- A. Seismic Performance: Acoustical ceiling shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.
 - 2. Smoke-Developed Index: 450 or less.
- C. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 ACOUSTICAL PANELS, GENERAL

- A. Source Limitations:
 - 1. Acoustical Ceiling Panel: Obtain each type from single source from single manufacturer.
 - 2. Suspension System: Obtain each type from single source from single manufacturer.
- B. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system from single source from single manufacturer.
- C. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances unless otherwise indicated.
 - 1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface according to ASTM E 795.
- D. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.
 - 1. Where appearance characteristics of acoustical panels are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by Architect from each manufacturer's full range that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.

2.3 ACOUSTICAL PANELS

- A. Manufacturers: Specific acoustical lay-in panels and suspension systems are indicated on the Finish Plans, to establish the design intent and required standard of quality. It is not intended to preclude the use of other acceptable manufacturers. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Armstrong World Industries, Inc.
 - 2. CertainTeed Corp.
 - 3. USG Interiors, Inc.; Subsidiary of USG Corporation.
- B. Mineral Based – ACT1 Ceiling Panels:
 - 1. Surface Texture: Fine
 - 2. Composition: Mineral Fiber
 - 3. Color: White
 - 4. Size: 24" x 24"
 - 5. Edge Profile: Beveled Tegular 15/16" for interface with PRELUDE XL 15/16" Exposed Tee grid.
 - 6. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.75
 - 7. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 35
 - 8. Flame Spread: ASTM E 1264; Class A (UL)
 - 9. Light Reflectance (LR) White Panel: ASTM E 1477; 0.88
 - 10. Dimensional Stability: HUMIGUARD Plus
 - 11. Basis of Design Product: ULTIMA Tegular, 1911 No added formaldehyde as manufactured by Armstrong World Industries
 - a. Or Equal

2.4 METAL SUSPENSION SYSTEMS, GENERAL

- A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Metal Suspension-System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635/C 635M.
 - 1. Per UNR Standards: Ceiling suspension systems shall meet requirements of UBC Standard 25-2.
- C. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
 - 1. Anchors in Concrete: Anchors with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **five** times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.

2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **10** times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.
- D. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
 1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 2. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.135-inch- (10 gage) diameter wire.
- E. Angle Hangers: Angles with legs not less than 7/8 inch wide; formed with 0.04-inch-thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 coating designation; with bolted connections and 5/16-inch- diameter bolts.
- F. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
- G. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
- H. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical panels in place.
- I. Hold-Down Clips: Where indicated, provide manufacturer's standard hold-down clips spaced 24 inches o.c. on all cross tees.

2.5 METAL SUSPENSION SYSTEM

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Armstrong World Industries, Inc.
 2. CertainTeed Corp.
 3. Chicago Metallic Corporation.
 4. USG Interiors, Inc.; Subsidiary of USG Corporation.
- B. Basis of Design Product: PRELUDE XL 15/16" Exposed Tee as manufactured by Armstrong World Industries
- C. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than **G30** coating designation; with prefinished 15/16-inch- wide metal caps on flanges.
 1. Structural Classification: Heavy-duty system.
 2. Face Design: Flat, flush.

3. Cap Material: Steel cold-rolled sheet.

2.6 METAL EDGE MOLDINGS AND TRIM

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Armstrong World Industries, Inc.
 2. CertainTeed Corp.
 3. Chicago Metallic Corporation.
 4. Fry Reglet Corporation.
 5. USG Interiors, Inc.; Subsidiary of USG Corporation.
- B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
 1. Provide manufacturer's standard edge moldings that fit acoustical panel edge details and suspension systems indicated and that match width and configuration of exposed runners unless otherwise indicated.
 2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
- C. Edge Moldings and Trim:
 1. 7800 - 12' Wall Molding
- D. Accessories:
 1. BERC2 - Beam End Retaining Clip
- E. Optional Accessories
 1. 7904 - 15/16" Flush Act. to Drywall Transition Molding
 2. 7908 - 15/16" Tegular Act. to Drywall Transition Molding

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION

- A. General: Install acoustical panel ceilings to comply with ASTM C 636/C 636M, UBC Standard 25-2, and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - 4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 - 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 - 6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 - 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 - 8. Do not attach hangers to steel deck tabs.
 - 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 - 10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
 - 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for

hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
 - 1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 - 2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
 - 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
 - 1. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
 - 2. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions unless otherwise indicated.
 - 3. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
 - 4. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
 - 1. Compliance of seismic design.
- B. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
 - 1. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
 - a. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf of tension.

- b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 095113

SECTION 096500 – RESILIENT WALL BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Resilient base.
- B. Transition Strips, Moldings, Transition and Edge Strips
- C. Installation accessories.

1.2 RELATED REQUIREMENTS

- A. Section 033000 - Cast-in-Place Concrete: Restrictions on curing compounds for concrete slabs and floors to receive adhesive-applied resilient flooring.
- B. Section 090561 - Common Work Results for Flooring Preparation: Removal of existing floor coverings, cleaning, and preparation.
- C. Section 090561 - Common Work Results for Flooring Preparation: Concrete slab moisture and alkalinity testing and remediation procedures.

1.3 REFERENCE STANDARDS

- A. ASTM D6329 - Standard Guide for Developing Methodology for Evaluating the Ability of Indoor Materials to Support Microbial Growth Using Static Environmental Chambers; 1998 (Reapproved 2015).
- B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2019, with Editorial Revision (2020).
- C. ASTM F1066 - Standard Specification for Vinyl Composition Floor Tile; 2004 (Reapproved 2018).
- D. ASTM F1861 - Standard Specification for Resilient Wall Base; 2016.
- E. ASTM F2169 - Standard Specification for Resilient Stair Treads; 2015 (Reapproved 2020).
- F. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2019a.

1.4 SUBMITTALS

- A. See Section 013300 - Submittal Requirements, for submittal procedures.
- B. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

1. Include information stating Static Coefficient of Friction.
 2. MSDS
 - a. Submit Material Safety Data Sheets (MSDS) available for flooring products, adhesives, patching/leveling compounds, floor finishes (polishes) and cleaning agents.
 3. For resilient products. Use same designations indicated on Drawings.
- C. Shop Drawings: Indicate seaming plans, floor patterns, and _____.
- D. Verification Samples: Submit 4 samples, 6 by 6 inch in size illustrating color and pattern for each resilient product specified.
- E. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.
- F. Certification: Prior to installation of flooring, submit written certification by flooring manufacturer and adhesive manufacturer that condition of subfloor is acceptable.
- G. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning, stripping, and re-waxing.
- H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Section 016310 - Substitutions, for additional provisions.
 2. Extra Wall Base: 100 linear feet of each type and color.
- 1.5 QUALITY ASSURANCE
- A. Manufacturer Qualifications: Company specializing in manufacturing specified flooring with minimum 10 years documented experience.
- B. Installer Qualifications: Company specializing in installing specified flooring with minimum 5 years documented experience.
- C. Testing Agency Qualifications: Independent firm specializing in performing concrete slab moisture testing and inspections of the type specified in this section.
- 1.6 QUALITY ASSURANCE AND REGULATORY REQUIREMENTS
- A. Single-Source Responsibility: provide types of flooring and accessories supplied by one manufacturer, including leveling and patching compounds, and adhesives.
- B. Slip resistance of floor surfaces and changes in level shall be in accordance with applicable law.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Upon receipt, immediately remove any shrink-wrap and check materials for damage and the correct style, color, quantity and run numbers.
- B. Store all materials off of the floor in an acclimatized, weather-tight space.

- C. Maintain temperature in storage area between 55 degrees F and 90 degrees F.
- D. Protect roll materials from damage by storing on end.
- E. Do not double stack pallets.

1.8 FIELD CONDITIONS

- A. Store materials for not less than 48 hours prior to installation in area of installation at a temperature of 70 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.
- B. Install flooring and accessories after the other finishing operations, including painting, have been completed. Close spaces to traffic during the installation of the flooring. Do not install flooring over concrete slabs until they are sufficiently dry to achieve a bond with the adhesive, in accordance with the manufacturer's recommended bond and moisture tests.

1.9 WARRANTY

- A. See Section 017836 - Warranties and Bonds, for additional warranty requirements.
- B. Resilient Products:
 - 1. Resilient Base: Submit a written warranty executed by the manufacturer, agreeing to repair or replace resilient base that fails within the warranty period.
- C. Warranty Period
 - 1. Warranty Period: 2 years
- D. Rights
 - 1. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

- A. Basis of Design: Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as determined by the Architect.
 - 1. Approved Manufacturer(s): Refer to Drawings and Material Schedules.
 - a. As specified in this section for other products.
- B. Substitutions: Refer to Section 012500 - Substitution Procedures.

2.2 RESILIENT BASE

- A. Resilient Base Type B-1: ASTM F1861, Type TS rubber, vulcanized thermoset; top set Style B, Cove.
 - 1. Approved Manufacturers:
 - a. Burke Flooring: www.burkeflooring.com/#sle.
 - b. Basis of Design: Johnsonite, a Tarkett Company: www.johnsonite.com.
 - c. Roppe Corporation: www.roppe.com/#sle.
 - d. Substitutions: See Section 016310 - Substitutions.
 - 2. Height: 4 inch.
 - 3. Thickness: 0.125 inch.
 - 4. Finish: Satin.
 - 5. Length: Roll.
 - 6. Color: As indicated on drawings.
 - 7. Accessories: Premolded external corners and internal corners.

2.3 ACCESSORIES

- A. Subfloor Filler: White premix latex; type recommended by adhesive material manufacturer.
- B. Primers, Adhesives, and Seam Sealer: Waterproof; types recommended by flooring manufacturer.
- C. Moldings, Transition and Edge Strips:
 - 1. For 1/4" to 1/2" flooring transitions height difference: Tarkett Wheeled Traffic Transition, Product CTA-XX-J.
 - 2. For up to 3/8" flooring transition height difference: Tarkett Reducer Transition, Product SSR-XX-B
 - 3. Refer to Drawings for Types, locations.
 - 4. Color: Black.
 - 5. Manufacturers: a. Basis of Design: Johnsonite, a Tarkett Company: www.johnsonite.com. b. Or Approved Equal. c. Substitutions: See Section 016310 - Substitutions.
- D. Filler for Coved Base: Plastic.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive resilient base.

3.2 PREPARATION

- A. Clean substrate.

3.3 INSTALLATION – GENERAL

- A. Install in accordance with manufacturer's written instructions.

3.4 INSTALLATION – RESILIENT BASE

- A. Fit joints tightly and make vertical. Maintain minimum dimension of 18 inches between joints.
- B. Miter internal corners. At external corners, use premolded units. At exposed ends, use premolded units.
- C. Install base on solid backing. Bond tightly to wall and floor surfaces.
- D. Scribe and fit to door frames and other interruptions.

3.5 CLEANING

- A. Remove excess adhesive from floor, base, and wall surfaces without damage.
- B. Clean in accordance with manufacturer's written instructions.

3.6 PROTECTION

- A. Prohibit traffic on resilient flooring for 48 hours after installation.

END OF SECTION 096500

SECTION 096720 – EPOXY FLOORING AND WALL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This section includes the following:
 - 1. Epoxy flooring/cove base system as shown on the drawings and in schedules.
 - 2. Epoxy wall coating system as shown on the drawings and in schedules.

1.2 RELATED REQUIREMENTS

- A. Section 033000 - Cast-in-Place Concrete.
- B. Section 079200 - Joint Sealants.
- C. Section 090561 - Common Work Results for Flooring Preparation.
- D. Section 092116 - Gypsum Board Assemblies: Level 5 finish requirements.

1.3 REFERENCE STANDARDS

- A. ASTM C579 - Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes.
- B. ASTM C580 - 02(2012) Standard Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes.
- C. ASTM D635 - 10 Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
- D. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics; 2010.
- E. ASTM D790 - 10 Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
- F. ASTM D2240 - 05(2010) Standard Test Method for Rubber Property-Durometer Hardness.
- G. ASTM D4060 - 10 Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser.
- H. ASTM D4541 - 09e1 Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.
- I. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2020.

- J. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2010.
- K. ASTM E1745 - 11 Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.
- L. ASTM F1869 - 11 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
- M. AATCC Test Method 147-2011 Antibacterial Activity Assessment of Textile Materials: Parallel Streak Method.
- N. UL 410 Standard for Safety for Slip Resistance of Floor Surface Materials.

1.4 SYSTEM DESCRIPTION

- A. Flooring Application:
 - 1. The work shall consist of preparation of the substrate, the furnishing and application of a cementitious urethane based self-leveling seamless flooring system with decorative chip broadcast and Epoxy broadcast and topcoats.
 - 2. The system shall have the color and texture as specified by the Owner with a nominal thickness of 3/16 inch. It shall be applied to the prepared area(s) as defined in the plans strictly in accordance with the Manufacturer's recommendations.
 - 3. Coved seamless wall base.
- B. Wall Application
 - 1. The work shall consist of preparation of the substrate, the furnishing and application of an epoxy-based wall coating system, with decorative colored chips and urethane topcoats. The system shall have the color and texture as specified by the Owner with a nominal thickness of 55 - 60 mils. It shall be applied to the prepared area(s) as defined in the plans strictly in accordance with the Manufacturer's recommendations.

1.5 SUBMITTALS

- A. See Section 013000 - Submittal Requirements for Submittal Procedures.
- B. Product Data: Submit manufacturer's technical data, installation instructions, and general recommendations for each resinous flooring material required. Include certification indicating compliance of materials with requirements.
- C. Surfacing applicator shall submit samples of color and textures for Architect's approval.
- D. Samples: Submit, for verification purposes, 6 x 6 inch square samples of each type of resinous decking required, applied to a rigid backing, in color and finish indicated.
 - 1. For initial selection of colors and finishes, submit manufacturer's color charts showing full range of colors and finishes available.

1.6 MOCK-UP

- A. Build mock-ups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
- B. Extent of mock-up shall be the same as that which will be provided in the final work.
- C. Personnel assembling mock-up shall be the same personnel that will perform the actual work at the project site.
- D. Mock-up shall be installed simulating actual construction conditions. Use means, methods and techniques proposed for final installation.
- E. Construct mock-up of resinous ceiling, wall, flooring, border and base illustrating appearance of finished work at corners and material transitions. Size mock-up to be not less than 6 x 6 x 6 feet.
- F. Locate where directed.
- G. Approved mock-up may not remain as part of the Work.
- H. Mock-up shall be subjected to testing criteria specified for final installation.

1.7 QUALITY ASSURANCE

- A. Single Source Responsibility: Obtain primary resinous flooring materials including primers, resins, hardening agents, finish or sealing coats from a single manufacturer with not less than ten years of successful experience in manufacturing and installing principal materials described in this section. Contractor shall have completed at least five projects of similar size and complexity; Stonhard or approved equal. Provide secondary materials only of type and from source recommended by manufacturer of primary materials.
- B. Surfacing shall be applied by a surfacing applicator approved by the Architect, with a minimum of seven (7) years experience installing the brand of surfacing in similar size and function projects. A list of ten (10) completed projects using the specified materials must be submitted proving seven (7) years experience by the lead mechanic.
- C. Surfacing applicator shall provide to the architect a completed list of jobs including the names of the Architect, General Contractor, and Owner, telephone numbers of all concerned, materials used, quantity installed and date completed on similar projects.
- D. Surfacing applicator must provide a written joint guarantee for materials and workmanship between applicator and surfacing manufacturer for one (1) year.
- E. Surfacing applicator or manufacturer seeking approval of products other than what is specified must supply samples, full product information, technical data with specifications, certification from an independent testing laboratory that the product being submitted for approval meets all requirements of the performance properties specified within this specification, installation instructions and comply with the above quality assurances in writing fourteen (14) days before bid letting.

1. Omission of any item will result in an automatic rejection.
2. Bidders will be notified by addendum of substitute surfacing materials, if approved.

- F. Static Coefficient of Friction: Provide floor products and finished floor installations with a wet and dry static coefficient of friction of 0.6 minimum for level surfaces and treads of stairs and 0.8 minimum for ramp surfaces as tested.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Material shall be delivered to job site and checked by flooring contractor for completeness and shipping damage prior to job start.
- B. All materials used shall be factory pre-weighed and pre-packaged in single, easy to manage batches to eliminate on site mixing errors. No on site weighing or volumetric measurements allowed.
- C. Material shall be stored in a dry, enclosed area protected from exposure to moisture. Temperature of storage area shall be maintained between 60 and 85°F/16 and 30°C.
- D. Material temperatures shall be a minimum of 55°F before use.
- E. Work on seamless flooring shall not commence until the building can be maintained at a minimum temperature of 55 °F for 48 hours before, during and 48 hours after application. Areas shall also be broom clean and reasonably dust free and shall have adequately controlled ventilation with bright, uniform lighting.

1.9 PROJECT CONDITIONS

- A. Before commencing work, ensure environmental and site conditions are suitable for application and curing.
- B. Site Requirements
1. Application may proceed while air, material and substrate temperatures are between 60F and 85F providing the substrate temperature is above the dew point. Outside of this range, the Manufacturer shall be consulted.
 2. The relative humidity in the specific location of the application shall be less than 85 % and the surface temperature shall be at least 5 F above the dew point.
 3. The Applicator shall ensure that adequate ventilation is available for the work area. This shall include the use of manufacturer's approved fans, smooth bore tubing and closure of the work area.
 4. The Applicator shall be supplied with adequate lighting equal to the final lighting level during the preparation and installation of the system.
- C. Conditions of new concrete to be coated with cementitious urethane material.
1. Concrete shall be moisture cured for a minimum of 3 days and have fully cured a minimum of 5 days in accordance with ACI-308 prior to the application of the coating system pending moisture tests.
 2. Concrete shall have a flat rubbed finish, float or light steel trowel finish (a hard steel trowel finish is neither necessary nor desirable).
 3. Sealers and curing agents should not to be used.

4. Concrete shall have minimum design strength of 3.500 psi. and a maximum water/cement ratio of 0.45
5. Concrete surfaces on grade shall have been constructed with a vapor barrier to protect against the effects of vapor transmission and possible delamination of the system.

D. Safety Requirements

1. All open flames and spark-producing equipment shall be removed from the work area prior to commencement of application.
2. "No Smoking" signs shall be posted at the entrances to the work area.
3. The Owner shall be responsible for the removal of foodstuffs from the work area.
4. Non-related personnel in the work area shall be kept to a minimum.

1.10 PROTECTION

- A. Protect adjacent surfaces from damage resulting from work of this trade. If necessary, mask and/or cover adjacent surfaces, fixtures, cabinet work, equipment, etc. by suitable means.

1.11 WARRANTY

- A. See Section 017000 - Contract Closeout, for additional warranty requirements.
- B. Manufacturer warrants that material shipped to buyers at the time of shipment substantially free from material defects and will perform substantially to Dur-A-Flex, Inc. published literature if used in accordance with the latest prescribed procedures and prior to the
- C. expiration date.

PART 2 - PRODUCTS

2.1 MANUFACTURER:

- A. Basis of Design: Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as determined by the Architect.
1. Dur-A-Flex, Inc., 95 Goodwin Street, East Hartford, CT 06108, Phone: (860) 528-9838, Fax: (860) 528-2802
- B. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers listed alphabetically below. If not listed, submit as substitution according to Conditions of the Contract and Division 1 Sections.
1. Stonhard, 1000 East Park Avenue, Maple Shade, NJ 08052, 800.257.7953
 2. Flowcrete Americas, which is located at: 616 Spring Hill Dr. Suite 100; Spring, TX 77386; Tel: 936 539 6700; Fax: 936 539 6701; Web: www.flowcreteamericas.com.

- C. Substitutions: Refer to Section 016310 - Substitutions.

2.2 MATERIALS FLOORING:

- A. Type ERC1: Dur-A-Flex, Inc: Hybri-Flex EC (self-leveling chip broadcast), epoxy/aliphatic urethane topcoat seamless flooring system.
1. System Materials:
 - a. Topping: Dur-A-Flex, Inc, Poly-Crete SL resin, hardener and SL aggregate.
 - b. The broadcast aggregate shall be Dur-A-Flex, Inc. Q28 or Q11 quartz aggregate.
 - c. Broadcast: Dur-A-Flex, Inc. Dur-A-Glaze #4, epoxy based two-component resin.
 - d. Grout coats: Dur-A-Flex, Inc Dur-A-Glaze #4, epoxy-based, two-component resin.
 - e. Top coat: Dur-A-Flex, Inc. Armor Top aliphatic urethane 2 component resin with grit.
 2. Patch Materials
 - a. Shallow Fill and Patching: Use Dur-A-Flex, Inc. Poly-Crete MD (up to ¼ inch).
 - b. Deep Fill and Sloping Material (over ¼ inch): Use Dur-A-Flex, Inc. Poly-Crete WR.
 3. Cove Base - Type ERB1: Provide seamless high turned up coved base with 1" radius cove as indicated on drawings, for an integral seal at the joint between the floor and the wall.
 4. Color/Pattern: As indicated on drawings / finish schedule.
 5. Product Requirements:
 - a. Topping: Poly-Crete SL - 1/8" Thickness
 - 1) Percent Reactive: 100 %
 - 2) VOC: 0 g/L
 - 3) Bond Strength to Concrete ASTM D4541: 400 psi, substrates fails
 - 4) Compressive Strength, ASTM C579: 9,000 psi
 - 5) Tensile Strength, ASTM D638: 2,175 psi
 - 6) Flexural Strength, ASTM D790: 5,076 psi
 - 7) Impact Resistance @ 125 mils, MIL D-3134, 160 inch lbs
No visible damage or deterioration.
 - b. Broadcast Coat: Dur-A-Glaze #4 Resin
 - 1) Percent Reactive,: 100 %
 - 2) VOC: <4 g/L
 - 3) Water Absorption, ASTM D570: 0.04%
 - 4) Tensile Strength, ASTM D638: 4000 psi
 - 5) Coefficient of thermal expansion ASTM D696: 2×10^{-5} in/in/F
 - 6) Flammability ASTM D635: Self-Extinguishing.
 - 7) Flame Spread/ NFPA 101 ASTM E84: Class A
 - c. Topcoat: Armor Top
 - 1) VOC: 0 g/L
 - 2) 60 Degree Gloss ASTM D523: 75+/-5
 - 3) Mixed Viscosity, (Brookfield 25oC): 500 cps
 - 4) Tensile strength, ASTM D638; 7,000 psi
 - 5) Abrasion Resistance, ASTM D4060; Gloss Satin
CS 17 wheel (1,000 g load) 1,000 cycles: 4 8 mg loss w/ grit

		10	12 mg loss w/o grit
6)	Pot life @ 70° F 50% RH;	2 hours	
7)	Dry properties, 70°F, 50% RH:	8 hours tack free,	
		12 hours Dry	
	60°F, 30% RH:	12 hours tack free,	
		18 ours Dry	
	80°F, 70% RH:	4 hours tack free,	
		6 hours Dry	
8)	Flash Point PMCC:	186°F	
9)	Full Chemical resistance:	7 days	

2.3 MATERIALS WALLS

- A. Type: ERC3: Dur-A-Flex, Inc, Dur-A-Wall VC, epoxy-based, urethane topcoat, chip seamless wall system
- B. System Materials:
 - 1. Primer:C
 - a. Use the appropriate primer based on the substrate. Sheetrock finished to a level #5 will Require the use of Dur-A-Wall Gripper primer.
 - b. If substrate is block or CMU use the Dur-A-Wall Block Filler.
 - 2. Wall System
 - a. 1st Broadcast Coat: Dur-A-Flex, Inc, Dur-A-Gard No Sag resin and hardener.
 - b. 2nd Broadcast Coat: Dur-A-Flex, Inc, Dur-A-Glaze # 4 Water Clear resin and hardener.
 - c. Chips: Dur-A-Flex, Inc, decorative chips (Micro or Macro)
 - d. Grout Coat: Dur-A-Flex, Inc, Dur-A-Glaze #4 Water Clear resin and hardener.
 - e. Topcoats: Dur-A-Flex, Inc. Armor Top resin and hardener
 - 3. Patch Materials
 - a. Shallow Fill and Patching: Use Dur-A-Flex, Inc. Dur-A-Glaze #4 Cove Rez.
- C. Color: As indicated on drawings / finish schedule.
- D. Product Requirements:
 - 1. First Broadcast Coat Dur-A-Gard No Sag
 - a. Percent Solids 100 %
 - b. VOC 3.45 g/L
 - c. Compressive Strength, ASTM D695 16,000 psi
 - d. Tensile Strength, ASTM D638 3,800 psi
 - e. Flexural Strength, ASTM D790 4,000 psi
 - f. Abrasion Resistance, ASTM D4060
 - C-10 Wheel, 1,000 gm load, 1,000 cycles 35 mg loss
 - g. Flame Spread/NFPA-101, ASTM E84 Class A
 - h. Flammability, ASTM D635 Self Extinguishing
 - i. Impact Resistance MIL D-3134 0.025 inch Max
 - j. Water Absorption. MIL D-3134 0.04 %
 - k. Potlife @ 70 F 20-25 minutes
 - 2. Second Broadcast Coat and Grout Coat Dur-A-Glaze #4 Water Clear

a.	Percent Solids	100 %
b.	VOC	3.8 g/L
c.	Compressive Strength, ASTM D695	11,200 psi
d.	Tensile Strength, ASTM D638	2,100 psi
e.	Flexural Strength, ASTM D790	5,100 psi
f.	Abrasion Resistance, ASTM D4060	
	C-10 Wheel, 1,000 gm load, 1,000 cycles	29 mg loss
g.	Flame Spread/NFPA-101, ASTM E 84	Class A
h.	Impact Resistance MIL D-24613	0.0007 inches, no cracking or delamination
i.	Water Absorption. MIL D-24613	Nil
j.	Potlife @ 70 F	20 minutes
3.	Topcoats	Armor Top
a.	VOC	0 g/L
b.	60 Degree Gloss ASTM D523	75+/-5
c.	Mixed Viscosity, (Brookfield 25oC)	500 cps
d.	Tensile strength, ASTM D 638	7,000 psi
e.	Abrasion Resistance, ASTM D4060	Gloss Satin
	CS 17 wheel (1,000 g load)	4
	1,000 cycles	10 12 mg loss without grit
f.	Pot life @ 70° F 50% RH	2 hours
g.	Dry properties, 70°F, 50% R.H.	8 hours tack free, 12 hrs Dry
	60°F, 30% RH	2 hours tack free, 18 hours Dry
	80°F, 70%RH	4 hours tack free, 6 hours Dry
h.	Flash Point PMCC	186oF
i.	Full Chemical resistance	7 days

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas and conditions, with Applicator present, for compliance with requirements for maximum moisture content, installation tolerances and other conditions affecting flooring performance.
- B. Verify that substrates and conditions are satisfactory for flooring installation and comply with requirements specified.

3.2 PREPARATION

- A. General
 1. New concrete surfaces shall be free of oil, grease, curing compounds, loose particles moss, algae growth, laitance, friable matter, dirt, and bituminous products.
- B. Moisture Testing: Perform tests recommended by manufacturer and as follows.
 1. Perform anhydrous calcium chloride test ASTM F1869. Application will proceed only when the vapor/moisture emission rates from the slab is less than and not higher than 20 lbs/1,000 sf/24 hrs.

2. Perform relative humidity test using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 99% relative humidity level measurement.
3. If the vapor drive exceeds 99% relative humidity or 20 lbs/1,000 sf/24 hrs then the Owner and/or Engineer shall be notified and advised of additional cost for the possible installation of a vapor mitigation system that has been approved by the manufacturer or other means to lower the value to the acceptable limit.

3.3 FLOORING APPLICATION

A. General:

1. The system shall be applied in five distinct steps as listed below:
 - a. Substrate preparation
 - b. Topping/overlay application with chip broadcast.
 - c. Resin application with chip broadcast.
 - d. Topcoat application
 - e. Second topcoat application.
2. Immediately prior to the application of any component of the system, the surface shall be dry and any remaining dust or loose particles shall be removed using a vacuum or clean, dry, oil-free compressed air.
3. The handling, mixing and addition of components shall be performed in a safe manner to achieve the desired results in accordance with the Manufacturer's recommendations.
4. The system shall follow the contour of the substrate unless pitching or other leveling work has been specified by the Architect.
5. A neat finish with well-defined boundaries and straight edges shall be provided by the Applicator.

B. Topping:

1. The topping shall be applied as a self-leveling system as specified by the Architect. The topping shall be applied in one lift with a nominal thickness of 1/8 inch.
2. The topping shall be comprised of three components, a resin, hardener and filler as supplied by the Manufacturer.
3. The hardener shall be added to the resin and thoroughly dispersed by suitably approved mechanical means. SL Aggregate shall then be added to the catalyzed mixture and mixed in a manner to achieve a homogenous blend.
4. The topping shall be applied over horizontal surfaces using 1/2 inch "v" notched squeegee, trowels or other systems approved by the Manufacturer.
5. Immediately upon placing, the topping shall be degassed with a loop roller.
6. Chip aggregate shall be broadcast to excess into the wet resin, Macro chip at the rate of 0.1 lbs/sf and Micro chip at the rate of 0.15 lbs/sf.
7. Quartz aggregate shall be broadcast to excess into the wet material at the rate of 0.8 lbs/sf.
8. Allow material to fully cure. Vacuum, sweep and/or blow to remove all loose chips and aggregate.

C. Broadcast

1. Dur-A-Glaze:
 - a. The broadcast coat resin shall be applied at the rate of 100 sf/gal.

- b. The broadcast coat shall be comprised of liquid components, combined at a ratio of 2 parts resin to 1 part hardener by volume and shall be thoroughly blended by mechanical means such as a high speed paddle mixer.
 - c. Chip aggregate shall be broadcast into the wet resin, Macro chips at the rate of 0.1 lbs/sf, Micro chips at the rate of 0.15 lbs/sf.
 - d. Allow material to fully cure. Vacuum, sweep and/or blow to remove all loose chips.
 - 2. Shop-Floor:
 - a. The broadcast coat resin shall be applied at the rate of 90 sf/gallon.
 - b. The broadcast coat shall be comprised of liquid components, combined at a ratio of 2 parts resin to 1 part hardener by volume and shall be thoroughly blended by mechanical means such as a high speed paddle mixer.
 - c. Aggregate shall be broadcast into the wet resin at the rate of 0.5 lbs/sf.
 - d. Allow material to fully cure. Vacuum, sweep and/or blow to remove all loose aggregate.
- D. Grout Coat
 - 1. Dur-A-Glaze:
 - a. The grout coat shall be squeegee applied with a coverage rate of 100 sf/gal.
 - b. The topcoat shall be comprised of liquid components, combined at a ratio of 2 parts resin to 1 part hardener by volume and shall be thoroughly blended by mechanical means such as a high speed paddle mixer.
 - c. The grout coat will be back rolled and cross rolled to provide a uniform texture and finish
 - 2. Shop-Floor
 - a. The grout coat shall be squeegee applied with a coverage rate of 90 sf/gal
 - b. The grout coat shall be comprised of liquid components, combined at a ratio of 2 parts resin to 1 part hardener by volume and shall be thoroughly blended by mechanical means such as a high speed paddle mixer.
 - c. The grout coat will be back rolled and cross rolled to provide a uniform texture and finish
- E. Topcoat:
 - 1. The first topcoat shall be squeegee applied with a coverage rate of 100 sf/gal.
 - 2. The topcoat shall be comprised of liquid components, combined at a ratio of 2 parts resin to 1 part hardener by volume and shall be thoroughly blended by mechanical means such as a high speed paddle mixer.
 - 3. The first topcoat will be back rolled and cross rolled to provide a uniform texture and finish
 - 4. The second topcoat with grit shall be roller applied with a coverage rate of 500 sf/gal.
 - 5. The finish floor will have a nominal thickness of:
 - a. Hybri-Flex EB: 1/4 inch.
 - b. Hybri-Flex EC: 3/16 inch.
 - c.

3.4 WALL APPLICATION

- A. General:
 - 1. The system shall be applied in six distinct steps as listed below:

- a. Substrate preparation
 - 1) Priming
 - 2) Broadcast coats application with chip broadcast
 - 3) Second broadcast coat application with chip broadcast
 - 4) Grout coat application
 - 5) Topcoat applications
 2. The handling, mixing and addition of components shall be performed in a safe manner to achieve the desired results in accordance with the Manufacturer's recommendations.
 3. The system shall follow the contour of the substrate.
 4. A neat finish with well-defined boundaries and straight edges shall be provided by the Applicator.
- B. Priming:
1. DUR-A-FLEX DUR-A-WALL HP BLOCK FILLER is recommended to fill any pores in the substrate when applying over concrete or block walls.
 2. When applying over sheet rock, use DUR-A-FLEX DUR-A-WALL HP GRIPPER PRIMER. This will prevent the base coat from soaking into the sheet rock.
- C. 1st Broadcast Coat:
1. The broadcast coat shall be comprised of the specified two components, a resin, and hardener.
 2. The resin shall be added to the hardener and thoroughly mixed by suitably approved mechanical means.
 3. The base coat shall be applied by a roller at the rate of 200 sf/gal to yield a dry film thickness of 8 mils.
 4. The chip will be broadcast into the wet resin at the rate of 0.1-0.12 lb/SF.
- D. 2nd Broadcast Coat:
1. A second broadcast coat will be applied as the first.
- E. Grout Coat:
1. The grout coat shall be comprised of the specified two components, a resin, and hardener.
 2. The resin shall be added to the hardener and thoroughly mixed by suitably approved mechanical means.
 3. The grout coat shall be applied using a roller at the rate of 200 sf/gal to yield a dry film thickness of 8 mils.

3.5 FIELD QUALITY CONTROL

- A. Tests, Inspection
1. The following tests shall be conducted by the Applicator:
 - a. Temperature
 - 1) Air, substrate temperatures and, if applicable, dew point.
 - b. Coverage Rates
 - 1) Rates for all layers shall be monitored by checking quantity of material used against the area covered.

3.6 CLEANING AND PROTECTION

- A. Cure flooring material in compliance with manufacturer's directions, taking care to prevent their contamination during stages of application and prior to completion of the curing process.
- B. Remove masking. Perform detail cleaning at floor termination, to leave cleanable surface for subsequent work of other sections.

END OF SECTION 096720

SECTION 096813 – ENTRY MAT CARPET TILE

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Entry Mat Carpet tile, fully adhered.

1.2 RELATED REQUIREMENTS

- A. Section 033000 - Cast-in-Place Concrete: Restrictions on curing compounds for concrete slabs and floors to receive adhesive-applied flooring.
- B. Section 090561 - Common Work Results for Flooring Preparation: Concrete slab moisture and alkalinity testing and remediation procedures.
- C. Section 096500 - Resilient Wall Base and Accessories for resilient base, reducer strips, and other accessories installed with carpet.
- D. Section 096816 - Vinyl Backed Cushioned Carpet: Vinyl Backed Cushioned carpet.

1.3 REFERENCE STANDARDS

- A. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2019, with Editorial Revision (2020).
- B. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2016a.
- C. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2019a.
- D. CRI 104 - Standard for Installation of Commercial Carpet; 2015.

1.4 SUBMITTALS

- A. See Section 013000 - Submittal Requirements, for submittal procedures.
- B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.
- C. Shop Drawings: Indicate layout of joints.
- D. Samples: Submit two carpet tiles illustrating color and pattern design for each carpet color selected.
- E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

- F. Concrete Subfloor Test Report: Submit a copy of the moisture and alkalinity (pH) test reports.
- G. Testing: Verification elevator cab flooring meets ASTM E648 - Standard Test Method for Critical Radiant Flux Floor Covering Systems.
- H. Installer's Qualification Statement.
- I. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.
- J. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
 - 1. See Section 016000 - Material and Equipment, for additional provisions.
 - 2. Extra Carpet Tiles: Quantity equal to 5 percent of total installed of each color and pattern installed, but not less than 10 sq. yd.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing specified carpet tile with minimum 10 years documented experience.
- B. Installer Qualifications: Company specializing in installing carpet tile with minimum 5 years documented experience and approved by carpet tile manufacturer.

1.6 PROJECT CONDITIONS

- A. Store materials in area of installation for minimum period of 24 hours prior to installation.
- B. Comply with CRI 104, Section 7.2, "Site Conditions? Temperature and Humidity" and Section 7.12, "Ventilation".
- C. Environmental Limitations: Do not install entry mat carpet tiles until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Comply with CRI 104, Section 5, "Storage and Handling."

1.8 WARRANTY

- A. Special Warranty for Entry Mat Carpet Tiles: Manufacturer's standard form in which manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.
 - 1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
 - 2. Warranty Period: Start at date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design: Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as determined by the Architect.
 - 1. Modular Carpeting: Tandus Centiva, a Tarkett Company:
www.commercial.tarkett.com
- B. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers listed alphabetically below. If not listed, submit as substitution according to Conditions of the Contract and Division 1 Sections.
- C. Substitutions: Not permitted.

2.2 ENTRY MAT TILE SYSTEM (WOT1)

- A. Product:.
 - 1. Provide Powerbond & Modular by Tandus (Tarkett):
 - 2. Style: Abrasive Action II – 02578
 - 3. Size: 18" x 18"
 - 4. Molded Reinforced Needlepunch Textile.
 - 5. Surface Texture: Rubber Reinforced Geometric Pattern
 - 6. Finished Pile Thickness: .250"
 - 7. Fiber System: 100% Premium Polypropylene
 - 8. Dye System: Solution dyed
 - 9. Backing Materials: Special Non-Thermoplastic Tri-Grip Cleated SBR
 - 10. Total Weight: 135 oz/yd
 - 11. Elevator cab flooring shall meet ASTM E648 - Standard Test Method for Critical Radiant Flux Floor Covering Systems.
- B. Color to be: As selected by Architect from manufacturer's full range.
- C. Pattern: Unidirectional. Confirm with Owner.

2.3 ACCESSORIES

- A. Subfloor Filler: White premix latex; type recommended by flooring material manufacturer.
- B. Transition Strips: Refer to Section 096500 - Resilient Wall Base and Accessories.
- C. Carpet Tile Adhesive: Recommended by carpet tile manufacturer; releasable type.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that subfloor surfaces are smooth and flat within tolerances specified for that type of work and are ready to receive carpet tile.
- B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive carpet tile.
- C. Verify that subfloor surfaces are dust-free and free of substances that could impair bonding of adhesive materials to subfloor surfaces.
- D. Cementitious Subfloor Surfaces: Verify that substrates are ready for flooring installation by testing for moisture and alkalinity (pH).
 - 1. Test in accordance with Section 090561.
 - 2. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.
 - 3. Follow moisture and alkalinity remediation procedures in Section 090561.
- E. Verify that required floor-mounted utilities are in correct location.

3.2 PREPARATION

- A. Prepare floor substrates for installation of flooring in accordance with Section 090561.

3.3 INSTALLATION

- A. Starting installation constitutes acceptance of subfloor conditions.
- B. Install carpet tile in accordance with manufacturer's instructions.
- C. Blend carpet from different cartons to ensure minimal variation in color match.
- D. Cut carpet tile clean. Fit carpet tight to intersection with vertical surfaces without gaps.
- E. Lay carpet tile in square pattern, with pile direction parallel to next unit, set parallel to building lines.
- F. Locate change of color or pattern between rooms under door centerline.
- G. Fully adhere carpet tile to substrate.
- H. Trim carpet tile neatly at walls and around interruptions.
- I. Complete installation of edge strips, concealing exposed edges.

3.4 CLEANING

- A. Remove excess adhesive without damage, from floor, base, and wall surfaces.
- B. Clean and vacuum carpet surfaces.

END OF SECTION 096813

SECTION 096816 – VINYL BACKED CUSHIONED CARPET

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Vinyl Backed Cushioned carpet.

1.2 RELATED SECTIONS:

- A. Section 033000 - Cast-in-Place Concrete: Restrictions on curing compounds for concrete slabs and floors to receive adhesive-applied flooring.
- B. Section 090561 - Common Work Results for Flooring Preparation: Concrete slab moisture and alkalinity testing and remediation procedures.
- C. Section 096500 - Resilient Wall Base and Accessories for resilient base, reducer strips, and other accessories installed with carpet.
- D. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.3 REFERENCE STANDARDS

- A. ASTM C307 - 03(2012) Standard Test Method for Tensile Strength of Chemical-Resistant Mortar, Grouts, and Monolithic Surfacing
- B. ASTM C531 - 00(2012) Standard Test Method for Linear Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes
- C. ASTM D635 - 10 Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
- D. ASTM D2240 - 05(2010) Standard Test Method for Rubber Property-Durometer Hardness.
- E. ASTM D4060 - 10 Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser.
- F. ASTM D4541 - 09e1 Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.
- G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2020.
- H. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2010.

- I. ASTM E1745 - 11 Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.
- J. ASTM F1869 - 11 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
- K. AATCC Test Method 147-2011 Antibacterial Activity Assessment of Textile Materials: Parallel Streak Method.
- L. UL 410 Standard for Safety for Slip Resistance of Floor Surface Materials.

1.4 SUBMITTALS

- A. See Section 013000 - Submittal Requirements for Submittal Procedures.
- B. Contractor shall submit samples of each color pattern of carpet available for the Owner's review for selections. Colors and patterns submitted for selection shall be available to meet the project schedule. Contractor shall also submit the manufacturer's specifications covering the manufacture of the carpeting which they are proposing. The specifications shall include a minimum material specifications as listed in Section 2.2 (C).
- C. Contractor shall submit within ninety (90) calendar days after the receipt of the Owner's Notice to Proceed, but before work begins. Manufacturer's recommended installation procedures which, when approved by the Owner, will become the basis for accepting or rejecting actual installation procedures used on the work.
- D. Seaming diagrams will not be required, but field seaming shall be discussed with and agreed to by the District representative prior to installation.
- E. Maintenance Manual: After award of bid, the Contractor shall furnish the Owner at least three (3) printed copies of the manufacturer's recommendation for the care, cleaning and maintenance of the carpet furnished and thoroughly instruct the Owner's maintenance personnel in the care, cleaning, and maintenance of the carpet if requested. This instruction shall happen once.

1.5 QUALITY CONTROL

- A. All carpet shall be from the same dye lot. The Contractor shall provide carpet storage per manufacturer's recommendations between Phases.
- B. Where a particular manufacturer and its model number or name is mentioned in connection with any item, they are listed to illustrate the only products that are acceptable to the District. No substitutions will be evaluated or accepted.
- C. The owner will award the bid with the understanding that the bids received were based upon the specified materials.
- D. Installation must be performed by a firm with not less than five (5) years of experience in installation of commercial carpet, by methods similar to those required for this project.

- E. Installation must be performed by an installer that is approved by the manufacturer to coordinate with warranties offered by the manufacture.
- F. Manufacturer is required to notify Owner, Architect, and General Contractor if installation instructions are not completely followed.
- G. Manufacturer must have been in continual operation for a minimum of ten years.
- H. Manufacturer will be on site to review startup of carpet installations to verify proposed installation procedures are correct and proposed seaming procedures are done in a proper fashion to stand by any warranties especially in the case of seams and carpet adhesion to substrate. Written verification of review and acceptance of these startup installation procedures will be required by the Owner. In addition, Manufacturer will be on site to review all installations within a three (3) month period after installation is complete to verify installation is correct and seaming was done in a proper fashion to stand by any warranties especially in the case of seams and carpet adhesion to substrate. Written verification of review and acceptance of the completed installation will be required by the Owner.

1.6 TESTING

- A. The Owner may decide that testing is required in order to establish conformance with these specifications. The Owner will select a prequalified independent testing laboratory should it be required. All testing will be in accordance with all pertinent codes and regulations and with selected standards of the American Society of Testing and Materials. All testing and retesting costs will be paid for by the Owner, except as otherwise directed in these specifications.
- B. It shall be the Contractor's responsibility to, at all times, cooperate with the testing laboratory. Representatives of the testing laboratory shall have access to the work at all times and at all locations where the work is in progress. All specimens and samples for testing shall be taken by the testing personnel or Owner. All deliveries of specimens and samples to the testing laboratory will be performed by the testing laboratory or the Owner. The Contractor shall establish with the testing laboratory a schedule of time to perform tests. If changes occur in this schedule, the Contractor shall coordinate all such changes with the testing laboratory. If the testing laboratory is prevented from taking specimens or testing due to uncoordinated time changes or incompleteness of the work, all extra charges for testing attributable to the delay will be back charged to the Contractor and shall not be borne by the Owner.

1.7 PRODUCT HANDLING

- A. Except as otherwise approved by the Owner, determine and comply with manufacturer's recommendations on product handling, storage, and protection. The Contractor shall provide all storage of materials used throughout this section.
- B. Deliver products to the job sites in their manufacturer's original container, with labels intact and legible. Maintain packaged materials with seals unbroken and labels intact until time of use. Carpet rolls shall have register number and tag attached or register numbers stenciled on bale and intact until time of use.

- C. The Owner may reject as noncomplying such material and products that do not bear identification satisfactory to the Owner as to manufacture, grade, quality, and other pertinent information as specified.
- D. The Contractor shall promptly remove damaged material and/or unsuitable or rejected items from the job site, and promptly replace with materials meeting the specified requirements, at no additional cost to the Owner.

1.8 FIELD CONDITIONS

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.
- C. Do not install carpet over concrete slabs until slabs have cured, are sufficiently dry to bond with adhesive, and have pH range recommended by carpet manufacturer.

1.9 MANUFACTURER'S WRITTEN WARRANTY

- A. All of the product related warranties listed below must be submitted as published warranties and presented as sample copies prior to approval. The originals must be signed by an official of the corporation that manufactures the carpeting and submitted to the Owner after installation is complete.
 - 1. Specification Warranty: The manufacturer warrants that the carpet conforms to specifications established for the product identified in the execution section, subject to normal manufacturing tolerances.
 - 2. Two Year Installation Workmanship: Provide special project warranty, signed by Contractor and installer, agreeing to repair or replace defective materials and workmanship of carpeting work during 2-year warranty period, without cost to Owner; and agreeing to repair or replace other defects beyond Contractor's/Installer's/Manufacturer's controls, as judged by Architect, at Owner's expense at prevailing rates.
 - 3. 20 Year non-prorated Wear Warranty: This carpet is warranted by the manufacturer for indoor commercial use. This manufacturer guarantees that the surface fiber of this carpet will wear less than 10% by weight from abrasion over a period of 20 years from the date of installation. Any area showing greater wear under conditions of normal use will be replaced at the manufacturer's expense including labor charges, as long as the carpet was properly installed and maintained.
 - a. 20 Year non-prorated Adhesive Warranty: The Manufacturer warrants that the carpet will remain attached to the substrate for a period of twenty (20) years from the date of installation.
 - b. 20 Year non-prorated Edge Ravel Warranty: The Manufacturer warrants that the carpet will not have continuous ends coming out of lengthwise seams for a period of 20 years from the date of installation.
 - c. 20 Year non-prorated Zippering Warranty: The Manufacturer warrants that the carpet will not develop "pile yarn runners" in the body of the carpet for a period of twenty (20) years from the date of installation.

- d. 20 Year non-prorated Delamination Warranty: The Manufacturer warrants that the carpet will not delaminate for a period of 20 years from the date of installation.
- e. 20 Year non-prorated Texture Retention Warranty: The Manufacturer warrants that the carpet will substantially maintain its physical surface texture against crushing, matting and walking out for a period of twenty (20) years from the date of installation.
- f. 20 Year non-prorated Run Resistance Strength Warranty: The Manufacturer warrants that the carpet will not zipper or develop continuous "pile yarn runners" for a period of twenty (20) years from the date of installation.
- g. 10 Year non-prorated Colorfastness to Light Warranty: The Fiber Manufacturer warrants that when installed for indoor use only, the carpet will not display or significantly change color due to exposure to light for twenty (10) years from the date of installation. (Applies only to Antron Lumena).
- h. Colorfastness to Atmospheric Contaminants Warranty: The Fiber Manufactures warrants that when installed for indoor use only, the carpet will not display or significantly change color due to the atmospheric contaminants (Ozone or Oxides of Nitrogen) for five (5) years from the date of installation. (Applies only to Antron Lumena).

PART 2 - PRODUCTS

2.1 MANUFACTURER:

- A. Basis of Design: Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as determined by the Architect.
- B. Approved Carpet: Furnish carpet of one of the following, subject to meeting material, performance and warranty requirements of this Section.
 - 1. Tandus Centiva, a Tarkett Company: www.commercial.tarkett.com
- C. Substitutions: See Section 016310 - Substitutions.

2.2 VINYL BACKED CUSHIONED CARPET

- A. Tandus | Centiva Flooring: geometric patterned loop pile carpet with "Powerbond Cushion RS" backing; 16-ounce yard face weight minimum. Furnish in 6-foot-wide rolls with low VOC non-wet peel and stick adhesive installation.
 - 1. CPT1:
 - a. Style: 11644 Color Spectrum II
 - b. Color: To be Selected by Architect from full range
- B. The specifications for carpeting outlined below are for the purpose of establishing quality standards required under the contract. Only the manufacturers and products listed will be acceptable. There will be no evaluations of other products prior to bid, nor

will there be any substitutions reviewed or allowed. Failure to submit a bid utilizing one of the listed products will be cause for rejection of the bid.

C. Carpet - General.

1. All materials shall be new and of domestic manufacture. Carpet of each type is to be of first quality and from one dye lot.
2. All carpet to have built-in permanent static control, anti-microbial treatment, soil and stain protection treatment, and a moisture barrier backing.

D. Material Specifications:

1. Construction/Face Pattern:
 - a. Level Loop
 - b. 8.5 stitches per square inch
 - c. 13t° Gauge or higher
 - d. Primary Backing: Non-woven synthetic fiber
 - e. Width: 6 feet
 - f. Tuft Density: 108.8 tufts/sq inch
 - g. Pile Height Average: 0.117 inch
 - h. Pile Thickness: 0.081 inch
 - i. Primary Tufting Substrate: Synthetic Non-Woven
2. Yarn System
 - a. Antron Lumina Nylon
 - b. Face weight no greater than 22 oz. and no less than 16 oz
 - c. Dyed Method: Solution Dyed
3. Backing System:
 - a. Primary Backing: Synthetic Non-Woven
 - b. Secondary Backing: Powerbond Cushion RS
 - 1) Closed Cell Vinyl Cushion — ASTM D 1667; Min. 7 psi @ 25%; Max. 25 psi @ 25%
 - 2) Permanently fused to tufting blanket.
 - 3) No Moisture Penetration in field or seams after 10,000 Impacts.
 - 4) No backing degradation after 50,000 cycles from Phillips Chair Caster Test.
4. Installation System:
 - a. Factory supplied non-wet, low VOC adhesive
 - b. No off-gassing required
 - c. Permanent chemically welded seams
 - d. No seam degradation after 50,000 cycles from Phillips Chair Caster Test
5. Sustainability: Manufacturer guarantees in writing that if materials are sent back for recycling, none will be landfilled or incinerated.

2.3 OTHER MATERIALS

- A. Transition Strips: Refer to Section 096500 - Resilient Wall Base and Accessories.
- B. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor subject to the approval of the Owner.

PART 3 - EXECUTION

3.1 SURFACE AND CONDITIONS

- A. Examine all areas and conditions under which work will be performed. Correct conditions detrimental to timely and proper completion of the work. Do not proceed until satisfactory conditions are corrected.

3.2 CARPET INSTALLATION

- A. Align the lines of carpet, as woven, using no fill strips less than 12" wide. Lay all carpet in the same direction unless specifically directed otherwise by the Owner.
- B. Locate seams only where specifically approved by the Owner. Locate seams to the maximum extent possible out of the way of traffic. Fabricate seams by the compression method, using a butt joint and properly chemically weld, bead and seal.
- C. After installation: When installation is completed, clean up all dirt and debris, clean carpet of all spots. Remove all loose threads with scissors. Vacuum carpet.
- D. Where any Tandus | Centivs Flooring is installed, specifically peel-and-stick 6' wide rolls of Color Spectrum carpet, the contractor shall be responsible for contacting the following for a post-installation inspection by the carpet manufacturer:
- E. Tandus Flooring
- F. Mike Milhous, LEED AP e-mail: mmilhous@tandus.com
- G. or Lane, Loomis CA 95650
- H. Cell: (916) 806-8502 Fax: (916) 765-2839

END OF SECTION 096816

SECTION 098433 - SOUND-ABSORBING WALL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes shop-fabricated, acoustical panel units tested for acoustical performance, including the following:
 - 1. Sound-absorbing wall panels.
- B. Related Requirements:

1.3 DEFINITIONS

- A. NRC: Noise Reduction Coefficient.
- B. SAA: Sound Absorption Average.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include fabric facing, panel edge, core material, and mounting indicated.
- B. Shop Drawings: For unit assembly and installation.
 - 1. Include plans, elevations, sections, and mounting devices and details.
 - 2. Include details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge profile and core materials.
 - 3. Include details at cutouts and penetrations for other work.
 - 4. Include direction of fabric weave and pattern matching.
- C. Samples for Verification: For the following products:
 - 1. Fabric: Full-width by approximately 36-inch- (900-mm-) long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
 - 2. Panel Edge: 12-inch- (300-mm-) long Sample(s) showing each edge profile, corner, and finish.
 - 3. Core Material: 12-inch- (300-mm-) square Sample at corner.
 - 4. Mounting Devices: Full-size Samples.
 - 5. Assembled Panels: Approximately 36 by 36 inches (900 by 900 mm), including joints and mounting methods.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Electrical outlets, switches, and thermostats.
 - 2. Items penetrating or covered by units including the following:
 - a. Alarms.
 - 3. Show operation of hinged and sliding components covered by or adjacent to units.
- B. Product Certificates: For each type of unit.
- C. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of unit to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal instructions.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Comply with fabric and unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not install units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Lighting: Do not install units until a permanent level of lighting is provided on surfaces to receive the units.
- C. Air-Quality Limitations: Protect units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.
- D. Field Measurements: Verify unit locations and actual dimensions of openings and penetrations by field measurements before fabrication, and indicate them on Shop Drawings.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace units and components that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to the following:
 - a. Acoustical performance.

- b. Fabric sagging, distorting, or releasing from panel edge.
 - c. Warping of core.
- 2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain wall units specified in this Section from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 - 2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

2.3 SOUND-ABSORBING WALL UNITS

- A. Sound-Absorbing Wall Panel: Manufacturer's standard panel construction consisting of facing material stretched over front face of edge-framed core and bonded or attached to edges and back of frame.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Acoustical Solutions.
 - b. Armstrong Ceiling & Wall Solutions.
 - c. Decoustics; CertainTeed Architectural Products; a Saint Gobain company.
 - d. MBI Products Company, Inc.
 - e. Wenger Corporation.
 - 2. Panel Shape: Rectangular.
 - 3. Mounting: Back mounted with manufacturer's "Z" style metal clips or bar hangers, secured to substrate.
 - 4. Core: Manufacturer's standard.
 - a. Core-Face Layer: Manufacturer's standard.
 - 5. Edge Construction: Manufacturer's standard.
 - 6. Edge Profile: Chamfered (beveled).
 - 7. Corner Detail in Elevation: Square with continuous edge profile indicated.
 - 8. Facing Material: As selected by Architect from Manufacturers full range

9. Acoustical Performance: Sound absorption NRC of 1.10 according to ASTM C423 for mounting according to ASTM E795.
10. Nominal Core Thickness: 2 inches (51 mm).
11. Panel Width: As indicated on Drawings.
12. Panel Height: As indicated on Drawings.

2.4 MATERIALS

- A. Core Materials:
 1. Glass-Fiber Board: ASTM C612; of type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft. (96 to 112 kg/cu. m), unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
- B. Facing Material: Fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range.
- C. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:
 1. Metal Clips or Bar Hangers: Manufacturer's standard two-part metal "Z" clips, with one part of each clip mechanically attached to back of unit and the other part to substrate, designed to permit unit removal.

2.5 FABRICATION

- A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
- B. Edge Hardening: For glass-fiber board cores, chemically harden core edges and areas of core where mounting devices are attached.
- C. Core-Face Layer: Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.
- D. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
 1. Square Corners: Tailor corners.
 2. Radius and Other Nonsquare Corners: Attach facing material so there are no seams or gathering of material.
 3. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.
- E. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch (1.6 mm) for the following:
 1. Thickness.
 2. Edge straightness.
 3. Overall length and width.

4. Squareness from corner to corner.
5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install units in locations indicated. Unless otherwise indicated, install units with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
- C. Align fabric pattern and grain [with adjacent units] [as indicated on Drawings].

3.3 INSTALLATION TOLERANCES

- A. Variation from Plumb and Level: Plus or minus 1/16 inch (1.6 mm) in 48 inches (1200 mm), noncumulative.

3.4 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 098433

SECTION 099113 - EXTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and the application of paint systems on the following exterior substrates:
 - 1. Galvanized metal.
- B. Do not paint or finish the following items:
 - 1. Items fully factory-finished unless specifically indicated. Materials and products having factory-applied primers are not considered factory finished.
 - 2. Items indicated to receive other finishes
 - 3. Items indicated to remain unfinished
 - 4. Fire rating labels, equipment serial number and capacity labels, and operating parts of equipment.
 - 5. Non-metallic roofing and flashing.
 - 6. Natural stones.
 - 7. Floors, unless specifically so indicated.
 - 8. Glass.
 - 9. Concealed pipes, ducts, and conduits.
- C. Related Requirements:
 - 1. Section 099123 "Interior Painting" for surface preparation and the application of paint systems on interior substrates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Indicate VOC content.
- B. Samples for Initial Selection: For each type of topcoat product.
- C. Samples for Verification: For each type of paint system and each color and gloss of topcoat.

1. Submit 4 paper “draw down” samples illustrating range of colors available for each finishing product specified.
2. Submit Samples on rigid backing, 8 inches square.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.
5. Samples shall be submitted at least 30 days prior to the start of painting work. Label and identify each sample as to location and application. Upon submittal of color samples, minor variations or changes in color selection may be requested by the Architect and new samples ordered until final color approval

D. Product List: For each product indicated, include the following:

1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
2. Indicate VOC content.
3. Product Characteristics.
4. Surface Preparation instructions and recommendations.
5. Primer Requirements and finish specification.
6. Storage and handling requirements and recommendations.
7. Application methods.
8. Cleanup information.
9. Manufacturer’s name, product name and/or catalog number, and general product category.
10. MPI product number
11. If proposal of substitutions is allowed under submittal procedures, explanation of all substitutions proposed.
 - a. Provide product equivalency table.

E. Product Certification: By manufacturer that all paints and coatings comply with VOC limits specified.

F. Product Certification: By manufacturer that all paints and coatings to not contain any of the prohibited chemicals specified; GreenSeal GS-11 certification is not required but if provided shall constitute acceptable certification.

1.4 CLOSEOUT SUBMITTALS

- A. Coating Maintenance Manual: Provide coating maintenance manual including area summary with finish schedule, area detail designating location where each product/color/finish was used, product data pages, material safety data sheets, care and cleaning instructions, touch-up procedures, and color samples of each color and finish used.**

1.5 MAINTENANCE MATERIAL SUBMITTAL

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.**

1. Paint: 1 gallon of each material and color applied.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum 10 years documented experience.
- B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum 5 years experience.
- C. Standards: Preparation, application and workmanship shall be in accordance with manufacturer's recommendations and applicable provisions of the following:
 1. Painting and Decorating Contractors of America (PDCA) "Painting Specification Manual and Standards"
 - a. PDCA P1-13: Touch-Up Painting and Damage Repair: Financial Responsibility and Definition of a Properly Painted Surface.
 - b. PDCA P2-13: Third Party Inspections: Qualifications, Responsibilities, and Procedures.
 - c. PDCA P3-13: Designation of Paint Color
 - d. PDCA P4-13: Responsibility for Inspection and Acceptance of Surfaces Prior to Painting and Decorating
 - e. PDCA P5-13: Benchmark Sample Procedures for Paint and Other Decorative Coating Systems.
 2. Gypsum Association ' CGA-232-04: "Painting New Gypsum Board".
- D. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft.
 - b. Other Items: Architect will designate items or areas required.
 2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Lead containing materials of any type are unacceptable. All products shall be certified completely free of lead containing materials and submitted to WCSD for testing prior to any application.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Handling: Deliver products to Project site in an undamaged condition in manufacturer's original sealed containers, complete with labels and instructions for handling, storing, unpacking, protecting, and installing. Packaging shall bear the manufacturer's label with the following information:
 - 1. Product name and type (description).
 - 2. Batch date.
 - 3. Color number.
 - 4. VOC content.
 - 5. Environmental handling requirements.
 - 6. Surface preparation requirements.
 - 7. Application instructions.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
 - 1. Maintain containers in clean condition, free of foreign materials and residue.
 - 2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide [Sherwin-Williams Company \(The\)](#); products indicated or comparable product from one of the following:
 - 1. Benjamin Moore Corporation.
 - 2. PPG Architectural Finishes, Inc.
 - 3. Dunn-Edwards Corporation
- B. Comparable Products: Comparable products of approved manufacturers will be considered in accordance with Section 016000 "Product Requirements," and the following:
 - 1. Products are approved by manufacturer in writing for application specified.
 - 2. Products meet performance and physical characteristics of basis of design product including published ratio of solids by volume, plus or minus two percent.

- C. Source Limitations: Obtain paint materials from single source from single listed manufacturer.
 - 1. Manufacturer's designations listed on a separate color schedule are for color reference only and do not indicate prior approval.

2.2 PAINT, GENERAL

- A. Material Compatibility:
 - 1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.
- B. VOC Content: For field applications, provide paints and coatings that complies with VOC content limits of authorities having jurisdiction.
- C. Colors: As indicated in a color schedule.

2.3 SOURCE QUALITY CONTROL

- A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
 - 1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
 - 2. Testing agency will perform tests for compliance with product requirements.
 - 3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers. Where acceptability of substrate conditions is in question, apply samples and perform in-site testing to verify compatibility, adhesion, and film integrity of new paint application.
 - 1. Report, in writing, conditions that may affect application, appearance, or performance of paint.

B. Substrate Conditions:

1. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - a. Concrete: 12 percent.
 - b. Fiber-Cement Board: 12 percent.
 - c. Masonry (Clay and CMU): 12 percent.
 - d. Wood: 15 percent.
 - e. Portland Cement Plaster: 12 percent.
 - f. Gypsum Board: 12 percent.
2. Portland Cement Plaster Substrates: Verify that plaster is fully cured.
3. Exterior Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

- C. Proceed with coating application only after unsatisfactory conditions have been corrected; application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "Data Pages" applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- F. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer.
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- I. Aluminum Substrates: Remove loose surface oxidation.
- J. Wood Substrates:
 - 1. Scrape and clean knots. Before applying primer, apply coat of knot sealer recommended in writing by topcoat manufacturer for exterior use in paint system indicated.
 - 2. Sand surfaces that will be exposed to view, and dust off.
 - 3. Prime edges, ends, faces, undersides, and backsides of wood.
 - 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- K. Plastic Trim Fabrication Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions and recommendations in "MPI Manual."
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed items with prime coat only.
 - 3. Paint both sides and edges of exterior doors and entire exposed surface of exterior door frames.
 - 4. Paint entire exposed surface of window frames and sashes.
 - 5. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 6. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. Tint undercoats same color as topcoat, but tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
 - 1. Paint the following work where exposed to view:
 - a. Equipment, including panelboards.

- b. Uninsulated metal piping.
- c. Uninsulated plastic piping.
- d. Pipe hangers and supports.
- e. Metal conduit.
- f. Plastic conduit.
- g. Tanks that do not have factory-applied final finishes.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
 - 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 - 2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 EXTERIOR PAINTING SCHEDULE

- A. Ferrous Metal Fabrications:
 - 1. Waterbased/Alkyd Urethane System: over shop coat primer. Exposed Structural Steel, Lintels, Pipe Ballards.
 - a. Prime Coat: Primer, rust-inhibitive, water based: MPI 107
 - 1) S-W Pro Industrial Pro-Cryl Universal Primer, B66-310 Series, at 5.0 to 10 mils wet, 2.0 to 4.0 mils dry.
 - b. Intermediate Coat: Water-based acrylic-alkyd, exterior, matching topcoat.
 - c. Topcoat: Water-based alkyd-urethane, semi-gloss, exterior: MPI 169
 - 1) S-W Pro Industrial Waterbased Alkyd Urethane Semi-Gloss, B53-1150 Series, at 4.0 mils wet, 1.4 mils dry, per coat.
- B. Galvanized and Zinc Rich Metal Fabrications:
 - 1. Waterbased Light Industrial Acrylic System: over shop coat primer. Standard system for Hollow Metal Doors & Frames and miscellaneous flashing.
 - a. Prime Coat: Primer, rust-inhibitive, water based: MPI 107

- 1) S-W Pro Industrial Pro-Cryl Universal Primer, B66-310 Series, at 5.0 to 10 mils wet, 2.0 to 4.0 mils dry.
- b. Intermediate Coat: Water-based Acrylic, exterior, matching topcoat.
- c. Topcoat: Water-based Acrylic, semi-gloss, exterior: MPI 163
 - 1) S-W Pro Industrial Acrylic Semi-Gloss Coating, B66-650 Series, at 2.5 to 4.0 mils dry, per coat.

END OF SECTION 099113

SECTION 099123 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and the application of paint systems on the following interior substrates:
 - 1. Concrete.
 - 2. Concrete masonry units (CMU).
 - 3. Galvanized metal.
 - 4. Aluminum (not anodized or otherwise coated).
 - 5. Gypsum board.
- B. Do not paint or finish the following items:
 - 1. Items fully factory-finished unless specifically indicated. Materials and products having factory-applied primers are not considered factory finished.
 - 2. Items indicated to receive other finishes
 - 3. Items indicated to remain unfinished
 - 4. Fire rating labels, equipment serial number and capacity labels, and operating parts of equipment.
 - 5. Non-metallic roofing and flashing.
 - 6. Natural stones.
 - 7. Floors, unless specifically so indicated.
 - 8. Glass.
 - 9. Fully Concealed pipes, ducts, and conduits.
- C. Related Requirements:
 - 1. Section 099113 "Exterior Painting" for surface preparation and the application of paint systems on exterior substrates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Indicate VOC content.
- B. Samples for Initial Selection: For each type of topcoat product.
- C. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
 - 1. Submit 4 paper "draw down" samples illustrating range of colors available for each finishing product specified.
 - 2. Submit Samples on rigid backing, 8 inches square.

3. Label each coat of each Sample.
 4. Label each Sample for location and application area.
 5. Label each Sample for location and application area.
 6. Samples shall be submitted at least 30 days prior to the start of painting work. Label and identify each sample as to location and application. Upon submittal of color samples, minor variations or changes in color selection may be requested by the Architect and new samples ordered until final color approval
- D. Product List: For each product indicated, include the following:
1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
 2. Indicate VOC content.
 3. Product Characteristics.
 4. Surface Preparation instructions and recommendations.
 5. Primer Requirements and finish specification.
 6. Storage and handling requirements and recommendations.
 7. Application methods.
 8. Cleanup information.
 9. Manufacturer's name, product name and/or catalog number, and general product category.
 10. MPI product number
 11. If proposal of substitutions is allowed under submittal procedures, explanation of all substitutions proposed.
 - a. Provide product equivalency table.
- 1.4 CLOSEOUT SUBMITTALS
1. Coating Maintenance Manual: Provide coating maintenance manual including area summary with finish schedule, area detail designating location where each product/color/finish was used, product data pages, material safety data sheets, care and cleaning instructions, touch-up procedures, and color samples of each color and finish used.
- 1.5 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Paint: 1 gallon of each material and color applied.
- 1.6 QUALITY ASSURANCE
- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified, with minimum 10 years documented experience.
 - B. Applicator Qualifications: Company specializing in performing the type of work specified with minimum 5 years experience.
 - C. Standards: Preparation, application and workmanship shall be in accordance with manufacturer's recommendations and applicable provisions of the following:
 1. Painting and Decorating Contractors of America (PDCA) "Painting Specification Manual and Standards"

- a. PDCA P1-13: Touch-Up Painting and Damage Repair: Financial Responsibility and Definition of a Properly Painted Surface.
 - b. PDCA P2-13: Third Party Inspections: Qualifications, Responsibilities, and Procedures.
 - c. PDCA P3-13: Designation of Paint Color
 - d. PDCA P4-13: Responsibility for Inspection and Acceptance of Surfaces Prior to Painting and Decorating
 - e. PDCA P5-13: Benchmark Sample Procedures for Paint and Other Decorative Coating Systems.
2. Gypsum Association ‘ CGA-232-04: “Painting New Gypsum Board”.
- D. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft.
 - b. Other Items: Architect will designate items or areas required.
 2. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Lead containing materials of any time are unacceptable. All products shall be certified completely free of lead containing materials and submitted to WCSD for testing prior to any application.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Handling: Deliver products to Project site in an undamaged condition in manufacturer's original sealed containers, complete with labels and instructions for handling, storing, unpacking, protecting, and installing. Packaging shall bear the manufacturer's label with the following information:
1. Product name and type (description).
 2. Batch date.
 3. Color number.
 4. VOC content.
 5. Environmental handling requirements.
 6. Surface preparation requirements.
 7. Application instructions.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
- C. Lead Paint: It is not expected that lead paint will be encountered in the Work.
 - 1. If suspected lead paint is encountered, do not disturb; immediately notify Architect and Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide [Sherwin-Williams Company \(The\)](#); products indicated or comparable products from one of the following:
 - 1. Benjamin Moore Corporation.
 - 2. PPG Architectural Finishes, Inc.
 - 3. Dunn-Edwards Corporation
- B. Comparable Products: Comparable products of approved manufacturers will be considered in accordance with Section 016000 "Product Requirements," and the following:
 - 1. Products are approved by manufacturer in writing for application specified.
 - 2. Products meet performance and physical characteristics of basis of design product including published ratio of solids by volume, plus or minus two percent.
- C. Source Limitations: Obtain paint materials from single source from single listed manufacturer.
 - 1. Manufacturer's designations listed on a separate color schedule are for color reference only and do not indicate prior approval.

2.2 PAINT, GENERAL

- A. Material Compatibility:
 - 1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.
- B. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall provide materials that comply with VOC limits of authorities having jurisdiction and for interior paints and coatings applied at Project site, the following VOC limits exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Flat Paints and Coatings: 50 g/L.
 - 2. Nonflat Paints and Coatings: 100 g/L.

3. Dry-Fog Coatings: 150 g/L.
4. Primers, Sealers, and Undercoaters: 100 g/L.
5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
6. Zinc-Rich Industrial maintenance Primers: 340 g/L.
7. Pretreatment Wash Primers: 420 g/L.
8. Floor Coatings: 100 g/L.
9. Wood Coatings: 275 g/L.

C. Colors: As indicated in a color schedule.

2.3 SOURCE QUALITY CONTROL

- A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
 1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
 2. Testing agency will perform tests for compliance with product requirements.
 3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers. Where acceptability of substrate conditions is in question, apply samples and perform in-situ testing to verify compatibility, adhesion, and film integrity of new paint application.
 1. Report, in writing, conditions that may affect application, appearance, or performance of paint.
- B. Substrate Conditions:
 1. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - a. Concrete: 12 percent.
 - b. Masonry (Clay and CMU): 12 percent.
 - c. Wood: 15 percent.
 - d. Gypsum Board: 12 percent.
 - e. Plaster: 12 percent.
 2. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
 3. Plaster Substrates: Verify that plaster is fully cured.
 4. Spray-Textured Ceiling Substrates: Verify that surfaces are dry.

- C. Proceed with coating application only after unsatisfactory conditions have been corrected; application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "Data Pages" applicable to substrates indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
 - 1. Concrete Floors: Remove oil, dust, grease, dirt, and other foreign materials. Comply with SSPC-SP-13/NACE 6 or ICRI 03732.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceed that permitted in manufacturer's written instructions.
- F. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer.
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- I. Aluminum Substrates: Remove loose surface oxidation.
- J. Wood Substrates:
 - 1. Scrape and clean knots, and apply coat of knot sealer before applying primer.
 - 2. Sand surfaces that will be exposed to view, and dust off.
 - 3. Prime edges, ends, faces, undersides, and backsides of wood.
 - 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.

- K. Cotton or Canvas Insulation Covering Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - 2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 - 3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 - 4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work (Building A):
 - 1. Paint the following work where exposed in occupied spaces:
 - a. Equipment, including panelboards.
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.
 - g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
 - h. Other items as directed by Architect.
 - 2. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
 - 1. Contractor shall touch up and restore painted surfaces damaged by testing.

2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 INTERIOR PAINTING SCHEDULE

- A. Concrete Substrates, Nontraffic Surfaces:
 1. Water-Based Light Industrial Coating System:
 - a. Prime Coat: Primer sealer, latex, interior: MPI 3
 - 1) S-W Loxon Concrete & Masonry Primer Sealer, LX02W50, at 8.0 mils wet, 3.2 mils dry.
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based, eggshell where indicated on drawings: MPI 151
 - 1) S-W Pro Industrial Pre-Catalyzed Water Based Epoxy, K45-1151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss where indicated on drawings: MPI 153
 - 1) S-W Pro Industrial Pre-Catalyzed Water Based Epoxy, K46-1151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.
- B. Concrete Substrates, Traffic Surfaces:
 1. Concrete Stain System, MPI INT 3.2E:
 - a. First Coat: Stain, interior, for concrete floors, matching topcoat.
 - b. Topcoat: Stain, interior, for concrete floors, MPI #58.
 - 1) H & C Infusion
 - c. Provide Sealer, MPI INT 3.2G
 2. Water-Based Concrete Floor Sealer System, MPI INT 3.2G:
 - a. First Coat: Sealer, water based, for concrete floors, matching topcoat.
 - b. Topcoat: Sealer, water based, for concrete floors, MPI #99.
 - 1) H & C ClariShield Water-Based Wet Look Sealer
- C. CMU Substrates:
 1. Water-Based Light Industrial Coating System:

- a. Block Filler: Block filler, latex, interior/exterior: MPI 3
 - 1) S-W PrepRite Block Filler, B25W25, at 75-125 sq. ft. per gal.
- b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
- c. Topcoat: Light industrial coating, interior, water based, eggshell where indicated on drawings: MPI 151
 - 1) S-W Pro Industrial Pre-Catalyzed Water Based Epoxy, K45-1151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.
- d. Topcoat: Light industrial coating, interior, water based, semi-gloss where indicated on drawings: MPI 153
 - 1) S-W Pro Industrial Pre-Catalyzed Water Based Epoxy, K46-1151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.
- D. Metal Substrates (Aluminum, Steel, Galvanized Steel):
 - 1. Waterbased Acrylic System: Standard system for doors & frames, misc metals.
 - a. Prime Coat: Primer, rust-inhibitive, water based: MPI 107
 - 1) S-W Pro Industrial Pro-Cryl Universal Primer, B66-310 Series, at 5.0 to 10 mils wet, 2.0 to 4.0 mils dry.
 - b. Intermediate Coat: Water-based Acrylic, interior, matching topcoat.
 - c. Topcoat: Water-based Acrylic, semi-gloss, interior: MPI 141
 - 1) S-W Pro Industrial Acrylic Semi-Gloss Coating, B66-650 Series, at 2.5 to 4.0 mils dry, per coat.
 - 2. Water-Based Dry-Fall System: Exposed Ceilings Exposed Ceiling Areas overhead metals
 - a. Top Coat: Dry-fall latex, flat: MPI 118
 - 1) S-W Pro Industrial Waterborne Acrylic Dryfall Flat, B42-181 Series, at 6.0 mils wet, 1.5 mils dry.
- E. Gypsum Board Substrates:
 - 1. Water-Based Light Industrial Coating System:
 - a. Prime Coat: Primer sealer, latex, interior: MPI 149
 - 1) S-W ProMar 200 Zero VOC Latex Primer, B28W2600, at 4.0 wet, 1.0 mils dry.
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based, eggshell where indicated on drawings: MPI 151
 - 1) S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy, K45-1151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss where indicated on drawings: MPI 153
 - 1) S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy, K46-1151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.

END OF SECTION 099123

SECTION 101100 - VISUAL DISPLAY UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Visual display board assemblies.

1.2 PREINSTALLATION REQUIREMENTS

- A. Locations:
 - 1. Confirm locations of all visual display boards with owner prior to installation.

1.3 ACTION SUBMITTALS

- A. Product Data:
 - 1. Visual display board assemblies.
- B. Product Data Submittals: For each product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.
- C. Product Schedule: For visual display units. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Sample Warranties: For manufacturer's special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For visual display units to include in maintenance manuals.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.8 WARRANTY

- A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Surfaces lose original writing and erasing qualities.
 - b. Surfaces exhibit crazing, cracking, or flaking.
 - 2. Warranty Period:
 - a. Life of the building.

PART 2 - PRODUCTS

2.1 VISUAL DISPLAY BOARD ASSEMBLIES

- A. Visual Display Board Assemblies:
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide MooreCo (formerly Best-Rite Manufacturing) or comparable product by one of the following:
 - a. ASI Visual Display Products.
 - b. Claridge Products and Equipment, Inc.
- B. Visual Display Board Assembly: F110
 - 1. MooreCo 202AH-25
 - 2. Assembly: Factory fabricated markerboard.
 - 3. Corners: Square.
 - 4. Width: 96 inches.
 - 5. Height: 48 inches.
 - 6. Mounting Method: Direct to wall.
- C. Visual Display Board Assembly: F111
 - 1. MooreCo Combination Board Type E: 404-60-PM-X2
 - 2. Assembly: Factory fabricated markerboard and tackboard.
 - 3. Corners: Square.
 - 4. Width: 48 inches.
 - 5. Height: 48 inches.
 - 6. Mounting Method: Direct to wall.
- D. Visual Display Board Assembly: F112
 - 1. MooreCo 302AG
 - 2. Assembly: Factory fabricated tackboard.
 - 3. Corners: Square.
 - 4. Width: 72 inches.
 - 5. Height: 48 inches.
 - 6. Mounting Method: Direct to wall.
- E. Visual Display Board Assembly: F113
 - 1. MooreCo 202AG-25
 - 2. Assembly: Factory fabricated markerboard.

3. Corners: Square.
 4. Width: 72 inches.
 5. Height: 48 inches.
 6. Mounting Method: Direct to wall.
- F. Visual Display Board Assembly: F123
1. MooreCo 202AD-25
 2. Assembly: Factory fabricated markerboard.
 3. Corners: Square.
 4. Width: 48 inches.
 5. Height: 48 inches.
 6. Mounting Method: Direct to wall.
- G. Markerboard Panel: Porcelain-enamel-faced markerboard panel on core indicated.
1. Color: White.
- H. Tackboard Panel: Natural-cork tackboard panel on core indicated.
1. Color and Pattern: As selected by Architect from manufacturers full range.
- I. Aluminum Frames and Trim: Fabricated from not less than 0.062-inch- (1.57-mm-) thick, extruded aluminum; standard size and shape.
1. Aluminum Finish: Clear anodic finish.
- J. Combination Assemblies: Provide manufacturer's standard exposed trim between abutting sections of visual display panels.
- K. Chalktray: Manufacturer's standard; continuous.
1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.
 2. Solid Type: Extruded aluminum with ribbed section and smoothly curved exposed ends.
- L. Display Rail: Manufacturer's standard, extruded-aluminum display rail with plastic-impregnated-cork insert, end stops, designed to hold accessories.
1. Size: 1 inch (25 mm) high by full length of visual display unit.
 2. Tackboard Insert Color: As selected by Architect from manufacturers full range.
 3. Aluminum Color: Match finish of visual display assembly trim.

2.2 MARKERBOARD PANELS

- A. Porcelain-Enamel Markerboard Panels: Balanced, high-pressure, factory-laminated markerboard assembly of three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with high-gloss finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.
1. Face Sheet Thickness: 0.021 inch (0.53 mm) uncoated base metal thickness.
 2. Manufacturer's Standard Core: Minimum 1/4 inch (6 mm) thick, with manufacturer's standard moisture-barrier backing.
 3. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.

2.3 TACKBOARD PANELS

- A. Tackboard Panels:
 - 1. Facing:
 - a. 1/8-inch- (3-mm-) thick, natural cork.
 - 2. Core:
 - a. Manufacturer's standard.
 - b. 3/8-inch- (9.5-mm-) thick fiberboard.

2.4 MATERIALS

- A. Porcelain-Enamel Face Sheet: PEI-1002, with face sheet manufacturer's standard two- or three-coat process.
- B. Natural-Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish.
- C. Hardboard: ANSI A135.4, tempered.
- D. Particleboard: ANSI A208.1, Grade M-1.
- E. MDF: ANSI A208.2, Grade 130.
- F. Fiberboard: ASTM C208 cellulosic fiber insulating board.
- G. Extruded Aluminum: ASTM B221 (ASTM B221M), Alloy 6063.

2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA AMP 500 for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.

- B. Examine roughing-in for electrical power systems to verify actual locations of connections before installation of motorized, sliding visual display units.
- C. Examine walls and partitions for proper preparation and backing for visual display units.
- D. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
- B. Factory-Fabricated Visual Display Board Assemblies:
 - 1. Attach concealed clips, hangers, and grounds to wall surfaces and to visual display board assemblies with fasteners at not more than 16 inches (400 mm) o.c. Secure tops and bottoms of boards to walls.
- C. Visual Display Board Assembly Mounting Heights: Install visual display units at mounting heights indicated on Drawings, or if not indicated, at heights indicated below.
 - 1. Mounting Height: 36 inches (914 mm) above finished floor to top of chalktray.

3.3 CLEANING AND PROTECTION

- A. Clean visual display units in accordance with manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.
- B. Touch up factory-applied finishes to restore damaged or soiled areas.
- C. Cover and protect visual display units after installation and cleaning.

END OF SECTION 101100

SECTION 101400 – SIGNAGE

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. All graphics and signage for the Project
 - 1. Room and door signs.
 - 2. Interior directional and informational signs.
- B. Building identification signs.
- C. Plaques.

1.2 RELATED REQUIREMENTS

- A. Section 220553 - Identification for Plumbing Piping and Equipment.
- B. Section 260553 - Identification for Electrical Systems.

1.3 REFERENCE STANDARDS

- A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines; current edition.
- B. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.
- C. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.

1.4 MINIMUM SIGN REQUIREMENTS

- A. Permanent Rooms and Spaces:
 - 1. Tactile and Braille Characters, raised minimum 0.793 mm (1/32 in). Characters shall be accompanied by Grade 2 Braille.
 - 2. Type Styles: Characters shall be uppercase, Helvetica Medium, Helvetica Medium Condensed and Helvetica Regular.
 - 3. Character Height: Minimum 16 mm (5/8 in) high, Maximum 50 mm (2 in).
 - 4. Symbols (Pictograms): Equivalent written description shall be placed directly below symbol, outside of symbol's background field. Border dimensions of symbol background shall be minimum 150 mm (6 in) high.
 - 5. Finish and Contrast: Characters and background shall be eggshell, matte or other non-glare finish with adequate contrast with background.
 - 6. Mounting Location and Height: As shown in drawings, mounted on wall adjacent to the latch side of the door and to avoid door swing and protruding objects.
- B. Overhead Signs:

1. Type Styles: As shown. Characters shall have a width-to-height ratio between 3:5 and 1:1. Characters shall have a stroke width-to-height ratio of between 1:5 and 1:10.
2. Character Height: minimum 75 mm (3 in) high for overhead signs. As shown, for directional signs.
3. Finish and Contrast: Same as for signs of permanent rooms and spaces.
4. Mounting Location and Height: As shown in Drawings.

1.5 SUBMITTALS

- A. See Section 013000 - Submittal Requirements, for submittal procedures.
- B. Product Data: Manufacturer's printed product literature for each type of sign, indicating sign styles, font, foreground and background colors, locations, overall dimensions of each sign.
- C. Signage Schedule: Provide information sufficient to completely define each sign for fabrication, including room number, room name, other text to be applied, sign and letter sizes, fonts, and colors.
 1. When room numbers to appear on signs differ from those on drawings, include the drawing room number on schedule.
 2. When content of signs is indicated to be determined later, request such information from Owner through Architect at least 2 months prior to start of fabrication; upon request, submit preliminary schedule.
 3. Submit for approval by Owner through Architect prior to fabrication.
- D. Shop Drawings: Show fabrication and installation details for signs.
 1. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
 2. Provide message list, typestyles, graphic elements, including tactile characters and Braille, and layout for each sign.
- E. Samples: Submit two samples of each type of sign, of size similar to that required for project, illustrating sign style, font, and method of attachment.
- F. Selection Samples: Where colors are not specified, submit two sets of color selection charts or chips.
- G. Verification Samples: Submit samples showing colors specified.
- H. Manufacturer's Installation Instructions: Include installation templates and attachment devices.
- I. Closeout Submittals:
 1. Submit operation and maintenance data for installed products, including precautions against harmful cleaning materials and methods.
 2. Submit warranty documents specified herein.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum 10 years of documented experience.
- B. Installer Qualifications: An employer of workers trained and approved by manufacturer.

1.7 COORDINATION

- A. Coordinate placement of anchorage devices with templates for installing signs.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Package signs as required to prevent damage before installation.
- B. Package room and door signs in sequential order of installation, labeled by floor or building.
- C. Store tape adhesive at normal room temperature.

1.9 FIELD CONDITIONS

- A. Do not install tape adhesive when ambient temperature is lower than recommended by manufacturer.
- B. Maintain this minimum temperature during and after installation of signs.

1.10 WARRANTY

- A. Manufacturer's Warranty: Submit manufacturer's standard warranty document executed by authorized company official.
 - 1. Warranty Period: One (1) year from Substantial Completion date.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Signs of type, size and design shown on the drawings and as specified.
- B. Signs complete with lettering, framing and related components for a complete installation.
- C. Provide graphics items as completed units produced by a single manufacturer, including necessary mounting accessories, fittings and fastenings.
- D. Do not scale drawings for dimensions. Contractor to verify and be responsible for all dimensions and conditions shown by these drawings. Resident Engineer to be notified of any discrepancy in drawing, in field directions or conditions, and/or of any changes required for all such construction details.

- E. The Sign Contractor, by commencing work of this section, assumes overall responsibility, as part of his warranty of work, to assure that assemblies, components and parts shown or required within the work of the section, comply with the Contract Documents. The Contractor shall further warrant: That all components, specified or required to satisfactorily complete the installation are compatible with each other and with conditions of installations.

2.2 SIGNAGE APPLICATIONS

- A. Accessibility Compliance: Signs are required to comply with ADA Standards and ICC A117.1 and applicable building codes, unless otherwise indicated; in the event of conflicting requirements, comply with the most comprehensive and specific requirements.
- B. Room and Door Signs: Provide a sign for every doorway, whether it has a door or not, not including corridors, lobbies, and similar open areas.
 - 1. Sign Type: Flat signs with laminated panel media as specified.
 - 2. Provide "tactile" signage, with letters raised minimum 1/32 inch and Grade II braille.
 - 3. Character Height: As indicated on Drawings.
- C. Interior Directional and Informational Signs:
 - 1. Sign Type: Same as room and door signs.
 - 2. Sizes: As indicated on drawings.
 - 3. Wording of signs is scheduled on drawings.
 - 4. Where suspended, ceiling mounted, or projecting from wall signs are indicated, provide two-sided signs with same information on both sides.
- D. Building Identification Signs:
 - 1. Use individual metal letters.
 - 2. Mount on outside wall in location indicated on drawings.
- E. Fire Extinguisher Cabinets: Cabinets and enclosed compartments used to house portable fire extinguishers shall be clearly marked with the words FIRE EXTINGUISHER in letters at least 2 inches (51 mm) high.
 - 1. Identify extinguishers and cabinets with the words "FIRE EXTINGUISHER" in red letter decals applied to wall surface
- F. Traffic Signs: To match campus standards; locate where indicated on drawings.

2.3 PANEL SIGNS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products to be incorporated into the Work include the following:
 - 1. Approved Manufacturers:
 - a. ACE Sign Systems, Inc.
 - b. APCO Graphics, Inc.
 - c. ASI-Modulex, Inc.
 - d. Best Sign Systems Inc.
 - e. Nelson-Harkins Industries.
 - 2. Substitutions: Refer to Section 016310 - Substitutions.

- B. Laminated Interior Signs: Contrasting Melamine plastic laminate.
 - 1. Surface Finish: Mat.
 - 2. Edge Condition: Beveled.
 - 3. Corner Condition: Square.
 - 4. Thickness: ¼ inch.
- C. Tactile and Braille Sign: Manufacturer's standard process for producing text and symbols complying with ADA-ABA Accessibility Guidelines and with ICC/ANSI A117.1.
 - 1. Text shall be accompanied by Grade 2 Braille. Produce precisely formed characters with square-cut edges free from burrs and cut marks; Braille dots with domed Or rounded shape.
 - a. Panel Material: Opaque acrylic sheet.
 - b. Raised-Copy Thickness: Not less than 1/32 inch.

2.4 DIMENSIONAL LETTERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Series LF as manufactured by ASI Modulex, Inc. or a comparable product by one of the following:
 - 1. Approved Manufacturers:
 - a. ACE Sign Systems, Inc.
 - b. Advance Corporation; Braille-Tac Division.
 - c. A. R. K. Ramos.
 - d. Bunting Graphics, Inc.
 - e. Charleston Industries, Inc.
 - f. Gemini Incorporated.
 - g. Grimco, Inc.
 - h. Innerface Sign Systems, Inc.
 - i. Metal Arts; Div. of L&H Mfg. Co.
 - j. Mills Manufacturing Company.
 - k. Mohawk Sign Systems.
 - l. Nelson-Harkins Industries.
 - m. Signature Signs, Incorporated.
 - 2. Substitutions: Refer to Section 016310 - Substitutions.
- B. Fabricated Channel Characters: Form exposed faces and sides of characters to produce surfaces free from warp and distortion. Include internal bracing for stability and attachment of mounting accessories. Comply with the following requirements:
 - 1. Aluminum Sheet: Not less than 0.125 inch thick for face and 0.125 inch thick for returns.
 - a. Finish: Brushed aluminum.
 - b. Font: As indicated on Drawings.
- C. Exterior Signage: As indicated on drawings.

2.5 ACCESSORIES

- A. Anchors and Inserts: Provide nonferrous-metal or hot-dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or lead expansion-bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

- B. Concealed Screws: Stainless steel, galvanized steel, chrome plated, or other non-corroding metal.
- C. Exposed Screws: Stainless steel.
- D. Tape Adhesive: Double sided tape, permanent adhesive.

2.6 FABRICATION

- A. General Provide manufacturer's standard signs of configurations indicated.
 - 1. Welded Connections: Comply with AWS standards for recommended practices in shop welding. Provide welds behind finished surfaces without distortion or discoloration of exposed side. Clean exposed welded surfaces of welding flux and dress exposed and contact surfaces.
 - 2. Mill joints to tight, hairline fit. Form joints exposed to weather to exclude water penetration.
 - 3. Preassemble signs in the shop to greatest extent possible. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in location not exposed to view after final assembly.
 - 4. Conceal fasteners if possible; otherwise, locate fasteners where they will be inconspicuous.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Verify that items, including anchor inserts, and electrical power are sized and located to accommodate signs.
- C. Proceed with installation only after unsatisfactory conditions have been corrected
- D. Verify that substrate surfaces are ready to receive work.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install neatly, with horizontal edges level.
- C. Locate signs and mount at heights indicated on drawings and in accordance with ADA Standards and ICC A117.1.
- D. Protect from damage until Date of Substantial Completion; repair or replace damaged items.
- E. Wall mount plaques shall be installed straight, level and true to the surface of the mounting area. The plaque shall be mounted in accordance with manufacturer's specification with concealed fasteners for the type of wall surface that the plaque is

being mounted. Plaques shall be mounted so that the center of the plaque is located in five (5) feet above the finish grade or floor.

3.3 CLEANING AND PROTECTION

- A. After installation, clean soiled sign surfaces per manufacturer's written instructions. Protect signs from damage until acceptance by Owner.

END OF SECTION 101400

SECTION 102113.17 – PHENOLIC TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Phenolic toilet and shower compartments.
- B. Urinal and vestibule screens.

1.2 RELATED REQUIREMENTS

- A. Section 055000 - Metal Fabrications: Concealed steel support members. Sheet metal backing for wall mounted partitions.
- B. Section 102800 - Toilet Room Accessories.

1.3 REFERENCE STANDARDS

- A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.
- B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2020.
- C. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.
- D. ICC A117.1-2009 - Accessible and Usable Buildings and Facilities; 2009.
 - 1. as applicable to toilet compartments designated as accessible.
- E. NFPA 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth; 2019.

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate the work with placement of support framing and anchors in walls and ceilings.

1.5 SUBMITTALS

- A. See Section 013000 - Submittal Requirements, for submittal procedures.
- B. Product Data: Provide data on panel construction, hardware, and accessories. Include fabrication details, description of materials and finishes.
- C. Shop Drawings: Indicate partition plan, elevation views, dimensions, details of wall supports, door swings. Include choice of options with details.
- D. Samples: Submit two samples of partition panels, 6 x 6 inch in size illustrating panel finish, color, and sheen.

- E. Manufacturer's Installation Instructions: Indicate special procedures.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Approved manufacturer listed in this section, with minimum 10 years experience in the manufacture of toilet compartments.
- B. Installers Qualifications: Experienced Installer regularly engaged in installation of toilet compartments for minimum 58 years.
- C. Source Limitations: Obtain toilet compartment components and accessories from single manufacturer.
- D. Accessibility Requirements: Comply with requirements of ICC/ANSI 117.1, and with requirements of authorities having jurisdiction.
- E. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E84 by qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: 30.
 - 2. Smoke-Developed Index: 110.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver toilet compartments to site until building is enclosed and HVAC systems are in operation.
 - 1. Deliver toilet compartments in manufacturer's original packaging.
 - 2. Store in an upright condition.

1.8 WARRANTY

- A. Special Manufacturer's Warranty: Provide manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship during the following period after substantial completion:
 - 1. Phenolic Core Toilet Partitions: Against delamination: 3 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products of Bradley Corporation, Mills Metals Division, Menomonee Falls, WI 53051.
 - 1. Contact Information:
(800)272-3539, fax (262)251-5817; Email info@BradleyCorp.com;
Website: www.bradleycorp.com.
- B. Acceptable Manufacturers:
 - 1. All American Metal Corp - AAMCO: www.allamericanmetal.com/#sle.
 - 2. Partition Systems International of South Carolina; Phenolic Toilet Partitions: www.psisc.com/#sle.
 - 3. Or Approved Equal.

C. Substitutions: Section 016310 - Substitutions.

2.2 PHENOLIC TOILET / SHOWER COMPARTMENTS / URINAL SCREENS

A. Toilet Compartments: Factory fabricated doors, pilasters, and divider panels.

1. Basis of Design Product: Bradley, Mills Partitions, Model: Floor-to-Ceiling Braced, Series 700.
2. Phenolic Core: Compressed cellulose impregnated with phenolic resins. Provide smooth material, without creases or ripples.
3. Door, Panel, and Pilaster Construction, General: Form edges with 15 degree bevel without crown molding. Finish edges smooth.
4. Mounting: Floor-mounted, ceiling braced.
5. Color: As selected by Architect from manufacturer's full range of Standard colors.

B. Doors:

1. Thickness: 3/4 inch.
2. Width: Toilet Partition: 26 inch.; Shower Partition: 26 inch
3. Width for Handicapped Use: 36 inch, out-swinging doors with a minimum 32-inch(813-mm-) wide clear opening for compartments designated as accessible.
4. Height: 72 inch. ; 69 inch. tall doors at ADA stalls.

C. Panels:

1. Thickness: 1/2 inch.
2. Height: As indicated on Drawings.
3. Depth: As indicated on Drawings.
4. Mounting Height: 6" AFF; panels mounted 9" AFF for ADA stalls.

D. Pilasters:

1. Thickness: 3/4 inch.
2. Width: As required to fit space; minimum 3 inch.
3. Provide pilaster with mechanically fastened leveling bar reinforcement with zinc-plated jack bolt for leveling.

~~E. Shower Compartments: with doors; to match compartments.~~ **Shower Compartments: refer to other specification sections (framed walls with epoxy resinous coating on floors and full height walls**

- ~~1. Thickness: 1/2 inch.~~
- ~~2. Height: As indicated on Drawings.~~
- ~~3. Depth: As indicated on Drawings~~

F. Urinal Screens: without doors; to match compartments.

1. Wall hung with panel brackets:
 - a. Basis of Design Product: Bradley, Mills Partitions, Model No. 2.
2. Thickness: 1/2 inch.
3. Height: 48 inch.
4. Depth: As indicated on Drawings
5. Mounting:
 - a. Three cast stainless steel stirrup brackets.
 - b. Two-ear stainless steel or Aluminum continuous brackets.
6. Mounting Height: 18" AFF.

2.3 FABRICATION

- A. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

2.4 ACCESSORIES

- A. Headrail: Extruded anodized aluminum headrail with anti-grip profile. Provide clamps for attachment to pilaster and stainless steel brackets to secure to wall.
- B. Wall and Pilaster Brackets: Satin stainless steel; manufacturer's standard type for conditions indicated on drawings.
- C. Attachments, Screws, and Bolts: Stainless steel, tamper proof type.
 - 1. For attaching panels and pilasters to brackets: Through-bolts and nuts; tamper proof.
- D. Hardware - Heavy Duty: Manufacturer's heavy-duty stainless steel castings, including stainless steel tamper-resistant fasteners:
 - 1. Hinges: Self-closing surface mounted, through bolted, with gravity cams, adjustable to hold doors open at any angle up to 90 degrees, with emergency access by lifting door. Mount with stainless steel through-bolts.
 - 2. Latch and Keeper: Surface-mounted slide latch with flat rubber-faced combination door strike and keeper, with provision for emergency access, meeting requirements for accessibility at accessible compartments.
 - 3. Coat Hook: Combination hook and rubber-tipped stop, sized to prevent door from hitting compartment-mounted accessories. Provide wall bumper where door abuts wall. Provide formed L-shaped hook without stop at outswing doors. Mount with stainless steel through-bolts.
 - 4. Door Pull: Standard unit on outside of inswing doors. Provide pulls on both sides of outswing doors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that field measurements are as indicated on shop drawings.
- B. Verify correct spacing of and between plumbing fixtures.
- C. Verify correct location of built-in framing, anchorage, and bracing.

3.2 INSTALLATION

- A. Install partitions secure, rigid, plumb, and level in accordance with manufacturer's instructions.
- B. Clearances: Install with clearances indicated on Drawings. Where clearances are not indicated, allow maximum 1/2 inch (13 mm) between pilasters and panels, and 1 inch (25 mm) between panels and walls.

- C. Attach panel brackets securely to walls using anchor devices.
- D. Attach panels and pilasters to brackets.
- E. Field touch-up of scratches or damaged finish will not be permitted. Replace damaged or scratched materials with new materials.

3.3 TOLERANCES

- A. Maximum Variation From True Position: 1/4 inch.
- B. Maximum Variation From Plumb: 1/8 inch.

3.4 ADJUSTING

- A. Adjust and align hardware to uniform clearance at vertical edge of doors, not exceeding 3/16 inch.
- B. Adjust hinges to position doors in partial opening position when unlatched. Return out-swinging doors to closed position.
- C. Adjust adjacent components for consistency of line or plane.

3.5 FINAL CLEANING

- A. Remove packaging and construction debris and legally dispose of off-site.
- B. Clean partition and screen surfaces with materials and cleansers in accordance with manufacturer's recommendations.

END OF SECTION **102113.17**

SECTION 102800 – TOILET ROOM ACCESSORIES

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Commercial toilet accessories.
- B. Utility room accessories.

1.2 RELATED REQUIREMENTS

- A. Section 079200 - Joint Sealants: Sealant around grab bars and accessories.
- B. Section 092216 - Non-Structural Metal Framing Sheet metal backing for accessories.

1.3 REFERENCE STANDARDS

- A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.
- B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.
- C. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service; 2015a (Reapproved 2019).
- D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2020.
- E. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.
- F. ASTM B456 - Standard Specification for Electrodeposited Coatings of Copper Plus Nickel Plus Chromium and Nickel Plus Chromium; 2017.
- G. ASTM C1036 - Standard Specification for Flat Glass; 2016.
- H. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.
- I. ASTM C1822 - Standard Specification for Insulating Covers on Accessible Lavatory Piping; 2015.
- J. ASTM F2285 - Standard Consumer Safety Performance Specification for Diaper Changing Tables for Commercial Use; 2004, with Editorial Revision (2016).
- K. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015.
- L. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Coordinate the work with the placement of internal wall reinforcement, concealed ceiling supports, and reinforcement of toilet partitions to receive anchor attachments.

1.5 SUBMITTALS

- A. See Section 013000 - Submittal Requirements, for submittal procedures.
- B. Product Data: Submit data on accessories describing size, finish, details of function, and attachment methods.
- C. Samples: Submit two samples of each accessory, illustrating color and finish.
- D. Manufacturer's Installation Instructions: Indicate special procedures and conditions requiring special attention.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store and handle materials and products in strict compliance with manufacturer's instructions and recommendations. Protect from damage.

1.7 WARRANTY

- A. See Section 017000 - Contract Closeout, for additional warranty requirements.
- B. Manufacturer's Warranty for Washroom Accessories: Manufacturer's standard 1 year warranty for materials and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Refer to Drawings - Toilet Accessory Schedule and Interior Elevations.
- B. Basis of Design: Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept Expressed in Contract Documents is not changed, as determined by the Architect.
 - 1. Basis of Design: Bobrick Washroom Equipment, Inc..
- C. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers listed alphabetically below. If not listed, submit as substitution according to Conditions of the Contract and Division 1 Sections.
 - 1. American Specialties, Inc: www.americanspecialties.com.
 - 2. Bradley Corporation: www.bradleycorp.com.
- D. Substitutions: Section 016310 - Substitutions.
- E. Provide products of each category type by single manufacturer.

2.2 MATERIALS

- A. Accessories - General: Shop assembled, free of dents and scratches and packaged complete with anchors and fittings, steel anchor plates, adapters, and anchor components for installation.
 - 1. Grind welded joints smooth.
 - 2. Fabricate units made of metal sheet of seamless sheets with flat surfaces.
- B. Keys: Provide 6 keys for each accessory to Owner; master key lockable accessories.
- C. Stainless Steel Sheet: ASTM A666, Type 304.
- D. Stainless Steel Tubing: ASTM A269/A269M, Grade TP304 or TP316.
- E. Galvanized Sheet Steel: Hot-dipped galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating.
- F. Mirror Glass: Tempered safety glass, ASTM C1048; and ASTM C1036 Type I, Class 1, Quality Q2, with silvering as required.
- G. Adhesive: Two component epoxy type, waterproof.
- H. Fasteners, Screws, and Bolts: Hot dip galvanized; tamper-proof; security type.
- I. Expansion Shields: Fiber, lead, or rubber as recommended by accessory manufacturer for component and substrate.

2.3 FINISHES

- A. Stainless Steel: Satin finish, unless otherwise noted.
- B. Chrome/Nickel Plating: ASTM B456, SC 2, polished finish, unless otherwise noted.
- C. Galvanizing for Items Other than Sheet: Comply with ASTM A123/A123M; galvanize ferrous metal and fastening devices.
- D. Shop Primed Ferrous Metals: Pretreat and clean, spray apply one coat primer and bake.
- E. Back paint components where contact is made with building finishes to prevent electrolysis.

2.4 COMMERCIAL TOILET ACCESSORIES

- A. Refer to Drawings - Toilet Accessory Schedule and Interior Elevations.
- B. Mirrors: Stainless steel framed, 1/4 inch thick annealed float glass; ASTM C1036.
 - 1. Refer also to Section 088300 - Mirrors.

2.5 UTILITY ROOM ACCESSORIES

- A. Mop and Broom Holder: 0.05 inch thick stainless steel, Type 304, hat-shaped channel.
 - 1. Holders: Three spring-loaded rubber cam holders.
 - 2. Length: 36 inches.
- B. Combination Utility Shelf/Mop and Broom Holder: 0.05 inch thick stainless steel, Type 304, with 1/2 inch returned edges, 0.06 inch steel wall brackets.
 - 1. Drying rod: Stainless steel, 1/4 inch diameter.
 - 2. Hooks: Two, 0.06 inch stainless steel rag hooks at shelf front.
 - 3. Mop/broom holders: Three spring-loaded rubber cam holders at shelf front.
 - 4. Length: 36 inches.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify exact location of accessories for installation.
- C. For electrically-operated accessories, verify that electrical power connections are ready and in the correct locations.
- D. Verify that field measurements are as indicated on drawings.
- E. See Sections 055000 or 092216 for installation of blocking, reinforcing plates, and concealed anchors in walls and ceilings.

3.2 PREPARATION

- A. Deliver inserts and rough-in frames to site for timely installation.
- B. Provide templates and rough-in measurements as required.

3.3 INSTALLATION

- A. Install accessories in accordance with manufacturers' instructions in locations indicated on drawings.
- B. Install plumb and level, securely and rigidly anchored to substrate in locations and at heights indicated on Drawings.
- C. Mounting Heights and Locations: As required by accessibility regulations and as indicated on drawings.

3.4 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.

- C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

3.5 PROTECTION

- A. Protect installed accessories from damage due to subsequent construction operations.

END OF SECTION 102800

SECTION 104400 – FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Fire extinguishers.
- B. Fire extinguisher cabinets.
- C. Accessories.

1.2 REFERENCE STANDARDS

- A. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2013a (Reapproved 2017).
- B. FM (AG) - FM Approval Guide; current edition.
- C. NFPA 10 - Standard for Portable Fire Extinguishers; 2017, with Errata (2018).
- D. UL (DIR) - Online Certifications Directory; Current Edition.

1.3 SUBMITTALS

- A. See Section 013300 - Submittal Requirements, for submittal procedures.
- B. Product Data: Provide extinguisher operational features, extinguisher ratings and classifications, color and finish, anchorage details, and installation instructions.
- C. Shop Drawings: Indicate locations of cabinets, cabinet physical dimensions, rough-in measurements for recessed cabinets, locations of individual fire extinguishers, mounting measurements for wall bracket, installation procedures, and accessories required for complete installation.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
 - 1. Size: 6 by 6 inches (150 by 150 mm) square.
- E. Manufacturer's Installation Instructions: Indicate special criteria and wall opening coordination requirements.
- F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
- G. Maintenance Data: Include test, refill or recharge schedules and re-certification requirements.

1.4 COORDINATION

- A. Coordinate size of fire protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate sizes and locations of fire protection cabinets with wall depths.

1.5 FIELD CONDITIONS

- A. Do not install extinguishers when ambient temperature may cause freezing of extinguisher ingredients.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Fire Extinguishers:
 - 1. Basis of Design: Activar Construction Products Group, Inc. - JL Industries; Cosmic Extinguisher - Multipurpose Chemical: www.activarcpq.com/#sle.
 - 2. Ansul, a Tyco Business: www.ansul.com.
 - 3. Potter-Roemer: www.potterroemer.com.
 - 4. Pyro-Chem, a Tyco Business: www.pyrochem.com.
- B. Fire Extinguisher Cabinets and Accessories:
 - 1. Basis of Design: Activar Construction Products Group, Inc. - JL Industries: www.activarcpq.com/#sle.
 - 2. Larsen's Manufacturing Co: www.larsensmfg.com.
 - 3. Potter-Roemer: www.potterroemer.com.
- C. Substitutions: See Section 016310 - Substitutions.

2.2 FIRE EXTINGUISHERS

- A. Fire Extinguishers - General: Comply with product requirements of NFPA 10 and applicable codes, whichever is more stringent.
 - 1. Provide extinguishers labeled by UL (DIR) or FM (AG) for purpose specified and as indicated.
- B. Multipurpose Dry Chemical Type Fire Extinguishers: Carbon steel tank, with pressure gauge.
 - 1. Construction: Heavy duty steel cylinder with metal valve and siphon tube, O-ring seal, replaceable valve stem seal, visual pressure gage, pull pin and upright squeeze grip.
 - 2. Monoammonium phosphate-based dry chemical.
 - 3. Finish: Baked polyester powder coat, red color.
 - 4. Valves: Manufacturer's standard.
 - 5. Handles and Levers: Manufacturer's standard.
 - 6. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.
 - 7. Temperature range: Minus 40 degrees F to 120 degrees F.

- C. Class: 2A:
 - 1. Cosmic 5E; 3-A:40-B:C
 - 2. Size: 5 pound.
 - 3. Bracket (in Shops – Building B): MB818C
 - 4. Cabinet (Building A): FEC-1
 - 5. Cabinet (Exterior): FEC-2

- D. Class: 3A:
 - 1. Cosmic 5E; 3-A:40-B:C
 - 2. Size: 5 pound.
 - 3. Bracket (in Shops – Building B): MB818C

- E. Class: 10A (Fueling Area):
 - 1. Cosmic 20E; 10-A:120-B:C
 - 2. Size: 20 pound.

2.3 FIRE EXTINGUISHER CABINETS – (JR INDUSTRIES)

- A. Type FEC-1 (Interior, Building A stud walls): Cabinet Configuration: Semi-recessed type.
 - 1. Basis of Design: Ambassador Series.
 - 2. Door Style: Style V: Vertical Duo Panel; narrow vertical glazing full height of door; with pull handle.
 - 3. Trim Style and Depth: Semi-recessed Cabinet:
 - a. Rolled Edge: 2-1/2 inch (63.50 mm), as required for specified extinguisher.
 - 4. Door and Trim Construction: Stainless steel; flush doors with 5/8 inch (15.88mm) door stop attached by continuous hinge and equipped with zinc-plated handle with roller catch.
 - a. Finish:
 - 1) Standard Color: White.
 - b. Finish of Cabinet Interior: White enamel.
 - 5. Door Glazing: Type 17: Clear tempered glass
 - 6. Cabinet Mounting Hardware: Pre-drill for anchors.
 - 7. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
 - a. Provide ADA flush door pull and friction latch.
 - b. Provide manufacturer's standard hinge permitting door to open 180 degrees.
 - 8. Weld, fill, and grind components smooth.
- B. Type FEC-2 (Exterior): Cabinet Configuration: Surface mount type.
 - 1. Basis of Design: Ambassador Series.
 - 2. Door Style: Style V: Vertical Duo Panel; narrow vertical glazing full height of door; with pull handle.
 - 3. Trim Style and Depth: Surface Mount Cabinet with Rolled Edge:
 - 4. Door and Trim Construction: Stainless steel; flush doors with 5/8 inch (15.88mm) door stop attached by continuous hinge and equipped with zinc-plated handle with roller catch.
 - a. Finish:
 - 1) Standard Color: Red
 - b. Finish of Cabinet Interior: Red enamel.

5. Door Glazing: Type 10: Clear acrylic
 6. Cabinet Mounting Hardware: Pre-drill for anchors.
 7. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
 - a. Provide ADA flush door pull and friction latch.
 - b. Provide manufacturer's standard hinge permitting door to open 180 degrees.
 8. Weld, fill, and grind components smooth.
- C. Fire-Rated Cabinets: Listed and labeled to meet requirements of ASTM E814 for fire-resistance rating of wall where it is installed. Construct fire-rated cabinets with double walls fabricated from 0.0478 inch (1.2-mm) thick, cold-rolled steel sheet lined with minimum (16-mm) thick, fire-barrier material. Provide factory drilled mounting holes.

2.4 ACCESSORIES

- A. Break-Glass Strike: Manufacturer's standard metal strike, complete with chain and mounting clip, secured to cabinet.
- B. Door Lock: Cylinder lock, keyed alike to other cabinets.
- C. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location.
 1. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."
 - a. Location: Applied to cabinet door.
 - b. Application Process: Pressure-sensitive vinyl letters.
 - c. Lettering Color: Red.
 - d. Orientation: Vertical.
- D. Extinguisher Brackets: Formed steel, chrome-plated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify rough openings for cabinet are correctly sized and located.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install cabinets plumb and level, 60 inches from finished floor to the top of the extinguisher, or as indicated on Drawings.
- C. Secure rigidly in place.
- D. Place extinguishers in cabinets.
- E. Wall Signs:

1. Location: Where shown or directed.
2. Apply on walls after field painting is completed and has been accepted.

F. Position cabinet signage as indicated.

3.3 MAINTENANCE – SELF-SERVICE FIRE EXTINGUISHERS

- A. Annual Inspections: Inspect self-service fire extinguishers on annual basis in accordance with manufacturer's instructions, and requirements of the authorities having jurisdiction (AHJ).
- B. Inspection Certification Tag: Provide new tag indicating acceptable condition of fire extinguisher, date of inspection, and name of self-service inspector for each inspection.

END OF SECTION **104400**

SECTION 105113 - METAL LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Knocked-down athletic lockers.
 - 2. Locker benches.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker.
- B. Shop Drawings: For metal lockers.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Show locker trim and accessories.
 - 3. Include locker identification system and numbering sequence.
- C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available.
- D. Samples for Verification: For the following products, in manufacturer's standard size:
 - 1. Lockers and equipment.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. The following metal locker hardware items equal to 10 percent of amount installed for each type and finish installed, but no fewer than five units:
 - a. Locks.
 - b. Hooks.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.

- B. Deliver master and control keys to Owner by registered mail or overnight package service.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.

1.8 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of latches and other door hardware.
 - 2. Damage from deliberate destruction and vandalism is excluded.
 - 3. Warranty Period for Knocked-Down Metal Lockers: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain metal lockers and accessories from single source from single locker manufacturer.
 - 1. Obtain locks from single lock manufacturer.
- B. Basis-of-Design Product: Subject to compliance with requirements, provide DeBourgh Manufacturing Company, Apex Athletic Lockers or comparable product by one of the following:
 - 1. Wenger Corporation
 - 2. Or Approved Equal

2.2 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design".

2.3 WELDED ATHLETIC LOCKERS, F122

- A. Locker Construction
 - 1. Lockers to be welded at seams and joints with exposed welds sanded smooth.
 - 2. No bolts, screws or rivets to be used in assembly of locker units.

3. Ship lockers set-up, ready to be anchored in place in accordance with manufacturer's instructions.
- B. Body of Lockers
1. Sides and Intermediate Partitions: Constructed of 1-inch by 1-inch by 1/8-inch steel angle iron frame with either 16-gauge diamond perforated sheet steel or 13-gauge bond sheared, flattened expanded metal welded to steel angle frames. Formed sheet steel locker frames are not acceptable.
 2. Exposed End Panels: Constructed of 1-inch by 1-inch by 1/8-inch steel angle iron frame with 16-gauge sheet steel welded to steel angle frame.
 3. Backs: Solid sheet of 18 gauge cold rolled sheet steel welded to frames of sides and intermediate partitions.
 4. Shelves and Tier Dividers: Constructed of 16 gauge cold rolled sheet steel welded to side and intermediate partition construction. Shelves provided in lockers 48-inches and taller, located to provide a minimum of 12-inches clearance.
- C. Doors
1. 14 gauge formed doors constructed of single piece cold rolled steel with double bends on vertical sides and a single bend on horizontal sides
 - a. An additional 13-gauge steel handle panel with 16 gauge cold rolled steel back panel will be securely welded to the center span of the door. All horizontal mesh edges shall be concealed with an additional steel formation welded to the door.
 2. Perforation: As selected by Owner from:
 - a. Diamond perforated , or
 - b. Secur-N-Vent – three-dimensional vertical vents formed on fronts and backs of door.
- D. Latching
1. Sentry I Three-Point/Three-Sided Cremone Latch
 - a. Latching mechanism operated by a steel handle welded to a three-point cremone type assembly.
 - b. Latching rods, 3/8-inch diameter, engage top and bottom edge of locker frame. A 3/16-inch thick center latch engages door jamb.
- E. Hinges
1. Hinges to be 3-inch, five knuckle, 14-gauge heavy-duty fast pin welded to both door and frame.
 2. Locker doors 42-inches high or less shall have 2 hinges.
 3. Doors over 42-inches shall have 3 hinges.
- F. Slope Tops
1. Provide 18 gauge all welded slope top with 25-degree pitch, attached at factory with concealed fasteners. Slope top to be in addition to the standard 16-gauge flat top.
- G. Filler Panels: Manufacturer's standard fabricated from 18-gauge solid steel finished to match lockers. Provide slip joint fillers angle formed to receive filler panel.
- H. Finish

1. Complete locker unit to be thoroughly cleaned, phosphatized and sealed.
2. Finish to be baked powder coat with a minimum 2-3 mil thickness.
3. Color of lockers shall be chosen from manufacturer's standard colors.

2.4 LOCKER ACCESSORIES

- A. A.Interior Equipment: Furnish each locker with the following items, unless otherwise indicated.
1. Hooks
 - a. Hooks to be heavy-duty forged steel with ball ends and zinc plated.
 - b. Provide two single ceiling hooks and one double ceiling hook in each locker opening 20-inches or taller.
 2. Numbering
 - a. Finish each locker with black anodized laser etched aluminum number plate.
 - b. Locate number plate near center of each door.
 - c. Owner to furnish numbering sequence.
 3. Coat Rods: Manufacturer's standard zinc plated. Optional clothes rod in lieu of ceiling hook available (recommended for lockers 18-inches deep or greater).

2.5 BENCHES

- A. A.Bench tops to be made of butcher block, Mixed Hardwood 1-1/4-inches thick. Apply double coat of satin-gloss sealer for protection.
- B. Dimensions
1. F124: 22 to 24 inches wide by 42 inches long.
 2. F125: 18 inches wide by 84 inches long.
- C. B.Pedestals
1. Heavy Duty Pedestals: Heavy duty cast iron bell shaped base with a diameter of 7-3/4-inches threaded for 1-1/2-inch pipe. The pedestal is secured to the floor with a 1/2-inch by 5-1/2-inch concealed concrete anchor. Overall pedestal height is 16-inches. Misty Gray powder coat is standard, with optional standard color choice available.

2.6 FABRICATION

- A. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
 2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
- B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments.
- C. Equipment: Provide each locker with an identification plate and the following equipment:

1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
- A. Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds smooth and flush.
- B. Accessible Lockers: Fabricate as follows:
 1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.
 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.
- C. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.
- D. Finished End Panels: Fabricated to conceal unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.

2.7 ACCESSORIES

- A. Fasteners: Zinc- or nickel-plated steel, slotless-type, exposed bolt heads; with self-locking nuts or lock washers for nuts on moving parts.
- B. Anchors: Material, type, and size required for secure anchorage to each substrate.
 1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls for corrosion resistance.
 2. Provide toothed-steel or expansion sleeves for drilled-in-place anchors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and floors or support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install lockers level, plumb, and true; shim as required, using concealed shims.
 1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
 2. Anchor single rows of metal lockers to walls near top and bottom of lockers.

3. Anchor back-to-back metal lockers to floor.
 - A. Welded Lockers: Connect groups together with manufacturer's standard fasteners, with no exposed fasteners on face frames.
 - B. Equipment:
 1. Attach hooks with at least two fasteners.
 2. Attach door locks on doors using security-type fasteners.
 3. Identification Plates: Identify metal lockers with identification indicated on Drawings.
 - a. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
 - b. Attach plates to upper shelf of each open-front metal locker, centered, with at least two aluminum rivets.
 - C. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
 1. Attach filler panels with concealed fasteners. Locate filler panels where indicated on Drawings.
 2. Attach finished end panels using fasteners only at perimeter to conceal exposed ends of nonrecessed metal lockers.
 - D. Fixed Benches: Provide no fewer than two pedestals for each bench, uniformly spaced not more than 72 inches (1830 mm) apart. Securely fasten tops of pedestals to undersides of bench tops, and anchor bases to floor.
- 3.3 ADJUSTING
- A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. Verify that integral locking devices operate properly.
- 3.4 PROTECTION
- A. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
 - B. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION 105113

SECTION 107113 - EXTERIOR SUN CONTROL DEVICES

PART 1 GENERAL

1.1 SUMMARY

- A. This section includes products to assist in controlling the effects of the sun.
 - 1. Horizontal sunshades
 - 2. Vertical sunshades
- B. Related work specified elsewhere
 - 1. 085113 Exterior Aluminum Windows
 - 2. 055000 Metal Fabrications
 - 3. 042200 Concrete Unit Masonry
 - 4. 107300 Aluminum Canopies
- C. Work included in this section.
 - 1. The extent of the extruded aluminum sunshade system is shown on the contract drawings and hereby defined to include all sunshade devices of the type shown and specified herein.

1.2 INDUSTRY STANDARD

- A. Reference:
 - A. Products and executions are specified in this section by reference to the following industry and/or trade specifications or standards of the following:
 - B. National Association of Architectural Metal Manufacturers (NAAMM), the Aluminum Association (AA), American Architectural Manufacturers Association (AAMA).

1.3 QUALIFICATIONS

- A. Manufacturers:
 - 1. Basis of Design:
 - 2. For the purpose of designation type and quality for the work under this section, drawings and specifications are based on the products manufactured by Architectural Grilles and Sunshades, Inc. (AGS, Inc.); 22442, Fey Drive, Frankfort, IL 60448. Phone: (708) 479-9458, Fax: (708) 479-9478. Email: Nathan.s@agsshade.com
 - 3. Additional Acceptable Manufacturers:
 - 4. Subject to compliance with these specifications, products as manufactured by:
 - i. Pittco Architectural Metals
 - ii. MASA Architectural Canopies
 - iii. Construction Specialties, Inc.
 - b. Substitutions: See Section 016310 - Substitutions.

- B. Minor adjustments may be made in interest of fabrication or installation methods, techniques, or ability to satisfy concept expressed in Contract Documents, provided concept is maintained as determined by Owner and Architect.

1.4 SUBMITTALS:

- A. Product data: Manufacturers technical and descriptive data.
- C. Shop Drawings:
 - 1. Submit for architect's approval prior to commencement of any work or fabrication under this section, 1 set of detail shop drawings showing all areas of work profiles and sections of all components, finishes and fastening details.
- D. Warranties:
 - 1. The work in this section shall be guaranteed against defects in material and workmanship for a period of one (1) year from date of acceptance of the building. Contractor shall replace and repair any defects at no cost to the owner.

1.5 COMPONENTS:

- A. Shipping and Handling:
 - 1. Deliver materials to the job site ready for erection. Assembled units to be packaged and shipped to prevent damage during freight and storage on site.

PART 2 PRODUCTS

2.1 MATERIALS:

- A. General: Metal shall be free from defects impairing strength, durability, or appearance.
 - 1. Aluminum – ASTM B 221, alloys 6063-T5 and 6063-T6 for extrusions. ASTM B 209, alloys 5052-H32 or greater.
 - 2. Fasteners – Unless otherwise noted, fasteners shall be 300 series non-magnetic stainless steel. ASTM A-307, grade A or better.

2.2 HORIZONTAL SUNSHADES

- A. Components:
 - 1. Outriggers: 1/4" thick by 8" tall extruded aluminum flat plate.
 - 2. Blades: 2" x 6" high, extruded aluminum rectangular tube design.
 - 3. Fascia: 2" x 8" extruded aluminum rectangular tube.
 - 4. Mounting Bracket: Manufacturer's standard for configuration.

5. Dimensions: As indicated on drawings.

B. Components to be shop assembled in as large as practical sections– to allow for immediate erection.

2.3 VERTICAL SUNSHADES:

A. Style: Stanley Series, ~~Tampa~~ **Nashville**

B. Components:

1. Vertical Fins: ~~3/8"~~ **1/8"** thick extruded aluminum flat plate **with 1/4" perforations on 3/8" staggered centers. Perimeter 2-1/2" square tubes.**

2. Mounting Bracket: Manufacturer's standard for configuration.

3. Dimensions: As indicated on drawings.

C. Components to be shop assembled in as large as practical sections– to allow for immediate erection.

2.4 ALUMINUM FINISH:

A. General:

B. Finish on exposed aluminum shall be compliant with the performance standards set forth in AAMA Specifications 2605-98, "Superior Performing Organic Coatings on Aluminum."

C. Type:

D. Factory-applied, high performance, 70% Polyvinylidene Fluoride (PVDF) coating based on Elf Atochem Inc. Kynar 500 or Ausimont USA Inc. Hylar 5000 resin, formulated by a licensed paint manufacturer, and applied by paint manufacturer's warranty-approved applicator.

E. Pretreatment:

F. Applicator to pretreat the aluminum with solutions to remove organic and inorganic surface soils, remove residual oxides, followed by a chrome phosphate conversion coating - at minimum 40 mg/square foot – to ensure adhesion of paint to the aluminum.

G. Application:

H. One primer coat, one color coat, for a minimum of 1.2 mils of dry film thickness.

I. Color

1. Horizontal sunshades and frames: ~~As selected by architect from manufacturer's full range.~~ **Custom Color.**

2. Vertical sunshades: ~~As selected by architect from manufacturer's full range.~~ **Custom Color.**

PART 3 – EXECUTION

3.1 FIELD DIMENSIONS

- A. Verify conditions: Examine areas where work is to be performed and identify any conditions that could be detrimental to proper or timely completion.
- B. General Contractor Shall field confirm openings and elevations as shown on shop drawings prior to fabrication.
- C. Installation should not proceed until all conditions are satisfactory.

3.2 ERECTION

- A. Qualified installer needs to comply with manufacturer's installation instructions.
- B. Verify all dimensions and the supporting structure and provide accurate field measurements, so that the sunshades will be properly designed, fabricated, and fitted to the structure.
- C. Anchor Sunshade to the building and/or window glazing systems per the architectural drawings.
- D. A maximum of +/- 1/8" tolerance between any column to column spacing is acceptable.
- E. Do not cut or trim any Sunshade components without written approval by AGS, Inc.
- F. Do not erect any damaged or deformed members. Remove or replace any damaged members in the erection process as directed by AGS, Inc.
- G. Set Sunshade units level, plumb, with uniform joints.
- H. Qualified installer to erect after all adjacent painting, roofing and masonry has been completed.
- I. Install bird spikes to top surfaces indicated in drawings.

3.3 CLEANING:

- A. Clean exterior Sunshades surfaces to prevent buildup of dust and debris, refer to AGS, Inc. cleaning instructions based on the finish of the material.

3.4 PROTECTION:

- A. Protect Sunshade materials after installation to prevent damage by other tradespersons.

END OF SECTION 107113

SECTION 107300 – ALUMINUM CANOPIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Overhead Supported Aluminum Canopies
- B. Related Requirements:
 - 1. Section 107113 “Exterior Sun Control Devices”

1.2 DELEGATED ENGINEERING REQUIREMENTS

- A. Contract Documents: Concept of work specified by this Section is expressed on Drawings and in Specifications. However, they may not indicate or specify full extent of work that may be required.
- B. Delegated Engineering Responsibility: Require manufacturer to employ a delegated engineering professional to provide engineering for work of this Section to comply with concept expressed in Contract Documents.
 - 1. Engineer system to withstand structural design loads within limits and under conditions indicated, specified, or required, without material failure or permanent deformation of building structural frame or work specified according to following:
 - a. Applicable local building codes.
 - b. ASCE 7 or the more stringent Building Code requirements.
 - c. Authorities having jurisdiction.
 - d. Criteria indicated in Contract Documents.
- C. Prepare engineering calculations, shop drawings, and other submittals and affix professional seal by a Registered Engineer in the State of Nevada, according to respective jurisdictional licensing regulations.
- D. Coordination of Contract Documents and Work:
 - 1. Notify Owner and Architect of potential constructability issues between Contract Documents and execution of work. Absence of notice constitutes acceptance of conditions indicated, specified, or required, and changes caused by minor differences between delegated engineering and Contract Documents will be at no additional cost to Owner.
 - 2. Minor adjustments may be made in interest of fabrication or installation methods, techniques, or ability to satisfy concept expressed in Contract Documents, provided concept is maintained as determined by Owner and Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including additional design and construction costs.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include styles, material descriptions, construction details, fabrication details, dimensions of individual components and profiles, hardware, fittings, mounting accessories, features, and finishes for canopies.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings:

1. Include design engineer's stamp or seal on shop drawings.
2. Include plans, elevations, sections, mounting heights, and attachment details.
3. Detail fabrication and assembly of canopies.
4. Show locations for blocking, reinforcement, and supplementary structural support.

C. Delegated Engineering Calculations: Engineering calculations, sealed by delegated engineering professional in the State of Nevada, for portion of work designated as delegated engineering.

D. Design Data: Provide framing member structural and physical characteristics, engineering calculations, and dimensional limitations.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For canopies to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of products.
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."

1.7 WARRANTY

- A. Special Warranty: Manufacturer and fabricator agree to repair or replace components of canopies that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including framework.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Canopy Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- B. Structural: Refer to Drawings.

2.2 MANUFACTURERS

- A. Basis of Design: Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as determined by the Architect.
 1. Basis-of-Design: Mitchell Metals: Overhead Support Canopy
- B. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers listed alphabetically below. If not listed, submit as substitution according to Conditions of the Contract and Division 1 Sections:
 1. Architectural Fabrication: Roll Formed Canopy System
 2. MASA Architectural Canopies: Extrudeck-100 Series
 3. Substitutions: See Section 016310 - Substitutions.

2.3 CANOPY FRAME AND ACCESSORY MATERIALS

- A. Steel:
 1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
 2. Steel Tubing: ASTM A500/A500M.
 3. Galvanized Steel Tubing: ASTM A787/A787M.
 4. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40).
- B. Aluminum: Alloy and temper recommended by canopy manufacturer for type of use and finish indicated and with not less than the strength and durability properties of alloy and temper required by structural loads.
 1. Aluminum Plate and Sheet: ASTM B209 (ASTM B209M).
 2. Aluminum Extrusions: ASTM B221 (ASTM B221M).
 3. Extruded Structural Pipe and Round Tubing: ASTM B429/B429M, standard weight (Schedule 40).
 4. Drawn Seamless Tubing: ASTM B210 (ASTM B210M).
- C. Anchors, Fasteners, Fittings, Hardware, and Installation Accessories: Complying with performance requirements indicated and suitable for exposure conditions, supporting structure, anchoring substrates, and installation methods indicated. Corrosion-resistant or noncorrodible units; weather-resistant, compatible, nonstaining materials. Provide as

required for canopy assembly, mounting, and secure attachment. Number as needed to comply with performance requirements and to maintain uniform appearance; evenly spaced. Where exposed to view, provide finish and color as selected by Architect from manufacturer's full range.

1. Wood Screws: ASME B18.6.1.
2. Lag Bolts: ASME B18.2.1 (ASME B18.2.3.8M).
3. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325 (Grade A325M), Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, (ASTM A563M, Class 10S) heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers, zinc coated.
4. Expansion Anchors: Anchor bolt and sleeve assembly with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry assemblies and equal to four times the load imposed when installed in concrete as determined by testing according to ASTM E488 conducted by a qualified independent testing and inspecting agency.
 - a. Material: Stainless steel with bolts and nuts complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Grade A1 or A4).
5. Adhesive-Bonded Anchors: Anchor bolt and sleeve assembly with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry assemblies and equal to four times the load imposed when installed in concrete as determined by testing according to ASTM E1512 conducted by a qualified independent testing and inspecting agency.
 - a. Material: Stainless steel with bolts and nuts complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Grade A1 or A4).

D. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.

2.4 ALUMINUM CANOPIES

A. Design:

1. Canopy shall use perimeter extruded gutter and extruded decking running perpendicular to wall being attached to. Extruded Decking shall be a roll-locked design where the extruded cap and pan shall interlock to make a rigid structure. Crimped decking is not allowed
2. Decking shall be a rigid roll-locked design that is self flashing and utilizes interlocking sections.
3. Canopy gutter frame shall be welded into a single frame unless shipping does not allow. If shipping does not allow, canopy frame shall be riveted together at the corners and caulked inside to make a water-tight frame.
4. Canopy shall be secured to the wall using a round support rod system which uses a galvanized steel round overhead support rod (minimum $\frac{3}{4}$ " schedule 40 pipe). The support rods shall have a galvanized steel eye bolt welded to each end. The canopy wall bracket shall be a galvanized steel eye bolt welded to the center of a 6"x6" galvanized steel plate. The support rod shall be connected to the wall bracket using a $\frac{7}{8}$ " galvanized steel Bolt, Nut, and Washers. The

canopy frame shall have a galvanized steel saddle bracket with a galvanized steel eye bolt welded to the top of it. The support rod shall be connected to the saddle bracket using a 7/8" galvanized steel Bolt, Nut, and Washers. The saddle bracket shall connect to a 2"x2" aluminum frame support tube that sits inside of the decking pan. The 2"x2" frame support tube shall connect to the gutter frame using 4 – 300 series stainless steel fasteners, 2 at each end.

a. Alternate support systems are allowed.

5. Canopies shall drain from the decking to the perimeter gutter, and discharge from the bottom of the gutter out of a downspout
6. Canopy shall be pitched toward the downspout to allow proper drainage out of the canopy frame.

B. Size: 11'-0" wide with 7'-0" overhang.

C. Fabrication:

1. Frame Fabrication: Fabricate canopy frames from aluminum. Preassemble in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
2. Form exposed work true to line and level with accurate angles and surfaces and straight edges.
3. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Fabricate slip-fit connections exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
4. Weld corners and connections continuously. Obtain fusion without undercut or overlap. Remove welding flux immediately. At exposed corners and connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
5. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure canopies in place and to properly transfer loads.

D. Steel Finish: Manufacturer's standard baked-enamel or powder-coat finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

1. Color: As selected by Architect from manufacturer's full range.

E. Aluminum Finish: Manufacturer's standard baked-enamel or powder-coat finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

1. Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for supporting members, blocking, inserts, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install canopies at locations and in position indicated, securely connected to supports, free of rack, and in proper relation to adjacent construction. Use mounting methods of types described and in compliance with Shop Drawings and fabricator's written instructions.
- B. Install canopies after other finishing operations, including joint sealing and painting, have been completed.
- C. Slip fit frame connections accurately together to form hairline joints, and tighten to secure.
- D. Weld frame connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - 1. Field Welding: Comply with the following requirements:
 - a. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - b. Obtain fusion without undercut or overlap.
 - c. Remove welding flux immediately.
 - d. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- E. Anchoring to In-Place Construction: Use anchors, fasteners, fittings, hardware, and installation accessories where necessary for securing canopies to structural support and for properly transferring load to in-place construction.
- F. Corrosion Protection: Coat concealed surfaces of aluminum that come in contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint.
- G. Coordinate canopy installation with flashing and joint-sealant installation so these materials are installed in sequence and in a manner that prevents exterior moisture from passing through completed exterior wall and roof assemblies.

3.3 CLEANING AND PROTECTION

- A. Touch up factory-applied finishes to restore damaged or soiled areas.

- B. Galvanized Surfaces: Clean field welds, connections, and abraded areas and repair galvanizing to comply with ASTM A780.

END OF SECTION 107300

SECTION 107516 – FLAGPOLES

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Aluminum Flagpoles.

1.2 RELATED REQUIREMENTS

- A. Section 033000 - Cast-in-Place Concrete: Concrete base and foundation construction.

1.3 REFERENCE STANDARDS

- A. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.
- B. ASTM B241/B241M - Standard Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube; 2016.
- C. NAAMM FP 1001 - Guide Specifications for Design Loads of Metal Flagpoles; 2007.

1.4 SUBMITTALS

- A. See Section 013000 - Submittal Requirements, for submittal procedures.
- B. Product Data: Provide data on pole, accessories, and configurations.
- C. Shop Drawings: Indicate detailed dimensions, base details, anchor requirements, and imposed loads.
- D. Designer's Qualification Statement.
- E. Operation Data: Provide operating data for the controller and timer.
- F. Maintenance Data: Provide lubrication and periodic maintenance requirement schedules.

1.5 QUALITY ASSURANCE

- A. Designer Qualifications: Design flagpole foundation under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed Nevada.
- B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc., as suitable for the purpose specified and indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Spiral wrap flagpole with protective covering and pack in protective shipping tubes or containers.

- B. Protect flagpole and accessories from damage or moisture.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design: Contract Documents are based on products specified below to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and design concept expressed in Contract Documents is not changed, as determined by the Architect.
 - 1. Basis of Design: Pole-Tech Co, Inc: www.poletch.com/#sle.
- B. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers listed alphabetically below. If not listed, submit as substitution according to Conditions of the Contract and Division 1 Sections.
 - 1. Concord American Industries, Inc: www.concordindustries.com/#sle.
 - 2. or Approved Equal.
- C. Substitutions: See Section 016310 - Substitutions.

2.2 FLAGPOLES

- A. Counterbalanced Pole System : Style PT-P.
 - 1. Gold Anodized Aluminum Ball
 - 2. Cast Aluminum Revolving Truck
 - 3. Solid Braid Nylon Halyard
 - 4. Bronze Swivel Snap Hooks
 - 5. 9" Cast Aluminum Cleat w/ Screws
 - 6. Steel Tabernacle
 - 7. Counterweight Material
 - 8. Galvanized Steel Anchor Bolt w/ Nuts, Flatwasher & Lockwashers
 - 9. Copper Clad Steel Lightning Rod
- B. Designed in accordance with NAAMM FP 1001.
 - 1. Material: Cone Tapered 6063-T6 Seamless Extruded Aluminum.
 - 2. Design: Cone tapered.
 - 3. Mounting: Ground mounted tiltable type.
 - 4. Outside Butt Diameter: 7 inches.
 - 5. Outside Tip Diameter: 3.5 inches.
 - 6. Nominal Wall Thickness: 0.156 inches.
 - 7. Nominal Height: 35 ft; measured from nominal ground elevation.
- C. Performance Requirements:
 - 1. Wind Pressure Loading on Flagpole with Flag: Resistant without permanent deformation to 108 miles/hr wind speed, in accordance with NAAMM FP 1001; the factor of safety used is 2.5.

2.3 POLE MATERIALS

- A. Aluminum: ASTM B241/B241M, 6063 alloy, T6 temper.

2.4 ACCESSORIES

- A. Finial Ball: Spun aluminum with gold anodic finish, 6 inch diameter.
- B. Truck Assembly: Cast aluminum; revolving, stainless steel ball bearings, non-fouling.
- C. Flag: USA design, 6 ft by 10 ft size, nylon fabric, brass grommets, hemmed edges.

2.5 MOUNTING COMPONENTS

- A. Foundation Tube Sleeve: AASHTO M 36, corrugated 16 gauge, 0.0598 inch steel, galvanized, depth of 36 inches as indicated.
- B. Pole Base Attachment: As detailed on Drawings.
- C. Lightning Ground Cable: Copper No. 6 AWG, soft drawn.

2.6 FINISHING

- A. Metal Surfaces in Contact With Concrete: Asphaltic paint.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that concrete foundation is ready to receive work and dimensions are as indicated on shop drawings.

3.2 PREPARATION

- A. Coat metal sleeve surfaces below grade and surfaces in contact with dissimilar materials with asphaltic paint.

3.3 INSTALLATION

- A. Install flagpole, base assembly, and fittings in accordance with manufacturer's instructions.
- B. Electrically ground flagpole installation.
- C. Fill foundation tube sleeve with concrete specified in Section 033000.
- D. Install foundation plate and centering wedges for flagpoles base set in concrete base and fasten.

3.4 TOLERANCES

- A. Maximum Variation From Plumb: 1 inch.

3.5 ADJUSTING

- A. Adjust operating devices so that halyard and flag function smoothly.

END OF SECTION **107516**

SECTION 111126 – VEHICLE WASHING EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Touchless Vehicle Washing System for Buses with recycling of water
- B. Related Requirements:
 - 1. The general provisions of the Contract, including General and Supplementary Conditions, apply to the work detailed in this specification.
 - 2. Division 22 – Plumbing, for work provided separate from the vehicle washing system
 - 3. Division 26 – Electrical, for work provided separate from the vehicle washing system

1.2 QUALITY ASSURANCE

- A. Experience: The system shall be produced by a manufacturer of established reputation with a minimum of five (5) years experience supplying the specified equipment in similar applications.
- B. Installation: Provide a qualified manufacturer's representative to supervise the work related to equipment installation, check out and start up.
- C. Training: Provide a technical representative to train Owner's maintenance personnel in the operation and maintenance of specified equipment.

1.3 SUBMITTALS

- A. Product Data
 - 1. Submit Product Data in strict accordance with the requirements of these specifications.
 - 2. Restrict submitted material to pertinent data. For instance, do not include a manufacturer's complete catalog when pertinent information is contained on a single page.
 - 3. All bidders shall provide the spinner manufacturer's certified test results that the spinner to be supplied has passed the required 5,000-hour continuous test run. Such certified test results shall indicate the condition of the spinner and the spinner components after the 5,000-hour test run.
- B. Engineering Drawings
 - 1. Submittal engineering drawings must include the following:
 - a. Equipment general layout
 - b. Electrical layout
 - 1) Provide UL listing card or equivalent document of a Nationally Recognized Testing Laboratory from the company building the electrical panel(s) and attach with the electrical drawings indicating that the electrical panels will be built to the required standards (see section 2.5.1 Electric Control Panel).

- c. Mechanical layout
- d. Floor plan view
- e. Isometric view with bill of materials
- f. Any related in-ground electrical or mechanical installation

C. Operation and Maintenance Manual

- 1. Assemble and provide copies of manual in 8.5 x 11 inch format. Fold out diagrams and illustrations are acceptable. Manuals shall be reproducible by dry copy method.

1.4 SUPPLIER QUALIFICATIONS

- A. The supplier shall have been regularly engaged in the design and supply of the type of equipment specified herein, for a period of not less than five (5) years.
- B. The wash system, high pressure cleaning systems, pumping stations and all electrical controls shall be designed and supplied by one supplier.
- C. All similar items shall be the products of one manufacturer.

1.5 APPROVED EQUAL STATUS

- A. No deviations from these specifications will be allowed unless approved by the Owner in writing prior to bid closing.
- B. All bidders with an "Approved Equal Status" shall submit the following with their bid package:
 - 1. A complete list of spinner and touchless heavy duty vehicle wash systems manufactured and installed by the bidder. The list shall include all such installations made by the bidder in the last five (5) years, including the duration of service and application. Should the reference list have more than
 - a. twenty-five (25) names, a list of the last twenty-five (25) installations shall suffice.
 - 2. Provide the name of a contact person at each location that is familiar with the operation and maintenance of the wash system.
 - 3. Based on the information supplied and discussions with the contact persons named, the Owner will determine the acceptability of the proposed supplier and the equipment.

1.6 WARRANTY

- A. Warranty work specified herein is for one (1) year from the date of substantial completion against defects in materials. All rotating spinners have a three (3) year full parts warranty.
 - 1. Defects shall include, but not be limited to:
 - a. Operation: Noisy, rough or substandard operation
 - b. Parts: Loose, damaged and missing parts
 - c. Finish: Abnormal deterioration

PART 2 - PRODUCTS

2.1 SCOPE OF WORK

- A. To furnish a completely automatic, touchless heavy-duty vehicle wash system which washes the front, roof, rear, sides and chassis of the Owner's school buses and other specified vehicles in drive-through mode.
- B. The supplier is to be responsible for the supply of necessary equipment, materials and service for the complete assembly and erection of the equipment so that it is ready for operation as per these specifications.

2.2 WASH SYSTEM PERFORMANCE

- A. The equipment specified herein is based on the system model LYUS-RT2 as supplied by InterClean Equipment, Inc. (800-468-3725), Spraying System of Chicago, IL, or engineer approved equal.
 - 1. **Acceptable Alternate: Hydro-chem 2 Step Bus Wash with Reclamation.**
- B. Regardless of the Owner's approval for any deviations and/or changes, the supplier is solely responsible for the performance of the supplied equipment per these specifications. All equipment and equipment functions must be built and designed to these specifications.
- C. Should the equipment not perform as per these specifications, the supplier shall modify, add and/or alter the equipment supplied at his own expense until the performance is satisfactory.
- D. The equipment offered shall be the latest standard product, modified as necessary to meet the requirements of this specification, of a type:
 - 1. that has been commercially available and in satisfactory use for at least five years.
- E. The vehicle washer shall be actuated in cycle sequence by vehicles driven in a fixed path between tire guides at a slow speed (50-60 feet / minute) through the washing system. All washing operations shall be automatically activated by the vehicle (driving through).
- F. The supplier is responsible to design the equipment to satisfactorily wash up to 30 vehicles per hour. The vehicle wash shall be able to remove all visible heavy dirt accumulation and most of the road film from the Owner's vehicles when driven through the washer at 50 feet / minute, using only alkaline detergents. The amount of detergent used per vehicle to remove road film shall not exceed 0.20 gallons. The evaluation of the system capability to remove road film shall be determined only after washing has been completed and the vehicles have dried.
- G. The vehicle wash system must be capable of washing specified vehicles up to 14' in height including the following:
 - 1. Cars, Pick-ups, Vans
 - 2. Buses, School buses
 - 3. Utility trucks with or without attached equipment
- H. The vehicle wash system will use a water reclamation system.

2.3 MECHANICAL INTERCONNECTING PIPING

- A. All field plumbing and mechanical work will be done by licensed Mechanical Contractor under contract with the General Contractor, including:
 - 1. Water and gas utilities up to and connecting to the equipment.
 - 2. Interconnecting piping between various equipment components located in the equipment room.
 - 3. Interconnecting piping between the equipment located in the equipment room and the equipment located in the wash bay.
 - 4. Furnish and installation of:
 - a. Exhaust duct for water heater
 - b. Backflow preventer
 - c. Underground pipe for chassis wash
 - d. Grating for trench

2.4 ELECTRICAL INTERCONNECTING WIRING

- A. All field electrical work will be done by a licensed Electrical Contractor under contract with the General Contractor, including:
 - 1. Electrical service up to and connecting to the equipment panel.
 - 2. Interconnecting wiring between various equipment components located in the equipment room.
 - 3. Interconnecting wiring between the equipment located in the equipment room and the equipment located in the wash bay.
 - 4. Furnish and installation of:
 - a. Underground conduits (if required) to be laid when concrete pad is being poured.

2.5 WASH SYSTEM TECHNICAL SPECIFICATIONS

- A. Detergent Arch Components
 - 1. Timing of operation and position of the detergent arch shall be determined by the manufacturer to provide optimum detergent penetration before high-pressure wash cycle.
 - 2. Detergent injector shall be Inject-O-Meter, InterClean DM or engineer approved equal with adjustable chemical injection ratio from 1:20 to 1:100. The ratio of detergent delivery (by the injector) must be readable on the injector calibrated settings. The detergent injector must be of the positive displacement type.
 - 3. The system shall have a water booster pump to ensure even water pressure.
 - 4. The detergent arch shall be made of 1.25 inch stainless steel pipe, compatible with selected detergents, and equipped with 25 pieces of adjustable Spraying Systems Swivel Nozzle Bodies 4202-T with Spraying Systems Diaphragm Check Valve Model 8360 to evenly apply hot water/detergent solution to front, rear, sides and roof of the vehicle proceeding through the arch. The design of the detergent arch shall allow immediate activation of the nozzles upon arch activation by the vehicle.
 - 5. The chemical spray components located in the equipment room must be assembled in a modular, wall-mounted assembly.
 - 6. The detergent arch shall have an Intensified Rear Detergent Feature. The application of detergent to the rear of the vehicle shall be done via a separate, stainless steel rear wash arch. This arch will be activated immediately after the vehicle has passed through the detergent arch. The detergent concentration for the rear wash arch shall

be double that of the detergent arch. The Intensified Rear Detergent arch shall be controlled and operated by its own vehicle sensing device, solenoid valves and chemical pumps as required for proper performance.

7. The detergent arch shall be activated by a limit switch assembly. This assembly is to be mounted on the adjustable height steel frame located at the front of the wash. The limit switch assembly shall be able to be activated by all sizes of vehicles.
8. The detergent arch shall be supplied hot water through a gas fired hot water heater. The heater shall be a minimum of 199,000 BTU.
9. A water softener for the detergent arch is required to be included by the supplier if the domestic water exceeds 3 grains of hardness. Should the water softener not be needed, the supplier shall provide to the Owner testing results proving the water hardness is acceptable (3 grains or lower).

B. High Pressure Spinner Assembly

1. High pressure cleaning shall be achieved using eight (8) rotating spinners mounted on one common self-supporting arch assembly. Four (4) spinners are mounted on each side of the arch for complete coverage for all shapes and sizes of vehicles including wheels and insides of wheel wells.
2. The high pressure arch shall be made of 2 inch Schedule 40 galvanized pipe. The spinner(s) position in relation the vehicle shall be adjustable vertically and horizontally.
3. The three bottom spinners on each side must be protected by 2 inch Schedule 40 galvanized spinner protection guards. Should the vehicle jump the tire guide, spinners shall be protected spinner guards which will allow the complete spinner arch assembly to swing aside when struck by a vehicle. Systems without protection for the spinners shall not be acceptable.

C. Chassis Wash System

1. The chassis wash system shall have two of the specified or engineer approved spinners located in the center trench for effective under-chassis cleaning. Normal spray nozzles, stationary or oscillating, are not acceptable.
2. The chassis wash spinners shall be mounted in the pit trench by a removable (for cleaning purposes) modular skid assembly.
3. The removable chassis wash assembly shall be equipped with a protective plate at the bottom of the assembly. This plate will prevent a person, who accidentally steps into the chassis wash spinner opening, from further falling into the trench.

D. Spinners

1. Spinners are to be CENTRI*SPINNER, Spraying Systems Spinner or engineer approved equal. All spinners submitted for approved equal must have been tested and passed a 5,000 hour continuous test run.
2. Each spinner is to have four (4) fully adjustable spray nozzles. The nozzles are to be of the zero degree type and be supported at the end by adjustable position elbows.
3. The rotational speed of each spinner is to be adjustable between 90 – 300 RPM. The rotational speed adjustment of the spinners is to be achieved through an internal oil pump. No free-floating oil pump gears without center shaft supports will be acceptable.
4. The rotational high-pressure water seal must be of the mechanical seal type.
5. The spinner inlet hookup must be a minimum of 1" stainless steel. Spinners equipped with smaller inlet hookups shall not be acceptable.

6. The nozzles are to be equipped with air jet nozzles. Zero degree water is to pass through the secondary orifice, which will be a minimum of three (3) inches long and have eight (8) openings for air intake at the joint of the spray nozzle and air jet nozzle. Air jets and nozzles must be made of stainless steel. Spinners not equipped with air jet nozzles are not acceptable.
 7. The spinner assembly shall have no periodic maintenance or lubrication requirements.
- E. Spinner Adjuster Tool
1. The spinner adjuster tool, to set all four spinner elbows in an exact, pre-determined angle, shall be supplied with the system.
 2. Adjustment of spinner elbow angles to a precise position by the adjustment tool shall be done without removing the spinners from the arch.
- F. Intensified Rear Wash System
1. The Intensified Rear Wash System shall be activated after the vehicle passes the high pressure spinner arch. The separate rear wash arch shall be made of a minimum of 2" Schedule 40 galvanized piping with an output minimum of 240 GPM at 300 PSI
 2. The supplier shall guarantee that the rear of the vehicle passing through the system at the speed of 50 feet/minute shall be cleaned as effectively as the rest of the vehicle.
 3. The rear wash arch shall be activated only for the rear of the vehicle and shall immediately (automatically) shut off after the vehicle has passed.
 4. The rear wash shall utilize a co-axial 3-way valve with the following features:
 - a. The valve shall utilize a control tube that moves linearly along the same axis as the fluid flow.
 - b. The valve shall be pressure balanced so that operation is unaffected by inlet pressure or pressure fluctuations.
 - c. The design life cycle for the intended application shall be a minimum of 500,000 cycles.
 - d. Adjustable switching time shall be 150 – 2,000 milliseconds.
 - e. The valve shall have wear compensating seats.
 5. The rear wash arch shall use either rotating spinners, oscillating zero degree nozzles or other supplier selected method for effective rear wash arrangement. The rear wash arch shall be totally separate and independent from the high pressure spinner arch. The supplier is solely responsible for the performance warranty regardless of the chosen method.
- G. Pumping Module
1. Pump: The high pressure pump shall be of the centrifugal diffuser type as manufactured by ITT/Goulds Pump and shall be capable of producing pressures up to 320 PSI. The pump shall deliver a maximum flow of 240 GPM as determined by the nozzle sizes incorporated in zero degree spinners.
 2. Casing: The suction casing shall be 3.0 inch 250 lb. ANSI flat faced flanged. It shall be oriented to right angles of the vertical center line when viewed from the drive end. The discharge is 2.5 inch 600 lb. ANSI raised face flange oriented on the vertical center line. The suction casing, discharge casing, stage casings and diffusers are made of ductile iron, free from blow holes, sand pockets, or other detrimental defects. Flow passages are smooth to permit maximum efficiency. Pump shall be equipped

with external tie bolts to hold the radially split casing sealed by 'O' rings. The casing shall be capable of withstanding the hydrostatic test pressure of 150% of the maximum pumping pressure under which the pump could operate at the designed speed.

3. Impellers: The impellers are of the enclosed single suction type, hydraulically balanced to minimize axial thrust loads. Each impeller is individually keyed to the shaft. Impeller is bronze.
4. Stuffing Box: Packed type stuffing boxes shall be equipped with a mechanical seal.
5. Shaft Sleeves: The shaft sleeve through the stuffing box is 11-13% chrome stainless steel hardened to a minimum of 225 Brinnel and is keyed to shaft.
6. Shaft: The shaft is standard carbon steel adequately sized for loads transmitted.
7. Bearing: The bearings are designed for an average life of 50,000 hours. The outboard bearing is a deep groove type; the inboard bearings are of the radial roller type with grease fittings.
8. Base: A steel base plate contains the mounting of the pump and motor, which are carefully aligned and bolted in place prior to shipment. Final alignment will be checked and certified after installation and prior to operation by the user.
9. Coupling: The pumping module shall have a "Jaw" type coupling as manufactured by Lovejoy or equal and includes a coupling guard.

H. Electric Motor

1. The electric motor shall be of the squirrel cage induction type suitable for across the line starting.
2. The motor shall operate on 460 Volt, 3 Phase, 60 Cycle and be OPSB with a 1.15 service factor.
3. The motor shall be sized to not exceed the name plate horse power during operation. The motor should be a minimum of 60 HP.

I. Electric Control Panel and Components

1. The panel and controls must be built according to these specifications. No substitutions shall be allowed. The control system shall be PLC based with separate HMI.
2. The PLC shall be the process application controller and provide near real time control of the entire wash system. It shall be connected to distributed I/O via an Ethernet network. The operator interface shall be through a separate HMI not integral to the PLC, connected to the PLC via Ethernet
3. The PLC shall be panel mounted in a 48"x36"x12" electrical enclosure, which also houses the electrical controls for the wash system. The PLC may be mounted in its own enclosure in an office environment. The PLC provides the centralized infrastructure to enable simple and complete integration with other systems.
4. The PLC and HMI programs shall be developed and provided by the bidder. These programs shall include the specified wash components and provide capacity for future expansion. The PLC program shall be provided in RSLogix 5000 v20 and the HMI program shall be provided in RSVIEW ME v6.1
5. PLC and HMI programs shall provide the following:
 - a. GUI shall be intuitive to use by people without computer experience. Little or no training should be required.
 - b. At program start up, all devices shall be initialized to a known state.

- c. All system settings, such as baud rates, parity, comm. port configurations, etc shall be reconfigurable without necessitating recompiling the application software.
 - d. All user configurable settings shall be stored in the PLC and/or HMI and saved to their respective SD cards. These include all timing set points, alarm settings, and communication settings.
 - e. Periodic polling of I/O shall be every 20 ms or less.
 - f. Alarms should have user configurable delays to prevent nuisance tripping.
 - g. Latency: scanning interval for all closed loop processes should be executed <20 ms.
 - h. Provide terminal windows for spying on any devices communicating to PC via Ethernet, RS232, etc. These will be used for troubleshooting communications problems.
 - i. Failure of any single component shall result in disabling the entire wash. For example, the system will not be allowed to wash vehicles in a crippled state if a chemical pump motor overload trips.
 - 6. The Industrial Control Panel shall be manufactured and evaluated in accordance with the Underwriters Laboratories, Inc. (UL) standard 508A (Industrial Control Panels). In addition, the panel shall be evaluated for high-capacity short circuit withstand and shall bear the appropriate UL marks including the short circuit withstand value mark as part of the official UL label.
 - 7. The industrial Control Panel shall be designed for operation on a 460 Volt, 3 phase, 60 Hertz system, with a short circuit capacity of 65,000 amperes RMS Symetrical available at the incoming line terminals of the control panel.
 - 8. The Industrial Control Panel shall be designed to meet the requirements of the National Electric Code (NEC) Articles 430 and 670, also the National Fire Protections Association (NFPA) Standard 79 (Industrial Machinery).
 - 9. E-Stop related operator controls, all push buttons, selector switches, pilot devices, system control and access functions must be by Touch Screen Operator Interface Terminal.
 - 10. Electric Panels that are not UL approved are not acceptable.
 - 11. The activation switches shall be designed to be activated by all fleet vehicles used by the owner. Each activator shall be pre-mounted and wired to a water tight junction box equipped with built-in drainage holes.
- J. Tire Guides
- 1. Tire guides shall be fabricated from 3 inch diameter painted steel pipe headings, supported at 5 foot intervals, to provide guide runs on both sides of the vehicle. The tire guides shall run the full length of the wash system.
 - 2. The system shall have an angled entry. The ends of the rails are capped and all headings are smoothly finished to prevent tire damage. Brackets supporting the pipe shall be made of a minimum 3/8" steel plate that is welded to concrete imbedded cleats or anchor bolted to the concrete.
- K. Water Holding Tank
- 1. The system shall be equipped with a 925 gallon polyethylene water holding tank equipped with high and low level float switches. The system holding tank shall be filled with water from fresh city water or reclaimed water from the vehicle wash system. It will be equipment suppliers responsibility to supply adequate filtering for

the water purification as is required for the proper cleaning and film removing requirements.

2. The holding tank shall be filled via 2", slow closing solenoid valve activated by a high level float switch in the holding tank.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Equipment shall be installed in accordance with manufacturer's supplied installation drawings.
- B. Equipment supplier shall undertake the commissioning of the system and make all required adjustments to ensure proper operation.
- C. The equipment manufacturer shall start up the system. The Owner shall have all operating personnel present during the start up and equipment training.
- D. The supplier shall arrange for an adequate amount of detergent to be available for the performance testing.

3.2 CLOSEOUT

- A. The Owner's personnel shall be trained for a minimum of five (5) hours in the system's operation and maintenance.
- B. The supplier shall provide the Owner with the names and addresses of all local service and maintenance personnel to assist in future service.

END OF SECTION 111126

SECTION 113013 - RESIDENTIAL APPLIANCES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Refrigeration appliances.
 - 2. Cleaning appliances.
- B. Related Requirements:
 - 1. Section 224100 "Residential Plumbing Fixtures" for kitchen sinks, dishwasher air-gap fittings, and waste (garbage) disposers.

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Refrigeration appliances.
 - 2. Cleaning appliances.
- B. Product Data Submittals: For each product.
 - 1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer.
- B. Product Certificates: For each type of appliance.
- C. Field quality-control reports.
- D. Sample Warranties: For manufacturers' special warranties.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Maintains, within **<Insert miles (km)>** of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.

1.6 WARRANTY

- A. Dishwasher: Limited warranty, including parts and labor, for on-site service on the product.
 - 1. Warranty Period: One year from date of Substantial Completion.
- B. Clothes Washer: Limited warranty, including parts and labor for first year and motor parts thereafter, for on-site service on the product.
 - 1. Warranty Period: Ten years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain [residential appliances from single source] [and] [each type of residential appliance from single manufacturer].

2.2 PERFORMANCE REQUIREMENTS

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design and ICC A117.1.

2.3 CLEANING APPLIANCES

- A. Dishwasher (Q106): Complying with AHAM DW-1.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide GE Appliances; Haier Group; GDT226S or a comparable product by one of the following:
 - a. Kenmore; Transformco SR Brands LLC.
 - b. Maytag; Whirlpool Corporation.
 - c. Whirlpool Corporation.
 - 2. Type: Built-in undercounter.
 - 3. Dimensions:
 - a. Width: 23-3/4 inches (604 mm).
 - b. Depth: 23-1/2 inches (597 mm).
 - c. Height: 32-1/4 inches (820 mm).
 - 4. Tub and Door Liner: Stainless steel with sealed detergent and automatic rinsing-aid dispensers.
 - 5. Rack System: Nylon-coated sliding dish racks.
 - 6. Controls: Touch-pad controls.
 - 7. Features:
 - a. Waste food disposer.
 - b. Self-cleaning food-filter system.
 - 8. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
 - 9. Front Panel: Stainless steel.

10. Appliance Color/Finish: Stainless steel.
11. ADA Compliant

B. Clothes Washer (Q108): Complying with AHAM HLW-1.

1. Basis-of-Design Product: Subject to compliance with requirements, provide GE Appliances; Haier Group; GFW550SSNWW or a comparable product by one of the following:
 - a. Kenmore; Transformco SR Brands LLC.
 - b. Maytag; Whirlpool Corporation.
 - c. Whirlpool Corporation.
2. Type: Stacking, front-loading unit.
3. Dimensions:
 - a. Width: 28 inches (712 mm).
 - b. Depth: 32 inches (813 mm).
 - c. Height: 39-3/4 inches (1010 mm).
4. Drum: Stainless steel.
 - a. Capacity: 4.8 cu. Ft.
5. Electrical Power: As indicated on Drawings.
6. Motor: Manufacturer's standard with built-in overload protector.
7. Features:
 - a. Reversible door.
8. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
9. Water-Efficient Clothes Washer: Provide clothes washer with modified energy factor greater than or equal to 2.0 and water factor less than 5.5.
10. Appliance Finish: Enamel.
 - a. Color: White.
11. Front-Panel Finish: Manufacturer's standard.
 - a. Panel Color: White.

C. Clothes Dryer (Q108): Complying with AHAM HLD-1.

1. Basis-of-Design Product: Subject to compliance with requirements, provide GE Appliances; Haier Group; GFD55ESSNWW or a comparable product by one of the following:
 - a. Kenmore; Transformco SR Brands LLC.
 - b. Maytag; Whirlpool Corporation.
 - c. Whirlpool Corporation.
2. Type: Stacking, frontloading, electric unit.
3. Dimensions:
 - a. Width: 28 inches (712 mm).
 - b. Depth: 32 inches (813 mm).
 - c. Height: 39-3/4 inches (1010 mm).
4. Drum: Manufacturer's standard.
 - a. Capacity: 7.8 cu. ft.
5. Electric-Dryer Power: As indicated on Drawings.
6. Features:
 - a. Stacking kit to stack dryer over washer.
7. Appliance Finish: Enamel.
 - a. Color: White.

- 8. Front-Panel Finish: Manufacturer's standard.
 - a. Panel Color: White.

2.4 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install appliances according to manufacturer's written instructions.
- B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.
- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

3.3 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
 - 2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After installation, start units to confirm proper operation.

4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.

B. An appliance will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION 113013

SECTION 122413 - ROLLER WINDOW SHADES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Manually operated, single-roller shades.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, features, finishes, and operating instructions for roller shades.
- B. Samples: For each exposed product and for each color and texture specified, 10 inches (250 mm) long.
- C. Samples for Verification: For each type of roller shade.
 - 1. Shadeband Material: Not less than 10 inches (250 mm) square. Mark interior face of material if applicable.
- D. Product Schedule: For roller shades.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of shadeband material.
- C. Product Test Reports: For each type of shadeband material, for tests performed by a qualified testing agency.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For roller shades to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Roller Shades: Two full-size units for window type A.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.

- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roller shades in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not install roller shades until construction and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Architect of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain roller shades from single source from single manufacturer.

2.2 MANUALLY OPERATED, SINGLE-ROLLER SHADES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Lutron Electronics Co., Inc ; Contract Roller Shades. or a comparable product by one of the following:
 - 1. Draper, Inc.
 - 2. Hunter Douglas Architectural.
- B. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
 - 1. Bead Chains: Stainless steel.
 - a. Loop Length: Full length of roller shade.
 - b. Limit Stops: Provide upper and lower ball stops.
 - c. Chain-Retainer Type: Chain tensioner, jamb mounted.

2. Spring Lift-Assist Mechanisms: Manufacturer's standard for balancing roller shade weight and for lifting heavy roller shades.
 - a. Provide for shadebands that weigh more than 10 lb (4.5 kg) or for shades as recommended by manufacturer, whichever criterion is more stringent.
- C. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
 1. Roller Drive-End Location: Coordinate with Architect.
 2. Direction of Shadeband Roll: Regular, from back (exterior face) of roller.
 3. Shadeband-to-Roller Attachment: Adhesive strip.
- D. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.
- E. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.
- F. Shadebands:
 1. Shadeband Material: Light-filtering fabric.
 2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
 - a. Type: Enclosed in sealed pocket of shadeband material.
 - b. Color and Finish: As selected by Architect from manufacturer's full range.
- G. Installation Accessories:
 1. Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.
 - a. Shape: L-shaped.
 - b. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than 4 inches (102 mm).
 2. Endcap Covers: To cover exposed endcaps.
 3. Installation Accessories Color and Finish: As selected from manufacturer's full range.

2.3 SHADEBAND MATERIALS

- A. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- B. Light-Filtering Fabric: Woven fabric, stain and fade resistant.
 1. Source: Roller shade manufacturer.
 2. Type: Woven PVC-coated fiberglass and PVC-coated polyester.
 3. Thickness: 0.02 inches
 4. Openness Factor: 1 percent
 5. Color: As selected by Architect from manufacturer's full range.

2.4 ROLLER SHADE FABRICATION

- A. Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.
- B. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F (23 deg C):
 - 1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which shade is installed less 1/4 inch (6 mm) per side or 1/2-inch (13-mm) total, plus or minus 1/8 inch (3.1 mm). Length equal to head-to-sill or -floor dimension of opening in which shade is installed less 1/4 inch (6 mm), plus or minus 1/8 inch (3.1 mm).
 - 2. Outside of Jamb Installation: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- C. Shadeband Fabrication: Fabricate shadebands without battens or seams to extent possible, except as follows:
 - 1. Vertical Shades: Where width-to-length ratio of shadeband is equal to or greater than 1:4, provide battens and seams at uniform spacings along shadeband length to ensure shadeband tracking and alignment through its full range of movement without distortion of the material.
 - 2. Railroaded Materials: Railroad material where material roll width is less than the required width of shadeband and where indicated. Provide battens and seams as required by railroaded material to produce shadebands with full roll-width panel(s) plus, if required, one partial roll-width panel located at top of shadeband.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER SHADE INSTALLATION

- A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions.
- B. Roller Shade Locations: As indicated on Drawings.

3.3 ADJUSTING

- A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

- A. Clean roller shade surfaces, after installation, according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain motor-operated roller shades.

END OF SECTION 122413

SECTION 123661.16 - SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Solid surface material countertops.
 - 2. Solid surface material backsplashes.
 - 3. Solid surface material end splashes.

1.2 ACTION SUBMITTALS

- A. Product Data: For countertop materials.
- B. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
 - 1. Show locations and details of joints.
 - 2. Show direction of directional pattern, if any.
- C. Samples for Verification: For the following products:
 - 1. Countertop material, 6 inches (150 mm) square.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance with at least 10 years experience.
- B. Installer Qualifications: Fabricator of countertops with at least 5 years experience on similar jobs.

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify dimensions of countertops by field measurements after base cabinets are installed but before countertop fabrication is complete.

1.7 COORDINATION

- A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

1. Provide grommets for all small utility penetrations whether indicated in drawings or not.

PART 2 - PRODUCTS

2.1 SOLID SURFACE COUNTERTOP MATERIALS

- A. Solid Surface Material: Homogeneous-filled plastic resin complying with ISFA 2-01.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide DuPont; DuPont de Nemours, Inc.; Corian Solid Surface Countertops or a comparable product by one of the following:
 - a. Affinity Surfaces; a brand of Domain Industries, Inc.
 - b. Avonite Surfaces; a Brand of Aristech Surfaces LLC.
 - c. Formica Corporation.
 - d. Wilsonart LLC.
 2. Type: Provide Standard type unless Special Purpose type is indicated.
 3. Colors and Patterns: Locations indicated on drawings
 - a. SSM1 – As selected by Architect from manufacturer's price group C or equivalent range.
- B. Plywood: Exterior softwood plywood complying with DOC PS 1, Grade C-C Plugged, touch sanded.

2.2 FABRICATION

- A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
 1. Grade: Custom.
- B. Configuration:
 1. Front: Radius edge, 1-1/2 inches high with 1/4-inch radius.
 2. Backsplash: Straight, slightly eased at corner.
 3. End Splash: Matching backsplash wherever sidewalls occur.
- C. Countertops:
 1. 3/4-inch- (19-mm-) thick, solid surface material with front edge built up with same material.
- D. Backsplashes: 3/4-inch- (19-mm-) thick, solid surface material.
- E. Fabricate tops with shop-applied edges unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 1. Fabricate with loose backsplashes for field assembly.
- F. Joints:
 1. Fabricate countertops in sections for joining in field.
 - a. Joint Locations: Not within 18 inches (450 mm) of a sink or cooktop and not where a countertop section less than 36 inches (900 mm) long would result, unless unavoidable.

G. Cutouts and Holes:

1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
 - a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
2. Counter-Mounted Plumbing Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
3. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.
4. Utility Penetrations: Drill countertops in shop for small utility, wiring, and conduit penetrations and similar items. Provide grommets for all small round penetrations.

2.3 INSTALLATION MATERIALS

- A. Adhesive: Product recommended by solid surface material manufacturer.
- B. Sealant for Countertops: Comply with applicable requirements in Section 079200 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install countertops level to a tolerance of 1/8 inch in 8 feet (3 mm in 2.4 m), 1/4 inch (6 mm) maximum. Do not exceed 1/64-inch (0.4-mm) difference between planes of adjacent units.
- B. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.
- C. Secure countertops to subtops with adhesive according to solid surface material manufacturer's written instructions. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
- D. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.

1. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- E. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
- F. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- G. Apply sealant to gaps at walls; comply with Section 079200 "Joint Sealants."

END OF SECTION 123661.16

SECTION 133419 - METAL BUILDING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Structural-steel framing.
 - 2. Thermal insulation.
- B. Related Requirements
 - 1. Section 042200 "Concrete Unit Masonry" for perimeter and other walls as shown on drawings.
 - 2. Section 074116 "Insulated Metal Roof Panels" for roofing
 - 3. Section 074213.19 "Insulated Metal Wall Panels" for walls
 - 4. Section 074293 "Soffit Panels" for metal soffit panels.
 - 5. Section 076200 "Sheet Metal Flashing and Trim"
 - 6. Section 077100 "Roof Specialties" for gutters and downspouts
 - 7. Section 077129 "Manufactured Roof Expansion Joint" for seismic connection at roofs
 - 8. Section 077258 "Snowguards"
 - 9. Section 078100 "Applied Fire Protection" for spray-applied fire-resistive materials applied to secondary roof structural members
 - 10. Section 078123 "Intumescent Fire Protection" for intumescent protection applied to primary structural frame
 - 11. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for seismic connection at walls
 - 12. Section 081113 "Hollow Metal Doors and Frames" for personnel doors and frames
 - 13. Section 083323 "Overhead Coiling Doors"
 - 14. Section 085113 "Exterior Aluminum Windows"
 - 15. Section 088000 "Glass and Glazing"
 - 16. Section 089119 "Fixed Louvers"
 - 17. Section 412246 "Ceiling Mounted Work Station Steel Bridge Crane" for ceiling mounted bridge crane attached to structure.
 - 18. Section 416720 "Fall Arrest Anchor System" for ceiling mounted fall arrest system attached to structure.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of metal building system component.
- B. Shop Drawings: Indicate components by others. Include full building plan, elevations, sections, details and attachments to other work.
- C. Samples: For units with factory-applied finishes.
- D. Delegated Design Submittals: For metal building systems.

1. Include analysis data indicating compliance with performance requirements and design data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Letter of Design Certification: Signed and sealed by a qualified professional engineer. Include the following:
 1. Name and location of Project.
 2. Order number.
 3. Name of manufacturer.
 4. Name of Contractor.
 5. Building dimensions including width, length, height, and roof slope.
 6. Indicate compliance with AISC standards for hot-rolled steel and AISI standards for cold-rolled steel, including edition dates of each standard.
 7. Governing building code and year of edition.
 8. Design Loads: Include dead load, roof live load, collateral loads, roof snow load, deflection, wind loads/speeds and exposure, seismic design category or effective peak velocity-related acceleration/peak acceleration, and auxiliary loads (cranes).
 9. Load Combinations: Indicate that loads were applied acting simultaneously with concentrated loads, according to governing building code.
 10. Building-Use Category: Indicate category of building use and its effect on load importance factors.
- C. Material test reports.
- D. Source quality-control reports.
- E. Field quality-control reports.
- F. Sample warranties.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance data.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer.
 1. Accreditation: Manufacturer's facility accredited according to IAS AC472, "Accreditation Criteria for Inspection Programs for Manufacturers of Metal Building Systems." **Or**
 2. **Accreditation: AISC certified metal building fabricator for steel manufacturing and provides steel manufacturing in accordance with MBMA Metal Building Systems Manual.**
 3. Engineering Responsibility: Preparation of comprehensive engineering analysis and Shop Drawings by a professional engineer who is legally qualified to practice in jurisdiction where Project is located.

- B. Erector Qualifications: An experienced erector who specializes in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3, "Structural Welding Code - Sheet Steel."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. A&S Building Systems, Inc.; part of the Cornerstone Building Brands.
 - 2. ACI Building Systems, Inc.
 - 3. All American Systems; a division of NCI Building Systems, Inc.
 - 4. Alliance Steel, Inc.
 - 5. American Buildings Company; a Nucor company.
 - 6. BC Steel Buildings, Inc.
 - 7. Behlen Mfg. Co.
 - 8. Bigbee Steel Buildings, Inc.
 - 9. Butler Manufacturing Company; a division of BlueScope Buildings North America, Inc.
 - 10. CBC Steel Buildings; a Nucor company.
 - 11. Ceco Building Systems; part of the Cornerstone Building Brands.
 - 12. Chief Buildings; Chief Industries, Inc.
 - 13. Dean Steel Buildings, Inc.
 - 14. Garco Building Systems; a division of NCI.
 - 15. Golden Giant Inc.
 - 16. Gulf States Manufacturers; Nucor Company.
 - 17. Heritage Building Systems, part of the Cornerstone Building Brands.
 - 18. Inland Building Systems; a Schulte Building Systems Company.
 - 19. Kirby Building Systems; a Nucor Company.
 - 20. Ludwig Buildings Enterprises, LLC.
 - 21. Mesco Building Solutions, part of the Cornerstone Building Brands family.
 - 22. Metallic Building Systems, part of the Cornerstone Building Brands.
 - 23. Mid-West Steel Building Company; an NCI company.
 - 24. Mueller, Inc.
 - 25. Nucor Building Systems; a Nucor company.
 - 26. Package Steel Systems, Inc.
- B. **Or: Fabrication facilities that are accredited by the American Institute of Steel Construction to engineer and fabricate Pre-Engineered Metal Buildings.**

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design metal building system.

- B. Structural Performance: Metal building systems to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to procedures in MBMA's "Metal Building Systems Manual."
 - 1. Design Loads: As indicated on Drawings and as required by the 2018 International Building Code.
 - a. Include loads as required for work station crane hoist system and fall arrest tether system at location shown on drawings.
 - 2. Deflection and Drift Limits:
 - a. Design metal building system assemblies to withstand serviceability design loads without exceeding deflections and drift limits recommended in AISC Steel Design Guide No. 3 "Serviceability Design Considerations for Steel Buildings."
 - b. No greater than the following:
 - 1) Purlins and Rafters: Vertical deflection of $1/150$ of the span.
 - 2) Girts: Horizontal deflection of $1/120$ of the span.
 - 3) Metal Roof Panels: Vertical deflection of $1/150$ of the span.
 - 4) Metal Wall Panels: Horizontal deflection of $1/180$ of the span.
 - 5) Spandrel Beams Supporting Masonry Wall Out of Plane: $1/240$ of the span.
 - 6) Jamb Studs, Wind Columns, or other vertical elements supporting Spandrel beams: $1/240$ of the span.
 - 7) Design secondary-framing system to accommodate deflection of primary framing and construction tolerances, and to maintain clearances at openings.
 - 8) Lateral Drift: Maximum of $1/60$ of the building height.
- C. Seismic Performance: Metal building system to withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- E. Fire-Resistance Ratings: Where assemblies are indicated to have a fire-resistance rating, provide metal panel assemblies identical to those of assemblies tested for fire resistance per ASTM E119 or ASTM E108 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory," FM Global's "Approval Guide," or from the listings of another qualified testing agency.
- F. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

- G. Structural Performance for Metal Roof and Wall Panels: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592:
 - 1. Wind Loads: As indicated on Drawings.
- H. Thermal Performance for Opaque Elements: Provide the following maximum U-factors and minimum R-values when tested according to ASTM C1363 or ASTM C518:
 - 1. Roof:
 - a. As indicated on drawings
 - 2. Walls:
 - a. As indicated on drawings

2.3 STRUCTURAL-STEEL FRAMING

- A. Structural Steel: Comply with AISC 360, "Specification for Structural Steel Buildings."
- B. Bolted Connections: Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts."
- C. Cold-Formed Steel: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" for design requirements and allowable stresses.
- D. Primary Framing: Manufacturer's standard primary-framing system, designed to withstand required loads and specified requirements. Primary framing includes transverse and lean-to frames; rafters and rake beams; sidewall, intermediate, end-wall, and corner columns; and wind bracing.
 - 1. General: Provide frames with attachment plates, bearing plates, and splice members. Factory drill for field-bolted assembly. Provide frame span and spacing indicated.
 - a. Slight variations in span and spacing may be acceptable if necessary to comply with manufacturer's standard, as approved by Architect.
- E. End-Wall Framing: Manufacturer's standard primary end-wall framing fabricated for field-bolted assembly to comply with the following:
- F. Secondary Framing: Manufacturer's standard secondary framing, including purlins, girts, eave struts, flange bracing, base members, gable angles, clips, headers, jambs, and other miscellaneous structural members. Unless otherwise indicated, fabricate framing from either cold-formed, structural-steel sheet or roll-formed, metallic-coated steel sheet, prepainted with coil coating, to comply with the following:
 - 1. **Metallic-Coated Steel Sheet Prepainted with Coil Coating: Steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A755/A755M.**
 - a. **Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, SS, Grades 33 through 80 (230 through 550), or HSLAS or HSLAS-F, Grades 50 through 80 (340 through 550); with G90 (Z275) coating designation.**

- G. Anchor Rods: Headed anchor rods as indicated in Anchor Rod Plan for attachment of metal building to foundation.

2.4 METAL ROOF PANELS

- A. Refer to section 074116 “Insulated Metal Roof Panels”

2.5 METAL WALL PANELS

- A. Refer to Section 074213.19 “Insulated Metal Wall Panels”

2.6 METAL SOFFIT PANELS

- A. Refer to section 074293 “Soffit Panels”

2.7 THERMAL INSULATION

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

- 1. Bay Insulation Systems; a division of Bay Industries.

- B. Faced Metal Building Insulation: ASTM C991, Type II, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (51-mm-) wide, continuous, vapor-tight edge tabs; with a flame-spread index of 25 or less.

- C. Unfaced Metal Building Insulation: ASTM C991, Type I, or NAIMA 202, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (51-mm-) wide, continuous, vapor-tight edge tabs; with a flame-spread index of 25 or less.

- D. Retainer Strips: For securing insulation between supports, 0.025-inch (0.64-mm) nominal-thickness, formed, metallic-coated steel or PVC retainer clips colored to match insulation facing.

- E. Vapor-Retarder Facing: ASTM C1136, with permeance not greater than 0.02 perm (1.15 ng/Pa x s x sq. m) when tested according to ASTM E96/E96M, Desiccant Method.

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

- a. Lamtec Corporation.

2.8 PERSONNEL DOORS AND FRAMES

- A. Refer to section 081113 “Hollow Metal Doors and Frames”

2.9 WINDOWS

- A. Refer to section 085113 “Exterior Aluminum Windows”

- B. Glazing: Comply with requirements specified in Section 088000 "Glazing."

2.10 ACCESSORIES

- A. General: Provide accessories as standard with metal building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.
 - 1. Form exposed sheet metal accessories that are without excessive oil-canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
- B. Roof Panel Accessories: Refer to section 074116 "Insulated Metal Roof Panels"
- C. Wall Panel Accessories: Refer to Section 074213.19 "Insulated Metal Wall Panels"
- D. Flashing and Trim: Refer to Section 076200 "Sheet Metal Flashing and Trim"
- E. Gutters and Downspouts: Refer to section 077100 "Roof Specialties"
- F. Roof Ventilators: Gravity type, complete with hardware, flashing, closures, and fittings.
 - 1. Continuous or Sectional-Ridge Type: Factory-engineered and -fabricated, continuous unit; Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, 0.018-inch (0.46-mm) nominal uncoated steel thickness, prepainted with coil coating; finished to match metal roof panels. Fabricated in minimum 10-foot- (3-m-) long sections. Provide throat size and total length indicated, complete with side baffles, ventilator assembly, end caps, splice plates, and reinforcing diaphragms.
 - a. Bird Screening: Galvanized steel, 1/2-inch- (13-mm-) square mesh, 0.041-inch (1.04-mm) wire; or aluminum, 1/2-inch- (13-mm-) square mesh, 0.063-inch (1.6-mm) wire.
 - b. Dampers: Manually operated, spring-loaded, vertically rising type; chain and worm gear operator; with pull chain of length required to reach within 36 inches (914 mm) of floor.
 - c. Throat Size: As standard with manufacturer, and as required to comply with ventilation requirements.
- G. Roof Curbs: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, 0.048-inch (1.21-mm) nominal uncoated steel thickness prepainted with coil coating; finished to match metal roof panels; with welded top box and bottom skirt, and integral full-length cricket; capable of withstanding loads of size and height indicated.
- H. Pipe Flashing: Premolded, EPDM pipe collar with flexible aluminum ring bonded to base.

2.11 FABRICATION

- A. General: Design components and field connections required for erection to permit easy assembly.
 - 1. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.

2. Fabricate structural framing to produce clean, smooth cuts and bends. Punch holes of proper size, shape, and location. Members to be free of cracks, tears, and ruptures.
- B. Tolerances: Comply with MBMA's "Metal Building Systems Manual" for fabrication and erection tolerances.
- C. Primary Framing: Shop fabricate framing components to indicated size and section, with baseplates, bearing plates, stiffeners, and other items required for erection welded into place. Cut, form, punch, drill, and weld framing for bolted field assembly.
- D. Secondary Framing: Shop fabricate framing components to indicated size and section by roll forming or break forming, with baseplates, bearing plates, stiffeners, and other plates required for erection welded into place. Cut, form, punch, drill, and weld secondary framing for bolted field connections to primary framing.

2.12 SOURCE QUALITY CONTROL

- A. Special Inspection: Owner will engage a qualified special inspector to perform source quality control inspections and to submit reports.
 1. Accredited Manufacturers: Special inspections will not be required if fabrication is performed by an IAS AC472-accredited manufacturer approved by authorities having jurisdiction to perform such Work without special inspection.
- B. Product will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 ERECTION OF STRUCTURAL FRAMING

- A. Erect metal building system according to manufacturer's written instructions and drawings.
- B. Do not field cut, drill, or alter structural members without written approval from metal building system manufacturer's professional engineer.
- C. Set structural framing accurately in locations and to elevations indicated, according to AISC specifications referenced in this Section. Maintain structural stability of frame during erection.
- D. Base and Bearing Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
 1. Set plates for structural members on wedges, shims, or setting nuts as required.
 2. Tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.

3. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- E. Align and adjust structural framing before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with framing. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
1. Level and plumb individual members of structure.
 2. Make allowances for difference between temperature at time of erection and mean temperature when structure will be completed and in service.
- F. Primary Framing and End Walls: Erect framing level, plumb, rigid, secure, and true to line. Level baseplates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use grout to obtain uniform bearing and to maintain a level base-line elevation. Moist-cure grout for not less than seven days after placement.
1. Make field connections using high-strength bolts installed according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for bolt type and joint type specified.
 - a. Joint Type: Snug tightened or pretensioned as required by manufacturer.
- G. Secondary Framing: Erect framing level, plumb, rigid, secure, and true to line. Field bolt secondary framing to clips attached to primary framing.
1. Provide rake or gable purlins with tight-fitting closure channels and fasciae.
 2. Locate and space wall girts to suit openings such as doors and windows.
 3. Provide supplemental framing at entire perimeter of openings, including doors, windows, ventilators, and other penetrations of roof and walls.
- H. Steel Joists: Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Standard Specifications and Load Tables for Steel Joists and Joist Girders," joist manufacturer's written instructions, and requirements in this Section.
1. Before installation, splice joists delivered to Project site in more than one piece.
 2. Space, adjust, and align joists accurately in location before permanently fastening.
 3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
 4. Joist Installation:
 - a. Bolt joists to supporting steel framework using carbon-steel bolts unless otherwise indicated.
 - b. Bolt joists to supporting steel framework using high-strength structural bolts unless otherwise indicated. Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for high-strength structural bolt installation and tightening requirements.
 - c. Weld joist seats to supporting steel framework.
 5. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.
- I. Bracing: Install bracing in roof and sidewalls where indicated on erection drawings.

1. Tighten rod and cable bracing to avoid sag.
2. Locate interior end-bay bracing only where indicated.

J. Framing for Openings: Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical work. Securely attach to structural framing.

K. Erection Tolerances: Maintain erection tolerances of structural framing within AISC 303.

3.2 FIRE PROTECTION

A. Apply Intumescent and spray applied fire resistive coatings per manufacturer's installation requirements.

3.3 THERMAL INSULATION INSTALLATION

A. General: Install insulation concurrently with metal panel installation, in thickness indicated to cover entire surface, according to manufacturer's written instructions.

1. Set vapor-retarder-faced units with vapor retarder toward warm side of construction unless otherwise indicated. Do not obstruct ventilation spaces except for firestopping.
2. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to the surrounding construction to ensure airtight installation.
3. Install factory-laminated, vapor-retarder-faced blankets straight and true in one-piece lengths, with both sets of facing tabs sealed, to provide a complete vapor retarder.
4. Install blankets straight and true in one-piece lengths. Install vapor retarder over insulation, with both sets of facing tabs sealed, to provide a complete vapor retarder.

B. Blanket Roof Insulation: Comply with the following installation method:

1. Over-Framing Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Hold in place by metal roof panels fastened to secondary framing.
2. Between-Purlin Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Hold in place with bands and crossbands below insulation.
3. Over-Purlin-with-Spacer-Block Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Install layer of filler insulation over first layer to fill space formed by metal roof panel standoffs. Hold in place by panels fastened to standoffs.
 - a. Thermal Spacer Blocks: Where metal roof panels attach directly to purlins, install thermal spacer blocks.
4. Two-Layers-between-Purlin-with-Spacer-Block Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Install layer of filler insulation over first layer to fill space between purlins formed by thermal spacer blocks. Hold in place with bands and crossbands below insulation.

- a. Thermal Spacer Blocks: Where metal roof panels attach directly to purlins, install thermal spacer blocks.
- 5. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.
- C. Blanket Wall Insulation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Hold in place by metal wall panels fastened to secondary framing.
 - 1. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.

3.4 DOOR AND FRAME INSTALLATION

- A. General: Install doors and frames plumb, rigid, properly aligned, and securely fastened in place according to manufacturers' written instructions. Coordinate installation with wall flashings and other components. Seal perimeter of each door frame with elastomeric sealant used for metal wall panels.
- B. Personnel Doors and Frames: Install doors and frames according to NAAMM-HMMA 840.
 - 1. At fire-rated openings, install frames according to, and doors with clearances specified in, NFPA 80.
- C. Field Glazing: Comply with installation requirements in Section 088000 "Glazing."
- D. Door Hardware:
 - 1. Install surface-mounted items after finishes have been completed at heights indicated in DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
 - 2. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
 - 3. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.
 - 4. Set thresholds for exterior doors in full bed of sealant complying with requirements for concealed mastics specified in Section 079200 "Joint Sealants."

3.5 WINDOW INSTALLATION

- A. General: Install windows plumb, rigid, properly aligned, without warp or rack of frames or sash, and securely fasten in place according to manufacturer's written instructions. Coordinate installation with wall flashings and other components. Seal perimeter of each window frame with elastomeric sealant used for metal wall panels.
 - 1. Separate dissimilar materials from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified in AAMA/WDMA/CSA 101/I.S.2/A440.
- B. Set sill members in bed of sealant or with gaskets, for weathertight construction.
- C. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.

- D. Mount screens directly to frames with tapped screw clips.

3.6 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal roof panel assembly, including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
 - 2. Install components for a complete metal wall panel assembly, including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
 - 3. Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by manufacturer.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - 1. Install exposed flashing and trim that is without excessive oil-canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 - 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (600 mm) of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).
- C. Gutters: Join sections with riveted-and-soldered or lapped-and-sealed joints. Attach gutters to eave with gutter hangers spaced as required for gutter size, but not more than 36 inches (914 mm) o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- D. Downspouts: Join sections with 1-1/2-inch (38-mm) telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1524 mm) o.c. in between.
 - 1. Provide elbows at base of downspouts to direct water away from building.
 - 2. Tie downspouts to underground drainage system indicated.
- E. Continuous Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Join sections with splice plates and end-cap skirt assemblies where required to achieve indicated length. Install preformed filler strips at base to seal ventilator to metal roof panels.

- F. Roof Curbs: Install curbs at locations indicated on Drawings. Install flashing around bases where they meet metal roof panels.
- G. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to panel as recommended by manufacturer.

3.7 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform field quality control special inspections and to submit reports.
- B. Product will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

SECTION 210516 - EXPANSION FITTINGS AND LOOPS FOR FIRE SUPPRESSION PIPING

1.1 SUMMARY

- A. Section Includes:
 - 1. Packless expansion joints.
 - 2. Alignment guides and anchors.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance data.
- B. Warranty Information.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Compatibility: Provide products suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Provide products and installations to accommodate maximum axial movement as scheduled or indicated on Drawings.

2.2 PACKLESS EXPANSION JOINTS

- A. Flexible-Hose Packless Expansion Joints:
 - 1. Basis-of-Design Product, subject to compliance with the specified product on the drawings, provide a product by one of the following manufacturers:
 - a. Twin City Hose.
 - b. Engineered Hose.
 - c. Flex-Hose.
 - d. Unisource.
 - e. Or Approved Equal.
 - 2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, V-shaped bend, or center section of flexible hose. Hoses shall be NFPA-13 compliant.
 - 3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.

4. Expansion Joints for Copper Tubing NPS 2 and Smaller: Copper-alloy fittings with solder-joint end connections.
 - a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F and 340 psig at 450 deg F ratings.
 - b. Hoses on domestic hot water, cold water, and hot water return shall be NSF-61, Lead-Free compliant.
5. Expansion Joints for Steel Piping NPS 2 and Smaller: Carbon steel fittings with threaded end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 450 psig at 70 deg F and 325 psig at 600 deg F ratings.
 - b. Joints used for natural gas shall be UL-listed for natural gas use.
6. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6: Carbon steel fittings with flanged end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 200 psig at 70 deg F and 145 psig at 600 deg F ratings.

2.3 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides:
 1. Guides shall be manufactured by the flexible hose manufacturer.
 2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.
- B. Anchor Materials:
 1. Steel Shapes and Plates: ASTM A36/A36M.
 2. Bolts and Nuts: ASME B18.10 or ASTM A183, steel hex head.
 3. Washers: ASTM F844, steel, plain, flat washers.
 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Stud: Threaded: Stainless steel.
 - b. Expansion Plug: Stainless steel.
 - c. Washer and Nut: Stainless steel.

PART 3 - EXECUTION

3.1 INSTALLATION OF EXPANSION JOINTS - GENERAL

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.

3.2 INSTALLATION OF ALIGNMENT GUIDES AND ANCHORS

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.

- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
 - 1. See structural drawings for anchor attachment specifications.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
 - 1. See structural drawings for anchor attachment specifications.

3.3 INSTALLATION OF PIPE LOOP AND SWING CONNECTIONS

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.

END OF SECTION 210516

SECTION 210517 - SLEEVES AND SLEEVE SEALS FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Sleeve-seal systems.
 - 3. Grout.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

2.2 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Advance Products & Systems, Inc.
 - 2. CALPICO, Inc.
 - 3. Metraflex Company.
 - 4. Pipeline Seal and Insulator, Inc.
 - 5. Proco Products, Inc.
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 - 1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 - 2. Pressure Plates: Stainless steel.
 - 3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.3 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
 - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
 - 2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
 - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 07 92 00 "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 84 13 "Penetration Firestopping."

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space

between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
 - 1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.
 - 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - 3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - 4. Concrete Slabs above Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.
 - 5. Interior Partitions:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 and Larger: Galvanized-steel-sheet sleeves.

END OF SECTION 210517

SECTION 210518 - ESCUTCHEONS FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With polished, chrome-plated and rough-brass finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Chrome-Plated Piping: One-piece, cast-brass type with polished, chrome-plated finish.
 - c. Insulated Piping: One-piece, stamped-steel type.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
 - f. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished, chrome-plated finish.

- g. Bare Piping in Equipment Rooms: One-piece, cast-brass type with polished, chrome-plated finish.
 - C. Install floor plates for piping penetrations of equipment-room floors.
 - D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. New Piping: One-piece, floor-plate type.
- 3.2 FIELD QUALITY CONTROL
- A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 210518

SECTION 210523 - GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Iron butterfly valves with indicators.
 - 2. Check valves.
 - 3. Iron OS&Y gate valves.
 - 4. NRS gate valves.
 - 5. Indicator posts.
 - 6. Trim and drain valves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. UL Listed: Valves shall be listed in UL's "Online Certifications Directory" under the headings listed below and shall bear UL mark:
 - 1. Main Level: HAMV - Fire Main Equipment.
 - a. Level 1: HCBZ - Indicator Posts, Gate Valve.
 - b. Level 1: HLOT - Valves.
 - 1) Level 3: HLUG - Ball Valves, System Control.
 - 2) Level 3: HLXS - Butterfly Valves.
 - 3) Level 3: HMER - Check Valves.
 - 4) Level 3: HMRZ - Gate Valves.
 - 2. Main Level: VDGT - Sprinkler System & Water Spray System Devices.
 - a. Level 1: VQGU - Valves, Trim and Drain.
- B. FM Global Approved: Valves shall be listed in its "Approval Guide," under the headings listed below:
 - 1. Automated Sprinkler Systems:
 - a. Indicator posts.
 - b. Valves.
 - 1) Gate valves.
 - 2) Check valves.
 - a) Single check valves.
 - 3) Miscellaneous valves.
- C. Source Limitations for Valves: Obtain valves for each valve type from single manufacturer.
- D. ASME Compliance:
 - 1. ASME B16.1 for flanges on iron valves.
 - 2. ASME B1.20.1 for threads for threaded-end valves.
 - 3. ASME B31.9 for building services piping valves.

- E. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- F. NFPA Compliance: Comply with NFPA 24 for valves.
- G. Valve Pressure Ratings: Not less than the minimum pressure rating indicated or higher as required by system pressures.
- H. Valve Sizes: Same as upstream piping unless otherwise indicated.
- I. Valve Actuator Types:
 - 1. Worm-gear actuator with handwheel for quarter-turn valves, except for trim and drain valves.
 - 2. Handwheel: For other than quarter-turn trim and drain valves.
 - 3. Handlever: For quarter-turn trim and drain valves NPS 2 and smaller.

2.2 IRON BUTTERFLY VALVES WITH INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anvil International.
 - 2. NIBCO INC.
 - 3. Tyco Fire.
 - 4. Victaulic Company.
 - 5. Zurn Industries, LLC.
- B. Description:
 - 1. Standard: UL 1091 and FM Global standard for indicating valves, (butterfly or ball type), Class Number 112.
 - 2. Minimum Pressure Rating: 175 psig.
 - 3. Body Material: Cast or ductile iron with nylon, EPDM, epoxy, or polyamide coating.
 - 4. Seat Material: EPDM.
 - 5. Stem: Stainless steel.
 - 6. Disc: Ductile iron, nickel plated and EPDM or SBR coated.
 - 7. Actuator: Worm gear or traveling nut.
 - 8. Supervisory Switch: Internal or external.
 - 9. Body Design: Lug or wafer.

2.3 CHECK VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anvil International.
 - 2. Mueller Co.
 - 3. NIBCO INC.
 - 4. Tyco Fire.
 - 5. Victaulic Company.
- B. Description:
 - 1. Standard: UL 312 and FM Global standard for swing check valves, Class Number 1210.

2. Minimum Pressure Rating: 175 psiga.
3. Type: Single swing check.
4. Body Material: Cast iron, ductile iron, or bronze.
5. Clapper: Bronze, ductile iron, or stainless steel with elastomeric seal.
6. Clapper Seat: Brass, bronze, or stainless steel.
7. Hinge Shaft: Bronze or stainless steel.
8. Hinge Spring: Stainless steel.
9. End Connections: Flanged, grooved, or threaded.

2.4 IRON OS&Y GATE VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. NIBCO INC.
 2. Victaulic Company.
 3. Watts.
 4. Zurn Industries, LLC.
- B. Description:
 1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
 2. Minimum Pressure Rating: 175 psig.
 3. Body and Bonnet Material: Cast or ductile iron.
 4. Wedge: Cast or ductile iron, or bronze with elastomeric coating.
 5. Wedge Seat: Cast or ductile iron, or bronze with elastomeric coating.
 6. Stem: Brass or bronze.
 7. Packing: Non-asbestos PTFE.
 8. Supervisory Switch: External.
 9. End Connections: Flanged or Grooved.

2.5 NRS GATE VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Mueller Co.
 2. NIBCO INC.
 3. Victaulic Company.
 4. Zurn Industries, LLC.
- B. Description:
 1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
 2. Minimum Pressure Rating: 175 psig.
 3. Body and Bonnet Material: Cast or ductile iron.
 4. Wedge: Cast or ductile iron with elastomeric coating.
 5. Wedge Seat: Cast or ductile iron, or bronze with elastomeric coating.
 6. Stem: Brass or bronze.
 7. Packing: Non-asbestos PTFE.
 8. Supervisory Switch: External.
 9. End Connections: Flanged or Grooved

2.6 INDICATOR POSTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Cast Iron Pipe Company.
 - 2. Clow Valve Company.
 - 3. Kennedy Valve Company.
 - 4. Mueller Co.
 - 5. NIBCO INC.
- B. Description:
 - 1. Standard: UL 789 and FM Global standard for indicator posts.
 - 2. Type: Underground.
 - 3. Base Barrel Material: Cast or ductile iron.
 - 4. Extension Barrel: Cast or ductile iron.
 - 5. Cap: Cast or ductile iron.
 - 6. Operation: Wrench.

2.7 TRIM AND DRAIN VALVES

- A. Angle Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc.
 - b. NIBCO INC.
 - c. United Brass Works, Inc.
 - 2. Description:
 - a. Pressure Rating: 175 psig.
 - b. Body Material: Brass or bronze.
 - c. Ends: Threaded.
 - d. Stem: Bronze.
 - e. Disc: Bronze.
 - f. Packing: Asbestos free.
 - g. Handwheel: Malleable iron, bronze, or aluminum.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS FOR VALVE INSTALLATION

- A. Comply with requirements in the following Sections for specific valve installation requirements and applications:
 - 1. Section 211313 "Wet-Pipe Sprinkler Systems" for application of valves in wet-pipe, fire-suppression sprinkler systems.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

- D. Install valves having threaded connections with unions at each piece of equipment arranged to allow easy access, service, maintenance, and equipment removal without system shutdown. Provide separate support where necessary.
- E. Install valves in horizontal piping with stem at or above the pipe center.
- F. Install valves in position to allow full stem movement.
- G. Install valve tags. Comply with requirements in Section 210553 "Identification for Fire-Suppression Piping and Equipment" for valve tags and schedules and signs on surfaces concealing valves; and the NFPA standard applying to the piping system in which valves are installed. Install permanent identification signs indicating the portion of system controlled by each valve.
- H. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections.
- I. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

END OF SECTION 210523

SECTION 210548 - SEISMIC CONTROLS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Seismic bracing shall comply with all applicable requirements of the 2018 International Building Code (IBC) including all applicable provisions of the American Society of Civil Engineers (ASCE) Minimum Design Loads for Buildings and Other Structures (ASCE Standard 7-16). Basic seismic design criteria for each project shall be as listed on the structural drawings for that project.
- B. Fire sprinkler systems shall be braced in accordance with the requirements of NFPA 13 as is allowed by ASCE Standard 7-16 Sections 13.6.8.2 and 13.6.8.3.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Delegated-Design Submittal: For each vibration isolation and seismic-restraint device.
 - 1. Include design calculations and details for selecting vibration isolators and seismic restraints complying with performance requirements, design criteria, and analysis data signed and sealed by a N.I.C.E.T. (National Institute for Certification in Engineering Technologies) Level III fire sprinkler technician or qualified State of Nevada Professional Engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: N.I.C.E.T Level III fire sprinkler technician or professional engineer.
- B. Welding certificates.
- C. The Contractor shall provide the required number of seismic shop drawing submittal sets for review and approval by the Owner. Submittals shall include a comprehensive set of shop drawings clearly depicting the seismic bracing requirements for all fire sprinkler suppression piping and equipment.
- D. Submittals shall be fully coordinated with the structural drawings and shall include all applicable structural attachment details. Seismic bracing shop drawings shall include all vertical support anchorage loads and all seismic bracing anchorage loads. Each specific load shall be indicated and the structural element that the support is attached to shall be clearly depicted/identified. Seismic bracing submittals shall be stamped and signed by a N.I.C.E.T Level III fire sprinkler technician or professional engineer.
- E. Seismic shop drawing submittals will be reviewed by both the mechanical engineer and the structural engineer.

1.4 QUALITY ASSURANCE

- A. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

PART 2 - PERFORMANCE REQUIREMENTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:
 - 1. Site Class as Defined in the IBC: D.
 - 2. Assigned Seismic Use Group or Building Category as Defined in the IBC: II.
 - a. Component Importance Factor: 1.0.
 - b. Component Response Modification Factor: wet-side components: 2.5.
 - c. Component Amplification Factor: 1.0 for wet-side components.
 - 3. Design Spectral Response Acceleration at Short Periods (0.2 Second): 100.
 - 4. Design Spectral Response Acceleration at 1-Second Period: 60.
- B. Verify seismic restraint criteria and other requirements identified on the structural drawings or specifications.

PART 3 - EXECUTION

3.1 VIBRATION CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 03 30 00 "Cast-in-Place Concrete."
- B. Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- C. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- D. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- E. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- F. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- G. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Set anchors to manufacturer's recommended torque, using a torque wrench.
5. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.2 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment.
- B. END OF SECTION 210548

SECTION 210553 - IDENTIFICATION FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Equipment-Label Schedule: Include a listing of all equipment to be labeled and the proposed content for each label.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. LEM Products Inc.
 - d. Marking Services, Inc.
 - 2. Material and Thickness: anodized aluminum, 0.032 inch thick, with predrilled holes for attachment hardware.
 - 3. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 - 4. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 - 5. Fasteners: Stainless-steel rivets.
 - 6. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Plastic Labels for Equipment:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. LEM Products Inc.
 - d. Marking Services, Inc.
 - 2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.

3. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 6. Fasteners: Stainless-steel rivets.
 7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- D. Equipment-Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Brimar Industries, Inc.
 2. Craftmark Pipe Markers.
 3. LEM Products Inc.
 4. Marking Services Inc.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
- C. Letter Color: White.
- D. Background Color: Red.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- H. Fasteners: Stainless-steel rivets.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- J. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brimar Industries, Inc.
 - 2. Craftmark Pipe Markers.
 - 3. LEM Products Inc.
 - 4. Marking Services Inc.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service and showing flow direction.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: At least 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

3.2 LABEL INSTALLATION REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be installed.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install or permanently fasten labels on each major item of mechanical equipment.
- D. Locate equipment labels where accessible and visible.
- E. Piping: Painting of piping is specified in Section 09 91 23 "Interior Painting."

- F. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
1. Near each valve and control device.
 2. Near each branch connection excluding short takeoffs. Where flow pattern is not obvious, mark each pipe at branch.
 3. Near penetrations and on both sides of through walls, floors, ceilings, and inaccessible enclosures.
 4. At access doors, manholes, and similar access points that permit a view of concealed piping.
 5. Near major equipment items and other points of origination and termination.
 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

END OF SECTION 210553

SECTION 211313 - WET-PIPE SPRINKLER SYSTEMS

1.1 PERFORMANCE REQUIREMENTS

- A. Quality Standards: NFPA 13 and NFPA 70.

1.2 GENERAL REQUIREMENTS

- A. This is a performance specification and the contractor shall be responsible for providing all permits, fees, design, material, fabrication, storage, installation, and testing for a complete and operable fire sprinkler system.
- B. It is the fire protection contractor's responsibility to review all documents including (but not limited to) architectural, civil, electrical, plumbing, mechanical, and structural disciplines when designing the fire protection system. Fire protection contractor shall acknowledge on their shop drawings that they have reviewed all design documents as part of the preparation of the fire protection system design.
- C. System shall meet the requirements of national fire protection association (NFPA) 13, 24, the National Electrical Code (NEC), as well as local building officials, water department and state fire marshal requirements as applicable.
- D. Submit complete set of shop drawings including necessary calculations and catalog cuts of materials to the engineer and the authority having jurisdiction for approval. Obtain approval prior to installation. Drawings and calculations shall be certified by a minimum N.I.C.E.T. (national institute for certification engineering technology) fire sprinkler systems level III technician.
- E. System shall be hydraulically designed. Contractor shall obtain latest water supply information and determine sprinkler head spacing and design densities for hydraulic calculations. Required system pressure shall be a minimum of 10 P.S.I. below the available pressure at system demand.
- F. Plans for installation of any fire alarm, or fire sprinkler system shall be submitted under separate permit by contractors licensed by the Nevada State Fire Marshal's Office to do this work; a separate permit is required for each type of system.
- G. Contractor shall hold a valid Nevada contractor's license for the type of work being performed.
- H. All piping shall be suspended and braced in strict accordance with NFPA 13, 2012 IBC, and ASCE 7.
- I. The contractor guarantees that all work installed shall be free of all defects in workmanship and material for a period of one year from the date of the certification of completion and acceptance of work.
- J. After system is completely installed, it shall be filled and tested in accordance with local requirements, NFPA 13, and the requirements of the applicable NFPA bulletins.

- K. All sprinkler heads to be semi-recess type with escutcheon. Coordinate with architect on head and escutcheon colors. All piping is to be concealed above finish ceiling areas. Sprinkler heads shall be aligned with lights, diffusers, and other equipment so as to present a neat and symmetric appearance. Sprinkler heads to be centered in ceiling tile.
- L. In lieu of rigid pipe offsets or return bends for sprinkler drops, multiple-use flexible stainless-steel sprinkler drop system may be used to locate sprinklers as required by final finished ceiling tiles and walls. The drop system shall consist of a braided or unbraided (corrugated) type 304 stainless steel flexible tube, a zinc plated steel 1" NPT male threaded nipple for connection to branch line piping, and a zinc plated steel reducer with a 1/2" or 3/4" NPT female thread for connection to the sprinkler head. The braided drop system shall be FM approved for sprinkler services to 200 psi and can be installed without the use of tools, and the corrugated system shall be UL listed for sprinkler services to 175 psi. All hoses shall be factory-pressure tested to 400 psi.
- M. Freeze protection shall be provided for fire sprinklers and piping that protect the indicated overhangs containing combustible materials. The most appropriate method of freeze protection shall be determined by the fire protection contractor.
- N. Where fire protection piping crosses a building seismic expansion joint, the fire protection piping shall be provided with a flexible piping loop. Metraflex Fire Loop expansion joint, or approved equal, capable of accommodating movement in all directions up to 4 inches. Expansion joint shall be UL listed and FM approved.

END OF SECTION 211313

SECTION 220500 - COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Piping materials and installation instructions common to most piping systems.
 - 2. Dielectric fittings.
 - 3. Equipment installation requirements common to equipment sections.

1.2 DEFINITIONS

- A. Finished Spaces: Spaces other than plumbing and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and plumbing equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.3 SUBMITTALS

- A. Welding certificates.
- B. Company welding procedures.
- C. See section 013000 for submittal requirements.

1.4 QUALITY ASSURANCE

- A. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.
- B. Reference Building Codes and Standards:
 - 1. IBC – 2018 International Building Code
 - 2. UMC – 2018 Uniform Mechanical Code
 - 3. UPC – 2018 Uniform Plumbing Code
 - 4. IFC – 2018 International Fire Code

5. NFPA – National Fire Protection Association
6. NEC – National Electrical Code
7. Nevada State Regulatory Agencies
8. ANSI – American National Standards Institute
9. SMACNA – Sheet Metal and Air Conditioning Contractors National Association
10. ASME – American Society of Mechanical Engineers
11. UL – Underwriters Laboratory
12. 2018 – International Energy Conservation Code

PART 2 - NOT USED

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel, and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

END OF SECTION 220500

SECTION 220516 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

1.1 SUMMARY

- A. Section Includes:
 - 1. Packless expansion joints.
 - 2. Alignment guides and anchors.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance data.
- B. Warranty Information.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Compatibility: Provide products suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Provide products and installations to accommodate maximum axial movement as scheduled or indicated on Drawings.

2.2 PACKLESS EXPANSION JOINTS

- A. Flexible-Hose Packless Expansion Joints:
 - 1. Basis-of-Design Product, subject to compliance with the specified product on the drawings, provide a product by one of the following manufacturers:
 - a. Twin City Hose.
 - b. Engineered Hose.
 - c. Flex-Hose.
 - d. Or Approved Equal.
 - 2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, V-shaped bend or center section of flexible hose.
 - 3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
 - 4. Expansion Joints for Copper Tubing NPS 2 and Smaller: Copper-alloy fittings with solder-joint end connections.

- a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F and 340 psig at 450 deg F ratings.
 - b. Hoses on domestic hot water, cold water, and hot water return shall be NSF-61, Lead-Free compliant.
5. Expansion Joints for Steel Piping NPS 2 and Smaller: Carbon steel fittings with threaded end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 450 psig at 70 deg F and 325 psig at 600 deg F ratings.
 - b. Joints used for natural gas shall be UL-listed for natural gas use.
6. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6: Carbon steel fittings with flanged end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 200 psig at 70 deg F and 145 psig at 600 deg F ratings.

2.3 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides:
 1. Guides shall be manufactured by the flexible hose manufacturer.
 2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.
- B. Anchor Materials:
 1. Steel Shapes and Plates: ASTM A36/A36M.
 2. Bolts and Nuts: ASME B18.10 or ASTM A183, steel hex head.
 3. Washers: ASTM F844, steel, plain, flat washers.
 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Stud: Threaded, Stainless steel.
 - b. Expansion Plug: Stainless steel.
 - c. Washer and Nut: Stainless steel.

PART 3 - EXECUTION

3.1 INSTALLATION OF EXPANSION JOINTS - GENERAL

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.

3.2 INSTALLATION OF ALIGNMENT GUIDES AND ANCHORS

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

- E. Anchor Attachments:
 - 1. See structural drawings for anchor attachment specifications.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
 - 1. See structural drawings for anchor attachment specifications.

3.3 INSTALLATION OF PIPE LOOP AND SWING CONNECTIONS

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.

END OF SECTION 220516

SECTION 220517 - SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Sleeve-seal systems.
 - 3. Grout.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements
- B. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast-Iron wall pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-steel wall pipes: ASTM A53/A53M, Schedule 40, with plain ends and welded steel collar: zinc coated.
- C. Galvanized Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. PVC Pipe Sleeves: ASTM D1785, Schedule 40.
- E. Galvanized-Steel Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

2.2 SLEEVE-SEAL SYSTEMS

- A. Manufactureres: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Pipeline Seal and Insulator, Inc.
 - c. Or approved equal.
- B. Descriptions: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 - a. Sealing Elements: EPDM – rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 - b. Pressure Plates: Stainless steel.
 - c. Connecting bolts and nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.3 GROUT

- A. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Non-shrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
 - 2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
 - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint.
- E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 078413 "Penetration Firestopping."

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space

between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.
- B. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.4 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
 - 1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than NPS 6: Cast-iron pipe sleeves.
 - 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than NPS 6 Steel pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - 3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than NPS 6 Steel pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - 4. Concrete Slabs above Grade:
 - a. Piping Smaller Than NPS 6: Steel pipe sleeves.
 - 5. Interior Partitions:
 - a. Piping Smaller Than NPS 6 Steel pipe sleeves.

END OF SECTION 220517

SECTION 220518- ESCUTCHEONS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Escutcheons.
2. Floor plates.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Chrome-Plated Piping: One-piece, cast-brass type with polished, chrome-plated finish.
 - c. Insulated Piping: One-piece, stamped-steel type.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.

- e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
 - f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
 - g. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type.
 - h. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
 - i. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type.
 - j. Bare Piping in Equipment Rooms: One-piece, cast-brass type with polished, chrome-plated finish.
 - k. Bare Piping in Equipment Rooms: One-piece, stamped-steel type.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
- 1. New Piping: One-piece, floor-plate type.
- E. Seal Escutcheons to wall with silicone suitable for use for kitchen and bathroom. Color of silicone used to be selected by architect.
- 3.2 FIELD QUALITY CONTROL
- A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 220518

SECTION 220519 - METERS AND GAGES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bimetallic-actuated thermometers.
 - 2. Thermowells.
 - 3. Dial-type pressure gages.
 - 4. Gage attachments.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Miljoco Corporation.
 - 2. Terice, H. O. Co.
 - 3. Weiss Instruments, Inc.
 - 4. Weksler Glass Thermometer Corp.
- B. Standard: ASME B40.200.
- C. NSF – 61 compliant.
- D. Case: sealed type(s); stainless steel with 5-inch nominal diameter.
- E. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.
- F. Connector Type(s): Union joint, adjustable angle and rigid, bottom, with unified-inch screw threads.
- G. Connector Size: 1/2 inch, with ASME B1.1 screw threads.
- H. Stem: 0.25 or 0.375 inch in diameter; stainless steel.

- I. Window: Plain glass.
- J. Ring: Stainless steel.
- K. Element: Bimetal coil.
- L. Pointer: Dark-colored metal.
- M. Accuracy: Plus, or minus 1 percent of scale range.

2.2 THERMOWELLS

- A. Thermowells:
 - 1. Standard: ASME B40.200.
 - 2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
 - 3. Material for Use with Copper Tubing: CNR or CUNI.
 - 4. Material for Use with Steel Piping: CRES.
 - 5. Type: Stepped shank unless straight or tapered shank is indicated.
 - 6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
 - 7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
 - 8. Bore: Diameter required to match thermometer bulb or stem.
 - 9. Insertion Length: Length required to match thermometer bulb or stem.
 - 10. Lagging Extension: Include on thermowells for insulated piping and tubing.
 - 11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.
 - 12. NSF-61 Compliant
- B. Heat-Transfer Medium: Mixture of graphite and glycerin.
- C. NFS-61 compliant.

2.3 PRESSURE GAGES

- A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Miljoco Corporation.
 - b. Terice, H. O. Co.
 - c. Weiss Instruments, Inc.
 - d. Weksler Glass Thermometer Corp.
 - 2. Standard: ASME B40.100.
 - 3. Case: Sealed type(s); cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
 - 4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 - 5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 - 6. Movement: Mechanical, with link to pressure element and connection to pointer.
 - 7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
 - 8. Pointer: Dark-colored metal.

- 9. Window: Glass.
- 10. Ring: Metal.
- 11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.
- 12. NSF – 61 compliant.

2.4 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and porous-metal-type surge-dampening device. Include extension for use on insulated piping.
- B. Siphons: Loop-shaped section of brass pipe with NPS 1/4 or NPS 1/2 pipe threads.
- C. Valves: Brass or stainless-steel needle, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- H. Install remote-mounted pressure gages on panel.
- I. Install valve and snubber in piping for each pressure gage for fluids.
- J. Install thermometers in the following locations:
 - 1. Inlet and outlet of each water heater.
- K. Install pressure gages in the following locations:
 - 1. Building water service entrance into building.
 - 2. Inlet and outlet of each pressure-reducing valve.
 - 3. Suction and discharge of each domestic water pump.

L. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

M. Adjust faces of meters and gages to proper angle for best visibility.

3.2 THERMOMETER SCHEDULE

A. Thermometers at inlet and outlet of each domestic water heater shall be the following:
1. Sealed, bimetallic-actuated type.

B. Thermometers at inlet and outlet of each tempering valve inlets and outlets shall be the following:
1. Sealed, bimetallic-actuated type.

C. Thermometer stems shall be of length to match thermowell insertion length.

3.3 THERMOMETER SCALE-RANGE SCHEDULE

A. Scale Range for Domestic Cold-Water Piping: 0 to 150 deg F.

B. Scale Range for Domestic Hot-Water and Tempered Water Piping: 0 to 250 deg F.

3.4 PRESSURE-GAGE SCHEDULE

A. Pressure gages at discharge of each water service into building shall be the following:
1. Sealed, direct-mounted, metal case.

B. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be the following:
1. Sealed, direct-mounted, metal case.

C. Pressure gages at suction and discharge of each domestic water pump shall be the following:
1. Sealed, direct-mounted, metal case.

3.5 PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Water Service Piping: 0 to 160 psi.

B. Scale Range for Domestic Water Piping: 0 to 160 psi.

END OF SECTION 220519

SECTION 220523.12 - BALL VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Bronze ball valves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of valve.
1. Certification that products comply with NSF 61 Annex G and NSF 372.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
1. ASME B1.20.1 for threads for threaded end valves.
 2. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 3. ASME B16.18 for solder-joint connections.
 4. ASME B31.9 for building services piping valves.
- C. NSF Compliance: NSF 61 Annex G and NSF 372 for valve materials for potable-water service.
- D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- F. Valve Sizes: Same as upstream piping unless otherwise indicated.
- G. Valve Actuator Types:
1. Handlever: For quarter-turn valves smaller than NPS 4.
- H. Valves in Insulated Piping:
1. Include 2-inch stem extensions.
 2. Extended operating handles of nonthermal-conductive material and protective sleeves that allow operation of valves without breaking vapor seals or disturbing insulation.
 3. Memory stops that are fully adjustable after insulation is applied.

2.2 BRONZE BALL VALVES

- A. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- B. Two-Piece, Bronze Ball Valves with Full Port and Bronze or Brass Trim:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Milwaukee Valve.
 - b. NIBCO INC.
 - c. Red-White Valve Corporation.
 - d. Watts; a Watts Water Technologies company.
 - 2. Description:
 - a. Standard: MSS SP-110.
 - b. CWP Rating: 400 psig.
 - c. Body Design: Two piece.
 - d. Body Material: Bronze.
 - e. Ends: Threaded and soldered.
 - f. Seats: PTFE.
 - g. Stem: Stainless steel.
 - h. Ball: Stainless steel.
 - i. Port: Full.

PART 3 - EXECUTION

3.1 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.

3.2 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- B. Select valves with the following end connections:
 - 1. For Copper Tubing, NPS 4 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.

3.3 DOMESTIC WATER VALVE SCHEDULE

- A. Pipe NPS 4 and Smaller:
 - 1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
- B. Ball valves at expansion tanks shall be Bronze Ball Valves with lockable handles.

3.4 COMPRESSED AIR VALVE SCHEDULE

A. Pipe NPS 4 and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.

END OF SECTION 220523.12

SECTION 220523.14 - CHECK VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bronze check valves.
 - 2. Iron check valves for compressed air

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of valve.
 - 1. Certification that products comply with NSF 61 Annex G and NSF 372.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded end valves.
 - 2. ASME B16.1 for flanges on iron valves.
 - 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 4. ASME B16.18 for solder joint.
 - 5. ASME B31.9 for building services piping valves.
- C. NSF Compliance: NSF 61 Annex G and NSF 372 for valve materials for potable-water service.
- D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- F. Valve Sizes: Same as upstream piping unless otherwise indicated.
- G. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE CHECK VALVES

- A. Bronze, inline, center guided silent check valve (1/4" through 2 1/2"):
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO INC.
 - b. Red-White Valve Corporation.
 - c. Watts; a Watts Water Technologies company.

- d. Milwaukee Valve.
- 2. Description:
 - a. Standard: MSS SP-80, Type 3.
 - b. CWP Rating: 200 psig.
 - c. Body Design: Horizontal flow.
 - d. Body Material: ASTM B 62, bronze.
 - e. Ends: Threaded or soldered. See valve schedule articles.
 - f. Disc: Bronze.

2.3 IRON CHECK VALVES FOR COMPRESSED AIR

- A. Ductile Iron, globe type, center guided, silent check valve (2-1/2" through 8"):
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Titan Flow Control
 - b. Crane; Crane Energy Flow Solutions.
 - c. Hammond Valve.
 - d. NIBCO INC.
 - e. Red-White Valve Corporation.
 - f. Watts; a Watts Water Technologies company.
 - 2. Description:
 - a. WOG (non-shock): 250 psig 100 deg. F.
 - b. Body Design: Inline flow.
 - c. Body Material: Ductile Iron ASTM A536
 - d. Ends: ANSI Class 150 flanged ends, flat face.
 - e. Disc: Aluminum Bronze ASTM B148
 - f. Seat: Aluminum Bronze ASTM B148
 - g. Spring: Series 300 Stainless Steel

PART 3 - EXECUTION

3.1 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.
- E. Install check valves for proper direction of flow in horizontal position with hinge pin level.

3.2 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.3 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Pump-Discharge Check Valves:
 - a. NPS 2-1/2 and Smaller: Bronze non-slam check valves with bronze disc.
- B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- C. End Connections:
 - 1. For Copper Tubing, NPS 2 and Smaller: Threaded or soldered.
 - 2. For Copper Tubing, NPS 2-1/2 threaded.

3.4 DOMESTIC WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 and Smaller: Bronze non-slam check valves, Class 125, bronze disc with soldered or threaded end connections.

3.5 COMPRESSED AIR VALVE SCHEDULE

- A. Pipe NPS 2-1/2 and Smaller: Bronze non-slam check valves, Class 125, bronze disc with soldered or threaded end connections.
- B. Pipe greater than NPS 2-1/2: Iron non-slam check valves.

END OF SECTION 220523.14

SECTION 220529-HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Metal pipe hangers and supports.
 - 2. Trapeze pipe hangers.
 - 3. Thermal-hanger shield inserts.
 - 4. Fastener systems.
 - 5. Pipe positioning systems.

1.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified State of Nevada Professional Engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Signed and sealed by a qualified State of Nevada Professional Engineer. Show fabrication and installation details and include calculations for the following; include Product Data for components:
 - 1. Trapeze pipe hangers.
 - 2. Equipment supports.
- C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
 - 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
 - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
- B. Stainless-Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.
- C. Copper Pipe Hangers:
 - 1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
 - 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel.

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 THERMAL-HANGER SHIELD INSERTS

- A. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.
- B. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength.
- C. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- D. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- E. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.4 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.5 PIPE POSITIONING SYSTEMS

- A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.6 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 - 2. Field fabricated from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- D. Fastener System Installation:
 - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

- E. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.
- F. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- G. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- H. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- I. Install lateral bracing with pipe hangers and supports to prevent swaying.
- J. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- K. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- L. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- M. Insulated Piping:
 - 1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
 - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 - 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 - 4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
 - b. NPS 4: 12 inches long and 0.06 inch thick.
 - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
 - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
 - e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
 - 5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.

6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.3 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 3/4 inches.

3.4 PAINTING

- A. Retain first paragraph below if Section 099113 "Exterior Painting" or Section 099123 "Interior Painting" is not in Project Manual.
- B. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- C. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 099113 "Exterior Painting", Section 099123 "Interior Painting", and Section 099600 "High-Performance Coatings." Retain first paragraph below if Section 099113 "Exterior Painting" or Section 099123 "Interior Painting" is in Project Manual. Revise reference if Section 099600 "High-Performance Coatings" applies instead.
- D. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.5 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports and metal trapeze pipe hangers and attachments for general service applications.
- F. Use stainless-steel pipe hangers and stainless-steel attachments for stainless-steel piping and tubing.
- G. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
 - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
 - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
 - 4. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
 - 5. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
 - 6. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
 - 7. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
 - 8. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.

9. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb.
 - b. Medium (MSS Type 32): 1500 lb.
 - c. Heavy (MSS Type 33): 3000 lb.
 8. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 9. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.

2. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
 3. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
- P. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- Q. Use powder-actuated fasteners instead of building attachments where required in concrete construction.
- R. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION 220529

SECTION 220548-VIBRATION AND SEISMIC CONTROLS FOR PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Seismic bracing for plumbing systems (equipment, piping, and conduit) shall comply with all applicable requirements of the 2018 International Building Code (IBC) including all applicable provisions of the American Society of Civil Engineers (ASCE) Minimum Design Loads for Buildings and Other Structures (ASCE Standard 7-16). Basic seismic design criteria for each project shall be as listed on the structural drawings for that project.
- B. Compliance with the applicable seismic bracing requirements shall be accomplished utilizing the most current version of one of the following design manuals (no exceptions):
 - 1. International Seismic Application Technology (ISAT) Design Manual
 - 2. Mason Industries Seismic Restraint Design Manual
 - 3. Kinetics Noise Control Seismic Design Manual
 - 4. Vibro-Acoustics Seismic Design Manual
- C. A complete bound copy of the applicable design manual shall be provided to the Owner at the beginning of the construction period for use/reference during the course of the project.
- D. Component Importance Factors (I_p) for all plumbing equipment, piping, and conduit shall be determined and assigned in accordance with ASCE Standard 7-16 Section 13.1.3.

1.2 SUBMITTALS

- A. The Contractor shall provide the required number of seismic shop drawing submittal sets for review and approval by the Owner. Submittals shall include a comprehensive set of shop drawings clearly depicting the seismic bracing requirements for all plumbing equipment, piping, and conduit. Any equipment that does not require seismic bracing shall be specifically identified in the submittal, and the reason for exemption shall be provided.
- B. Submittals shall be fully coordinated with the structural drawings and shall include all applicable structural attachment details. Seismic bracing shop drawings shall include all vertical support anchorage loads and all seismic bracing anchorage loads. Each specific load shall be indicated and the structural element that the support is attached to shall be clearly depicted/identified. Seismic bracing submittals shall be stamped and signed by a mechanical, structural, or civil engineer licensed in the State of Nevada.
- C. Seismic shop drawing submittals will be reviewed by both the mechanical engineer and the structural engineer.

1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. An authorized representative of the seismic bracing system manufacturer shall visit the job site during the construction period to confirm that the seismic bracing installation complies with the shop drawings, with all applicable code requirements, and with the seismic bracing system manufacturer's written installation requirements and associated details. A minimum of three site visits shall be provided, with the first visit scheduled just prior to installation of the first seismic braces, the second visit at the approximate midpoint of construction, and the third visit when the seismic bracing installation is complete (and prior to installation of ceilings).
- D. A written report shall be issued within one week of each site visit summarizing the observations made during the site visit and listing all required corrective actions and/or deficiencies.
- E. Site visits shall be coordinated with the Owner and shall be scheduled in writing a minimum of two weeks prior to the proposed site visit date.
- F. After all equipment installation is complete and all seismic bracing has been verified, the authorized representative that conducted the field verification shall issue a letter certifying that the installation is complete and that the installation complies with the specified requirements.

1.5 SPECIAL INSPECTION

- A. Special inspections will be arranged and paid for by the Owner when and if required by 2018 IBC Section 1704. When special inspection is required for a system or item of equipment the Contractor shall be available on site during each special inspection to facilitate the on-site review process.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Wind-Restraint Loading:
 - 1. Basic Wind Speed: 140 mph.
 - 2. Building Classification Category: III.

3. Minimum 10 lb./sq. ft. multiplied by maximum area of HVAC component projected on vertical plane normal to wind direction, and 45 degrees either side of normal.
- B. Seismic-Restraint Loading:
1. Site Class as Defined in the IBC: D.
 2. Assigned Seismic Risk as Defined in the IBC: III.
 - a. Component Importance Factor: 1.0.
 - b. Component Response Modification Factor: 6.0 for air-side units and ducts of sheet metal; wet-side components: 2.5.
 - c. Component Amplification Factor: 2.5 for air-side components and 1.0 for wet-side components.
 3. Design Spectral Response Acceleration Parameter at Short Periods (0.2 Second): 1.577g.
 4. Design Spectral Response Acceleration Parameter at 1-Second Period: 0.841g.

2.2 SEISMIC RESTRAINTS

- A. Compliance with the applicable seismic bracing requirements shall be accomplished utilizing the most current version of one of the following design manuals (no exceptions):
1. International Seismic Application Technology (ISAT) Design Manual
 2. Mason Industries Seismic Restraint Design Manual
 3. Kinetics Noise Control Seismic Design Manual
 4. Vibro-Acoustics Seismic Design Manual

PART 3 - EXECUTION

3.1 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.
- B. Hanger-Rod Stiffeners: Install hanger-rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength is adequate to carry present and future static and seismic loads within specified loading limits.

3.2 VIBRATION CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Installation of vibration isolators must not cause any change of position of equipment, piping resulting in stresses or misalignment.
- B. Equipment Restraints:
1. Install seismic snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.

2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
 3. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- C. Piping Restraints:
1. Comply with requirements in MSS SP-127.
 2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
 3. Brace a change of direction longer than 12 feet.
- D. Install cables so they do not bend across edges of adjacent equipment or building structure.
- E. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- F. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- G. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- H. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- I. Drilled-in Anchors:
1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 4. Set anchors to manufacturer's recommended torque, using a torque wrench.
 5. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.3 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach

equipment. Comply with requirements in Section 232113 "Hydronic Piping" for piping flexible connections.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' advance notice.
3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
4. Test to 90 percent of rated proof load of device.
5. Measure isolator restraint clearance.
6. Measure isolator deflection.
7. Verify snubber minimum clearances.

D. Remove and replace malfunctioning units and retest as specified above.

E. Prepare test and inspection reports.

3.5 ADJUSTING

A. Adjust isolators after piping system is at operating weight.

B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

END OF SECTION 220548

SECTION 220553 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Equipment labels.
 2. Warning signs and labels.
 3. Valve Tags
 4. Pipe labels.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Plastic Labels for Equipment:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. LEM Products Inc.
 - d. Marking Services, Inc.
 2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8-inch-thick, and having predrilled holes for attachment hardware.
 3. Letter Color: White.
 4. Background Color: Black.
 5. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 6. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 7. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
 8. Fasteners: Stainless-steel rivets.
 9. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number, and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the

Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brimar Industries, Inc.
 - 2. Craftmark Pipe Markers.
 - 3. LEM Products Inc.
 - 4. Marking Services Inc.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8-inch-thick, and having predrilled holes for attachment hardware.
- C. Letter Color: White.
- D. Background Color: Red.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
- H. Fasteners: Stainless-steel rivets.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- J. Label Content: Include caution and warning information plus emergency notification instructions.

2.3 VALVE TAGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brimar Industries, Inc.
 - 2. Craftmark Pipe Markers.
 - 3. LEM Products Inc.
 - 4. Marking Services Inc.
- B. Material and Thickness: 2-inch diameter, 1/8-inch-thick brass, and having predrilled hole.
- C. Top row shall indicate system connected to
- D. Bottom row shall be a unique number

- E. Provide owner with a schedule of valve numbers and locations of valves.

2.4 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brimar Industries, Inc.
 - 2. Craftmark Pipe Markers.
 - 3. LEM Products Inc.
 - 4. Marking Services Inc.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction according to ASME A13.1.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: Size letters according to ASME A13.1 for piping.

PART 3 - EXECUTION

3.1 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.
- C. Equipment label schedule:
 - 1. Plastic Name Tag
 - 2. Label the following equipment:
 - a. Water heater
 - b. Expansion tank
 - c. Air compressor
 - d. Storage tank

3.2 PIPE LABEL INSTALLATION

- A. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.

3. Near penetrations and on both sides of through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

B. Pipe Label Color Schedule:

1. Sanitary Waste and Vent Piping: Black letters on a green background.
2. Drain Piping: White letters on a safety-green background.
3. Domestic Cold Water: White letters and blue background.
4. Industrial Cold Water: White letters and yellow background.
5. Domestic Tempered Water: White letter and red background.
6. Domestic hot water: White letters and red background.
7. Domestic hot water return: White letters and orange background.
8. Natural gas: Black letters on safety-yellow background.
9. 75W-90W Oil: Black Letters on Safety-Yellow Background
10. 80W-140W Oil: Black Letters on Safety-Yellow Background
11. 15W-40W Oil: Black Letters on Safety-Yellow Background
12. Lube: Black Letters on Safety-Yellow Background
13. Compressed Air: Black Letters on Safety-Yellow Background

END OF SECTION 220553

SECTION 220719 PLUMBING PIPING INSULATION

PART 1 GENERAL

1.1 SUMMARY

- A. Section includes insulating the following plumbing piping services:
 - 1. Domestic cold-water piping.
 - 2. Domestic hot-water piping.
 - 3. Domestic recirculating hot-water piping.
 - 4. Domestic tempered-water piping.
 - 5. Domestic recirculating, tempered-water piping.

1.2 ACTION SUBMITTALS

- A. See Section 013300 for submittal requirements.
- B. Product Data: For each type of product indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

PART 2 PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C871.

- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Mineral-Fiber, Preformed Pipe Insulation:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Knauf Insulation.
 - c. Owens Corning.
 - 2. Type I, 850 Deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- G. Flexible Closed Cell Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA, Inc.
 - b. Armacell LLC.
 - c. K-Flex USA.
 - 2. Insulation shall be an EPDM-rubber based insulation that is UV resistant. Insulation shall not require supplemental vapor retarder protection. Insulation shall have an acrylic adhesive seal on the inside of the longitudinal joint and an EPDM flap that is self-sealing.

2.2 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.

- c. Foster Brand; H. B. Fuller Construction Products.
 - 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. PVC Jacket Adhesive: Compatible with PVC jacket
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Dow Corning Corporation.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. P.I.C. Plastics, Inc.
 - d. Speedline Corporation.
 - 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
- 1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA, Inc.
 - b. Armacell LLC.
 - c. K-Flex USA.
 - 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - 4. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 5. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Knauf Insulation.
2. Water-Vapor Permeance: ASTM F1249, 1.8 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: 60 percent by volume and 66 percent by weight.
5. Color: White.

2.4 SEALANTS

A. Joint Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F.
5. Color: White or gray.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. FSK and Metal Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.

5. Color: White.
 6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Flexible Elastomeric Insulation Sealants:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Aeroflex USA, Inc.
 - b. Armacell LLC.
 - c. K-Flex USA.
 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F.
 5. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.5 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
 3. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E96/E96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.6 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C921, Type I, unless otherwise indicated.
- B. Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. P.I.C. Plastics, Inc.
 - c. Proto Corporation.
 - d. Speedline Corporation.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: White.
 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricated.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

- C. Aluminum embossed jacket, 0.016" thick
 - 1. Adhesive: As recommended by jacket material manufacturer.
 - 2. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricated.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

2.7 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division.
 - b. Compac Corporation.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Venture Tape.
 - 2. Width: 3 inches.
 - 3. Thickness: 11.5 mils.
 - 4. Adhesion: 90 ounces force/inch in width.
 - 5. Elongation: 2 percent.
 - 6. Tensile Strength: 40 lbf/inch in width.
 - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Compac Corporation.
 - b. Ideal Tape Co., Inc., an American Biltrite Company.
 - c. Venture Tape.
 - 2. Width: 2 inches.
 - 3. Thickness: 6 mils.
 - 4. Adhesion: 64 ounces force/inch in width.
 - 5. Elongation: 500 percent.
 - 6. Tensile Strength: 18 lbf/inch in width.

2.8 SECUREMENTS

- A. Aluminum Bands: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020-inch-thick, 1/2-inch-wide with wing seal or closed seal.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ITW Insulation Systems; Illinois Tool Works, Inc.
 - b. RPR Products, Inc.
- B. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel, or Monel.

- C. Wire: 0.080-inch nickel-copper alloy.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. C & F Wire.

PART 3 EXECUTION

3.1 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Cleanouts.

3.3 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.

4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
1. Comply with requirements in Section 078400 - Firestopping for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
1. Pipe: Install insulation continuously through floor penetrations.
 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078400 - Firestopping.

3.4 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets,

- valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

3.5 INSTALLATION OF MINERAL-FIBER PREFORMED PIPE INSULATION

- A. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
 3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
 4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.
- B. Insulation Installation on Pipe Flanges:
1. Install preformed pipe insulation to outer diameter of pipe flange.
 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
 4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

- C. Insulation Installation on Pipe Fittings and Elbows:
 - 1. Install preformed sections of same material as straight segments of pipe insulation when available.
 - 2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.
- D. Insulation Installation on Valves and Pipe Specialties:
 - 1. Install preformed sections of same material as straight segments of pipe insulation when available.
 - 2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
 - 3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 - 4. Install insulation to flanges as specified for flange insulation application.

3.6 FIELD-APPLIED JACKET INSTALLATION

- A. Where FSK jackets are indicated, install as follows:
 - 1. Draw jacket material smooth and tight.
 - 2. Install lap or joint strips with same material as jacket.
 - 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 - 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
 - 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- B. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.
 - 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- C. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.7 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

- C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.8 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Drainage piping located in crawl spaces.
 - 2. Underground piping.
 - 3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.9 INDOOR PIPING INSULATION SCHEDULE

- A. Domestic Cold Water: Insulation shall be the following:
 - 1. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch thick.
- B. Domestic Hot and Recirculated Hot Water: Insulation shall be the following:
 - 1. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
- C. Domestic Tempered and Recirculated Tempered water: Insulation shall be the following:
 - 1. Mineral-Fiber, preformed pipe insulation, Type 1: 1-inch thick.

3.10 OUTDOOR PIPING INSULATION SCHEDULE

- A. Industrial Cold Water and Drain Piping from Make-up Air Unit: Insulation shall be the following:
 - 1. Flexible Elastomeric, Preformed Pipe Insulation, Type I: 1-inch thick.

3.11 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 - 1. None.
- D. Piping, Exposed in the office area:
 - 1. PVC: 30 mils thick.

3.12 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. Piping Industrial Cold Water and Drain Piping to and from Make-up Air Unit:

1. Aluminum Embossed Jacket: 0.016-inches thick.

END OF SECTION 220719

SECTION 220800 – PLUMBING SYSTEMS COMMISSIONING

PART 1 - GENERAL REQUIREMENTS

1.1 RELATED WORK

- A. All other sections in Division 21, 22, and 23.
- B. Specification Section 019133 -- “General Commissioning Requirements.”
- C. Specification Section 260800 - “Electrical Systems Commissioning
- D. Specification Section 230800 – “HVAC Systems Commissioning”.

1.2 DEFINITIONS

- A. The purpose of the commissioning process is to provide the Owner/operator of the facility with a high level of assurance that the plumbing systems have been installed in the prescribed manner, and operates within the performance guidelines set in the design intent. The Commissioning Authority (CxA) shall provide the Owner with an unbiased, objective view of the system installation, operation, and performance. This process is not to take away or reduce the responsibility of the design professionals or installing contractors to provide a finished product. Commissioning is intended to enhance the quality of system start-up and aid in the orderly transfer of systems to beneficial use by the Owner. The Commissioning Authority will be a member of the construction team, cooperating and coordinating all commissioning activities with the design professionals, construction manager, contractors, subcontractors, manufacturers, and equipment suppliers.

1.3 SCOPE

- A. The Plumbing systems commissioning shall include a demonstration by the Contractor with the assistance of the Commissioning Authority (CxA) of each piece of equipment to comply with the Owners’ project requirements (ORP) and the Construction Documents (CD). The commissioning process shall demonstrate that each piece of equipment is performing and operating to the OPR and CDs.
- B. Participants in Plumbing Systems Commissioning: plumbing systems shall be conducted with representatives from the following entities (the required participants shall be confirmed with the commissioning agent prior to scheduling the commissioning).
 - 1. General Contractor
 - 2. Plumbing Contractor
 - 3. Owner’s Representative
- C. Major Pieces of Equipment shall be defined as (while this list is meant to show a representative sample, any equipment that uses energy for heating water or moving water shall be considered as major):
 - 1. Water Heaters
 - 2. Domestic Water Recirculation Pumps

3. Tempering Valve
 4. Air Compressor System.
- D. Kickoff, Coordination and MEP Meetings.
1. The CxA will attend the contractors sub meeting to discuss any issue items.
 2. Other meetings such as the Commissioning Kick-Off meeting, controls meeting, another coordination meetings shall be attended by those participants as indicated in the “Participants in Plumbing Systems commissioning.”
- E. Submittal Review and Meetings.
1. The CxA shall review each submittal in Division 22.
 2. Submittal reviews are NOT an approval but a courtesy review to help validate products submitted are in general compliance with the construction documents.
- F. Issues Log.
1. An “Issues Log” shall be kept by the CxA. The issues log will identify issues, defects, improper installations, and deficiencies of the installation and design. The issues log will have the issue, a potential resolution, the subcontractor responsible, the date the issue was found, and the CxA who found the issue.
 2. The issue log shall be immediately addressed every week by the contractor.
 3. When an item is completed and addressed by the contractor or subcontractor responsible, the party responsible shall sign off and deliver to the CxA for review. The sign off shall include how the contractor addressed the issue and the date in which the contractor addressed the issue.
- G. Construction Checklists: Pre-and Final Functional testing checklist, and startup checklists:
1. The CxA shall develop construction checklists that will be executed by the CxA. The contractors and sub-contractors shall review the checklists for compliance with the ability of their individual systems. If the contractor or subcontractor does not provide comments to the CxA then the CxA shall assume their procedures shall not harm nor deteriorate the individual systems. If a problem occurs during testing that causes a piece of equipment of system to malfunction, damage, or any other failure and the contractor or subcontractor has not in writing opposed such test, then the contractor or subcontractor shall be liable for any damages and delays.
 2. The contractor shall fill out checklists and Contractor Readiness Checklists (CRC). These shall be delivered in the commissioning plan and shall be used to show the CxA that the contractor is ready for Final Commissioning (FAT.)
 3. Startup sheets shall be delivered to the CxA. The contractor responsible for the piece of equipment is also responsible for delivering those startup sheets to the CxA.
 4. Functional testing shall be attended by the members as defined in “Participants in Plumbing Systems Commissioning.”
 5. Should any of the aforementioned requirements not be met on the date that the commissioning process commences and or if deficiencies are observed during the commissioning process the commissioning will be considered a failure and the deficiencies will be required to be remedied and the addressed in writing prior to requesting a date for the recommissioning. There will be no additional costs allowed to the Contractor for re-commissioning sessions as may be required to

address issues that are found to be in non-compliance with the requirements of this specification.

1.4 SYSTEMS TO BE COMMISSIONED

- A. This list is not intended to be exhaustive. All Division 22 and any equipment, piping, balancing, controls, etc. that are defined in the entire cumulative sections of Division 22 will go through commissioning. The list below is a representative sample of items that are typically commissioned.
 - 1. Domestic water piping and equipment.
 - 2. Plumbing fixtures.
 - 3. Mixing valves.
 - 4. DWV piping.
 - 5. Natural gas piping.
 - 6. Compressed air storage tanks.
 - 7. Compressed air and equipment.
 - 8. Chlorination proceeds.

1.5 COORDINATION

- A. The Commissioning Authority shall receive a copy of all construction documents, addenda, change orders, and appropriate approved submittals and show drawings directly from the Contractor. We only use this documentation for our review, but as a method of approval.
- B. The Commissioning Authority shall disseminate written information and documents to all responsible parties relative to the nature and extent of the communication.
- C. The Commissioning Authority is primarily responsible to the Owner, and as such, shall regularly appraise the Architect, the contractor, and the Owner of the progress, pending problems and/or disputes, and shall provide regular status reports on the progress with each system. Any potential change in the contractual and/or financial obligations of the Owner (credit, change orders, schedule changes, etc.) shall be identified and qualified as soon as possible.
- D. The Commissioning Authority shall coordinate the schedule of commissioning activities with the construction schedule. It is possible that procedures will be completed before the entire plumbing system is completed.

1.6 SCHEDULE

- A. Final commissioning shall not commence on the individual pieces of equipment, test and balance controls, and other plumbing systems until the Contractor Readiness Checklist are delivered to the CxA. These checklists will be done in blocks coordinated with the contractor.
- B. Pre-Functional Commissioning shall commence during the progress of the project. Contractor Readiness checklists do not typically have to be filled out for the CxA to check out these systems. However, the contractor is responsible to inform and schedule the CxA to do pre-Functional checks.

- C. Contractor schedules and scheduling is the responsibility of the Contractor. The Commissioning Authority shall coordinate commissioning scheduling information with the contractor for review and planning activities.
- D. The following list is a general set of tasks and criteria along with the approximate duration for each task in regards to the CxA activities. This list is intended to be utilized as a guideline for creating an appropriate schedule for all of the work related to plumbing systems commissioning. Three of these activities can be commissioned concurrently at one time. The activities do not include issues that will take additional days to fix.
 - 1. Plumbing fixtures – 2 business days.
 - 2. Domestic hot-water system – 2 business days.
 - 3. Domestic cold-water systems – 2 business days.
 - 4. Compressed Air System – 2 business days.

1.7 MISCELLANEOUS CONTRACTOR RESPONSIBILITIES

- A. Means and Methods: The contractor is solely responsible for the means and methods of construction. While the CxA shall assist in the interpretation of construction and documentation, the final responsibility rests solely on the General and Installation Contractor.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 COMMISSIONING KICKOFF MEETING

- A. The CxA shall facilitate a Commissioning Kick-off Meeting after all plumbing, electrical, and plumbing subcontractors are under contract with the General Contractor. The CxA shall invite the Architect, Engineers, and Owner's representatives to the meeting.
- B. The General Contractor shall ensure that the following individuals are in attendance.
 - 1. The Mechanical Foreman and Project Manager.
 - 2. The Plumbing Foreman and Project Manager
 - 3. The Controls Foreman and Project Manager
 - 4. The Test and Balance Project Manager
 - 5. The Electrical Foreman and Project Manager.
 - 6. The Fire Protection Foreman and Project Manager.
 - 7. The General Contractor Project Engineer, Superintendent, and Project Manager.
- C. The CxA shall keep meeting minutes and distribute to the individuals in attendance.

3.2 DISTRIBUTION LIST

- A. A distribution list shall be developed during the Commissioning Kick-off Meeting. This distribution list shall be used for all distribution of commissioning activities. While every effort shall be made to distribute all pertinent information to the subcontractors by the CxA, the sole responsibility for the subcontractors to receive information rests on the General Contractor.

3.3 COMMISSIONING PLAN

- A. The Commissioning Plan shall be developed by the CxA and delivered at the conclusion of the submittal process.
- B. The Commissioning Plan will have the CxA Procedural Standards for testing, the PFAT checklists, the FAT checklists, and the Contractor Readiness checklists.
- C. The subcontractors and contractors are responsible for reviewing the above checklists and provide comments to the CxA within 30 days of receiving the commissioning plan. During this comment period the comments must be received in writing and the CxA will work with the individual contractors and subcontractors to ensure the safety of systems.

3.4 SUBMITTAL REVIEWS

- A. The CxA shall review all plumbing submittals. It is the responsibility of the contractor to ensure they receive the CxA reviews. The Architect is responsible to coordinate the submittals with the CxA,
- B. The submittals will be marked with REVIEWED as noted. Refer to Engineer, reviewed with the Engineer, Note, or Revise and Resubmitted. Only Revise and Resubmit items will have the expectation of a re-submittal.

3.5 COORDINATION MEETING (MEP MEETINGS)

- A. The CxA shall attend the contractors MEP meeting every other week.
- B. The purpose of these meeting is to coordinate installation, commissioning, and testing activities. These meeting will be conducted by the contractor.

3.6 CONSTRUCTION OBSERVATION AND FIRST INSTALLS

- A. The CxA shall observe construction activities throughout the construction of the project. Schedule observations and coordinate with GNC. An issues log as outlined in Part 1, shall be kept by the CxA.
- B. Mockups, or first installations of individual pieces of equipment, need to be installed in their location where applicable. First installs shall be required by the contractor and subcontractor for the following items:
 - 1. Piping and Hangers (Racks of pipes and individual pipes.)
- C. Contractor shall coordinate and not prohibit observations and first installs. Subcontractors, Owner's representatives, and engineers shall review the First installs for compliance.

3.7 CONTRACTORS READINESS CHECKLIST

- A. Contractor Readiness Checklist (CRC) shall be delivered to the CxA to the contracting team for the contracting team to complete. The purpose of the CRC is to inform the

CxA of the readiness of the contractor to begin Functional Testing on the plumbing system.

- B. The CxA shall not Function Test the system or any equipment until the CRCs have been received. While some systems can be tested without a complete system, the CxA shall have the final say on which can and cannot begin functional testing based on the completeness of the project. A single CRC can be completed per type of equipment (i.e., if there are 80 heat pumps and all of them are ready then a single sheet can be completed for 80 heat pumps.)

3.8 PRE-FUNCTIONAL CHECKLIST

- A. The pre-Functional Checklist shall be developed by the CxA and delivered in the commissioning plan.
- B. The pre-Functional Checklist shall be developed by the contractors and subcontractors and shall be executed by the CxA and delivered in the commissioning plan
- C. The CxA shall review 100% of all plumbing system installations.

3.9 FUNCTIONAL ACCEPTANCE TESTING

- A. The CxA shall execute Functional Acceptance Testing.
- B. Commissioning Authority shall develop and document the commissioning procedures to be used; tis will be delivered to the contractor in the commissioning plan and is called the Procedural Standards. Included is a performance checklist and performance test data sheets for each system based on actual system configuration. These procedures shall be reviewed by the appropriate contractors and subcontractors for technical dept, clarity of documentation completeness of information. Emphasis shall be placed on testing procedures that shall determine actual systems performance and compliance with the design intent.
- C. The Commissioning Authority shall determine the acceptance procedures for each system within MEP divisions as required. The acceptance procedures shall incorporate the commissioning standards and successful testing results as referred to throughout plumbing specifications.
- D. The appropriate contractor and vendor(s) shall be informed of what tests are to be performed and the expected results. Whereas some test results and interpretations may not become evident until the actual tests are performed, all parties shall have a reasonable understanding of the requirements. The Commissioning Plan shall address those requirements and be distributed to all parties involved with that particular system.
- E. Acceptance procedure shall confirm the performance of systems to the extent of the design intent. When a system is accepted, the Owner shall be assured that the system is complete, work as intended, is correctly documented, and operator training has been performed.

- F. The BMS or ATC contractor shall be in attendance throughout the Sequence of Operation checks, which we expect to take 1 day if all sequences function as per contract documents.

- G. The CxA shall review 100% and test 100% of plumbing systems.

3.10 OPERATION MAINTENANCE MANUALS

- A. The final O&M Manual shall be reviewed by the CxA before delivery to the Owner. Any deficiencies shall be noted and the contractor shall remedy before final delivery.
- B. The final O&M must be delivered to the Owner before training shall commence and it shall be one of the requirements for Substantial Completion.

3.11 TRAINING

- A. The CxA shall be invited to all plumbing training sessions by the General Contractor.
- B. The training shall not commence until the system has been commissioned and proven ready for training.
- C. The contractor shall schedule and coordinate training sessions for the Owner's staff for each system. Training shall be in a classroom setting with the appropriate schematics, handouts, and visual/audio training aids on-site with equipment.
- D. The Commissioning Authority shall review agendas, which shall be submitted at least four weeks before training, and shall audit the training sessions. The agenda shall include, but not limited to operational setpoints, runtime schedules, general operation and maintenance requirements, time, and location for the training.
- E. The training program shall include the following:
 - 1. Emergency instructions and procedures.
 - 2. Operation instructions and procedures.
 - 3. Troubleshooting procedures.
 - 4. Maintenance and inspection procedures.
 - 5. Repair procedures.
 - 6. Upkeep of the systems manual and associated maintenance documentation logs.
- F. The contractor shall provide a schedule for training times and dates. The schedule shall include location, who is training and trainers contact information.
- G. The appropriate installing contractors shall provide training on all the major systems per specifications, including peculiarities specific to this project.
- H. The equipment vendors shall provide training on the specifics of each major equipment item including philosophy, troubleshooting and repair techniques.

3.12 RECORD DRAWINGS OR REDLINES

- A. The CxA shall review the "Redlines" or "Record Drawings" on a bi-weekly basis, or as requested.

- B. Record Drawings or Redlines shall be kept in a printed format above and beyond any BIM modeling. If record drawings are being kept on BIM a printed version on a typical 2D flat sheet of paper large enough to read shall be kept as well in the General Contractors trailer.
- C. The following requirements shall be met for Redlines or Record Drawings:
 - 1. Per specifications elsewhere defined.
- D. The final redlines shall be reviewed by the CxA before delivery to the Architect.

3.13 WARRANTY PERIOD AND CONTINUOUS COMMISSIONING

- A. The CxA shall provide Continuous Commissioning during the One-Year Warranty Period after substantial completion. During this time the CxA shall adjust settings on the BMS for optimization of the system, shall find issues with the system, and shall report issues to the contractors.

3.14 REPEATED WORK, TESTING, AND REVIEWS

- A. Contractor shall, at no additional cost to Owner, repeat the complete verification test procedure for each test for which acceptable results are not achieved. Repeat tests until acceptable results are achieved.

END OF SECTION 220800

SECTION 221116 - DOMESTIC WATER PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes under-building-slab and aboveground domestic water pipes, tubes, and fittings inside buildings.

1.2 ACTION SUBMITTALS

- A. Product Data: For transition fittings and dielectric fittings.

1.3 INFORMATIONAL SUBMITTALS

- A. System purging and disinfecting activities report.
- B. Field quality-control reports.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
- B. Potable-water piping and components shall comply with NSF 14 and NSF 61 Annex G. Plastic piping components shall be marked with "NSF-pw."

2.2 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type L water tube, drawn temper.
- B. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.
- C. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
- D. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
- E. Copper Unions:
 - 1. MSS SP-123.
 - 2. Cast-copper-alloy, hexagonal-stock body.
 - 3. Ball-and-socket, metal-to-metal seating surfaces.
 - 4. Solder-joint or threaded ends.

2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials:

1. AWWA C110/A21.10, rubber, flat face, 1/8-inch-thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
2. Full-face or ring type unless otherwise indicated.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys.
- D. Flux: ASTM B 813, water flushable.
- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

2.4 TRANSITION FITTINGS

- A. General Requirements:
 1. Same size as pipes to be joined.
 2. Pressure rating at least equal to pipes to be joined.
 3. End connections compatible with pipes to be joined.
- B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.

2.5 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. HART Industrial Unions, LLC.
 - b. Watts.
 - c. Wilkins.
 - d. Zurn Industries, LLC.
 2. Standard: ASSE 1079.
 3. Pressure Rating: 150 psig.
 4. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Watts.
 - b. Wilkins.
 - c. Zurn Industries, LLC.
 2. Standard: ASSE 1079.
 3. Factory-fabricated, bolted, companion-flange assembly.
 4. Pressure Rating: 150 psig.

5. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 2. Nonconducting materials for field assembly of companion flanges.
 3. Pressure Rating: 150 psig.
 4. Gasket: Neoprene or phenolic.
 5. Bolt Sleeves: Phenolic or polyethylene.
 6. Washers: Phenolic with steel backing washers.
- E. Dielectric Nipples:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Grinnell Mechanical Products.
 - b. Precision Plumbing Products.
 - c. Victaulic Company.
 2. Standard: IAPMO PS 66.
 3. Electroplated steel nipple complying with ASTM F 1545.
 4. Pressure Rating and Temperature: 300 psig at 225 deg F.
 5. End Connections: Male threaded or grooved.
 6. Lining: Inert and noncorrosive, propylene.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
- C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
- D. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gages in Section 220519 "Meters and Gages for Plumbing Piping" and with requirements for drain valves and strainers in Section 221119 "Domestic Water Piping Specialties."
- E. Install shutoff valve immediately upstream of each dielectric fitting.

- F. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements for pressure-reducing valves in Section 221119 "Domestic Water Piping Specialties."
- G. Install domestic water piping level and plumb.
- H. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
- I. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- J. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- K. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- M. Install piping to permit valve servicing.
- N. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
- O. Install piping free of sags and bends.
- P. Install fittings for changes in direction and branch connections.
- Q. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
- R. Install pressure gages on suction and discharge piping for each plumbing pump and packaged booster pump. Comply with requirements for pressure gages in Section 220519 "Meters and Gages for Plumbing Piping."
- S. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Section 221123 "Domestic Water Pumps."
- T. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements for thermometers in Section 220519 "Meters and Gages for Plumbing Piping."
- U. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."

- V. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- W. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

3.2 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- D. Brazed Joints for Copper Tubing: Comply with CDA's "Copper Tube Handbook," "Braze Joints" chapter.
- E. Soldered Joints for Copper Tubing: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."
- F. Pressure-Sealed Joints for Copper Tubing: Join copper tube and pressure-seal fittings with tools recommended by fitting manufacturer.
- G. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
- H. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

3.3 TRANSITION FITTING INSTALLATION

- A. Install transition couplings at joints of dissimilar piping.
- B. Transition Fittings in Underground Domestic Water Piping:
 - 1. Fittings for NPS 1-1/2 and Smaller: Fitting-type coupling.
 - 2. Fittings for NPS 2 and Larger: Sleeve-type coupling.
- C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 and Smaller: Plastic-to-metal transition fittings or unions.

3.4 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings or nipples.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.
- D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for pipe hanger, support products, and installation in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
 - 1. Vertical Piping: MSS Type 8 or 42, clamps.
 - 2. Individual, Straight, Horizontal Piping Runs:
 - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
 - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.
- E. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
 - 2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
 - 3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
 - 4. NPS 2-1/2: 108 inches with 1/2-inch rod.
 - 5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
 - 6. NPS 6: 10 feet with 5/8-inch rod.
 - 7. NPS 8: 10 feet with 3/4-inch rod.
- F. Install supports for vertical copper tubing every 10 feet.
- G. Install supports for vertical steel piping every 15 feet.
- H. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.6 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
- C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
- D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
 - 1. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.
 - 2. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

3.7 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Section 220553 "Identification for Plumbing Piping and Equipment."
- B. Label pressure piping with system operating pressure.

3.8 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Piping Inspections:
 - a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
 - b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
 - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
 - 2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
 - c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections, and arrange for reinspection.
 - d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
 - 2. Piping Tests:
 - a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
 - b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.

- c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 - d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
 - e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
 - f. Prepare reports for tests and for corrective action required.
- B. Domestic water piping will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.9 ADJUSTING

- A. Perform the following adjustments before operation:
 - 1. Close drain valves, hydrants, and hose bibbs.
 - 2. Open shutoff valves to fully open position.
 - 3. Open throttling valves to proper setting.
 - 4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
 - a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
 - b. Adjust calibrated balancing valves to flows indicated.
 - 5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
 - 6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
 - 7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
 - 8. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.10 CLEANING

- 1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
- 2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
 - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
 - b. Fill and isolate system according to either of the following:
 - 1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
 - 2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
 - c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
 - d. Repeat procedures if biological examination shows contamination.
 - e. Submit water samples in sterile bottles to authorities having jurisdiction.

- B. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.
- C. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

3.11 PIPING SCHEDULE

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
- D. Aboveground domestic water piping, NPS 1-1/2 and smaller, shall be the following:
 - 1. Hard copper tube, ASTM B 88, Type L; wrought-copper, solder-joint fittings; and soldered joints.
- E. Aboveground domestic water piping, NPS 2 to NPS 4, shall be the following:
 - 1. Hard copper tube, ASTM B 88, Type L; wrought-copper, solder-joint fittings; and brazed joints

END OF SECTION 221116

SECTION 221117 - DRAIN PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes equipment drain pipes, tubes, and fittings inside buildings.

1.2 ACTION SUBMITTALS

- A. Product Data: For transition fittings and dielectric fittings.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type M water tube, drawn temper.
- B. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
- C. Copper Unions:
 - 1. MSS SP-123.
 - 2. Cast-copper-alloy, hexagonal-stock body.
 - 3. Ball-and-socket, metal-to-metal seating surfaces.
 - 4. Solder-joint or threaded ends.

2.3 CPVC PIPING.

- A. CPVC Pipe:
 - 1. CPVC Socket Fittings: ASTM F 438 for Schedule 40.
- B. CPVC Piping System: ASTM D 2846/D 2846M, SDR 11, pipe and socket fittings.
- C. CPVC Tubing System: ASTM D 2846/D 2846M, SDR 11, tube and socket fittings.

2.4 PIPING JOINING MATERIALS

- A. Solder Filler Metals: ASTM B 32, lead-free alloys.
- B. Flux: ASTM B 813, water flushable.

- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Solvent Cements for Joining CPVC Piping and Tubing:
 - 1. CPVC solvent cement shall have a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.5 TRANSITION FITTINGS

- A. General Requirements:
 - 1. Same size as pipes to be joined.
 - 2. Pressure rating at least equal to pipes to be joined.
 - 3. End connections compatible with pipes to be joined.
- B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
- C. Plastic-to-Metal Transition Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Colonial Engineering, Inc.
 - b. NIBCO INC.
 - c. Spears Manufacturing Company.
 - 2. Description:
 - a. CPVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions.
 - b. One end with threaded brass insert and one solvent-cement-socket or threaded end.

2.6 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. HART Industrial Unions, LLC.
 - b. Watts.
 - c. Wilkins.
 - d. Zurn Industries, LLC.
 - 2. Standard: ASSE 1079.
 - 3. Pressure Rating: 150 psig.
 - 4. End Connections: Solder-joint copper alloy and threaded ferrous.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- E. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
- I. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- J. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- K. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

3.2 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

- C. Soldered Joints for Copper Tubing: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."
- D. Joint Construction for Solvent-Cemented Plastic Piping: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
 - 2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
 - 3. PVC Piping: Join according to ASTM D 2855.
- E. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

3.3 TRANSITION FITTING INSTALLATION

- A. Install transition couplings at joints of dissimilar piping.
- B. Transition Fittings in Underground Domestic Water Piping:
 - 1. Fittings for NPS 1-1/2 and Smaller: Fitting-type coupling.
 - 2. Fittings for NPS 2 and Larger: Sleeve-type coupling.
- C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 and Smaller: Plastic-to-metal transition fittings or unions.

3.4 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings or nipples.

3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for pipe hanger, support products, and installation in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
 - 1. Vertical Piping: MSS Type 8 or 42, clamps.
 - 2. Individual, Straight, Horizontal Piping Runs:
 - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
 - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.

- E. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
 - 2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
 - 3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
- F. Install supports for vertical copper tubing every 10 feet.
- G. Install vinyl-coated hangers for CPVC piping with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 1 and Smaller: 36 inches with 3/8-inch rod.
 - 2. NPS 1-1/4 to NPS 2: 48 inches with 3/8-inch rod.
- H. Install supports for vertical CPVC piping every 60 inches for NPS 1 and smaller, and every 72 inches for NPS 1-1/4 and larger.
- I. Install vinyl-coated hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 2 and Smaller: 48 inches with 3/8-inch rod.
- J. Install supports for vertical PVC piping every 48 inches.
- K. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.6 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.

3.7 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Piping Inspections:
 - a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
 - b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
 - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
 - 2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
 - c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections, and arrange for reinspection.
 - d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

2. Piping Tests:
 - a. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
 - b. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
 - c. Prepare reports for tests and for corrective action required.

B. Prepare test and inspection reports.

3.8 CLEANING

- A. Clean and flush piping of all debris, use a filter at the end of discharge so debris do not go into drains.

3.9 PIPING SCHEDULE

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
- D. Water heater drain piping to the neutralizer shall be the following:
 1. CPVC, Schedule 40, plastic pipe and fittings and solvent-welded joints
- E. Water heater drain from the neutralizer to the floor sink/drain shall be the following:
 1. Hard copper tube, ASTM B 88, Type M; wrought-copper, solder-joint fittings; and soldered joints.
- F. Equipment drain for mechanical equipment shall have a trap per manufacturer's instructions and be the following:
 1. Hard copper tube, ASTM B 88, Type M; wrought copper, solder-joint fittings, and soldered joints.
- G. Boiler condensate drain piping to and from the neutralizer shall be the following:
 1. CPVC, Schedule 40, plastic pipe and fittings and solvent-welded joints

END OF SECTION 221117

SECTION 221119 - DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Backflow preventers.
2. Water pressure-reducing valves.
3. Balancing valves.
4. Temperature-actuated, water mixing valves.
5. Hose bibbs.
6. Wall hydrants.
7. Water-hammer arresters.
8. Trap-seal primer device.

B. Related Requirements:

1. Section 220519 "Meters and Gauges for Plumbing Piping" for thermometers, pressure gauges, and flow meters in domestic water piping.
2. Section 221116 "Domestic Water Piping" for water meters.
3. Section 224500 "Emergency Plumbing Fixtures" for water tempering equipment.

1.2 SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For domestic water piping specialties.

1.3 INFORMATIONAL SUBMITTALS

A. Test and inspection reports.

B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

- A.** Domestic water piping specialties intended to convey or dispense water for human consumption are to comply with the SDWA, requirements of authorities having jurisdiction, and NSF 61 and NSF 372, or to be certified in compliance with NSF 61 and NSF 372 by an American National Standards Institute (ANSI)-accredited third-party certification body that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.

1.6 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig unless otherwise indicated.

PART 2 - GENERAL

2.1 BACKFLOW PREVENTERS

- A. Reduced-Pressure-Principle Backflow Preventers:
1. Basis of design product. Provide product specified on drawings or a product by one of the following manufacturers:
 - a. Zam
 - b. Watts
 - c. Or approved equal
 2. Standard: ASSE 1013.
 3. Operation: Continuous-pressure applications.
 4. Pressure Loss: 12 psig maximum, through middle third of flow range.
 5. Body: Bronze for NPS 2 and smaller.
 6. Configuration: Designed for horizontal, straight-through flow.
 7. Accessories:
 - a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

2.2 WATER PRESSURE-REDUCING VALVES

- A. Water Regulators:
1. Basis of design product. Provide product specified on drawings or a product by one of the following manufacturers:
 - a. Zam
 - b. Watts
 - c. Or approved equal.
 2. Standard: ASSE 1003.
 3. Pressure Rating: Initial working pressure of 150 psig.
 4. Body: Bronze for NPS 2 and smaller; bronze for NPS 2-1/2 and NPS 3.
 5. Valves for Booster Heater Water Supply: Include integral bypass.
 6. End Connections: Threaded or solder for NPS 2 and smaller; flanged or solder for NPS 2-1/2 and NPS 3.

2.3 BALANCING VALVES

- A. Memory-Stop Balancing Valves:
1. Provide product compliant to the specifications by one of the following manufactures:
 - a. Bell and Gossett
 - b. Caleffi
 - c. Red and White Value Company
 - d. Nibco
 2. Standard: MSS SP-110 for two-piece, copper-alloy ball valves.
 3. Pressure Rating: 400-psig minimum CWP.
 4. Size: NPS 2 or smaller.

5. Body: Copper alloy.
6. Port: Standard or full port.
7. Ball: Chrome-plated brass or stainless steel.
8. Seats and Seals: Replaceable.
9. End Connections: Solder joint or threaded.
10. Handle: Vinyl-covered steel with memory-setting device.

2.4 TEMPERATURE-ACTUATED, WATER MIXING VALVES

A. Primary, Thermostatic, Water Mixing Valves:

1. Basis of design product. Provide specified product or drawings or one of the listed manufacturers below. Subject to compliance with specified products:
 - a. Leonard
 - b. Symmons
 - c. Watts
 - d. Or approved equal.
2. Standard: ASSE 1017.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.
4. Type: Exposed-mounted or Cabinet-type, thermostatically controlled, water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded union inlets and outlet.
7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.

2.5 HOSE BIBBS

A. Hose Bibbs:

1. Basis of design product. Provide product by the specified manufacturer or by one of the following manufacturers. Subject to compliance with specified products:
 - a. Woodford
 - b. Schier
 - c. Or approved equal
2. Standard: ASME A112.18.1 for sediment faucets.
3. Body Material: Bronze.
4. Seat: Bronze, replaceable.
5. Supply Connections: NPS 1/2 or NPS 3/4 threaded or solder-joint inlet.
6. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
7. Pressure Rating: 125 psig.
8. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
9. Finish for Service Areas: Chrome or nickel plated.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Lockable handle.
12. Include operating key with each operating-key hose bibb.
13. Include integral wall flange with each chrome- or nickel-plated hose bibb.

2.6 WALL HYDRANTS

A. Freezeless Wall Hydrants:

1. Basis of design product. Provide product by the specified manufacturer or by one of the following manufacturers. Subject to compliance with specified products:
 - a. Woodford
 - b. Schier
 - c. Or approved equal
2. Standard: ASME A112.21.3M for exposed-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
6. Inlet: NPS 3/4.
7. Outlet, exposed: With integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
8. Nozzle and Wall-Plate Finish: Chrome.
9. Operating Keys(s): Two with each wall hydrant.

2.7 WATER-HAMMER ARRESTERS

A. Water-Hammer Arresters:

1. Basis of design product, subject to compliance with product specified on drawings or provide product by one of the following manufacturers:
 - a. MiFab
 - b. Zurn
 - c. Watts
 - d. Sioux Chief
 - e. Or approved equal
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Piston.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.
5. Manufacturers' written instructions shall not require an access door.

2.8 TRAP-SEAL PRIMER DEVICE

A. Supply-Type, Trap-Seal Primer Device:

1. Basis of design product, subject to compliance with specified product. Provide product by one of the following:
 - a. PPP Inc.
 - b. Or approved equal.
2. Standard: ASSE 1018.
3. Pressure Rating: 125 psig minimum.
4. Body: Bronze.
5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

B. Drainage-Type, Trap-Seal Primer Device:

1. Basis of design product, subject to compliance with specified product. Provide product by one of the following:
 - a. PPP Inc.
 - b. Or approved equal.

2. Standard: ASSE 1044, lavatory P-trap with NPS 3/8 minimum, trap makeup connection.
3. Size: NPS 1-1/4 minimum.
4. Material: Chrome-plated, cast brass.

PART 3 - EXECUTION

3.1 INSTALLATION OF PIPING SPECIALTIES

- A. Backflow Preventers: Install in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.
 1. Locate backflow preventers in same room as connected equipment or system.
 2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
 3. Do not install bypass piping around backflow preventers.
- B. Balancing Valves: Install in locations where they can easily be adjusted. Set at indicated design flow rates.
- C. Temperature-Actuated, Water Mixing Valves: Install with check stops or shutoff valves on inlets and with shutoff valve on outlet.
 1. Install cabinet-type units recessed in or surface mounted on wall as specified.
- D. Y-Pattern Strainers: For water, install on supply side of each water pressure-reducing valve.
- E. Water-Hammer Arresters: Install in water piping in accordance with PDI-WH 201.
- F. Supply-Type, Trap-Seal Primer Device: Install with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.
- G. Drainage-Type, Trap-Seal Primer Device: Install as lavatory trap with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting.
- H. Install refrigerator supply boxes flush with wall and level.

3.2 PIPING CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping specialties adjacent to equipment and machines, allow space for service and maintenance.

3.3 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

3.4 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.
- B. Set field-adjustable flow set points of balancing valves.
- C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.
- D. Adjust each reduced-pressure-principle backflow preventer in accordance with manufacturer's written instructions, authorities having jurisdiction and the device's reference standard.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform the following tests and inspections.
 - 1. Test each reduced-pressure-principle backflow preventer according to authorities having jurisdiction and the device's reference standard.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION 221119

SECTION 221123 - DOMESTIC WATER PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. In-line, sealless centrifugal pumps.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

PART 2 - PRODUCTS

2.1 IN-LINE, SEALLESS CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Grundfos Pumps Corp.
 - 2. TACO Incorporated.
 - 3. Or approved equal.
- B. Description: Factory-assembled and -tested, in-line, close-coupled, canned-motor, sealless, overhung-impeller centrifugal pumps.
- C. Pump Construction:
 - 1. Pump and Motor Assembly: Hermetically sealed, replaceable-cartridge type with motor and impeller on common shaft and designed for installation with pump and motor shaft horizontal.
 - 2. Casing: Bronze, with threaded or companion-flange connections.
 - 3. Impeller: Plastic.
 - 4. Motor: Single speed, unless otherwise indicated.

2.2 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 220513 "Common Motor Requirements for Plumbing Equipment."
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2.3 CONTROLS

- A. Thermostats: Electric; adjustable for control of hot-water circulation pump.
 - 1. Type: Water-immersion temperature sensor, for installation in piping.
 - 2. Range: 65 to 200 deg F.
 - 3. Enclosure: NEMA 250
 - 4. Operation of Pump: On or off.
 - 5. Transformer: Provide if required.
 - 6. Settings: Start pump at 105 deg F and stop pump at 110 deg F.

PART 3 - EXECUTION

3.1 PUMP INSTALLATION

- A. Comply with HI 1.4.
- B. Install in-line, sealless centrifugal pumps with shaft horizontal unless otherwise indicated.
- C. Install horizontally mounted, in-line, close-coupled centrifugal pumps with shaft horizontal.
- D. Install thermostats in hot-water return piping.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps to allow service and maintenance.
- C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
 - 1. Install flexible connectors adjacent to pumps in suction and discharge piping of the following pumps:
 - a. Horizontally mounted, in-line, close-coupled centrifugal pumps.
 - b. Comply with requirements for flexible connectors specified in Section 221116 "Domestic Water Piping."
 - 2. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping. Comply with requirements for valves specified in Section 220523.12 "Ball Valves for Plumbing Piping," "Section 220523.14

"Check Valves for Plumbing Piping," and comply with requirements for strainers specified in Section 221119 "Domestic Water Piping Specialties."

3. Install pressure gage and snubber at suction of each pump and pressure gage and snubber at discharge of each pump. Install at integral pressure-gage tapings were provided or install pressure-gage connectors in suction and discharge piping around pumps. Comply with requirements for pressure gages and snubbers specified in Section 220519 "Meters and Gages for Plumbing Piping."

- D. Connect thermostats to pumps that they control.

3.3 ADJUSTING

- A. Adjust domestic water pumps to function smoothly, and lubricate as recommended by manufacturer.
- B. Adjust initial temperature set points.
- C. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION 221123

SECTION 221124 - FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Pipes, tubes, and fittings.
 - 2. Piping specialties.
 - 3. Piping and tubing joining materials.
 - 4. Valves.
 - 5. Pressure regulators.
 - 6. Earthquake valves.

1.2 PERFORMANCE REQUIREMENTS

- A. Minimum Operating-Pressure Ratings:
 - 1. Piping and Valves: 100 psig minimum unless otherwise indicated.
- B. Natural-Gas System Pressure within Buildings: More than 0.5 psig but not more than 2 psig.
- C. Delegated Design: Design restraints and anchors for natural-gas piping and equipment, including comprehensive engineering analysis by a qualified State of Nevada Professional engineer, using performance requirements and design criteria indicated.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
- C. Delegated-Design Submittal: For natural-gas piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Detail fabrication and assembly of seismic restraints.
 - 2. Design Calculations: Calculate requirements for selecting seismic restraints.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
 - 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 - 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
 - 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 - 4. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
 - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

2.2 PIPING SPECIALTIES

- A. Flexible Hose Connectors:
 - 1. Flexible hose connector to accommodate any thermal expansion, contraction, or seismic movement of the connected equipment.
 - 2. Capable of compensating for lateral movement and vibration.
 - 3. Manufactured complete with section of corrugated metal hose, compatible braid, with inlet and outlet connections as required.
 - 4. CSA / AGA certified.
 - 5. Products:
 - a. Metraflex Company model GASCT, threaded ends
 - b. Metraflex Company model GASCW, flanged ends
 - c. Or approved equal.
 - 6. Corrugated Hose:
 - a. Type 304 stainless steel.
 - 7. Braid:
 - a. Type 304 stainless steel.
 - 8. Fittings Materials of construction and end fitting type shall be consistent with pipe material and equipment/ pipe connection fittings. Copper fittings shall not be attached to stainless steel hose.

9. Flexible hose connector shall be rated with a 150psi minimum operating pressure.

B. Appliance Flexible Connectors:

1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
4. Corrugated stainless-steel tubing with polymer coating.
5. Operating-Pressure Rating: 0.5 psig.
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: Comply with ASME B1.20.1.
8. Maximum Length: 72 inches

C. Quick-Disconnect Devices: Comply with ANSI Z21.41.

1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.
3. Hand operated with automatic shutoff when disconnected.
4. For indoor or outdoor applications.
5. Adjustable, retractable restraining cable.

D. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

E. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for natural gas.**
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.**

2.4 MANUAL GAS SHUTOFF VALVES

- A. See "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles for where each valve type is applied in various services.**
- B. General Requirements for Metallic Valves, NPS 2 and Smaller: Comply with ASME B16.33.**
1. CWP Rating: 125 psig.
 2. Threaded Ends: Comply with ASME B1.20.1.
 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.

4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
 6. Service Mark: Valves 1-1/4 inches to NPS 2 shall have initials "WOG" permanently marked on valve body.
- C. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BrassCraft Manufacturing Co.; a Masco company.
 - b. Conbraco Industries, Inc.
 - c. Nibco
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 8. CWP Rating: 600 psig.
 9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- D. Bronze Plug Valves: MSS SP-78.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Lee Brass Company.
 2. Body: Bronze, complying with ASTM B 584.
 3. Plug: Bronze.
 4. Ends: Threaded, socket, as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 5. Operator: Square head or lug type with tamperproof feature where indicated.
 6. Pressure Class: 125 psig.
 7. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- E. Solenoid Shut Off Valve:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASCO.
 - b. Approved equal
 2. Body: Aluminum.
 3. Plug: 430F stainless steel.
 4. Ends: Threaded, socket,
 5. Pressure Class: 125 psig.

7. Listing: FM approved to Class 7400 "Liquid and Gas Safety Shutoff Valves".
8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

2.5 EARTHQUAKE VALVES

- A. Earthquake Valves: Comply with ASCE 25.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. Pacific Seismic Products, Inc.
 - b. Or approved equal.
 2. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 3. Maximum Operating Pressure: 60 psig.
 4. Cast-aluminum body with stainless-steel internal parts.
 5. Nitrile-rubber, reset-stem o-ring seal.
 6. Valve position, open or closed, indicator.
 7. Composition valve seat with clapper held by spring or magnet locking mechanism.
 8. Level indicator.
 9. End Connections: Threaded for valves NPS 2 and smaller.

2.6 PRESSURE REGULATORS

- A. General Requirements:
 1. Single stage and suitable for natural gas.
 2. Steel jacket and corrosion-resistant components.
 3. Elevation compensator.
 4. End Connections: Threaded for regulators NPS 2 and smaller.
- B. Line Pressure Regulators: Comply with ANSI Z21.80.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Meter Company.
 - b. Emerson Fisher.
 - c. Or Approved Equal.
 2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
 3. Springs: Zinc-plated steel; interchangeable.
 4. Diaphragm Plate: Zinc-plated steel.
 5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
 6. Orifice: Aluminum; interchangeable.
 7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
 8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
 9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
 10. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
 11. Maximum Inlet Pressure: 5 psig.

2.7 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

PART 3 - EXECUTION

3.1 OUTDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
 - 1. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.
- C. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
 - 3. Replace pipe having damaged PE coating with new pipe.
- D. Install fittings for changes in direction and branch connections.
- E. Install pressure gage downstream from each service regulator. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."
- F. Exterior exposed gas piping to be painted with UV-resistant, 100% lead-free, paint. Paint is to be sampled and approved by WCSD.

3.2 INDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
 - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- P. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- Q. Connect branch piping from top or side of horizontal piping.
- R. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment.
- S. Do not use natural-gas piping as grounding electrode.
- T. Install pressure gage downstream from each line regulator. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."
- U. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."

- V. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- W. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.3 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing or copper connector.
- B. Install underground valves with valve boxes.
- C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.

3.4 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

3.5 HANGER AND SUPPORT INSTALLATION

- A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

- B. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- C. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 1 and Smaller: Maximum span, 96 inches; minimum rod size, 3/8 inch.
 - 2. NPS 1-1/4: Maximum span, 108 inches; minimum rod size, 3/8 inch.
 - 3. NPS 1-1/2 and NPS 2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
- D. Install hangers for horizontal, corrugated stainless-steel tubing with the following maximum spacing and minimum rod sizes:
 - 1. NPS 3/8: Maximum span, 48 inches; minimum rod size, 3/8 inch.
 - 2. NPS 1/2: Maximum span, 72 inches; minimum rod size, 3/8 inch.
 - 3. NPS 3/4 and Larger: Maximum span, 96 inches; minimum rod size, 3/8 inch.

3.6 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- C. Install piping adjacent to appliances to allow service and maintenance of appliances.
- D. Connect piping to kitchen appliances using manual gas shutoff valves, unions, and appliance connectors. Install valve within 72 inches of each gas-fired appliance. Install union between valve and appliances.
- E. Connect piping to equipment (boilers, water heaters, unit heaters, etc.) using manual gas shutoff valves, unions, and flexible connectors. Install valve within 72 inches of each gas-fired equipment. Install union between valve and equipment
- F. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.
- G. Flexible piping to unit to be full size of the rigid gas pipe not connection size of unit.

3.7 LABELING AND IDENTIFYING

- A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

3.8 FIELD QUALITY CONTROL

- A. Test, inspect, and purge natural gas according to NFPA 54 and authorities having jurisdiction.

- B. Natural-gas piping will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.9 OUTDOOR PIPING SCHEDULE

- A. Aboveground, branch piping NPS 2 and smaller shall be the following:
 - 1. Steel pipe with malleable-iron fittings and threaded joints.
- B. Above ground piping greater than NPS2, shall be the following.
 - 1. Steel pip with welded fittings.
- C. Aboveground, distribution piping shall be the following:
 - 1. Steel pipe with malleable-iron fittings and threaded joints.
 - 2. Steel pipe with wrought-steel fittings and welded joints.
- D. All outdoor piping to be painted with UV resistance exterior paint to match existing building. Paint shall be 100% lead-free and be tested and approved by WCSD environmental department.

3.10 INDOOR PIPING SCHEDULE

- A. Aboveground, branch piping NPS 1 and smaller shall be the following:
 - 1. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be the following:
 - 1. Steel pipe with malleable-iron fittings and threaded joints.
 - 2. Steel pipe with wrought-steel fittings and welded joints.

3.11 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Valves for pipe sizes NPS 2 and smaller at service entrance shall be the following:
 - 1. Bronze plug valve.
- B. Distribution piping valves for pipe sizes NPS 2 and smaller shall be the following:
 - 1. Two-piece, full-port, bronze ball valves with bronze trim.
- C. Valves in branch piping for single appliance shall be the following:
 - 1. Two-piece, full-port, bronze ball valves with bronze trim.
- D. FLEXIBLE PIPING APPLICATION SCHEDULE
 - 1. Rooftop Units: flexible hose connector.
 - 2. Boilers: flexible hose connector.
 - 3. Water heaters: flexible hose connector.
 - 4. Kitchen appliances: appliance flexible connector.

END OF SECTION 221124

SECTION 221316 - SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Pipe, tube, and fittings.
 - 2. Specialty pipe fittings.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. See section 013300 for submittal requirements.

1.3 QUALITY ASSURANCE

- A. Piping materials shall bear label, stamp, or other markings of specified testing agency

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.
- B. Heavy-Duty, Hubless-Piping Couplings:
 - Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ANACO-Husky.
 - b. MiFab, Inc.
 - c. Tyler Pipe.
 - d. Or approved equal.
- C. Standards: ASTM C 1277 and ASTM C 1540.
- D. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping at indicated slopes.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- I. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch, and 1/8-bend fittings if two fixtures are installed back-to-back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- J. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- K. Install soil and waste drainage and vent piping at the following minimum slopes unless otherwise indicated:
 - Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 2 percent downward in direction of flow for piping NPS 4 and larger.
 - Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.

Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

- L. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- M. Plumbing Specialties:
 - Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Comply with requirements for cleanouts specified in Section 221319 "Sanitary Waste Piping Specialties."
 - Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Section 221319 "Sanitary Waste Piping Specialties."
- N. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- O. Install sleeves for piping penetrations of walls, ceilings, and floors.
- P. Install sleeve seals for piping penetrations of concrete walls and slabs.
- Q. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.2 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for pipe hanger and support devices and installation specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
 - Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
 - Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
 - Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
 - Vertical Piping: MSS Type 8 or Type 42, clamps.
 - Install individual, straight, horizontal piping runs:
 - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
 - Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls.
 - Support pipe rolls on trapeze.
 - Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Support horizontal piping and tubing within 12 inches of each fitting and coupling.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.

- E. Maximum spans in remaining paragraphs were taken from MSS SP-69 for water service and from model plumbing codes. The most restrictive piping and spacing dimensions allowed are shown.
- F. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
 - NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
 - NPS 3: 60 inches with 1/2-inch rod.
 - NPS 4: 60 inches with 5/8-inch rod.Spacing for 10-foot lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.
- G. Install supports for vertical cast-iron soil piping every 15 feet.

3.3 CONNECTION

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect drainage and vent piping to the following:
 - Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
 - Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
 - Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
 - Equipment: Connect drainage piping as indicated. Provide shutoff valve if indicated and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 and larger.
- D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
- E. Make connections according to the following unless otherwise indicated:
 - Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.

3.4 IDENTIFICATION

- A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.5 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.

Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections, and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
- D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.

Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.

Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.

Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.

Prepare reports for tests and required corrective action.

3.6 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.7 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground, vent piping NPS 4 and smaller shall be the following:
Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.
- C. Underground, soil, waste, and vent piping NPS 4 and smaller shall be the following:
Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.

END OF SECTION 221316

SECTION 221319 -SANITARY WASTE PIPING SPECIALTIES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cleanouts.
 - 2. Miscellaneous sanitary drainage piping specialties.

1.2 ACTION SUBMITTALS

- A. See Section 013300 for submittal requirements.
- B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and accessories for grease interceptors.

1.3 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 PRODUCTS

2.1 CLEANOUTS

- A. Exposed Cast-Iron Cleanouts:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.
 - d. Tyler Pipe.
 - e. Watts.
 - f. Zurn Industries, LLC.
 - 2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
 - 3. Size: Same as connected drainage piping
 - 4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
 - 5. Closure: Countersunk or raised-head, brass plug.
 - 6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
- B. Cast-Iron Floor Cleanouts:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company.
 - b. Smith, Jay R. Mfg. Co.
 - c. Tyler Pipe.
 - d. Watts.
 - e. Zurn Industries, LLC.

2. Standard: ASME A112.36.2M for adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
6. Clamping Device: Required.
7. Outlet Connection: Inside calk.
8. Closure: Brass plug with straight threads and gasket.
9. Adjustable Housing Material: Cast iron with threads.
10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Heavy Duty.
13. Riser: ASTM A74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

C. Cast-Iron Wall Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.
 - d. Tyler Pipe.
 - e. Watts.
 - f. Zurn Industries, LLC.
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk or raised-head, brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, deep, chrome-plated bronze cover plate with screw.
8. Wall Access: Round, wall-installation frame, and cover.

2.2 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Open Drains:

1. Description: Shop or field fabricate from ASTM A74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C564, rubber gaskets.
2. Size: Same as connected waste piping with increaser fitting of size indicated.

B. Deep-Seal Traps:

1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
2. Size: Same as connected waste piping.
 - a. NPS 2: 4-inch-minimum water seal.
 - b. NPS 2-1/2 and Larger: 5-inch-minimum water seal.

C. Air-Gap Fittings:

1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
2. Body: Bronze or cast iron.

3. Inlet: Opening in top of body.
4. Outlet: Larger than inlet.
5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

E. Sleeve Flashing Device:

1. Description: Manufactured, cast-iron fitting, with clamping device, that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 2 inches above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
2. Size: As required for close fit to riser or stack piping.

F. Stack Flashing Fittings:

1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
2. Size: Same as connected stack vent or vent stack.

PART 3 EXECUTION

3.1 INSTALLATION

- A. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
 1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
 2. Locate at each change in direction of piping greater than 45 degrees.
 3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
 4. Locate at base of each vertical soil and waste stack.
- B. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- C. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- D. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- E. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.

- F. Assemble open drain fittings and install with top of hub 2 inches above floor.
- G. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- H. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
 - 1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
 - 2. Size: Same as floor drain inlet.
- I. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- K. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- L. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

3.2 CONNECTIONS

- A. Comply with requirements in Section 221316 - Sanitary Waste and Vent Piping for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.

3.3 FLASHING INSTALLATION

- A. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Section 076200 - Sheet Metal Flashing and Trim.

3.4 LABELING AND IDENTIFYING

- A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 - Identification for Plumbing Piping and Equipment.

3.5 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221319

SECTION 221319.13 - SANITARY DRAINS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Floor drains.
 - 2. Floor sinks.
 - 3. Trench drains.

1.2 DEFINITIONS

- A. HDPE: High-density polyethylene.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

PART 2 PRODUCTS

2.1 DRAIN ASSEMBLIES

- A. Sanitary drains shall bear label, stamp, or other markings of specified testing agency.

2.2 FLOOR DRAINS

- A. Cast-Iron Floor Drains:
 - 1. Basis of design product, subject to compliance with the special product on the drawings. Provide a product by one of the following manufacturers:
 - a. Zurn
 - b. MiFab
 - c. J.R. Smith
 - d. Or approved equal.
 - 2. Standard: ASME A112.6.3.
 - 3. Pattern: Floor drain.
 - 4. Body Material: Gray iron.
 - 5. Anchor Flange: Required.
 - 6. Outlet: Bottom.
 - 7. Sediment Bucket: Not required.
 - 8. Top Shape: Round.
 - 9. Trap Material: Cast iron.
 - 10. Trap Pattern: Standard P-trap.

2.3 FLOOR SINKS

- A. Cast-Iron Floor Sinks:
 - 1. Basis of design product, subject to compliance with the special product on the drawings. Provide a product by one of the following manufacturers:
 - a. Zurn

- b. MiFab
 - c. J.R. Smith
 - d. Or approved equal.
- 2. Standard: ASME A112.6.7.
- 3. Pattern: Floor drain.
- 4. Body Material: Cast iron.
- 5. Anchor Flange: Required.
- 6. Outlet: Bottom, no-hub, connection.
- 7. Coating on Interior Surfaces: Acid-resistant enamel.
- 8. Internal Strainer: Dome.
- 9. Internal Strainer Material: Aluminum.
- 10. Top Grate Material: Cast iron, loose.
- 11. Top of Body and Grate Finish: Acid-resistant enamel.
- 12. Top Shape: Square.

2.4 TRENCH DRAINS

- A. Trench Drains:
 - 1. Basis of design product, subject to compliance with the special product on the drawings. Provide a product by one of the following manufacturers:
 - a. Zurn
 - b. MiFab
 - c. J.R. Smith
 - d. Or approved equal.
 - 2. Standard: ASME A112.6.3 for trench drains.
 - 3. Material: Ductile or gray iron.
 - 4. Outlet: Bottom.
 - 5. Grate Material: Ductile iron.
 - 6. Grate Finish: Not required.
 - 7. Top Loading Classification: Class E.
 - 8. Trap Material: Cast iron.
 - 9. Trap Pattern: Standard P-trap.

PART 3 EXECUTION

3.1 INSTALLATION

- A. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
 - 1. Position floor drains for easy access and maintenance.
 - 2. Set floor drains below elevation of surrounding finished floor to allow floor drainage.
 - 3. Install floor-drain flashing collar or flange, so no leakage occurs between drain and adjoining flooring.
 - a. Maintain integrity of waterproof membranes where penetrated.
 - 4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
- B. Install trench drains at low points of surface areas to be drained.
 - 1. Set grates of drains flush with finished surface, unless otherwise indicated.
 - 2. Install on support devices, so that top will be flush with adjacent surface.

3.2 CONNECTIONS

- A. Comply with requirements in Section 221316 - Sanitary Waste and Vent Piping for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 221319 - Sanitary Waste Piping Specialties for backwater valves, air admittance devices and miscellaneous sanitary drainage piping specialties.
- C. Install piping adjacent to equipment to allow service and maintenance.

3.3 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221319.13

SECTION 221513 - GENERAL-SERVICE COMPRESSED-AIR PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes piping and related specialties for general-service compressed-air systems, as follows:
 - 1. Pipes, tubes, and fittings.
 - 2. Joining materials.
 - 3. Valves.
 - 4. Dielectric fittings.
 - 5. Flexible pipe connectors.
 - 6. Specialties.
 - 7. Quick couplings.
 - 8. Hose assemblies.
- B. Related Requirements:
 - 1. Section 221519 "General-Service Packaged Air Compressors and Receivers" for general-service air compressors and accessories.

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Pipes, fittings, and valves.
 - 2. Dielectric fittings.
 - 3. Flexible pipe connectors.
 - 4. Safety valves.
 - 5. Pressure regulators. Include rated capacities and operating characteristics.
 - 6. Automatic drain valves.
 - 7. Filters. Include rated capacities and operating characteristics.
 - 8. Quick couplings.
 - 9. Hose assemblies.
- B. See specification section 013300.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Schedule 40, Steel Pipe: ASTM A53/A53M, Type E or S, Grade B, black or hot-dip zinc coated with ends threaded in accordance with ASME B1.20.1.
 - 1. Steel Nipples: ASTM A733, made of ASTM A53/A53M or ASTM A106, Schedule 40, galvanized seamless steel pipe. Include ends matching joining method.
 - 2. Malleable-Iron Fittings: ASME B16.3, Class 150 or 300, threaded.

3. Malleable-Iron Unions: ASME B16.39, Class 150 or 300, threaded.
4. Steel Flanges: ASME B16.5, Class 150 or 300, carbon steel, threaded.
5. Wrought-Steel, Butt-Welding Fittings: ASME B16.9, Schedule 40.
6. Steel Flanges: ASME B16.5, Class 150 or 300, carbon steel.

- B. Transition Couplings for Metal Piping: Metal coupling or other manufactured fitting same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

2.2 VALVES

- A. Metal Ball, Butterfly, Check, and Gate Valves: Comply with requirements in Section 220523.12 "Ball Valves for Plumbing Piping," Section 220523.13 "Butterfly Valves for Plumbing Piping," Section 220523.14 "Check Valves for Plumbing Piping," and Section 220523.15 "Gate Valves for Plumbing Piping."

2.3 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
1. Description:
 - a. Standard: ASSE 1079.
 - b. Pressure Rating: 150 psig.
 - c. End Connections: Solder-joint copper alloy and threaded ferrous.

2.4 FLEXIBLE PIPE CONNECTORS

- A. Stainless Steel-Hose Flexible Pipe Connectors: Corrugated, stainless-steel tubing with stainless steel wire-braid covering and ends welded to inner tubing.
1. Working-Pressure Rating: 200 psig - 250 psig minimum.
 2. End Connections, NPS 2 and Smaller: Threaded steel pipe nipple.

2.5 SPECIALTIES

- A. Safety Valves: ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," construction; National Board certified, labeled, and factory sealed; constructed of bronze body with poppet-type safety valve for compressed-air service.
1. Pressure Settings: Higher than discharge pressure and same or lower than receiver pressure rating.
- B. Air-Line Pressure Regulators, Bronze Body: Diaphragm or pilot operated, bronze body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for 200 psig minimum inlet pressure, unless otherwise indicated.
- C. Air-Line Pressure Regulators, Aluminum Alloy, or Plastic Body: Diaphragm operated, aluminum alloy or plastic body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for 200 psig minimum inlet pressure, unless otherwise indicated.

- D. Automatic Drain Valves: Stainless steel body and internal parts, rated for 200 psig minimum working pressure, capable of automatic discharge of collected condensate.
- E. Coalescing Filters: Coalescing type with activated carbon capable of removing water and oil aerosols; with color-change dye to indicate when carbon is saturated and warning light to indicate when selected maximum pressure drop has been exceeded

2.6 QUICK COUPLINGS

- A. General Requirements for Quick Couplings: Assembly with locking-mechanism feature for quick connection and disconnection of compressed-air hose.
- B. Automatic-Shutoff Quick Couplings: Straight-through brass body with O-ring or gasket seal and stainless steel or nickel-plated-steel operating parts.
 - 1. Socket End: With one-way valve and threaded inlet for connection to piping or threaded hose fitting.
 - 2. Plug End: Straight-through type with barbed outlet for attaching hose.
- C. Valveless Quick Couplings: Straight-through brass body with stainless steel or nickel-plated-steel operating parts.
 - 1. Socket End: With O-ring or gasket seal, without valve, and with barbed inlet for attaching hose.
 - 2. Plug End: With barbed outlet for attaching hose.

2.7 HOSE ASSEMBLIES

- A. Description: Compatible hose, clamps, couplings, and splicers suitable for compressed-air service, of nominal diameter indicated, and rated for 300 psig minimum working pressure, unless otherwise indicated.
 - 1. Hose: Reinforced double-wire-braid, CR-covered hose for compressed-air service.
 - 2. Hose Clamps: Stainless steel clamps or bands.
 - 3. Hose Couplings: Two-piece, straight-through, threaded brass or stainless-steel O-ring or gasket-seal swivel coupling with barbed ends for connecting two sections of hose.
 - 4. Hose Splicers: One-piece, straight-through brass or stainless-steel fitting with barbed ends for connecting two sections of hose.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Compressed-Air Piping between Air Compressors and Receivers: Use the following piping materials for each size range:
 - 1. NPS 2 and Smaller: Schedule 40, black-steel pipe; threaded, malleable-iron fittings; and threaded joints.
- B. Low-Pressure Compressed-Air Distribution Piping: Use the following piping materials for each size range:

1. Retain one of two subparagraphs below, or both NPS 2 and Smaller: Schedule 40, black-steel pipe; threaded, malleable-iron fittings; and threaded joints.

C. Drain Piping: Use the following piping materials:

1. NPS 2 and Smaller: Type M copper tube; wrought-copper fittings; and brazed or soldered joints.

3.2 VALVE APPLICATIONS

A. Metal General-Duty Valves: Comply with requirements and use valve types specified in "Valve Applications" Article in Section 220523.12 "Ball Valves for Plumbing Piping," Section 220523.13 and Section 220523.14 "Check Valves for Plumbing Piping," according to the following:

1. Low-Pressure Compressed Air: Valve types specified for low-pressure compressed air.
2. Equipment Isolation NPS 2 and Smaller: Safety-exhaust, copper-alloy ball valve with exhaust vent and pressure rating at least as great as piping system operating pressure.

3.3 INSTALLATION OF PIPING, GENERAL

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless otherwise indicated.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.
- E. Where installing piping adjacent to equipment and machines, allow space for service and maintenance.
- F. Install air and drain piping with 1 percent slope downward in direction of flow.
- G. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating unless otherwise indicated.
- H. Equipment and Specialty Flanged Connections:
1. Use steel companion flange with gasket for connection to steel pipe.

- I. Extended-tee outlets with brazed branch connection may be used for copper tubing, within extruded-tee connection diameter to run tube diameter ratio for tube type, in accordance with Extruded Tee Connections Sizes and Wall Thickness for Copper Tube (Inches) Table in ASTM F2014.
- J. Install eccentric reducers where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.
- K. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.
- L. Install pressure gauge on discharge piping from each air compressor and on each receiver.
- M. Install piping to permit valve servicing.
- N. Install piping free of sags and bends.
- O. Install fittings for changes in direction and branch connections.
- P. Install seismic restraints on piping. Seismic-restraint devices are specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- Q. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- R. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- S. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

3.4 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

3.5 INSTALLATION OF DIELECTRIC FITTINGS

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. NPS 2 and Smaller: Use dielectric unions.

3.6 INSTALLATION OF FLEXIBLE PIPE CONNECTORS

- A. Install flexible pipe connectors in discharge piping of each air compressor.
- B. Install bronze-hose flexible pipe connectors in copper compressed-air tubing.
- C. Install stainless steel-hose flexible pipe connectors in steel compressed-air piping.

3.7 INSTALLATION OF SPECIALTIES

- A. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.
- B. Install air-main pressure regulators in compressed-air piping at or near air compressors.
- C. Install air-line pressure regulators in branch piping to equipment.
- D. Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters.
- E. Install quick couplings at piping terminals for hose connections.
- F. Install hose assemblies at hose connections.
- G. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment and machine.

3.8 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for hangers, supports, and anchor devices.
- C. Install hangers for steel piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for aluminum piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping within 12 inches of each fitting and coupling.

- F. Support vertical runs of steel piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- G. Support vertical runs of aluminum piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- H. Individual, Straight, Horizontal Piping Runs:
 - 1. 100 Ft. or Less: MSS Type 1, adjustable, steel clevis hangers.
 - 2. Longer Than 100 Ft.: MSS Type 43, adjustable roller hangers.
- I. Multiple, Straight, Horizontal Piping Runs 100 Ft. or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
- J. Base of Vertical Piping: MSS Type 52, spring hangers.

3.9 LABELING AND IDENTIFICATION

- A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Section 220553 "Identification for Plumbing Piping and Equipment."

3.10 FIELD QUALITY CONTROL

- A. Perform field tests and inspections.
- B. Tests and Inspections:
 - 1. Piping Leak Tests for Metal Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen to pressure of 50 psig above system operating pressure, but not less than 150 psig. Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
 - 2. Repair leaks and retest until no leaks exist.
 - 3. Inspect filters and pressure regulators for proper operation.
- C. Prepare test and inspection reports.

END OF SECTION 221513

SECTION 221519 - GENERAL-SERVICE PACKAGED AIR COMPRESSORS AND RECEIVERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Lubricated, reciprocating air compressors.
 - 2. Inlet-air filters.
 - 3. Refrigerant compressed-air dryers.

1.2 DEFINITIONS

- A. Actual Air: Air delivered from air compressors. Flow rate is delivered compressed air measured in acfm.
- B. Standard Air: Free air at 68 deg F and 1 atmosphere before compression or expansion and measured in scfm .

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Diagrams for power, signal, and control wiring.
- C. See section 013300.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label receivers to comply with ASME Boiler and Pressure Vessel Code.

2.2 GENERAL REQUIREMENTS FOR PACKAGED AIR COMPRESSORS AND RECEIVERS

- A. General Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled; continuous-duty air compressors and receivers that deliver air of quality equal to intake air.

- B. Control Panels: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.
 - 1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.
 - 2. Motor Controllers: Full-voltage, combination magnetic type with undervoltage release feature and motor-circuit-protector-type disconnecting means and short-circuit protective device.
 - 3. Control Voltage: 120-V ac or less, using integral control power transformer.
 - 4. Motor Overload Protection: Overload relay in each phase.
 - 5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
 - 6. Alarm Signal Device: For connection to alarm system to indicate when backup air compressor is operating.
- C. Receivers: Steel tank constructed according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 1. Pressure Rating: At least as high as highest discharge pressure of connected compressors, and bearing appropriate code symbols.
 - 2. Interior Finish: Corrosion-resistant coating.
 - 3. Accessories: Include safety valve, pressure gage, drain, and pressure-reducing valve.

2.3 LUBRICATED, RECIPROCATING AIR COMPRESSORS

- A. Basis of design product, subject to compliance with the specified product on the drawings. Provide a product by one of the following manufacturers:
 - 1. Ingersoll-Rand
 - 2. Atlas-Copco
 - 3. Or approved equal.
- B. Compressor(s): Lubricated, reciprocating-piston type with lubricated compression chamber and crankcase.
 - 1. Submerged gear-type oil pump.
 - 2. Oil filter.
 - 3. Combined high discharge-air temperature and low lubrication-oil pressure switch.
 - 4. Belt guard totally enclosing pulleys and belts.
- C. Capacities and Characteristics:
 - a. See drawings for capacities and characteristics.

2.4 INLET-AIR FILTERS

- A. Description: Combination inlet-air filter-silencer, suitable for remote installation, for each air compressor.
 - 1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
 - 2. Capacity: Match capacity of air compressor, with filter having collection efficiency of 99 percent retention of particles larger than 10 micrometers.
- B. Description: Combination inlet-air filter-silencer, suitable for remote installation, for multiple air compressors.

2.5 REFRIGERANT COMPRESSED-AIR DRYERS

- A. Description: Noncycling, air-cooled, electric-motor-driven unit with steel enclosure and capability to deliver 35 deg F, 100-psig air at dew point. Include automatic ejection of condensate from airstream, step-down transformers, disconnect switches, inlet and outlet pressure gages, thermometers, automatic controls, and filters.
- B. Capacities and Characteristics:
 - 1. See drawings for capacities and characteristics.

2.6 COMPRESSED AIR STORAGE TANK

- A. Basis of design product, subject to compliance with the specified product on the drawings. Provide a product by one of the following manufacturers:
 - 1. Ingersoll-Rand
 - 2. Atlas-Copco
 - 3. Samuel
 - 4. Or approved equal.
- B. Steel tank constructed according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 1. Pressure Rating: At least as high as highest discharge pressure of connected compressors, and bearing appropriate code symbols.
 - 2. Interior Finish: Corrosion-resistant coating.
 - 3. Accessories: Include safety valve, pressure gage, drain, and pressure-reducing valve.
- C. Capacities and Characteristics:
 - 1. Maximum Air Working Pressure: 200 PSI at 400°F
 - 2. Capacity: 400 Gallons
 - 3. Provide with ring stand with welded tabs for anchoring to the ground.

2.7 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 220513 "Common Motor Requirements for Plumbing Equipment."
 - 1. Enclosure: Open, dripproof.
 - 2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load does not require motor to operate in service factor range above 1.0.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

- A. Equipment Mounting:
 - 1. Install air compressors and air dryers on cast-in-place concrete equipment base(s).
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment"

- B. Install compressed-air equipment anchored to substrate.
- C. Arrange equipment so controls and devices are accessible for servicing.
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Install the following devices on compressed-air equipment:
 - 1. Thermometer, Pressure Gage, and Safety Valve: Install on each compressed-air receiver.
 - 2. Pressure Regulators: Install downstream from air compressors and dryers.
 - 3. Automatic Drain Valves: Install on aftercoolers, receivers, and dryers. Discharge condensate over nearest floor drain.

3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 221513 "General-Service Compressed-Air Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to machine, allow space for service and maintenance.

3.3 IDENTIFICATION

- A. Identify general-service air compressors and components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air compressors and air dryers.

END OF SECTION 221519

SECTION 223400 - FUEL-FIRED, DOMESTIC-WATER HEATERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Commercial, power-burner, gas-fired, storage, domestic-water heaters with integral storage tank.
 - 2. Domestic-water heater accessories.

1.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Commercial domestic-water heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type and size of domestic-water heater indicated.
- B. Shop Drawings:
 - 1. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For fuel-fired, domestic-water heaters, accessories, and components, from manufacturer.
- B. Product certificates.
- C. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.
- D. Source quality-control reports.
- E. Field quality-control reports.
- F. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE/IESNA Compliance: Fabricate and label fuel-fired, domestic-water heaters to comply with ASHRAE/IESNA 90.1.

- C. ASME Compliance:
 - 1. Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 2. Where ASME-code construction is indicated, fabricate and label commercial, finned-tube, domestic-water heaters to comply with ASME Boiler and Pressure Vessel Code: Section IV.
- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects."

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fuel-fired, domestic-water heaters that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Periods: From date of Substantial Completion.
 - a. Commercial, Gas-Fired, Domestic-Water Heaters:
 - 1) Storage Tank: Five years.
 - 2) Controls and Other Components: One year(s).

PART 2 - PRODUCTS

2.1 COMMERCIAL, GAS-FIRED, STORAGE TANK, DOMESTIC-WATER HEATERS

- A. Commercial, Power-Burner, Gas-Fired, Storage Tank, Domestic-Water Heaters:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Lochinvar
 - b. Bradford White
 - c. Smith, A.O. Corporation
 - d. Or Approved Equal
 - 2. Standard: ANSI Z21.10.3/CSA 4.3.
 - 3. Storage-Tank Construction: ASME-code steel with 150-psig working-pressure rating.
 - a. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
 - 1) NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
 - 2) NPS 2-1/2 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
 - b. Interior Finish: Comply with NSF 61 Annex barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Lining: Glass complying with NSF 61 Annex G barrier materials for potable-water tank linings, including extending lining into and through tank fittings and outlets.
 - 4. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rod: Replaceable magnesium.
 - b. Dip Tube: Required unless cold-water inlet is near bottom of tank.

- c. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - d. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
 - e. Jacket: Steel with enameled finish.
 - f. Burner: UL 795 for power-burner, gas-fired, domestic-water heaters, and natural-gas fuel.
 - g. Automatic Ignition: ANSI Z21.20/CSA C22.2 No. 199, electric, automatic, gas-ignition system.
 - h. Temperature Control: Adjustable thermostat.
 - i. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.
 - j. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
- 5. Special Requirements: NSF 5 construction.
 - 6. The water heater specified on the drawings does not require an equipment pad to drain properly. If a substituted water heater requires a pad; contractor to provide an equipment pad as required for proper draining with bid at no additional cost to owner.

2.2 WATER HEATER ACCESSORIES

- A. Domestic-Water Expansion Tanks:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL, Inc.
 - b. Wessels
 - c. Elbi
 - d. Or approved equal
 - 2. Description: Steel, pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
 - 3. Construction:
 - a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
 - b. Interior Finish: Comply with NSF 61 Annex G barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
 - c. Air-Charging Valve: Factory installed.
- B. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater, and include drain outlet not less than NPS 3/4 with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.
- C. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2.
- D. Heat-Trap Fittings: ASHRAE 90.2.

- E. Gas Shutoff Valves: ANSI Z21.15/CSA 9.1-M, manually operated. Furnish for installation in piping.
- F. Combination Temperature-and-Pressure Relief Valves: Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.
 - 1. Gas-Fired, Domestic-Water Heaters: ANSI Z21.22/CSA 4.4-M.

2.3 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect assembled domestic-water heaters and storage tanks specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test commercial domestic-water heaters and storage tanks to minimum of one and one-half times pressure rating before shipment.
- C. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 DOMESTIC-WATER HEATER INSTALLATION

- A. Commercial, Domestic-Water Heater Mounting: Install commercial domestic-water heaters on concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
 - 1. Exception: Omit concrete bases for commercial domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
 - 2. Maintain manufacturer's recommended clearances.
 - 3. Arrange units so controls and devices that require servicing are accessible.
 - 4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
 - 5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 7. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 8. Anchor domestic-water heaters to substrate.
- B. Install domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 220523.12 "Ball Valves for Plumbing Piping," Section 220523.13 "Butterfly Valves for Plumbing Piping," and Section 220523.15 "Gate Valves for Plumbing Piping."
 - C. Install gas-fired, domestic-water heaters according to NFPA 54.
 1. Install gas shutoff valves on gas supply piping to gas-fired, domestic-water heaters without shutoff valves.
 2. Install gas pressure regulators on gas supplies to gas-fired, domestic-water heaters without gas pressure regulators if gas pressure regulators are required to reduce gas pressure at burner.
 3. Install automatic gas valves on gas supplies to gas-fired, domestic-water heaters if required for operation of safety control.
 4. Comply with requirements for gas shutoff valves, gas pressure regulators, and automatic gas valves specified in Section 231123 "Facility Natural-Gas Piping."
 - D. Install commercial domestic-water heaters with seismic-restraint devices. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
 - E. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
 - F. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Section 221119 "Domestic Water Piping Specialties." To be CPVC piping from water heater to neutralizer and copper from neutralizer to floor drain/sink.
 - G. Install thermometer on outlet piping of domestic-water heaters. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
 - H. Install piping-type heat traps on inlet and outlet piping of domestic-water heater storage tanks without integral or fitting-type heat traps.
 - I. Fill domestic-water heaters with water.
 - J. Charge domestic-water compression tanks with air.
- 3.2 CONNECTIONS
- A. Comply with requirements for domestic-water piping specified in Section 221116 "Domestic Water Piping."

- B. Comply with requirements for gas piping specified in Section 231123 "Facility Natural-Gas Piping."
- C. Drawings indicate general arrangement of piping, fittings, and specialties.
- D. Where installing piping adjacent to fuel-fired, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.3 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- C. Prepare test and inspection reports.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial, gas-fired, storage, domestic-water heaters.

END OF SECTION 223400

SECTION 224213.13 - COMMERCIAL WATER CLOSETS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Water closets.
 - 2. Flushometer valves.
 - 3. Toilet seats.
 - 4. Supports.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flushometer valves and electronic sensors to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 WALL-MOUNTED WATER CLOSETS

- A. Water Closets: Wall mounted, top spud, accessible.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Kohler Co.
 - c. TOTO USA, INC.
 - 2. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Style: Flushometer valve.
 - e. Height: Standard.
 - f. Rim Contour: Elongated.
 - g. Water Consumption: 1.28 gal. per flush.
 - h. Spud Size and Location: NPS 1-1/2; top.
 - 3. Flushometer Valve: Refer to drawings.
 - 4. Toilet Seat: Refer to drawings.
 - 5. Support: Water closet carrier, refer to drawings.
 - 6. Water-Closet Mounting Height: Refer to architectural drawings for mounting height.

2.2 FLUSHOMETER VALVES

A. Manual Diaphragm-Type Flushometer Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Zurn Industries, LLC.
 - b. Sloan Valve Company.
 - c. Or Approved Equal.
2. Standard: ASSE 1037. And ASME A112.19.2M.
3. Minimum Pressure Rating: 125 psig.
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Panel Finish: Chrome plated or stainless steel.
8. Actuator: Solenoid complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
9. Trip Mechanism: Trip Lever that is ADA compliant
10. Style: Exposed.
11. Sensor: Adjustable sensor eyes
12. Consumption: 1.28 gal. per flush.
13. Minimum Inlet: NPS 1.
14. Minimum Outlet: NPS 1-1/4.

2.3 TOILET SEATS

A. Toilet Seats:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2.
 - a. American Standard America.
 - b. Bemis Manufacturing Company.
 - c. Church Seats; Bemis Manufacturing Company.
 - d. Zurn Industries, LLC.
3. Standard: IAPMO/ANSI Z124.5.
4. Material: Plastic.
5. Type: Commercial (Heavy duty).
6. Shape: Elongated rim, open front.
7. Hinge: Self-sustaining, check.
8. Hinge Material: Noncorroding metal.
9. Seat Cover: Not required.
10. Color: White.

2.4 SUPPORTS

A. Water Closet Carrier:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Zurn Industries, LLC.
 - b. Or Approved Equal
2. Standard: ASME A112.6.1M.

3. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Water-Closet Installation:
 1. Install level and plumb according to roughing-in drawings.
 2. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate.
 3. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ICC/ANSI A117.1.
- B. Support Installation:
 1. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
 2. Use carrier supports with waste-fitting assembly and seal.
 3. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.
- C. Flushometer-Valve Installation:
 1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
 2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
 3. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
 4. Install actuators in locations that are easy for people with disabilities to reach.
 5. Install fresh batteries in battery-powered, electronic-sensor mechanisms.
- D. Install toilet seats on water closets.
- E. Wall Flange and Escutcheon Installation:
 1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
 2. Install deep-pattern escutcheons if required to conceal protruding fittings.
 3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- F. Joint Sealing:
 1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
 2. Match sealant color to water-closet color.
 3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.2 CONNECTIONS

- A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.

- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."
- D. Where installing piping adjacent to water closets, allow space for service and maintenance.

3.3 ADJUSTING

- A. Operate and adjust water closets and controls. Replace damaged and malfunctioning water closets, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.
- C. Adjust sensors to ensure proper sensor operation and flush valve operation.

3.4 CLEANING AND PROTECTION

- A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed water closets and fittings.
- C. Do not allow use of water closets for temporary facilities unless approved in writing by Owner.

END OF SECTION 224213.13

SECTION 224213.16 - COMMERCIAL URINALS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Urinals.
 - 2. Flushometer valves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flushometer valves and electronic sensors to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 WALL-HUNG URINALS

- A. Urinals: Wall hung, back outlet, siphon jet, accessible.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Kohler Co.
 - c. TOTO USA, INC.
 - 2. Fixture:
 - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
 - b. Material: Vitreous china.
 - c. Type: Siphon jet.
 - d. Strainer or Trapway: Manufacturer's standard strainer with integral trap.
 - e. Water Consumption: Water saving.
 - f. Spud Size and Location: NPS 3/4; top.
 - g. Outlet Size and Location: NPS 2; back.
 - h. Color: White.
 - 3. Flushometer Valve: Refer to drawings.
 - 4. Waste Fitting:
 - a. Standard: ASME A112.18.2/CSA B125.2 for coupling.
 - b. Size: NPS 2.
 - 5. Support: ASME A112.6.1M, Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture.

2.2 URINAL FLUSHOMETER VALVES

- A. Manual operated, Diaphragm-Type Flushometer Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Sloan Valve Company.
 - b. Zurn Industries, LLC.
 - c. Or approved equal.
2. Standard: ASSE 1037.
3. Minimum Pressure Rating: 125 psig.
4. Features: Include integral check stop and backflow-prevention device.
5. Material: Brass body with corrosion-resistant components.
6. Exposed Flushometer-Valve Finish: Chrome plated.
7. Style: Exposed.
8. Actuator: Solenoid complying with UL 1951; listed and labeled as defined in NFPA 70, by a qualified testing agency; and marked for intended location and application.
9. Trip Mechanism: ADA-Compliant Trip Lever
10. Style: Exposed.
11. Sensor: Adjustable sensor eyes
12. Consumption: 0.5 gallon per flush.
13. Minimum Inlet: NPS 3/4.
14. Minimum Outlet: NPS 1-1/4.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before urinal installation.
- B. Examine walls and floors for suitable conditions where urinals will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Urinal Installation:
 1. Install urinals level and plumb according to roughing-in drawings.
 2. Install wall-hung, back-outlet urinals onto waste fitting seals and attached to supports.
 3. Install wall-hung, bottom-outlet urinals with tubular waste piping attached to supports.
 4. Install accessible, wall-mounted urinals at mounting height for the handicapped/elderly, according to ICC/ANSI A117.1.
 5. Install trap-seal liquid in waterless urinals.
- B. Support Installation:
 1. Install supports, affixed to building substrate, for wall-hung urinals.
 2. Use off-floor carriers with waste fitting and seal for back-outlet urinals.
 3. Use carriers without waste fitting for urinals with tubular waste piping.
 4. Use chair-type carrier supports with rectangular steel uprights for accessible urinals.

- C. Flushometer-Valve Installation:
 - 1. Install flushometer-valve water-supply fitting on each supply to each urinal.
 - 2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
 - 3. Install lever-handle flushometer valves for accessible urinals with handle mounted on open side of compartment.
 - 4. Install fresh batteries in battery-powered, electronic-sensor mechanisms.
- D. Wall Flange and Escutcheon Installation:
 - 1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations.
 - 2. Install deep-pattern escutcheons if required to conceal protruding fittings.
 - 3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- E. Joint Sealing:
 - 1. Seal joints between urinals and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
 - 2. Match sealant color to urinal color.
 - 3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Connect urinals with water supplies and soil, waste, and vent piping. Use size fittings required to match urinals.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."
- D. Where installing piping adjacent to urinals, allow space for service and maintenance.

3.4 ADJUSTING

- A. Operate and adjust urinals and controls. Replace damaged and malfunctioning urinals, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.
- C. Adjust sensors to ensure proper sensor operation and flush valve operation.

3.5 CLEANING AND PROTECTION

- A. Clean urinals and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed urinals and fittings.
- C. Do not allow use of urinals for temporary facilities unless approved in writing by Owner.

END OF SECTION 224213.16

SECTION 224216.13 - COMMERCIAL LAVATORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Lavatories.
 - 2. Faucets.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lavatories and faucets to include in operation and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Servicing and adjustments of automatic faucets.

PART 2 - PRODUCTS

2.1 VITREOUS-CHINA, WALL-MOUNTED LAVATORIES

- A. Lavatory: Vitreous china, wall mounted, with back.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Standard America.
 - b. Kohler Co.
 - c. TOTO USA, INC.
 - 2. Fixture:
 - a. Standard: ASME A112.19.2/CSA B45.1.
 - b. Type: For wall hanging.
 - c. Faucet-Hole Location: Top.
 - d. Color: White.
 - e. Mounting Material: Chair carrier.
 - 3. Faucet: Refer to drawings.
 - 4. Support: carrier with OSHPD compliant legs, concealed-arm lavatory carrier.

2.2 SOLID-BRASS, MANUAL FAUCETS

- A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet materials that will be in contact with potable water.
- B. Lavatory Faucets: Deck Mounted, single-control mixing, commercial, solid-brass valve.
 - 1. Manufacturers:
 - a. Chicago Faucets.
 - b. Sloan Valve Company
 - c. Moen Commercial.
 - d. American Standard Commercial.
 - 2. Standard: ASME A112.18.1/CSA B125.1.
 - 3. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
 - 4. Body Type: 4" On centers.
 - 5. Body Material: Commercial, solid brass.
 - 6. Finish: Polished chrome plate.
 - 7. Maximum Flow Rate: 0.5 gpm with vandal proof aerator.
 - 8. Mounting Type: Deck exposed.
 - 9. Spout: Rigid.
 - 10. Spout Outlet: Aerator.
 - 11. Drain: Grid Drain.

2.3 SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF/ANSI 61 Annex G, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type, or compression valve with inlet connection matching supply piping.
- E. Operation: Wheel or Lever handle.
- F. Risers:
 - 1. NPS 3/8.
 - 2. Flexible tube riser.

- G. Fittings shall be suitable for continuous use at 120°F.

2.4 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: Grid type with NPS 1-1/4 offset and straight tailpiece.

- C. Trap:
 - 1. Size: NPS 1-1/2 by NPS 1-1/4.
 - 2. Material: Chrome-plated, two-piece, cast-brass trap, and swivel elbow with 0.032-inch-thick brass tube to wall; and chrome-plated, brass or steel wall flange.
 - 3. Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch-thick stainless-steel tube to wall; and stainless-steel wall flange.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before lavatory installation.
- B. Examine counters and walls for suitable conditions where lavatories will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install lavatories level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-mounted lavatories.
- C. Install accessible wall-mounted lavatories at handicapped/elderly mounting height for people with disabilities or the elderly, according to ICC/ANSI A117.1.
- D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- E. Seal joints between lavatories and counters and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 220719 "Plumbing Piping Insulation."
- G. Contractor to install new set of batteries for battery powered faucet after commissioning.

3.3 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."

- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Operate and adjust lavatories and controls. Replace damaged and malfunctioning lavatories, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

- A. After completing installation of lavatories, inspect and repair damaged finishes.
- B. Clean lavatories, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed lavatories and fittings.
- D. Do not allow use of lavatories for temporary facilities unless approved in writing by Owner.

END OF SECTION 224216.13

SECTION 224216.16 - COMMERCIAL SINKS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Mop service basins.
 - 2. Laundry Sink
 - 3. Handwash and breakroom sinks.
 - 4. Sink faucets.
 - 5. Supply fittings.
 - 6. Waste fittings.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance data.

PART 2 - PRODUCTS

2.1 MOP SERVICE BASINS

- A. Service Basins: Plastic, floor mounted.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Florestone Products Co., Inc.
 - b. Fiat
 - c. Zurn Industries, LLC.
 - 2. Fixture:
 - a. Standard: IAPMO/ANSI Z124.6.
 - b. Material: Receptor shall be manufactured of tan and white marble chips cast in white Portland cement to produce a compressive strength of not less than 3000 PSI, seven days after casting. Terrazzo surface shall be ground and polished with all air holes and/or pits to be grouted and excess removed and sealed to resist stains and moisture. Receptor will be reinforced with 16-gauge wire.
 - c. Nominal Size: Refer to drawings schedule
 - d. Tiling Flange: Required
 - e. Rim Guard: On front top surfaces.
 - f. Color: Standard.
 - g. Drain: Grid with NPS 3 outlet.

3. Mounting: On floor and flush to wall.

B. Faucet:

1. Brass construction, chrome finish
2. Vacuum-breaker spout with garden hose thread
3. 1/2" IPS connections
4. Vandal resistant torx head screws
5. With service stops
6. Operation: Wrist blade handles with hot and cold color indicators
7. Flow: Unrestricted
8. Cartridge: Ceramic disc cartridge, 1/4 turn operation, Nonmetallic and nonferrous material
9. Standards: Third party certified by CSA to meet ASME A112.18.1 and all applicable specifications referenced therein for lever handles
10. Warranty: Warranted for 5 years against material or manufacturing defects.

2.2 LAUNDRY SINKS

A. Utility Sinks: Stainless steel, Floor-mounted.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkay Manufacturing Co.
 - b. Just Manufacturing.
2. Fixture:
 - a. Standard: ASME A112.19.3/CSA B45.4.
 - b. Seamless welded construction, fabricated of 14-gauge type 304 stainless steel with Integra Flow. 1-1/2" dia. roll rim.
 - c. Surfaces polished to a Hand-Blended Just Finish. Exposed exterior surfaces polished with a standard brush finish.
 - d. Four 14-gauge type 304 stainless steel legs with angle frame.
 - e. Number of Compartments: One.
 - f. Overall Dimensions: Refer to drawing schedule
 - g. Metal Thickness: Refer to drawing schedule
3. Faucet(s):
 - a. Required: One.
 - b. Mounting: Wall.
 - c. Brass construction, chrome finish
 - d. Vacuum-breaker spout with garden hose thread
 - e. Vandal resistant torx head screws
 - f. With service stops
 - g. Operation: Wrist blade handles with hot and cold color indicators
 - h. Flow: Unrestricted
 - i. Cartridge: Ceramic disc cartridge, 1/4 turn operation, Nonmetallic and nonferrous material
 - j. Standards: Third party certified by CSA to meet ASME A112.18.1 and all applicable specifications referenced therein for lever handles
 - k. Warranty: Warranted for 5 years against
 - l. See plumbing fixture schedule on drawings for specific faucet type.
4. Supply Fittings:
 - a. Standard: ASME A112.18.1/CSA B125.1.

- b. Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
 - 1) Operation: Wheel handle.
 - 2) Risers: NPS 1/2, ASME A112.18.6, braided or corrugated stainless-steel flexible hose.
- 5. Waste Fittings:
 - a. Standard: ASME A112.18.2/CSA B125.2.
 - b. Trap(s):
 - 1) Size: NPS 1-1/2.
 - 2) Material: Chrome-plated, two-piece, cast-brass trap, and swivel elbow with 0.032-inch- thick brass tube to wall; and chrome-plated brass or steel wall flange.
 - 3) Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch- thick stainless-steel tube to wall; and stainless-steel wall flange.
 - c. Continuous Waste:
 - 1) Size: NPS 1-1/2.
 - 2) Material: Chrome-plated, 0.032-inch- thick brass tube.
- 6. Mounting: On counter with sealant.

2.3 HANDWASH AND BREAKROOM SINKS

- A. Handwash Sinks: Stainless steel, floor/wall mounted.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkay Manufacturing Co.
 - b. Just Manufacturing.
 - 2. Fixture:
 - a. Standards: ASME A112.19.3/CSA B45.4 and NSF/ANSI 2.
 - b. Type: Basin with radius corners, back for faucet, and support brackets.
 - 3. Faucet(s):
 - a. Required: One.
 - b. Mounting: On ledge
 - c. Brass construction with chrome plated finish
 - d. Operation: 4" wrist blade handles with hot and cold color indicators, 1/4 turn to open (clockwise to close), Vandal resistant torx head screws
 - e. Cartridge: Brass shell, ceramic disc cartridge, Nonmetallic/nonferrous and ceramic material
 - f. Standards: Third party certified to meet A112.18.1/CSA B125.1 and all applicable specifications referenced therein
 - g. Certified to NSF 61/9
 - h. Contains no more than 0.25% weighted average lead content
 - i. See plumbing fixture schedule on drawings for specific faucet type.
 - 4. Supply Fittings: Comply with requirements in "Supply Fittings" Article.
 - 5. Waste Fittings: Comply with requirements in "Waste Fittings" Article.
 - 6. Support: ASME A112.6.1M, Type II, sink carrier.

2.4 SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF/ANSI 61 Annex G, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.

- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type, or compression valve with inlet connection matching supply piping.
- E. Operation: Wheel or lever handle.
- F. Risers:
 - 1. NPS 3/8
 - 2. Chrome-plated, rigid-copper pipe.
- G. Fittings shall be suitable for continuous use at 120°F.

2.5 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: Grid type with NPS 1-1/2 offset and straight tailpiece.
- C. Trap:
 - 1. Size: NPS 1-1/2.
 - 2. Material: Chrome-plated, two-piece, cast-brass trap, and swivel elbow with 0.032-inch-thick brass tube to wall; and chrome-plated brass or steel wall flange.
 - 3. Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch-thick stainless-steel tube to wall; and stainless-steel wall flange.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before sink installation.
- B. Examine walls, floors, and counters for suitable conditions where sinks will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sinks level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-hung sinks.
- C. Install accessible wall-mounted sinks at handicapped/elderly mounting height according to ICC/ANSI A117.1.
- D. Set floor-mounted sinks in leveling bed of cement grout.

- E. Install water-supply piping with stop on each supply to each sink faucet.
 - 1. Exception: Use ball or gate valves if supply stops are not specified with sink. Comply with valve requirements specified in Section 220523.12 "Ball Valves for Plumbing Piping" and Section 220523.15 "Gate Valves for Plumbing Piping."
 - 2. Install stops in locations where they can be easily reached for operation.
- F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- G. Seal joints between sinks and counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- H. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

3.3 CONNECTIONS

- A. Connect sinks with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Operate and adjust sinks and controls. Replace damaged and malfunctioning sinks, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.

3.5 CLEANING AND PROTECTION

- A. After completing installation of sinks, inspect and repair damaged finishes.
- B. Clean sinks, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed sinks and fittings.
- D. Do not allow use of sinks for temporary facilities unless approved in writing by Owner.

END OF SECTION 224216.16

SECTION 224223 - COMMERCIAL SHOWERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Shower heads and shower valves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Shower valves intended to convey or dispense water for human consumption are to comply with the U.S. Safe Drinking Water Act (SDWA), with requirements of the Authority Having Jurisdiction (AHJ), and with NSF 61 and NSF 372, or be certified in compliance with NSF 61 and NSF 372 by an ANSI-accredited third-party certification body, in that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.

2.2 SHOWER HEADS AND SHOWER VALVES

- A. Shower Head with Single-Handle, Thermostatic/Pressure-Balancing Mixing Valve:
1. Basis of design product, subject to compliance with the specified product on the drawings. Provide a product by one of the following manufacturers:
 - a. American Standard.
 - b. Sloan.
 - c. Moen Commercial.
 - d. Or approved equal.
 2. Description: Single-handle, accessible, thermostatic/pressure-balancing mixing valve with hot- and cold-water indicators; check stops; and hose with handheld shower head on sliding rod shower head.
 3. Shower Valve:
 - a. Standards: ASME A112.18.1/CSA B125.1 and ASSE 1016/ASME A112.1016/CSA B125.16.
 - b. Body Material: Solid brass.
 - c. Finish: Polished chrome plate.
 - d. Mounting: Exposed.
 - e. Operation: Single-handle, twist or rotate control.
 - f. Antiscald Device: Integral with mixing valve.
 - g. Check Stops: Check-valve type, integral with or attached to body; on hot- and cold-water supply connections.

4. Supply Connections: NPS 1/2.
5. Shower Head:
 - a. Shower Head Maximum Flow Rate: 2.5 gpm.
 - b. Shower Head Material: Metallic with chrome-plated finish.
 - c. Spray Pattern: Adjustable.
 - d. Integral Volume Control: Required.
 - e. Temperature Indicator: Integral with valve.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Assemble shower components according to manufacturers' written instructions.
- B. Install showers level and plumb.
- C. Install ball valves in water-supply piping to the shower if supply stops are specified with the shower valve. Comply with valve requirements specified in Section 220523.12 "Ball Valves for Plumbing Piping Install valves in locations that are accessible for ease of operation.
- D. Install shower flow-control fittings with specified maximum flow rates in shower arms.
- E. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheons requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

3.2 PIPING CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with traps and soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.3 ADJUSTING

- A. Operate and adjust showers and controls. Replace damaged and malfunctioning showers, fittings, and controls.
- B. Adjust water pressure at shower valves to produce proper flow.

3.4 CLEANING AND PROTECTION

- A. After completing installation of showers, inspect and repair damaged finishes.

- B. Clean showers, shower valves, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed fixtures and fittings.
- D. Do not allow use of showers for temporary facilities unless approved in writing by Owner.

END OF SECTION 224223

SECTION 224233 - WASH FOUNTAINS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid-surface, semicircular wash fountains.

B. Related Requirements:

1. Section 224216.13 "Commercial Lavatories."
2. Section 224216.16 "Commercial Sinks."

1.2 ACTION SUBMITTALS

A. Product Data.

B. See specification section 01 33 00 for additional submittal requirements.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

B. Warranty.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Standards:

1. Wash fountain spray heads and faucets intended to convey or dispense water for human consumption must comply with the SDWA, requirements of authorities having jurisdiction, and NSF 61 and NSF 372, or must be certified in compliance with NSF 61 and NSF 372 (by an ANSI-accredited third-party certification body) that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.

B. Comply with IAPMO IGC 156 for solid-surface and stainless-steel wash fountains.

C. Comply with ASME A112.18.1/CSA B125.1 for water supply fittings.

D. Comply with ASME A112.18.2/CSA B125.2 for plumbing waste fittings.

E. Comply with ASSE 1016 for mixing valves.

2.2 SOLID-SURFACE, SEMICIRCULAR WASH FOUNTAINS

A. Wash Fountains - Floor Mounted, Solid Surface, Semicircular Receptor:

1. Basis-of-design product, subject to compliance with the specified product on the drawings. Provide a product by one of the following manufacturers:
 - a. Bradley.
 - b. Acorn.
 - c. Sloan.
 - d. Or Approved equal.
2. Receptor:
 - a. Nominal Diameter: 36 inches
 - b. Height to Rim: Standard.
 - c. Color or Finish: Provide architect with physical color samples of manufacturer's options during submittals.
 - d. Drain: Grid with NPS 2 tailpiece.
3. Spray Head:
 - a. Material: Stainless steel or integral part of receptor back.
 - b. Number of User Stations: 3.
 - c. Control: foot-control actuation with thermostatic mixing valve, and having check stops.
4. Supply Fittings:
 - a. Piping: NPS 3/4 copper tubing.
 - b. Valves: Shutoff valve on each supply.
 - c. Supply Piping: From top.
5. Waste Fittings:
 - a. Trap and Drain Piping: NPS 2.
 - b. Vent Piping: NPS 1-1/2 to ceiling.
6. Floor Mounting: Manufacturer's floor bracket and wall bracket attached to reinforcement in wall.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for water-supply piping, and sanitary drainage and vent piping systems to verify actual locations of piping connections before wash-fountain installation.
- B. Examine walls and floors for suitable conditions where wash fountains will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Install wash fountains level and plumb in accordance with rough-in drawings.
- B. Set freestanding wash fountains on floor.
- C. Install off-floor carrier supports, affixed to building substrate, for wall-mounted wash fountains.
- D. Install water-supply piping with shutoff valve on each supply to each wash fountain to be connected to domestic-water distribution piping. Use ball or gate valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Section 220523.12 "Ball Valves for Plumbing Piping."
- E. Waste piping on each drain outlet of each wash fountain to be connected to sanitary drainage system.
- F. Wall Flange and Escutcheon Installation:
 - 1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations.
 - 2. Install deep-pattern escutcheons if required to conceal protruding fittings.
 - 3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- G. Joint Sealing:
 - 1. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant silicone sealant.
 - 2. Match sealant color to fixture color.
 - 3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.3 PIPING CONNECTIONS

- A. Connect wash fountains with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with requirements for waste drainage piping and vent piping specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

- A. Operate and adjust wash fountains and controls. Replace damaged and malfunctioning wash fountains, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install new batteries in battery-powered, electronic-sensor mechanisms.

3.5 CLEANING AND PROTECTION

- A. After installing wash fountains, inspect and repair damaged finishes.
- B. Clean wash fountains, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Install protective covering for installed wash fountains and fittings.
- D. Do not allow use of wash fountains for temporary facilities unless approved in writing by Owner.

END OF SECTION 224233

SECTION 224500 - EMERGENCY PLUMBING FIXTURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Combination units.
 - 2. Water-tempering equipment.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Diagram power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ANSI Standard: Comply with ANSI Z358.1, "Emergency Eyewash and Shower Equipment."
- C. NSF Standard: Comply with NSF 61, "Drinking Water System Components - Health Effects," for fixture materials that will be in contact with potable water.
- D. Regulatory Requirements: Comply with requirements in ICC/ANSI A117.1, "Accessible and Usable Buildings and Facilities"; for plumbing fixtures for people with disabilities.

PART 2 - PRODUCTS

2.1 COMBINATION UNITS

- A. Standard, Plumbed Emergency Shower with Eyewash Combination Units:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Haws Manufacturing Corp.
 - b. Bradley Corp.
 - c. Chicago Faucets.
 - d. Approved Equal.

2. Piping:
 - a. Material: Chrome-plated brass or stainless steel.
 - b. Unit Supply: NPS 1-1/4 minimum.
 - c. Unit Drain: Outlet at back or side near bottom.
3. Shower:
 - a. Capacity: Not less than 20 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1 with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Pull rod.
 - d. Shower Head: 8-inch minimum diameter, plastic.
 - e. Mounting: Pedestal.
4. Eyewash Unit:
 - a. Capacity: Not less than 0.4 gpm for at least 15 minutes.
 - b. Supply Piping: NPS 1/2 with flow regulator and stay-open control valve.
 - c. Control-Valve Actuator: Paddle.
 - d. Spray-Head Assembly: Two receptor-mounted spray heads.
 - e. Receptor: Chrome-plated brass or stainless-steel bowl.
 - f. Mounting: Attached shower pedestal.

2.2 WATER-TEMPERING EQUIPMENT

- A. Hot- and Cold-Water, Water-Tempering Equipment:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Leonard Valve Company.
 - b. Bradley Corporation.
 - c. Guardian Equipment.
 - d. Approved Equal.
 2. Description: Factory-fabricated equipment with thermostatic mixing valve.
 - a. Thermostatic Mixing Valve: Designed to provide 80 deg F tepid, potable water at emergency plumbing fixtures, to maintain temperature at plus or minus 5 deg F throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, metal piping, and corrosion-resistant enclosure.
 - b. Supply Connections: For hot and cold water.

2.3 SOURCE QUALITY CONTROL

- A. Certify performance of emergency plumbing fixtures by independent testing organization acceptable to authorities having jurisdiction.

PART 3 - EXECUTION

2.4 EMERGENCY PLUMBING FIXTURE INSTALLATION

- A. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.
- B. Install fixtures level and plumb.
- C. Fasten fixtures to substrate.

- D. Install shutoff valves in water-supply piping to fixtures. Use ball or gate valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Comply with requirements for valves specified in Section 220523.12 "Ball Valves for Plumbing Piping" and Section 220523.15 "Gate Valves for Plumbing Piping."
 - 1. Exception: Omit shutoff valve on supply to group of plumbing fixtures that includes emergency equipment.
 - 2. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.
- E. Install dielectric fitting in supply piping to emergency equipment if piping and equipment connections are made of different metals. Comply with requirements for dielectric fittings specified in Section 221116 "Domestic Water Piping."
- F. Install thermometers in supply and outlet piping connections to water-tempering equipment. Comply with requirements for thermometers specified in Section 220519 "Meters and Gages for Plumbing Piping."
- G. Install trap and waste piping on drain outlet of emergency equipment receptors that are indicated to be directly connected to drainage system. Comply with requirements for waste piping specified in Section 221316 "Sanitary Waste and Vent Piping."
- H. Install indirect waste piping on drain outlet of emergency equipment receptors that are indicated to be indirectly connected to drainage system. Comply with requirements for waste piping specified in Section 221316 "Sanitary Waste and Vent Piping."
- I. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."
- J. Fill self-contained fixtures with flushing fluid.

2.5 CONNECTIONS

- A. Connect cold-water-supply piping to plumbed emergency plumbing fixtures not having water-tempering equipment. Comply with requirements for cold-water piping specified in Section 221116 "Domestic Water Piping."
- B. Connect hot- and cold-water-supply piping to hot- and cold-water, water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for hot- and cold-water piping specified in Section 221116 "Domestic Water Piping."
- C. Connect cold water and electrical power to electric heating water-tempering equipment. Comply with requirements for cold-water piping specified in Section 221116 "Domestic Water Piping."
- D. Directly connect emergency plumbing fixture receptors with trapped drain outlet to sanitary waste and vent piping. Comply with requirements for waste piping specified in Section 221316 "Sanitary Waste and Vent Piping."

- E. Indirectly connect emergency plumbing fixture receptors without trapped drain outlet to sanitary waste or storm drainage piping.
- F. Where installing piping adjacent to emergency plumbing fixtures, allow space for service and maintenance of fixtures.

2.6 IDENTIFICATION

- A. Install equipment nameplates or equipment markers on emergency plumbing fixtures and equipment and equipment signs on water-tempering equipment. Comply with requirements for identification materials specified in Section 220553 "Identification for Plumbing Piping and Equipment."

2.7 FIELD QUALITY CONTROL

- A. Mechanical-Component Testing: After plumbing connections have been made, test for compliance with requirements. Verify ability to achieve indicated capacities.
- B. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection.
 - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry, has been energized, start units to confirm proper unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Emergency plumbing fixtures and water-tempering equipment will be considered defective if they do not pass tests and inspections.

2.8 ADJUSTING

- A. Adjust or replace fixture flow regulators for proper flow.
- B. Adjust equipment temperature settings.

END OF SECTION 224500

SECTION 224713 - DRINKING FOUNTAINS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Stainless Steel Drinking Fountains
 - 2. Bottle Fillers

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of drinking fountains.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For drinking fountains to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 DRINKING FOUNTAINS

- A. Drinking Fountains: Stainless steel, wall mounted.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Haws Corporation.
 - b. Elkay.
 - 2. Standards:
 - a. Comply with ASME A112.19.3/CSA B45.4.
 - b. Comply with NSF 61.
 - 3. Back Panel: Stainless-steel wall plate behind drinking fountain.
 - 4. Bubblers: Single, with adjustable stream regulator, located on deck.
 - 5. Control: Manual Bar.
 - 6. Drain: Grid type with NPS 1-1/4 tailpiece.
 - 7. Supply Piping: NPS 3/4 with shutoff valve.
 - 8. Drain Piping: ASME A112.18.2/CSA B125.2, NPS 1-1/4 chrome-plated brass P-trap and waste.
 - 9. Support: ASME A112.6.1M, Type III lavatory carrier.
- B. Bottle-Filling Station: Surface-mounted, ADA compliant
 - 1. Basis-of-Design Product: Subject to compliance with requirements with the specified product on the drawings, provide a product by one of the following:
 - a. Elkay Manufacturing Co.
 - b. Haws.
 - c. Or approved equal
 - 2. Standards:
 - a. Comply with ASME A112.19.3/CSA B45.4.
 - b. Comply with NSF 61 and NSF 372.
 - c. Comply with ICC A117.1.
 - 3. Cabinet: Galvanized steel.
 - 4. Filtration: Carbon block filter with filter life indicator.
 - 5. Water Flow Control: Manual button.

6. Capacities:
 - a. Water Flow Rate: 0.5 gpm, laminar flow.
7. Drain: Grid type with NPS 1-1/4 tailpiece.
8. Supply: NPS 3/8.
9. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 tailpiece.
10. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
11. Bottle-Filling Station Mounting Height: See architectural drawings.

PART 3 - EXAMINATION

3.1 EXAMINATION

- A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls and floors for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Set pedestal drinking fountains on floor.
- C. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.
- D. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ball or gate valve. Install valves in locations where they can be easily reached for operation.
- E. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
- F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- G. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Adjust fixture flow regulators for proper flow and stream height.

3.3 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Install ball or gate shutoff valve on water supply to each fixture. Comply with valve requirements specified in Section 220523.12 "Ball Valves for Plumbing Piping" and Section 220523.15 "Gate Valves for Plumbing Piping."
- D. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

3.4 CLEANING

- A. After installation, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
- C. Provide protective covering for installed fixtures.
- D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 224713

SECTION 226888 LUBE OIL PIPING

PART 1 GENERAL

1.1 SUMMARY

- A. Section includes piping and related specialties for welding gas systems, as follows:
 - 1. Pipes, tubes, and fittings.
 - 2. Valves.
 - 3. Flexible pipe connectors.
 - 4. Hose Reel Assemblies
 - 5. Lube/Oil Pumps

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Pipes, fittings, and valves.
 - 2. Hose assemblies.
- B. See specification section 01 33 00.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Schedule 80, Steel Pipe: ASTM A53/A53M, Type E or S, Grade B, black or hot-dip zinc coated with ends threaded in accordance with ASME B1.20.1.
 - 1. Steel Nipples: ASTM A733, made of ASTM A53/A53M or ASTM A106, Schedule 80, galvanized seamless steel pipe. Include ends matching joining method.
 - 2. Malleable-Iron Fittings: ASME B16.3, Class 300, threaded.
 - 3. Malleable-Iron Unions: ASME B16.39, Class 300, threaded.
 - 4. Steel Flanges: ASME B16.5, Class 300, carbon steel, threaded.
 - 5. Wrought-Steel, Butt-Welding Fittings: ASME B16.9, Schedule 80.
 - 6. Steel Flanges: ASME B16.5, Class 300, carbon steel.
- B. Schedule 80, Stainless Steel Pipe: ASTM SA249, A269, A270 Type 316L stainless steel piping.
 - a. Wall thicknesses.
 - a. 1/2-inch O.D. tube shall have a minimum of 0.109-inch thickness
 - b. 3/4-inch O.D. tube shall have a minimum of 0.113-inch thickness
 - c. 1-inch O.D. tube shall have a minimum of 0.133-inch thickness
 - b. Flareless, Mechanical Grip Type Fittings:
 - a. Manufacturers:
 - i. Swagelok
 - ii. Ingersoll-Rand
 - iii. Or approved equal

- b. 316 Stainless high pressure threaded fittings.
 - c. Fittings shall be rated for pressures greater 5,000 psi.
- C. Transition Couplings for Metal Piping: Metal coupling or other manufactured fitting same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

2.2 VALVES

- A. Two-Piece, Carbon-Steel Ball Valves with Standard Port and Stainless-Steel Trim:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Milwaukee Valve.
 - b. NIBCO INC.
 - c. Red-White Valve Corporation.
 - d. Watts; a Watts Water Technologies company.
 - e. Jomar.
 - 2. Description:
 - a. Standard: ANSI B1.20.1, API 598, and MSS SP-110
 - b. Pressure Rating: 2000 WOG
 - c. Body Design: Two piece.
 - d. Body Material: Carbon Steel.
 - e. Ends: Threaded.
 - f. Seats: PTFE.
 - g. Stem: Stainless steel.
 - h. Ball: Stainless steel.
 - i. Port: Standard
- B. 316 Stainless Steel Ball Valves with Standard Port and Stainless-Steel Trim:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Swagelok
 - b. Ingersoll Rand
 - c. Milwaukee Valve.
 - d. NIBCO INC.
 - e. Red-White Valve Corporation.
 - f. Watts; a Watts Water Technologies company.
 - g. Jomar.
 - 2. Description:
 - a. Standard: ANSI B1.20.1, API 598, and MSS SP-110
 - b. Pressure Rating: 3000 WOG
 - c. Body Design: Five-piece.
 - d. Body Material: Stainless steel
 - e. Ends: Swagelok or threaded
 - f. Seats: PTFE.
 - g. Stem: Stainless steel.
 - h. Ball: Stainless steel.
 - i. Port: Standard

2.3 FLEXIBLE PIPE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Parker
 - b. Swagelok
 - c. Or approved equal
- C. Lube flexible piping to be Parker 2244N (or approved equal)
 - 1. Polyamide inner
 - 2. Two spiral layers, one braided layer of high tensile steel wire
 - 3. Polyurethane Cover
 - 4. Maximum working pressure of 10,000 psi
- D. Oil Flexible Piping
 - 1. EPDM inner hose with ARPM Class C Tubing and EPDM cover.
 - 2. Working-Pressure Rating: 600 psig minimum.
 - 3. End Connections, NPS 2 and Smaller: Threaded steel pipe nipple.

2.4 HOSE REEL ASSEMBLIES

- A. Description: Retractable hose reels with hoses.
 - 1. Manufacturer: Basis-of-Design Product, subject to compliance with the specified product on the drawings, provide a product by one of the following manufacturers:
 - a. Graco
 - b. Reelcraft
 - c. Or Approved Equal
 - 2. Hose: EPDM interior, with reinforcement and EPDM cover
 - a. Rating: Hoses shall be rated up to 1,000 PSI
 - 3. Hose Reel: carbon steel hose reel, shall be retractable type with mounting frame to structure.

2.5 LUBE/OIL PUMPS

- A. Description: Drum-mounted lube/oil pumps operated by compressed air.
 - 1. Manufacturer: Basis-of-Design Product, subject to compliance with the specified product on the drawings, provide a product by one of the following manufacturers:
 - a. Graco
 - b. Lincoln
 - c. Or Approved Equal
 - 2. Self-priming type pump with Buna-N seal.
 - 3. Rated for an outlet pressure of up to 1,000 psi with a maximum air inlet pressure of 200 PSI
 - 4. Manufacturer's quick coupler connection for compressed air and lube oil.

PART 3 EXECUTION

3.1 PIPING APPLICATIONS

- A. Lube/Oil Piping from Pump to Hose Reel: Use the following piping materials for each size range:

1. NPS 2 and Smaller: Schedule 40, black-steel pipe; threaded, malleable-iron fittings; and threaded joints.

3.2 INSTALLATION OF PIPING, GENERAL

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless otherwise indicated.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.
- E. Where installing piping adjacent to equipment and machines, allow space for service and maintenance.
- F. Install lube/oil piping with a 1% slope back to tanks.
- G. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating unless otherwise indicated.
- H. Equipment and Specialty Flanged Connections:
- I. Use steel companion flange with gasket for connection to steel pipe.
- J. Install eccentric reducers where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.
- K. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.
- L. Install pressure gauge on discharge piping from each air compressor and on each receiver.
- M. Install piping to permit valve servicing.
- N. Install piping free of sags and bends.
- O. Install fittings for changes in direction and branch connections.
- P. Install seismic restraints on piping. Seismic-restraint devices are specified in Section 22 05 48 - Vibration and Seismic Controls for Plumbing Piping and Equipment.

- Q. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 22 05 17 - Sleeves and Sleeve Seals for Plumbing Piping.
- R. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 05 17 - Sleeves and Sleeve Seals for Plumbing Piping.
- S. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 05 18 - Escutcheons for Plumbing Piping.

3.3 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Flareless, mechanical grip-type joints shall be installed per manufacturer's instructions.

3.4 INSTALLATION OF FLEXIBLE PIPE CONNECTORS

- A. Install flexible pipe connectors in discharge piping of each air compressor.
- B. Install bronze-hose flexible pipe connectors in copper compressed-air tubing.
- C. Install stainless steel-hose flexible pipe connectors in steel compressed-air piping.

3.5 INSTALLATION OF SPECIALTIES

- A. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.
- B. Install air-main pressure regulators in compressed-air piping at or near air compressors.
- C. Install air-line pressure regulators in branch piping to equipment.
- D. Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters.
- E. Install quick couplings at piping terminals for hose connections.
- F. Install hose assemblies at hose connections.

- G. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment and machine.

3.6 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for hangers, supports, and anchor devices.
- C. Install hangers for steel piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for aluminum piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping within 12 inches of each fitting and coupling.
- F. Support vertical runs of steel piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- G. Support vertical runs of aluminum piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- H. Individual, Straight, Horizontal Piping Runs:
 - I. 100 Ft. or Less: MSS Type 1, adjustable, steel clevis hangers.
 - J. Longer Than 100 Ft.: MSS Type 43, adjustable roller hangers.
 - K. Multiple, Straight, Horizontal Piping Runs 100 Ft. or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - L. Base of Vertical Piping: MSS Type 52, spring hangers.

3.7 LABELING AND IDENTIFICATION

- A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Section 22 05 53 - Identification for Plumbing Piping and Equipment.

3.8 FIELD QUALITY CONTROL

- A. Perform field tests and inspections.
- B. Tests and Inspections:
 - 1. Piping Leak Tests for Metal Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air

or gaseous nitrogen to pressure of 50 psig above system operating pressure, but not less than 150 psig Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.

2. Repair leaks and retest until no leaks exist.
3. Inspect filters and pressure regulators for proper operation.

C. Prepare test and inspection reports.

3.9 PIPING SCHEDULE

A. Oil Piping

1. Schedule 80 Steel Piping with threaded fittings.

B. Lube Piping

1. Schedule 80, 316L Stainless Steel Piping with flareless mechanical grip fittings.

END OF SECTION 226888

SECTION 230000-COMMON WORK RESULTS FOR HVAC SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following:
1. Piping materials and installation instructions common to most piping systems.
 2. Mechanical demolition.
 3. Equipment installation requirements common to equipment sections.
- B. The information indicated on the drawings as existing is based upon information taken from as-built drawings, field investigation, and information obtained from submittal data, etc. The plans do not guarantee accuracy but are only an indication of existing conditions. It is the contractor's responsibility to field verify exact conditions such as equipment placement, ductwork (size, routing, and elevation), piping (size, routing, and elevation), etc. The drawings are intended to provide the contractor an indication of the system installed in the facility to date. It will be the contractor's responsibility to make adjustments to the drawing information as required to match existing field conditions.
- C. The contractor shall install the new equipment, ductwork, and piping around all existing obstacles including: electrical conduit, domestic water piping, waste and vent piping, chilled and heating water piping, and fire sprinkler piping. Provide offsets to avoid relocation of other utilities. Relocate utilities if they are in conflict with the mechanical system installation, cause deviations in the design intent, unsatisfactory operation, noisy conditions, or interfere with maintenance. It is the mechanical contractor's responsibility to coordinate any utility relocation with the appropriate subcontractor.
- D. Provide all necessary labor, materials, equipment, services, and insurances to complete the heating, ventilating and air conditioning work within the full intent of the drawings and specifications contained hereon and to the entire satisfaction of the engineer.
- E. All dimensions and measurements shall be verified at the jobsite before fabrication and/or installation of the equipment.
- F. Contractor shall visit the site and become familiar with the project before bidding.

1.2 DEFINITIONS

- A. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- B. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.

1.3 SUBMITTALS

- A. See specification section 001330, "Submittal Procedures".

B. Welding certificates.

1.4 WORKMANSHIP

A. All work to be performed by qualified personnel normally engaged in the respective line of work.

B. Perform all work in a manner not to disturb the normal operation of the building.

C. Coordinate all work with the owner's representative.

D. The mechanical contractor is responsible for performing all work acceptable to the owner's representative.

1.5 PROJECT/SITE CONDITIONS

A. Examine the site, verify dimensions and locations against the drawings, and inform self of conditions under which work is to be done before submitting proposal. No allowance will be made for extra expense on account of error.

B. Information shown relative to existing locations is based upon available records and data but shall be regarded as approximate only. Make minor deviations found necessary to conform with actual locations and conditions without extra cost.

C. Install work in locations shown on drawings, unless prevented by project conditions.

D. Prepare drawings showing proposed rearrangement of work to meet project conditions, including changes to work specified in other sections. Obtain permission of Owner/Engineer before proceeding.

1.6 QUALITY ASSURANCE

A. Steel Pipe Welding: Qualify processes and operators shall be in accordance with the following:

1. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

B. Electrical Characteristics for Mechanical Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

C. Reference Building Codes and Standards:

1. IBC – 2018 International Building Code
2. UMC – 2018 Uniform Mechanical Code
3. UPC – 2018 Uniform Plumbing Code
4. IFC – 2018 International Fire Code
5. IECC – 2018 International Energy Conservation Code
6. NFPA – National Fire Protection Association
7. NEC – National Electrical Code

8. Nevada State Regulatory Agencies
9. ANSI – American National Standards Institute
10. SMACNA – Sheet Metal and Air Conditioning Contractors National Association
11. ASME – American Society of Mechanical Engineers
12. UL – Underwriters Laboratory
13. ASHRAE Handbooks
14. ASHRAE Standards
15. SMACNA Duct Construction Standards
16. ASPE Data Books
17. ASMI CSD-1, latest adopted edition by the State of Nevada.

PART 2 - NOT USED

PART 3 - EXECUTION

3.1 MECHANICAL DEMOLITION

- A. coordinate with the owner prior to the beginning of demolition work of equipment and material that the owner will salvage.
- B. Disconnect, demolish, and remove mechanical systems, equipment, and components indicated to be removed.
 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
- C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.2 PRODUCT HANDLING

- A. Protection: use all means necessary to protect the materials of this section before, during, and after installation and to protect the materials and work of the other trades.
- B. Replacements: in the event of damage, immediately make all repairs and replacements necessary to the approval of the engineer and at no additional cost to the owner.

3.3 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

- B. Install equipment level and plumb, parallel, and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install mechanical equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

3.4 CARE AND CLEANING

- A. Replace broken, damaged, or otherwise defective parts, materials, and work. Leave the entire work in a condition satisfactory to the architect and owner. At completion, carefully clean and adjust equipment, fixtures, and trim which are installed as part of this work. Leave systems and equipment in satisfactory operating condition.
- B. Drain and flush piping to remove grease and foreign matter.
- C. Clean out and remove surplus materials and debris resulting from the work, including surplus excavated material.

END OF SECTION 230000

SECTION 230189-HVAC WATER TREATMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following HVAC water-treatment systems:
 - 1. Bypass chemical-feed equipment
 - 2. Chemical treatment test equipment.
 - 3. HVAC water-treatment chemicals.

1.2 PERFORMANCE REQUIREMENTS

- A. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or the environment.
- B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
- C. Closed hydronic systems, including hot-water heating, shall have the following water qualities:
 - 1. pH: Maintain a value within 9.0 to 10.5.
 - 2. "P" Alkalinity: Maintain a value within 100 to 500 ppm.
 - 3. Boron: Maintain a value within 100 to 200 ppm.
 - 4. Chemical Oxygen Demand: Maintain a maximum value of 100 ppm.
 - 5. Soluble Copper: Maintain a maximum value of 0.20 ppm.
 - 6. TDS: Maintain a maximum value of 10 ppm.
 - 7. Ammonia: Maintain a maximum value of 20 ppm.
 - 8. Free Caustic Alkalinity: Maintain a maximum value of 20 ppm.
 - 9. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maintain a maximum value of 1000 organisms/ml.
 - b. Total Anaerobic Plate Count: Maintain a maximum value of 100 organisms/ml.
 - c. Nitrate Reducers: Maintain a maximum value of 100 organisms/ml.
 - d. Sulfate Reducers: Maintain a maximum value of 0 organisms/ml.
 - e. Iron Bacteria: Maintain a maximum value of 0 organisms/ml.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems. Include plans, elevations, sections, details, and attachments to other work.
- C. Field quality-control test reports.

1.4 QUALITY ASSURANCE

- A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. San Joaquin Chemicals Telephone No. (800) 647-9577
 - 2. Chemtex Corporation Telephone No. (775) 846-8045
 - 3. Garratt Callahan Telephone No. (972) 661-5006

2.2 CHEMICALS

- A. Add a non-chromate corrosion inhibitor (Sanacor 2301, or approved equal) to the recommended level of concentration (600 to 900 ppm sodium nitrite). Furnish the Owner with an inhibitor test kit, Taylor nitrite test set No. 1510, or approved equal.
- B. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment, and that can attain water quality specified in Part 1 "Performance Requirements" Article.

PART 3 - EXECUTION

3.1 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.2 INSTALLATION

- A. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- B. Install water testing equipment on wall near water chemical application equipment.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.

- C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Division 23 Section "Common Work Results for HVAC."
- D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Division 23 Section "General-Duty Valves for HVAC Piping."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
 - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
 - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 - 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
 - 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
 - 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 - 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 - 7. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 - 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Comply with ASTM D 3370 and with the following standards:
 - 1. Silica: ASTM D 859.
 - 2. Acidity and Alkalinity: ASTM D 1067.
 - 3. Iron: ASTM D 1068.
 - 4. Water Hardness: ASTM D 1126.
- E. System Flushing:
 - 1. Install a 20 mesh screen on all strainers during system flushing.
 - 2. Replace strainer screens with specified after system flushing has been completed.

END OF SECTION 230189

SECTION 230513 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small, and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.2 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with NEMA MG 1 unless otherwise indicated.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 4,500 above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Rotor: Random-wound, squirrel cage.

- F. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- G. Temperature Rise: Match insulation rating.
- H. Insulation: Class F
- I. Code Letter Designation:
 - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller Than 15 HP: Manufacturer's standard starting characteristic.
- J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 ADDITIONAL REQUIREMENTS FOR POLYPHASE MOTORS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable-Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
 - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width-modulated inverters.
 - 2. Energy and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 - 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 - 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
 - 1. Permanent-split capacitor.
 - 2. Split phase.
 - 3. Capacitor start, inductor run.
 - 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

2.6 ELECTRONICALLY COMMUTATED MOTORS (ECM)

- A. Electronically commuted motors (ECM), shall be permanently lubricated with heavy-duty ball bearings to match load.
- B. Internal motor circuitry shall convert AC power supplied to the fan to DC power to operate the motor.
- C. Motor shall be speed controlled down to 20% full speed.
- D. Motor speed shall be controlled by either a potentiometer dial mounted on the motor or by a 0-10 VDC signal.
- E. Motor shall be a minimum of 85% efficient at all speeds.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230513

SECTION 230516 - EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

1.1 SUMMARY

- A. Section Includes:
 - 1. Packless expansion joints.
 - 2. Alignment guides and anchors.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance data.
- B. Warranty Information.

1.4 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Compatibility: Provide products suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Provide products and installations to accommodate maximum axial movement as scheduled or indicated on Drawings.

2.2 PACKLESS EXPANSION JOINTS

- A. Flexible-Hose Packless Expansion Joints:
 - 1. Basis-of-Design Product, subject to compliance with the specified product on the drawings, provide a product by one of the following manufacturers:
 - a. Twin City Hose.
 - b. Engineered Hose.
 - c. Flex-Hose.
 - d. Unisource.
 - e. Or Approved Equal.
 - 2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, V-shaped bend, or center section of flexible hose.
 - 3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.

4. Expansion Joints for Copper Tubing NPS 2 and Smaller: Copper-alloy fittings with solder-joint end connections.
 - a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F and 340 psig at 450 deg F ratings.
 - b. Hoses on domestic hot water, cold water, and hot water return shall be NSF-61, Lead-Free compliant.
5. Expansion Joints for Steel Piping NPS 2 and Smaller: Carbon steel fittings with threaded end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 450 psig at 70 deg F and 325 psig at 600 deg F ratings.
 - b. Joints used for natural gas shall be UL-listed for natural gas use.
6. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6: Carbon steel fittings with flanged end connections.
 - a. Stainless steel hoses and single-braid, stainless steel sheaths with 200 psig at 70 deg F and 145 psig at 600 deg F ratings.

2.3 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides:
 1. Guides shall be manufactured by the flexible hose manufacturer.
 2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.
- B. Anchor Materials:
 1. Steel Shapes and Plates: ASTM A36/A36M.
 2. Bolts and Nuts: ASME B18.10 or ASTM A183, steel hex head.
 3. Washers: ASTM F844, steel, plain, flat washers.
 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Stud: Threaded, Stainless steel.
 - b. Expansion Plug: Stainless steel.
 - c. Washer and Nut: Stainless steel.

PART 3 - EXECUTION

3.1 INSTALLATION OF EXPANSION JOINTS - GENERAL

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.

3.2 INSTALLATION OF ALIGNMENT GUIDES AND ANCHORS

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.

- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
 - 1. See structural drawings for anchor attachment specifications.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
 - 1. See structural drawings for anchor attachment specifications.

3.3 INSTALLATION OF PIPE LOOP AND SWING CONNECTIONS

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.

END OF SECTION 230516

SECTION 230517 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Sleeve-seal systems.
 - 3. Grout.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements
- B. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast-Iron wall pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-steel wall pipes: ASTM A53/A53M, Schedule 40, with plain ends and welded steel collar: zinc coated.
- C. Galvanized Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. PVC Pipe Sleeves: ASTM D1785, Schedule 40.
- E. Galvanized-Steel Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

2.2 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Pipeline Seal and Insulator, Inc.
 - c. Or approved equal.
- B. Descriptions: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 - a. Sealing Elements: EPDM – rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 - b. Pressure Plates: Stainless steel.
 - c. Connecting bolts and nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.3 GROUT

- A. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Non-shrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
 - 2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
 - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint.
- E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 078413 "Penetration Firestopping."

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space

between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.
- B. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.4 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
 - 1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than NPS 6: Cast-iron pipe sleeves.
 - 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than NPS 6 Steel pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - 3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than NPS 6 Steel pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - 4. Concrete Slabs above Grade:
 - a. Piping Smaller Than NPS 6: Steel pipe sleeves.
 - 5. Interior Partitions:
 - a. Piping Smaller Than NPS 6 Steel pipe sleeves.

END OF SECTION 230517

SECTION 230518 - ESCUTCHEONS FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With polished, chrome-plated, and rough-brass finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Chrome-Plated Piping: One-piece, cast-brass type with polished, chrome-plated finish.
 - c. Insulated Piping: One-piece, stamped-steel type.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
 - e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.

- f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
- g. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type.
- h. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
- i. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type.
- j. Bare Piping in Equipment Rooms: One-piece, cast-brass type with polished, chrome-plated finish.
- k. Bare Piping in Equipment Rooms: One-piece, stamped-steel type.

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

- 1. New Piping: One-piece, floor-plate type.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 230518

SECTION 230519 - METERS AND GAGES FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bimetallic-actuated thermometers.
 - 2. Thermowells.
 - 3. Dial-type pressure gages.
 - 4. Gage attachments.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Wiring Diagrams: For power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

- A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Miljoco Corporation.
 - 2. Trerice, H. O. Co.
 - 3. Weiss Instruments, Inc.
 - 4. Weksler Glass Thermometer Corp.
- B. Standard: ASME B40.200.
- C. Case: Sealed type(s); cast aluminum or drawn steel; 5-inch nominal diameter
- D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.
- E. Connector Type(s): Union joint, adjustable angle and rigid, bottom, with unified-inch screw threads.
- F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.
- G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.

- H. Window: Plain glass.
- I. Ring: Stainless steel.
- J. Element: Bimetal coil.
- K. Pointer: Dark-colored metal.
- L. Accuracy: Plus, or minus 1 percent of scale range.

2.2 THERMOWELLS

- A. Thermowells:
 - 1. Standard: ASME B40.200.
 - 2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
 - 3. Material for Use with Copper Tubing: CNR or CUNI.
 - 4. Material for Use with Steel Piping: CRES.
 - 5. Type: Stepped shank unless straight or tapered shank is indicated.
 - 6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
 - 7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
 - 8. Bore: Diameter required to match thermometer bulb or stem.
 - 9. Insertion Length: Length required to match thermometer bulb or stem.
 - 10. Lagging Extension: Include on thermowells for insulated piping and tubing.
 - 11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.
- B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.3 PRESSURE GAGES

- A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Miljoco Corporation.
 - b. Terice, H. O. Co.
 - c. Weiss Instruments, Inc.
 - d. Weksler Glass Thermometer Corp.
 - 2. Standard: ASME B40.100.
 - 3. Case: Sealed type(s); cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
 - 4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 - 5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 - 6. Movement: Mechanical, with link to pressure element and connection to pointer.
 - 7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
 - 8. Pointer: Dark-colored metal.
 - 9. Window: Glass.
 - 10. Ring: Metal.
 - 11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.4 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and porous-metal-type surge-dampening device. Include extension for use on insulated piping.
- B. Siphons: Loop-shaped section of brass pipe with NPS 1/4 or NPS 1/2 pipe threads.
- C. Valves: Brass or stainless-steel needle, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.
- H. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- I. Install remote-mounted pressure gages on panel.
- J. Install valve and snubber in piping for each pressure gage for fluids (except steam).
- K. Install valve and syphon fitting in piping for each pressure gage for steam.
- L. Install flow indicators in piping systems in accessible positions for easy viewing.
- M. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.
- N. Install flowmeter elements in accessible positions in piping systems.

- O. Install differential-pressure-type flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.
- P. Install permanent indicators on walls or brackets in accessible and readable positions.
- Q. Install connection fittings in accessible locations for attachment to portable indicators.
- R. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.
- S. Install thermometers in the following locations:
 - 1. Inlet and outlet of each hydronic zone.
 - 2. Inlet and outlet of each hydronic boiler.
 - 3. Two inlets and two outlets of each chiller.
 - 4. Inlet and outlet of each hydronic coil in air-handling units.
 - 5. Two inlets and two outlets of each hydronic heat exchanger.
 - 6. Inlet and outlet of each thermal-storage tank.
- T. Install pressure gages in the following locations:
 - 1. Discharge of each pressure-reducing valve.
 - 2. Inlet and outlet of each chiller chilled-water and condenser-water connection.
 - 3. Suction and discharge of each pump.

3.2 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.
- B. Connect flowmeter-system elements to meters.
- C. Connect flowmeter transmitters to meters.

3.3 ADJUSTING

- A. After installation, calibrate meters according to manufacturer's written instructions.
- B. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each hydronic zone and building entrance shall be the following:
 - 1. Sealed, bimetallic-actuated type.
- B. Thermometers at inlet and outlet of each hydronic boiler shall be the following:
 - 1. Sealed, bimetallic-actuated type.
- C. Thermometers at inlets and outlets of each chiller shall be the following:
 - 1. Sealed, bimetallic-actuated type.

- D. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems shall be the following:
 - 1. Sealed, bimetallic-actuated type.
- E. Thermometers at inlets and outlets of each hydronic heat exchanger shall be the following:
 - 1. Sealed, bimetallic-actuated type.
- F. Thermometers at inlet and outlet of each hydronic heat-recovery unit shall be the following:
 - 1. Sealed, bimetallic-actuated type.
- G. Thermometers at inlet and outlet of each thermal-storage tank shall be the following:
 - 1. Sealed, bimetallic-actuated type.
- H. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: 0 to 150 deg F.
- B. Scale Range for Heating, Hot-Water Piping: 0 to 250 deg F.
- C. Scale Range for Heat Exchanger Loop Piping: 0 to 250 deg.F

3.6 PRESSURE-GAGE SCHEDULE.

- A. Pressure gages at discharge of each pressure-reducing valve shall be the following:
 - 1. Sealed, direct-mounted, metal case.
- B. Pressure gages at inlet and outlet of each chiller chilled-water and condenser-water connection shall be the following:
 - 1. Sealed, direct-mounted, metal case.
- C. Pressure gages at suction and discharge of each pump shall be the following:
 - 1. Sealed, direct-mounted, metal case.

3.7 RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: 0 to 160 psi.
- B. Scale Range for Heating, Hot-Water Piping: 0 to 160 psi.
- C. Scale Range for Heat Exchange Loop: 0 to 160 psi.

END OF SECTION 230519

SECTION 230523.12 - BALL VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bronze ball valves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded-end valves.
 - 2. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 3. ASME B16.18 for solder-joint connections.
 - 4. ASME B31.1 for power piping valves.
 - 5. ASME B31.9 for building services piping valves.
- C. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- D. Refer to HVAC valve schedule articles for applications of valves.
- E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- F. Valve Sizes: Same as upstream piping unless otherwise indicated.
- G. Valve Actuator Types:
 - 1. Handlever: For quarter-turn valves smaller than NPS 4.
- H. Valves in Insulated Piping:
 - 1. Include 2-inch stem extensions.
 - 2. Extended operating handle of nonthermal-conductive material, and protective sleeves that allow operation of valves without breaking the vapor seals or disturbing insulation.
 - 3. Memory stops that are fully adjustable after insulation is applied.

2.2 BRONZE BALL VALVES

- A. Two-Piece Bronze Ball Valves with Full Port and Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane; Crane Energy Flow Solutions.
 - b. Hammond Valve.
 - c. NIBCO INC.
 - d. Red-White Valve Corporation.
 - e. Watts; a Watts Water Technologies company.
2. Description:
 - a. Standard: MSS SP-110.
 - b. SWP Rating: 150 psig.
 - c. CWP Rating: 600 psig.
 - d. Body Design: Two piece.
 - e. Body Material: Bronze.
 - f. Ends: Threaded.
 - g. Seats: PTFE.
 - h. Stem: Stainless steel.
 - i. Ball: Stainless steel, vented.
 - j. Port: Full.
 - k. Dezincification resistant.

PART 3 - EXECUTION

3.1 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.

3.2 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- B. Select valves with the following end connections:
 1. For Copper Tubing, NPS 2-1/2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
 2. For Steel Piping, NPS 2-1/2 and Smaller: Threaded ends.

3.3 HEATING-WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 and Smaller: Two-piece, full port, brass, or bronze with stainless-steel trim.
 1. Valves may be provided with solder-joint ends instead of threaded ends.

END OF SECTION 230523.12

SECTION 230523.13 - BUTTERFLY VALVES FOR HVAC PIPING

1.1 SUMMARY

- A. Section Includes:
 - 1. High-performance butterfly valves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:
 - 1. ASME B16.1 for flanges on iron valves.
 - 2. ASME B16.5 for flanges on steel valves.
 - 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 4. ASME B31.9 for building services valves.
- B. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- C. Valve Sizes: Same as upstream piping unless otherwise indicated.
- D. Valve Actuator Types:
 - 1. Hand Lever: For valves NPS 6 and smaller.
- E. Valves in Insulated Piping: Provide with 2-inch extended neck stems.

2.2 HIGH-PERFORMANCE BUTTERFLY VALVES

- A. Single-Flange (Lug-Type), High-Performance Butterfly Valves, Class 150:
 - 1. Subject to compliance with the specifications, provide a product by one of the following manufacturers:
 - a. Nibco
 - b. Red-White Valve Corp.
 - c. Milwaukee Valve
 - d. Or approved equal
 - 2. Standard: MSS SP-68.
 - 3. CWP Rating: 285 psig at 100 deg F
 - 4. Body Design: Single flange (lug type), suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
 - 5. Body Material: **Carbon** steel.
 - 6. Seat: Reinforced PTFE or metal.
 - 7. Stem: Stainless steel; offset from seat plane.
 - 8. Disc: Type 316 stainless steel.
 - 9. Service: Bidirectional.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine mating flange faces for damage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- D. Do not attempt to repair defective valves; replace with new valves. Remove defective valves from site.

3.2 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow space for service, maintenance, and equipment removal without system shutdown.
- B. Provide support of piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access.
- D. Install valves in horizontal piping with stem at or above center of pipe.
- E. Install valves in position to allow full valve actuation movement.
- F. Valve Tags: Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.
- G. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. If leakage cannot be repaired, replace valve.

3.3 HEATING-WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 and Larger:
 - 1. High-Performance Butterfly Valves: Single flange, carbon-steel body, and Class 150].

END OF SECTION 230523.13

SECTION 230523.14 - CHECK VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bronze check valves.
 - 2. Iron check valves.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- B. ASME Compliance:
 - 1. ASME B1.20.1 for threads for threaded-end valves.
 - 2. ASME B16.1 for flanges on iron valves.
 - 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 4. ASME B16.18 for solder joint.
 - 5. ASME B31.1 for power piping valves.
 - 6. ASME B31.9 for building services piping valves.
- C. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream piping unless otherwise indicated.
- F. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE SILENT CHECK VALVES

- A. Bronze, inline, center guided silent check valve (1/4" through 2-1/2"):
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Titan Flow Control
 - b. Crane; Crane Energy Flow Solutions.
 - c. Hammond Valve.
 - d. NIBCO INC.
 - e. Red-White Valve Corporation.
 - f. Watts; a Watts Water Technologies company.
 - 2. Description:
 - a. WOG (non-shock): 400 psig 100 deg. F.
 - b. Body Design: Inline flow.
 - c. Body Material: Brass CW 617N.

- d. Ends: Threaded.
- e. Check Module: Polyetherimide
- f. Seat: Buna-N
- g. Spring: Series 300 Stainless Steel

2.3 IRON CHECK VALVES

- A. Ductile Iron, globe type, center guided, silent check valve (3" through 8"):
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Titan Flow Control
 - b. Crane; Crane Energy Flow Solutions.
 - c. Hammond Valve.
 - d. NIBCO INC.
 - e. Red-White Valve Corporation.
 - f. Watts; a Watts Water Technologies company.
 - 2. Description:
 - a. WOG (non-shock): 250 psig 100 deg. F.
 - b. Body Design: Inline flow.
 - c. Body Material: Ductile Iron ASTM A536
 - d. Ends: ANSI Class 150 flanged ends, flat face.
 - e. Disc: Aluminum Bronze ASTM B148
 - f. Seat: Aluminum Bronze ASTM B148
 - g. Spring: Series 300 Stainless Steel

PART 3 - EXECUTION

3.1 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.
- E. Install swing check valves for proper direction of flow in horizontal position with hinge pin level.

3.2 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.3 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Pump-Discharge Check Valves:
 - a. NPS 2-1/2 and Smaller: Bronze silent check valves with bronze disc.
 - b. NPS 3 and Larger: Iron check silent check valves with spring; metal-seat check valves.

- B. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- C. Select valves, except wafer types, with the following end connections:
 - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 3: Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 3. For Steel Piping, NPS 2 and Smaller: Threaded ends.
 - 4. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 5. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.4 HEATING-WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 and Smaller:
 - 1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
 - 2. Bronze Check Valves: Class 150, nonmetallic disc.
- B. Pipe NPS 3 and Larger:
 - 1. Iron Check Valves: Class 125, metal seats.

END OF SECTION 230523.14

SECTION 230529 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Metal pipe hangers and supports.
 2. Trapeze pipe hangers.
 3. Thermal-hanger shield inserts.
 4. Fastener systems.
 5. Equipment supports.

1.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
1. Design supports for multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.
 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
 3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

1.3 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: For each type of product indicated.
- C. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following; include Product Data for components:
1. Trapeze pipe hangers.
 2. Equipment supports.
- D. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified State of Nevada Professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 - 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
 - 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
 - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
- B. Copper Pipe Hangers:
 - 1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
 - 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel.

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 THERMAL-HANGER SHIELD INSERTS

- A. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.
- B. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig ASTM C 552 or Type II cellular glass with 100-psig minimum compressive strength.
- C. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- D. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- E. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.4 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- B. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.5 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.6 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 - 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- D. Fastener System Installation:
 - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.

2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- E. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- F. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- G. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- H. Install lateral bracing with pipe hangers and supports to prevent swaying.
- I. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- J. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- K. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- L. Insulated Piping:
 1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
 - b. NPS 4: 12 inches long and 0.06 inch thick.
 - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
 - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
 - e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
 5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.

6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.3 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.4 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1 inch.

3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 099000 – "Painting and Coatings."
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports and metal trapeze pipe hangers and attachments for general service applications.
- F. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.
- G. Use padded hangers for piping that is subject to scratching.
- H. For black steel piping, provide and install 2-layers of 10 mil, PVC tape around piping at all supports.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
 - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
 - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
 - 4. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
 - 5. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
 - 6. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
 - 7. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
 - 8. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
 - 9. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.

- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb.
 - b. Medium (MSS Type 32): 1500 lb.
 - c. Heavy (MSS Type 33): 3000 lb.
 8. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 9. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
 2. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
 3. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping

system from base support.

- P. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- Q. Use powder-actuated fasteners instead of building attachments where required in concrete construction.

END OF SECTION 230529

SECTION 230548 - VIBRATION AND SEISMIC CONTROLS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. Seismic bracing for mechanical systems (equipment, ductwork, piping, and conduit) shall comply with all applicable requirements of the 2018 International Building Code (IBC) including all applicable provisions of the American Society of Civil Engineers (ASCE) Minimum Design Loads for Buildings and Other Structures (ASCE Standard 7-16). Basic seismic design criteria for each project shall be as listed on the structural drawings for that project.
- B. Compliance with the applicable seismic bracing requirements shall be accomplished utilizing the most current version of one of the following design manuals (no exceptions):
 - 1. International Seismic Application Technology (ISAT) Design Manual
 - 2. Mason Industries Seismic Restraint Design Manual
 - 3. Kinetics Noise Control Seismic Design Manual
 - 4. Vibro-Acoustics Seismic Design Manual
- C. A complete bound copy of the applicable design manual shall be provided to the Owner at the beginning of the construction period for use/reference during the course of the project.
- D. Component Importance Factors (I_p) for all mechanical equipment, ductwork, piping, and conduit shall be determined and assigned in accordance with ASCE Standard 7-16 Section 13.1.3.

1.2 SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. The Contractor shall provide the required number of seismic shop drawing submittal sets for review and approval by the Owner. Submittals shall include a comprehensive set of shop drawings clearly depicting the seismic bracing requirements for all mechanical equipment, ductwork, piping, and conduit. Any equipment that does not require seismic bracing shall be specifically identified in the submittal, and the reason for exemption shall be provided.
- C. Submittals shall be fully coordinated with the structural drawings and shall include all applicable structural attachment details. Seismic bracing shop drawings shall include all vertical support anchorage loads and all seismic bracing anchorage loads. Each specific load shall be indicated and the structural element that the support is attached to shall be clearly depicted/identified. Seismic bracing submittals shall be stamped and signed by a structural or civil engineer licensed in the State of Nevada.
- D. Seismic shop drawing submittals will be reviewed by both the mechanical engineer and the structural engineer.

1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. An authorized representative of the seismic bracing system manufacturer shall visit the job site during the construction period to confirm that the seismic bracing installation complies with the shop drawings, with all applicable code requirements, and with the seismic bracing system manufacturer's written installation requirements and associated details. A minimum of three site visits shall be provided, with the first visit scheduled just prior to installation of the first seismic braces, the second visit at the approximate midpoint of construction, and the third visit when the seismic bracing installation is complete (and prior to installation of ceilings).
- D. A written report shall be issued within one week of each site visit summarizing the observations made during the site visit and listing all required corrective actions and/or deficiencies.
- E. Site visits shall be coordinated with the Owner and shall be scheduled in writing a minimum of two weeks prior to the proposed site visit date.
- F. After all equipment installation is complete and all seismic bracing has been verified, the authorized representative that conducted the field verification shall issue a letter certifying that the installation is complete and that the installation complies with the specified requirements.

1.5 SPECIAL INSPECTION

- A. Special inspections will be arranged and paid for by the Owner when and if required by 2018 IBC Section 1704. When special inspection is required for a particular system or item of equipment the Contractor shall be available on site during each special inspection to facilitate the on-site review process.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Wind-Restraint Loading:
 - 1. Basic Wind Speed: 140 mph.
 - 2. Building Classification Category: III.

3. Minimum 10 lb./sq. ft. multiplied by maximum area of HVAC component projected on vertical plane normal to wind direction, and 45 degrees either side of normal.

B. Seismic-Restraint Loading:

1. Site Class as Defined in the IBC: D.
2. Assigned Seismic Risk as Defined in the IBC: III.
 - a. Component Importance Factor: 1.0.
 - b. Component Response Modification Factor: 6.0 for air-side units and ducts of sheet metal; wet-side components: 2.5.
 - c. Component Amplification Factor: 2.5 for air-side components and 1.0 for wet-side components.
3. Design Spectral Response Acceleration Parameter at Short Periods (0.2 Second): 1.610g.
4. Design Spectral Response Acceleration Parameter at 1-Second Period: 0.565g.

2.2 SEISMIC RESTRAINTS

- A.** Compliance with the applicable seismic bracing requirements shall be accomplished utilizing the most current version of one of the following design manuals (no exceptions):
1. International Seismic Application Technology (ISAT) Design Manual
 2. Mason Industries Seismic Restraint Design Manual
 3. Kinetics Noise Control Seismic Design Manual
 4. Vibro-Acoustics Seismic Design Manual

PART 3 - EXECUTION

3.1 APPLICATIONS

- A.** Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.
- B.** Hanger-Rod Stiffeners: Install hanger-rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C.** Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength is adequate to carry present and future static and seismic loads within specified loading limits.

3.2 VIBRATION CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A.** Installation of vibration isolators must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- B.** Comply with requirements in Section 077200 "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- C.** Equipment Restraints:

1. Install seismic snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
 2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
 3. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
 4. All equipment shall be anchored to concrete bases.
- D. Piping Restraints:
1. Comply with requirements in MSS SP-127.
 2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
 3. Brace a change of direction longer than 12 feet.
- E. Install cables so they do not bend across edges of adjacent equipment or building structure.
- F. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.
- G. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- H. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- I. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- J. Drilled-in Anchors:
1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 4. Set anchors to manufacturer's recommended torque, using a torque wrench.
 5. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.3 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Section 232113 "Hydronic Piping" for piping flexible connections.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' advance notice.
 - 3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test to 90 percent of rated proof load of device.
 - 5. Measure isolator restraint clearance.
 - 6. Measure isolator deflection.
 - 7. Verify snubber minimum clearances.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

END OF SECTION 230548

SECTION 230553 – IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Equipment labels.
 2. Warning signs and labels.
 3. Pipe labels.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment (Outdoor Equipment Only):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. LEM Products Inc.
 - d. Marking Services, Inc.
 2. Material and Thickness: anodized aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
 3. Letter Color: White.
 4. Background Color: Black.
 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch
 6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
 7. Fasteners: Stainless-steel rivets.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Plastic Labels for Equipment (Indoor equipment only):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. LEM Products Inc.
 - d. Marking Services, Inc.
 2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8-inch-thick and having predrilled holes for attachment hardware.
 3. Letter Color: White.

4. Background Color: Black.
 5. Maximum Temperature: Able to withstand temperatures up to 160 deg F
 6. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch
 7. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
 8. Fasteners: Stainless-steel rivets.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number, and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Brimar Industries, Inc.
 2. Craftmark Pipe Markers.
 3. LEM Products Inc.
 4. Marking Services, Inc.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8-inch-thick, and having predrilled holes for attachment hardware.
- C. Letter Color: White.
- D. Background Color: Red.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch
- G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
- H. Fasteners: Stainless-steel rivets.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- J. Label Content: Include caution and warning information plus emergency notification instructions.

2.3 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brimar Industries, Inc.
 - 2. Craftmark Pipe Markers.
 - 3. LEM Products Inc.
 - 4. Marking Services Inc.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction according to ASME A13.1.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: Size letters according to ASME A13.1 for piping.

2.4 VALVE TAGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brimar Industries, Inc.
 - 2. Craftmark Pipe Markers.
 - 3. LEM Products Inc.
 - 4. Marking Services Inc.
- B. Material and Thickness: 2-inch diameter, 20-gauge thick brass, and having predrilled hole.
- C. Top row shall indicate system connected to
- D. Bottom row shall be a unique number
- E. Provide owner with a schedule of valve numbers and locations of valves.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surface of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

- A. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations and on both sides of through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.
 - 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
 - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

3.4 EQUIPMENT LABEL SCHEDULE:

- 1. Outdoor equipment: Metal Tags
- 2. Indoor Equipment: Plastic Tags

3.5 PIPE LABEL SCHEDULE:

- 1. Heating hot water: Red background with White Letters. Provide with flow arrows.
- 2. Refrigerant piping: Blue background with White letters.

END OF SECTION 230553

SECTION 230593 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Balancing Air Systems:
 - a. Constant-volume air systems.
 - b. Variable-Air volume air systems.
 - 2. Balancing Hydronic Piping Systems:
 - a. Constant-flow hydronic systems.
 - b. Variable-flow hydronic systems.
 - 3. Domestic water system
- B. Test & Balance to be conducted by Raglen System Balance or a member of the associated air balance council.
 - 1. TAB listed office on AABC website shall be within 60 miles of job site.
- C. Test & Balance of plumbing systems such as circulation pumps, balance valves, and tempering stations are to be included. The Test & Balance contractor shall review the plumbing drawings to determine systems that fall under the procedures identified in this section.

1.2 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. TAB: Testing, adjusting, and balancing.
- C. TAB Specialist: An independent entity, meeting qualifications to perform TAB work.
- D. TDH: Total dynamic head.

1.3 INFORMATIONAL SUBMITTALS

- A. Strategies and Procedures Plan: Within 60 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
- B. Certified TAB reports.

1.4 QUALITY ASSURANCE

- A. TAB Specialists Qualifications: Certified by AABC.
 - 1. TAB Field Supervisor: Employee of the TAB specialist and certified by AABC.
 - 2. TAB Technician: Employee of the TAB specialist and certified by AABC as a TAB technician.
- B. Instrumentation Type, Quantity, Accuracy, and Calibration: Comply with requirements in ASHRAE 111, Section 4, "Instrumentation."

- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.
- B. Examine installed systems for balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.
- F. Examine equipment performance data including fan and pump curves.
 - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
 - 2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
- G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
- H. Examine test reports specified in individual system and equipment Sections.
- I. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.
- J. Examine heat pumps and verify that they are accessible and their controls are

connected and functioning.

- K. Examine strainers. Verify that startup screens have been replaced by permanent screens with indicated perforations.
- L. Examine control valves for proper installation for their intended function of throttling, diverting, or mixing fluid flows.
- M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
- N. Examine system pumps to ensure absence of entrained air in the suction piping.
- O. Examine operating safety interlocks and controls on HVAC equipment.
- P. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.2 PREPARATION

- A. Prepare a TAB plan that includes strategies and step-by-step procedures for balancing the systems.
- B. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:
 - 1. Airside:
 - a. Duct systems are complete with terminals installed.
 - b. Volume, smoke, and fire dampers are open and functional.
 - c. Clean filters are installed.
 - d. Fans are operating, free of vibration, and rotating in correct direction.
 - e. Variable-frequency controllers' startup is complete and safeties are verified.
 - f. Automatic temperature-control systems are operational.
 - g. Ceilings are installed.
 - h. Windows and doors are installed.
 - i. Suitable access to balancing devices and equipment is provided.
 - 2. Hydronics:
 - a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
 - b. Piping is complete with terminals installed.
 - c. Water treatment is complete.
 - d. Systems are flushed, filled, and air purged.
 - e. Strainers are pulled and cleaned.
 - f. Control valves are functioning per the sequence of operation.
 - g. Shutoff and balance valves have been verified to be 100 percent open.
 - h. Pumps are started and proper rotation is verified.
 - i. Pump gage connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
 - j. Variable-frequency controllers' startup is complete and safeties are verified.
 - k. Suitable access to balancing devices and equipment is provided.

3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" and in this Section.
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
 - 1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
 - 2. After testing and balancing, install test ports and duct access doors that comply with requirements in Section 233300 "Air Duct Accessories."
 - 3. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Section 230713 "Duct Insulation," Section 230716 "HVAC Equipment Insulation," and Section 230719 "HVAC Piping Insulation."
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Cross-check the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. For variable-air-volume systems, develop a plan to simulate diversity.
- D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- G. Verify that motor starters are equipped with properly sized thermal protection.
- H. Check dampers for proper position to achieve desired airflow path.
- I. Check for airflow blockages.
- J. Check condensate drains for proper connections and functioning.
- K. Check for proper sealing of air-handling-unit components.
- L. Verify that air duct system is sealed as specified in Section 233113 "Metal Ducts."

3.5 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
 - 1. Measure total airflow.
 - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
 - b. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
 - c. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
 - d. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
 - 2. Measure fan static pressures as follows:
 - a. Measure static pressure directly at the fan outlet or through the flexible connection.
 - b. Measure static pressure directly at the fan inlet or through the flexible connection.
 - c. Measure static pressure across each component that makes up the air-handling system.
 - d. Report artificial loading of filters at the time static pressures are measured.
 - 3. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
 - 4. Obtain approval from commissioning authority for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
 - 5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
 - 1. Measure airflow of submain and branch ducts.
 - 2. Adjust submain and branch duct volume dampers for specified airflow.
 - 3. Re-measure each submain and branch duct after all have been adjusted.
- C. Adjust air inlets and outlets for each space to indicated airflows.
 - 1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
 - 2. Measure inlets and outlets airflow.
 - 3. Adjust each inlet and outlet for specified airflow.
 - 4. Re-measure each inlet and outlet after they have been adjusted.

3.6 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. Adjust the variable-air-volume systems as follows:
 - 1. Verify that the system static pressure sensor is located two-thirds of the distance down the duct from the fan discharge.

2. Verify that the system is under static pressure control.
3. Select the terminal unit that is most critical to the supply-fan airflow. Measure inlet static pressure, and adjust system static pressure control set point so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
4. Calibrate and balance each terminal unit for maximum and minimum design airflow as follows:
 - a. Adjust controls so that terminal is calling for maximum airflow. Some controllers require starting with minimum airflow. Verify calibration procedure for specific project.
 - b. Measure airflow and adjust calibration factor as required for design maximum airflow. Record calibration factor.
 - c. When maximum airflow is correct, balance the air outlets downstream from terminal units.
 - d. Adjust controls so that terminal is calling for minimum airflow.
 - e. Measure airflow and adjust calibration factor as required for design minimum airflow. Record calibration factor. If no minimum calibration is available, note any deviation from design airflow.
 - f. When in full cooling or full heating, ensure that there is no mixing of hot-deck and cold-deck airstreams unless so designed.
 - g. On constant volume terminals, in critical areas where room pressure is to be maintained, verify that the airflow remains constant over the full range of full cooling to full heating. Note any deviation from design airflow or room pressure.
5. After terminals have been calibrated and balanced, test and adjust system for total airflow. Adjust fans to deliver total design airflows within the maximum allowable fan speed listed by fan manufacturer.
 - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
 - b. Set terminals for maximum airflow. If system design includes diversity, adjust terminals for maximum and minimum airflow so that connected total matches fan selection and simulates actual load in the building.
 - c. Where duct conditions allow, measure airflow by Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses to obtain total airflow.
 - d. Where duct conditions are not suitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
 - e. If a reliable Pitot-tube traverse or coil traverse is not possible, measure airflow at terminals and calculate the total airflow.
6. Measure fan static pressures as follows:
 - a. Measure static pressure directly at the fan outlet or through the flexible connection.
 - b. Measure static pressure directly at the fan inlet or through the flexible connection.
 - c. Measure static pressure across each component that makes up the air-handling system.
 - d. Report any artificial loading of filters at the time static pressures are measured.
7. Set final return and outside airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
 - a. Balance the return-air ducts and inlets the same as described for constant-

- volume air systems.
- b. Verify that terminal units are meeting design airflow under system maximum flow.
- 8. Re-measure the inlet static pressure at the most critical terminal unit and adjust the system static pressure set point to the most energy-efficient set point to maintain the optimum system static pressure. Record set point and give to controls contractor.
- 9. Verify final system conditions as follows:
 - a. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
 - b. Re-measure and confirm that total airflow is within design.
 - c. Re-measure final fan operating data, rpms, volts, amps, and static profile.
 - d. Mark final settings.
 - e. Test system in economizer mode. Verify proper operation and adjust if necessary. Measure and record all operating data.
 - f. Verify tracking between supply and return fans.

3.7 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports for pumps, coils, and heat exchangers. Obtain approved submittals and manufacturer-recommended testing procedures. Crosscheck the summation of required coil and heat exchanger flow rates with pump design flow rate.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.
- C. In addition to requirements in "Preparation" Article, prepare hydronic systems for testing and balancing as follows:
 - 1. Check liquid level in expansion tank.
 - 2. Check highest vent for adequate pressure.
 - 3. Check flow-control valves for proper position.
 - 4. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
 - 5. Verify that motor starters are equipped with properly sized thermal protection.
 - 6. Check that air has been purged from the system.

3.8 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

- A. Adjust pumps to deliver total design gpm.
 - 1. Measure total water flow.
 - a. Position valves for full flow through coils.
 - b. Measure flow by main flow meter, if installed.
 - c. If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
 - 2. Measure pump TDH as follows:
 - a. Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
 - b. Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
 - c. Convert pressure to head and correct for differences in gage heights.
 - d. Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow, and

- verify that the pump has the intended impeller size.
 - e. With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
 - 3. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
- B. Adjust flow-measuring devices installed in mains and branches to design water flows.
 - 1. Measure flow in main and branch pipes.
 - 2. Adjust main and branch balance valves for design flow.
 - 3. Re-measure each main and branch after all have been adjusted.
- C. Adjust flow-measuring devices installed at terminals for each space to design water flows.
 - 1. Measure flow at terminals.
 - 2. Adjust each terminal to design flow.
 - 3. Re-measure each terminal after it is adjusted.
 - 4. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
 - 5. Perform temperature tests after flows have been balanced.
- D. For systems with pressure-independent valves at terminals:
 - 1. Measure differential pressure and verify that it is within manufacturer's specified range.
 - 2. Perform temperature tests after flows have been verified.
- E. For systems without pressure-independent valves or flow-measuring devices at terminals:
 - 1. Measure and balance coils by either coil pressure drop or temperature method.
 - 2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
- F. Verify final system conditions as follows:
 - 1. Re-measure and confirm that total water flow is within design.
 - 2. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
 - 3. Mark final settings.
- G. Verify that memory stops have been set.

3.9 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

- A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals, and proceed as specified above for hydronic systems.
- B. Adjust the variable-flow hydronic system as follows:
 - 1. Verify that the differential-pressure sensor is located as indicated.
 - 2. Determine whether there is diversity in the system.
- C. For systems with no diversity:
 - 1. Adjust pumps to deliver total design gpm.
 - a. Measure total water flow.

- 1) Position valves for full flow through coils.
 - 2) Measure flow by main flow meter, if installed.
 - 3) If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
 - b. Measure pump TDH as follows:
 - 1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
 - 2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
 - 3) Convert pressure to head and correct for differences in gage heights.
 - 4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 - 5) With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
 - c. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
2. Adjust flow-measuring devices installed in mains and branches to design water flows.
 - a. Measure flow in main and branch pipes.
 - b. Adjust main and branch balance valves for design flow.
 - c. Re-measure each main and branch after all have been adjusted.
3. Adjust flow-measuring devices installed at terminals for each space to design water flows.
 - a. Measure flow at terminals.
 - b. Adjust each terminal to design flow.
 - c. Re-measure each terminal after it is adjusted.
 - d. Position control valves to bypass the coil and adjust the bypass valve to maintain design flow.
 - e. Perform temperature tests after flows have been balanced.
4. For systems with pressure-independent valves at terminals:
 - a. Measure differential pressure and verify that it is within manufacturer's specified range.
 - b. Perform temperature tests after flows have been verified.
5. For systems without pressure-independent valves or flow-measuring devices at terminals:
 - a. Measure and balance coils by either coil pressure drop or temperature method.
 - b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
6. Prior to verifying final system conditions, determine the system differential-pressure set point.
7. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion open discharge valve 100 percent and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
8. Mark final settings and verify that all memory stops have been set.
9. Verify final system conditions as follows:
 - a. Re-measure and confirm that total water flow is within design.
 - b. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.

- c. Mark final settings.
 10. Verify that memory stops have been set.
- D. For systems with diversity:
 1. Determine diversity factor.
 2. Simulate system diversity by closing required number of control valves, as approved by the design engineer.
 3. Adjust pumps to deliver total design gpm.
 - a. Measure total water flow.
 - 1) Position valves for full flow through coils.
 - 2) Measure flow by main flow meter, if installed.
 - 3) If main flow meter is not installed, determine flow by pump TDH or exchanger pressure drop.
 - b. Measure pump TDH as follows:
 - 1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
 - 2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
 - 3) Convert pressure to head and correct for differences in gage heights.
 - 4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
 - 5) With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved.
 - c. Monitor motor performance during procedures and do not operate motor in an overloaded condition.
 4. Adjust flow-measuring devices installed in mains and branches to design water flows.
 - a. Measure flow in main and branch pipes.
 - b. Adjust main and branch balance valves for design flow.
 - c. Re-measure each main and branch after all have been adjusted.
 5. Adjust flow-measuring devices installed at terminals for each space to design water flows.
 - a. Measure flow at terminals.
 - b. Adjust each terminal to design flow.
 - c. Re-measure each terminal after it is adjusted.
 - d. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
 - e. Perform temperature tests after flows have been balanced.
 6. For systems with pressure-independent valves at terminals:
 - a. Measure differential pressure, and verify that it is within manufacturer's specified range.
 - b. Perform temperature tests after flows have been verified.
 7. For systems without pressure-independent valves or flow-measuring devices at terminals:
 - a. Measure and balance coils by either coil pressure drop or temperature method.
 - b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
 8. Open control valves that were shut. Close a sufficient number of control valves that were previously open to maintain diversity, and balance terminals that were

- just opened.
9. Prior to verifying final system conditions, determine system differential-pressure set point.
 10. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion open discharge valve 100 percent and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
 11. Mark final settings and verify that memory stops have been set.
 12. Verify final system conditions as follows:
 - a. Re-measure and confirm that total water flow is within design.
 - b. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
 - c. Mark final settings.
 13. Verify that memory stops have been set.

3.10 PROCEDURES FOR DOMESTIC PLUMBING SYSTEMS

- A. Verify flow control valves matches drawings.
- B. Verify pump flows matches drawing and that pump installed in the right direction
- C. Verify backflow preventer pressure drop matches design
- D. Verify outlet temperature of tempering valves matches design
- E. Verify equal draw at water heater flow control valves.

3.11 PROCEDURES FOR MOTORS

- A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:
 1. Manufacturer's name, model number, and serial number.
 2. Motor horsepower rating.
 3. Motor rpm.
 4. Efficiency rating.
 5. Nameplate and measured voltage, each phase.
 6. Nameplate and measured amperage, each phase.
 7. Starter thermal-protection-element rating.
- B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

3.12 PROCEDURES FOR BOILERS

- A. Hydronic Boilers: Measure and record entering- and leaving-water temperatures and water flow.

3.13 PROCEDURES FOR AIR HANDLERS

- A. Measure, adjust, and record the following data for each water coil:
 - 1. Entering- and leaving-water temperature.
 - 2. Water flow rate.
 - 3. Water pressure drop.
 - 4. Dry-bulb temperature of entering and leaving air.
 - 5. Wet-bulb temperature of entering and leaving air for cooling coils.
 - 6. Airflow.
 - 7. Air pressure drop.
- B. Measure, adjust, and record the following data for each refrigerant coil:
 - 1. Dry-bulb temperature of entering and leaving air.
 - 2. Wet-bulb temperature of entering and leaving air.
 - 3. Airflow.
 - 4. Air pressure drop.
 - 5. Refrigerant suction pressure and temperature.

3.14 PROCEDURES FOR MAKEUP AIR UNIT

- A. Measure, adjust, and record the following data:
 - 1. Entering- and leaving-water temperature.
 - 2. Water flow rate.
 - 3. Water pressure drop.
 - 4. Dry-bulb temperature of entering and leaving air.
 - 5. Wet-bulb temperature of entering and leaving air for cooling coils.
 - 6. Airflow.
 - 7. Air pressure drop.
 - 8. External Static Pressure.
 - 9. Evaporative Cooler is adjusted per manufacturer's instructions.

3.15 PROCEDURES FOR EXHAUST FANS

- A. Measure, adjust, and record the following data:
 - 1. Airflow.
 - 2. Static Pressure.
 - 3. Rotation of fan.

3.16 TOLERANCES

- A. Set HVAC system's airflow rates and water flow rates within the following tolerances:
 - 1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus, or minus 10 percent.
 - 2. Air Outlets and Inlets: Plus, or minus 10 percent.
 - 3. Heating-Water Flow Rate: Plus, or minus 10 percent.
 - 4. Heat Pump - Water Flow Rate: Plus, or minus 10 percent.
- B. Maintaining pressure relationships as designed shall have priority over the tolerances specified above.

3.17 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
 - 1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
 - 2. Include a list of instruments used for procedures, along with proof of calibration.
 - 3. Certify validity and accuracy of field data.
- B. Final Report Contents: In addition to certified field-report data, include the following:
 - 1. Pump curves.
 - 2. Fan curves.
 - 3. Manufacturers' test data.
 - 4. Field test reports prepared by system and equipment installers.
 - 5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.
- C. General Report Data: In addition to form titles and entries, include the following data:
 - 1. Title page.
 - 2. Name and address of the TAB specialist.
 - 3. Project name.
 - 4. Project location.
 - 5. Architect's name and address.
 - 6. Engineer's name and address.
 - 7. Contractor's name and address.
 - 8. Report date.
 - 9. Signature of TAB supervisor who certifies the report.
 - 10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
 - 11. Summary of contents including the following:
 - a. Indicated versus final performance.
 - b. Notable characteristics of systems.
 - c. Description of system operation sequence if it varies from the Contract Documents.
 - 12. Nomenclature sheets for each item of equipment.
 - 13. Data for terminal units, including manufacturer's name, type, size, and fittings.
 - 14. Notes to explain why certain final data in the body of reports vary from indicated values.
 - 15. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outdoor-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Face and bypass damper settings at coils.
 - e. Fan drive settings including settings and percentage of maximum pitch diameter.
 - f. Inlet vane settings for variable-air-volume systems.
 - g. Settings for supply-air, static-pressure controller.
 - h. Other system operating conditions that affect performance.

- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
 - 1. Quantities of outdoor, supply, return, and exhaust airflows.
 - 2. Water and steam flow rates.
 - 3. Duct, outlet, and inlet sizes.
 - 4. Pipe and valve sizes and locations.
 - 5. Terminal units.
 - 6. Balancing stations.
 - 7. Position of balancing devices.

- E. Fan Test Reports: For supply, return, and exhaust fans, include the following:
 - 1. Fan Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and size.
 - e. Manufacturer's serial number.
 - f. Arrangement and class.
 - g. Sheave make, size in inches, and bore.
 - h. Center-to-center dimensions of sheave and amount of adjustments in inches.
 - 2. Motor Data:
 - a. Motor make, and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in inches, and bore.
 - f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
 - g. Number, make, and size of belts.
 - 3. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm.
 - b. Total system static pressure in inches wg.
 - c. Fan rpm.
 - d. Discharge static pressure in inches wg.
 - e. Suction static pressure in inches wg.

- F. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
 - 1. Report Data:
 - a. System and air-handling-unit number.
 - b. Location and zone.
 - c. Traverse air temperature in deg F.
 - d. Duct static pressure in inches wg.
 - e. Duct size in inches.
 - f. Duct area in sq. ft.
 - g. Indicated airflow rate in cfm.
 - h. Indicated velocity in fpm.
 - i. Actual airflow rate in cfm.
 - j. Actual average velocity in fpm.
 - k. Barometric pressure in psig.

- G. Air-Terminal-Device Reports:
1. Unit Data:
 - a. System and air-handling unit identification.
 - b. Location and zone.
 - c. Apparatus used for test.
 - d. Area served.
 - e. Make.
 - f. Number from system diagram.
 - g. Type and model number.
 - h. Size.
 - i. Effective area in sq. ft.
 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm.
 - b. Air velocity in fpm.
 - c. Preliminary airflow rate as needed in cfm.
 - d. Preliminary velocity as needed in fpm.
 - e. Final airflow rate in cfm.
 - f. Final velocity in fpm.
 - g. Space temperature in deg F.
- H. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:
1. Unit Data:
 - a. System and air-handling-unit identification.
 - b. Location and zone.
 - c. Room or riser served.
 - d. Coil make and size.
 - e. Flowmeter type.
 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm.
 - b. Entering-water temperature in deg F.
 - c. Leaving-water temperature in deg F.
 - d. Water pressure drop in feet of head or psig.
 - e. Entering-air temperature in deg F.
 - f. Leaving-air temperature in deg F.
- I. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:
1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Service.
 - d. Make and size.
 - e. Model number and serial number.
 - f. Water flow rate in gpm.
 - g. Water pressure differential in feet of head or psig.
 - h. Required net positive suction head in feet of head or psig.
 - i. Pump rpm.
 - j. Impeller diameter in inches.
 - k. Motor make and frame size.
 - l. Motor horsepower and rpm.

- m. Voltage at each connection.
- n. Amperage for each phase.
- o. Full-load amperage and service factor.
- p. Seal type.
- 2. Test Data (Indicated and Actual Values):
 - a. Static head in feet of head or psig.
 - b. Pump shutoff pressure in feet of head or psig.
 - c. Actual impeller size in inches.
 - d. Full-open flow rate in gpm.
 - e. Full-open pressure in feet of head or psig.
 - f. Final discharge pressure in feet of head or psig.
 - g. Final suction pressure in feet of head or psig.
 - h. Final total pressure in feet of head or psig.
 - i. Final water flow rate in gpm.
 - j. Voltage at each connection.
 - k. Amperage for each phase.

J. Instrument Calibration Reports:

- 1. Report Data:
 - a. Instrument type and make.
 - b. Serial number.
 - c. Application.
 - d. Dates of use.
 - e. Dates of calibration.

3.18 VERIFICATION OF TAB REPORT

- A. The TAB specialist's test and balance engineer shall conduct the inspection in the presence of Construction Manager and commissioning authority.
- B. Commissioning authority shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
- C. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
- D. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
- E. If TAB work fails, proceed as follows:
 - 1. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
 - 2. If the second final inspection also fails, Owner may contract the services of another TAB specialist to complete TAB work according to the Contract Documents and deduct the cost of the services from the original TAB specialist's final payment.

F. Prepare test and inspection reports.

END OF SECTION 230593

SECTION 230713 DUCT INSULATION

PART 1 GENERAL

1.1 SUMMARY

- A. Section includes insulating the following duct services:
 - 1. Indoor, concealed supply, return, and outdoor air.
 - 2. Outdoor, supply air

1.2 RELATED SECTIONS:

- A. Section 230719 - HVAC Piping Insulation.
- B. Section 233113 - Metal Ducts for duct liners.

1.3 ACTION SUBMITTALS

- A. See Section 013300 for submittal requirements.
- B. Product Data: For each type of product indicated.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail insulation application at elbows, fittings, dampers, specialties, and flanges for each type of insulation.
 - 3. Detail application of field-applied jackets.
 - 4. Detail application at linkages of control devices.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

PART 2 PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Fiberglass Blanket Insulation: Glass fibers bonded with a thermosetting resin. Comply with ASTM C553, Type II and ASTM C1290, Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Owens Corning.

2.2 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Fiberglass Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Childers Brand; H. B. Fuller Construction Products.
- b. Eagle Bridges - Marathon Industries.
- c. Foster Brand; H. B. Fuller Construction Products.
2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
 1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Knauf Insulation.
 2. Water-Vapor Permeance: ASTM F1249, 1.8 perms at 0.0625-inch dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F.
 4. Solids Content: 60 percent by volume and 66 percent by weight.
 5. Color: White.

2.4 SEALANTS

- A. FSK and Metal Jacket Flashing Sealants:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F.
 5. Color: Aluminum.
 6. For indoor applications, use sealants that have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 7. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.5 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.

2.6 TAPES

- A. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Compac Corporation.
 - b. Knauf Insulation.
 - c. Venture Tape.
 2. Width: 3 inches.
 3. Thickness: 6.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

2.7 SECUREMENTS

- A. Aluminum Bands: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020-inch-thick, 1/2-inch-wide with wing seal or closed seal.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ITW Insulation Systems; Illinois Tool Works, Inc.
 - b. RPR Products, Inc.
- B. Insulation Pins and Hangers:
1. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Baseplate: Perforated, galvanized carbon-steel sheet, 0.030-inch-thick by 2 inches square.
 - 5) Spindle: Copper- or zinc-coated, low-carbon steel, fully annealed, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
 - 6) Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Hardcast, Inc.
 - 4) Midwest Fasteners, Inc.
 - 5) Nelson Stud Welding.
 - 6) Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel, or Monel.
- D. Wire: 0.080-inch nickel-copper alloy.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. C & F Wire.

2.8 FIELD-APPLIED JACKETS

- A. Aluminum embossed jacket, 0.016" thick
 1. Adhesive: As recommended by jacket material manufacturer.
- B. Galvanized Steel jacket matching the construction of the ductwork in which it is insulating.

PART 3 EXECUTION

3.1 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.
 - 2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 - 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 - 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
- L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.3 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 - 4. Seal jacket to wall flashing with flashing sealant.
- C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
 - 1. Comply with requirements in Section 078400 - Firestopping for firestopping and fire-resistive joint sealers.
- E. Insulation Installation at Floor Penetrations:
 - 1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078400 - Firestopping.

3.4 INSTALLATION OF FIBERGLASS INSULATION

- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
 - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
 - 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
 - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not over compress insulation during installation.
 - e. Impale insulation over pins and attach speed washers.
 - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1-inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.5 FIELD-APPLIED JACKET INSTALLATION

- A. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.

3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

3.6 FINISHES

- A. Do not field paint aluminum or stainless-steel jackets.

3.7 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 1. Inspect ductwork, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
- C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.8 DUCT INSULATION SCHEDULE, GENERAL

- A. Plenums and Ducts Requiring Insulation:
 1. Indoor, concealed supply and outdoor air.
 2. Indoor, concealed return located.
 3. Indoor, exposed return located in unconditioned space.
- B. Items Not Insulated:
 1. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
 2. Exposed ducts located within the room they are serving, unless noted to be insulated.
 3. Factory-insulated flexible ducts.
 4. Factory-insulated plenums and casings.
 5. Flexible connectors.
 6. Vibration-control devices.
 7. Factory-insulated access panels and doors.

3.9 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Concealed, Supply-Air Duct, Return-Air, Outside-Air, and Plenum Insulation: Fiberglass blanket, 2 inches thick and 0.75-lb/cu. ft. nominal density.

END OF SECTION 230713

SECTION 230719 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes insulation for HVAC piping systems.
 - 1. Heating hot-water piping – indoors.
 - 2. Piping heat exchanger to snow melt manifold piping.
 - 3. Refrigerant suction and discharge piping, indoors and outdoors.

1.2 RELATED SECTIONS:

- A. Section 230714 – Duct insulation.

1.3 ACTION SUBMITTALS

- A. See Section 013300 for submittal requirements.
- B. Product Data: For each type of product indicated.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.
 - 3. Detail insulation application at pipe expansion joints for each type of insulation.
 - 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
 - 5. Detail removable insulation at piping specialties.
 - 6. Detail application of field-applied jackets.
 - 7. Detail application at linkages of control devices.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.5 QUALITY ASSURANCE

- A. Surface Burning Characteristic: For insulation and related materials, as determined by testing identical products according to ASTM E84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. Insulation installed indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation installed Outdoors: Flame-spread index of 75 or less and smoke developed index of 150 or less.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- B. Products that come into contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- C. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable in accordance with ASTM C795.
- D. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- E. Flexible Elastomeric: Closed-cell, or expanded-rubber materials; Comply with ASTM C534/C534M, Type I for tubular materials.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA, Inc.
 - b. Armacell LLC.
 - c. K-Flex USA.
- F. Fiberglass, Preformed Pipe Insulation:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway Company.
 - b. Knauf Insulation.
 - c. Owens Corning.
 - 2. Type I, 850 deg F Materials: Glass fibers bonded with a thermosetting resin. Comply with ASTM C547, Type I Grade A, with factory-applied ASJ-SSL.
 - 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA, Inc.
 - b. Armacell LLC
 - c. K-Flex USA
 - 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services "Standard Practice of the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers"
- C. Fiberglass Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H.B. Fuller Construction Products.
 - b. Eagle Bridges – Marathon Industries.
 - c. Foster Brand; H.B. Fuller Construction Products.
 2. For indoor applications, adhesive shall have a VOC content shall content of 80 g/L or less when calculated according to 40 CFR, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services "Standard Practice of the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers"
- D. ASJ Adhesive and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A, for bonding insulation jacket lap seams and joints.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H.B. Fuller Construction Products.
 - b. Eagle Bridges – Marathon Industries.
 - c. Foster Brand; H.B. Fuller Construction Products.
 2. For indoor applications, adhesive shall have a VOC content shall content of 50 g/L or less when calculated according to 40 CFR, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services "Standard Practice of the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers"
- E. PVC Jacket Adhesive: Compatible with PVC jacket.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Dow Corning Corporation.
 - b. Johns Manville; a Berkshire Hathaway Company
 - c. P.I.C Plastics, Inc.
 - d. Speedline Corporation.
 2. For indoor applications, adhesive shall have a VOC content shall content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services "Standard Practice of the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers"

2.3 MASTICS

- A. For indoor applications, use mastics that have a VOC content of 50g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- B. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H.B. Fuller Construction Products.
 - b. Eagle Bridges – Marathon Industries.
 - c. Foster Brand; H.B. Fuller Construction Products.
 - d. Knauf Insulation.
 - 2. Water-Vapor Permeance: ASTM F1249, 1.8 perms at 0.0625-inch dry film thickness.
 - 3. Service Temperature Range: Minus 20 to plus 180 deg F.
 - 4. Solids Content: 60 percent by volume and 66 percent by weight.
 - 5. Color: White.

2.4 SEALANTS

- A. Joint Sealants:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H.B. Fuller Construction Products.
 - b. Eagle Bridges – Marathon Industries.
 - c. Foster Brand; H.B. Fuller Construction Products.
 - 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 3. Permanently flexible, elastomeric sealant.
 - a. Service Temperature Range: Minus 100 to plus 300 deg F
 - b. Color: White or gray.
 - c. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - d. Sealants shall comply with the testing and product requirements of the California Department of Health Services “Standard Practice of the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers”
- B. FSK and Metal Jacket Flashing Sealants:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H.B. Fuller Construction Products.
 - b. Eagle Bridges – Marathon Industries.
 - c. Foster Brand; H.B. Fuller Construction Products.
 - 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 - 3. Fire- and water-resistant, flexible, elastomeric sealant.
 - 4. Service Temperature Range: Minus 40 to plus 250 deg F.
 - 5. Color: Aluminum.
 - 6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 7. Sealants shall comply with the testing and product requirements of the California Department of Health Services “Standard Practice of the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers”.
- C. ASJ Flashing Sealants and PVDC and PVC Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H.B. Fuller Construction Products.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services "Standard Proactive of the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers".

2.5 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
 1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
 3. PVDC Jacket for indoor Applications: 4-mil-thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perm when tested according to ASTM E96/E96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E84.
 4. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E96/E96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.6 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C921, Type I, unless otherwise indicated.
- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway Company.
 - b. P.I.C. Plastics, Inc.
 - c. Proto Corporation.
 - d. Speedline Corporation.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: White.
 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

- C. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H.B. Fuller Construction Products
 - b. ITW Insulation Systems, Illinois Tool Works, Inc.
 - c. RPR Products, Inc.
 - 2. Sheet and roll stock ready for shop or field sizing.
 - 3. Finish and thickness are indicated in field-applied jacket schedules.
 - 4. Moisture Barrier for Outdoor Applications: 3-mil-thick, heat-bonded polyethylene and kraft paper.
 - 5. Factory-Fabricated Fitting Covers:
 - a. Same material, finish, and thickness as jacket.
 - 1) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 2) Tee covers.
 - 3) Flange and union covers.
 - 4) End caps.
 - 5) Beveled collars.
 - 6) Valve covers.
 - 7) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.7 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the work included, but not limited to the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division.
 - b. Compac Corporation.
 - c. Ideal Tape Co., Inc. an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Venture Tape.
 - f. P.I.C. Plastics,
 - 2. Width: 3 inches.
 - 3. Thickness: 11.5 mils.
 - 4. Adhesion: 90 ounces force/inch in width.
 - 5. Elongation: 2 percent.
 - 6. Tensile Strength: 40 lbf/inch in width.
 - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the work included, but not limited to the following:
 - a. Compac Corporation.
 - b. Ideal Tape Co., Inc. an American Biltrite Company.
 - c. Venture Tape.

2.8 SECUREMENTS

- A. Aluminum Bands: Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch with wing seal or closed seal.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ITW Insulation Systems, Illinois Tool Works, Inc.
 - b. RPR Products, Inc.
- B. Staples: Outward-clinching insulation staples, nominal 3/4 inch-wide, stainless steel or Monel.
- C. Wire: 0.080-inch nickel-copper alloy.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the work included, but not limited to the following:
 - a. C & F Wire.

2.9 INSULATION COVERS

- A. Subject to compliance with requirements. Provide one of the following:
 - 1. LIT Industries
 - 2. Insultech
 - 3. Thermal Energy Products
- B. Interior Fabric: Silicone or Teflon coated fiberglass cloth. Temperature rating –80° F to 500°F
- C. Insulation Filler/Properties: One (1") inch thick high density needled fiberglass mat insulation. maximum temperature Rating to 299°F.
- D. Exterior Fabric/Properties: Silicone or Teflon coated fiberglass cloth. Temperature rating 0°F to 299°F
- E. Securement: Stainless steel buckles lacing hardware and strap assembly
- F. Sewing Thread: Kevlar
- G. Identification Tag: All insulation covers assemblies shall be labeled with a 1.50" x 3.5" aluminum tag with raised imprinted lettering. The tagging systems will facilitate installation and reinstallation of all blankets and enable us to provide replacements upon request by number assigned as imprinted on the label.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and of thicknesses required for each item of pipe system, as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.
 - 3. Install insert materials and insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at 2 inches o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its normal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.3 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor

- insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 - 4. Seal jacket to wall flashing with flashing sealant.
 - D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
 - E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
 - 1. Comply with requirements in Section 078400 "Firestopping" for firestopping and fire-resistive joint sealers.
 - F. Insulation Installation at Floor Penetrations:
 - 1. Pipe: Install insulation continuously through floor penetrations.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078400 "Firestopping."
- 3.4 GENERAL PIPE INSULATION INSTALLATION
- A. Requirements in this article generally apply to all insulation materials, except where more specific requirements are specified in various pipe insulation material installation articles below.
 - B. Insulation Installation on Fittings, Valves, Strainers, Flanges, Mechanical Couplings, and Unions:
 - 1. Install insulation over fittings, valves, strainers, flanges, mechanical couplings, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as that of adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 - 3. Insulate tee fittings with preformed fitting insulation of same material and thickness as that used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 - 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 - 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than two (2) times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers, so strainer basket flange or plug can be easily removed and replaced without damaging the insulation

- and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
6. Insulate flanges and unions using a section of oversized preformed pipe insulation to fit. Overlap adjoining pipe insulation by not less than two (2) times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket, except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing, using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as that of adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union at least 2 times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.
- ### 3.5 INSTALLATION OF CELLULAR-GLASS INSULATION
- A. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.
 4. For insulation with jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.
- B. Insulation Installation on Pipe Flanges:
1. Install prefabricated pipe insulation to outer diameter of pipe flange.
 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
 4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
 2. When preformed sections of insulation are not available, install mitered or routed sections of cellular-glass insulation. Secure insulation materials with wire or bands.
- D. Insulation Installation on Valves and Pipe Specialties:
1. Install prefabricated sections of cellular-glass insulation to valve body.
 2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 3. Install insulation to flanges as specified for flange insulation application.
- 3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION
- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Flanges:
1. Install pipe insulation to outer diameter of pipe flange.
 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as that of pipe insulation.
 4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install mitered sections of pipe insulation.
 2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

- D. Insulation Installation on Valves and Pipe Specialties:
 - 1. Install prefabricated valve covers manufactured of same material as that of pipe insulation when available.
 - 2. When prefabricated valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 - 3. Install insulation to flanges as specified for flange insulation application.
 - 4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.7 INSTALLATION OF FIBERGLASS PREFORMED PIPE INSULATION

- A. Insulation Installation on Straight Pipes and Tubes:
 - 1. Secure each layer of preformed pipe insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
 - 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
 - 3. For insulation with jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
 - 4. For insulation with jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.
- B. Insulation Installation on Pipe Flanges:
 - 1. Install prefabricated pipe insulation to outer diameter of pipe flange.
 - 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 - 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with fiberglass blanket insulation.
 - 4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.
- C. Insulation Installation on Pipe Fittings and Elbows:
 - 1. Install preformed sections of same material as that of straight segments of pipe insulation when available.
 - 2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.
- D. Insulation Installation on Valves and Pipe Specialties:
 - 1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available.
 - 2. When prefabricated sections are not available, install fabricated sections of pipe insulation to valve body.
 - 3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 - 4. Install insulation to flanges as specified for flange insulation application.

3.8 INSTALLATION OF FIELD-APPLIED JACKETS

- A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer's recommended adhesive. directly over bare insulation or insulation with factory-applied jackets.
 - 1. Apply two continuous beads of adhesive to seams and joints, one bead under the lap and the finish bead along seam and joint edge.
 - 2. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by the insulation manufacturer. Secure jacket with stainless steel bands 12 inches o.c. and at end joints.

3.9 FINISHES

- A. Pipe insulation with ASJ or other paintable Jacket Materials: Paint jacket with paint system identified below and as specified in Section 099000 "Painting and Coating".
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.10 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and inspections.
 - 1. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- C. All insulation applications will be considered defective work if sample inspection reveals noncompliance with requirements.

3.11 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Drainage piping located in crawl spaces.
 - 2. Underground piping.
 - 3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.12 INDOOR PIPING INSULATION SCHEDULE

- A. Refrigerant Suction and discharge piping: Flexible elastomeric, 1" thick.
- B. Heating water piping insulation shall be the following:
 - 1. Fiberglass: 1 ½-inch thick and larger – 2" thick.
 - 2. Fiberglass: 1 ¼-inch and smaller – 1 ½" thick

3.13 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

- A. Refrigerant Suction and Liquid Piping insulation shall be the following:
 - 1. Flexible Elastomeric: 2" thick with embossed aluminum jacket.

3.14 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 - 1. None.
- D. Piping, Exposed in the Interior Wash Bay:
 - 1. PVC: 30 mils thick, provide architect with physical color samples
- E. Piping, Exposed that is not in the Interior Wash Bay:
 - 1. Aluminum, Embossed Jacket: 0.016 inch thick.

3.15 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Jacket shall be the following for all insulated outdoor piping:
 - 1. Aluminum, Stucco Embossed: 0.020 inch thick.

3.16 PIPING COMPONENT INSULATION

- A. Piping components to be insulated with removeable insulation covers include the following:
 - 1. Strainers, that are not on VAV boxes.
 - 2. All triple duty valves.
 - 3. All suction diffusers.
 - 4. All control valve bodies.
 - 5. Valves greater than 2".
 - 6. Pipe blind flange.

END OF SECTION 230719

SECTION 230800 – MECHANICAL SYSTEMS COMMISSIONING

PART 1 - GENERAL REQUIREMENTS

1.1 RELATED WORK

- A. All other sections in Division 21, 22, and 23.
- B. Specification Section 019133 -- “General Commissioning Requirements.”
- C. Specification Section 260800 - “Electrical Systems Commissioning
- D. Specification Section 220800 – “Plumbing Systems Commissioning”.

1.2 DEFINITIONS

- A. The purpose of the commissioning process is to provide the Owner/operator of the facility with a high level of assurance that the mechanical and associated electrical systems have been installed in the prescribed manner, and operates within the performance guidelines set in the design intent. The Commissioning Authority (CxA) shall provide the Owner with an unbiased, objective view of the system installation, operation, and performance. This process is not to take away or reduce the responsibility of the design professionals or installing contractors to provide a finished product. Commissioning is intended to enhance the quality of system start-up and aid in the orderly transfer of systems to beneficial use by the Owner. The Commissioning Authority will be a member of the construction team, cooperating and coordinating all commissioning activities with the design professionals, construction manager, contractors, subcontractors, manufacturers, and equipment suppliers.

1.3 SCOPE

- A. The HVAC systems commissioning shall include a demonstration by the Contractor with the assistance of the Commissioning Authority (CxA) of each piece of equipment to comply with the Owners’ project requirements (ORP) and the Construction Documents (CD). The commissioning process shall demonstrate that each piece of equipment is performing and operating to the OPR and CDs.
- B. Participants in HVAC Systems Commissioning: HVAC systems shall be conducted with representatives from the following entities (the required participants shall be confirmed with the commissioning agent prior to scheduling the commissioning).
 - 1. General Contractor
 - 2. Mechanical Contractor
 - 3. Building Management System “BMS” or ATC Contractor
 - 4. Electrical Contractor
 - 5. Test and Balance Contractor
 - 6. Owner’s Representative.
- C. Major Pieces of Equipment shall be defined as (while this list is meant to show a representative sample, any equipment that uses energy for heating water or moving water shall be considered as major):

1. Air Handling Units.
 2. Variable Frequency Drives.
 3. Exhaust Fans
 4. Building Management System "BMS" or ATC Controls.
 5. Relief Fans.
 6. Makeup Air Units.
 7. Unit Heaters.
 8. Vertical Heat Pumps.
 9. Ductless Split Systems.
- D. Kickoff, Coordination and MEP Meeting.
1. The CxA will attend the contractors sub meeting to discuss any issue items.
 2. Other meetings such as the Commissioning Kick-Off meeting, controls meeting, and other coordination meetings shall be attended by those participants as indicated in the "Participants in HVAC Systems Commissioning."
- E. Submittal Review and Meetings.
1. The CxA shall review each submittal in Division 23.
 2. Submittal reviews are NOT an approval but a courtesy review to help validate products submitted are in general compliance with the construction documents.
- F. Issues Log.
1. An "issues log" shall be kept by the CxA. The issues log will identify issues, defects, improper installations, and deficiencies of the installation and design. The issues log will have the issue, a potential resolution, the subcontractor responsible, the date the issue was found, and the CxA who found the issue.
 2. The issue log shall be immediately addressed every week by the contractor.
 3. When an item is completed and addressed by the contractor or subcontractor responsible, the party responsible shall sign off and deliver to the CxA for review. The sign off shall include how the contractor addressed the issue and the date in which the contractor addressed the issue.
- G. Construction Checklist. Pre and final functional testing checklist and start-up checklists.
1. The CxA shall develop construction checklists that will be executed by the CxA. The contractors and sub-contractors shall review the checklists for compliance with the ability of their individual systems. If the contractor or subcontractor does not provide comments to the CxA then the CxA shall assume their procedures shall not harm nor deteriorate the individual systems. If a problem occurs during testing that causes a piece of equipment of system to malfunction, damage, or any other failure and the contractor or subcontractor has not in writing opposed such test, then the contractor or subcontractor shall be liable for any damages and delays.
 2. The contractor shall fill out checklists and "Contractor Readiness Checklists" (CRC). These shall be delivered in the commissioning plan and shall be used to show the CxA that the contractor is ready for Final Commissioning (FAT.)
 3. Startup sheets shall be delivered to the CxA. The contractor responsible for the piece of equipment is also responsible for delivering those startup sheets to the CxA.
 4. Functional testing shall be attended by the members as defined in "Participants in HVAC Systems Commissioning."

5. Should any of the aforementioned requirements not be met on the date that the commissioning process commences and or if deficiencies are observed during the commissioning process the commissioning will be considered a failure and the deficiencies will be required to be remedied and the addressed in writing prior to requesting a date for the recommissioning. There will be no additional costs allowed to the Contractor for re-commissioning sessions as may be required to address issues that are found to be in non-compliance with the requirements of this specification.

H. Access to BMS

1. The BMS contractor shall give the CxA their own password and user name for their system.
2. The Contractor shall also give "Admin" access to the CxA to change settings, review programming, and review graphics.

1.4 SYSTEMS TO BE COMMISSIONED

- A. This list is not intended to be exhaustive. All Division 23 and any equipment, piping, balancing, controls, etc. that are defined in the entire cumulative sections of Division 23 will go through commissioning. The list below is a representative sample of items that are typically commissioned.
1. Mechanical systems including electrical that connects to mechanical.
 2. Variable frequency drives.
 3. Refrigerant equipment.
 4. Ventilation equipment.
 5. ATC control systems, hardware, software, and documentation.
 6. All mechanical and HVAC Systems.
 7. Any other mechanical system specified in the specifications, contractor documents, and program documents.

1.5 COORDINATION

- A. The Commissioning authority shall receive a copy of all construction documents, addenda, change orders, and appropriate approved submittals and show drawings directly from the Contractor. We only use this documentation for our review, but as a method of approval.
- B. The Commissioning Authority shall disseminate written information and documents to all responsible parties relative to the nature and extent of the communication.
- C. The Commissioning Authority is primarily responsible to the Owner, and as such, shall regularly appraise the Architect, the Contractor, and the Owner of the progress, pending problems and/or disputes, and shall provide regular status reports on the progress with each system. Any potential change in the contractual and/or financial obligations of the Owner (credit, change orders, schedule changes, etc.) shall be identified and qualified as soon as possible.
- D. The Commissioning Authority shall coordinate the schedule of commissioning activities with the construction schedule. It is possible that procedures will be completed before the entire mechanical system is completed.

1.6 SCHEDULE

- A. Final Commissioning shall not commence on the individual pieces of equipment, test and balance controls, and other mechanical systems until the Contractor Readiness Checklist are delivered to the CxA.
- B. Pre-Functional Commissioning shall commence during the progress of the project. Contractor Readiness checklists do not typically have to be filled out for the CxA to check out these systems. However, the contractor is responsible to inform and schedule the CxA to do pre-functional checks.
- C. Contractor schedules and scheduling is the responsibility of the Contractor. The Commissioning Authority shall coordinate commissioning scheduling information with the contractor for review and planning activities.
- D. The following list is a general set of tasks and criteria along with the approximate duration for each task in regards to the CxA activities. This list is intended to be utilized as a guideline for creating an appropriate schedule for all of the work related to HVAC systems commissioning. Three of these activities can be commissioned concurrently at one time. These activities do not include the PFAT systems. The activities do not include issues that will take additional days to fix.
 - 1. PFAT Systems – PFATs will be completed within 10 business days of the contractor notice to CxA to start. We expect these systems to be split up and not told to inspect ALL systems at one time. These will be completed during the typical construction schedule and before startup.
 - 2. Test and balance verification – This will take 5 business days for initial review. It will take an additional 3 days after functional testing.
 - 3. Exhaust fan functional testing – 2 business days.
 - 4. Point to point controls testing – 5 business days.
 - 5. Sequence of operations functional testing – 5 business days.

1.7 MISCELLANEOUS CONTRACTOR RESPONSIBILITIES

- A. Means and Methods: The contractor is solely responsible for the means and methods of construction. While the CxA shall assist in the interpretation of construction and documentation, the final responsibility rests solely on the General and Installation Contractor.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 COMMISSIONING KICK-OFF MEETING

- A. The CxA shall facilitate a Commissioning Kick-off meeting after all mechanical, electrical, and plumbing subcontractors are under contract with the General Contractor. The CxA shall invite the Architect, Engineers, and Owner's representatives to the meeting.
- B. The General Contractor shall ensure that the following individuals are in attendance.
 - 1. The Mechanical Foreman and Project Manager.

2. The Plumbing Foreman and Project Manager
3. The Controls Foreman and Project Manager
4. The Test and Balance Project Manager
5. The Electrical Foreman and Project Manager.
6. The Fire Protection Foreman and Project Manager.
7. The General Contractor Project Engineer, Superintendent, and Project Manager.

- C. The CxA shall keep meeting minutes and distribute to the individuals in attendance.

3.2 DISTRIBUTION LIST

- A. A distribution list shall be developed during the Commissioning Kick-off Meeting. This distribution list shall be used for all distribution of commissioning activities. While every effort shall be made to distribute all pertinent information to the subcontractors by the CxA, the sole responsibility for the subcontractors to receive information rest on the General Contractor.

3.3 COMMISSIONING PLAN

- A. The Commissioning Pan shall be developed by the CxA and delivered at the conclusion of the submittal process.
- B. The Commissioning Plan will have the CxA Procedural Standards for testing, the PFAT checklists, the FAT checklists, and the Contractor Readiness checklists.
- C. The subcontractors and contractors are responsible for reviewing the above checklists and provide comments to the CxA within 30 days of receiving the commissioning plan. During this comment period the comments must be received in writing and the CxA will work with the individual contractors and subcontractors to ensure the safety of systems.

3.4 SUBMITTAL REVIEWS

- A. The CxA shall review all mechanical submittals. It is the responsibility of the contractor to ensure they receive the CxA reviews. The Architect is responsible to coordinate the submittals with the CxA,
- B. The submittals will be marked with REVIEWED as noted. Defer to Engineer, Note, or Revise and Resubmit. Only Revise and Resubmit items will have the expectation of a re-submittal.

3.5 COORDINATION MEETING (MEP MEETINGS)

- A. The CxA shall attend the contractors MEP meeting every other week.
- B. The purpose of these meeting is to coordinate installation, commissioning, and testing activities. These meeting will be conducted by the contractor.

3.6 CONSTRUCTION OBSERVATION AND FIRST INSTALLS

- A. The CxA shall observe construction activities throughout the construction of the project. Schedule observations and coordinate with GNC. The
- B. issues log as outlined in Part 1, shall be kept by the CxA.
- C. Mockups, or first installations of individual pieces of equipment, need to be installed in there location where applicable. First installs shall be required by the contractor and subcontractor for the following items:
 - 1. Piping and Hangers (Racks of pipes and individual pipes.)
 - 2. Piping and Duct Insulation (Overhead and in-wall).
 - 3. Duct and Hangers.
 - 4. Pumps.
 - 5. Expansion Tanks.
 - 6. Exhaust Fans.
 - 7. Rooftop Units.
- D. Contractor shall coordinate and not prohibit observations and first installs. Subcontractors, Owner's representatives, and engineers shall review the first installs for compliance.

3.7 CONTRACTORS READINESS CHECKLIST

- A. Contractor Readiness Checklists shall be delivered to the CxA to the contracting team for the contracting team to complete. The purpose of the CRC is to inform the CxA of the readiness of the contractor to begin functional testing on the mechanical system.
- B. The CxA shall not begin function test the system or any equipment until the CRCs have been received. While some systems can be tested without a complete system, the CxA shall have the final say on which can and cannot begin functional testing based on the completeness of the project. A single CRC can be completed per type of equipment (i.e., if there are 80 heat pumps and all of them are ready then a single sheet can be completed for 80 heat pumps.)

3.8 PRE-FUNCTIONAL CHECKLIST

- A. The Pre-Functional Checklist shall be developed by the CxA and delivered in the commissioning plan.
- B. The Pre-Functional Checklist shall be reviewed by the contractors and subcontractors and shall be executed by the CxA.
- C. The CxA shall review 100% of all HVAC system installations.

3.9 FUNCTIONAL ACCEPTANCE TESTING

- A. The CxA shall execute Functional Acceptance Testing with the attendance of suppliers, BMS or ATC Contractor, Mechanical Contractor, Electrical Contractor, Test and Balances Contractor and Plumbing Contractor at the request of the CxA. This includes

Point-to-Point testing which shall be performed with the Controls Contractor on-site the ENTIRE time.

- B. Commissioning Authority shall develop and document the commissioning procedures to be used; this will be delivered to the contractor in the commissioning plan and is called the Procedural Standards. Included are a performance checklist and performance test data sheets for each system based on actual system configuration. These procedures shall be reviewed by the appropriate contractors and subcontractors for technical dept, clarity of documentation completeness of information. Emphasis shall be placed on testing procedures that shall determine actual systems performance and compliance with the design intent.
 - C. The Commissioning Authority shall determine the acceptance procedures for each system within MEP divisions as required. The acceptance procedures shall incorporate the commissioning standards and successful testing results as referred to throughout the mechanical and electrical specifications.
 - 1. In particular, the temperature control system shall have all I/O (input/output) points individually verified for proper function, calibration, and operation. The Commissioning Authority shall review proposed testing procedures and report formats, and observe sufficient field testing to confirm that all I/O points have been properly tested.
 - 2. All control sequence of operation strategies, alarm generation and reporting shall also be reviewed and proper operation verified by the Commissioning Authority.
 - 3. The central work station graphics, point assignments, alarm messages, and logging functions shall be verified.
 - 4. All major pieces of mechanical equipment shall go through functional testing.
 - 5. Test and balance verification.
 - D. The appropriate contractor and vendor(s) shall be informed of what tests are to be performed and the expected results. Whereas some test results and interpretations may not become evident until the actual tests are performed, all parties shall have a reasonable understanding of the requirements. The Commissioning Plan shall address those requirements and be distributed to all parties involved with that specific system.
 - E. Acceptance procedure shall confirm the performance of systems to the extent of the design intent. When a system is accepted, the Owner shall be assured that the system is complete, works as intended, is correctly documented, and operator training has been performed.
 - F. The BMS or ATC contractor shall be in attendance throughout the Sequence of Operation checks, which we expect to take 1 day if all sequences function as per contract documents.
 - G. The CxA shall review 100% and test 100% of HVAC systems.
- 3.10 TRENDING
- A. Trending points shall be outlined in the Procedural Standards as delivered by the CxA in the commissioning plan.

- B. A minimum of four (4) weeks of “Clean” trending (no mechanical, software, control loop or Building Management System BMS failures) shall be provided on ANY or All BMS systems & points as already defined in the contract documents. Trends shall be coincident at 15m minute intervals with a cache able to handle four weeks of trending on a rollover basis. The trending shall also be setup to a COV in conjunction with the 15- minute requirement if possible.
- C. The CxA shall review the trends after the four weeks of clean trending.

3.11 OPERATION MAINTENANCE MANUALS

- A. The final O&M Manual shall be reviewed by the CxA before delivery to the Owner. Any deficiencies shall be noted and the contractor shall remedy before final delivery.
- B. The final O&M must be delivered to the Owner before training shall commence and it shall be one of the requirements for Substantial Completion.

3.12 TRAINING

- A. The CxA shall be invited to all HVAC training sessions by the General Contractor.
- B. The training shall not commence until the system has been commissioned and proven ready for training.
- C. The contractor shall schedule and coordinate training sessions for the Owner’s staff for each system. Training shall be in a classroom setting with the appropriate schematics, handouts, and visual/audio training aids on-site with equipment.
- D. The Commissioning Authority shall review agendas, which shall be submitted at least four weeks before training, and shall audit the training sessions. The agenda shall include, but not limited to operational setpoints, runtime schedules, general operation and maintenance requirements, time, and location for the training.
- E. The training program shall include the following:
 - 1. Emergency instructions and procedures.
 - 2. Operation instructions and procedures.
 - 3. Troubleshooting procedures.
 - 4. Maintenance and inspection procedures.
 - 5. Repair procedures.
 - 6. Upkeep of the systems manual and associated maintenance documentation logs.
- F. The contractor shall provide a schedule for training times and dates. The schedule shall include location, who is training and trainers contact information
- G. The appropriate installing contractors shall provide training on all the major systems per specifications, including peculiarities specific to this project.
- H. The equipment vendors shall provide training on the specifics of each major equipment item including philosophy, troubleshooting and repair techniques.

- I. The automatic control vendor shall provide training on the control system per their specification section.

3.13 RECORD DRAWINGS OR REDLINES

- A. The CxA shall review the “Redlines” or “Record Drawings” on a bi-weekly basis, or as requested.
- B. Record Drawings or Redlines shall be kept in a printed format above and beyond any BIM modeling. If record drawings are being kept on BIM a printed version on a typical 2D flat sheet of paper large enough to read shall be kept as well in the General Contractors trailer.
- C. The following requirements shall be met for Redlines or Record Drawings:
 - 1. Per specifications elsewhere defined.
- D. The final redlines shall be reviewed by the CxA before delivery to the Architect.

3.14 WARRANTY PERIOD AND CONTINUOUS COMMISSIONING

- A. The CxA shall provide Continuous Commissioning during the One-Year Warranty Period after substantial completion. During this time the CxA shall adjust settings on the BMS for optimization of the system, shall find issues with the system, and shall report issues to the contractors.

3.15 REPEATED WORK, TESTING, AND REVIEWS

- A. Contractor shall, at no additional cost to Owner, repeat the complete verification test procedure for each test for which acceptable results are not achieved. Repeat tests until acceptable results are achieved.

END OF SECTION 230800

SECTION 230900 – DIRECT DIGITAL CONTROLS SYSTEM**PART 1 - OWNER'S GENERAL
REQUIREMENTS****1.1 GENERAL**

- A. The control system shall provide direct digital control (DDC) with Windows based user interface. The manufacturer and/or his authorized representative shall be responsible for all work under this section of the specifications. Only pre-approved manufacturers and contractors will be allowed. All control system equipment is to be Alerton, who shall be recognized by Alerton as an approved "Associate Dealer" and shall be as follows:
 - 1. Alerton by: Building Control Services, Inc. (775) 826-8998
 - 2. No Exceptions.
- B. Furnish and install microprocessor-based energy management and control system (EMCS) as an extension to the existing Alerton EMCS System at the Washoe County School District Plant Operations.

1.2 HARDWARE

- A. Controllers:
 - 1. BACnet MS/TP LAN must be software-configured from 9.6 to 115.4Kbps.
 - a. Each BACnet MS/TP LAN shall support 64 BACnet devices at a minimum.
 - b. All property object types, if used in the system, shall be thoroughly documented, and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information.
 - c. All controllers (except application-specific for heat pumps) shall be furnished with a minimum of 10 percent spare capacity to allow for addition of both analog and digital inputs and outputs.

1.3 SUBMITTALS AND AS-BUILT DOCUMENTATION

- A. The submittals shall include complete written control sequences for each item of equipment requiring control. The sequences shall include all set points, dead bands, etc. required for successful operation of the specified equipment. The submitted sequences shall include all necessary sequencing details; whether or not those details are furnished as part of the Mechanical Engineer's written control sequences (such details are commonly omitted from the Mechanical Engineer's written control sequences and shall be provided by the Temperature Control Contractor at no additional cost to the Owner.) The written control sequences, initial set points and dead-bands shall all be reviewed and confirmed with the Engineer.
- B. After all temperature control sequences have been finalized and have been approved by the Engineer (and after the HVAC systems commissioning process has been completed) the Contractor shall provide as-built documentation which shall include written control sequences. Written control sequences shall be provided both in hard copy and on diskette.

1.4 WARRANTY PERIOD SERVICES

- A. The Contractor shall provide full service for the temperature control system for a period of one-year after the date of Substantial Completion. Service shall include, but not be limited to, calibration of all sensors and other devices, adjustment to set points and modifications to control sequences or programming as required/desired to fine-tune and/or finalize all control sequences.

1.5 TRAINING

- A. Upon completion of work, the Temperature Control Contractor shall instruct the Owner's designated personnel on the operation of all control system software features shall provide a complete explanation of the control sequences for each item of equipment and shall provide instructions on the operation and maintenance of all control devices. Training time shall be a minimum of twelve total hours (consisting of three separate 4- hours sessions.)

1.6 EMCS SOFTWARE AND PROGRAMMING REQUIREMENTS

- A. Provide a security/password system with two passwords systems with two passwords of up to four characters each. The security/password system shall access based on four levels of security as follows:
 - 1. Level 1 viewing only.
 - 2. Level 2 Room temperature adjustment.
 - 3. Level 3 Adjustment of all set points.
 - 4. Level 4 full access to all set points and programming.
- B. No set points related to the equipment control sequences or programming shall be accessible by anyone other than the Temperature Control Contractor during the commissioning and warranty period.
- C. The Temperature Control Contractor shall program the eleven School District Holidays into the EMCS software for the three years following the date of installation. The eleven School District Holidays each year are as follows:

1. New Year's Day	January 1
2. Martin Luther King, Jr's Birthday	Third Monday in January
3. President's Day	Third Monday in February
4. Memorial Day	Last Monday in May
5. Independence Day	July 4 th
6. Labor Day	First Monday in September
7. Nevada Day	Last Friday in October
8. Veteran's Day	November 11
9. Thanksgiving Day	Fourth Thursday in November
10. Family Day	Friday following Thanksgiving
11. Christmas Day	December 25 th

When January 1, July 4, November 11 or December 25 falls on a Saturday, the preceding Friday is the observed holiday. If these days fall on Sunday, the following Monday is the observed holiday.

- D. Equipment schedules – A separate occupied/unoccupied schedule shall be provided for each heat pump, air handling unit, fan coil or other individual air handling systems. A graphic display shall be provided to allow for access to each of the schedules from the display screen.

1.7 GRAPHIC DISPLAYS

- A. All temperature set points and all other set points identified as adjustable shall be adjustable from the appropriate graphic displays. Set points given in the control sequences are for initial set-up and trial of system operations. Control system shop drawing shall utilize the same (or similar) written sequences with all set points, throttling ranges and differentials identified. As-built drawing shall include this same information with actual set points following start-up, testing, and adjustment.
- B. Monitored points and alarms for each system shall be shown on the displays with full color graphics and real time data as listed below. Where indicated, graphic shall be dynamic (animated). All graphic displays shall be submitted to the Engineer for review and approval prior to commencing any programming for the temperature controls. Graphic displays shall be developed for a screen resolution of 800 x 600 unless otherwise agreed upon in writing.
- C. All temperatures shall be displayed with zero decimal places.
- D. All valves and damper positions shall be displayed as percent open and shall be displayed with zero decimal places.
- E. All set points which are identified as "adjustable" in written control sequences shall be adjustable via the associated graphic displays (including dead band between and cooling room set point.)
- F. All occupied mode and unoccupied mode room temperature set points shall have an adjustable dead band (adjustable from the associated graphic display).
- G. All displays specified to be dynamic shall depict motion (as a minimum dynamic display shall include rotating fan wheels and rotating pump impellers.)
- H. All set points adjustable from the graphic displays shall be programmed with the dead band on one side of the set point (not split evenly across the set point - unless otherwise specified.)
- I. Zone Temperature Summary – Provide a summary screen which indicates the current room temperature set point and current room temperature for each zone. The screen shall have a global room temperature set point capability that will override the current/individual set point for all zones. Each zone shall be capable of being set to either the global set point or to a separate individual set point. By selecting any of the zones on the screen there shall be the capability to transfer to the selected zones' equipment control screen and back. The zone summary screen shall also include additional information such as discharge air temperature, valve position, fan status, etc. (these requirements shall be coordinated with the Owner prior to developing graphic displays.)
- J. Floor Plans – Provide a display showing the building floor plans, all space temperature sensors, and the equipment associated with each zone (with the zone borders depicted on the floor plan.) The necessary AutoCAD drawing file will be furnished to the Temperature Control Contractor by the Mechanical Engineer upon request.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Approved manufacturers subject to compliance with requirements: (See Part 3- Execution, General, 01)
 - 1. Alerton Technologies to match existing school district systems, no exceptions.

2.2 MATERIALS AND EQUIPMENT

A. General:

1. Provide a distribution processing system complete with Direct Digital Control (DDC) software. The system shall be a fully integrated package of control and instrumentation to control all heat pumps, valves, fans, pumps, etc., directly without intervening conventional controls. Control system components shall be manufacturer's standard as indicated through published product information, designed, and constructed as recommended by the manufacturer.

B. System Architecture

1. The system shall be a complete stand-alone energy management and control system consisting of state-of-the-art menu-driven technology, dynamic graphics, and simple user- friendly operation, completely programmable and highly modular in construction.
2. The basic elements shall be built up of standard components kept in inventory by the EMCS supplier. Components shall not require customizing other than setting jumpers and switches, adding firmware modules or software programming to perform required functions.
3. The system shall be a true distributed processing system with all software control functions to be performed by the remote field panels. Control software shall be in nonvolatile memory. System shall provide "on-line" programming by both "local" and "remote" computer terminals allowing any and all data to be changed, added, deleted, etc., from either terminal. Remote field computers shall communicate with the central processor and the terminal unit control panels.

C. Global Controller.

1. BACnet Conformance
 - a. Building Controller shall be approved by the BTL as meeting BACnet Building Controller requirements.
 - b. Please refer to section 22.2, BACnet Functional Groups, in the BACnet standard, for a complete list of the services that must be directly supported to provide each of the functional groups listed above. All proprietary services, if used in the system, shall be thoroughly documented, and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information
2. Building controller shall be of scalable design such that the number of trunks and protocols may be selected to fit the specific requirements of a given project.
3. The controller shall be capable of panel-mounted on DIN rail and/or mounting screws.
4. The controller shall be capable of providing global control strategies for the system based on information from any objects in the system, regardless if the object is directly monitored by the building controller module or by another controller.
5. The controller shall be capable of running up to six (6) independent control strategies simultaneously. The modification of one control strategy does not interrupt the function or runtime of others.
6. The software program implementing the DDC strategies shall be completely flexible and user-definable. All software tools necessary for programming shall be provided as part of the project software. Any systems utilizing factory pre-

- programmed global strategies that cannot be modified by field personnel on-site, using a wide area network (WAN) or downloaded through remote communications are not acceptable. Changing global strategies using firmware changes are also unacceptable.
7. Programming shall be object oriented using control function blocks and support DDC functions. All flowcharts shall be generated and automatically downloaded to controller. Programming tool shall be supplied and be resident on workstation. The same tool shall be used for all controllers.
 8. The programming tool shall provide means to graphically view inputs and outputs to each program block in real-time as program is executing. This function may be performed using the operator's workstation or field computer.
 9. Controller shall have 6,000 Analog Values and 6,000 Binary Values.
 10. Controller IP configuration can be done via a direct USB connect with an operator's workstation or field computer.
 11. Controller shall have at a minimum a Quad Core 996Ghz processor to ensure fast processing speeds.
 12. Global control algorithms and automated control functions shall execute using a 64-bit processor.
 13. Controller shall have a minimum of GB of DDR3 SDRAM on a 533Mhz bus to ensure high speed data recording, large data storage capacity and reliability.
 14. Controller shall support two (2) on-board EIA-485 ports capable of supporting various EIA-485 protocols including, but not limited to BACnet MS/TP and Modbus.
 - a. Ports are capable of supporting various EIA-485 protocols including, but not limited to BACnet MS/TP and Modbus.
 15. Controller shall support two (2) ports-each of gigabit speed- Ethernet (10/100/1000) ports.
 - a. Ports are capable of supporting various Ethernet protocols including, but not limited to BACnet IP, FOX, and Modbus.
 16. All ports shall be capable of having protocol(s) assigned to utilize the port's physical connection.
 17. The controller shall have at a minimum four (4) on-board inputs, two (2) universal inputs and two (2) binary inputs.
 18. Schedules.
 - a. Building controller modules shall provide normal seven-day scheduling, holiday scheduling and event scheduling.
 - b. Each building controller shall support a minimum of 380 BACnet Schedule Objects and 380 BACnet Calendar Objects.
 19. Logging Capabilities.
 - a. Each building controller shall log as minimum 2,000 objects at 15-minute intervals. Any object in the system (real or calculated) may be logged. Sample time interval shall be adjustable at the operator's workstation.
 - b. Logs may be viewed both on-site or off-site using WAN or remote communication.
 - c. Building controller shall periodically upload trended data to network operator's workstation for long term archiving of desired.
 - d. Archived data stored in database format shall be available for use in third-party spreadsheet or database programs.
 20. Alarm Generation
 - a. Alarms may be generated within the system for any object change of value or state (either real or calculated). This includes things such as

- analog object value changes, binary object state changes, and various controller communication failures.
 - b. Each alarm may be dialed out as noted elsewhere.
 - c. Alarm log shall be provided for alarm viewing. Log may be viewed on-site at the operator's terminal or off-site using remote communications.
 - d. Controller must be able to handle up to 2,000 alarm setups stored as BACnet event enrollment objects, with system destination and actions individually configurable.
 - 21. DDC Terminal Unit Controller
 - a. Each controller shall be microprocessor based and communicate with its respective GC and also be stand-alone maintaining its own control strategy in the event of communication failure with the GC or remote computer terminals. Each controller shall contain RAM and ROM and be capable of controlling heat pumps, boilers, cooling towers, pumps etc., as specified in control sequence. Inputs shall be either analog or digital. Momentary type switch closure allows an input to be both analog and digital. Outputs shall be analog or digital with LED's provided to indicate status. Each controller is linked serially by a pair of wires and communicates to its respective GC at 4800 baud. Controllers default to last programmed temperature or to fixed operator selectable control whenever communication to GC is lost. Default mode shall be field changeable. All operating modes (except default) ad set points shall be modified at the computer terminals. Each unit shall allow complete calibration of all temperatures.
 - b. System shall be capable of accomplishing any controller to controller command within a maximum of 1 second.
- D. OA Temperature Sensor:
 - 1. Sensor shall be pre-calibrated Thermistor type resistance element complete with terminal housing and sensor shield.
- E. Immersion Temperature Sensor
 - 1. Sensor shall be similar to OA sensor, except a stainless steel well shall be included providing sensor with fluid contract and capability for sensor removal without draining system.
- F. Current Sensors shall be as follows
 - 1. Current sensors shall be digital type and shall have the capability to transmit the actual system reading.
- G. Duct Temperature Sensor
 - 1. Sensor shall be similar to OA sensor where used in ducts not to exceed 36 inches.
- H. Duct Temperature Sensor
 - 1. Sensor shall be similar to (I); except the sensor shall be averaging type with mechanical support across the duct section when used in ducts over 36" wide.
- I. Room Temperature Sensor
 - 1. Sensor shall contain temperature sensing element. Controller shall allow occupants to raise and lower set point and to activate heat pump for override use within limits programmed by building operator. Controller shall allow service technician access following a password entry to view and change any data relative to service, maintenance, and operation of the heat pump control. Provide

service tool to check data for each individual heat pump from its thermostat Mount at +4'-6" AFF.

- J. Control Valves
 - 1. Heat pump control valves shall be Belimo Characterized Control Valves (CCV) 2-way automatic control valves with stainless steel ball, stem, and electronic actuators.
- K. Relays
 - 1. Relays shall be plug-in type complete with sockets for panel mounting. Poles shall be required and contact rated for intended use.
- L. Damper Actuator
 - 1. Actuator shall be by Belimo with permanently lubricated gear-train sealed in duct tight enclosure. Actuator shall be sized to handle intended load plus 10%. Heat motors will not be acceptable.
- M. Control Dampers
 - 1. Control dampers shall be low leakage type with extruded bladed seals and flexible metal jamb seals. Leakage rating when tested in accordance with AMCA standard shall not exceed 10 cfm/ft² at 4.0" H₂O pressure.
 - 2. Control dampers are to be provided and installed by Mechanical Contractor, control damper actuators to be provided and installed by Temperature Control Contractor.
- N. Gas Monitors
 - 1. Gas monitor for CO₂ and combustibles shall be stand along type utilizing an electrochemical cell (for toxic gas monitoring) or a catalytic combustion cell (for explosive gas monitoring.) Gas monitor shall have an analog output for input to EMCS system. Gas monitor shall also have two (2) alarm relays. Monitor shall be Honeywell Analytics Model E3SM with appropriate Sensor Cartridge for all gases except CO₂ which shall be Honeywell Analytics IAQPoint2.
- O. Software
 - 1. The Energy Management and Control System (EMCS) application program shall be written to communicate specifically utilizing BACnet protocols. Software functions delivered on this project shall include password protection, scheduling (including optimum start), alarming, logging of historical data, full graphics including animation, after-hours billing program, demand limiting, and a full suite of field engineering tools including graphical programming and applications. Systems using operating systems other than that described above are strictly prohibited. All software required to program application specific controller and all field level devices and controllers will be left with the owner. All software passwords required to program and make future changes to the system will also become the property of the owner. All software required to make any program changes anywhere in the system, along with scheduling and trending applications, will be left with the owner. All software passwords required to program and make future changes to scheduled, trends and related program changes will also become the property of the owner. All software required for all field engineering tools including graphical programming and applications will be left with the owner. All software passwords required to program and make future changed to field engineering tools, including graphical programming and applications will be left with the owner.

PART 3 - INSTALLATION

3.1 GENERAL

- A. By "Alerton Technologies" by Building Control Services, Inc. no exceptions.
- B. Interlock and Control Wiring
 - 1. Installation shall be in a neat and workman like manner with all runs parallel to or perpendicular to building lines.
 - 2. All wiring walls shall be in EMT. In ceiling areas above finished ceilings, exposed "plenum rated cabling" without raceways shall be permissible, where code permits. Cabling shall be supported above finished ceiling as high as permissible in a neat and workmanship like manner. Cabling shall not lie on top of finished ceiling.
 - 3. "Plenum Rated" cabling shall be identified as follows:
 - a. "EMS Communication" cabling shall be "raspberry" in color and identified on cabling jacket every three (3) feet-minimum.
 - b. "EMS Sensor" cabling shall be "blue" in color and identified on cabling jacket every three (3) feet-minimum.
 - c. Installation shall be in accordance with manufacturers written instructions and with recognized industry standards.
 - d. All wiring shall be in conformance with all local and national code requirements.
 - e. Verify all room sensor locations in the field prior to installation and relocate as required at no cost to the owner.
- C. Control Panels
 - 1. Mount controllers, relays, and switches, etc. for equipment located in equipment rooms in enclosed control panels with hinged doors. Control devices for equipment located in exposed areas subject to outside weather conditions shall be mounted inside weatherproof enclosures. Location of each panel shall be convenient for adjustment service. Provide plastic nameplates at each panel-mounted control device describing function of device.
 - 2. Prewire electrical devices within the panel to number interdevice within panel completed prior to installation. Terminal numbers to match terminals shown on control diagram.
 - 3. Coordinate with Division 23 and 26, including power distribution and mechanical and electrical equipment, as necessary to properly interface installation.
 - 4. Adjust and validate all thermostats, sensors, controllers, relays, etc., provided, and complete system validation forms attached in conjunction with WCSD Personnel.
 - 5. Validation forms shall be completed and furnished to test and balance contractor for inclusion in final report prior to final inspection and be provided to commissioning agent.

3.2 ADJUSTMENT

- A. Adjust and validate all thermostats, sensors, controllers, relays, etc., provided, and complete system validation forms attached in conjunction with Owner's representative. Provide complete 24 hour printed logs to owner for all equipment operations and system functions as part of acceptance. Thirty days prior to first year warranty anniversary date, provide a duplicate series of validation logs in cooperation with owner's representative. Initial validation complete with all logs shall be included with

“Operation and Maintenance Manuals.” Copies of all additional logs shall be furnished to Engineer at same time they are furnished to Owner.

1. Items to be logged include:
 - a. Heat pump loop supply water.
 - b. Heat pumps; operating temperatures.
2. Specific problem areas requested by Building Operations Engineer.
3. Copies of each log complete with analysis shall be furnished to commissioning agency.

3.3 INSTRUCTION

- A. Furnish instruction manuals covering functions and operation of control systems for use by Owner’s operating personnel. A field instruction period lasting not less than two (2) 8-hour days shall be provided followed by one (1) 8-hour day approximately 30 days later.
- B. Provide control diagrams, reduce as required, diagrams shall equipment, controls, etc., marked to correspond to identification on equipment.
- C. Control Contractor shall maintain terminal and printer in his office to communicate with jobsite and for system troubleshooting, fine tubing system set points and assistance to owner on-site personnel.
- D. Provide vandal proof type sensors or covers on all devices exposed to public.

3.4 Commissioning

- A. Control Contractor shall meet all requirements outlined by Commissioning agent as described in specification.

PART 4 - WARRANTY

4.1 GENERAL

- A. Provide one-year unconditional warranty on all material, software and labor furnished and installed under this contract from date of substantial completion.
- B. Provide and install any software updates and software changes for the site required by owner occurring during warranty period without charge.

END OF SECTION 230900

SECTION 230923.12 - CONTROL DAMPERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes control dampers and actuators for DDC systems.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label products to comply with ASME Boiler and Pressure Vessel Code where required by authorities having jurisdiction.

2.2 RECTANGULAR CONTROL DAMPERS

- A. General Requirements:
 - 1. Unless otherwise indicated, use parallel blade configuration for two-position control, equipment isolation service, and when mixing two airstreams. For other applications, use opposed blade configuration.
 - 2. Factory assemble multiple damper sections to provide a single damper assembly of size required by the application.
- B. Manufacturers: Basis of design product, subject to compliance with the specified product on the drawings. Provide a product by the following manufacturers:
 - a. Greenheck.
 - b. Pottorff.
 - c. Or approved equal.
- C. Rectangular Dampers with Aluminum Airfoil Blades:
 - 1. Performance:
 - a. Leakage: AMCA 511, Class 1A. Leakage shall not exceed 3 cfm/sq. ft. against 1-in. wg differential static pressure.
 - b. Pressure Drop: 0.05-in. wg at 1500 fpm across a 24-by-24-inch damper when tested according to AMCA 500-D, figure 5.3.
 - c. Velocity: Up to 6000 fpm.

- d. Temperature: Minus 40 to plus 185 deg F.
- e. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
- f. Damper shall have AMCA seal for both air leakage and air performance.
- 2. Construction:
 - a. Frame:
 - 1) Material: ASTM B211, Alloy 6063 T5 extruded-aluminum profiles, 0.07 inch thick.
 - 2) Hat-shaped channel with integral flange(s). Mating face shall be a minimum of 1 inch.
 - 3) Width not less than 5 inches.
 - b. Blades:
 - 1) Hollow, airfoil, extruded aluminum.
 - 2) Parallel or opposed blade configuration as required by application.
 - 3) Material: ASTM B211, Alloy 6063 T5 aluminum, 0.07 inch thick.
 - 4) Width not to exceed 6 inches.
 - 5) Length as required by close-off pressure, not to exceed 48 inches.
 - c. Seals:
 - 1) Blades: Replaceable, mechanically attached extruded silicone, vinyl, or plastic composite.
 - 2) Jambs: Stainless steel, compression type.
 - d. Axles: 0.5-inch- diameter stainless steel, mechanically attached to blades.
 - e. Bearings:
 - 1) Molded synthetic or stainless-steel sleeve mounted in frame.
 - 2) Where blade axles are installed in vertical position, provide thrust bearings.
 - f. Linkage:
 - 1) Concealed in frame.
 - 2) Constructed of aluminum and stainless steel.
 - 3) Hardware: Stainless steel.
 - g. Transition:
 - 1) For round and flat oval duct applications, provide damper assembly with integral transitions to mate to adjoining field connection.
 - 2) Factory mount damper in a sleeve with a close transition to mate to field connection.
 - 3) Damper size and sleeve shall be connection size plus 2 inches.
 - 4) Sleeve length shall be not less than 12 inches for dampers without jackshafts and shall be not less than 16 inches for dampers with jackshafts.
 - 5) Sleeve material shall match adjacent duct.

2.3 GENERAL CONTROL-DAMPER ACTUATORS REQUIREMENTS

- A. Actuators shall operate related damper(s) with sufficient reserve power to provide smooth modulating action or two-position action and proper speed of response at velocity and pressure conditions to which the damper is subjected.
- B. Actuators shall produce sufficient power and torque to close off against the maximum system pressures encountered. Actuators shall be sized to close off against the fan shutoff pressure as a minimum requirement.

- C. The total damper area operated by an actuator shall not exceed 80 percent of manufacturer's maximum area rating.
- D. Provide one actuator for each damper assembly where possible. Multiple actuators required to drive a single damper assembly shall operate in unison.
- E. Avoid the use of excessively oversized actuators which could overdrive and cause linkage failure when the damper blade has reached either its full open or closed position.
- F. Use jackshafts and shaft couplings in lieu of blade-to-blade linkages when driving axially aligned damper sections.
- G. Provide mounting hardware and linkages for connecting actuator to damper.
- H. Select actuators to fail in desired position in the event of a power failure.
- I. Actuator Fail Positions: As indicated below:
 - 1. Exhaust Air: Close.
 - 2. Outdoor Air: Close.
 - 3. Supply Air: Open.
 - 4. Return Air: Open.

2.4 ELECTRIC AND ELECTRONIC ACTUATORS

- A. Type: Motor operated, with or without gears, electric and electronic.
- B. Voltage:
 - 1. Actuator shall deliver torque required for continuous uniform movement of controlled device from limit to limit when operated at rated voltage.
 - 2. Actuator shall function properly within a range of 85 to 120 percent of nameplate voltage.
- C. Construction:
 - 1. Less Than 100 W: Fiber or reinforced nylon gears with steel shaft, copper alloy or nylon bearings, and pressed steel enclosures.
 - 2. 100 up to 400 W: Gears ground steel, oil immersed, shaft-hardened steel running in bronze, copper alloy, or ball bearings. Operator and gear trains shall be totally enclosed in dustproof cast-iron, cast-steel, or cast-aluminum housing.
 - 3. Greater Than 400 W: Totally enclosed reversible induction motors with auxiliary hand crank and permanently lubricated bearings.
- D. Field Adjustment:
 - 1. Spring return actuators shall be easily switchable from fail open to fail closed in the field without replacement.
 - 2. Provide gear-type actuators with an external manual adjustment mechanism to allow manual positioning of the damper when the actuator is not powered.
- E. Two-Position Actuators: Single direction, spring return or reversing type.
- F. Modulating Actuators:

1. Capable of stopping at all points across full range, and starting in either direction from any point in range.
 2. Control Input Signal:
 - a. Three Point, Tristate, or Floating Point: Clockwise and counter-clockwise inputs. One input drives actuator to open position, and other input drives actuator to close position. No signal of either input remains in last position.
 - b. Proportional: Actuator drives proportional to input signal and modulates throughout its angle of rotation. Suitable for zero- to 10- or 2- to 10-V dc and 4- to 20-mA signals.
 - c. Pulse Width Modulation (PWM): Actuator drives to a specified position according to a pulse duration (length) of signal from a dry-contact closure, triac sink or source controller.
 - d. Programmable Multi-Function:
 - 1) Control input, position feedback, and running time shall be factory or field programmable.
 - 2) Diagnostic feedback of hunting or oscillation, mechanical overload, mechanical travel, and mechanical load limit.
 - 3) Service data, including at a minimum, number of hours powered and number of hours in motion.
- G. Position Feedback:
1. Equip two-position actuators with limits switches or other positive means of a position indication signal for remote monitoring of open and close position.
 2. Equip modulating actuators with a position feedback through current or voltage signal for remote monitoring.
 3. Provide a position indicator and graduated scale on each actuator indicating open and closed travel limits.
- H. Fail-Safe:
1. Where indicated, provide actuator to fail to an end position.
 2. Internal spring return mechanism to drive controlled device to an end position (open or close) on loss of power.
 3. Batteries, capacitors, and other non-mechanical forms of fail-safe operation are acceptable only where uniquely indicated.
- I. Integral Overload Protection:
1. Provide against overload throughout the entire operating range in both directions.
 2. Electronic overload, digital rotation sensing circuitry, mechanical end switches, or magnetic clutches are acceptable methods of protection.
- J. Damper Attachment:
1. Unless otherwise required for damper interface, provide actuator designed to be directly coupled to damper shaft without need for connecting linkages.
 2. Attach actuator to damper drive shaft in a way that ensures maximum transfer of power and torque without slippage.
 3. Bolt and set screw method of attachment is acceptable only if provided with at least two points of attachment.
- K. Temperature and Humidity:

1. Temperature: Suitable for operating temperature range encountered by application with minimum operating temperature range of minus 20 to plus 120 deg F.
 2. Humidity: Suitable for humidity range encountered by application; minimum operating range shall be from 5 to 95 percent relative humidity, non-condensing.
- L. Enclosure:
1. Suitable for ambient conditions encountered by application.
 2. NEMA 250, Type 2 for indoor and protected applications.
 3. NEMA 250, Type 4 or Type 4X for outdoor and unprotected applications.
 4. Provide actuator enclosure with a heater and controller where required by application.
- M. Stroke Time:
1. Operate damper from fully closed to fully open within seconds.
 2. Operate damper from fully open to fully closed within seconds.
 3. Select operating speed to be compatible with equipment and system operation.
 4. Actuators operating in smoke control systems comply with governing code and NFPA requirements.
- N. Sound:
1. Spring Return: 62 dBA.
 2. Non-Spring Return: 45 dBA.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy most stringent requirements indicated.
- B. Properly support dampers and actuators, tubing, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a force.
- C. Provide ceiling, floor, roof, and wall openings and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- D. Seal penetrations made in fire-rated and acoustically rated assemblies.
- E. Fastening Hardware:
1. Stillson wrenches, pliers, or other tools that will cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for assembling and tightening nuts.
 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- F. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required

for Owner's access, confirm unrestricted ladder placement is possible under occupied condition.

3.2 CONTROL DAMPERS

- A. Install smooth transitions, not exceeding 15 degrees, to dampers smaller than adjacent duct. Install transitions as close to damper as possible but at distance to avoid interference and impact to performance. Consult manufacturer for recommended clearance.
- B. Clearance:
 - 1. Locate dampers for easy access and provide separate support of dampers that cannot be handled by service personnel without hoisting mechanism.
 - 2. Install dampers with at least 24 inches of clear space on sides of dampers requiring service access.
- C. Service Access:
 - 1. Dampers and actuators shall be accessible for visual inspection and service.
 - 2. Install access door(s) in duct or equipment located upstream of damper to allow service personnel to hand clean any portion of damper, linkage, and actuator. Comply with requirements in Section 233300 "Air Duct Accessories."
- D. Install dampers straight and true, level in all planes, and square in all dimensions. Install supplementary structural steel reinforcement for large multiple-section dampers if factory support alone cannot handle loading.
- E. Attach actuator(s) to damper drive shaft.
- F. For duct-mounted and equipment-mounted dampers installed outside of equipment, install a visible and accessible indication of damper position from outside.

3.3 CHECKOUT PROCEDURES

- A. Control-Damper Checkout:
 - 1. Check installed products before continuity tests, leak tests, and calibration.
 - 2. Check dampers for proper location and accessibility.
 - 3. Verify that control dampers are installed correctly for flow direction.
 - 4. Verify that proper blade alignment, either parallel or opposed, has been provided.
 - 5. Verify that damper frame attachment is properly secured and sealed.
 - 6. Verify that damper actuator and linkage attachment are secure.
 - 7. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
 - 8. Verify that damper blade travel is unobstructed.

3.4 ADJUSTMENT, CALIBRATION, AND TESTING:

- A. Stroke and adjust control dampers following manufacturer's recommended procedure, from 100 percent open to 100 percent closed back to 100 percent open.
- B. Check and document open and close cycle times for applications with a cycle time of less than 30 seconds.

- C. For control dampers equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

END OF SECTION 230923.12

SECTION 232113 - HYDRONIC PIPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes pipe and fitting materials and joining methods for the following:
 - 1. Hot water heating piping.
 - 2. Makeup water piping.
 - 3. Air Vent piping.
 - 4. Safety valve inlet and outlet piping.
 - 5. Snow melt heating hot water piping.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: For each type of the following:
 - 1. Pipe materials.
 - 2. Pipe fittings.
 - 3. Pipe joining materials.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality control reports.

1.4 QUALITY ASSURANCE

- A. ASME Compliance” Comply with ASME B31.9, “Building Services Piping,” for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressures and temperatures:
 - 1. Chilled-Water Piping: 150 psig.
 - 2. Heating hot water piping: 150 psig at 200 deg F.
 - 3. Make-up water piping: 80 psig at 150 deg F.
 - 4. Drain piping: 150 deg F.
 - 5. Air vent piping: 200 deg F.
 - 6. Safety valve inlet and outlet Piping: Equal to the pressure of the piping system to which it is attached.

2.2 COPPER TUBE AND FITTINGS.

- A. Drawn-Temper Copper Tube: ASTM B88, Type L.

- B. Drawn-Temper Copper Tube: ASTM B88, Type M.
- C. Annealed-Temper Copper Tube: ASTM B88, Type K.
- D. Copper Fittings: ASME B16.22.
- E. Copper Unions: ASME B16.22.

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A53/A53M black steel with plain ends; welded and seamless, Grade B, and schedule number as indicated in Part 3, "Piping Applications" Article.
- B. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 as indicated in Part 3, "Piping Applications" Article.
- C. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in "Piping Applications" Article.
- D. Cast iron flanges and flanged fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in "Piping Applications" Article.
- E. Wrought cast and forged steel flanges and flanged fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections and facings:
 - 1. Material Group: 1.1
 - 2. End Connections: Butt welding.
 - 3. Facings: Raised face.

2.4 JOINING MATERIALS

- A. Pipe flange gasket materials: Suitable for chemical and thermal conditions of piping systems contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless otherwise indicated.
 - a. Full face type: For flat-face, Class 125, cast iron and cast bronze flanges.
 - b. Narrow face type: For raised face, Class 250, cast iron and steel flanges.
 - 2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
 - 3. Solder filler metals: ASTM B32, lead free alloys. Include water flushable flux according to ASTM B813.
 - 4. Brazing filler metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
 - 5. Welding filler metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.5 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

- B. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Precision Plumbing Products (PPP) Clearflow.
 - b. MIFAB MI-DE.
 - 2. Description:
 - a. Standard: ASTM F1545.
 - b. Pressure Rating: 300 psig minimum at 225 deg F.
 - c. End connections: Threaded.

2.6 VALVES

- A. Check, ball, and butterfly valves: Comply with requirements specified in Division 23 Section "Valves".
- B. Automatic temperature control valves, actuators, and sensors: Comply with requirements specified in Division 23 Section "HVAC Instrumentation and Controls." See editing instruction No. 1, in evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 – Product requirements.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Hot-Water Heating, aboveground shall be the following:
 - 1. Sizes up to 1 ½": ASTM B88, Type "L", hard drawn copper with wrought-copper solder joint fittings.
 - 2. Sizes up to 2 to 2 ½": ASTM B88, Type "L", hard drawn copper with wrought-copper brazed joint fittings.
 - 3. Sizes over 3": ASTM A53, Schedule 40, 0.375 wall for sizes over 10", black steel with welded joints. Victaulic (grooved) couplings are not acceptable.
- B. Makeup-water piping installed aboveground shall be the following:
 - 1. Type "L", drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
- C. Air-Vent Piping:
 - 1. Inlet: Same as service were installed with metal-to-plastic transition fittings for plastic piping systems, according to piping manufacturer's written instructions.
 - 2. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.
- D. Safety-valved inlet and outlet piping for hot water piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed with metal-to-plastic transition fittings for plastic piping systems, according to piping manufacturer's written instructions.

3.2 INSTALLATION OF PIPING

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system operating pressure.
- K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- L. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- O. Install branch connections to mains using tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- P. Install valves according to Section 230523.12 "Ball Valves for HVAC Piping", Section 230523.13 "Butterfly Valves for HVAC Piping", and Section 230523.14 "Check Valves for HVAC Piping."
- Q. Install unions in piping, and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

- R. Install flanges in piping, NPS 2 ½ and larger, at final connections of equipment and elsewhere as indicated.
- S. Install shutoff valve immediately upstream of each dielectric fitting.
- T. Comply with requirements in Section 230516 "Expansion Fittings and Loops for HVAC Piping" for installation of expansion loops, expansion joints, anchors, and pipe alignment guides.
- U. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for identifying piping.
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.3 INSTALLATION OF DIELECTRIC FITTINGS

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric nipples.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.
- D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.4 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 230529 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.
 - 1. Comply with the following requirements for maximum spacing of supports.
- C. Install the following piping attachments:
 - 1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
 - 2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
 - 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping less than 20 feet or longer, supported on a trapeze.
 - 4. Spring hangers to support vertical runs.

5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
 6. On plastic pipe, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.
- D. Install hangers for steel piping, with the following maximum spacing and minimum rod sizes:
1. NPS $\frac{3}{4}$: Maximum span, 7 feet.
 2. NPS 1: Maximum span, 7 feet.
 3. NPS $1\frac{1}{2}$: Maximum span, 9 feet.
 4. NPS 2: Maximum span, 10 feet.
 5. NPS $2\frac{1}{2}$: Maximum span, 11 feet.
 6. NPS 3 and larger: Maximum span, 12 feet.
- E. Install hangers for drawn-temper copper piping, with the following maximum spacing and minimum rod sizes:
1. NPS $\frac{3}{4}$: Maximum span, 5 feet; minimum rod size, $\frac{1}{4}$ inch.
 2. NPS 1: Maximum span, 6 feet; minimum rod size, $\frac{1}{4}$ inch.
 3. NPS $1\frac{1}{4}$: Maximum span, 7 feet; minimum rod size, $\frac{3}{8}$ inch.
 4. NPS $1\frac{1}{2}$: Maximum span, 8 feet; minimum rod size, $\frac{3}{8}$ inch.
 5. NPS $2\frac{1}{2}$: Maximum span, 9 feet; minimum rod size, $\frac{3}{8}$ inch.
 6. NPS 3 and larger: Maximum span, 10 feet; minimum rod size, $\frac{3}{8}$ inch.
- F. Plastic piping hanger spacing: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.
- G. Support vertical runs at roof, at each floor, and at 10-foot intervals between floors.

3.5 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain end of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Solder joints: Apply ASTM B813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B828 or CDA's "Copper Tube Handbook", using lead free solder alloy complying with ASTM B32.
- D. Brazed joints: Construct joints according to AWS's "Brazing Handbook", "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- E. Threaded joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 2. Damaged threads: DO NOT use pipe or pipe fittings with threads that are corroded or damaged. DO NOT use pipe sections that have cracked or open welds.

3.6 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install bypass piping with ball valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install ports for pressure gauges and thermometers at coil inlet and outlet connections. Comply with requirements in Section 230519 "Meters and Gauges for HVAC Piping."

3.7 CHEMICAL TREATMENT

- A. Refer to chemical water treatment specification.

3.8 FIELD QUALITY CONTROL

- A. Prepare hydronic piping in accordance with ASME B31.9 and as follows:
 - 1. Leave joints, including welds, uninsulated and exposed for examination during test.
 - 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
 - 3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
 - 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure is to be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
 - 5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Perform the following tests on hydronic piping:
 - 1. Use ambient-temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
 - 2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
 - 3. Isolate expansion tanks and determine that hydronic system is full of water.
 - 4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure is not to exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times the "SE" value in Appendix A in ASME B31.9. "Building Services Piping".
 - 5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
 - 6. Prepare written report of testing.

- 3.9 Perform the following before operating the system:
1. Open manual valves fully.
 2. Inspect pumps for proper rotation.
 3. Set makeup pressure-reducing valves for required system pressure.
 4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
 5. Set temperature controls so all coils are calling for full flow.
 6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
 7. Verify lubrication of motors and bearings

END OF SECTION 232113

SECTION 232123 - HYDRONIC PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Close-coupled, in-line centrifugal pumps.
 - 2. Separately coupled, base-mounted, end-suction centrifugal pumps.

1.2 DEFINITIONS

- A. ECM: Electronically commutated motor.
- B. EPDM: Ethylene propylene diene monomer.
- C. FKM: Fluoroelastomer polymer.
- D. HI: Hydraulic Institute.
- E. NBR: Nitrile rubber or Buna-N.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of pump.
- B. Shop Drawings: For each pump.
 - 1. Show pump layout and connections.
 - 2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
 - 3. Include diagrams for power, signal, and control wiring.
- C. See division 01 for submittal requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.
- B. Pump Startup report, filled out startup checklist, and laser alignment report.

PART 2 - PRODUCTS

2.1 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with the specified product on the drawings, provide products by one of the following:
 - 1. Grundfos.
 - 2. TACO Incorporated.
 - 3. Goulds.

- B. If product is substituted from the basis of design on the drawings and needs redesign by the design team, contractor shall compensate design team for redesign.
- C. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically.
- D. Pump Construction:
 - 1. Casing: Radially split, cast iron, with threaded gage tappings at inlet and outlet, replaceable bronze wear rings, and threaded companion-flange connections.
 - 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For constant-speed pumps, trim impeller to match specified performance.
 - 3. Pump Shaft: Stainless steel.
 - 4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket. Include water slinger on shaft between motor and seal.
 - 5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
 - 6. Pump Bearings: Permanently lubricated ball bearings.
- E. Motor: Single speed and rigidly mounted to pump casing.
 - 1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- F. Provide and install shaft grounding ring.

2.2 SEPARATELY COUPLED, BASE MOUNTED, END SUCTION CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with the specified product on the drawings, provide products by one of the following:
 - 1. Grundfos.
 - 2. TACO Incorporated.
 - 3. Goulds.
- B. If product is substituted from the basis of design on the drawings and needs redesign by the design team, contractor shall compensate design team for redesign.
- C. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, base mounted pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally.
- D. Pump Construction:

1. Casing: Radially split, cast iron, with threaded gage tappings at inlet and outlet, and threaded companion-flange connections.
 2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, and keyed to shaft. For pumps not frequency-drive controlled, trim impeller to match specified performance.
 3. Pump Shaft: Stainless steel.
 4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket. Include water slinger on shaft between motor and seal.
 5. Pump Bearings: Oil lubricated; bronze-journal or thrust type.
- E. Shaft Coupling: Molded-rubber insert with interlocking spider capable of absorbing vibration.
- F. Motor: Single speed and resiliently mounted to pump casing.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- G. Motor shall be NEMA Premium Efficient inverter duty motor.
- H. Provide and install shaft grounding ring.

2.3 PUMP SPECIALTY FITTINGS

- A. Suction Diffuser:
1. Angle pattern.
 2. 175-psig pressure rating, ductile-iron body and end cap, pump-inlet fitting.
 3. Bronze startup and bronze or stainless-steel permanent strainers.
 4. Bronze or stainless-steel straightening vanes.
 5. Drain plug.
 6. Factory-fabricated support.
- B. Triple-Duty Valve:
1. Angle or straight pattern.
 2. 175-psig pressure rating, ductile-iron body, pump-discharge fitting.
 3. Drain plug and bronze-fitted shutoff, balancing, and check valve features.
 4. Brass gage ports with integral check valve and orifice for flow measurement.

2.4 ELECTRONICALLY COMMUTATED MOTOR (ECM)

- A. Motors shall be:
1. Synchronous, constant torque, ECM with permanent magnet rotor. Rotor magnets to be time-stable, nontoxic ceramic magnets (Sr-Fe).
 2. Driven by a frequency converter with an integrated power factor correction filter. Conventional induction motors will not be acceptable.
 3. Each motor with an integrated variable-frequency drive, tested as one unit by manufacturer.

4. Motor speed adjustable over full range from 0 rpm to maximum scheduled speed.
5. Variable motor speed to be controlled by a 0- to 10 V-dc or 4- to 20-mA input.
6. Integrated motor protection verified by UL to protect the pump against over-/undervoltage, overtemperature of motor and/or electronics, overcurrent, locked rotor, and dry run (no-load condition).

PART 3 - EXECUTION

3.1 PUMP INSTALLATION

- A. Comply with HI 1.4.
- B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.
- C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- D. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.
- E. Equipment Mounting:
 1. Install base-mounted pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- F. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and elastomeric hangers of size required to support weight of in-line pumps.
 1. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

3.2 ALIGNMENT

- A. Engage a factory-authorized service representative to perform laser alignment services.
- B. Comply with requirements in Hydronics Institute standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.
- C. Comply with pump and coupling manufacturers' written instructions.
- D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.3 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to pump, allow space for service and maintenance.
- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
- E. Install triple-duty valve on discharge side of pumps.
- F. Install suction diffuser and shutoff valve on suction side of pumps.
- G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.
- H. Install pressure gages on pump suction and discharge or at integral pressure-gage tapping, or install single gage with multiple-input selector valve.
- I. Install check valve and gate or ball valve on each condensate pump unit discharge.
- J. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- K. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

END OF SECTION 232123

SECTION 232300 – REFRIGERANT PIPING

PART 1 - GENERAL

1.1 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-410:
 - 1. Suction Lines for Air-Conditioning Applications: 200 psig
 - 2. Liquid Lines for Air-Conditioning Applications: 535 psig

1.2 SUBMITTALS

- A. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop based on manufacturer's test data.
- B. See section 013000 for submittal requirements.

1.3 QUALITY ASSURANCE

- A. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."
- B. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

1.4 PRODUCT STORAGE AND HANDLING

- A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

PART 2 - PRODUCTS

2.1 PIPING APPLICATIONS

- A. Copper and tube fittings
 - 1. Drawn-Temper Copper Tube: ASTM B 280, Type ACR, clean, dry, and capped.
 - 2. Annealed-Temper Copper Tube: ASTM B 280, Type ACR, clean, dry, and capped. Annealed copper tubing shall not be used for piping larger than 0.625 O.D.
 - 3. Wrought-Copper Fittings: ASME B16.22.
 - 4. Wrought-Copper Unions: ASME B16.22.
 - 5. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
 - 6. Brazing Filler Metals: AWS A5.8.

2.2 VALVES AND SPECIALTIES

- A. Moisture/Liquid Indicators:
 - 1. Body: Forged brass.
 - 2. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
 - 3. Indicator: Color coded to show moisture content in ppm.
 - 4. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.

5. End Connections: Socket or flare.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 240 deg F.

B. Permanent Filter Dryers: Comply with ARI 730.

1. Body and Cover: Painted-steel shell.
2. Filter Media: 10 micron pleated with integral end rings; stainless-steel support.
3. Desiccant Media: Activated alumina
4. End Connections: Socket.
5. Access Ports: NPS 1/4 connections at entering and leaving sides for pressure differential measurement.
6. Maximum Pressure Loss: 2 psig
7. Working Pressure Rating: 500 psig
8. Maximum Operating Temperature: 240 deg F

2.3 REFRIGERANTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Atofina Chemicals, Inc.
2. DuPont Company; Fluorochemicals Div.
3. Honeywell, Inc.; Genetron Refrigerants.
4. INEOS Fluor Americas LLC.
5. Or approved equal.

2.4 INSULATION

A. For indoor refrigerant piping, the suction piping shall be insulated with Rubatex R-180 FS or approved equal 1/2" thick closed cell foam insulation meeting all NFPA requirements for smoke density and flame spread.

B. All outdoor section of the refrigerant suction and liquid piping shall be insulated with Rubatex R-180 FS or approved equal 1/2" thick closed cell foam insulation meeting all NFPA requirements for smoke density and flame spread and covered with embossed aluminum jacket.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Suction and Liquid Lines NPS 1-1/2 for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed joints.

3.2 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

- B. Install refrigerant piping according to ASHRAE 15.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping adjacent to machines to allow service and maintenance.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Select system components with pressure rating equal to or greater than system operating pressure.
- J. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- K. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels if valves or equipment requiring maintenance is concealed behind finished surfaces.
- L. Install refrigerant piping in rigid conduit in locations where exposed to mechanical injury.
- M. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
- N. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- O. Identify refrigerant piping and valves according to Division 23 Section "Identification for HVAC Piping and Equipment."
- P. Install sleeves for piping penetrations of walls, ceilings, and floors.
- Q. Install sleeve seals for piping penetrations of concrete walls and slabs.
- R. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.3 PIPE JOINT CONSTRUCTION

- A. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."

1. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.

3.4 HANGERS AND SUPPORTS

- A. Hanger, support, and anchor products are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Install the following pipe attachments:
 1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
 2. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- C. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:
 1. NPS 1/2: Maximum span, 60 inches; minimum rod size, 1/4 inch.
 2. NPS 5/8: Maximum span, 60 inches; minimum rod size, 1/4 inch.
 3. NPS 1: Maximum span, 72 inches; minimum rod size, 1/4 inch.
 4. NPS 1-1/4: Maximum span, 96 inches; minimum rod size, 3/8 inch.
- D. Support multifloor vertical runs at least at each floor.

3.5 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 1. Comply with ASME B31.5, Chapter VI.
 2. Test refrigerant piping and specialties. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
 3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.
 - a. Fill system with nitrogen to the required test pressure.
 - b. System shall maintain test pressure at the manifold gage throughout duration of test.
 - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
 - d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.

3.6 SYSTEM CHARGING

- A. Charge system using the following procedures:
 1. Install core in filter dryers after leak test but before evacuation.
 2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
 4. Charge system with a new filter-dryer core in charging line.

3.7 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning controllers to the system design temperature.

END OF SECTION 232300

SECTION 233113 – METAL DUCTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Rectangular ducts and fittings.
 - 2. Sheet metal materials.
 - 3. Sealants and gaskets.
 - 4. Hangers and supports.
 - 5. Seismic-restraint devices.
 - 6. Duct Liner
- B. Related Sections:
 - 1. Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
 - 2. Division 23 Section "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.2 PERFORMANCE REQUIREMENTS

- A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports and seismic restraints shall withstand the effects of gravity and seismic loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"
 - 1. See section 23 05 48 for seismic performance requirements.
- C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2010.

1.3 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
 - 3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."
- C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004, Section 6.4.4 - "HVAC System Construction and Insulation."

PART 2 - PRODUCTS

2.1 RECTANGULAR DUCT AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-4, "Transverse (Girth) Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-5, "Longitudinal Seams - Rectangular Ducts," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 2, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 ROUND DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
- B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- D. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- E. Ductwork connected to dehumidification unit is to be 316 stainless-steel with stainless steel screws, stainless steel flanges and stainless-steel fittings and support.

2.3 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
 - 1. Galvanized Coating Designation: G90.
 - 2. Finishes for Surfaces Exposed to View: Mill phosphatized.
- C. Aluminum sheet, ASTM B209, alloy 3003.
- D. Galvanized Steel Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.
- E. Aluminum Steel Tie Rods: Aluminum 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.
- F. Polyisocyanurate: Insulation shall be compliant with ASTM C1289, having minimum thermal resistance of 0.167 per degree F/BTUH/inch at 75-degrees F mean temperature. John Mansville AP foil insulation.

2.4 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Water-Based Joint and Seam Sealant:
 - 1. Application Method: Brush on.
 - 2. Solids Content: Minimum 65 percent.
 - 3. Shore A Hardness: Minimum 20.
 - 4. Water resistant.
 - 5. Mold and mildew resistant.
 - 6. VOC: Maximum 75 g/L (less water).
 - 7. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
 - 8. Service: Indoor or outdoor.
 - 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless-steel, or aluminum sheets.
- C. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- D. Round Duct Joint O-Ring Seals:

1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch and shall be rated for 10-inch wg static-pressure class, positive or negative.
2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.5 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Pool Room: See non-metallica hangers and supports specification.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1, "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct."
- D. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- E. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- F. Trapeze and Riser Supports:
 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
 2. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

2.6 DUCT LINER

- A. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
 1. Basis-of-Design Product: Subject to compliance with requirements, provide Johns Manville Linacoustic RC or comparable product by one of the following:
 - a. CertainTeed Corporation; Insulation Group.
 - b. Knauf Insulation.
 - c. Owens Corning.
 2. Duct liner shall be a minimum of 1-1/2" thick with a minimum installed R-value of R-6.
 3. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 4. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.
 - a. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Insulation Pins and Washers:
 1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch diameter shank,

length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.

2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick galvanized steel; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

C. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-19, "Flexible Duct Liner Installation."

1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
3. Butt transverse joints without gaps, and coat joint with adhesive.
4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm.
7. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
 - a. Fan discharges.
 - b. Intervals of lined duct preceding unlined duct.
 - c. Upstream edges of transverse joints in ducts where air velocities are higher than 2500 fpm or where indicated.
9. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.
 - a. Sheet Metal Inner Duct Perforations: 3/32-inch diameter, with an overall open area of 23 percent.

2.7 SEISMIC-RESTRAINT DEVICES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper B-Line, Inc.
 2. Ductmate Industries, Inc.
 3. Hilti Corp.
 4. Unistrut Corporation.
- B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an evaluation service member of the ICC Evaluation Service.

- C. Channel Support System: Shop- or field-fabricated support assembly made of slotted steel channels rated in tension, compression, and torsion forces and with accessories for attachment to braced component at one end and to building structure at the other end. Include matching components and corrosion-resistant coating.
- D. Restraint Cables: ASTM A 603, galvanized-steel cables with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for restraining cable service; and with an automatic-locking and clamping device or double-cable clips.
- E. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install round ducts in maximum practical lengths.
- D. Install ducts with fewest possible joints.
- E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- H. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
- I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- J. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.

3.2 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
 - 1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 2. Outdoor, Supply-Air Ducts: Seal Class A.
 - 3. Outdoor, Return-Air Ducts: Seal Class C.
 - 4. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg Seal Class B.
 - 5. Conditioned Space, Exhaust Ducts: Seal Class B.
 - 6. Conditioned Space, Return-Air Ducts: Seal Class C.

3.3 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."
- B. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1, "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- C. Hangers Exposed to View: Threaded rod and angle or channel supports.
- D. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum interval of 16 feet.
- E. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.4 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by applicable building codes.
- B. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.
- C. Install seismic-restraint devices using methods approved by an evaluation service member of the ICC Evaluation Service.

- D. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.

3.5 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.6 START UP

- A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

3.7 DUCT SCHEDULE

- A. Duct Liner:
 - 1. Rectangular Supply Ducts and Fittings: Fibrous glass, 1-inch thick
 - 2. Rectangular Return Ducts and Fittings: Fibrous glass, 1-inch thick
 - 3. Rectangular Transfer Ducts and Fittings: Fibrous glass, 1-inch thick
 - 4. Rectangular Return Ducts and Fittings: Fibrous glass, 1-inch thick
 - 5. Adjust duct size to accommodate liner and give net dimensions shown on drawings.
 - 6. Ductwork connected to makeup air units shall not be internally lined.
- B. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:
 - 1. Ductwork connected to dehumidification unit: aluminum with marine grade paint.
- C. Supply Ducts:
 - 1. Ducts Connected to Air Handling Units:
 - a. Pressure Class: Positive 4-inch wg.
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 3
 - d. SMACNA Leakage Class for Round and Flat Oval: 3.
 - 2. Ducts Connected to Makeup Air Units:
 - a. Pressure Class: Positive 3-inch wg.
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 3
 - d. SMACNA Leakage Class for Round and Flat Oval: 3.
- D. Return Ducts:
 - 1. Ducts Connected to Air Handling Units:
 - a. Pressure Class: Positive or negative 4-inch wg.
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 6.
 - d. SMACNA Leakage Class for Round and Flat Oval: 6.
 - 2. Ducts Connected to Makeup Air Units:

- a. Pressure Class: Positive or negative 3-inch wg.
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 6.
 - d. SMACNA Leakage Class for Round and Flat Oval: 6.
 - e.
- E. Intermediate Reinforcement:
- 1. Galvanized-Steel Ducts: Galvanized steel.
- F. Elbow Configuration:
- 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Velocity 1000 fpm or Lower:
 - 1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
 - 2) Mitered Type RE 4 without vanes.
 - b. Velocity 1000 to 1500 fpm:
 - 1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
 - c. Velocity 1500 fpm or Higher:
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
 - 2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
 - 3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
 - 1) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
 - 2) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
 - 3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.

- 4) Radius-to Diameter Ratio: 1.5.
 - b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
 - c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam.
- G. Branch Configuration:
 - 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Spin in.
 - 2. Round: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
 - a. Velocity 1000 fpm or Lower: 90-degree tap.
 - b. Velocity 1000 to 1500 fpm: Conical tap.
 - c. Velocity 1500 fpm or Higher: 45-degree lateral.

END OF SECTION 233113

SECTION 233300 – AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Manual volume dampers.
 2. Flange connectors.
 3. Turning vanes.
 4. Fire Dampers
 5. Duct-mounted access doors.
 6. Flexible connectors.
 7. Duct accessory hardware.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details, and attachments to other work.
1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
 - a. Special fittings.
 - b. Manual volume damper installations.
 - c. Control-damper installations.
 - d. Fire-damper and smoke-damper installations, including sleeves; and duct-mounted access doors.
 - e. Wiring Diagrams: For power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 MATERIALS

- A. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
 - 1. Galvanized Coating Designation: G90.
 - 2. Exposed-Surface Finish: Mill phosphatized.
- B. Reinforcement Shapes and Plates: Galvanized-steel reinforcement were installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- C. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.3 MANUAL VOLUME DAMPERS

- A. Standard, Steel, Manual Volume Dampers:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
 - a. Greenheck Fan Corporation.
 - b. Nailor Industries Inc.
 - c. Air Balance Inc.
 - d. Ruskin.
 - e. Vent Products Co., Inc.
 - 2. Standard leakage rating, with linkage outside airstream.
 - 3. Suitable for horizontal or vertical applications.
 - 4. Frames:
 - a. Frame: Hat-shaped, 22 gauge-thick, galvanized sheet steel.
 - b. Mitered and welded corners.
 - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
 - 5. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Galvanized-steel, 20 gauge thick.
 - 6. Blade Axles: Galvanized steel.
 - 7. Bearings:
 - a. Oil-impregnated bronze.
 - b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
 - 8. Tie Bars and Brackets: Galvanized steel.
- B. Jackshaft:
 - 1. Size: 0.5-inch diameter.
 - 2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
 - 3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.
- C. Damper Hardware:

1. Zinc-plated, die-cast core with dial and handle made of 3/32-inch-thick zinc-plated steel, and a 3/4-inch hexagon locking nut.
2. Include center hole to suit damper operating-rod size.
3. Include elevated platform for insulated duct mounting.

2.4 FLANGE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
1. CL WARD & Family Inc.
 2. Ductmate Industries, Inc.
 3. Hardcast, Inc.
 4. Ward Industries, Inc.
- B. Description: Add-on or roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.
- C. Material: Galvanized steel.
- D. Gage and Shape: Match connecting ductwork.

2.5 TURNING VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. CL WARD & Family Inc.
 2. Ductmate Industries, Inc.
 3. Duro Dyne Inc.
 4. Hardcast, Inc.
 5. METALAIRE, Inc.
 6. Ward Industries, Inc.
- B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
- D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 4-3, "Vanes and Vane Runners," and 4-4, "Vane Support in Elbows."
- E. Vane Construction: Single wall.

2.6 FIRE DAMPERS

- A. Manufacturers: Subject to compliance with the specified product on the drawings, provide products by one of the following:
 - 1. Pottorff.
 - 2. Greenheck.
 - 3. Ruskin
 - 4. Or Approved Equal
- B. Type: dynamic; rated and labeled in accordance with UL 555 by an NRTL.
- C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000 fpm velocity.
- D. Fire Rating: 1-1/2 and 3 hours.
- E. Frame: Multiple-blade type; fabricated with roll-formed galvanized steel; with mitered and interlocking corners; gauge in accordance with UL listing.
- F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel; gauge in accordance with UL listing.
- G. Mounting Orientation: Vertical or horizontal as indicated.
- H. Blades: Roll-formed galvanized sheet steel, full-length steel blade connectors. Material gauge is to be in accordance with UL listing.

2.7 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Ductmate Industries, Inc.
 - 2. Duro Dyne Inc.
 - 3. Hardcast, Inc.
 - 4. Ventfabrics, Inc.
 - 5. Ward Industries, Inc.
- B. Materials: Flame-retardant or noncombustible fabrics.
- C. Coatings and Adhesives: Comply with UL 181, Class 1.
- D. Metal-Edged Connectors: Factory fabricated with a fabric strip 5-3/4 inches wide attached to two strips of 2-3/4-inch-de, 0.028-inch-ick, galvanized sheet steel or 0.032-inch-ick aluminum sheets. Provide metal compatible with connected ducts.
- E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
 - 1. Minimum Weight: 26 oz./sq. yd.
 - 2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
 - 3. Service Temperature: Minus 40 to plus 200 deg F

2.8 DUCT ACCESSORY HARDWARE

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness. Test holes shall be finished with a Ventlock instrument test hole assembly, Ventlock model 699.
- B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- C. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
- D. Set dampers to fully open position before testing, adjusting, and balancing.
- E. Install test holes at fan inlets and outlets and elsewhere as indicated.
- F. Install fire dampers in accordance with UL listing.
- G. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
 - 1. On both sides of duct coils.
 - 2. Upstream and downstream from duct filters.
 - 3. At outdoor-air intakes and mixed-air plenums.
 - 4. At drain pans and seals.
 - 5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
 - 6. Adjacent to and close enough to fire dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
 - 7. At each change in direction and at maximum 50-foot spacing.
 - 8. Upstream and downstream from turning vanes.
 - 9. Upstream or downstream from duct silencers.

- 10. Control devices requiring inspection.
- 11. Elsewhere as indicated.
- H. Install access doors with swing against duct static pressure.
- I. Install flexible connectors to connect ducts to equipment.
- J. Connect diffusers or light troffer boots to ducts with maximum 60-inch lengths of flexible duct clamped or strapped in place.
- K. Connect flexible ducts to metal ducts with draw bands.
- L. Install duct test holes where required for testing and balancing purposes.

3.2 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Operate dampers to verify full range of movement.
 - 2. Inspect locations of access doors and verify that purpose of access door can be performed.
 - 3. Operate fire dampers to verify full range of movement and verify that proper heat-response device is installed.
 - 4. Inspect turning vanes for proper and secure installation.

END OF SECTION 233300

SECTION 233346 - FLEXIBLE DUCTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Insulated flexible ducts.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

- A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- C. Comply with the Air Diffusion Council's "ADC Flexible Air Duct Test Code FD 72-R1."
- D. Comply with ASTM E96/E96M, "Test Methods for Water Vapor Transmission of Materials."

2.2 INSULATED FLEXIBLE DUCTS

- A. Provide product by one of the following manufacturers:
 - 1. ATCO
 - 2. Thermaflex
 - 3. Hart & Cosley
 - 4. Or approved equal
- B. Insulated, Flexible Duct: UL 181, Class 1, two-ply vinyl film supported by helically wound, spring-steel wire; fibrous-glass insulation; aluminized vapor-barrier film.
 - 1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
 - 2. Maximum Air Velocity: 4000 fpm.
 - 3. Temperature Range: Minus 10 to plus 160 deg F.
 - 4. Insulation R-Value: R6.

2.3 FLEXIBLE DUCT CONNECTORS

- A. Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action in sizes 3 through 18 inches, to suit duct size.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install flexible ducts according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install in indoor applications only. Flexible ductwork should not be exposed to UV lighting.
- C. Connect diffusers or ceiling return grilles to ducts directly or with maximum 60-inch lengths of flexible duct clamped or strapped in place.
- D. Connect flexible ducts to metal ducts with adhesive plus sheet metal screws.
- E. Install duct test holes where required for testing and balancing purposes.
- F. Installation:
1. Install ducts fully extended.
 2. Do not bend ducts across sharp corners.
 3. Bends of flexible ducting shall not exceed a minimum of one duct diameter.
 4. Avoid contact with metal fixtures, water lines, pipes, or conduits.
 5. Install flexible ducts in a direct line, without sags, twists, or turns.
- G. Supporting Flexible Ducts:
1. Suspend flexible ducts with bands 1-1/2 inches wide or wider and spaced a maximum of 48 inches apart. Maximum centerline sag between supports shall not exceed 1/2 inch per 12 inches.
 2. Install extra supports at bends placed approximately one duct diameter from center line of the bend.

END OF SECTION 233346

SECTION 233423 - HVAC POWER VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Ceiling-mounted ventilators.
 - 2. Centrifugal ventilators - roof upblast.
 - 3. Sidewall propeller fans.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, or BIM model, drawn to scale and coordinated with all building trades.
- B. Seismic Qualification Data: For fans, accessories, and components, from manufacturer.
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 CEILING-MOUNTED VENTILATORS

- A. Basis of design product. Subject to compliance with the specified product on the drawings. Provide a product by the following:
 - 1. Greenheck
 - 2. PennBarry
 - 3. Cook
- B. Housing: Steel, lined with acoustical insulation.
- C. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel removable for service.
- D. Back-draft damper: Integral.

- E. Grille: Aluminum, louvered grille with flange on intake and thumbscrew or spring retainer attachment to fan housing.
- F. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.
- G. Accessories:
 - 1. Electronically commutated motor (ECM) with factory mounted and wire speed controller.
 - 2. Isolation: Rubber-in-shear vibration isolators.
 - 3. Manufacturer's standard roof jack or wall cap, and transition fittings.

2.2 CENTRIFUGAL VENTILATORS - ROOF UPBLAST.

- A. Basis of design product. Subject to compliance with the specified product on the drawings. Provide a product by the following:
 - 1. Greenheck
 - 2. PennBarry
 - 3. Cook
- B. Configuration: Centrifugal roof upblast ventilator.
- C. Housing: Removable spun-aluminum dome top and outlet baffle; square, one-piece aluminum base with venturi inlet cone.
 - 1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains.
- D. Fan Wheels: Aluminum hub and wheel with backward-inclined blades; spark proof construction.
- E. Direct Drive:
 - 1. Resiliency mounted to housing.
 - 2. Bearings: Permanently lubricated, permanently sealed, self-aligning, ball bearings; minimum ABMA 9 L(10) of 100,000 hours.
 - 3. Fan and motor isolated from airstream.
- F. Accessories:
 - 1. Electronically commutated motor (ECM) with factory mounted and wired motor speed controller.
 - 2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
 - 3. Bird Screens: Removable, 1/2-inch mesh, aluminum, or brass wire.
 - 4. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
 - 5. Spark-resistant, all-aluminum wheel construction.
 - 6. Seismic, roof curb. Coordinate pitch prior to ordering.

2.3 SIDEWALL PROPELLER FANS

- A. Basis of design product, subject to compliance with the specified product on the drawings or comparable product by one of the following manufacturers:

1. Greenheck
 2. PennBarry
 3. Or approved equal.
- B. Housing: Galvanized-steel sheet with flanged edges and integral orifice ring, with baked-enamel finish coat applied after assembly.
- C. Fan Wheel: Replaceable, extruded-aluminum, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.
- D. Fan Drive, Direct: Direct-drive motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.
- E. Accessories:
1. Disconnect Switch: fused type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
 2. Motorized Dampers: Parallel-blade dampers with electric actuator wired to close when fan stops.
 3. Motor-Side Back Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.
- F. Direct Drive:
1. Resiliency mounted to housing.
 2. Bearings: Permanently lubricated, permanently sealed, self-aligning, ball bearings; minimum ABMA 9 L(10) of 100,000 hours.
 3. Fan and motor isolated from airstream.
- G. Accessories:
1. Electronically commutated motor (ECM) with factory mounted and wired motor speed controller.
 2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
 3. Bird Screens: Removable, 1/2-inch mesh, aluminum, or brass wire.
 4. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
 5. Spark-resistant, all-aluminum wheel construction.
 6. Seismic, roof curb. Coordinate pitch prior to ordering.

2.4 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2.5 SOURCE QUALITY CONTROL

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

- B. AMCA Certification: Fans shall comply with AMCA 11 and bear the AMCA-Certified Ratings Seal.
- C. Fan Sound Ratings: Comply with AMCA 311, and label fans with the AMCA-Certified Ratings Seal. Sound ratings shall comply with AMCA 301. The fans shall be tested according to AMCA 300.
- D. Fan Performance Ratings: Comply with AMCA 211 and label fans with AMCA-Certified Rating Seal. The fans shall be tested for air performance - flow rate, fan pressure, power, fan efficiency, air density, speed of rotation, and fan efficiency - according to AMCA 210/ASHRAE 51.
- E. Operating Limits: Classify according to AMCA 99.
- F. UL Standards: Power ventilators shall comply with UL 705.

PART 3 - EXECUTION

3.1 INSTALLATION OF HVAC POWER VENTILATORS

- A. Install power ventilators level and plumb.
- B. Secure roof-mounted fans to roof curbs with zinc-plated hardware.
- C. Ceiling Units: Suspend units from structure; use steel wire or metal straps.
- D. Support suspended units from structure using threaded steel rods and spring hangers spring hangers with vertical-limit stops having a static deflection of 1 inch.
- E. Install units with clearances for service and maintenance.
- F. Label units according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.2 DUCTWORK CONNECTIONS

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."

3.3 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."

2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.4 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- C. Perform tests and inspections.
- D. Tests and Inspections:
 1. Verify that shipping, blocking, and bracing are removed.
 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 3. Verify that there is adequate maintenance and access space.
 4. Verify that cleaning and adjusting are complete.
 5. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 6. Adjust belt tension.
 7. Adjust damper linkages for proper damper operation.
 8. Verify lubrication for bearings and other moving parts.
 9. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 10. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 11. Shut unit down and reconnect automatic temperature-control operators.
 12. Remove and replace malfunctioning units and retest as specified above.
- E. Test and adjust controls and safeties. Controls and equipment will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.

- D. Replace fan and motor pulleys as required to achieve design airflow.
- E. Lubricate bearings.

3.7 DEMONSTRATION

- A. Owner's maintenance personnel to adjust, operate, and maintain centrifugal fans.

END OF SECTION 233423

SECTION 233439 - HIGH-VOLUME, LOW-SPEED FANS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes high-volume, low-speed fans.

1.2 DEFINITIONS

- A. HVLS - High volume, low speed.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.5 WARRANTY

- A. Warranty: Manufacturer and Installer agree to repair or replace components of fans that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period:
 - a. For Motor, Including Controls: three year(s) from date of Substantial Completion.
 - b. For Parts, Including Blades, and Hub: seven year(s) from date of Substantial Completion.
 - c. For Labor: One year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. UL Compliance: Listed and labeled to UL 507.
- C. CSA Compliance: Listed and labeled to CSA C22.2, No. 113.
- D. Comply with NFPA 13 requirements for HVLS fans.
- E. AMCA Compliance:
 - 1. Test HVLS fans according to AMCA 230.
 - 2. Certify HVLS fan performance according to AMCA 211.

- F. Performance Data: Comply with ANSI 230 test procedure standard, based on five rating points: 20-, 40-, 60-, 80-, and 100-percent of maximum speed. Comply with AMCA 211 for publication of performance data.

2.2 CAPACITIES AND CHARACTERISTICS

- A. See drawings for capacities and characteristics:

2.3 MANUFACTURERS

- A. Basis of design product, subject to compliance with the specified product on the drawings. Provide a product by the following manufacturers:
 - 1. Big Ass Fans
 - 2. Greenheck
 - 3. Skyblade
 - 4. Or approved equal.
- B. Source Limitations: Obtain HVLS fans from single source from single manufacturer.

2.4 HIGH-VOLUME, LOW-SPEED FANS

- A. Description: Factory-assembled and -tested horizontal, non-ducted fan unit, consisting of large-diameter blade set, direct-drive electric motor, with variable-speed motor controller.
 - 1. Provide fan designed to circulate large air volume, vertically, at low velocity.
 - 2. Maximum Operating Temperature: 122 deg F
 - 3. Frame:
 - a. Material: Aluminum.
 - 1) Finish: Powdercoat.
 - 4. Diameter: 6 feet.
 - 5. Blades: Airfoil type.
 - a. Quantity: 6.
 - b. Material: Aluminum.
 - 1) Blade Finish: Anodized.
 - 6. Motor: integral to fan frame.
 - 7. Wiring and Controls Enclosure:
 - a. NEMA 250, Class 1.
 - b. Grounded.
 - 8. Mounting Bracket: Solid beam.
 - 9. Accessories:
 - a. Mounting extension tube.

PART 3 - EXECUTION

3.1 INSTALLATION OF HIGH-VOLUME LOW-SPEED FANS

- A. Examine conditions for compliance with requirements for installation tolerances and other conditions affecting HVLS fan performance, maintenance, and operations.
- B. Fan locations indicated on Drawings are approximate. Determine exact locations before roughing-in for mounting, control, and electrical connections.

- C. Install fan according to manufacturer's published instructions.
- D. Comply with NECA 1 and NFPA 70.
- E. Comply with NFPA 13 for installation of HVLS fans and maximum allowable fan diameter. Center HVLS fans between four adjacent sprinklers. Minimum vertical clearance from HVLS fan to sprinkler deflector is 3 feet.
- F. Comply with NFPA 72 and interlock HVLS fans to shut down upon receiving an alarm from fire alarm system.
- G. Equipment Mounting:
 - 1. Anchor fan to building structure with manufacturer's recommended mounting bracket for installed condition.
 - 2. Consult a licensed professional structural engineer for mounting methods and approval for mounting to the structure. Structure must be able to withstand the torque and forces generated by the fan.
 - 3. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
 - 4. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 5. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- H. Install unit to permit access for maintenance.
- I. Install parts and accessories shipped loose.
- J. Perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that fan is secure on mountings and supporting devices and that connections to electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
 - 3. Verify proper motor rotation direction and free fan rotation.
 - 4. Check bearing and gearbox lubrication.
 - 5. Verify proper fan rotation. Set rotation selector to blow vertically downward during heating season and vertically upward during cooling season.

3.2 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
- E. Install power wiring to field-mounted electrical devices, furnished by fan manufacturer, but not factory mounted.

3.3 CONTROL CONNECTIONS

- A. Connect control wiring to field-mounted control devices.
- B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."
- C. Connect control interlock wiring between HVLS fan and other equipment to provide a complete and functioning system.
- D. Connect control wiring between fan unit control interface and control system to provide remote control and monitoring.
- E. Install control devices furnished by manufacturer, but not factory mounted.
- F. Install control wiring to field-mounted control devices, furnished by fan manufacturer, but not factory mounted.
- G. Protect installed units from damage caused by other work.

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Fan or components will be considered defective if fan or components do not pass tests and inspections.
- C. Prepare and submit test and inspection reports.

3.5 ADJUSTING

- A. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.6 CLEANING

- A. Clean equipment externally; remove coatings applied for protection during shipping and storage, foreign material, and oily residue according to manufacturer's written instructions. Following manufacturer's cleaning procedures, and clean with manufacturer-recommended cleaning products.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain HVLS fans.

END OF SECTION 233439

SECTION 233443 VEHICLE EXHAUST EXTRACTION SYSTEMS

PART 1 GENERAL

1.1 DESCRIPTION

- A. This section describes vehicle exhaust extraction systems.

1.2 RELATED WORK SPECIFIED ELSEWHERE

- A. Section 230500, Common Work Results for HVAC
- B. Section 230529, Hangers and Supports for HVAC Piping and Equipment
- C. Section 230545, Seismic Restraints for HVAC Piping and Equipment
- D. Section 230593, Testing, Adjusting, and Balancing
- E. Section 233113, Low Pressure Ductwork
- F. Section 233400, HVAC Fans

1.3 SUBMITTALS

- A. For systems, equipment, and components specified herein, submit product/material data; shop drawings; operation and maintenance data; as-constructed data; installation, startup, and testing manuals; operation and maintenance manuals; and as-constructed drawings.
1. Shop Drawings: Include details of construction and dimensions.
 2. Product Data: Include performance data.
- B. See specification section 013300 for additional submittal requirements.

1.4 QUALITY ASSURANCE

- A. Vehicle exhaust extraction systems supplied shall be fully compatible with the vehicles and shall be designed specifically for the use intended.
- B. All components shall be designed, constructed, and rated for the temperatures, pressures, stresses and motions required under normal operation and shall perform the required functions without need for excessive maintenance, adjustment, or parts replacement.
- C. The Contractor shall warranty the equipment and installation to be free of defects in material and workmanship and application for a period of 1-year.

PART 2 - PRODUCTS

2.1 VEHICLE EXHAUST EXTRACTION SYSTEM

- A. Manufacturers: Subject to compliance with the specified product on the drawings, provide a product by one of the following manufacturers:
 - 1. NSGV.
 - 2. Nederman.
 - 3. Or Approved Equal.

- B. Hose Reel System:
 - 1. Spring Driven Hose Reel System with on/off switch
 - 2. The flexible vehicle exhaust hose shall be 6-inch diameter, high temperature hose, suitable for use on Diesel engines, consisting of four-ply black high temperature composite impregnated fabric laminated over a spring wire helix bound with a protective yellow wear strip to allow for high visibility of hanging hose by personnel. Flame retardant to UL 94 V.O.
 - 3. Mechanical Attachment System:
 - a. Provide a fully adjustable quick-release locking clamp, protective, high temperature chloroprene rubber cover, and a high temperature rubber nozzle.
 - 4. The duct connection, with brackets, shall connect the hose to the duct system. The swivel connector shall be sealed.
 - 5. Manufacturer's contact to be connected to BMS system

- C. Exhaust Fan:
 - 1. Description:
 - a. Factory-fabricated, -assembled, -tested, and -finished, direct-driven centrifugal fan utility vent sets, consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure, fan shall be mounted to hose reel.
 - 2. Housings:
 - a. Housing Material: Reinforced steel.
 - b. Housing Coating: Powder-baked enamel.
 - c. Formed panels to make curved-scroll housings with shaped cutoff.
 - d. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 - e. Discharge Arrangement: Fan scroll housing field rotatable to any of eight discharge positions. Provide fan with discharge positioned in proper direction to minimize connected duct turns.
 - 3. Wheels:
 - a. Wheel Configuration: SWSI, with hub keyed to shaft.
 - b. Wheel and Blade Materials: Steel
 - c. Forward-Curved Blades:
 - 1) Curved design.
 - 2) Heavy backplate.
 - 3) Single-thickness blades continuously welded or riveted at tip flange and backplate.
 - 4. Motor Enclosure: Open, dripproof

- D. Accessories listed in subparagraphs below are optional features. Manufacturers' catalogs list many other accessories for specialized applications.
1. Inlet and Outlet: Flanged.
 2. Companion Flanges: Rolled flanges for duct connections of same material as housing.
 3. Backdraft Dampers: Gravity actuated with counterweight and interlocking aluminum blades, with felt edges in steel frame installed on fan discharge.
 4. Access Door: Gasketed door in scroll with latch-type handles.
 5. Scroll Dampers: Single-blade damper installed at fan scroll top with adjustable linkage.
 6. Inlet Screens: Removable wire mesh.
 7. Outlet Screens: Removable wire mesh.
 8. Drain Connections: NPS 3/4 threaded coupling drain connection installed at lowest point of housing.
 9. Weather Hoods: Weather resistant with stamped vents over motor and drive compartment.
- E. MOTORS
1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install centrifugal fans level and plumb.
- B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.
- D. Equipment Mounting:
1. Support duct-mounted and other hanging centrifugal fans directly from the building structure, using suitable hanging systems as specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
 2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- E. Isolation Curb Support: Install centrifugal fans on isolation curbs, and install flexible duct connectors and vibration-isolation and seismic-control devices.
1. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC".
- F. Install units with clearances for service and maintenance.
- G. Label fans according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."
- H. Install in accordance with the manufacturer's instructions.

I. Support equipment from building structures and provide seismic restrains as detailed on the drawings and in accordance with Sections 230529 and 230545.

J. Install hose reels from structure per manufacturer's instructions.

3.2 DUCTWORK

A. Install ducts adjacent to fans to allow service and maintenance.

B. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. See electrical drawings and specifications for identification requirements.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

3.5 TESTING

A. Check out, start up, and test systems, equipment, and components specified herein.

B. Have a factory representative do a point-to-point commissioning of the exhaust system prior to turnover to owner.

3.6 TRAINING

A. Engage a factory authorized representative to train user on system.

END OF SECTION 233443

SECTION 233600 – AIR TERMINAL UNITS

PART 1 – GENERAL

1.1 SUMMARY

- A. This Section includes:
 - 1. Shutoff, single-duct air terminal units.
 - 2. Casing liner.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved.
- B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 – PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
- C. ASHRAE Compliance: Applicable requirements in ASHRAE/IES 90.1, "Section 6 - Heating, Ventilating, and Air Conditioning."

2.2 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Enviro-tec; by Johnson Controls, Inc.
 - 2. Krueger
 - 3. Price Industries
 - 4. Titus
- B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.

- C. Casing: Minimum 22-gauge galvanized steel thick galvanized steel, single wall.
 - 1. Casing Liner: Comply with requirements in "Casing Liner".
 - 2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
 - 3. Air Outlet: S-slip and drive connections, size matching inlet size.
 - 4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
 - 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
 - 1. Maximum Damper Leakage: AHRI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
 - 2. Damper Position: Normally closed.
- E. Primary Airflow Sensor:
 - 1. For inlet diameters 6" or greater, the differential pressure airflow sensor shall traverse the duct along two perpendicular diameters. Cylindrically shaped inlets shall utilize the equal cross sectional area or log-linear traverse method. Single axis sensor shall not be acceptable for duct diameters 6" or larger. A minimum of 12 total pressure sensing points shall be utilized. The total pressure inputs shall be averaged using a pressure chamber located at the center of the sensor. A sensor that delivers the differential pressure signal from one end of the sensor is not acceptable. The sensor shall output an amplified differential pressure signal that is at least 2.5 times the equivalent velocity pressure signal obtained from a conventional pitot tube. The sensor shall develop a differential pressure of 0.03" w.g. at an air velocity of < 450 FPM. Documentation shall be submitted which substantiates this requirement. Balancing taps and airflow calibration charts shall be provided for field airflow measurements.
- F. Attenuator Section: 22-gauge galvanized steel sheet.
 - 1. Attenuator Section Liner: Comply duct insulation or metal duct specification requirements.
 - 2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- G. Hydronic Heating Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include auto air vent and drain valve.
- H. Control devices shall be compatible with temperature controls system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

2.3 CASING LINER

- A. Casing Liner: Flexible elastomeric duct liner fabricated of preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1; and with NFPA 90A or NFPA 90B.
 - 1. Minimum Thickness: 1/2 inch.

2. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
3. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
 - a. Adhesive VOC Content: 50 g/L or less.
 - b. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.4 SOURCE QUALITY CONTROL

- A. Factory Tests: Test assembled air terminal units according to AHRI 880.
 1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and AHRI certification seal.

PART 3 EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 5, "Hangers and Supports" and with Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 1. Where practical, install concrete inserts before placing concrete.
 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes and for slabs more than 4 inches thick.
 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.
 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hangers Exposed to View: Threaded rod and angle or channel supports.
- D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.2 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. Install hangers and braces designed to support the air terminal units and to restrain against seismic forces required by applicable building codes. Comply with ASCE/SEI 7. Comply with requirements for seismic-restraint devices in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.

- C. Install cables so they do not bend across edges of adjacent equipment or building structure.
- D. Install cable restraints on air terminal units that are suspended with vibration isolators.
- E. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction.
- F. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.

3.3 ELECTRIC POWER

- A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."
- B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- C. Where installing piping adjacent to air terminal unit, allow space for service and maintenance.
- D. Hot-Water Piping: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties," and connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.
- E. Comply with requirements in Section 233113 "Metal Ducts" for connecting ducts to air terminal units.
- F. Make connections to air terminal units with flexible connectors complying with requirements in Section 233300 "Air Duct Accessories."
- G. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- B. Air terminal unit will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

END OF SECTION 233600

SECTION 233713 - DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Rectangular and square ceiling diffusers.
 2. Return and Exhaust Grilles
 3. Duct mounted supply and exhaust grilles.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated, include the following:
1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- B. See section 013000 for submittal requirements.

PART 2 - PRODUCTS

2.1 CEILING DIFFUSERS

- A. Rectangular and Square Ceiling Diffusers:
1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Krueger.
 - b. Price Industries.
 - c. Titus.
 2. Material: Aluminum.
 3. Finish: Baked enamel, white.

2.2 RETURN AND EXHAUST GRILLES

- A. Rectangular and Square return and exhaust grilles:
1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Krueger.
 - b. Price Industries.
 - c. Titus.
 2. Material: Aluminum.
 3. Finish: Baked enamel, white.

2.3 DUCT MOUNTED SUPPLY AND EXHAUST GRILLES

- A. Rectangular and Square return and exhaust grilles:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Air Concepts.
 - b. Krueger.
 - c. Price Industries.
 - d. Titus.
2. Material: Aluminum.
3. Finish: Baked enamel, white.

2.4 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.2 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 233713

SECTION 235100 – BREECHINGS, CHIMNEYS AND STACKS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes the following:
 - 1. Polypropylene flue and combustion air piping (PP).
 - 2. Listed B-Vent.
 - 3. Dry duct and prefabricated dryer box.
 - 4. Listed double wall vents.
- B. Shop drawing: For vents, breaching, chimneys, and stacks. Include plans, elevations, sections, details, and attachments to other work.

PART 2 - PRODUCTS

2.1 POLYPROPYLENE VENT PIPING

- A. Manufacturers:
 - 1. DuraVent
 - 2. Centrotherm
 - 3. Or approved equal
- B. Polypropylene pipe for use with ANSI Category II and IV gas burning appliances.
 - 1. Fittings: Polypropylene compatible with supplied piping.
 - 2. Joints: Gaskets with locking band.

2.2 LISTED TYPE B VENTS

- A. Provide a product by the following manufacturer that meets the requirements in this specification section:
 - 1. Metal-Fab
 - 2. DuraVent
 - 3. Or approved equal
- B. Description: Double wall metal vents tested according to UL441 and rated for 480 deg F continuously for Type B with neutral or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least ¼- inch airspace.
- D. Inner Shell: Aluminum Alloy.
- E. Outer Jacket: Galvanized steel.
- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designed as vent-pipe straight sections; all listed for same assembly.
 - 1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.

2. Termination: Round Chimney top designed to exclude minimum 98 percent of rainfall.
3. Termination: Exit cone with drain section incorporated into riser.
4. Termination: Anti-backdraft.

2.3 DRYER VENTING

- A. Prefabricated Dryer Box
 1. Manufacturers:
 - a. The Drybox
 - b. Everbilt
 - c. Or approved equal
 2. To be constructed of 22-gauge aluminum (minimum) with nailing flange.
 3. Provide and install manufacturer's discharge outlet with a field fabricated 14" curb.
 4. Contractor to coordinate pitch prior to fabrication.
- B. Ducting
 1. Minimum 28-gauge aluminum ducting.
 2. All transitions shall be made with Dryer-ell, zero run penalty elbows (or approved equal).

2.4 LISTED DOUBLE WALL GAS VENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Heat-Fab, Inc.
 2. Metal-Fab, Inc.
 3. Jeremiah's
 4. Or approved equal
- B. Description: Double-wall metal vents tested according to UL 1738 and rated for 480 deg F continuously, with positive or negative flue pressure complying with NFPA 211. The vent shall be of the double-wall, factory type for use on condensing appliances or pressurized venting systems serving Category II, III or IV appliances or as specified by the equipment manufacturer.
- C. Maximum temperature shall not exceed 550°F.
- D. Vent shall be listed for an internal static pressure of 6" w.g. and tested to 15" w.g.
- E. Vent shall be constructed with an inner and outer wall, with a 1" annular insulating air space.
- F. The inner wall (vent) shall be constructed of AL29-4C, Type 444, or 316L superferritic stainless steel, .015 thickness for 3" – 12" diameters and .024 thickness for 14"-24" diameters. The outer wall (casing) shall be constructed of 304 stainless steel, .018 thickness for 3"-12" diameters and .24 thickness for 14"-24" diameters. Inner and outer walls shall be connected by means of spacer clips that maintain concentricity of the annular space and allow unobstructed differential thermal expansion of the inner and outer wall.

- G. All supports, roof or wall penetrations, terminations, appliance connectors and drain fittings, required to install the vent system shall be included.
- H. Roof penetration pieces shall be UL listed and provide by the vent manufacture. Roof curbs shall be required on roofs greater than 12:12 pitch.
- I. All inner vent connections shall be secured by means of profiled connector bands with gear clamp tighteners. Joints shall be sealed with P077 Sealant. Where exposed to weather, the outer closure band shall be sealed to prevent rainwater from entering the space between inner and outer walls.
- J. Vent shall terminate in accordance with installation instructions and local codes.
- K. Construction: Inner shall and outer jacket separated by at least a 1-inch airspace.
- L. Inner Shell: UL 1738 compliant stainless steel.
- M. Outer Jacket: 304 Stainless-steel.
- N. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spaced, and fasteners; fabricated from similar materials and designed as vent-pip straight sections; all listed for same assembly.
 - 1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.

PART 3 - EXECUTION

3.1 POLYPROPYLENE SCHEDULE

- A. Water Heater flue and combustion air piping and fittings shall be the following:
 - 1. Polypropylene (PP). Provide with polypropylene manufacturer's concentric termination outlet.

3.2 LISTED B-VENT SCHEDULE

- A. Infrared Heater flue and fittings shall be the following:
 - 1. Double Wall Listed B-Vent

3.3 DOUBLE WALL GAS VENT SCHEDULE

- A. Boiler flue and fittings shall be the following:
 - 1. Double Wall, UL 1738, stainless-steel flue.

3.4 INSTALLATION OF LISTED VENTS AND CHIMNEYS

- A. Locate to comply with minimum clearance from combustibles and minimum termination heights according to product listing or NFPA 21, whichever is most stringent.
- B. Seal between sections of positive-pressure vents and grease exhaust ducts according to manufacturer's written installation instructions, using sealants recommended by manufacturer.

- C. Support vents at intervals recommended by manufacturer to support weight of vents and all accessories, without exceeding appliance loading.
- D. Slope breechings down in direction of appliance, with condensate drain connection at lowest point piped to nearest drain.
- E. Lap joints in direction of flow.
- F. After completing system installation, including outlet fitting and devices, inspect exposed finish., Remove burrs, dirt, and construction debris and repair damaged finishes.
- G. Clean breeching internally, during and after installation, to remove dust and debris. Clean external surfaces to remove welding slag and mill film. Grind welds smooth and apply touchup finish to match factory or shop finish.
- H. Provide temporary closures at ends of breechings, chimneys, and stack that are not completed or connected to equipment.

3.5 INSTALLATION OF POLYPROPYLENE FLUE AND COMBUSTION AIR PIPING

- A. Install in accordance with NFPA 54 and manufacturer's installation instructions.
- B. Maintain all listed minimum clearances. Assemble pipe and accessories for complete installation.
- C. Provide gaskets and locking rings on all joints.
- D. Slope piping as required for each appliance and in accordance with installation instructions.
- E. Provide all required appliance adapter clamps and any required adapter fittings.
- F. Support piping at each offset and as required by pipe manufacturer.
- G. Provide Polypropylene Concentric Vent Termination Kit for each appliance.
- H. Use black UV protected components on all venting installed on the exterior of the building.

3.6 INSTALLATION OF DRYER DUCT

- A. Dryer duct shall be installed with no screws in the air stream of ductwork per NFPA.
- B. No connection seams shall be in wall.

END OF SECTION 235100

SECTION 235216 - CONDENSING BOILERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Packaged, factory-fabricated and assembled, gas-fired, fire-tube condensing boilers, trim, and accessories for generating and heating hot water.

1.2 SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: Include performance data, operating characteristics, furnished specialties, and accessories.
- C. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, and attachments to other work details.
 - 1. Wiring diagrams: Power, signal, and control wiring.
- D. Operation and maintenance data.
- E. Warranty: Special warranty specified in this Section.

1.3 QUALITY ASSURANCE

- A. Electrical components, devices, and accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASME compliance: Fabricate and label boilers to comply with ASME Boiler and Pressured vessel code.
- C. ASHRAE/IESNA 90.1 compliance: Boilers shall have minimum efficiency according to “Gas and Oil-Fired Boilers- Minimum Efficiency Requirements”.
- D. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N, “Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers”.
- E. UL compliance: Test boilers form compliance with UL 795, “Commercial-Industrial Gas Heating Equipment”.
- F. Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.
- G. Boiler installation shall meet the latest edition of the ASME CSD-1 code Nevada State Boiler code.

1.4 WARRANTY

- A. Special warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Water-Tube Condensing Boilers:
 - a. Heat Exchanger damaged by thermal stress and corrosion: non-prorated for a minimum of 20 from the date of substantial completion.
 - b. Parts and labor on gas train, boiler for 1 year from date of substantial completion.

PART 2 - PRODUCTS

2.1 FIRE-TUBE CONDENSING BOILERS

- A. Basis of design product: Subject to compliance with requirements, provide the product indicated on the drawings or a comparable product by one of the following:
 - a. Lochinvar.
 - b. Cleaver Brooks.
 - c. Fulton.
 - d. Or pre-approved equal.
- B. Description: Factory-fabricated, assembled, and tested, fire-tube condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls. Water-heating service only.
- C. The boiler's condensing capability shall allow the boiler to be operated without the use of a 3-way valve for the boiler supply water temperature reset. No minimum boiler return water temperature or secondary pump or minimum flow rate shall be required to protect the boiler against thermal shock or for minimum temperature water.
- D. Heat Exchanger: The heat exchanger shall bear the ASME "H" stamp for 160 psi working pressure and shall be a National Board listed. The heat exchanger shall be constructed of a fully welded 3161L stainless steel and of fire tube design. Cast iron, aluminum, or condensing copper tube boilers will not be accepted.
- E. Combustion Chamber: The combustion chamber shall be constructed of cast-iron. It shall be a down-fired design utilizing light weight refractory around the burner housing or stainless-steel, sealed.
- F. Burner: Natural gas, negative-pressure gas valve.
- G. Blower: Centrifugal fan to operate during each burner-firing sequence and to prepurge and postpurge the combustion chamber.
 - 1. Motors sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- H. Gas Train: CCSD-1 compliant combination gas valve with manual shutoff and pressure regulator.

- I. Ignition: Direct-spark ignition.
- J. Integral Circulator: Stainless-steel body and stainless-steel impeller sized for minimum flow required in heat exchanger.
- K. Casing:
 - 1. Jacket: Sheet metal, with snap-in or interlocking closures.
 - 2. Control Compartment Enclosures: NEMA 250, Type 1A.
 - 3. Finish: Textured epoxy protective finish.
 - 4. Insulation: Minimum 1 inch-thick, mineral-fiber insulation surrounding the heat exchanger.
 - 5. Combustion-Air Connections: Inlet and vent duct collars.
 - 6. Mounting base to secure boiler.
- L. Capacities and Characteristics:
 - 1. See drawings for capacities and characteristics.
- M. Options:
 - 1. Manufacturers provided and installed boiler drain valve.
 - 2. Manufacturers condensate neutralization kit.
 - 3. Manufacturers primary boiler pump relay mounted and wired for single power connection.
 - 4. Flow switch or low water cutoff switch with manual reset.
 - 5. Digital display with alarm and status LEDs.
 - 6. Sequential and diagnostic control panel.
 - 7. ASME rated pressure relief valve.
 - 8. 0-10Vdc building management input system.
 - 9. Contacts on any failure.
 - 10. Modulating burner with 5:1 turn down ratio.
 - 11. Spark ignition.
 - 12. Factory system header sensor with immersion well.
 - 13. Vent material shall be double wall UL 1738 compliant flue.
 - 14. Factory appliance regulator; regulator to be vented outside.
 - 15. Manufacturers RM7800 ignition system display module, one per boiler.
 - 16. Factory training and authorized startup.

2.2 TRIM

- A. Include devices sized to comply with ANSI B31.9, "Building Services Piping".
- B. Aquastat Controllers: Operating, firing rate, and high limit.
- C. Safety Relief Valve: ASME rated.
- D. Pressure and Temperature Gauge: Minimum 3-1/2-inch diameter, combination water-pressure and temperature gauge. Gauges shall have operating-pressure and temperature ranges, so normal operating range is about 50 percent of full range.
- E. Boiler air vent: Automatic.
- F. Drain Valve: Minimum NPS 3/4 hose-end gate valve.

2.3 CONTROLS

- A. The control system shall consist of a master panel and system intelligence device that is to be located within the mechanical room. The master panel shall be capable of controlling inputs and outputs of a maximum of 16 boilers. Control system is to be wired system, wireless system will not be accepted.
- B. Boiler operating control shall include the following devices and features:
 - 1. Supply water temperature sensor.
 - 2. Return water temperature sensor.
 - 3. Outdoor temperature sensor.
 - 4. Flow meter.
 - 5. Set-point adjust: Set points shall be adjustable.
 - 6. BacNet communication to Alerton Building Management System.
 - 7. Sequence of operation:
 - a. Electric, factory-fabricated, and field-installed panel control burner-firing rate to reset supply water temperature inversely with outside air temperature.
 - b. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
- C. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
 - 1. High Cutoff: Manual reset stops burner if operating conditions rise above maximum boiler design temperature.
 - 2. Low-Water Cutoff Switch: Electronic probe shall prevent burner operation on low water. Cutoff switch shall be manual-reset type.
 - 3. Blocked Inlet Safety Switch: Manual-reset pressure switch field mounted on boiler combustion-air inlet.
 - 4. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
- D. Building Automation System Interface: Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.
 - 1. Hardwired Points:
 - a. Monitoring: On/off status, common trouble alarm.
 - b. Control: On/off operation, hot-water-supply temperature set-point adjustment.
 - 2. A communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, and locally at boiler control panel shall be available through building automation system.

2.4 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are shown in Division 26 Sections.

- B. Single-Point Field Power Connection: Factory-installed and wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
 - 1. House in NEMA 250, Type 1 enclosure.
 - 2. Wiring shall be numbered and color coded to match wiring diagram.
 - 3. Install factory wiring outside of an enclosure in a metal raceway.
 - 4. Field power interface shall be to fused disconnect switch.
 - 5. Provide branch power circuit to each motor and to controls with a disconnect switch.
 - 6. Provide each motor with overcurrent protection.
- C. Pump relay: Boiler shall have a relay to energize boiler pump.
- D. Boiler shall not use a transformer to step-down main voltage.

2.5 SOURCE QUALITY CONTROL

- A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- B. Test and inspect factory-assembled boilers, before shipping, in accordance with ASME Boiler and Pressure Vessel Code.

PART 3 - EXECUTION

3.1 BOILER INSTALLATION

- A. Install boilers level on concrete base. Concrete base is specified in Division 23 Section "Common Work Results for HVAC" and concrete materials and installation requirements are specified in Division 03.
- A. Install gas-fired boilers according to NFPA 54.
- B. Assemble and install boiler trim.
- C. Install electrical devices furnished with boiler but not specified to be factory mounted.
- D. Install control wiring to field-mounted electrical devices.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.

- D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Division 23 Section "Common Work Results for HVAC".
- E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas-train connection. Provide a reducer if required.
- F. Connect hot-water piping to supply- and return-boiler tapplings with shutoff valve, and union or flange at each connection.
- G. Install piping from safety relief valves to nearest floor drain.
- H. Boiler Venting:
 - 1. Install flue-venting kit and combustion-air intake.
 - 2. Connect full size to boiler connections.
- I. Ground equipment according to electrical specifications.
- J. Connect wiring according to electrical specifications.

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
 - 1. Manufacturers Field Service: Engage a factory- authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Perform installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Check and adjust initial operating set points and high and low-limit safety set points of fuel supply, water level, and water temperature.
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Remove and replace malfunctioning units and retest as specified above.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain boilers. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 235216

SECTION 235523.13 - LOW-INTENSITY, GAS-FIRED, RADIANT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes low-intensity, gas-fired, draft-induced radiant heaters.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
 - 1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.5 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of radiant heaters that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: All warranty periods listed below are from date of Substantial Completion.
 - a. Burner Assembly: Three years.
 - b. Combustion and Emitter Tubes: Three years.
 - c. Heater Controls: The years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. CSA certified, with CSA Seal and certification number clearly visible on units indicating compliance with ANSI Z83.20/CSA 2.34.
- B. UL listed and labeled, with UL label clearly visible on units indicating compliance with ANSI Z83.20/CSA 2.34.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 FORCED-DRAFT HEATERS

- A. Basis of design product, subject to compliance with the specified product on the drawings. Provide a product by one of the following manufacturers.
- B. Description: Factory-assembled, indoor, overhead-mounted, electrically controlled, low-intensity, infrared radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup.
- C. Fuel Type: Design burner for natural gas having characteristics same as those of gas available at Project site.
- D. Burner Assembly:
 - 1. Combustion-Air Inlet: Ducted vertical to outdoors through roof with vent caps.
 - 2. Ignition System: Direct spark 24/25-V ac with flame rod sensing capabilities and self-diagnostic control module.
- E. Combustion Chamber: 4-inch-diameter, 12-gage, stainless steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish.
- F. Emitter Tube: 4-inch-diameter, 16-gage, stainless-steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish.
- G. Reflector: Polished stainless steel, with end caps. Shape to control radiation from tubing for uniform intensity at floor level with 100 percent cutoff above centerline of tubing. Reflectors or entire heater shall accommodate rotational adjustment from horizontal to a minimum 30-degree tilt from vertical.
- H. Capacities and Characteristics:
 - 1. See drawings for capacities and characteristics.

2.3 CONTROLS AND SAFETIES

- A. Gas Control Valve: Single-stage, regulated redundant 24-V ac gas valve that contains pilot solenoid valve, electric gas valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
- B. Failure Safeguards: 100 percent shutoff of gas flow in the event of flame or power failure.
- C. Prepurge of 30 seconds of air control system prior to burner ignition.
- D. Safety lockout of burner after three consecutive ignition failures.
- E. Blocked Vent Safety: Differential pressure switch in burner safety circuit to stop burner operation with high discharge or suction pressure.
- F. Control Panel Interlock: Stops burner if panel is open.
- G. Indicator Lights: "burner-on" indicator lights.

- H. Thermostat: Single-stage, wall-mounted type with 50 to 90 deg F operating range and fan on switch.
 - 1. Control Transformer: Integrally mounted.
- I. Thermostat: Two-stage, wall-mounted type with 50 to 90 deg F operating range and fan on switch.
 - 1. Control Transformer: Integrally mounted.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Equipment Installation: Install gas-fired, radiant heaters and associated gas features and systems according to NFPA 54.
- B. Suspended Units: Suspend from substrate using chain hanger kits and building attachments.
 - 1. Restrain the unit to resist seismic acceleration. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- C. Maintain manufacturers' recommended clearances for combustibles.
- D. Gas Piping: Comply with Section 221123 "Facility Natural-Gas Piping." Connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service.
 - 1. Gas Connections: Connect gas piping to radiant heaters according to NFPA 54.
- E. Where installing piping adjacent to gas-fired, radiant heaters, allow space for service and maintenance.
- F. Vent Connections: Comply with Section 233113 "Metal Ducts" and with Section 235123 "Gas Vents."
- G. Electrical Connections: Comply with applicable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - 1. Install electrical devices furnished with heaters but not specified to be factory mounted.

3.2 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 2. Verify bearing lubrication.
 - 3. Verify proper motor rotation.
 - 4. Test Reports: Prepare a written report to record the following:
 - a. Test procedures used.

- b. Test results that comply with requirements.
 - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
 - B. Gas-fired, radiant heaters will be considered defective if they do not pass tests and inspections.
 - C. Prepare test and inspection reports.
- 3.3 ADJUSTING
- A. Adjust initial-temperature set points.
 - B. Adjust burner and other unit components for optimum heating performance and efficiency.

END OF SECTION 235523.13

SECTION 235700 - HEAT EXCHANGERS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes gasketed-plate heat exchangers.

1.2 INFORMATIONAL SUBMITTALS

- A. See Section 013300 – Submittal requirements.
- B. Sample Warranty: For manufacturer's warranty.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.4 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of heat exchangers that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Periods: From date of Substantial Completion.
 - a. Plate Heat Exchangers:
 - 1) Gasketed-Plate Type; One year(s).

PART 2 - PRODUCTS

2.1 GASKETED-PLATE HEAT EXCHANGERS

- A. Basis of design product subject to compliance with the specified product by one of the following manufacturers.
 - 1. Sondex
 - 2. Danfoss
 - 3. Alfa Laval
 - 4. Or an approved equal.
- B. Configuration: Freestanding assembly, consisting of frame support, top and bottom carrying and guide bars, fixed and movable end plates, tie rods, individually removable plates, and one-piece gaskets. Floor-mounted heat exchangers must have integral legs with mounting feet.
- C. Construction: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.
- D. Frame:
 - 1. Capacity to accommodate 20 percent additional plates.
 - 2. Painted carbon steel with provisions for anchoring to support.

- E. Top and Bottom Carrying and Guide Bars: Painted carbon steel, aluminum, or stainless steel.
 - 1. Fabricate attachment of heat-exchanger support bars and guide bars with reinforcement strong enough to resist heat-exchanger movement during seismic event when heat-exchanger support bars and guide bars are anchored to building structure.
- F. End-Plate Material: Painted carbon steel.
- G. Tie Rods and Nuts: Steel or stainless steel.
- H. Plate Material: 0.024 inch thick before stamping; Type 304 stainless steel.
- I. Piping Connections: Factory fabricated of materials compatible with heat-exchanger shell. Attach tappings to shell before testing and labeling.
 - 1. NPS 2 and Smaller: Threaded ends in accordance with ASME B1.20.1.
 - 2. NPS 2-1/2 and Larger: Flanged ends in accordance with ASME B16.5 for steel and stainless-steel flanges and in accordance with ASME B16.24 for copper and copper-alloy flanges.
- J. Enclose plates in solid aluminum removable shroud.
- K. Capacities and Characteristics:
 - 1. See drawings for capacities and characteristics.

2.2 ACCESSORIES

- A. Pressure-Relief Valves: Steel, ASME rated and stamped.
 - 1. Pressure-relief valve setting: 50 psig.

2.3 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect heat exchangers in accordance with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1. Affix ASME International label.
- B. Hydrostatically test heat exchangers to minimum of one and one-half times pressure rating before shipment.
- C. Heat exchangers will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 INSTALLATION OF HEAT EXCHANGER, GENERAL

- A. Equipment Mounting:
 - 1. Install floor-mounted heat exchangers on cast-in-place concrete equipment bases. Install all heat exchangers level and plumb in accordance with manufacturer's recommendations. Install floor-mounted and wall-hung steam

heat exchangers at sufficient height, using sufficient length supports, to achieve required steam and condensate pipe pitch. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."

3.2 INSTALLATION OF GASKETED-PLATE HEAT EXCHANGER

- A. Install floor-mounted gasketed-plate heat exchangers on cast-in-place concrete equipment base, and fasten legs to base.
- B. Install metal shroud over installed gasketed-plate heat exchanger in accordance with manufacturer's written instructions.

3.3 PIPING CONNECTIONS

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Maintain manufacturer's recommended clearances for tube removal, service, and maintenance.
- C. Install piping adjacent to heat exchangers to allow space for service and maintenance of heat exchangers. Arrange piping for easy removal of heat exchangers.
- D. Install shutoff valves at heat-exchanger inlet and outlet connections.
- E. Install pressure-relief valves on heat-exchanger shells where a connection has been provided on shell. When no shell pressure-relief valve connection has been provided, install pressure-relief valve on shell outlet piping before any isolation valves.
- F. Install pressure-relief valves on heat-exchanger tube outlet piping before any isolation valves.
- G. Pipe pressure-relief valves, full size of valve connection, to floor drain.
- H. Install vacuum breaker at heat-exchanger steam inlet connection.
- I. Install hose end valve to drain shell.
- J. Install thermometer on each heat-exchanger fluid inlet and outlet piping. Comply with requirements for thermometers specified in Section 230519 "Meters and Gages for HVAC Piping."
- K. Install pressure gauges on each heat-exchanger fluid inlet and outlet piping. Comply with requirements for pressure gauges specified in Section 230519 "Meters and Gauges for HVAC Piping."

3.4 CLEANING

- A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes.
- B. Isolate heat exchangers from piping before flushing piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blind flanges in flanged joints to isolate equipment.
- C. Flush heat-exchanger piping systems with clean water; then remove and clean or replace strainer screens before reopening flow to heat exchangers.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency, Owner: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Testing Agency, Contractor: Engage a qualified testing agency to perform tests and inspections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative:
- D. Tests and Inspections:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Heat exchanger will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

3.6 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain heat exchangers.

END OF SECTION 235700

SECTION 236200 - PACKAGED COMPRESSOR AND CONDENSER UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Compressor and condenser units, air cooled, 6 to 120 tons.

1.2 ACTION SUBMITTALS

- A. Product Data: For each compressor and condenser unit.

1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.
- B. Filled out manufacturer's startup checklist to be included in the Operation and Maintenance manual.

1.5 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-In-Place Concrete."
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."
- C. Coordinate location of piping and electrical rough-ins.

1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of compressor and condenser units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.
 - 2. Warranty Period (Compressor Only): Five years from date of Substantial Completion.

PART 2 - PRODUCTS

- A. Fabricate and label refrigeration system in accordance with ASHRAE 15 and ASHRAE 34.

- B. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6, "Heating, Ventilating, and Air-Conditioning."
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 COMPRESSOR AND CONDENSER UNITS, AIR COOLED, 6 TO 120 TONS

- A. Basis-of-Design product, subject to compliance with the specified product on the drawings, provide a product by one of the following manufacturers:
 - 1. Samsung
 - 2. Trane
 - 3. Carrier
 - 4. Daikin
 - 5. Or approved equal
- B. Description: Factory assembled and tested, air cooled; consisting of casing, compressors, condenser coils, condenser fans and motors, and unit controls.
- C. Compressor:
 - 1. Hermetic or semihermetic rotary-screw compressor designed for service with crankcase sight glass, crankcase heater, and back seating service access valves on suction and discharge ports.
 - a. Capacity Control: Variable-frequency controller.
- D. Refrigerant: R-410A.
- E. Condenser Coil: aluminum microchannel-tube, aluminum-fin coil, including subcooling circuit and back seating liquid-line service access valve.
 - 1. Factory pressure test coils, then dehydrate by drawing a vacuum and fill with a holding charge of nitrogen or refrigerant.
- F. Condenser Fans: Propeller-type vertical discharge; either directly or belt driven. Include the following:
 - 1. Permanently lubricated, ball-bearing motors.
 - 2. Separate motor for each fan.
 - 3. Dynamically and statically balanced fan assemblies.
- G. Operating and safety controls include the following:
 - 1. Manual-reset, high-pressure cutout switches.
 - 2. Automatic-reset, low-pressure cutout switches.
 - 3. Low-oil-pressure cutout switch.
 - 4. Compressor-winding thermostat cutout switch.
 - 5. Three-leg, compressor-overload protection.
 - 6. Control transformer.
 - 7. Magnetic contactors for compressor and condenser fan motors.
 - 8. Timer to prevent excessive compressor cycling.
- H. Accessories:
 - 1. Low-Ambient Controller:

- a. Controls condenser fan speed to permit operation down to minus 20 deg F with time-delay relay to bypass low-pressure switch.
2. Gauge Panel: Package with refrigerant circuit suction and discharge gauges.
3. Hot-gas bypass kit.
4. Part-winding-start timing relay, circuit breakers, and contactors.
5. Reversing valve.
6. Low-noise fans.
7. Manufacturer's Electronic Expansion Valves installed at the air handler coil
- I. Unit Casings: Designed for outdoor installation with weather protection for components and controls and with removable panels for required access to compressors, controls, condenser fans, motors, and drives. Additional features include the following:
 1. Steel, galvanized or zinc coated, for exposed casing surfaces; treated and finished with manufacturer's standard paint coating.
 2. Perimeter base rail with forklift slots and lifting holes to facilitate rigging.
 3. Gasketed control panel door.
 4. Condenser coil hail guard.
- J. Capacities and Characteristics:
 1. See drawings for capacities and characteristics.

2.3 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2.4 SOURCE QUALITY CONTROL

- A. Performance Ratings: Certify capacity performance ratings of compressor and condenser units in accordance with AHRI 340/360.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of compressor and condenser units.
- B. Examine roughing-in for refrigerant piping systems to verify actual locations of piping connections before equipment installation.
- C. Examine walls, floors, and roofs for suitable conditions where compressor and condenser units will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install units level and plumb, firmly anchored in locations indicated.
- B. Install roof-mounting units on equipment supports specified in Section 077200 "Roof Accessories."
- C. Equipment Mounting:
 - 1. Comply with requirements for seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Loose Components: Install piping specialties, electrical components, devices, and accessories that are not factory mounted.

3.3 PIPING CONNECTIONS

- A. Where installing piping adjacent to equipment, allow space for service and maintenance.
- B. Connect refrigerant piping to air-cooled compressor and condenser units; maintain required access to unit. Install furnished field-mounted accessories. Refrigerant piping and specialties are specified in Section 232300 "Refrigerant Piping."

3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.

3.6 STARTUP SERVICE

- A. Perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions and perform the following:
 - a. Inspect for physical damage to unit casing.
 - b. Verify that access doors move freely and are weathertight.

- c. Clean units and inspect for construction debris.
- d. Verify that all bolts and screws are tight.
- e. Adjust vibration isolation and flexible connections.
- f. Verify that controls are connected and operational.

- B. Start unit in accordance with manufacturer's written instructions and complete manufacturer's startup checklist.
- C. Measure and record airflow and air temperature rise over coils.
- D. Verify operation of condenser capacity control device.
- E. Verify that vibration isolation and flexible connections prevent vibration transmission to structure.

3.7 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections.
 - 1. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
 - 2. Leak Test: After installation, charge system with refrigerant and oil and test for leaks. Repair leaks, replace lost refrigerant and oil, and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor operation and unit operation, product capability, and compliance with requirements.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 5. Verify manufacturer's required airflow over coils.
- B. Compressor and condenser units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.8 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain compressor and condenser units.

END OF SECTION 236200

SECTION 237313.13 - INDOOR, BASIC AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes factory-assembled, indoor air-handling units with limited features, including the following components and accessories:
 - 1. Casings.
 - 2. Fans, drives, and motors.
 - 3. Coils.
 - 4. Air filtration.
 - 5. Dampers.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: For each air-handling unit.

1.3 INFORMATIONAL SUBMITTALS

- A. Startup service reports.
- B. Field quality-control reports.
- C. Sample Warranty: For manufacturer's warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-handling units to include in emergency, operation, and maintenance manuals.

1.5 WARRANTY

- A. Warranty: Manufacturer agrees to repair or replace components of indoor, basic, air-handling units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Manufacturer's standard, but not less than one year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 CAPACITIES AND CHARACTERISTICS

- A. See drawings for capacities and characteristics.

2.3 MANUFACTURERS

- A. Basis of design product, subject to compliance with the specified product on the drawings, provide a product by the following manufacturers:
 - 1. Pace.
 - 2. Scotts Springfield.
 - 3. UMP.
 - 4. Temtrol.
 - 5. Or approved equal.

2.4 UNIT CASINGS

- A. General Fabrication Requirements for Casings;
 - 1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
 - 2. Joints: Sheet metal screws or pop rivets.
 - 3. Sealing: Seal all joints with water-resistant sealant. Hermetically seal at each corner and around entire perimeter.
- B. Double-Wall Construction:
 - 1. Outside Casing Wall: Galvanized steel, minimum 18 gauge thick, with manufacturer's standard finish.
 - 2. Inside Casing Wall: G90 galvanized steel, solid, minimum 18 thick.
 - 3. Floor Plate: G90 galvanized steel, minimum 18 gauge thick.
 - 4. Casing Insulation:
 - a. Materials: Glass-fiber blanket, Type I or Type II ASTM C1071.
 - b. Insulation Thickness: 1 inch.
 - c. Thermal Break: Provide continuity of insulation with no through-casing metal in casing walls, floors, or roofs of air-handling unit.
- C. Airstream Surfaces: Surfaces in contact with airstream shall comply with requirements in ASHRAE 62.1.
- D. Static-Pressure Classifications:
 - 1. For Unit Sections Upstream of Fans: Minus 3-inch wg.
 - 2. For Unit Sections Downstream and Including Fans: 4-inch wg.
- E. Panels and Doors:
 - 1. Doors:
 - a. Fabrication: Formed and reinforced with same materials and insulation thickness as casing.
 - b. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside.

Arrange doors to be opened against airflow. Provide safety latch retainers on doors so that doors do not open uncontrollably.

- c. Gasket: Neoprene, applied around entire perimeters of frame.
Size: Large enough to allow for unobstructed access for inspection and maintenance of air-handling unit's internal components. At least 18 inches wide by full height of unit casing up to a maximum height of 60 inches.

2.5 CONDENSATE DRAIN PANS:

- 1. Location: Each type pf cooling coil.
- 2. Construction:
 - a. Single-wall, stainless steel sheet.
- 3. Drain Connection:
 - a. Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on both end of pan.
 - b. Minimum connection size: NPS 1.

2.6 FAN, DRIVE, AND MOTOR SECTION

- A. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.
- B. Fans: Centrifugal, galvanized steel; mounted on solid-steel shaft.
 - 1. Shafts: With field-adjustable alignment.
 - a. Turned, ground, and polished hot-rolled steel with keyway.
 - 2. Shaft Bearings:
 - a. Heavy-duty, self-aligning, pillow-block type with an L-50 rated life of minimum 100,000 hours according to ABMA 9.
 - 3. Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutoff and spun-metal inlet bell.
 - a. Bracing: Steel angle or channel supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 - 4. Housings, Plenum Fans: Steel frame and panel; fabricated without fan scroll and volute housing. Provide inlet screens for Type SWSI fans.
 - 5. Forward-Curved, Centrifugal Fan Wheels: Inlet flange, backplate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically fastened to flange and backplate; aluminum hub swaged to backplate and fastened to shaft with setscrews.
 - 6. Mounting: For internal vibration isolation. Factory-mount fans with manufacturer's standard vibration isolation mounting devices having a minimum static deflection of 1 inch.
 - 7. Shaft Lubrication Lines: Extended to a location outside the casing.
- C. Motors:
 - 1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 2. Enclosure Type: Open, dripproof.
- D. Variable-Frequency Motor Controller: Serving all fans combined in fan array.
 - 1. Manufactured Units: Pulse-width modulated; variable torque inverter-duty motors.

2. Output Rating: Three phase; 10 to [0 Hz, with voltage proportional to frequency throughout voltage range; maximum voltage equals input voltage.

2.7 COIL SECTION

A. General Requirements for Coil Section:

1. Comply with AHRI 410.
2. Fabricate coil section to allow removal and replacement of coil for maintenance and to allow in-place access for service and maintenance of coil(s).
3. Coils shall not act as structural component of unit.
4. Hot-Water Coils: Continuous circuit.
 - a. Piping Connections: Threaded same end of coil.
 - b. Tube Material: Copper.
 - c. Fin Type: Plate.
 - d. Fin Material: Aluminum.
 - e. Fin and Tube Joint: Mechanical bond].
 - f. Headers:
 - 1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
 - 2) Seamless copper tube with brazed joints, prime coated.
 - 3) Fabricated steel, with brazed joints, prime coated.
 - 4) Provide insulated cover to conceal exposed outside casings of headers.
 - g. Frames: Channel frame, minimum 0.052-inch-thick galvanized steel.
 - h. Coil Working-Pressure Ratings: 200 psig 325 deg F.

B. Refrigerant Coils:

1. Refrigeration Coil: Continuous circuit.
 - a. Tubes: Copper.
 - b. Fins:
 - 1) Material: Aluminum.
 - c. Fin and Tube Joints: Mechanical bond.
 - d. Headers: Seamless-copper headers with brazed connections
 - e. Frames: Galvanized steel.
 - f. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.
 - 1) Working Pressure: Minimum 350 psig.

2.8 AIR FILTRATION SECTION

A. Panel Filters:

1. Description: Pleated factory-fabricated, self-supported disposable air filters with holding frames.
2. Filter Unit Class: UL 900.
3. Media: Interlaced glass, synthetic, or cotton fibers coated with nonflammable adhesive and antimicrobial coating.

B. Side-Access Filter Mounting Frames:

1. Particulate Air Filter Frames: Match inner casing and outer casing material, and insulation thickness. Galvanized steel track.
 - a. Sealing: Incorporate positive-sealing device to ensure seal between gasketed material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

2.9 DAMPERS

- A. Dampers: Comply with requirements in Section 230923.12 "Control Dampers."
- B. Damper Operators: Comply with requirements in Section 230923.12 "Control Dampers."

2.10 MATERIALS

- A. Steel:
 1. ASTM A36/A36M for carbon structural steel.
 2. ASTM A568/A568M for steel sheet.
- B. Stainless Steel:
 1. Manufacturer's standard grade for casing.
 2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.
- C. Galvanized Steel: ASTM A653/A653M.
- D. Aluminum: ASTM B209.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Examine roughing-in for steam, hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.
- B. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Coordinate sizes and locations of structural-steel support members with actual equipment provided. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- C. Arrange installation of units to provide access space around air-handling units for service and maintenance.
- D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.
- E. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

3.2 PIPING CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to air-handling unit, allow for service and maintenance.
- C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- D. Connect condensate drain pans using NPS 1-1/4, ASTM B88, Type M copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.
- E. Hot-Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.
- F. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

3.3 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."

3.4 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.

3.5 STARTUP SERVICE

- A. Perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that shipping, blocking, and bracing are removed.

3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
6. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
7. Comb coil fins for parallel orientation.
8. Verify that proper thermal-overload protection is installed for electric coils.
9. Install new, clean filters.
10. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

B. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm.
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

3.6 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.
- C. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.7 CLEANING

- A. After completing system installation and testing, adjusting, and balancing of air-handling unit and air-distribution systems, and after completing startup service, clean air-handling units internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, coils, and filter housings, and install new, clean filters.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

END OF SECTION 237313.13

SECTION 237423.16 - PACKAGED, INDIRECT-FIRED, OUTDOOR MAKEUP-AIR UNITS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes outdoor, indirect, gas-fired, heating-only, makeup air units, including the following components:
 - 1. Casings.
 - 2. Outdoor-air intake hood.
 - 3. Roof curbs.
 - 4. Fans, drives, and motors.
 - 5. Dampers.
 - 6. Indirect, gas-fired burners.
 - 7. Evaporative Cooler.
 - 8. Controls.

1.2 ACTION SUBMITTALS

- A. Product Data: For each outdoor, indirect, gas-fired, heating-only, makeup air unit.

1.3 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For manufacturer's warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For indirect, gas-fired, makeup air units to include in emergency, operation, and maintenance manuals.
- B. Filled out manufacturer's startup checklist is to be included in the Operation and Maintenance Manual.

1.5 WARRANTY

- A. Warranty: Manufacturer agrees to repair or replace components of indirect, gas-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period for Entire Unit: Manufacturer's standard, but not less than **[one]** **<Insert number>** year(s) from date of Substantial Completion.
 - 2. Warranty Period for Heat Exchangers: Not less than **[five]** **<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of units and components.

2.2 CAPACITIES AND CHARACTERISTICS

- A. See drawings for capacities and characteristics.

2.3 MANUFACTURERS

- A. Basis-of-Design Product, subject to compliance with the specified product on the drawings. Provide a product by one of the following manufacturers:
 - 1. Greenheck
 - 2. Cook
 - 3. Applied Air
 - 4. Or Approved Equal

2.4 UNIT CASINGS

- A. General Fabrication Requirements for Casings:
 - 1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
 - 2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
 - 3. Makeup Air Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.
- B. Configuration: Horizontal unit with bottom discharge for roof-mounting installation.
- C. Double-Wall Construction:
 - 1. Outside Casing Wall: Galvanized steel minimum 18 gauge thick, with manufacturer's standard finish.
 - 2. Inside Casing Wall:
 - a. Inside Casing, Burner Section: Galvanized steel, solid, minimum 14-gauge thick steel.
 - b. Inside Casing, All Other Sections: Galvanized steel.
 - 3. Floor Plate: Galvanized steel, minimum 18 gauge thick.
 - 4. Casing Insulation:
 - a. Materials: Glass-fiber blanket or board insulation, Type I or Type II ASTM C1071.
 - b. Insulation Thickness: 1 inch.
 - c. Thermal Break: Provide continuity of insulation with no through-casing metal in casing walls, floors, or roof of unit.
- D. Panels and Doors:
 - 1. Panels:
 - a. Fabrication: Formed and reinforced, with same materials and insulation thickness as casing.
 - b. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against airflow.
 - c. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - d. Size: Large enough to allow unobstructed access for inspection and maintenance of unit's internal components.
 - 2. Doors:

- a. Fabrication: Formed and reinforced with same materials and insulation thickness as casing.
 - b. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside. Arrange doors to be opened against airflow. Provide safety latch retainers on doors so that doors do not open uncontrollably.
 - c. Gasket: Neoprene, applied around entire perimeters of panel frames.
 - d. Size: Large enough to allow unobstructed access for inspection and maintenance of unit's internal components.
3. Locations and Applications:
- a. Fan Section: **Doors**
 - b. Access Section: Doors.
 - c. Gas-Fired Burner Section: **Doors**.
 - d. Damper Section: **Doors**.
 - e. Filter Section: **Doors** large enough to allow periodic removal and installation of filters.

2.5 OUTDOOR-AIR INTAKE HOOD

- A. Type: Manufacturer's standard hood or louver.
- B. Materials: Match cabinet.
- C. Bird Screen: Comply with requirements in ASHRAE 62.1.
- D. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.6 ROOF CURBS

- A. Roof curbs with seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
 - 1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
 - a. Materials: ASTM C 1071, Type I or Type II.
 - b. Thickness: 2-inches
 - 2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
 - a. Liner Adhesive: Comply with ASTM C 916, Type I.
 - b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
 - c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
 - d. Liner Adhesive: Comply with ASTM C 916, Type I.
- C. Curb Height: 20-inches high

- D. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match unit, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for wind-load requirements.

2.7 FANS, DRIVES, AND MOTORS

- A. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.
- B. Fans: Centrifugal, rated according to AMCA 210; galvanized steel; mounted on solid-steel shaft.
 - 1. Shafts: With field-adjustable alignment.
 - 2. Shaft Bearings: Heavy-duty pillow-block bearings with an L50 rated life of 100,000 hours according to ABMA 9.
 - 3. Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutoff and spun-metal inlet bell.
 - 4. Mounting: For internal vibration isolation. Factory-mount fans with manufacturer's standard vibration isolation mounting devices having a minimum static deflection of 1 inch.
 - 5. Shaft Lubrication Lines: Extended to a location outside the casing.
 - 6. Flexible Connector: Factory fabricated with a fabric strip minimum 3-1/2 inches wide, attached to two strips of minimum 2-3/4-inch-wide by 0.028-inch-thick, galvanized-steel sheet.
 - a. Flexible Connector Fabric: Glass fabric, double coated with neoprene. Fabrics, coatings, and adhesives shall comply with UL 181, Class 1.
- C. Motors:
 - 1. Motor Sizes: Maximum sizes as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 2. Enclosure: Open, drip proof Retain "Enclosure Materials," "Motor Bearings," "Unusual Service Conditions," "Efficiency," and "NEMA Design" subparagraphs below if options are available from equipment manufacturers and are different from default requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment." Consider each subparagraph and retain only those that vary from default requirements.
 - 3. Enclosure Materials: Cast iron.
 - 4. Efficiency: Premium efficient as defined in NEMA MG 1.

2.8 DAMPERS

- A. Outdoor-Air Dampers: Low-leakage, double-skin, airfoil-blade, galvanized-steel dampers with compressible jamb seals and extruded-vinyl blade edge seals in parallel-blade arrangement with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame, and with operating rods connected with a common linkage. Leakage rate shall not exceed 4 cfm/sq. ft. at 1-inch wg and 8 cfm/sq. ft. at 4-inch wg.
- B. Electronic Damper Operators:
 - 1. Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.

2. Electronic damper position indicator shall have visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
3. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft.: Size for running and breakaway torque of 150 in. x lbf.
4. Coupling: V-bolt and V-shaped, toothed cradle.
5. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
6. Fail-Safe Operation: Mechanical, spring-return mechanism with external.
7. Power Requirements (Two-Position Spring Return): 24 V dc.
8. Temperature Rating: Minus 22 to plus 122 deg F.
9. Run Time: 120 seconds.

2.9 INDIRECT-FIRED GAS BURNER

- A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47 and with NFPA 54.
- B. CSA Approval: Designed and certified by and bearing label of CSA.
- C. Burners: Stainless steel.
 1. Rated Minimum Turndown Ratio: 30 to 1.
 2. Fuel: Natural gas.
 3. Ignition: Electronically controlled electric spark with flame sensor.
 4. Gas Control Valve: Modulating.
 5. Gas Train: Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, electronic-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
 6. High-Altitude Kit
- D. Venting, Power: Power vented, with integral, motorized centrifugal fan interlocked with gas valve.
- E. Heat Exchanger: Stainless steel.
- F. Heat-Exchanger Drain Pan: Stainless steel.
- G. Safety Controls:
 1. Gas Manifold: Safety switches and controls complying with ANSI standards and FM Global.
 2. Vent Flow Verification: Flame rollout switch.
 3. High Limit: Thermal switch or fuse to stop burner.
 4. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
 5. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
 6. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
 7. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.
 8. Control Transformer: 24 V ac.

2.10 EVAPORATIVE COOLER SECTION

- A. Stainless Steel Drain Pan
- B. Media
 - 1. Glasdek.
- C. Manufacturer's evaporative Pump

2.11 CONTROLS

- A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" and controls drawings for control equipment and sequence of operation.
- B. Control Devices:
 - 1. Ionization-Type Smoke Detectors:
 - a. 24-V dc, nominal.
 - b. Self-restoring.
 - c. Plug-in arrangement.
 - d. Integral visual-indicating light.
 - e. Sensitivity that can be tested and adjusted in place after installation.
 - f. Integral addressable module.
 - g. Remote controllability.
 - h. Responsive to both visible and invisible products of combustion.
 - i. Self-compensating for changes in environmental conditions.
- C. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.
- D. Temperature Control:
 - 1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
 - 2. Burner Control, Modulating: 20 to 100 percent modulation of the firing rate. 10 to 100 percent with dual burner units.

2.12 MATERIALS

- A. Steel:
 - 1. ASTM A36/A36M for carbon structural steel.
 - 2. ASTM A568/A568M for steel sheet.
- B. Stainless Steel:
 - 1. Manufacturer's standard grade for casing.
 - 2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.
- C. Galvanized Steel: ASTM A653/A653M.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Examine roughing-in piping, ducts, and electrical systems to verify actual locations of piping and electrical connections before equipment installation.
- B. Roof Curb: Install on roof structure or concrete base, level and secure, according to NRCA's "NRCA Roofing Manual: Membrane Roof Systems." Install units on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts. Coordinate sizes and locations of roof curbs with actual equipment.
- C. Install gas-fired units in accordance with NFPA 54.
- D. Install controls and equipment shipped by manufacturer for field installation with indirect, gas-fired heating and ventilating units.
- E. Adjust evaporative cooler float per manufacturer's instructions.

3.2 PIPING CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Gas Piping: Comply with requirements in Section 231123 "Facility Natural-Gas Piping." Connect gas piping with shutoff valve and union, and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.
- B. Drain: Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for traps and accessories on piping connections to condensate drain pans under condensing heat exchangers.
- C. Where installing piping adjacent to heating and ventilating units, allow space for service and maintenance.

3.3 DUCTWORK CONNECTIONS

- A. Duct Connections: Connect supply ducts to indirect-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.

3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 FIELD QUALITY CONTROL

- A. Perform tests and inspections with the assistance of a factory-authorized service representative.
- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.

END OF SECTION 237423.16

SECTION 238126 - SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes split-system air-conditioning and heat-pump units consisting of separate evaporator-fan and compressor-condenser components.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: For each type of product indicated.

1.3 INFORMATIONAL SUBMITTALS

- A. Warranty: Sample of special warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance:
 - 1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
 - 2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Procedures," and Section 7 - "Construction and System Start-up."
- C. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period:
 - a. For Compressor: Five year(s) from date of Substantial Completion.
 - b. For Parts: Five year(s) from date of Substantial Completion.
 - c. For Labor: One year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

1. Basis of design products subject to compliance to the specified product on the drawing. Provide a product by one of the following manufacturers:
 - a. Mitsubishi.
 - b. Trane.
 - c. Lennox.
 - d. LG.
 - e. York.
 - f. Daikin.
 - g. Samsung
 - h. Or approved equal.

2.2 INDOOR UNITS 5 TONS OR LESS)

A. Wall-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
3. Fan: Direct drive, centrifugal.
4. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
 - c. Enclosure Type: Totally enclosed, fan cooled.
 - d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
 - e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
6. Condensate Drain Pans:
 - a. Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
 - 1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
 - 2) Depth: A minimum of 1 inch deep.
 - b. Single-wall, galvanized steel sheet.
 - c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
 - 1) Minimum Connection Size NPS 3/4.
 - d. Pan-Top Surface Coating: Asphaltic waterproofing compound.
7. Air Filtration Section:

2.3 OUTDOOR UNITS 5 TONS OR LESS.

- A. Air-Cooled, Compressor-Condenser Components:
 - 1. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
 - 2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - a. Compressor Type: Scroll.
 - b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
 - c. Refrigerant: R-410A.
 - d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.
 - 3. Fan: Aluminum-propeller type, directly connected to motor.
 - 4. Motor: Permanently lubricated, with integral thermal-overload protection.
 - 5. Low Ambient Kit: Permits operation down to 45 deg F.
 - 6. Mounting Base: Polyethylene.

2.4 ACCESSORIES

- A. Thermostat: Low voltage with subbase to control compressor and evaporator fan.
- B. Automatic-reset timer to prevent rapid cycling of compressor.
- C. Drain Hose: For condensate.

2.5 CAPACITIES AND CHARACTERISTICS

- A. See drawings for capacities and characteristics.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install units, level and plumb.
- B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- C. Equipment Mounting:
 - 1. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- D. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Prepare test and inspection reports.

3.4 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain units.

END OF SECTION 238126

SECTION 238239.16 - PROPELLER UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes propeller unit heaters with hot-water coils.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittals for submittal requirements.
- B. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- 1. Basis of design product, subject to compliance with the specified product on the drawing, provide a product by one of the following:
 - a. Modine.
 - b. Trane.
 - c. Reznor.
 - d. Sterling.

2.2 DESCRIPTION

- A. Assembly including casing, coil, fan, and motor in vertical and horizontal discharge configuration with adjustable discharge louvers.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 HOUSINGS

- A. Finish: Manufacturer's standard baked enamel applied to factory-assembled and -tested propeller unit heaters before shipping.
- B. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- C. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.

2.4 COILS

- A. General Coil Requirements: Test and rate hot-water propeller unit-heater coils according to ASHRAE 33.
- B. Hot-Water Coil: Copper tube, minimum 0.025-inch wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 325 deg F, with manual air vent. Test for leaks to 350 psig underwater.

2.5 FAN AND MOTOR

- A. Fan: Propeller type with aluminum wheel directly mounted on motor shaft in the fan venturi.
- B. Motor: Permanently lubricated. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.6 CAPACITIES AND CHARACTERISTICS

- A. See drawings for capacities and characteristics.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive propeller unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install propeller unit heaters to comply with NFPA 90A.
- B. Install propeller unit heaters level and plumb.
- C. Suspend propeller unit heaters from structure with all-thread hanger rods and elastomeric hangers. Hanger rods and attachments to structure are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Section 230548 "Vibration and Seismic Controls for HVAC."

3.3 CONNECTIONS

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to propeller unit heater's factory, hot-water piping package. Install the piping package if shipped loose.
- D. Comply with safety requirements in UL 1995.
- E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of propeller unit heater. Hydronic specialties are specified in Section 232116 "Hydronic Piping Specialties."
- F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

END OF SECTION 238239.16

SECTION 238239.19 - WALL AND CEILING UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes wall and ceiling heaters with propeller fans and electric-resistance heating coils.

1.2 ACTION SUBMITTALS

- A. See Section 013300 – Submittal requirements.
- B. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include details of anchorages and attachments to structure and to supported equipment.
 - 4. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
 - 5. Wiring Diagrams: Power, signal, and control wiring.
- D. Samples: For each exposed product and for each color and texture specified.

1.3 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Berko; Marley Engineered Products.
 - b. Chromalox, Inc.
 - c. Markel Products; TPI Corporation.
 - d. Marley Engineered Products.
 - e. QMark; Marley Engineered Products.

2.2 DESCRIPTION

- A. Assembly including chassis, electric heating coil, fan, motor, and controls. Comply with UL 2021.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 CABINET

- A. Front Panel: **Stamped-steel louver**, with removable panels fastened with tamperproof fasteners.
- B. Finish: Baked enamel over baked-on primer with manufacturer's **standard** color selected by Architect, applied to factory-assembled and -tested wall and ceiling heaters before shipping.
- C. Surface-Mounted Cabinet Enclosure: Steel with finish to match cabinet.

2.4 COIL

- A. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high-temperature protection. Provide integral circuit breaker for overcurrent protection.

2.5 FAN AND MOTOR

- A. Fan: Aluminum propeller directly connected to motor.
- B. Motor: Permanently lubricated. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.6 CONTROLS

- A. Controls: Unit-mounted thermostat.
- B. Electrical Connection: Factory wire motors and controls for a single field connection.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install wall and ceiling unit heaters to comply with NFPA 90A.
- B. Install wall and ceiling unit heaters level and plumb.
- C. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

- E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

END OF SECTION 238239.19

SECTION 260001 – ELECTRICAL GENERAL PROVISIONS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. The Drawings and General provisions of the Contract including the "General Conditions", "Supplementary Conditions", and "General Requirements" of the Contract as written and referred to here are adopted and made part of Division 26.
- B. The Contract Agreement, Bidding documents, and all Addenda issued prior to Contract Agreement execution form a part of these specifications and apply to all Contracts or Subcontracts relating to the electrical systems.

1.2 SUMMARY

- A. The work under this Division shall consist of all labor, materials, equipment, services and related accessories, etc., necessary and required to complete all work as shown or inferred on the Drawings and in the Specifications (Contract Documents).
- B. Provide fixed electrical equipment, except where specifically noted otherwise.
- C. Provide portable electrical equipment for the complete system(s).
- D. Provide equipment and/or wiring normally furnished or required for complete electrical systems but not specifically specified on the drawings and/or in specifications, as though specified by both.
- E. All equipment and wiring shall be new, except where specifically shown or specified otherwise.
- F. Provide flexible electrical conduit and conductors having a slack, 90-degree bend or loop in any plane between connections at all vibration isolated equipment and the first attachment to building structure or cabinets, panels or boxes mounted thereon.

1.3 WORK INCLUDED IN THIS DIVISION

- A. Electrical work includes, but is not limited to
 - 1. Arranging and coordinating with utility services required as shown or specified.
 - 2. Removal or relocation of electrical services and electrical work located on or crossing through project property, above or below grade, obstructing construction of project or conflicting with completed project or any applicable code.
 - 3. Provide meters, switchboards, panelboards, circuit breakers, power outlets, convenience outlets, switches, and/or other equipment forming part of system.
 - 4. Complete lighting system.
 - 5. Complete communication system.
 - 6. Complete Audio/Visual system.
 - 7. Connection of all appliances and equipment including Owner furnished equipment.
 - 8. Complete grounding system.

9. Complete temporary facilities for construction power.
10. Complete fire alarm system.

1.4 WORK NOT INCLUDED IN THIS DIVISION (REFER TO OTHER DIVISIONS OF THESE SPECIFICATIONS)

- A. Flashing of conduits into roofs and outside walls. Inform General Contractor of number and size of roof penetrations prior to bidding.
- B. Furring of building structure or finishes for conduit and equipment.
- C. Finish painting of conduit and equipment except for factory applied prime or finish painting specified for equipment, fixtures, devices or materials furnished under this section.
- D. Installation of motors except where specifically noted. See Division 23.
- E. Control wiring for mechanical systems, except where specifically indicated to be provided by Electrical Contractor. See Division 23.

1.5 RELATED WORK SPECIFIED ELSEWHERE

- A. Classification of Excavation: Division 02 – Site work.
- B. Concrete Work: Division 03.
- C. Painting: Division 09.
- D. Firestopping: Division 07.

1.7 ADOPTED CODES

- A. 2018 International Building Code (IBC) Published by the International Code Council (ICC).
- B. 2017 National Electrical Code (NEC) published by the National Fire Protection Association (NFPA)
- C. 2018 International Fire Code (IFC) published by the International Code Council.
- D. National Fire Codes (NFPA Standards) published by the National Fire Protection Association (NFPA) as referenced in the 2018 International Fire Code.
- E. 2018 International Energy Conservation Code (IECC) published by the International Code Council. ASHRAE/IESNA Standard 90.1 is incorporated by reference.
- F. All applicable provisions of the Nevada Revised Statutes (NRS) and the Nevada Administrative Code (NAC), including those listed below.
- G. The most current regulations of the State Fire Marshal, Nevada Department of Public Safety, Carson City, Nevada (NAC Chapter 477, State Fire Marshal).
- H. The most current edition of the Americans with Disabilities Act (ADA) published by the United States Department of Justice including the Americans with Disabilities Act Accessibility Guidelines (ADAAG)
- I. Other codes, regulations, and standards referenced in the body of this document.
- J. Local codes and ordinances do not apply to projects constructed on state-owned land, except for zoning requirements pursuant to Nevada Revised Statutes Section 278.580.
- K. Northern Nevada ICC 2018 Adopted Amendments.

1.8 DEFINITIONS

Provide:	Furnish, install, connect and test until complete.
Wire:	Furnish all necessary wiring, connect and test until complete.
Install:	Furnish, set in place, wire and test until complete.
Work:	Materials completely installed, connected, and tested until complete.
AWG:	American Wire Gage.

Equal:	Acceptable equal as determined by the Engineer.
--------	---

1.9 REQUIREMENTS OF REGULATORY AGENCIES

- A. Obtain and pay for all permits and inspections required for the work. Comply with all ordinances pertaining to work described herein. Pay all expenses arising from the procurement of these certificates and include in the base contract price.
- B. Install work under this Division per drawings, specifications, latest adopted edition of the National Electrical Code, (NFPA-70) including local amendments and interpretations, Local adopted Building Codes, and any special codes having jurisdiction over specific portions of work within complete installation. In event of conflict, install work per most stringent code requirements determined by Engineer. This does not relieve the Contractor from furnishing and installing work shown or specified which may exceed the requirements of such ordinances, laws, regulations and codes.
- C. All materials, products, devices, fixtures, forms or types of construction included in this project shall meet or exceed the published requirements of National Electrical Code (NEC), American National Standards Institute (ANSI), Institute of Electrical and Electronics Engineers (IEEE) and National Electrical Manufacturers Associations (NEMA). All equipment shall bear the Underwriter's Laboratories (UL) label or equivalent from approved independent testing laboratory.
- D. Arrange, pay fees for and complete work to pass required tests by agencies having authority over work. Deliver to Engineer copies of the Certificates of Inspection and approval issued by authorities and provide original copy of each certificate to Owner.
- E. When required by law or regulations, the governmental agency having jurisdiction for inspections shall be given reasonable notice and opportunity to inspect the work. Any work that is enclosed or covered up before such inspection and test shall be uncovered at the Contractor's expense; after it has been inspected, the Contractor shall restore the work to its original condition at his own expense.

1.10 INSURANCE

- A. The Contractor shall procure and maintain, at his expense, such insurance as required by law and/or specified in the General Conditions.

1.11 DRAWINGS AND SPECIFICATIONS

- A. Drawings and specifications are complementary. Work called for by one is binding as if called for by both. Any discrepancies between drawings and specifications shall be brought to the attention of the Engineer for clarification during the bidding period. No allowance shall subsequently be made to the Contractor by reason of his failure to have brought said discrepancies to the attention of the Consultant during the bidding period or by reason of any error on the Contractor's part.
- B. Drawings are schematic and diagrammatic in nature. Drawings show general run of circuits and approximate location of equipment. The contractor shall review drawings of all trades to assure coordination prior to placement of work. Right is reserved to

change location of equipment and devices, and routing of conduits within 10 feet, without extra cost to Owner (prior to rough-in).

- C. Use dimensions in figures, shop drawings, etc. and actual site measurements in preference to scaled dimensions. Do not scale drawings for exact sizes or locations – use dimensioned details or actual field conditions. Verify item mounting heights as required by project conditions prior to rough-in.
- D. The architectural drawings shall take precedence over all other drawings in matters of dimensions. Discrepancies between different drawings or between drawings and specifications, or regulations and codes governing the installation shall be brought to the attention of the Engineer in writing for determination.
- E. Layout equipment as shown on drawings as close as possible. Verify access requirements for equipment actually furnished, and adjust layout to comply with NEC 110. Right is reserved to change layout within 10 feet without additional cost (prior to rough-in).
- F. All devices, light fixtures, etc. located in ceiling tiles shall be located in the center of the ceiling tile UNLESS specifically noted or approved to do otherwise.
- G. The Contractor is responsible to field measure and confirm the mounting heights and location of electrical equipment with respect to counters, doorways, and other architectural, mechanical or structural work. Do not scale distances off the electrical drawings: Use actual building dimensions.
- H. Execution of Contract is evidence that Contractor has examined all existing conditions, drawings and specifications related to work, and is informed to extent and character of work. Later claims for labor and materials required due to difficulties encountered, which could have been foreseen had examination been made, will not be recognized.
- I. All work called for in this Section of the plans and specifications shall be performed under this Section, regardless of whether such work may also have been called for in other Section(s). Discrepancies in or conflicts among the various parts of the contract drawings shall not relieve Contractor of his obligation to perform.
- J. No attempt has been made to establish the required sections or splits of equipment relative to the size of access into the space, building, etc. Contractor shall establish all said splits, sections, etc. necessary to install equipment complete without undue disassembly of equipment or demolition of building parts at site of work.
- K. Charges for extra work are not allowed unless work is authorized by written order from the Owner's Representative approving charges for work.
- L. Check all door swings so light switches are not located behind doors. Relocate switches as required with the Engineer's review.
- M. Elevators: The location of switches, GFCI receptacles, lights, telephone outlets, disconnect switches, fire alarm devices, etc., in elevator pits, shafts, equipment rooms

shall be located as required by the Elevator Shop Drawings and applicable codes. Coordinate size and type of all electrical devices with Elevator Contractor prior to purchase of equipment.

1.12 SEISMIC QUALIFICATIONS & REQUIREMENTS

A. Equipment Seismic Qualification

Major equipment and components shall be suitable for and certified to meet all applicable seismic requirements of the California Building Code (CBC) through zone 4 application. Guidelines for the installation consistent with these requirements shall be provided by the manufacturer and be based upon testing of representative equipment. The test response spectrum shall be based upon a 5% minimum damping factor, CBC: a peak of 2.15g's and a ZPA of 0.86g's applied at the base of the equipment. The tests shall fully envelop this response spectrum for all equipment natural frequencies up to at least 35 Hz.

B. Structural Design Requirements

1. **Include in the bid, hiring of a structural engineer, registered in the state of Nevada, to provide calculations and details for equipment pads and mounting and bracing of all major equipment. Attach equipment according to those calculations.**
2. **Major equipment and components include:**
 - a) **Conduit racks and supports.**
 - b) **Transformers.**
 - c) **Panelboards.**
 - d) **Service and Distribution switchboards.**
3. Equipment anchoring and bracing shall be designed to conform to IBC 2018 and NRS 341.143.

C. See Spec Section 26 05 30 Seismic Protection for Electrical Equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. All material shall be new, and have a UL label where available. If UL label is not available, material shall be manufactured in accordance with applicable NEMA, IEEE and Federal Standards. Use UL labeled components in assemblies that do not have overall UL label. All equipment shall comply with the terms "listed and labeled" as defined in the NEC 70, Article 100. Submit letter stating compliance with these requirements.
- B. Utilize one of the manufacturers listed to furnish all of the major equipment (i.e., transformers, bus duct, switchgear, circuit breakers, etc.) required for this project.
- C. Basis-of-Design Products: Where Specifications name a product, or refer to a product indicated on Drawings, and include a manufacturer or list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements

in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers or a comparable substitution.

2.2 COMPARABLE PRODUCTS

- A. Conditions for Consideration: Engineer will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Engineer may return requests without action, except to record noncompliance with these requirements:
1. Evidence that the proposed product does not require revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
 2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
 3. Evidence that proposed product provides specified warranty.
 4. List of similar installations for completed projects with project names and addresses and names and addresses of engineers and owners, if requested.
 5. Samples, if requested.

PART 3 - EXECUTION

3.1 VISIT TO SITE

- A. Visit site, and survey existing conditions affecting work prior to bid. Include necessary materials and labor to accomplish the electrical work, including relocation of existing services and utilities on building site in bid. No consideration shall be given to future claims due to existing conditions. Any discrepancies or interference's shall be reported immediately to the Engineer.

3.2 WORKMANSHIP

- A. All work performed shall be first class work in every aspect. The work shall be performed by mechanics skilled in their respective trades, who shall at all times be under the supervision of competent persons. All work shall be installed to comply with NECA's "Standard of Installation."
- B. Work under this Division shall be first class with emphasis on neatness and workmanship. All work shall be installed square and plumb and concealed where possible. Work that is deficient, defective, poorly laid out, not perfectly aligned, or that is not consistent with the requirements generally accepted in the trade for "first class work" will not be acceptable.
- C. In addition to the materials specified elsewhere, furnish and install all other miscellaneous items necessary for the completion of the work to the extent that all systems are complete and operative.
- D. All work under this Section shall be performed in cooperation with the work performed under all other Sections of the Specifications for the Project in order to avoid interference with other work and to secure the proper installation of all work. Refer the Drawings and Specifications covering the work to be performed under all Sections, so

that the relation and extent of the work of this Section with respect to the work of all other Sections is understood. Give right of way to raceways and piping systems installed at a required slope.

- E. Install work using competent mechanics, under supervision of foreman, all duly certified by local authorities. The installation shall be subject to the Engineer's observation, and final acceptance. The Engineer may reject unsuitable work.
- F. Conduit systems must be complete prior to installation of wiring.

3.3 CHANGE ORDERS

- A. Additional work may be required on the project which is outside the scope of the contract. Such additional work will be described in Supplemental Instructions and/or Clarifications, to be estimated and priced by the Contractor, and accepted by the Owner, prior to commencing work. Proposals shall include a list of quantities of all material being used with unit costs broken down into material and labor costs per unit, along with quotations from suppliers for equipment/devices/components.
- B. Material costs and labor units shall not exceed the latest edition of RS Means Electrical Cost Data.
- C. See the General Conditions of the Specifications for acceptable charges.

3.4 GUARANTEE

- A. Furnish the Owner a written guarantee, stating that if workmanship and/or material executed under this Division is proven defective within one (1) year after final acceptance by the Owner, such defects and other work damaged will be repaired and/or replaced. Submit with Operations and Maintenance Manuals.
- B. Obtain from the various manufacturers or vendors guarantees or warranties for their particular equipment or components, and deliver them to the Owner. All guarantees and warranties provided shall be referenced to this project.
- C. In event that systems are placed in operation in several phases at the Owner's request, guarantee will begin on date each system or item of equipment is accepted for service by the Owner. Provide O&M manuals for all equipment when equipment is accepted for service by the Owner.
- D. All guarantees and warranties shall include labor and material at the site of installation for the duration of the guarantee period.

3.5 OBSERVATIONS OF WORK AND DEMONSTRATION OF OPERATION (ACCEPTANCE)

- A. At all observations of work, open panel covers, junction box covers, pull box covers, device covers, and other equipment with removable plates for observation. Provide sufficient personnel to expedite cover removal and replacement.
- B. Contractor to demonstrate operation of new equipment and/or systems to satisfaction of Owner/Engineer. Contractor to have manufacturer available for demonstration of

equipment and/or systems where requested by Owner/Engineer. Furnish affidavit signed by Owner's representative indicating that demonstration of operation has been performed.

3.6 COOPERATION AND COORDINATION

- A. Carefully coordinate work with other contractors and subcontractors. Refer conflicts between trades to Engineer. Provide necessary information to other trades for such coordination. Such information shall include Shop Drawings, Product Data and all other required data. There shall be no additional cost to the owner for any post-bid changes made to the electrical design and/or construction that are generated by changes to the basis-of-design equipment of any discipline. This includes changes made by substituted, alternate or comparable products regardless of manufacturer.
- B. Provide a system erection/coordination drawing showing electrical, HVAC, plumbing and architectural for installation in congested areas. Drawings shall be in plan view for work above the ceilings and also sections shall be provided showing the elevations of conduit racks and routing and the coordination with mechanical piping and ductwork.**
- C. Whenever such information is not provided in a timely manner or whenever such information is incorrect, this contractor shall bear all costs for providing or correcting affected work of related trades with no change to the Contract Price or Construction Schedule.
- D. Work to be installed as progress of project will allow. Schedule of work determined by General Contractor, Owner, and/or Architect/Engineer.

3.7 COORDINATION OF UTILITY SERVICES

- A. Drawings indicate proposed service layouts. The Contractor shall provide all concrete structures, pads, pullboxes, vaults, trenching, raceways, protective bollards, etc., as required per NV Energy standards.

3.8 HVAC CONTROL WIRING

- A. Control Wiring including low voltage and line voltage interlock wiring will be furnished and installed under Division 23, except where specifically shown otherwise. Carefully coordinate power and control wiring interface.
- B. This Contractor shall obtain from Division 23 all wiring diagrams associated with the HVAC work and furnish all power and 120V control wiring, disconnects and starters for equipment not already packaged with these items. All wiring and conduit associated with the HVAC Temperature Control System is included under Division 23. Wiring and conduit shall comply with Division 26. All electrical work associated with the HVAC system shall be done under the supervision of Division 23.**

3.9 STARTERS

- A. Separately mounted starters are furnished and installed under Division 26 unless specifically shown otherwise. All power wiring, fuses, thermal overloads, and

disconnect switches and connection of all motors is under this division. Provide the proper feeders and connections as recommended by the manufacturer of the equipment. See Spec Section 26 29 13 Enclosed Controllers.

3.10 PROTECTING

- A. Provide warning lights, bracing, shoring, rails, guards and covers necessary to prevent damage or injury. All persons working around electrical equipment shall have electrical shock and flash protection per OSHA 1910.301-309 & 331-335.
- B. Do not leave exposed or unprotected, electrical items carrying current. Protect visitors and workers from exposure to contact with electrically energized surfaces, parts, etc. in accordance with OSHA standards.

3.11 DELIVERY, STORAGE AND HANDLING

- A. Deliver equipment and materials to job site in original, unopened, labeled container. Products shall be properly identified with names, model numbers, types, grades, compliance labels and other information needed for identification. Store to prevent damage and injury. Store materials to prevent corroding. Store finished materials and equipment to prevent staining and discoloring. Store materials affected by condensation in warm dry areas. Provide heaters. Contractor shall verify the availability of on site storage space, if no on site storage space is available then the contractor shall cover the cost for off site storage. Materials stored at the project site that becomes soiled with construction dirt, concrete, or moisture shall be removed from the site and replaced with new. Do not install soiled material.
- B. Protect work and materials from damage by weather, entrance of water or dirt. Cap and mark conduit during installation.
- C. Avoid damage to materials and equipment in place. Repair, or remove and replace damaged work and materials.
- D. Protection and safekeeping of products stored on premises is responsibility of Contractor supplying products.
- E. Schedule of deliveries and unloading to prevent traffic congestion blocking of access or interference with work. Arrange deliveries to avoid larger accumulations of materials than can be suitably stored at site.
- F. Install equipment per manufacturer's recommendations. Conflicts between contract documents and these recommendations shall be referred to Engineer for remedy.
- G. Electrical or electronic equipment that has been damaged, exposed to weather or is, in the opinion of the Engineer or Architect, otherwise unsuitable because of improper fabrication, storage or installation shall be removed and replaced by this Contractor at his expense.

3.12 ANCHORS

- A. Provide anchors for all equipment, raceways, hangers, etc. to safely support weight of item involved plus 100% for dead loads. Live loads shall be considered in addition to dead loads.

- B. Anchors to consist of expansion type devices similar to "Redhead" or lead expansion anchors. Plastic anchors are not acceptable.
- C. Use preset anchor steel inserts in concrete slabs. Provide preset anchor size and type for anticipated or specified rod/bolt size and live/dead load.

3.13 CLEANING AND PAINTING

- A. Clean equipment furnished in this Division after completion of work. Clean wipe the interior of all conduit, pullboxes, junction boxes, outlet boxes, and panelboard backboxes, soiled with dirt and debris prior to installation of wiring.
- B. Touch-up or re-paint damaged painted finishes as determined by the Engineer.
- C. Remove debris, packing cartons, scrap, etc., from site daily.

3.14 SPARE PARTS

- A. Where spare parts are specified in the Technical Sections, furnish spare parts to Owner with itemized receipt. Contractor is responsible to deliver parts and have receipt signed by Owner's representative. Turn over receipt with as-built documents.

3.15 HOUSEKEEPING PADS

- A. Furnish 2500 # concrete pads, 4" high (interior locations) or 6" high (exterior locations) unless otherwise noted, for all freestanding equipment, i.e.: switchboards, panels, control panels, motor control centers, transformers, etc. Pads shall have 1" x 45° chamfered edges, and shall extend 2" to 4" beyond equipment mountings.

3.16 TRAINING

- A. Training for operation and maintenance of new systems or modifications to existing systems is specified in Technical sections. Contractor shall submit with record documents an itemized receipt signed by Owner's representative that all specified training has been received.

3.17 ACCESS PANELS

- A. The contractor shall furnish all access panels for walls, partitions, etc., and shall give access panel to the General Contractor for installation at locations as directed by the Electrical Contractor. It shall be the responsibility of the Electrical Contractor that access panels are provided for access to all boxes, bus joints, equipment, etc., which may be concealed by building construction to comply with the NEC and NFPA. Access panels shall be installed so as not to interfere with lighting arrangements.

3.18 CONDUIT ROUTING

- A. All penetrations through slab-on-grade and concrete-filled metal decks to be sealed watertight. See Section 07 92 00 – Joint Sealants.

END OF SECTION 260001

SECTION 260002 – ELECTRICAL SUBMITTALS

PART 1 – GENERAL

1.1 DESCRIPTION OF SUBMITTAL CATEGORIES

- A. The required submittals are defined below and specified in each section.
1. Requests for substitutions are written requests to use materials, equipment, etc., different from that specified.
 2. Shop Drawings include fabrication, layout, wiring diagrams, erection, setting, coordination, drawings and diagrams and performance data.
 3. Samples are units of work, materials or equipment items, showing the workmanship, pattern, trim and similar qualities proposed.
 4. Manufacturer's Data is standard printed product information concerning the standard portions of the manufacturer's products.
 5. Certifications are written statements, executed specifically for the project application by an authorized officer of the contracting firm, manufacturer, or other firm as designated, certifying to compliance with the specified requirements.
 6. Test Reports are specific reports prepared by independent testing laboratories, showing the results of specified testing.
 7. Industry Standards are printed copies of the current standards in the industry.
 8. Manufacturer's Product Warranties are manufacturer's standard printed commitment in reference to a specific product and normal application, stating that certain acts of restitution will be performed by the manufacturer if the product fails under certain conditions and times limits.
 9. Operating Instructions are the written instructions by the manufacturer, fabricator or installer of equipment or systems, detailing the procedures to be followed by the Owner's in operation, control and shut-down.
 10. Maintenance Manuals are the compiled information provided for the Owner's maintenance of each system of operating equipment.
 11. Maintenance Materials (spare parts) are extra stock of parts or materials for the Owner's initial use in maintaining the equipment and systems in operation.
 12. Record Drawings are accurate representations of the installed systems and wiring as recorded on a daily "as-installed" basis.
 13. Guarantees are signed commitments to the Owner that certain acts of restitution will be performed if certain portions of work fail within certain conditions and time limits.
 14. Product Data includes manufacturer's data pertaining to the products, materials and equipment of the work.
 15. Method of Procedures are detailed sequences of work required during interruption of service and/or connection to energized parts of systems requiring special sequences or protections.
 16. Training – Materials and sign-off of completion.
 17. Identification nomenclature – See section 26 05 53.

PART 2 – PRODUCTS

2.1 PROPOSED MATERIAL MANUFACTURERS

- A. Submit to Consultant within 30 days after award of contract a complete list of proposed material manufacturers. List does not preclude submission of shop drawings. Acceptance of manufacturer on list does not constitute acceptance of specific material or equipment. If shop drawings are submitted with non approved substitutions, the contractor will pay the expense incurred by the consultant to review the shop drawings of any re-submittal.

PART 3 – EXECUTION

3.1 SUBSTITUTIONS

- A. See General Conditions of the specifications for information regarding substitutions. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples if requested by Engineer are provided. Alternate products shall meet or exceed design criteria.

3.2 SUBMITTAL FORM AND PROCEDURES

- A. Shop and Erection Drawings
 - 1. Submit shop drawings for material and equipment furnished under Division 26 of specifications, to Consultant for review within 30 days after award of contract. Shop drawings shall be submitted on timely basis to allow adequate lead time for review, re-submission if necessary, manufacture and delivery to allow access of material to project at correct time based on schedule established by Consultant/Contractor. Provide index with thumb tabs collated with Table of Contents for sections. Include complete descriptive data with dimensions, operating data and weight for each item of equipment. Carefully examine shop drawings to assure compliance with drawings and specifications prior to submittal to Consultant. **Shop drawings and submittals shall bear the stamp of approval of the Electrical Contractor as evidence that they have checked the drawings.** Drawing submitted without this stamp of approval will not be considered and will be returned for proper re-submission. All shop drawings shall be submitted as a single one time complete package. Partial packages shall not be reviewed.
 - 2. Submit copies per general project conditions.
 - 3. Clearly mark each shop drawing item to correspond to drawings and specifications. Any drawings not clearly marked will be rejected.
 - 4. Review of shop drawings does not relieve Contractor of responsibility for errors and omissions in shop drawings. Contractor is responsible for dimensions and sizes of equipment. Inform Engineer in writing of equipment differing from that specified.
- B. "Record" Drawings
 - 1. One complete set of prints will be furnished to the Contractor to indicate actual location of conduit systems, outlets, and equipment. Keep set of prints on job and record day to day changes to Contract drawings with red pencil. Provide

"Record" drawings as specified in the General Conditions or Division 01 of the specifications at the completion of job.

C. Maintenance Materials

1. Submit a list of all warranties and guarantees.
2. Submit with final close out documents a signed receipt for all maintenance materials (spare parts) specified. See Technical Sections for required materials.

D. Product Warranties and Guarantees

1. Submit fully executed Product Warranties and Contractor Guarantees to the Owner with final close out documents.

E. Maintenance Manuals

1. Submit to Consultant data prepared by manufacturer for each item and/or device of electrical equipment furnished in this contract completely describing and identifying equipment. Data to include serial numbers, catalog/model numbers, parts lists, description of operation, final shop drawings, wiring diagrams, all electrical ratings, set-up and maintenance procedures and other literature required for maintenance of equipment. See Technical Sections for other required information.

F. Summary of Project Closeout Items for Owner

1. Certificates of inspection and approval from authorities having jurisdiction.
2. Executed Guarantees and Product Warranties.
3. "Record" drawings.
4. Final shop drawings.
5. Final Erection drawings.
6. Receipt for maintenance materials (spare parts).
7. Maintenance manuals.
8. Receipt for keys.
9. Completed test reports.
10. Signed off observation and punch lists.
11. Lien waivers.

3.3 SPECIFIC SUBMITTAL REQUIREMENTS

A. Shop drawings shall include, but not be limited to the following:

1. Shall be drawn to accurate scale except where diagrammatic representations are specifically indicated.
2. Shall show clearance dimensions of critical locations and show dimensions of spaces required for operation and maintenance of equipment.
3. Shall show conduit and conductor connections and other service connections.
4. Shall show interfaces with other work including structural support.
5. Shall include complete descriptive data, with dimensions, operating data and weight.
6. Shall indicate deviation from the contract documents.
7. Shall explain deviations.
8. Shall show short circuit current ratings for all electrical equipment.
9. Shall show how deviations coordinate with portions of the work, currently or previously submitted.

- B. Review of shop drawings shall not relieve Contractor of responsibility for errors or omissions in shop drawings. Any equipment that will not fit into space shown on drawings shall be called to the attention of the Engineer in writing.
- C. Samples: Submit samples where requested by Engineer. Engineer's review of sample submittals
 - 1. Shall be limited to general type, pattern and finish.
 - 2. Shall not include testing and inspection of the submitted samples.
 - 3. Shall not indicate complete compliance with specified requirements. Complete compliance with specifications is the exclusive responsibility of the Contractor.
- D. Manufacturer's Data
 - 1. Where pre-printed data covers more than one distinct item, mark copy to *clearly* indicate which item is to be provided.
 - 2. Contractor shall delete portions of data not applicable.
 - 3. Contractor shall mark data showing portion of operating range required for project application.
 - 4. Elaboration of standard data describing a non-standard product shall be processed as a shop drawing.
 - 5. For each product Contractor shall include the following information summarized into a single sheet document for each product
 - a) Manufacturer's production specifications including catalog/model number.
 - b) Manufacturer's Serial Number.
 - c) Installation or fabrication instructions.
 - d) Source of supply.
 - e) Sizes, weights, speeds and operating capacities.
 - f) All electrical ratings, including temperature rating of terminals.
 - g) Conduit and wire connection sizes and locations.
 - h) All thermal ratings.
 - i) Statements of compliance with required standard and governing regulations.
 - j) Cooling requirements and makeup and/or ventilating air requirements.
 - k) Performance data, where applicable.
 - l) All sound ratings.
 - m) Other information needed to confirm compliance.
 - n) Manufacturers recommended parts list.
 - o) Other information required by Technical Sections.
- E. Source Codes: Provide Source Code in both electronic and paper format and Source Code Licenses for all equipment that is computer driven. Provide Development licenses so Source Code can be examined, modified, and maintained. These Development Licenses, along with all software licenses shall become property of the Owner. At the discretion of the owner, third parties will be allowed to use the software as necessary, for the life of the work in this project. No encryption or other obfuscation will be allowed.
- F. Certifications: Contractor shall submit with notarized execution.
- G. Test Reports: Submit notarized test reports signed and dated by firm performing test.

- H. Manufacturer's Product Warranties: Contractor shall submit product warranties in accordance with the technical sections. Where published warranty includes deviation from required warranty, product is disqualified from use on project, unless manufacturer issues a specific project warranty.

- I. Operating Instructions required
 - 1. Submit manufacturer's operating instructions for each item of electrical equipment.
 - 2. Submit supplement with additional project application instructions where necessary.
 - 3. Submit specific operating instructions for each electrical system that involves multiple items of equipment.
 - 4. Submit instructions for charging, start-up, control or sequencing of operation, phase or seasonal variations, shut-down, safety and similar operations.
 - 5. All operating instructions shall be typewritten in completely explained and easily understood English language.

- J. Maintenance Manual Requirements
 - 1. Provide emergency instructions including addresses and telephone numbers for service sources.
 - 2. Provide regular system maintenance procedures.
 - 3. Indicate proper use of tools and accessories.
 - 4. Provide wiring and control diagram for each system.
 - 5. Provide manufacturer's data for each operational item in each system.
 - 6. Provide source code submittal for all software controlled equipment.
 - 7. Provide manufacturer's product warranties, and guarantee relating to the system and equipment items in the system.
 - 8. Provide Final Shop and Erection drawings relating to the system.
 - 9. Bind each operating and maintenance manual in one or more vinyl-covered, 2" 3-ring binders, plus pocket-folders for folded drawings. Index with thumb tab collated with Table of Contents for sections. Mark the back spine and front cover of each binder with system identification and volume number.

- K. Maintenance Materials: Deliver all materials to the Owner in fully identified containers or packages suitable for storage. Obtain receipt for all delivered materials signed by the Owner's Representative.

- L. Guarantees: Where indicated as "Certified", provide guarantee which, in addition to execution by an authorized officer of each guarantor, is attested to by the Secretary of each guarantor and bears the corporate seal. Submit draft of each guarantee prior to execution.

END OF SECTION 260002

SECTION 260003 – TEMPORARY ELECTRICAL FACILITIES FOR CONSTRUCTION

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Furnish temporary electrical facilities to provide lighting and power for construction. Temporary power must be installed in accordance with the National Electrical Code, National Electrical Safety Code, local utility, local codes and authority having jurisdiction.
- B. Coordinate temporary electrical facilities with other trades.
- C. See General Conditions, Supplemental General Conditions and Spec Section 01 50 00, Temporary Facilities and Controls for additional information.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. General: Provide new or used materials and equipment suitable for intended use. Ensure safe, adequate performance of facilities in accordance with governing regulations. Used equipment shall be in good, safe working order.

PART 3 - EXECUTION

3.1 INSTALLATION AND OPERATION

- A. Except for self-contained facilities, connect and terminate temporary electrical facilities at locations required for proper distribution.
- B. Do not subject electrical facilities on either temporary work or temporary use of permanent work to excess demand or overload.

3.2 SERVICE CONNECTION

- A. Obtain temporary service from Nevada Energy. Install service in conformance with NEC 230 and 590.

3.3 GROUNDING

- A. Power service and distribution system shall be properly grounded in accordance with NEC requirements.
- B. Ground the system neutral in accordance with NEC 250.

- C. Provide feeders and branch circuits with ground wire sized per NEC 250-122.

3.4 POWER SYSTEM AND DISTRIBUTION

- A. Provide required distribution and capacity of system. Over-current protection, fusible and/or circuit breakers sized per NEC.
- B. For 120/240 volts, single-phase system; use 3-wire 120/240-volt feeders and branch circuits.
- C. For 120/208 volt, 3 phase, 4-wire system; use 120/208 volt balanced single-phase 3-wire distribution or 120/208 volts, 3 phase, 4-wire distribution.
- D. For 480 volt, 3 phase, 3-wire distribution system; use balanced 2-wire single phase or 3-wire, 3 phase feeders for step-down to 120/240 volt or 120/208 volt utilization.
- E. For 277/480 volt distribution system; use balanced 2-wire single phase or 3 and 4-wire, 3 phase feeders for step-down to 120/240 volt or 120/208 volt utilization.
- F. Step-down transformers inside building shall be dry-type construction; protect from weather and construction damage.
- G. Use No. 12 wire for branch circuits less than 100 feet to last outlet, and No. 10 wire for circuits beyond 100 feet. Install branch circuits using NEC approved wiring methods.
- H. Balance loads connected to 3 phase services within reasonable limits.

3.5 PLUG-IN RECEPTACLES

- A. Use 20A, duplex, NEMA grounded type or as required for special equipment.
- B. Branch circuits feeding receptacles shall be 20A or as required for special equipment.
- C. Provide receptacles to be reached by 50-foot extension cord.
- D. All receptacle circuits shall be protected by dynamic type ground-fault circuit interrupters, which automatically disconnect circuit when leakage current of 4-6MA is detected.
- E. Receptacles shall not be placed on the same circuit with temporary lighting.

3.6 TEMPORARY LUMINARIES

- A. Provide luminaries approved by NEC for temporary construction wiring.
- B. Lamps shall be rough service incandescent 150 watt to 300 watt equipped with guards to protect from contact and damage (sizes as directed).

3.7 LAMPS AND REPLACEMENTS

- A. Provide lamps.
- B. Replace burned out lamps to maintain required lighting levels throughout the duration of the project.

3.8 INSTALLATION OF CIRCUITS

- A. Install required lighting and receptacle circuits along a route least objectionable to construction work as determined by Contractor. Protect circuits where exposed to damage.

3.9 PERMANENT WIRING SYSTEM

- A. Do not use permanent wiring for construction without specific acceptance of the Owner. Before using permanent wiring for temporary service, submit a list of uses to the Owner. The Owner may refuse use of permanent equipment for temporary service. Use of permanent equipment prior to Substantial Completion shall not affect warranty period.

3.10 REMOVAL AND RESTORATION

- A. Temporary wiring shall be removed immediately upon completion of construction or purpose for which the wiring was installed. Repair or replace work damaged by temporary electrical facilities. Clean and restore permanent electrical system used to provide temporary services to condition of new and unused work.
 - 1. Electrical work installed as temporary facilities, upon removal, remains property of Installer.
 - 2. Replace lamps of permanent light fixtures used for temporary lighting that have burned out or are noticeable dim. All permanently installed fixtures in the construction area lamps shall be removed and cleaned.
 - 3. Where temporary use of lamps exceeds 50 percent of lamp life, replace lamps.
- B. At Substantial Completion, clean permanent electrical work used as temporary facilities. Remove debris accumulated in electrical spaces.

END OF SECTION 260003

SECTION 260503 – EQUIPMENT WIRING CONNECTIONS

PART 1 – GENERAL

1.1 SUMMARY

- A. Section includes electrical connections to equipment.
- B. Related Sections:
 - 1. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.
 - 2. Section 26 05 33 - Raceway and Boxes for Electrical Systems.

1.2 REFERENCES

- A. National Electrical Manufacturers Association:
 - 1. NEMA WD 1 - General Requirements for Wiring Devices.
 - 2. NEMA WD 6 - Wiring Devices-Dimensional Requirements.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit wiring device manufacturer's catalog information showing dimensions, configurations, and construction.
- C. Manufacturer's installation instructions.

1.4 CLOSEOUT SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Project Record Documents: Record actual locations, sizes, and configurations of equipment connections.

1.5 COORDINATION

- A. General Conditions: Coordination and project conditions.
- B. Obtain and review shop drawings, product data, manufacturer's wiring diagrams, and manufacturer's instructions for equipment furnished under other sections.
- C. Determine connection locations and requirements.
- D. Sequence rough-in of electrical connections to coordinate with installation of equipment.
- E. Sequence electrical connections to coordinate with start-up of equipment.

PART 2 - PRODUCTS

2.1 CORD AND PLUGS

- A. Attachment Plug Construction: Conform to NEMA WD 1.
- B. Configuration: NEMA WD 6; match receptacle configuration at outlet furnished for equipment.
- C. Cord Construction: Type SO multiconductor flexible cord with identified equipment grounding conductor, suitable for use in damp locations.
- D. Size: Suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify equipment is ready for electrical connection, for wiring, and to be energized.

3.2 INSTALLATION

- A. Make electrical connections.
- B. Make conduit connections to equipment using flexible conduit. Use liquidtight flexible conduit with watertight connectors in damp or wet locations and to motors.
- C. Connect heat producing equipment using wire and cable with insulation suitable for temperatures encountered.
- D. Install receptacle outlet to accommodate connection with attachment plug.
- E. Install cord and cap for field-supplied attachment plug.
- F. Install suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.
- G. Install disconnect switches, controllers, control stations, and control devices to complete equipment wiring requirements.
- H. Install terminal block jumpers to complete equipment wiring requirements.
- I. Install interconnecting conduit and wiring between devices and equipment to complete equipment wiring requirements.
- J. Coolers and Freezers: Cut and seal conduit openings in freezer and cooler walls, floor, and ceilings.

3.3 ADJUSTING

- A. Cooperate with utilization equipment installers and field service personnel during checkout and starting of equipment to allow testing and balancing and other startup operations. Provide personnel to operate electrical system and checkout wiring connection components and configurations.

END OF SECTION 260503

SECTION 260519 – LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes building wire and cable and wiring connectors and connections.
- B. Related Sections:
 - 1. Section 26 05 53 - Identification for Electrical Systems: Product requirements for wire identification.
 - 2. Section 31 20 00 - Trenching: Execution requirements for trenching required by this section.
 - 3. Section 31 20 00 - Fill: Requirements for backfill to be placed by this section.

1.2 REFERENCES

- A. International Electrical Testing Association:
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.
- B. National Fire Protection Association:
 - 1. NFPA 70 - National Electrical Code.
 - 2. NFPA 262 - Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces.
- C. Underwriters Laboratories, Inc.:
 - 1. UL 1277 - Standard for Safety for Electrical Power and Control Tray Cables with Optional Optical-Fiber Members.

1.3 SYSTEM DESCRIPTION

- A. Product Requirements: Provide products as follows:
 - 1. Solid conductor for feeders and branch circuits 12 AWG and smaller.
 - 2. Stranded conductors for feeders and branch circuits 10 AWG and larger.
 - 3. Stranded conductors for control circuits.
 - 4. Conductor not smaller than 12 AWG for power and lighting circuits.
 - 5. Conductor not smaller than 16 AWG for control circuits.
 - 6. Increase wire size in branch circuits to limit voltage drop to a maximum of 3 percent.
- B. Wiring Methods: Provide the following wiring methods:
 - 1. All Locations Unless Noted Otherwise: Use only building wire, Type THHN/THWN or XHHW insulation, in raceway.

1.4 DESIGN REQUIREMENTS

- A. Conductor sizes are based on copper, aluminum conductors are not acceptable.

1.5 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Product Data: Submit for building wire.
- C. Design Data: Indicate voltage drop and ampacity calculations for aluminum conductors substituted for copper conductors.
- D. Test Reports: Indicate procedures and values obtained.

1.6 CLOSEOUT SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Project Record Documents: Record actual locations of components and circuits.

1.7 QUALITY ASSURANCE

- A. Provide wiring materials located in plenums with peak optical density not greater than 0.5, average optical density not greater than 0.15, and flame spread not greater than 5 feet (1.5 m) when tested in accordance with NFPA 262.
- B. Maintain one copy of each document on site.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.9 FIELD MEASUREMENTS

- A. Verify field measurements are as indicated on Drawings.

1.10 COORDINATION

- A. General Conditions: Requirements for coordination.
- B. Where wire and cable destination is indicated and routing is not shown, determine routing and lengths required.
- C. Wire and cable routing indicated is approximate unless dimensioned.

PART 2 - PRODUCTS

2.1 BUILDING WIRE

- A. Product Description: Single conductor insulated wire.
- B. Conductor: Copper.

260519 - 2 LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

- C. Insulation Voltage Rating: 600 volts.
- D. Insulation Temperature Rating: 90 degrees C.
- E. Insulation Material: Thermoplastic.

2.2 ARMORED CABLE

- A. Type AC Cable may not be used on this project.

2.3 METAL CLAD CABLE

- A. Type MC Cable may not be used on this project and is strictly prohibited.

2.4 CONNECTORS AND SPLICES

- A. Provide UL-listed factory-fabricated wiring connectors of size, ampacity rating, material, type and class for application and for service indicated. Select connectors to comply with Project's installation requirements and as specified in Part 3 "Applications" of this Article.
- B. For Conductors #10 AWG and Smaller: Wire and cable connectors shall be solderless, twist on, 600 volts, 105°C., shall comply with UL 486A/C standards. Connectors coded for easy selection compatible with wiring to be spliced. Install connectors as recommended by manufacturer. Use proper crimping tool where crimp sleeves are used.
 - 1. Acceptable Connector Manufacturers
 - a) 3M- "Scotchlock"
 - b) Buchanan - "B Cap"
 - c) Thomas & Betts - "Stak-On"
 - d) Ideal - "Wing Nuts"
- C. Compression Splices: Splice conductors #8 and larger with solid copper barrel, type fittings applied with an appropriate hydraulic tool. Splices used only where approved. Splice fittings: Burndy "Hydent". Insulate splices with 600 volt, 105°C, "heat shrink", "cold shrink" covers, or taped insulation consisting of rubber, friction and vinyl tapes applied per manufacturer for 600 volt, 105°C covering to 150 percent of installation rating of conductor.
 - 1. Acceptable Splice and Tape Manufacturers
 - a) Burndy
 - b) Thomas & Betts
 - c) IlSCO
 - d) Anderson
 - e) Blackburn
 - f) Oz/Gedney
- D. Connectors and/or Terminations for Conductors #6 AWG and larger: Tin plated, 98% copper, dual crimp long barrel compression lugs with two bolt holes, insulated with molded covers to accommodate 1/2" bolts. Apply with hydraulic tool recommended by manufacturer.
 - 1. Acceptable Manufacturers and Products

- a) O-Z Gedney
 - b) Burndy Engineering Company "Hylugs"
 - c) Thomas and Betts, "Color Keyed"
 - d) Anderson
- E. Use pulling lubricant which will not be detrimental to insulation of conductors indicated by published user information.
 - 1. Acceptable Manufacturers of Lubricant
 - a) Ideal Industries
 - b) Panduit Corp.
 - c) OZ/Gedney
 - d) Plymouth/Bishop
 - e) American Polywater Corp.
 - f) Thomas & Betts
- F. Insulate all live joints to 600 volts with strip rubber, friction tape, and electrical vinyl tape installed in accordance with manufacturers recommendations.
 - 1. Acceptable Tape Manufacturers
 - a) 3M
 - b) Plymouth

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify interior of building has been protected from weather.
- C. Verify mechanical work likely to damage wire and cable has been completed.
- D. Verify raceway installation is complete and supported.

3.2 PREPARATION

- A. Completely and thoroughly swab raceway before installing wire.

3.3 INSTALLATION

- A. Route wire and cable to meet Project conditions.
- B. Neatly train and lace wiring inside boxes, equipment, and panelboards.
- C. Identify and color code wire and cable under provisions of Section 260553. Identify each conductor with its circuit number or other designation indicated.
- D. Install wiring complete with connections to equipment.
- E. Install wiring so conductors are not in tension in completed system.

- F. Form wiring neatly and group in circuit. Tie grouped conductors with nylon ties, T&B "Tyrap" or approved equivalent.
- G. Each conduit run shall be run complete end to end before conductors are installed.
- H. Use pulling lubricant to decrease pulling tension for all feeder cables, and all difficult cable pulls of any type or size. Pull all conductors into raceway at the same time.
- I. Provide cable supports, at locations required by NEC and/or as shown. Supports with malleable screwed conduit fitting and non-conductive wedges drilled for the size conductors installed. Provide supports rated for all types of insulation and all voltage. Cable supports shall be O.Z./Gedney type "R" or accepted equivalent. Furnish pullbox, sized per NEC for each cable support.
- J. Bond circuit ground wires where installed to all devices, equipment, outlet and junction boxes, and grounding bushings (where provided) with a full size conductor and lugged type connection.
- K. Securely fasten non-ferrous identifying tapes, pressure sensitive labels or engraved nameplates to all cables, feeders and power cables exposed in vaults, inside pull boxes, exposed in manholes, exposed in switchboard, termination compartments, etc
- L. Join and terminate copper conductors individually. Do not mix voltages in the same raceway.
- M. Provide lugs where not furnished as part of equipment - furnish as specified above, to connect all conductors.
- N. Furnish lugs for conductors #1/0 and larger with two bolt tongue or accepted equivalent single bolt tongue with anti-turn devices.
- O. Mark all branch circuit conductors at panel terminations including neutrals with pressure sensitive numbers to correspond to circuit numbers connected. See Section 260553 for labels.
- P. Connect circuits and feeders as shown on drawings. Drawings are diagrammatic and do not show every detail required in the wiring system. Detail wiring accomplished per NEC.
- Q. All conductors making up parallel feeders to be same size, same type, and same insulation, all cut same length. Bond each group of conductors making up a phase or neutral at both ends in an approved manner. Parallel conductors shall not be run in the same raceway.
- R. DO NOT COMBINE CIRCUITS into more than three circuits per homerun unless specifically approved by the Consultant.
- S. Neutral conductors shall not be used for equipment grounding.
- T. Circuitry shall not be run in elevator shafts and hoistways.

- U. Provide a separate neutral and grounding conductor for all GFI circuits or GFI devices to ensure an adequate ground-fault return path.

V. Conductors for receptacle and lighting circuits shall be installed in accordance with the following conditions:

Maximum one-way circuit length in feet for 90°C copper conductors with unity power factor to first device on circuit. Assumed 1920VA/120V, 4432VA/277V loading per circuit.

1. 120V – Single Phase
 - a. #12AWG – 53'
 - b. #10AWG – 88'
 - c. #8AWG – 138'
 - d. #6 AWG – 223'
2. 277V – Single Phase
 - a. #12AWG – 123'
 - b. #10AWG – 205'
 - c. #8AWG – 319'
 - d. #6AWG – 515'

- W. Panelboards may not be used as raceways.
- X. Install crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under screws.
- Y. Install terminal lugs on ends of 600-volt wires unless lugs are furnished on connected device, such as circuit breakers.
- Z. Size lugs in accordance with manufacturer's recommendations terminating wire sizes. Install 2-hole type lugs to connect wires 4 AWG and larger to copper bus bars.
- AA. For terminal lugs fastened together such as on motors, transformers, and other apparatus, or when space between studs is small enough that lugs can turn and touch each other, insulate for dielectric strength of 2-1/2 times normal potential of circuit.
- BB. Clean conductor surfaces before installing lugs and connectors.
- CC. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.

3.4 WIRE COLOR

- A. General:
 1. For wire sizes 10 AWG and smaller, install wire colors in accordance with the following:
 - a. Black and red for single phase circuits at 120/240 volts.
 - b. Black, red, and blue for circuits at 120/208 volts single or three phase.
 - c. Orange, brown, and yellow for circuits at 277/480 volts single or three phase.
 2. For wire sizes 8 AWG and larger, identify wire with colored tape at terminals, splices and boxes. Colors are as follows:
 - a. Black and red for single phase circuits at 120/240 volts.

- b. Black, red, and blue for circuits at 120/208 volts single or three phase.
 - c. Orange, brown, and yellow for circuits at 277/480 volts single or three phase.
 - B. Neutral Conductors: White. When two or more neutrals are located in one conduit, individually identify each with proper circuit number.
 - C. Branch Circuit Conductors: Install three or four wire home runs with each phase uniquely color coded.
 - D. Feeder Circuit Conductors: Uniquely color code each phase.
 - E. Ground Conductors:
 - 1. For 6 AWG and smaller: Green.
 - 2. For 4 AWG and larger: Identify with green tape at both ends and visible points including junction boxes.
- 3.5 FIELD QUALITY CONTROL
- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
 - B. Inspect and test in accordance with NETA ATS, except Section 4.
 - C. Perform inspections and tests listed in NETA ATS, Section 7.3.1.

END OF SECTION 260519

SECTION 260526 – GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Rod electrodes.
 - 2. Wire.
 - 3. Grounding well components.
 - 4. Mechanical connectors.
 - 5. Exothermic connections.
- B. Related Sections:
 - 1. Section 03 20 00 - Concrete Reinforcing: Bonding or welding bars when reinforcing steel is used for electrodes.

1.2 REFERENCES

- A. Institute of Electrical and Electronics Engineers:
 - 1. IEEE 142 - Recommended Practice for Grounding of Industrial and Commercial Power Systems.
 - 2. IEEE 1100 - Recommended Practice for Powering and Grounding Electronic Equipment.
- B. International Electrical Testing Association:
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.
- C. National Fire Protection Association:
 - 1. NFPA 70 - National Electrical Code.

1.3 SYSTEM DESCRIPTION

- A. Grounding systems use the following elements as grounding electrodes:
 - 1. Metal underground water pipe.
 - 2. Metal building frame.
 - 3. Concrete-encased electrode.
 - 4. Rod electrode.

1.4 PERFORMANCE REQUIREMENTS

- A. Grounding System Resistance: 5 ohms maximum.

1.5 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Product Data: Submit data on grounding electrodes and connections.
- C. Test Reports: Indicate overall resistance to ground and resistance of each electrode.
- D. Manufacturer's Installation Instructions: Submit for active electrodes.
- E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

1.6 CLOSEOUT SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Project Record Documents: Record actual locations of components and grounding electrodes.

1.7 QUALITY ASSURANCE

- A. Provide grounding materials conforming to requirements of NEC, IEEE 142, and UL labeled.
- B. Maintain one copy of each document on site.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum three years documented experience.

1.9 PRE-INSTALLATION MEETINGS

- A. General Conditions: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Requirements for transporting, handling, storing, and protecting products.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

- D. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.

1.11 COORDINATION

- A. General Conditions: Requirements for coordination.
- B. Complete grounding and bonding of building reinforcing steel prior concrete placement.

PART 2 - PRODUCTS

2.1 ROD ELECTRODES

- A. Product Description:
 - 1. Material: Copper-clad steel.
 - 2. Diameter: 3/4 inch (19 mm).
 - 3. Length: 8 feet (2.4 m).
- B. Connector: Connector for exothermic welded connection.

2.2 WIRE

- A. Material: Stranded copper.
- B. Foundation Electrodes: As shown on drawings.
- C. Grounding Electrode Conductor: Copper conductor bare.
- D. Bonding Conductor: Copper conductor bare.

2.3 GROUNDING WELL COMPONENTS

- A. Well Pipe: 8 inches NPS (DN200) by 18 inches (600 mm) long concrete pipe with belled end.
- B. Well Cover: Cast iron with legend "GROUND" embossed on cover.

2.4 MECHANICAL CONNECTORS

- A. Description: Bronze connectors, suitable for grounding and bonding applications, in configurations required for particular installation. Where connection is made to domestic water with a bonding connector, contractor shall remove all paint/tape at connection point to adequately expose bare copper for a proper bonding connection.

2.5 EXOTHERMIC CONNECTIONS

- A. Product Description: Exothermic materials, accessories, and tools for preparing and making permanent field connections between grounding system components.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Verification of existing conditions before starting work.
- B. Verify final backfill and compaction has been completed before driving rod electrodes.

3.2 PREPARATION

- A. Remove paint, rust, mill oils, surface contaminants at connection points.

3.3 EXISTING WORK

- A. Modify existing grounding system to maintain continuity to accommodate renovations.
- B. Extend existing grounding system using materials and methods as specified.

3.4 INSTALLATION

- A. Install in accordance with IEEE 142.
- B. Install grounding and bonding conductors concealed from view.
- C. Install grounding well pipe with cover at each rod location. Install well pipe top flush with finished grade.
- D. Install grounding electrode conductor and connect to reinforcing steel in foundation footing as indicated on Drawings. Electrically bond steel together.
- E. Bond together metal siding not attached to grounded structure; bond to ground.
- F. Equipment Grounding Conductor: Install separate, insulated conductor within each feeder and branch circuit raceway. Terminate each end on suitable lug, bus, or bushing.
- G. Install continuous grounding using underground cold water system and building steel as grounding electrode. Where water piping is not available, install artificial station ground by means of driven rods or buried electrodes.
- H. Permanently ground entire light and power system in accordance with NEC, including service equipment, distribution panels, lighting panelboards, switch and starter enclosures, motor frames, grounding type receptacles, and other exposed non-current carrying metal parts of electrical equipment.
- I. Accomplish grounding of electrical system by using insulated grounding conductor installed with feeders and branch circuit conductors in conduits. Size grounding conductors in accordance with NEC. Install from grounding bus of serving panel to ground bus of served panel, grounding screw of receptacles, lighting fixture housing, light switch outlet boxes or metal enclosures of service equipment. Ground conduits by

means of grounding bushings on terminations at panelboards with installed number 12 conductor to grounding bus.

- J. Grounding electrical system using continuous metal raceway system enclosing circuit conductors in accordance with NEC.
- K. Permanently attach equipment and grounding conductors prior to energizing equipment.

3.5 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Grounding and Bonding: Perform inspections and tests listed in NETA ATS, Section 7.13.
- D. Perform ground resistance testing in accordance with IEEE 142.
- E. Perform continuity testing in accordance with IEEE 142.
- F. When improper grounding is found on receptacles, check receptacles in entire project and correct. Perform retest.

END OF SECTION 260526

SECTION 260529 – HANGERS, SUPPORTS AND FIRESTOPPING FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Conduit supports.
 - 2. Formed steel channel.
 - 3. Spring steel clips.
 - 4. Sleeves.
 - 5. Mechanical sleeve seals.
 - 6. Firestopping relating to electrical work.
 - 7. Firestopping accessories.
 - 8. Equipment bases and supports.
- B. Related Sections:
 - 1. Section 03 30 00 - Cast-In-Place Concrete: Product requirements for concrete for placement by this section.

1.2 REFERENCES

- A. ASTM International:
 - 1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - 2. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
 - 3. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
 - 4. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.
- B. FM Global:
 - 1. FM - Approval Guide, A Guide to Equipment, Materials & Services Approved By Factory Mutual Research For Property Conservation.

- D. Underwriters Laboratories Inc.:
 - 1. UL 263 - Fire Tests of Building Construction and Materials.
 - 2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
 - 3. UL 1479 - Fire Tests of Through-Penetration Firestops.
 - 4. UL 2079 - Tests for Fire Resistance of Building Joint Systems.
 - 5. UL - Fire Resistance Directory.
- E. Intertek Testing Services (Warnock Hersey Listed):

1. WH - Certification Listings.

1.3 DEFINITIONS

- A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.4 SYSTEM DESCRIPTION

- A. Firestopping Materials: ASTM E119, ASTM E814, UL 263, UL 1479, to achieve fire ratings of adjacent construction. In accordance with Design Numbers.
- B. Surface Burning: UL 723 with maximum flame spread / smoke developed rating of 25/450.
- C. Firestop interruptions to fire rated assemblies, materials, and components.

1.5 PERFORMANCE REQUIREMENTS

- A. Firestopping: Conform to UL for fire resistance ratings and surface burning characteristics.

1.6 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Shop Drawings: Indicate system layout with location and detail of trapeze hangers.
- C. Product Data:
 1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
 2. Firestopping: Submit data on product characteristics, performance and limitation criteria.
- D. Firestopping Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.
- E. Design Data: Indicate load carrying capacity of trapeze hangers and hangers and supports.
- F. Manufacturer's Installation Instructions:
 1. Hangers and Supports: Submit special procedures and assembly of components.
 2. Firestopping: Submit preparation and installation instructions.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- H. Engineering Judgements: For conditions not covered by UL or WH listed designs, submit judgements by licensed professional engineer suitable for presentation to

authority having jurisdiction for acceptance as meeting code fire protection requirements.

1.7 QUALITY ASSURANCE

- A. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10 inch water gage (24.9 Pa) minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.
 - 1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
 - 2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.
 - a. Floor Penetrations Within Wall Cavities: T-Rating is not required.
- B. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.
 - 1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
 - 2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.
- C. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.
- D. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10-inch water gage (24.9 Pa) minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.
- E. Surface Burning Characteristics: 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum three years documented experience approved by manufacturer.

1.9 PRE-INSTALLATION MEETINGS

- A. General Conditions: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Requirements for transporting, handling, storing, and protecting products.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

1.11 ENVIRONMENTAL REQUIREMENTS

- A. General Conditions: Environmental conditions affecting products on site.
- B. Do not apply firestopping materials when temperature of substrate material and ambient air is below 60 degrees F (15 degrees C).
- C. Maintain this minimum temperature before, during, and for minimum 3 days after installation of firestopping materials.
- D. Provide ventilation in areas to receive solvent cured materials.

PART 2 – PRODUCTS

2.1 CONDUIT SUPPORTS

- A. Hanger Rods: Threaded high tensile strength galvanized carbon steel with free running threads.
- B. Beam Clamps: Malleable Iron, with tapered hole in base and back to accept either bolt or hanger rod. Set screw: hardened steel.
- C. Conduit clamps for trapeze hangers: Galvanized steel, notched to fit trapeze with single bolt to tighten.
- D. Conduit clamps - general purpose: One hole malleable iron for surface mounted conduits.

2.2 FORMED STEEL CHANNEL

- A. Product Description: Galvanized 12 gage (2.8 mm) thick steel. With holes 1-1/2 inches (38 mm) on center.

2.3 SPRING STEEL CLIPS

- A. Product Description: Mounting hole and screw closure.

2.4 SLEEVES

- A. Furnish materials in accordance with project standards.
- B. Sleeves Through Non-fire Rated Floors: 18 gage (1.2 mm) thick galvanized steel.
- C. Sleeves for Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 mm thick galvanized steel.
- D. Sleeves for Through Fire Rated and Fire Resistive Floors and Walls, and Fire Proofing: Prefabricated fire rated sleeves including seals, UL listed.
- E. Fire-stopping Insulation: Glass fiber type, non-combustible.

2.5 MECHANICAL SLEEVE SEALS

- A. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.6 FIRESTOPPING

- A. Manufacturers:
 - 1. Dow Corning Corp.
 - 2. 3M fire Protection Products.
 - 3. Specified Technology, Inc.
 - 4. Substitutions: General Conditions
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
 - 1. Silicone Firestopping Elastomeric Firestopping: Single component silicone elastomeric compound and compatible silicone sealant.
 - 2. Foam Firestopping Compounds: Single component foam compound.
 - 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
 - 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral fiber stuffing insulation with silicone elastomer for smoke stopping.
 - 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
 - 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
 - 7. Firestop Pillows: Formed mineral fiber pillows.
- C. Color: Dark gray.

2.7 FIRESTOPPING ACCESSORIES

- A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.
- B. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- C. General:
 - 1. Furnish UL listed products.
 - 2. Select products with rating not less than rating of wall or floor being penetrated.
- D. Non-Rated Surfaces:
 - 1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
 - 2. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. General Conditions: Verification of existing conditions before starting work.
- B. Verify openings are ready to receive sleeves.
- C. Verify openings are ready to receive firestopping.

3.2 PREPARATION

- A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.
- B. Remove incompatible materials affecting bond.
- C. Obtain permission from Architect/Engineer before using powder-actuated anchors.
- D. Do not drill or cut structural members.

3.3 INSTALLATION - HANGERS AND SUPPORTS

- A. Anchors and Fasteners:
 - 1. Concrete Structural Elements: Provide precast inserts, expansion anchors, and preset inserts.
 - 2. Steel Structural Elements: Provide beam clamps, spring steel clips, steel ramset fasteners, and welded fasteners.
 - 3. Concrete Surfaces: Provide self-drilling anchors and expansion anchors.

4. Hollow Masonry, Plaster, and Gypsum Board Partitions: Provide toggle bolts and hollow wall fasteners.
 5. Solid Masonry Walls: Provide expansion anchors and preset inserts.
 6. Sheet Metal: Provide sheet metal screws.
 7. Wood Elements: Provide wood screws.
- B. Inserts:
1. Install inserts for placement in concrete forms.
 2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
 3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches (100 mm).
 4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
 5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut flush with top of slab.
- C. Install conduit and raceway support and spacing in accordance with NEC.
- D. Do not fasten supports to pipes, ducts, mechanical equipment, or conduit.
- E. Install multiple conduit runs on common hangers.
- F. Supports:
1. Fabricate supports from structural steel or formed steel channel. Install hexagon head bolts to present neat appearance with adequate strength and rigidity. Install spring lock washers under nuts.
 2. Install surface mounted cabinets and panelboards with minimum of four anchors.
 3. In wet and damp locations install steel channel supports to stand cabinets and panelboards
1 inch (25 mm) off wall.
 4. Support vertical conduit at every floor.
- G. Support EMT within twelve inches of each outlet, junction box, cabinet or fitting and every eight-foot thereafter. Combination box/conduit hangers are not allowed.
1. Acceptable Individual conduit hanger manufacturers
 - a. Appleton
 - b. Minerallac
 - c. OZ Mfr. Co.
 - d. Erico-Products
 - e. Steel City
 - f. Thomas & Betts
- H. Support for multiple conduit runs shall consist of trapeze type hangers as required. Galvanized bolts or rods shall be 3/8" minimum diameter and anchored to structure. Provide support system clamp for each conduit on hangers. Support systems shall utilize 1-5/8" x 1-5/8" x 12 gage multi-purpose steel channels, complete with all necessary hardware, clamps, etc. all channel hardware shall be galvanized and/or plated to prevent corrosion. Channel sizes and quantity, and number of support rods shall be increased to support increased weights. Design each assembly to carry the combined weight of conduit and wire, assembly itself plus 100 pounds. Provide space for 25 percent additional conduit of the same size.

- I. 1. Acceptable Manufacturers of channel support Systems
 - a. B-Line
 - b. Kindorf
 - c. Superstrut
 - d. Unistrut

- I. **All hangars for electrical items (conduit, boxes, fixtures and all other related equipment) where an “Epic Deck” system occurs shall be compatible for use with this system, “Epic Deck” is by Epic Metals Corporation. See Architectural and Structural drawings for locations.**

3.4 INSTALLATION - FIRESTOPPING

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.
- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.
- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating, to uniform density and texture.
- D. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.
- E. Fire Rated Surface:
 1. Seal opening at floor, wall, partition, ceiling, and roof as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch (25 mm) on both sides of building element.
 - b. Size sleeve allowing minimum of 1 inch (25 mm) void between sleeve and building element.
 - c. Pack void with backing material.
 - d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
 2. Where cable tray, conduit, wireway, and cable penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.
- F. Non-Rated Surfaces:
 1. Seal opening through non-fire rated wall, partition, floor, ceiling and roof opening as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch (25 mm) on both sides of building element.
 - b. Size sleeve allowing minimum of 1 inch (25 mm) void between sleeve and building element.
 - c. Install type of firestopping material recommended by manufacturer.
 2. Install floor plates or ceiling plates where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
 3. Exterior wall openings below grade: Assemble rubber links of mechanical seal to size of conduit and tighten in place, in accordance with manufacturer's instructions.

4. Interior partitions: Seal pipe penetrations at computer rooms and data rooms. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

3.5 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

- A. Provide housekeeping pads of concrete, minimum 3-1/2 inches (87 mm) thick and extending 4 inches (150 mm) beyond supported equipment. Refer to Section 03 30 00.
- B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
- C. Construct supports of steel members. Brace and fasten with flanges bolted to structure.

3.6 INSTALLATION - SLEEVES

- A. Exterior watertight entries: Seal with adjustable interlocking rubber links.
- B. Conduit penetrations not required to be watertight: Sleeve and fill with silicon foam.
- C. Set sleeves in position in forms. Provide reinforcing around sleeves.
- D. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- E. Extend sleeves through floors 1 inch above finished floor level. Caulk sleeves.
- F. Where conduit or raceway penetrates floor, ceiling, or wall, close off space between conduit or raceway and adjacent work with fire stopping insulation and caulk airtight. Provide close fitting metal collar or escutcheon covers at both sides of penetration.
- G. Install chrome plated steel escutcheons at finished surfaces.

3.7 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Inspect installed firestopping for compliance with specifications and submitted schedule.

3.8 CLEANING

- A. General Conditions: Requirements for cleaning.
- B. Clean adjacent surfaces of firestopping materials.

3.9 PROTECTION OF FINISHED WORK

- A. General Conditions: Requirements for protecting finished Work.
- B. Protect adjacent surfaces from damage by material installation.

END OF SECTION 260529

SECTION 260530 – SEISMIC PROTECTION FOR ELECTRICAL EQUIPMENT

PART 1 – GENERAL

1.1 SUMMARY

- A. Structural design and calculations for major equipment anchoring, conduit support, and bracing details.

1.2 RELATED SECTIONS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.

1.3 REFERENCES

- A. International Building Code, 2018

1.4 CODE INFORMATION

- A. This project is subject to the seismic bracing requirements of the International Building Code, 2018 edition. The following criteria are applicable to this project.
 - 1. Risk Category: III
 - 2. Site Class Category: D
 - 3. Seismic Design Category: D
 - 4. See Sheet S001 Basis of Design for additional information.
- B. It is recommended that the contractor enlist the services of a qualified seismic bracing vendor/supplier. Provide bracing for identified equipment and system.
- C. Resistance to lateral forces induced by earthquakes shall not be accomplished with consideration of friction resulting from gravity loads. The following companies are listed as resources for the Contractor to consider for obtaining competent assistance regarding the seismic bracing of mechanical piping and equipment. Since seismic constraint is not a common mechanical or electrical requirement for projects and considering that the requirements are specific and include technical expertise, this information may be helpful.
 - 1. Amber Booth
 - 2. Cooper B-Line
 - 3. Mason Industries

4. Tolco (Division of Nibco)

1.5 SUBMITTALS

- A. **Shop Drawings:** Detail drawings along with catalog cuts, templates, and erection and installation details, as appropriate, for the items listed. Submittals shall be complete in detail; shall indicate thickness, type, grade, class of metal, and dimensions; and shall show construction details, reinforcement, anchorage, and installation with relation to the building construction. **Seismic Bracing Submittals shall be sent with associated equipment prior to installation of any equipment.**

1. **Lighting Fixtures in Buildings.**

2. **Equipment Requirements.**

- B. Product Data:

1. Copies of the design calculations with the detail drawings. Calculations shall be stamped by a registered engineer in the State of Nevada and shall verify the capability of structural members to which bracing are attached for carrying the load from the brace. Structural seismic calculations for equipment anchorage for major equipment shall be included.
2. Contractor Designed Bracing: Copies of the Design Calculations with the Drawings. Calculations shall be approved, certified, stamped and signed by a Registered Professional Engineer. Calculations shall verify the capability of structural members to which bracing are attached for carrying the load from the brace.

- C. Include Seismic Certification for major equipment.

1. Light Fixtures.
2. Transformers.
3. Switchboards.
4. Panelboards.

1.6 QUALIFICATION

- A. The manufacturer of the assembly shall be the manufacturer of the major components within the assembly.
- B. For the equipment specified herein, the manufacturer shall be ISO 9001 or 9002 certified.
- C. The manufacturer of this equipment shall have produced similar electrical equipment for a minimum period of five years. When requested by the engineer, an acceptable

list of installations with similar equipment shall be provided demonstrating compliance with this requirement.

D. Provide Seismic qualified equipment as follows:

The equipment and major components shall be suitable for and certified by actual seismic testing to meet all applicable seismic requirements of the 2018 International Building Code (IBC) Site Classification D. The site coefficients $F_a=1.0$, and spectral response accelerations of $S_s=1.999g$, $S_1=0.649g$ are used. The test response spectrum shall be based upon a 5% damping factor, and a peak (S_d s) of at least $1.05g$'s (3-12 Hz) applied at the base of the equipment in the horizontal direction. The forces in the vertical direction shall be at least 66% of those in the horizontal direction. The tests shall cover a frequency range from 1 to 100Hz. Guidelines for the installation consistent with these requirements shall be provided by the equipment manufacturer and based upon testing of representative equipment. Equipment certification acceptance criteria shall be based upon the ability for the equipment to be returned to service immediately after a seismic event within the above requirements without the need for repairs.

1.7 SYSTEM DESCRIPTION

A. The requirements for seismic protection measures described in this section shall be applied to the electrical equipment and systems listed below.

B. Electrical Equipment: Electrical equipment shall include the following items to the extent required on the Drawings or in other sections of these specifications:

1. Light Fixtures.
2. Transformers.
3. Switchboards.
4. Panelboards.
5. Cable Tray.

C. Electrical Systems: The following electrical systems shall be seismically protected in accordance with this specification: Lighting, power, security, communications and fire alarm.

D. Conduits Requiring No Special Seismic Restraints: Seismic restraints may be omitted from electrical conduit less than 2-1/2 inches trade size. All other interior conduit, shall be seismically protected as specified.

1.8 EQUIPMENT REQUIREMENTS

A. Rigidly Mounted Equipment: Constructed and assembled to withstand the seismic forces in accordance with IBC 2018. Each item of rigid electrical equipment shall be entirely located and rigidly attached on one side only of a building expansion joint. Piping, electrical conduit, etc., which cross the expansion joint shall be provided with

flexible joints that are capable of accommodating displacements equal to the full width if the joint in both orthogonal directions.

PART 2 – PRODUCTS

2.1 LIGHTING FIXTURE SUPPORTS

- A. Lighting fixtures and supports shall conform to UL 1570, UL 1571, UL1572, UL1573 or UL1574 as applicable.

PART 3 – EXECUTION

3.1 SWAY BRACES FOR CONDUIT

- A. Sway bracing materials shall consist of rods, plates, angles, etc.

3.2 LIGHTING FIXTURES IN BUILDINGS

- A. Pendant Fixtures: Per manufacturer's mounting requirements and details on plans.
 - 1. Pendant fixtures shall be attached to structure with a mounting system designed to support 1.4 times the weight of the fixture both vertically and laterally. The connection to structure shall allow a 360-degree range of motion in the horizontal plane (ball and socket).
- B. Ceiling Attached Fixtures:
 - 1. Recessed LED Fixtures: Recessed individual or continuous- row mounted fixtures shall be supported by a seismic-resistant suspended ceiling support system built in accordance with the ASTM E 580. Recessed lighting fixtures not over 56 pounds in weight may be supported by and attached directly to the ceiling seismic design. Fixture accessories, including louvers, diffusers, and lenses shall have lock or screw attachments.
 - 2. Surface-Mounted LED Fixtures: Surface-mounted LED individual or continuous-row fixtures shall be attached to a seismic-restraint ceiling support system built in accordance with ASTM E 580.
- C. Assembly Mounted on Outlet Box: A supporting assembly, that is intended to be mounted on an outlet box, shall be designed to accommodate mounting features on 4-inch boxes, plaster rings, and fixture studs.
- D. Wall-Mounted Emergency Light Unit: Attachments for wall-mounted emergency light units shall be designed and secured for the worst expected seismic disturbance at the site.

3.3 ANCHOR BOLTS

- A. Cast-In-Place: Floor or pad mounted equipment shall use cast-in-place anchor bolts or Hilti HDA anchors as indicated. One nut shall be provided on each bolt. Anchor bolts shall conform to ASTM F 1554, Grade 36. Anchor bolts shall have an embedded straight length equal to at least 12 times nominal diameter of the bolt. Anchor bolts that exceed the normal depth of equipment foundation piers or pads shall either extend into concrete floor or the foundation shall be increased in depth to accommodate bolt lengths.
- B. Expansion or Chemically Bonded Anchors: Expansion or chemically bonded anchors shall not be used unless test data in accordance with ASTM E 488 has been provided verify the adequacy of the specific anchor and application. Expansion of chemically bonded anchors shall not be used to resist pull-out in overhead and wall installations.

3.4 RESILIENT VIBRATION ISOLATION DEVICES

- A. Where the need for these devices is determined, based on the magnitude of the design seismic forces, selection of anchor bolts for vibration isolation devices and/or snubbers for equipment base and foundations shall follow the same procedure as in paragraph ANCHOR BOLTS, except that an equipment weight equal to three times the actual equipment weight shall be used.

3.5 SWAY BRACES FOR CONDUIT 2-1/2" TRADESIZE AND GREATER

- A. Sway braces shall be provided to prevent movement of the conduits under seismic loading. Braces shall be provided in both the longitudinal and transverse directions, relative to the axis of the pipe. The bracing shall not interfere with thermal expansion requirements for the pipes as described in other sections of these specifications.
- B. Transverse Sway Bracing: Install transverse sway bracing for steel and conduit. All runs (length of pipe between end joints) shall have a minimum of two transverse braces.
- C. Longitudinal Sway Bracing: Longitudinal sway bracing shall be provided at 40 foot intervals unless otherwise indicated. All runs (length of conduit between end joints) shall have one longitudinal brace minimum. Branch lines, walls, or floors shall not be used as sway braces.
- D. Vertical Runs: Run is defined as length of pipe between end joints. Vertical runs of conduit shall be braced at not more than 10-foot vertical intervals. Braces for vertical runs shall be above the center of gravity of the segment being braces. Sway braces shall not be used as sway braces.
- E. Clamps and Hangers: Clamps or hangers in conduits shall be applied directly to conduit.
- F. Anchor Rods, Angles, and Bars: Anchor rods, angles, and bars shall be bolted to either pipe clamps or pipe flanges at one end and cast-in-place concrete or masonry

insert or clip angles bolted to the steel structure in the other end. Rods shall be solid metal or pipe as specified below. Anchor rods, angles, and bars shall not exceed lengths given in the tabulation below.

3.6 EQUIPMENT SWAY BRACING

- A. Suspended Equipment: Equipment sway bracing shall be provided for items supported from overhead structural systems. Braces shall consist of angles, rods, bars, or pipes and secured at both ends with not less than ½-inch bolts. Sufficient braces shall be provided for equipment to resist a horizontal force equal to three times the weight of equipment without exceeding safe working stress of bracing components. Details of equipment bracing shall be submitted for acceptance. In lieu of bracing with vertical supports, these items may be supported and braced with hangers inclined at 45 degrees directed up and radially away from equipment and oriented symmetrically in 90-degree intervals on the horizontal plane, bisecting the angles of each corner of the equipment, provided that supporting members are properly sized to support operating weight of equipment when hangers are inclined at a 45-degree angle.
- B. Floor or Pad Mounted Equipment:
 - 1. Shear Resistance: Floor mounted equipment shall be bolted to the floor. Requirements for the number and installation of bolts to resist shear forces shall be in accordance with paragraph ANCHOR BOLTS.
 - 2. Overturning Resistance: The ratio of the overturning moment from seismic forces to the resisting moment due to gravity loads shall be used to determine if overturning forces need to be considered in the sizing of anchor bolts. Calculations shall be provided to verify the adequacy of the anchor bolts for combined shear and overturning.

END OF SECTION 260530

SECTION 260533 – RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.1 SUMMARY

- A. Section includes conduit and tubing, surface raceways, wireways, outlet boxes, pull and junction boxes, and handholes.
- B. Related Sections:
 - 1. Section 26 05 03 - Equipment Wiring Connections.
 - 2. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
 - 3. Section 26 05 29 - Hangers and Supports for Electrical Systems.
 - 4. Section 26 05 53 - Identification for Electrical Systems.
 - 5. Section 26 27 16 - Electrical Cabinets and Enclosures.
 - 6. Section 26 27 26 - Wiring Devices.
 - 7. Section 27 05 33 - Conduits and Backboxes for Communications Systems.
 - 8. Section 27 05 36 - Cable Trays for Communications Systems.
 - 9. Section 28 05 28 - Conduits and Backboxes for Electronic Safety and Security.

1.2 REFERENCES

- A. American National Standards Institute:

- B. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
 - 3. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 4. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 5. NEMA RN 1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
 - 6. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
 - 7. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.

1.3 SYSTEM DESCRIPTION

- A. Raceway and boxes located as indicated on Drawings, and at other locations required for splices, taps, wire pulling, equipment connections, and compliance with regulatory requirements. Raceway and boxes are shown in approximate locations unless dimensioned. Provide raceway to complete wiring system. Exposed junction/pull boxes are not acceptable in finished areas, pull/spare boxes shall be above ceilings and hidden from view.

- B. Underground: Provide schedule 40 PVC. Provide pre-cast concrete or nonmetallic handholes, vaults or manholes.
- C. In or Under Slab on Grade: Under slab on grade provide PVC conduit. Minimum size $\frac{3}{4}$ " conduit. Conduit not allowed to be run within slab on grade.
- D. Outdoor Locations, Above Grade: Provide rigid steel conduit and electrical metallic tubing. Provide cast metal or nonmetallic outlet, pull, and junction boxes.
- E. In or Under Slab on Grade: Under slab on grade provide PVC conduit. Minimum size $\frac{3}{4}$ " conduit. Conduit not allowed to be run within slab on grade.
- F. Interior Wet Locations: Provide rigid steel conduit. Provide cast metal outlet, junction, and pull boxes. Provide flush mounting outlet box in finished areas.
- G. Concealed Dry Locations: Provide electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.
- H. Exposed Dry Locations: Provide electrical metallic tubing, except where exposed to physical damage; provide rigid steel conduit. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes. Exposed conduit in finished areas not acceptable. Exposed conduit shall be kept to a minimum in all cases.

1.4 DESIGN REQUIREMENTS

- A. Minimum Raceway Size: 1/2inch (13mm) unless otherwise specified. Comply with NEC for minimum size conduit and installation requirements. Minimum size 1/2 inch diameter for branch circuits, minimum size 3/4 inch diameter for homeruns. Minimum size for PVC conduit shall be 3/4 inch in diameter. Conduits shall be installed complete end-to-end prior to installing conductors.

1.5 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit for the following:
 - 1. Flexible metal conduit.
 - 2. Liquidtight flexible metal conduit.
 - 3. Nonmetallic conduit.
 - 4. Raceway fittings.
 - 5. Conduit bodies.
 - 6. Surface raceway.
 - 7. Wireway.
 - 8. Pull and junction boxes.
 - 9. Handholes.
- C. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements.

Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

1.6 CLOSEOUT SUBMITTALS

- A. General Conditions: Closeout procedures.
- B. Project Record Documents:
 - 1. Record actual routing of conduits 2" and larger.
 - 2. Record actual locations and mounting heights of outlet, pull, and junction boxes.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Product storage and handling requirements.
- B. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.
- C. Protect PVC conduit from sunlight.

1.8 COORDINATION

- A. General Conditions: Coordination and project conditions.
- B. Coordinate installation of outlet boxes for equipment connected under Section 26 05 03.
- C. Coordinate mounting heights, orientation and locations of outlets mounted above counters, benches, and backsplashes.

PART 2 - PRODUCTS

2.1 METAL CONDUIT

- A. Rigid Steel Conduit: ANSI C80.1.
- B. Intermediate Metal Conduit (IMC): Rigid steel.
- C. Fittings and Conduit Bodies: NEMA FB 1; all steel fittings. Threadless fittings shall not be used.
- D. Terminate rigid conduit in dry locations with two steel locknuts, one inside, one outside of the cabinet, junction box or outlet box and an insulated bushing. Bushings shall be malleable iron or steel with smooth insulating ring molded into edge of bushing to prevent damage to cable. Insulated bushings shall be 150 degree C self extinguishing thermoplastic. Provide grounding bushings on 1 ½ inch conduit and larger. Construction of bushings shall be similar to steel bushings described above except provide lugs for grounding connection.

- E. Where conduits are installed underground, the threaded joints shall be sealed with a conductive joint sealing compound.

2.2 PVC COATED METAL CONDUIT

- A. Product Description: NEMA RN 1; rigid steel conduit with external PVC coating, 40 mil (0.05 mm) thick.
- B. Fittings and Conduit Bodies: NEMA FB 1; steel fittings with external PVC coating to match conduit.

2.3 FLEXIBLE METAL CONDUIT

- A. Product Description: Interlocked steel construction.
- B. Fittings: NEMA FB 1.
- C. Connectors and fittings galvanized steel, threadless type with insulated throats, U.L. approved for grounding means.

2.4 LIQUIDTIGHT FLEXIBLE METAL CONDUIT

- A. Product Description: Interlocked steel construction with PVC jacket.
- B. Fittings: NEMA FB 1.
- C. Fitting Assembly – Sealing type, with steel gland, nylon ring and ground cone inside locknut. All fittings with insulated throat, U.L. approved for grounding means.

2.5 ELECTRICAL METALLIC TUBING (EMT)

- A. Product Description: ANSI C80.3; galvanized tubing.
- B. Fittings and Conduit Bodies: NEMA FB 1; use insulated throat galvanized steel, rain tight, compression or set screw type. Compression type must be used in all medical facilities and in damp locations. Provide grounding bushing on 1¼ inch and larger. **Zinc alloy and similar soft metal castings are not allowed.**

2.6 NONMETALLIC CONDUIT

- A. Product Description: NEMA TC 2; Schedule 40 PVC. Minimum sizes shall be 3/4 inch by diameter.
- B. Fittings and Conduit Bodies: NEMA TC 3.
- C. Fittings same material as conduit and installed with watertight joint compound recommended by manufacturer.

2.7 WIREWAY

- A. Product Description: NEMA Type 1, General purpose, Oiltight and dust-tight. NEMA Type 3R, raintight type wireway as required to meet project conditions. Open top assembly.
- B. Knockouts: NEMA Type 1, Manufacturer's standard. NEMA Type 3R – none.
- C. Size: As indicated on Drawings.
- D. Cover: NEMA Type 1 – removable hinged cover latches with captive screws. NEMA Type 3R – removable cover with quick release latches and full gaskets.
- E. Connector: Slip-in.
- F. Fittings: Lay-in type with removable top, bottom, and side; captive screws.
- G. Finish: Rust inhibiting primer coating with gray enamel finish.

2.8 OUTLET BOXES

- A. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.
 - 1. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; furnish 1/2 inch (13 mm) male fixture studs where required.
 - 2. Concrete Ceiling Boxes: Concrete type.
- B. Cast Boxes: NEMA FB 1, Type FD, cast fer alloy. Furnish gasketed cover by box manufacturer.
- C. Wall Plates for Finished Areas: As specified in Section 26 27 26.
- D. Wall Plates for Unfinished Areas: Galvanized industrial raised rings suitable for device type.
- E. Welded boxes are not acceptable.

2.9 PULL AND JUNCTION BOXES

- A. Sheet Metal Boxes: NEMA OS 1, galvanized steel.
- B. Hinged Enclosures: As specified in Section 26 27 16.
- C. Surface Mounted Cast Metal Box: NEMA 250, Type 4; flat-flanged, surface mounted junction box:
 - 1. Material: Galvanized cast iron.
 - 2. Cover: Furnish with ground flange, neoprene gasket, and stainless steel cover screws.
- D. Flush pull boxes installed in walls shall have oversized covers and be painted to match surface.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify outlet locations and routing and termination locations of raceway prior to rough-in.

3.2 INSTALLATION

- A. Ground and bond raceway and boxes in accordance with Section 26 05 26.
- B. Fasten raceway and box supports to structure and finishes in accordance with Section 26 05 29.
- C. Identify raceway and boxes in accordance with Section 26 05 53.
- D. Arrange raceway and boxes to maintain headroom and present neat appearance.

3.3 INSTALLATION – RACEWAY

- A. Electrical conduits shall be run concealed where building construction allows. Any exposed conduit shall be approved by the owner or architect prior to installation. Any exposed conduit, fittings, supports, etc shall be painted to match the surface on which they are installed.
- B. Conduit within the roof deck assembly shall be installed in accordance with NEC 300.4(E) and (F). Utilize Galvanized Rigid Conduit (GRC), or Intermediate Metallic Conduit (IMC) with steel plates to protect junction boxes from roof insulation attachment anchors.
- C. Raceway routing is shown in approximate locations unless dimensioned. Route to complete wiring system.
- D. Arrange raceway supports to prevent misalignment during wiring installation.
- E. Support raceway using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
- F. Group related raceway; support using conduit rack. Construct rack using steel channel specified in Section 26 05 29; provide space on each for 25 percent additional raceways.
- G. Do not support raceway with wire or perforated pipe straps. Remove wire used for temporary supports
- H. Do not attach raceway to ceiling support wires or other piping systems.
- I. Construct wireway supports from steel channel specified in Section 26 05 29.

- J. Route exposed raceway parallel and perpendicular to walls.
- K. Route raceway installed above accessible ceilings parallel and perpendicular to walls.
- L. Route conduit in and under slab from point-to-point.
- M. Maintain clearance between raceway and piping for maintenance purposes.
- N. Maintain 12 inch (300 mm) clearance between raceway and surfaces with temperatures exceeding 104 degrees F (40 degrees C).
- O. Cut conduit square using saw or pipe cutter; de-burr cut ends.
- P. Bring conduit to shoulder of fittings; fasten securely.
- Q. Join nonmetallic conduit using cement as recommended by manufacturer. Wipe nonmetallic conduit dry and clean before joining. Apply full even coat of cement to entire area inserted in fitting. Allow joint to cure for minimum 20 minutes.
- R. Install conduit hubs to fasten conduit to sheet metal boxes in damp and wet locations and to cast boxes.
- S. Install no more than equivalent of three 90 degree bends (270 degrees total) between boxes. Install conduit bodies to make sharp changes in direction, as around beams. Use hydraulic one-shot bender to fabricate or factory elbows for bends in metal conduit larger than 2 inch (50 mm) size.
- T. Avoid moisture traps; install junction box with drain fitting at low points in conduit system.
- U. Install suitable pull string or cord in each empty raceway except sleeves and nipples.
- V. Install suitable caps to protect installed conduit against entrance of dirt and moisture.
- W. Surface Wireway: Install flat-head screws, clips, and straps to fasten raceway channel to surfaces; mount plumb and level. Install insulating bushings and inserts at connections to outlets and corner fittings.
- X. Close ends and unused openings in wireway.
- Y. Exterior buried conduit shall be scheduled 40 PVC with PVC coated RGS 90 degree bends when penetrating through floor slabs.
- Z. Use rigid steel conduit for all motor circuits where subject to physical damage.
- AA. Intermediate grade metal conduit, (threaded only), may be used in lieu of rigid steel conduit where allowed by NEC.
- BB. Use flexible steel conduit for:
 - 1. Connection to vibrating equipment in dry locations between rigid conduit and connection box on equipment.

2. Final connections to equipment in dry locations.
 3. Final connections to equipment requiring adjustments.
 4. Final connections to recessed lighting fixtures from conduit system.
 5. Connection to distribution transformers.
 6. Maximum length 6'.
- CC. Use Liquidtight flexible conduit in damp or wet locations for same circuit categories listed for flexible conduit above. Engineer will determine "damp or wet" locations if questionable.
- DD. EMT shall not be installed underground and shall not be encased in concrete.
- EE. Conduit must be installed high enough above lay in ceiling to permit removal of ceiling panels and light fixtures.
- FF. In concrete slab on grade or elevated slabs: Conduit may penetrate slabs but will **NOT** be allowed to run in slabs on grade or elevated slabs.
- GG. In accordance with NEC 300.4 conduit may not be run exposed across roof.
- HH. Due to the corrosive nature of the soil all metal conduit, couplings, elbows and fittings in contact with the soil or buried below grade shall be factory coated with PVC or two-lap wrapped with 20 mil 3M Scotchwrap with Pipe Primer applied as recommended by Manufacturer. Make underground conduit fittings watertight using conductive compound tape. Do not use split couplings and similar fittings underground and exposed to moisture.
- II. Route underground conduits minimum 24" below grade.
- JJ. Paint conduit threads exposed to moisture with exterior grade, rust preventive silver paint after installation.
- KK. Where conduit crosses expansion joints, install expansion type fittings with bonding jumper. Use expansion joint with lateral conduit movement of 4" or 8" as indicated. When both vertical and lateral movement is expected the joint shall be a 1" braided flexible coupling allowing both directional movements.
- LL. Vibrating equipment and equipment requiring adjustment, i.e.: motors, transformers, etc: make final connections with flexible metal conduit.
- MM. Isolate conduit connections to equipment on roof from roof penetration of conduit with short section of liquid-tight flexible conduit between roof penetration and equipment to prevent leak in roof penetration due to equipment vibration.
- NN. Supports shall be installed in accordance with Seismic standards. Provide necessary side braces and swing joints as required. See Spec Section 26 05 30 Seismic Protection for Electrical Equipment.
- OO. All conduit penetrations through or within CMU walls shall be rigid steel. Conduit run within CMU walls encased in concrete shall be PVC.

3.4 INSTALLATION - BOXES

- A. Install wall mounted boxes at elevations to accommodate mounting heights as indicated on Drawings.
- B. Adjust box location up to 10 feet prior to rough-in to accommodate intended purpose.
- C. Orient boxes to accommodate wiring devices oriented as specified in Section 26 27 26.
- D. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.
- E. In Accessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches (150 mm) from ceiling access panel or from removable recessed luminaire.
- F. Locate flush mounting box in masonry wall to require cutting of masonry unit corner only. Coordinate masonry cutting to achieve neat opening.
- G. Do not install flush mounting box back-to-back in walls; install with minimum 6 inches (150 mm) separation (non-rated or acoustically rated). Install with minimum 24 inches (600 mm) separation in fire-rated walls.
- H. Secure flush mounting box to interior wall and partition studs. Accurately position to allow for surface finish thickness.
- I. Install stamped steel bridges to fasten flush mounting outlet box between studs.
- J. Install flush mounting box without damaging wall insulation or reducing its effectiveness.
- K. Install adjustable steel channel fasteners for hung ceiling outlet box.
- L. Do not fasten boxes to ceiling support wires or other piping systems.
- M. Support boxes independently of conduit.
- N. Install gang box where more than one device is mounted together. Do not use sectional box.
- O. Install gang box with plaster ring for single device outlets.
- P. Seal boxes during construction to prevent entrance of construction debris.
- Q. Paint wiring connections in ground mounted outlets or floor outlets in wet locations with "Scotchkote" and fill box with "Duxseal".
- R. Where outlet boxes are installed in unfinished concrete walls or columns, provide 1" deep plaster ring with box and ring set in position before the concrete is poured so concrete will fill around the ring and cover plate can be installed flush with the

unfinished surface. In case of brick walls, follow same procedure with mason filling around the plaster ring with mortar.

- S. Install all outlets located on columns or walls, provide 6" x 6" x 3" deep wood box placed in the forms before concrete is poured. Remove wood box before waterproofing is applied. General Contractor will waterproof wall and opening, after which Electrical Contractor will install outlet box. General Contractor will grout around box. Set boxes carefully so that cover plates will be flush with the surface and square.
- T. **Refer to structural details regarding installation of boxes and conduit within CMU walls and adjacent to openings. All boxes and conduit must maintain minimum spacing requirements per structural details. See 1/S021.**

3.5 INTERFACE WITH OTHER PRODUCTS

- A. Install conduit to preserve fire resistance rating of partitions and other elements, using materials and methods in accordance with Section 07 84 00.
- B. Route conduit through roof openings for piping and ductwork or through suitable roof jack with pitch pocket. Coordinate location with roofing installation specified.
- C. Locate outlet boxes to allow luminaires positioned as indicated on Drawings.
- D. Align adjacent wall mounted outlet boxes for switches, thermostats, and similar devices.

3.6 ADJUSTING

- A. General Conditions: Testing, adjusting, and balancing.
- B. Adjust flush-mounting outlets to make front flush with finished wall material.
- C. Install knockout closures in unused openings in boxes.

3.7 CLEANING

- A. General Conditions: Final cleaning.
- B. Clean interior of boxes to remove dust, debris, and other material.
- C. Clean exposed surfaces and restore finish.

END OF SECTION 260533

SECTION 260553 – ELECTRICAL IDENTIFICATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Provide and install required identification for the systems and equipment shown on the drawings and/or specified. The extent of identification is specified herein and in individual technical sections of work.
- B. Coordinate with Consultant and Owner for proper equipment identification nomenclature. Nameplates must be approved by Consultant prior to ordering and installation.
- C. Types of electrical identification include:
 - 1. Conduit labeling.
 - 2. Buried cable and conduit warnings.
 - 3. Cable/conductor identification.
 - 4. Operational instructions and warnings.
 - 5. Danger signs.
 - 6. Equipment/system identification labels and signs.
 - 7. Device plate labeling.
 - 8. Junction box labeling.

1.2 RELATED WORK

- A. Painting of conduit and color-coded painting of conduit if required. See Division 9.

1.3 SUBMITTALS

- A. Manufacturer's Data
 - 1. Product specifications and installation instructions for each material and device.
- B. Samples
 - 1. Provide for each color, lettering style and other graphic representation.
- C. Labels
 - 1. Provide a list of labels with actual designations as they will be printed.

PART 2 - PRODUCTS

2.1 ELECTRICAL IDENTIFICATION MATERIAL

Conform to ANSI A13.1, Table 3 for minimum size of legend letters and minimum length of color field for each raceway or cable size. Use colors prescribed by ANSI A13.7, NFPA 70 and these specifications.

- A. Color-Coded Conduit Markers
 - 1. Manufacturer's standard preprinted, flexible or semi-rigid, permanent, plastic-sheet conduit markers, extending 360 degrees around conduits. Attach with

adhesive, adhesive lap joint of marker, matching adhesive plastic tape at each end of marker, or pre-tensioned snap-on. Lettering to indicate voltage, function of conductors in conduit and shall be 8" minimum length (i.e. ac power, dc power, fire alarm).

B. Color-Coded Plastic Tape

1. Manufacturer's standard self-adhesive vinyl tape, minimum 3 mils thick by 1-1/2" wide.
2. Color: Orange.

C. Underground Plastic Line Marker

1. Manufacturer's standard permanent, bright-colored, continuous-printed plastic tape, for direct-burial service; minimum 4" wide x 4 mils thick. Printing to indicate type service of cable; with large (minimum 2-1/2") high letters.

D. Cable/Conductor Identification Bands

1. Manufacturer's standard vinyl self-adhesive self laminating cable/conductor markers, wrap-around type; pre-numbered plastic coated, or write-on type with clear plastic self-adhesive cover flap, lettered to show circuit identification. Similar to Panduit "Instacode" or accepted equivalent by T&B, or Tyton. Refer to Section 26 05 19 Low Voltage Electrical Power Conductors and Cables.

E. Self-Adhesive Plastic Signs

1. Manufacturer's standard, self-adhesive, pre-printed, flexible vinyl signs for operational instructions or warnings. Sizes suitable for application and visibility, with proper wording for application.
2. Color: Orange or Yellow with black lettering.

F. Danger Signs

1. Manufacturer's standard "DANGER" signs, baked enamel finish on 20 gage steel; standard red, black and white graphics; 14" x 10" unless 10" x 7" is largest which can be applied, or where larger size is needed for visibility use recognized explanation wording (as examples: HIGH VOLTAGE, KEEP AWAY, BURIED CABLE, DO NOT TOUCH SWITCH, DANGER-STARTS AUTOMATICALLY).

G. Engraved Signs (Nameplates)

1. Use 1/8" thick melamine plastic laminate, complying with FS LP-387, sizes as indicated, engrave with standard letter style of sizes and wording indicated (1/4" letters minimum).
2. Color: Black field with white letters for normal power service;
3. Fasteners: Self adhesive backing or double stick tape.

H. Permanent Polyester Tape:

1. Use Permanent Metalized Polyester Tapes for Industrial purposes that are resistant to oil, solvents and chemicals, these durable tapes adhere to all surface.
2. DYMO #18485, Black on Silver, 3/8" wide, or equivalent.

I. Lettering and Graphics

1. Coordinate names, abbreviations and other designations used with those shown or specified. Provide numbers, lettering, and wording as indicated or required for identification and operation/maintenance.

PART 3 - EXECUTION

3.1 APPLICATION AND INSTALLATION

A. General Installation Requirements

1. Install after completion of painting.
2. Comply with governing regulations and requests of governing authorities for identification of electrical work.

B. Conduit Identification

1. Use adhesive marking tape labels, Brother or Kroy labels 1" high x 12" long (min.), at 20 foot intervals to identify all conduits run exposed or located above accessible ceilings. Conduits located above non-accessible ceiling or in floors and walls shall be labeled within 3 feet of becoming accessible. Labels for multiple conduits shall be aligned. Use the following colors:
 - a. Above 600 Volts: Conduit 2" and larger - Black letters on orange background indicating feeder identification and voltage. Feeders within walls: provide identification on wall surfaces directly external to the conduits. Alternate identification labels with "DANGER - HIGH VOLTAGE" warning signs of the same color.
 - b. 600 Volt and Below Normal: Conduit 2" and larger - White letters on black background indicating feeder identification and voltage. Not required unless otherwise noted.
 - c. 600 Volt and Below Emergency: All conduit - White or black letters on red background indicating feeder identification and voltage. Not required unless otherwise noted
 - d. 600 Volt and Below UPS: All conduit - Black letters on yellow background indicating feeder identifications, circuit number and voltage. Not required unless otherwise noted
 - e. Fire Alarm: All conduit shall be manufactured red.
 - f. Temperature Control: White or black letters on blue background indicating "TEMP. CONTROL"
 - g. Ground: All conduit - White or black letters on green background
 - h. Network Fiber: All conduit - Black letters on white background indicating "NETWORK FIBER."
2. Where conduits enter or exit a panelboard, pull or junction box, switchboard, or other distribution equipment, conduit labels shall include circuit number in addition to feeder identification and voltage.
3. For overhead conduits, place identification such that it can be read standing on the floor below.

C. Underground Cable Identification

1. During back-filling of underground cable, install continuous underground marker, directly over buried line 6" to 8" below finished grade. Where multiple lines are buried in common trench not exceeding 24" width, install a single line marker. Install additional line markers for each increment of 24" width, i.e., 36" wide

- trench - 2 markers; 54" wide trench, 3 markers. Install multiple markers evenly spaced.
 - 2. Install line marker for every buried ductbank and/or conduits 3" diameter or larger.
 - 3. Electric Lines: Use red colored tape with lettering stating "CAUTION BURIED ELECTRIC LINE BELOW".
 - 4. Communication Lines: Use orange colored tape with lettering stating "CAUTION COMMUNICATION LINE BELOW".
- D. Operational Identification and Warnings
- 1. Provide operational signs for:
 - a. Switchgear
 - b. Large motor starters
 - c. All rotating equipment
- E. Danger Signs
- 1. Provide as required by codes.
- F. Engraved Plastic Laminated Signs
- 1. Install on each major unit of electrical equipment in the building. Provide single line of text, 1/4" high lettering on 1" high sign (1-1/2" high where 2 lines required). Matching terminology and numbering as indicated in contract documents.
 - 2. Provide signs for each unit of the following categories:
 - a. Electrical cabinets and enclosures: Indicate cabinet designation, voltage, phase and feeder origin.
 - b. Access panel/doors to electrical facilities: Indicate room name and use.
 - c. Major electrical switchgear: Indicate equipment designation, voltage, phase and feeder origin.
 - d. Electrical substations: Indicate equipment designation, voltage, phase and feeder origin.
 - e. Safety switches, circuit breakers and portable engine disconnects: Indicate equipment designation, voltage, phase, feeder origin and circuit number.
 - f. Transformers: Indicate transformer designation, voltages, phases, feeder origin, circuit number and equipment served.
 - g. Feeder cables inside pull and junction boxes and inside all switchgear at terminals indicating source and destination: Fasten with nylon ties.
 - h. All equipment furnished in this Division of the specifications: Indicate equipment designation, voltage, phase, feeder origin and circuit number.
- G. Install signs where indicated or most visible. Secure with at least two cadmium-plated screws. Where substrate cannot receive screws, use industrial epoxy cement to secure signs. Self-adhesive or double stick tape is acceptable. Secure with cadmium plated screws on porous surfaces.
- H. Identify all conduits installed for future use.
- I. Junction, Pull and Connection boxes. Identification of systems and circuits shall indicate system voltage and identity of contained circuits on outside of box cover. Color code shall be same as conduits for pressure sensitive labels. Use self-adhesive marking tape labels at exposed locations and indelible black marker at concealed

boxes. All fire alarm boxes shall have red covers. All temperature control boxes shall have blue covers.

- J. Branch Circuit Conductors shall be identified in each junction box and pull box with wire markers as manufactured by T & B, Panduit, 3M or Ideal to indicate panel/circuit number.
- K. Junction Boxes in branch circuit wiring shall be labeled with panel and circuit numbers. Junction boxes for special systems shall be labeled with system name and other identification as directed; for example, "fire alarm-zone 1". Where boxes are installed flush mounted in finished areas or surface mounted in unfinished areas, labeling shall be with engraved plastic nameplate as specified herein. Where boxes are installed above accessible ceilings, labeling may be neat hand written lettering with indelible marker.
- L. Device Plates – switches and receptacles. Identify the panelboard and branch circuit number from which served on the front of the device plate with Permanent Polyester Clear Tape with black letters. Locate all labels at the bottom of the plate in the same location throughout.

END OF SECTION 260553

SECTION 260573 – OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes short circuit and protective device coordination study encompassing portions of electrical distribution system from normal power source or sources up to and including breakers in service entrance switchboard, fuses in service entrance switchboard, main breaker in sub-distribution panels, fuses in sub-distribution panels and main breaker in each panelboard.
- B. Related Sections:
 - 1. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.
 - 2. Section 26 22 00 - Low-Voltage Transformers.
 - 3. Section 26 24 13 - Switchboards.
 - 4. Section 26 24 16 - Panelboards.
 - 5. Section 26 28 13 - Fuses.
 - 6. Section 26 28 19 - Enclosed Switches.

1.2 REFERENCES

- A. Institute of Electrical and Electronics Engineers:
 - 1. IEEE 242 - Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems (Buff Book).
- B. National Fire Protection Association:
 - 1. NFPA 70 - National Electrical Code.

1.3 DESIGN REQUIREMENTS

- A. Complete Short Circuit and Protective Device Coordination Study to meet requirements of NFPA 70 and NEC 700.27 for selective coordination.
- B. Report Preparation:
 - 1. Prepare study prior to ordering distribution equipment to verify equipment ratings required.
 - 2. Perform study with aid of computer software program.
 - 3. Obtain actual settings for packaged chiller and motor characteristics and for equipment incorporated into Work.
 - 4. Calculate short circuit interrupting and, when applicable, momentary duties for assumed 3-phase bolted fault short circuit current and phase to ground fault short circuit current at each of the following:
 - a. Utility supply bus.
 - b. Low-voltage switchgear.
 - c. Switchboards.
 - d. Motor control centers.
 - e. Distribution panelboards.
 - f. Branch circuit panelboards.

- g. Busway.
 - h. Each other significant equipment location throughout system.
 - 5. Starting point for study shall be at 10 milliseconds.
- C. Report Contents:
 - 1. Include the following:
 - a. Calculation methods and assumptions.
 - b. Base per unit value selected.
 - c. One-line diagram.
 - d. Source impedance data including power company system available power and characteristics.
 - e. Typical calculations.
 - 1) Fault impedance.
 - 2) X to R ratios.
 - 3) Asymmetry factors.
 - 4) Motor fault contribution.
 - 5) Short circuit kVA.
 - 6) Symmetrical and asymmetrical phase-to-phase and phase-to-ground fault currents.
 - 7) Tabulations of calculation quantities and results.
 - f. One-line diagram revised by adding actual instantaneous short circuits available.
 - g. State conclusions and recommendations.
 - 2. Prepare time-current device coordination curves graphically indicating coordination proposed for system, centered on conventional, full-size, log-log forms.
 - 3. Prepare with each time-curve sheet complete title and one-line diagram with legend identifying specific portion of system covered by that particular curve sheet.
 - 4. Prepare detailed description of each protective device identifying its type, function, manufacturer, and time-current characteristics. Tabulate recommended device tap, time dial, pickup, instantaneous, and time delay settings.
 - 5. Plot device characteristic curves at point reflecting maximum symmetrical fault current to which device is exposed. Include on curve sheets the following:
 - a. Power company relay characteristics.
 - b. Power company fuse characteristics.
 - c. Low voltage equipment circuit breaker trip device characteristics.
 - d. Low voltage equipment fuse characteristics.
 - e. Cable damage point characteristics.
 - f. Pertinent transformer characteristics including:
 - 1) Transformer full load current.
 - 2) Transformer magnetizing inrush.
 - 3) ANSI transformer withstand parameters.
 - 4) Significant symmetrical fault current.
 - g. Pertinent motor characteristics.
 - h. Other system load protective device characteristics.

1.4 ARC FLASH HAZARDS ANALYSIS STUDIES

- A. Scope of Study
Determine the short-circuit current available at the designated point of contact and perform the following to provide adequate protection:
1. Calculate the flash protection boundary
 2. Calculate the arc-flash incident energy.
 3. Confirm the required labeling.
 4. Confirm the required personal protective equipment with arc rating to provide adequate protection for personnel working on or near energized conductors or components.
- B. Procedure
The actual short-circuit available current is to be determined from a recent short circuit study. If the actual short-circuit is not known, calculate incident energy using the nearest transformer that would supply the fault current. The flash protection boundary will be calculated in accordance with NFPA 70E. The arc-flash incident energy is to be calculated using the equations in NFPA 70E.
- Provide Warning Labels on all switchboards, panelboards and motor control centers for "Arc Flash and Shock Hazard Appropriate PPE Required" listing the following:
1. Available 3 phase Short-Circuit Current
 2. Flash Protection Boundary
 3. Incident energy at 18" expressed in cal/cm²
 4. PPE required
 5. Voltage shock hazard
 6. Limited shock approach boundary
 7. Restricted shock approach boundary
 8. Prohibited shock approach boundary

1.5 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Qualifications Data: Submit the following for review prior to starting study.
1. Submit qualifications and background of firm.
 2. Submit qualifications of Professional Engineer performing study.
- C. Software: Submit for review information on software proposed to be used in performing study.
- D. Product Data: Submit the following:
1. Report: Summarize results of study in report format including the following:
 - a. Descriptions, purpose, basis, and scope of study.
 - b. Tabulations of circuit breaker, fuse and other protective device ratings versus calculated short-circuit duties, and commentary regarding same.
 - c. Protective device time versus current coordination curves, tabulations of relay and circuit breaker trip settings, fuse selection, and commentary regarding same.

- d. Fault current calculations including definition of terms and guide for interpretation of computer printout.
- E. Submit copies of final report signed by professional engineer. Make additions or changes required by review comments.

1.6 QUALITY ASSURANCE

- A. Maintain one copy of each document on site.
- B. Use commercially available software, designed specifically for short circuit and protective device coordination studies with minimum of 5 years documented availability approved by Architect/Engineer.
- C. Perform study in accordance with IEEE 242.

1.7 QUALIFICATIONS

- A. Study Preparer: Company specializing in performing work of this section with minimum 5 years documented experience.
- B. Perform study under direct supervision of Professional Engineer experienced in design of this Work and licensed in State of Nevada with minimum of five years experience in power system analysis.
- C. Demonstrate company performing study has capability and experience to provide assistance during system start up.

1.8 PRE-INSTALLATION MEETINGS

- A. General Conditions: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.9 SEQUENCING

- A. General Conditions: Requirements for sequencing.
- B. Allow for review of completed study by Architect/Engineer.
- C. Submit short circuit and protective device coordination study to Architect/Engineer prior to receiving final approval of distribution equipment shop drawings and prior to releasing equipment for manufacturing.
- D. When formal completion of study will cause delay in equipment manufacturing, obtain approval from Architect/Engineer for preliminary submittal of study data sufficient in scope to ensure selection of device ratings and characteristics will be satisfactory.

1.10 SCHEDULING

- A. General Conditions: Requirements for scheduling.
- B. Schedule work to expedite collection of data to ensure completion of study for final approval of distribution equipment shop drawings prior to release of equipment for manufacturing.

1.11 COORDINATION

- A. General Conditions: Requirements for coordination.
- B. Coordinate work with local power company.

PART 2 - PRODUCTS

Not used.

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Provide assistance to electrical distribution system equipment manufacturer during start up of electrical system and equipment.
- C. Select each primary protective device for delta-wye connected transformer so device's characteristic or operating band is within transformer characteristics, including point equal to 58 percent of ANSI withstand point to provide secondary line-to-ground fault protection.
- D. Separate transformer primary protective device characteristic curves from associated secondary device characteristics by 16 percent current margin to provide proper coordination and protection in event of secondary line-to-line faults.
- E. Separate medium-voltage relay characteristic curves from curves for other devices by at least 0.4 second time margin.

3.2 ADJUSTING

- A. General Conditions: Requirements for starting and adjusting.
- B. Perform field adjustments of protective devices and modifications to equipment to place equipment in final operating condition. Adjust settings in accordance with approved short circuit and protective device coordination study.

END OF SECTION 260573

SECTION 260923 – LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Remote control lighting relays.
 - 2. Lighting contactors.
 - 3. Switches.
 - 4. Switch plates.
 - 5. Occupancy sensors.
 - 6. Photocells.
 - 7. Photocell control unit.
- B. Related Sections:
 - 1. Section 26 05 03 - Equipment Wiring Connections: Execution requirements for electric connections specified by this section.
 - 2. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.
 - 3. Section 26 05 33 - Raceway and Boxes for Electrical Systems: Product requirements for raceway and boxes for placement by this section.
 - 4. Section 26 05 53 - Identification for Electrical Systems: Product requirements for electrical identification items for placement by this section.
 - 5. Section 26 24 16 - Panelboards.
 - 6. Section 26 27 26 - Wiring Devices: Product requirements for wiring devices for placement by this section.

1.2 SYSTEM DESCRIPTION

- A. Distributed switching control using self contained individually mounted lighting relays.
- B. Where indicated on drawings or required by applicable code, provide automatic shutoff for lighting inside building larger than 5000 square feet (465 square meters). Control shutoff by method conforming to ICC IECC.
- C. Where indicated on drawings or required by applicable code, provide automatic shutoff for lighting outside building. Control shutoff by method conforming to ICC IECC.
- D. Extent of lighting control system work is indicated by drawings and by the requirements of this section. It is the intent of this section to provide an integrated, energy saving lighting control system including Lighting Control Panels and Occupancy Sensors, and Daylighting Controls from a single supplier. Contractor is responsible for confirming that the panels and sensors interoperate as a single system.

1.3 SUBMITTALS

- A. General Conditions: Requirements for submittals.

- B. Shop Drawings: Indicate dimensioned drawings of lighting control system components and accessories.
 - 1. One Line Diagram: Indicating system configuration indicating panels, number and type of switches or devices.
 - 2. Include typical wiring diagrams for each component.
 - 3. Detailed point to point wiring diagrams and floor plans showing occupancy and daylighting sensor locations.
 - 4. Provide typical mounting details for all equipment and devices.
 - 5. Sample calibration log.
 - 6. Provide Source Code and Source Code Licenses for all equipment that is computer driven. Provide Development licenses so Source Code can be examined. These Development Licenses, along with all software licenses shall become property of the Owner. Third parties will be allowed to use the software as necessary for this project.
- C. Product Data: Submit manufacturer's standard product data for each system component.
- D. Manufacturer's Installation Instructions: Submit for each system component.
- E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Project Record Documents: Record the following information:
 - 1. Actual locations of components and record circuiting and switching arrangements.
 - 2. Wiring diagrams reflecting field installed conditions with identified and numbered, system components and devices.
- C. Operation and Maintenance Data:
 - 1. Submit replacement parts numbers.
 - 2. Submit manufacturer's published installation instructions and operating instructions.
 - 3. Recommended renewal parts list.
 - 4. Submit final calibration log.

1.5 QUALITY ASSURANCE

- A. Manufacturers: Firms regularly engaged in the manufacture of lighting control equipment and ancillary equipment, of types and capacities required, whose products have been in satisfactory use in similar service for not less than 5 years.
- B. Comply with NEC, NEMA, and FCC Emission requirements for Class A applications.
- C. UL Approvals: Relay panels and accessory devices are to be UL listed under UL 916 Energy Management Equipment. Configured to order or custom relay panels shall be UL Listed under UL 508, Industrial Control Panels.

1.6 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.
- B. The contractor shall be completely responsible for providing a system meeting this specification in its entirety. All deviations from this specification must be listed and individually signed off by the consultant.

1.7 PRE-INSTALLATION MEETINGS

- A. General Conditions: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section. Attendance required: Electrical Contractor, Factory Representative, Local Factory Representative and Outside Commissioning Agent.

Review placement of all components, wiring schematics and samples.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Requirements for transporting, handling, storing, and protecting products.
- B. Accept components on site in manufacturer's packaging. Inspect for damage.
- C. Protect components by storing in manufacturer's containers indoor protected from weather.

1.9 WARRANTY

- A. General Conditions: Requirements for warranties.
- B. Furnish five year manufacturer warranty for components.

1.10 EXTRA MATERIALS

- A. General Conditions: Requirements for extra materials.
- B. Furnish 5 of each switch type installed.
- C. Furnish 5 of each occupancy sensor type installed.
- D. Furnish 1 of each photocell type.

PART 2 - PRODUCTS

2.1 RELAY PANELS

- A. System Description
Lighting Control Panels shall be UL listed and consist of the following:

LIGHTING CONTROL DEVICES

1. Enclosure/Tub: NEMA 1 as indicated on the drawings, sized to accept an interior with 24 relays and six (6) four pole contactors.
 2. Cover: Surface or Flush as required, hinged, and lockable and with restricted access to line voltage section.
 3. Interior: Barrier included for separation of high voltage (class 1) and low voltage (class 2) wiring. The interior shall include intelligence boards, power supply, mechanically latched control relays and multi-pole contactors. The interiors will include the following features:
 - a. Screwless, removable, plug-in connections for all low voltage terminations.
 - b. Each relay shall be capable of individual ON/OFF control by a low voltage switch and/or occupancy sensor input.
 - c. The system shall monitor true relay status; the relay status will be displayed at the onboard pilot LED and monitored by the system electronics.
 - d. Stagger the ON and OFF sequence of the relays.
 - e. Heavy Duty Relays – Mechanically latching contacts with single moving part design for improved reliability. Relays to have the following characteristics:
 - (1) 30 amp NEMA 410 electronic ballast rated and 20 amp tungsten, rated for 50,000 ON/OFF cycles at full load, Support #12 - #14 AWG solid or stranded wire and rated for 120, and 277 volts; 20 amp NEMA 410 electronic ballast rated and 20 amp tungsten 347 volts.
 - (2) 30 VAC isolated contacts for status feedback and pilot light indication.
 - (3) 14,000 amp short circuit current rating.
 4. Contactors shall be DIN rail mounted, four pole standard, normally open or normally closed, electrically held with 120 or 277 volt coil voltage to match panel control power voltage. Contactors shall be compatible with all lighting, ballast and HID loads and be rated for 277 volt 20 amp tungsten and 600 volt 30 amp ballast loads.
- B. Power Supply: Multi-voltage transformer assembly with enough power to supply all electronics, occupancy sensors, dataline switches, pilot lights, and photocells as necessary to meet the project requirements. Power supply to have internal over-current protection with automatic reset and metal oxide varistor protection.

2.2 NETWORK CLOCK

- A. Provide an eight channel network clock that connects to the system using the four conductor data communications wire network described in Section 2.10.
- B. The clock will be used to schedule any of the eight global channel groups (Section 2.03) in the relay panel network. The clock will support all of the energy saving features required of ASHRAE 90.1 - 2001, IECC 2003, as well as all state and local energy codes.
- C. The clock will provide astronomic capabilities, time delays, blink warning, daylight savings, and holiday functions and will include a battery back up for the clock function and EEPROM for program retention. Clocks that require multiple events to meet local code lighting shut off requirements shall not be allowed.

- D. The clock shall allow unique scenario and time delays. Scenarios are:
 - 1. Scheduled ON / OFF
 - 2. Manual ON / Scheduled OFF
 - 3. Manual ON / Auto Sweep OFF (for AS-100 Switches)
 - 4. Astro ON / OFF (or Photo ON / OFF)
 - 5. Astro and Schedule ON / OFF (or Photo and Schedule ON / OFF)
- E. The clock shall include system diagnostic functions to identify devices anywhere on the network dataline, and will function as a dataline switch programming tool.
- F. Features
 - 1. Clear 8-line, 22-character per line display and a simple user interface and online help.
 - 2. Retains memory and time for a minimum of 10 years.

2.3 NATIVE BACnet INTEGRATION

- A. Description
 - 1. Lighting Control Panels shall have a BACnet card with the capability to modify the IP address at the job site. The controller shall be furnished with all hardware/software required to field modify the IP address.
 - 2. BACnet card shall allow interface with the direct digital control system via BACnet / MSTP protocol.

2.4 ETHERNET MULTI-USER CONNECTIVITY - WEBLINK

- A. System Description
 - 1. A network appliance will provide multi-user, simultaneous access to the lighting system using standard TCP/IP and the manufacturer's software.
 - 2. The network appliance will include the following hardware:
 - a. Ethernet, Serial and Parallel port, optional 56K BAUD internal modem, Video graphics card.
- B. Features
 - 1. Multiple users (each with a licensed copy of the manufacturer's software will be able to simultaneously connect to the IP address of the WebLink.
 - 2. Users may be connected via an Intranet, or Internet depending upon network security limitations.
 - 3. A single user may connect using the manufacturer's software, via the internal modem of the WebLink.
 - 4. The WebLink will provide all the features of a direct connected site to the simultaneous users.
- C. Optional 365 day and Events Scheduler (Schools, Retail and Event Centers)
 - 1. 365 day event scheduling will allow "Events" to be defined as a series of commands to allow a preprogrammed timed sequence to occur by selecting the start time and stop time of the event. Events may be programmed as a repeating schedule with specific start and ending times or as one time scheduled events.

2. 365 day programming will simplify single day activities for schools, retail applications, or event centers. The schedules may be programmed up to two years in advance.

D. Contractor shall coordinate networking/IT/VPN requirements with owner prior to start of system installation. The contractor is required to provide information from the lighting controls supplier as to the individual who is responsible for system startup. Coordinate with WCSD IT department for network access requirements.

2.5 LOW VOLTAGE SWITCHES / PLATES

A. Description

1. Low voltage switches shall provide a momentary signal to allow individual relay control or group control using the Group Switching card specified in Section 2.03 above. Switches shall be available in 1-button, 3-button, 5-button, or 9-button designs. The 1, 3, and 5 switch devices shall mount in a standard single gang box: the 9-switch version in a two-gang box.

B. Features

1. Switches shall be constructed of non-breakable Lexan on all exposed parts and shall include a matching screwless Lexan wall plate.
2. **Individual buttons shall be labeled and identified to their use with either removable faceplates or permanent engraving on the button.**
3. Each switch shall use an LED pilot light for the individual buttons to indicate status of the controlled relay or group of relays.

2.6 OCCUPANCY SENSORS AND POWER PACKS

A. Occupancy Sensors

1. All products listed shall integrate fully with the Lighting Control Panels and daylighting controls listed in the project specifications.
2. Dual technology sensors shall:
 - a. Either corner mounted, or ceiling mounted in such a way as to minimize coverage in unwanted areas
 - b. Passive infrared and ultrasonic or microphonic technologies for occupancy detection. Products that react to noise or ambient sound shall have sophisticated filtering technology to mask out and recognize noises made by the building or the environment such as the sound of the HVAC system, air currents, equipment, cars driving by, etc. They shall also have automatic gain control to dynamically self-adapt to the environment by filtering out constant background noise.
5. Ultrasonic sensors shall:
 - a. Utilize Advanced Signal Processing to adjust the detection threshold dynamically to compensate for constantly changing levels of activity and airflow throughout controlled space.

- b. Have an ultrasonic operating frequency that is crystal controlled at 25 kHz within $\pm 0.005\%$ tolerance, 32 kHz within $\pm 0.002\%$ tolerance, or 40 kHz $\pm 0.002\%$ tolerance to assure reliable performance and eliminate sensor cross-talk. Sensors using multiple frequencies are not acceptable.
 - 6. All sensors shall be capable of operating normally **with LED Drivers**.
 - 7. Coverage of sensors shall remain constant after sensitivity control has been set. No automatic reduction shall occur in coverage due to the cycling of air conditioner or heating fans.
 - 8. All sensors shall have readily accessible, user adjustable settings for time delay and sensitivity. Settings shall be located on the sensor (not the control unit) and shall be recessed to limit tampering.
 - 9. In the event of failure, a bypass manual override shall be provided on each sensor. When bypass is utilized, lighting shall remain on constantly or control shall divert to a wall switch until sensor is replaced. This control shall be recessed to prevent tampering.
 - 10. All sensors shall provide an LED as a visual means of indication at all times to verify that motion is being detected during both testing and normal operation.
 - 11. **The lighting controls contractor/supplier shall provide sensors adequate for the use in each space and individual device selection shall be made with regards to ceiling heights and specific installation location. It is the contractor's responsibility to select appropriate sensors with varying coverage ranges for each space where required to be provided with occupant sensor control. Additional devices shall be provided at no cost to the owner to provide best level of detection and energy savings. All documents in the project shall be reviewed with regards to mounting heights and obstructions in the space.**
- B. Circuit Control Hardware – (Power Packs)
- 1. Control Units - For ease of mounting, installation and future service, control unit(s) shall be able to externally mount through a 1/2" knock-out on a standard electrical enclosure and be an integrated, self-contained unit consisting internally of an isolated load switching control relay and a transformer to provide low-voltage power. Control unit shall provide power to a minimum of two (2) sensors.
 - 2. Relay Contacts shall have ratings of:
 - a. 13A - 120 VAC Tungsten
 - b. 20A - 120 VAC Ballast
 - c. 20A - 277 VAC Ballast
 - d. 20A – 347 VAC Ballast
- C. Control wiring between sensors and control units shall be Class II, 18-20 AWG, stranded U.L. Classified, PVC insulated or TEFLON jacketed cable suitable for use in plenums, where applicable.
- 1. Minimum acceptable wire gauge from the circuit control hardware relays shall be #14 AWG.

2.7 EXTERIOR PHOTOCELLS

- A. Each photocell shall be mounted in the appropriate location for measuring the available daylight. Each photocell will have a separate control/calibration module mounted separately and in an accessible location.
- B. The control module shall:
 - 1. Have a separate trip point settings. These settings will be entered via easily readable dial switches.
 - 2. Have a fixed deadband of 10%.
 - 3. Have a starting delay.
 - 4. Be suitable for panel mounting.
 - 5. Be UL listed.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Mount switches, occupancy sensors, and photocells as indicated on Drawings and by manufacturer's requirements. **Provide additional sensors as required to provide optimal detection in each space.**
- B. Install wiring in accordance with Section 26 05 19.
- D. Use only properly color coded, stranded wire. Install wire sizes as indicated on Drawings. Install wire in conduit in accordance with Section 26 05 33.
- E. Label each low voltage wire clearly indicating connecting relay panel. Refer to Section 26 05 53.
- F. Identify power wiring with circuit breaker number controlling load. When multiple circuit breaker panels are feeding into relay panel, label wires to indicate originating panel designation.
- G. Label each low voltage wire with relay number at each switch or sensor.

3.2 SUPPORT SERVICES

Service Description:

- A. System Startup
 - 1. Manufacturer shall have a factory authorized technician confirm proper installation and operation of all system components. The startup requirement is intended to verify:
 - a. That all occupancy sensors are located, installed, and adjusted as intended by the factory and the contract documents.
 - b. The occupancy sensors are operating within the manufacturers specifications.
 - c. The sensors and relay panels interact as a complete and operational system to meet the design intent.
 - 2. Manufacturer to provide minimum of two day factory start-up at site. Additional days shall be included as required

3. Manufacturer to provide a written statement verifying that the system meets the above requirements.
- H. Training
1. Manufacturer shall provide factory authorized technician to train owner personnel in the operation, programming and maintenance of the lighting control system including all occupancy sensors and controls.
 2. Manufacturer shall provide minimum of one day on site training.
 3. Training shall be video recorded and provided to Owner on a DVD.
- C. Factory Commissioning
1. Manufacturer shall provide factory authority technician for on site Commissioning Agent Testing. Number of days on-site shall be as necessary based on number of components and systems.
 2. Factory Commissioning shall include:
 - a. Fine tune occupancy sensors.
 - b. Program daylight harvesting.
 - c. Program relay panels,
 - d. Program dimming panels.
 - e. Fine tune dimming controls.
- D. **Follow-up Site Assistance**
1. **The lighting controls representative shall visit the site 1-year post final commissioning to ensure the system is operating appropriately and make any fine-tuning programming adjustments as requested by the owner at that time. The controls representative shall also provide an additional 1-day training session for the owner at this time.**

3.3 ADJUSTING AND CALIBRATING

- A. General Conditions: Requirements for starting and adjusting.
- B. Test each system component after installation to verify proper operation.
- C. Test relays, contactors, and switches after installation to confirm proper operation.
- D. Confirm correct loads are recorded on directory card in each panel.
- E. Provide calibration logs for all devices. Sample log shall be part of shop drawing submittal.

CONTROL TYPE	COMMISSIONING AND CALIBRATION
Occupancy sensors and photosensors	Ensure that the sensor is correctly placed and oriented per the specifications and/ or construction drawings. If unanticipated obstructions are present, it may be necessary to adjust the sensor location and orientation.
Occupancy sensors	Adjust the sensitivity and time delay of the occupancy sensor, and test to ensure it provides appropriate

	response. For optimal user acceptance, energy savings and lamp life, set the time delay initially for a minimum of 15 minutes (NEMA recommendation).
Daylight harvesting	All furnishings and interior finishes and materials should be installed before calibrating the sensors. Adjust the photosensor to determine the threshold for switching based on detected light level. It may be helpful to calibrate under normal daylight conditions and dusk conditions (it may be possible to close window blinds to approximate dusk). Record the calibration adjustments if possible and replicate in similar spaces.
Automatic shut-off (“sweep off”)	Input the schedule into the programmable scheduling controls, incorporating weekday, weekend and holiday operating times. Ensure that overrides work and that they are located conveniently for users.
Dimming systems	It is recommended that fluorescent lamps be “seasoned” before dimming by operating them at full light output, so as to ensure uniform dimming performance across all lamps in a system. Recommendations vary, but NEMA recommends seasoning fluorescent linear lamps overnight, or about 12 hours, and compact fluorescent lamps for 100 hours, prior to dimming. Consult the lamp manufacturer to determine whether the select lamp type must be seasoned and for how long prior to dimming.
Manual dimming	Ensure correct placement of the dimmer per the construction drawings. Adjust the upper limit of the dimming range according to the task being performed, and set the lower limit of the range so that the minimum light level meets the use/application of the space.

END OF SECTION 260923

SECTION 262200 - LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Two-winding transformers.
- B. Related Requirements:
 - 1. Section 03 30 00 - Cast-In-Place Concrete: Housekeeping pads.
 - 2. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
 - 3. Section 26 05 29 - Hangers and Supports for Electrical Systems.
 - 4. Section 26 05 33 - Raceway and Boxes for Electrical Systems.
 - 5. Section 26 05 53 - Identification for Electrical Systems.

1.2 REFERENCE STANDARDS

- A. National Electrical Manufacturers Association:
 - 1. NEMA ST 1 - Specialty Transformers (Except General Purpose Type).
 - 2. NEMA ST 20 - Dry Type Transformers for General Applications.
- B. International Electrical Testing Association:
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit outline and support point dimensions of enclosures and accessories, unit weight, voltage, kVA, and impedance ratings and characteristics, tap configurations, insulation system type, and rated temperature rise.
- C. Test and Evaluation Reports: Indicate loss data, efficiency at 25, 50, 75 and 100 percent rated load, and sound level.
- D. Source Quality Control Submittals: Indicate results of factory tests and inspections.
- E. Field Quality Control Submittals: Indicate results of Contractor furnished tests and inspections.

1.4 CLOSEOUT SUBMITTALS

- A. General Conditions: Closeout procedures.
- B. Record Documentation: Record actual locations of transformers.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Product storage and handling requirements.
- B. Store in clean, dry space. Maintain factory wrapping or provide additional canvas or plastic cover to protect units from dirt, water, construction debris, and traffic.
- C. Handle in accordance with manufacturer's written instructions. Lift only with lugs provided. Handle carefully to avoid damage to transformer internal components, enclosure, and finish.

PART 2 - PRODUCTS

2.1 TWO-WINDING TRANSFORMERS

- A. Manufacturer List:
 - 1. Eaton Electrical.
 - 2. General Electrical.
 - 3. Square D.
 - 4. Seimens.
- B. Substitution Limitations:
 - 1. General Conditions: Requirements for substitutions for other manufacturers and products.
- C. Description: NEMA ST 20, factory-assembled, air-cooled, dry type transformers, ratings as indicated on Drawings.
- D. Operation:
 - 1. Primary Voltage: 480 volts, 3 phase.
 - 2. Secondary Voltage: 208Y/120 volts, 3 phase.
 - 3. Insulation system and average winding temperature rise for rated kVA as follows:
 - 4. 1-15 kVA: Class 185 with 115 degrees C rise.
 - 5. 16-500 kVA: Class 220 with 150 degrees C rise.
 - 6. Case temperature: Do not exceed 35 degrees C rise above ambient at warmest point at full load.
 - 7. Winding Taps:
 - a. Transformers Less than 15 kVA: Two 5 percent below rated voltage, full capacity taps on primary winding.
 - b. Transformers 15 kVA and Larger: NEMA ST 20.
 - 8. Sound Levels: NEMA ST 20.
 - 9. Basic Impulse Level: 10 kV for transformers less than 300 kVA, 30 kV for transformers 300 kVA and larger.
 - 10. Mounting:
 - a. 1-15 kVA: Suitable for wall mounting.

- b. 16-75 kVA: Suitable for wall, floor, or trapeze mounting.
- c. Larger than 75 kVA: Suitable for floor or trapeze mounting.

E. Materials:

- 1. Ground core and coil assembly to enclosure by means of visible flexible copper grounding strap.
- 2. Coil Conductors: Continuous copper windings with terminations brazed or welded.
- 3. Enclosure: NEMA ST 20, Type 1 or Type 3R ventilated as required to meet service conditions. Furnish lifting eyes or brackets.

F. Fabrication:

- 1. Isolate core and coil from enclosure using vibration-absorbing mounts.
- 2. Nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise.

2.2 SOURCE QUALITY CONTROL

- A. General Conditions: Testing, inspection and analysis requirements.
- B. Production test each unit according to NEMA ST20.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Requirements for installation examination.
- B. Verify mounting supports are properly sized and located including concealed bracing in walls.

3.2 PREPARATION

- A. General Conditions: Requirements for installation preparation.
- B. Provide concrete pads under provisions of Section 03 30 00.

3.3 INSTALLATION

- A. Set transformer plumb and level.
- B. Use flexible conduit, in accordance with Section 26 05 33, 2 feet (600 mm) minimum length, for connections to transformer case. Make conduit connections to side panel of enclosure.
- C. Support transformers in accordance with Section 26 05 29.
 - 1. Mount wall-mounted transformers using integral flanges or accessory brackets furnished by manufacturer.
 - 2. Mount floor-mounted transformers on vibration isolating pads suitable for isolating transformer noise from building structure.

3. Mount trapeze-mounted transformers as indicated on Drawings.

D. Provide seismic restraints.

E. Install grounding and bonding in accordance with Section 26 05 26.

3.4 FIELD QUALITY CONTROL

A. General Conditions: Requirements for inspecting and testing.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.2.1.

3.5 ADJUSTING

A. General Conditions: Testing, adjusting, and balancing.

B. Measure primary and secondary voltages and make appropriate tap adjustments.

3.6 CLEANING

A. General Conditions: Requirements for cleaning.

B. Clean existing transformers to remain or to be reinstalled.

END OF SECTION 262200

SECTION 262413 – SWITCHBOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes main and distribution switchboards.
- B. Related Sections
 - 1. Section 03 30 00 – Cast-In-Place Concrete for concrete pads.
 - 2. Section 26 05 26 – Grounding and Bonding for Electrical Systems.
 - 3. Section 26 05 53 – Identification for Electrical Systems.
 - 4. Section 26 25 00 – Enclosed Bus Assemblies.
 - 5. Section 26 28 13 – Fuses.
 - 6. Section 26 35 56 – Surge Protective Devices.

1.2 REFERENCES

- A. American National Standards Institute:
 - 1. ANSI C12.1 - Code for Electricity Metering.
 - 2. ANSI C39.1 - Requirements, Electrical Analog Indicating Instruments.
- B. Institute of Electrical and Electronics Engineers:

 - 2. UL 891 - Dead-Front Switchboards.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.

- B. Shop Drawings: Indicate front and side views of enclosures with overall dimensions shown; conduit entrance locations and requirements; nameplate legends; size and number of bus bars for each phase, neutral, and ground; and switchboard instrument details.
- C. Product Data: Submit electrical characteristics including voltage, frame size and trip ratings, fault current withstand ratings, and time-current curves of equipment and components.
- D. Test Reports: Indicate results of factory production and field tests.

1.4 CLOSEOUT SUBMITTALS

- A. General Conditions: Closeout procedures.
- B. Project Record Documents: Record actual locations, configurations, and ratings of switchboards and their components on single line diagrams and plan layouts.
- C. Operation and Maintenance Data: Submit spare parts data listing; source and current prices of replacement parts and supplies; and recommended maintenance procedures and intervals.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Requirements for transporting, handling, storing, and protecting products.
- B. Deliver in 48 inch maximum width shipping splits, individually wrapped for protection and mounted on shipping skids.
- C. Accept switchboards on site. Inspect for damage.
- D. Store in clean, dry space. Maintain factory wrapping or provide additional canvas or plastic cover to protect units from dirt, water, construction debris, and traffic.
- E. Handle in accordance with NEMA PB 2.1. Lift only with lugs provided. Handle carefully to avoid damage to switchboard internal components, enclosure, and finish.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. General Conditions.
- B. Conform to NEMA PB 2 service conditions during and after installation of switchboards.

1.8 FIELD MEASUREMENTS

- A. Verify field measurements prior to fabrication.

1.9 SEQUENCING

- A. General Conditions: Work sequence.
- B. Sequence Work to avoid interferences with building finishes and installation of other products.

1.10 MAINTENANCE MATERIALS

- A. General Conditions: Spare parts and maintenance products.
- B. Furnish two of each key.

1.11 EXTRA MATERIALS

- A. General Conditions: Spare parts and maintenance products.

PART 2 - PRODUCTS

2.1 DISTRIBUTION SWITCHBOARDS

- A. Manufacturers:
 - 1. Eaton Electrical.
 - 2. GE Electric Company.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D Company.
 - 5. Substitutions: General Conditions.
- B. Product Description: NEMA PB 2, enclosed switchboard with electrical ratings and configurations as indicated on Drawings.
- C. Service Conditions:
 - 1. Temperature: 100 degrees F.
 - 2. Altitude: 4500 feet.
- D. Device Mounting:
 - 1. Main Section: Individually mounted and compartmented.
 - 2. Distribution Section: Individually mounted and compartmented.
 - 3. Auxiliary Section: Individually mounted.
- E. Bus:
 - 1. Material: Copper, standard size.
 - 2. Connections: Bolted, accessible from front for maintenance.
 - 3. Insulation: Fully insulate bus bars. Do not reduce spacing of insulated bus.
 - 4. The phase and neutral through-bus shall have an ampacity as shown on the plans. For 4-wire systems, the neutral shall be of equivalent ampacity as the

phase bus bar. Tapered bus in not acceptable. Provide full height vertical bus in all sections with minimum number of spaces as shown on Single Line Diagram. Full provisions for the addition of future sections shall be provided. Bussing shall include all necessary hardware to accommodate splicing for future additions.

- F. Ground Bus: extend length of switchboard.
- G. Minimum Short Circuit Rating: 65,000 symmetrical amperes rms, fully rated, or as indicated.
- H. Line and Load Terminations: Accessible from front only of switchboard, suitable for conductor materials and sizes as indicated on Drawings.
- I. Utility Metering Compartment: Furnish metering transformer compartment for Utility Company's use, in accordance with Utility Company requirements.
- J. Pull Section: Width, depth and height to match switchboard. Arrange as indicated on Drawings.
- K. Pull Box: Removable top and sides, same construction as switchboard, Furnish insulating, fire-resistive bottom with separate openings for each circuit to pass into switchboard.
- L. Future Provisions: Fully equip spaces for future devices with bussing and bus connections, insulated and braced for short circuit currents. Furnish continuous current rating as indicated on Drawings.
- M. Enclosure: Type 1 - General Purpose. All Front covers shall be screw removable with a single tool and all doors shall be hinged with removable hinge pins.
- N. Align sections at front and rear.
- O. Finish: Manufacturer's standard light gray enamel over external surfaces. Coat internal surfaces with minimum one coat corrosion-resisting paint, or plate with cadmium or zinc.

2.2 FUSIBLE SWITCH ASSEMBLIES

- A. Product Description: NEMA KS 1, Type HD, load interrupter knife switch. Handle lockable in OFF position.
- B. Fuse clips: Designed to accommodate NEMA FU 1, Class J fuses.

2.3 MOLDED CASE CIRCUIT BREAKER

- A. Product Description: UL 489, molded-case circuit breaker.
- B. Field-Adjustable Trip Circuit Breaker: Circuit breakers with frame sizes 250 amperes and larger have mechanism for adjusting continuous current setting for automatic operation.

- C. Current Limiting Circuit Breaker: Circuit breaker indicated as current-limiting have automatically-resetting current limiting elements in each pole. Let-through Current and Energy: Less than permitted for same size Class RK-5 fuse.
- D. Solid-State Circuit Breaker (for all breakers 800 amp and larger): Electronic sensing, timing, and tripping circuits for adjustable current settings; ground fault trip with zero sequence type ground fault sensor (where indicated); instantaneous trip; adjustable short time trip; and energy-reducing active arc flash mitigation system (1200 amp and larger only).
- E. Current Limiter: Designed for application with molded case circuit breaker.
 - 1. Coordinate limiter size with trip rating of circuit breaker to prevent nuisance tripping and to achieve interrupting current rating specified for circuit breaker.
 - 2. Interlocks trip circuit breaker and prevent closing circuit breaker when limiter compartment cover is removed or when one or more limiter is not in place or has operated.
- F. Accessories: Conform to UL 489.
 - 1. Shunt Trip Device: As shown on plans.
 - 2. Undervoltage Trip Device: All main breakers.
 - 3. Auxiliary Switch: As shown on plans.
 - 4. Alarm Switch: As shown on plans.
 - 5. Handle Lock: Provisions for padlocking.
 - 6. Insulated Grounding Lug: In each enclosure.

2.4 GROUND FAULT DEVICES

- A. Ground Fault Sensor: Zero sequence type.
- B. Ground Fault Relay: Adjustable ground fault sensitivity from 200 to 1200 amperes, time delay adjustable from 0 to 15 seconds. Furnish monitor panel with lamp to indicate relay operation, TEST and RESET control switches.

2.5 SURGE PROTECTIVE DEVICES

- A. Product Description: IEEE C62.41, factory-mounted transient voltage surge suppressor, selected to meet requirements for medium exposure and to coordinate with system circuit voltage. See specification section 26 35 56.

2.6 ACCESSORIES

- A. Concrete: 3,000 psi (20 MPa) as specified in Section 3.

2.7 SOURCE QUALITY CONTROL

- A. Furnish shop inspection and testing in accordance with NEMA PB 2.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify surface is suitable for switchboard installation.

3.2 PREPARATION

- A. Concrete Pad: Comply with requirements of Section 03 30 00.

3.3 INSTALLATION

- A. Install in accordance with NEMA PB 2.1.
- B. Tighten accessible bus connections and mechanical fasteners after placing switchboard.
- C. Install fuses in each switch and coordinate sizes with connected load.
- D. Install engraved plastic nameplates in accordance with Section 26 05 53.
- E. Install breaker circuit directory.
- F. Ground and bond switchboards in accordance with Section 26 05 26.

3.4 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform inspections and tests listed in NETA ATS, Section 7.1.
- D. Measure, using a Megger, the insulation resistance of each bus section phase-to-phase and phase-to-ground for one minute each, at minimum test voltage of 1000 VDC; minimum acceptable value for insulation resistance is 1 megohms. Note: Refer to manufacturer's literature for specific testing procedures.

3.5 ADJUSTING

- A. General Conditions: Testing, adjusting, and balancing.
- B. Adjust operating mechanisms for free mechanical movement.
- C. Tighten bolted bus connections.
- D. Adjust circuit breaker trip and time delay settings to values as instructed by Architect/Engineer.

3.6 CLEANING

- A. General Conditions: Final cleaning.
- B. Touch up scratched or marred surfaces to match original finish.

END OF SECTION 262413

SECTION 262416 – PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Distribution and branch circuit panelboards.
 - 2. Electronic grade branch circuit panelboards.
- B. Related Requirements:
 - 1. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
 - 2. Section 26 05 53 - Identification for Electrical Systems.
 - 3. Section 26 28 13 - Fuses.

1.2 REFERENCE STANDARDS

- A. Institute of Electrical and Electronics Engineers:
 - 1. IEEE C62.41 - Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.
- B. National Electrical Manufacturers Association:
 - 1. NEMA FU 1 - Low Voltage Cartridge Fuses.
 - 2. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
 - 3. NEMA ICS 5 - Industrial Control and Systems: Control Circuit and Pilot Devices.
 - 4. NEMA KS 1 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).
 - 5. NEMA PB 1 - Panelboards.
 - 6. NEMA PB 1.1 - General Instructions for Proper Installation, Operation, and Maintenance of Panelboards Rated 600 Volts or Less.
- C. International Electrical Testing Association:
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.
- D. National Fire Protection Association:
 - 1. NFPA 70 - National Electrical Code.
- E. Underwriters Laboratories Inc.:
 - 1. UL 50 - Cabinets and Boxes
 - 2. UL 67 - Safety for Panelboards.
 - 3. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures.
 - 4. UL 1283 - Electromagnetic Interference Filters.
 - 5. UL 1449 - Transient Voltage Surge Suppressors.
 - 6. UL 1699 - Arc-Fault Circuit Interrupters.

1.3 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Product Data: Submit catalog data showing specified features of standard products.
- C. Shop Drawings: Indicate outline and support point dimensions, voltage, main bus ampacity, integrated short circuit ampere rating, circuit breaker and fusible switch arrangement and sizes.
- D. Source Quality control submittals: Indicate results of factory tests and inspections.
- E. Field Quality Control Submittals: Indicate results of Contractor furnished tests and inspections.

1.4 CLOSEOUT SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Project Record Documents: Record actual locations of panelboards and record actual circuiting arrangements.
- C. Operation and Maintenance Data: Submit spare parts listing; source and current prices of replacement parts and supplies; and recommended maintenance procedures and intervals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. General Conditions: Requirements for maintenance products.
- B. Extra Stock Materials:
 - 1. Furnish two of each panelboard key. Panelboards keyed alike.

1.6 QUALITY ASSURANCE

- A. Qualifications
 - 1. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

PART 2 - PRODUCTS

2.1 DISTRIBUTION PANELBOARDS

- A. Manufacturer List:

Manufacturer	Lighting Panels rated 240V	Lighting Panels rated 480/277V	Distribution Panels rated 600V
Square D	NQOD	NF	I-Line

GE	AQ	AE	Spectra
Eaton Cutler-Hammer	Pow-R-Line 1A	Pow-R-Line 2A	Pow-R-Line 4B
Siemens	S1	S2	S5

B. Substitution Limitations:

1. General Conditions: Requirements for substitutions for other manufacturers and products.

C. Description: NEMA PB 1, circuit breaker type panelboard.

D. Operation:

1. Service Conditions:
 - a. Temperature: 100 degrees F.
 - b. Altitude: 4500 feet.
2. Minimum integrated short circuit rating: 10,000 amperes rms symmetrical for 208 volt panelboards; 14,000 amperes rms symmetrical for 480 volt panelboards, or as indicated on Drawings.

E. Materials

1. Panelboard Bus: Copper, current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard.
2. Molded Case Circuit Breakers: UL 489, circuit breakers with integral thermal and instantaneous magnetic trip in each pole. Furnish circuit breakers UL listed as Type HACR for air conditioning equipment branch circuits.
3. Molded Case Circuit Breakers with Current Limiters: UL 489, circuit breakers with replaceable current limiting elements, in addition to integral thermal and instantaneous magnetic trip in each pole.
4. Current Limiting Molded Case Circuit Breakers: UL 489, circuit breakers with integral thermal and instantaneous magnetic trip in each pole, coordinated with automatically resetting current limiting elements in each pole. Interrupting rating 100,000 symmetrical amperes, let-through current and energy level less than permitted for same size NEMA FU 1, Class RK-5 fuse.
5. Surge Suppressors: Integrated in panelboard, refer to Section 26 35 53.
6. Enclosure: NEMA PB 1, Type 1 or as required to meet service conditions.
7. Cabinet Front: Surface door-in-door type, fastened with concealed trim clamps, hinged door with flush lock and plastic directory card holder. Fronts shall have cylindrical tumbler type lock with catch and spring-loaded door pull. All lock assemblies shall be keyed alike.
8. Circuit breaker accessories: Trip units and auxiliary switches as indicated on drawings.

F. Finishes

1. Manufacturer's standard gray enamel.

2.2 BRANCH CIRCUIT PANELBOARDS

A. Manufacturer List:

Manufacturer	Lighting Panels rated 240V	Lighting Panels rated 480/277V	Distribution Panels rated 600V
--------------	----------------------------	--------------------------------	--------------------------------

Square D	NQOD	NF	I-Line
GE	AQ	AE	Spectra
Eaton Cutler-Hammer	Pow-R-Line 1A	Pow-R-Line 2A	Pow-R-Line 4B
Siemens	S1	S2	S5

- B. Substitution Limitations:
1. General Conditions: Requirements for substitutions for other manufacturers and products.
- C. Description: NEMA PB1, circuit breaker type, lighting and appliance branch circuit panelboard.
- D. Materials:
1. Panelboard Bus: Copper, current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard.
 2. For non-linear load applications subject to harmonics furnish 200 percent rated, plated copper, solid neutral.
 3. Minimum Integrated Short Circuit Rating: 10,000 amperes rms symmetrical for 208 volt panelboards; 14,000 amperes rms symmetrical for 480 volt panelboards, or as indicated on Drawings.
 4. Molded Case Circuit Breakers: UL 489, bolt-on type thermal magnetic trip circuit breakers, with common trip handle for all poles, listed as Type SWD for lighting circuits, Type HACR for air conditioning equipment circuits, Class A ground fault interrupter circuit breakers as indicated on Drawings. Provide UL class 760 arc-fault interrupter circuit breakers as indicated on Drawings. Do not use tandem circuit breakers.
 5. Current Limiting Molded Case Circuit Breakers: UL 489, circuit breakers with integral thermal and instantaneous magnetic trip in each pole, coordinated with automatically resetting current limiting elements in each pole. Interrupting rating 100,000 symmetrical amperes, let-through current and energy level less than permitted for same size NEMA FU 1, Class RK-5 fuse.
 6. Enclosure: NEMA PB 1, Type 1 or Type 3R as required to meet service conditions.
 7. Split solid neutral shall be plated and located in the main compartment up to 225 amperes so incoming neutral cable may be of the same length. UL listed panelboards with 200% rated solid neutral shall be plated copper for non-linear load applications. Panelboards shall be marked for non-linear load applications.
 8. Interior trim shall be of dead-front construction to shield user from energized parts. Dead-front trim shall have pre-formed twist-outs covering unused mounting space.
 9. Breaker handle and faceplate shall indicate rated ampacity. Standard construction circuit breakers shall be UL listed for reverse connection without restrictive line or load markings. Circuit breaker handle accessories shall provide provisions for locking handle in the OFF position.
- E. Cabinet Front: Door-in-door Flush or Surface cabinet front as indicated on drawings with concealed trim clamps, concealed hinge, plastic directory card holder, and flush lock keyed alike. Front shall have cylindrical tumbler type lock with catch and spring-loaded door pull. All lock assemblies shall be keyed alike. Finishes:

1. Finish in manufacturer's standard gray enamel.

2.3 ELECTRONIC GRADE PANELBOARD

A. Description:

1. Integral Surge Suppressor: Component recognized in accordance with UL 1449 and UL 1283.
2. Panelboard: UL 67 listed and TVSS device UL 1449 Component Recognized. TVSS device meets UL 1449. Furnish panelboard markings with clamp voltage at TVSS terminals and clamp voltage at panelboard line terminals.

B. Performance:

1. Integral Surge Suppressors:
 - a. Meet or exceed the following criteria:
 - 1) Maximum single impulse current rating not less than 200 kA for each phase.
 - 2) Pulse Lift Test: Capable of protecting against and surviving 5000 IEEE C62.41 Category C transients without failure or degradation.
 - 3) Clamping voltage not exceeding the following:

Voltage	L-N	N-G	L-G
208Y/120	500 V	500 V	500 V
480Y/277	1000 V	1000 V	1000 V

C. Fabrication:

1. Integral Surge Suppressor:
 - a. Furnish copper bus bars for surge current path.
 - b. Construct using surge current modules (MOV based). Each module fused with user replaceable 200,000 AIR rated fuses. Status of each module monitored on front cover of panelboard enclosure and on module.
 - c. Furnish with audible alarm activated when one of surge current modules has failed. Furnish alarm on/off to silence alarm and alarm push-to-test switch to test alarm. Locate switches and alarm on front cover of panelboard enclosure.
 - d. Furnish response time no greater than five nanoseconds for individual protection modes.
 - e. Designed to withstand maximum continuous operating voltage (MCOV) of not less than 115 percent of nominal RMS voltage.
 - f. Furnish visible indication of proper suppresser connection and operation. Lights indicate operable phase and module.
 - g. Furnish minimum EMI/RFI filtering of 34 dB at 100 kHz with insertion loss ratio of 50: 1 using Mil Std. 220A methodology.
2. Panelboards
 - a. Top or bottom feed as indicated on Drawings. Furnish circuit directory inside door.
 - b. Construct box of galvanized steel. Box size as indicated on Drawings.
 - c. Main bus constructed of copper and rated for load current.

- d. Furnish interior with branch circuit breakers. Furnish one 60-amp circuit breaker, with appropriate number of poles, as dedicated disconnect for TVSS.
- e. Furnish 200 percent rated neutral assembly with copper neutral bus.
- f. Furnish with insulated ground bus and safety ground bus.
- g. Furnish wiring gutters in accordance with NEC.
- h. Field connections to panelboard: As indicated on drawings.
- i. Construct with flush or surface mounted trim and NEMA Type 1 or 3R enclosure, as indicated on drawings.
- j. Furnish with branch breaker positions and nominal current rating as indicated on Drawings.

2.4 SOURCE QUALITY CONTROL

- A. General Conditions: Testing, inspection and analysis requirements.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install panelboards in accordance with NEMA PB 1.1.
- B. Install panelboards plumb.
- C. Install recessed panelboards flush with wall finishes.
- D. Height: 6 feet (1800 mm) to top of panelboard install panelboards taller than 6 feet (1800 mm) with bottom no more than 4 inches (100 mm) above floor.
- E. Install filler plates for unused spaces in panelboards.
- F. Provide typed circuit directory for each branch circuit panelboard and load center. Revise directory to reflect circuiting changes to balance phase loads. Identify each circuit as to its clear, evident and specific purpose of use.
- G. Install engraved plastic nameplates in accordance with Section 26 05 53.
- H. Install spare conduits out of each recessed panelboard to accessible location above ceiling and below slab not on grade. Minimum spare conduits: 5 empty 1 inch (DN27) (above and below). Identify each as SPARE.
- I. Ground and bond panelboard enclosure according to Section 26 05 26. Connect equipment ground bars of panels in accordance with NFPA 70.
- J. Provide each panelboard with nameplate showing panel designation, voltage rating and phase. Indicate source of power (feeder origin) and feeder size (awg/mils and conduit).
- K. Label shall be engraved laminated-plastic nameplate. Nameplates shall be black with white letters (normal power) or red with white letters (emergency power).

- L. Mount panelboards securely to building structure with 3/8" minimum diameter galvanized bolts and inserts number as required for size of panel, but not less than 4. Mount panelboards with centerline 4'-6" approximately above finished floor with the top a maximum of 74" AFF. Where panels of different heights are mounted adjacent, install top of panel trim at same height above floor. Close all unused openings.
- M. Mount feeder panelboards taller than 66" on 4" high 2500# concrete pad and bolt to wall and pad with 1/2" diameter bolts and inserts. Breaker handles in the "ON" position shall not be higher than 6'-7" to centerline from the Finished Floor when panelboards are installed on concrete pads
- N. Where two sets of feeder cables are required in panel gutter space, run one set in each side of panel.
- O. When connecting a panelboard to a transformer, connected conductors shall include a slack 90-degrees bend in flexible conduit between the transformer and any subsequent rigid connection to building structure. Use stranded, flexible conductors to maintain as much flexibility as practical. Do not permit flexible conductors to contact or drape against floor or wall surfaces. The first panelboard, cabinet or switch connected to a transformer shall be resiliently supported from structure by affixing with bolts through holes with grommets (wall supported; equal to Kinetics Model TG Isolation Grommet) or by being set on 3/4" thick Neoprene isolation pads (equal to Kinetics Type RSP) sized so that the supported load deflects pads approximately 0.12", or in the upper half of the manufacturer's recommended loading range in pounds per square inch. Pad type isolators should use load spreading steel plates to avoid damaging the pad by narrow base rails or sections, as required.
- P. Provide seismic bracing in accordance with the manufacturer's recommendations and in compliance with the seismic zone requirements for the zone in which the equipment is located.
- Q. Connect only one wire/cable to each breaker terminal.

3.2 FIELD QUALITY CONTROL

- A. General Conditions: Requirements for testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform circuit breaker inspections and tests listed in NETA ATS, Section 7.6.
- D. Perform switch inspections and tests listed in NETA ATS, Section 7.5.
- E. Perform controller inspections and tests listed in NETA ATS, Section 7.16.1.

3.3 ADJUSTING

- A. General Conditions: Requirements for starting and adjusting.

- B. Measure steady state load currents at each panelboard feeder; rearrange circuits in panelboard to balance phase loads to within 20 percent of each other. Maintain proper phasing for multi-wire branch circuits.

3.4 CLEANING

- A. General Conditions: Requirements for cleaning.
- B. Clean existing panelboards to remain or to be reinstalled.

END OF SECTION 262416

SECTION 262716 - CABINETS AND ENCLOSURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Hinged cover enclosures.
 - 2. Cabinets.
 - 3. Terminal blocks.
 - 4. Accessories.
- B. Related Requirements:
 - 1. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
 - 2. Section 26 05 29 - Hangers and Supports for Electrical Systems.
 - 3. Section 26 05 33 - Raceway and Boxes for Electrical Systems.

1.2 REFERENCE STANDARDS

- A. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA ICS 4 - Industrial Control and Systems: Terminal Blocks.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit manufacturer's standard data for enclosures, cabinets, and terminal blocks.
- C. Manufacturer's Instructions: Submit application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. General Conditions: Requirements for maintenance materials.
- B. Extra Stock Materials:
 - 1. Furnish two of each key.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.

PART 2 - PRODUCTS

2.1 HINGED COVER ENCLOSURES

- A. Description: NEMA 250, Type 1 or 3R steel enclosure.
 - 1. Covers: Continuous hinge, held closed by hasp and staple for padlock.
 - 2. Furnish interior metal panel for mounting terminal blocks and electrical components; finish with white enamel.
 - 3. Enclosure Finish: Manufacturer's standard enamel.

2.2 CABINETS

- A. Description:
 - 1. Boxes: Galvanized steel with removable end walls.
 - 2. Backboard: Furnish 3/4 inch (19 mm) thick plywood backboard for mounting terminal blocks. Paint matte white.
 - 3. Fronts: Steel.
- B. Fabrication
 - 1. Furnish metal barriers to form separate compartments wiring of different systems and voltages.
 - 2. Furnish accessory feet for free-standing equipment.
- C. Finishes:
 - 1. Finish with gray baked enamel.

2.3 TERMINAL BLOCKS

- A. Description:
 - 1. Terminal Blocks: NEMA ICS 4.
 - 2. Power Terminals: Unit construction type with closed back and tubular pressure screw connectors, rated 600 volts.
 - 3. Signal and Control Terminals: Modular construction type, suitable for channel mounting, with tubular pressure screw connectors, rated 300 volts.
 - 4. Furnish ground bus terminal block, with each connector bonded to enclosure.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install enclosures and boxes plumb. Anchor securely to wall and structural supports at each corner in accordance with Section 26 05 29.
- B. Install cabinet fronts plumb.

3.2 CLEANING

- A. General Conditions: Final cleaning.
- B. Clean existing cabinets and enclosures to remain or to be reinstalled.

- C. Clean electrical parts to remove conductive and harmful materials.
- D. Remove dirt and debris from enclosure.
- E. Clean finishes and touch up damage.

END OF SECTION 262716

SECTION 262726 – WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes wall switches; wall dimmers; wall and ceiling occupancy sensors; receptacles; multioutlet assembly; and device plates and decorative box covers.
- B. Related Sections:
 - 1. Section 26 05 33 - Raceway and Boxes for Electrical Systems: Outlet boxes for wiring devices.
 - 2. Section 26 09 23 – Lighting Control Devices; Wall and ceiling occupancy sensors.

1.2 REFERENCES

- A. National Electrical Manufacturers Association:
 - 1. NEMA WD 1 - General Requirements for Wiring Devices.
 - 2. NEMA WD 6 - Wiring Devices-Dimensional Requirements.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit manufacturer's catalog information showing dimensions, colors, and configurations.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.5 EXTRA MATERIALS

- A. General Conditions: Spare parts and maintenance products.
- B. Furnish two of each style, size, or switch, receptacle type and finish wall plate.

PART 2 - PRODUCTS

2.1 WALL SWITCHES

- A. Manufacturers:
 - 1. Cooper Wiring Devices.
 - 2. Hubbell, Inc.

3. Leviton Manufacturing Company.
 4. P&S.
 5. Substitutions: Upon review.
- B. Product Description: NEMA WD 1, Heavy-Duty, AC only general-use snap switch.
- C. Body and Handle: White plastic with toggle handle.
- D. Indicator Light: Lighted handle type switch; green color handle.
- E. Locator Light: Lighted handle type switch; red color handle.
- F. Ratings:
1. 120-277 volts, AC.
 2. Current: 20 amperes.

2.2 WALL DIMMERS

- A. Manufacturers:
1. Eagle.
 2. Hubbell Wiring Devices.
 3. Leviton.
 4. Lutron.
 5. P&S.
 6. Synergy Lighting Controls.
 7. Substitutions: Not Permitted.
- B. Product Description: NEMA WD 1; Semiconductor dimmer for the following load types.
1. Dimmers shall provide full range, continuously variable control of light intensity.
 2. Controls shall provide preset single pole, 3-way, or multi-location control from the dimmer location regardless of the position of the other 3-way switch location.
 3. Ten-year operational life while operating continually at any temperature in an ambient temperature range of 0 degrees C (32 degrees F) to 40 degrees C (104 degrees F) and 90 percent non-condensing relative humidity.
 4. Operate at the rated capacity across the full ambient temperature range including modified capacities for ganging configurations with require the removal of fins.
 5. Control should be designed to not interfere with audio, video, or radio equipment.
 6. Utilize air gap off, activated when user selects "off" at any control to disconnect the load from line supply eliminating any leakage current.
 7. Possess power failure memory such that if power is interrupted and subsequently returned, lights will automatically return to same levels (dimmed setting, full on, or off) prior to power interruption.
 8. Designed and tested with withstand electrostatic discharges up to 15,000 V without impairment per IEC 801-2.

9. Design and test dimmers to withstand line-side surges without impairment to performance when subjected to surges of 6,000 volts, 200 amps per ANSI/ IEEE C62.41C.
 10. Capable of operating at the rated capacity; this includes modified capacities for ganging configurations which require the removal of fins. Operation at rated capacity shall be possible across the full ambient temperature range, without shortening design lifetime.
- C. Load Specific Requirements: Within rated capacity, dimmers shall be available for direct control of the following loads.
1. Dimming LED Lamps:
 - a. Contain circuitry specifically designed to control dimmable self ballasted CFL loads.
 - b. Provide with lower dimming range adjustment.
 - c. Listed to UL 172.
 2. Electronic Low Voltage (ELV):
 - a. Dimmers shall contain circuitry specifically designed to control the input of electronic solid state low voltage transformers.
 - b. Shall have a maximum output of no less than 92% of line voltage.
 - c. Dimmers using standard phase control shall not be acceptable.
 3. Fan Speed Control:
 - a. Fully Variable fan speed controls for paddle fans, ventilation fans and exhaust fans.
 - b. Quiet fan speed controls shall provide low-medium-high speeds settings and off.
 - c. Shall be listed to UL 1917.
 4. Remote Dimming Modules:
 - a. Provide high power module and wall dimmer from a single manufacturer.
 - b. High power module listed to UL 508 for control of incandescent/ halogen, magnetic low voltage, electronic low voltage, fluorescent, and neon/cold cathode loads. Provide high power modules as defined on project drawings.
- D. Body and Handle: White Nylon or match existing with linear slide.
- E. Voltage: 120 or 277 volts.
- F. Power Rating: Match load shown on drawings; 600 watts minimum.
- G. Accessory Wall Switch: Match dimmer appearance.

2.3 OCCUPANCY SENSORS AND POWER PACKS

- A. Occupancy Sensors
1. Ceiling sensors.
 2. Wall sensors.
 3. Dual technology sensors shall:
 - a. Either corner mounted or ceiling mounted in such a way as to minimize coverage in unwanted areas

- b. Passive infrared and ultrasonic technologies for occupancy detection. Products that react to noise or ambient sound shall not be considered.
 - 4. Ultrasonic sensors shall:
 - a. Utilize Advanced Signal Processing to adjust the detection threshold dynamically to compensate for constantly changing levels of activity and airflow throughout controlled space.
 - b. Have an ultrasonic operating frequency that is crystal controlled at 25 kHz within $\pm 0.005\%$ tolerance, 32 kHz within $\pm 0.002\%$ tolerance, or 40 kHz $\pm 0.002\%$ tolerance to assure reliable performance and eliminate sensor cross-talk. Sensors using multiple frequencies are not acceptable.
 - 5. All sensors shall be capable of operating normally with electronic ballasts, PL lamp systems and rated motor loads.
 - 6. Coverage of sensors shall remain constant after sensitivity control has been set. No automatic reduction shall occur in coverage due to the cycling of air conditioner or heating fans.
 - 7. All sensors shall have readily accessible, user adjustable settings for time delay and sensitivity. Settings shall be located on the sensor (not the control unit) and shall be recessed to limit tampering.
 - 8. In the event of failure, a bypass manual override shall be provided on each sensor. When bypass is utilized, lighting shall remain on constantly or control shall divert to a wall switch until sensor is replaced. This control shall be recessed to prevent tampering.
 - 9. All sensors shall provide an LED as a visual means of indication at all times to verify that motion is being detected during both testing and normal operation.
 - B. Products
 - 1. Wall Mounted Single Level Motion Sensor Switch.
 - 2. Wall Mounted Bi-Level Motion Sensor Switch.
 - 3. Ceiling Mounted Dual Technology Occupancy Sensor with Power Pack.
 - C. Circuit Control Hardware – (Power Packs)
 - 1. Control Units - For ease of mounting, installation and future service, control unit(s) shall be able to externally mount through a 1/2" knock-out on a standard electrical enclosure and be an integrated, self-contained unit consisting internally of an isolated load switching control relay and a transformer to provide low-voltage power. Control unit shall provide power to a minimum of two (2) sensors.
 - 2. Provide power packs as required. Power Pack shall be installed in jbox.
 - 3. Relay Contacts shall have ratings of:
 - a. 13A - 120 VAC Tungsten
 - b. 20A - 120 VAC Ballast
 - c. 20A - 277 VAC Ballast
 - d. 20A – 347 VAC Ballast
 - D. Control wiring between sensors and control units shall be Class II, 18-20 AWG, stranded U.L. Classified, PVC insulated or TEFLON jacketed cable suitable for use in plenums, where applicable.
 - 1. Minimum acceptable wire gauge from the circuit control hardware relays shall be #14 AWG.

- E. Mount switches and occupancy sensors as indicated on Drawings and by manufacturer's requirements.

CONTROL TYPE	COMMISSIONING AND CALIBRATION
Occupancy sensors	Ensure that the sensor is correctly placed and oriented per the specifications and/ or construction drawings. If unanticipated obstructions are present, it may be necessary to adjust the sensor location and orientation.
Occupancy sensors	Adjust the sensitivity and time delay of the occupancy sensor, and test to ensure it provides appropriate response. For optimal user acceptance, energy savings and lamp life, set the time delay initially for a minimum of 15 minutes (NEMA recommendation).
Manual dimming	Ensure correct placement of the dimmer per the construction drawings. Adjust the upper limit of the dimming range according to the task being performed, and set the lower limit of the range so that the minimum light level meets the use/application of the space.

2.3 RECEPTACLES

- A. Manufacturers:
1. Cooper Wiring Devices.
 2. Harvey Hubbell, Inc.
 3. Leviton Manufacturing Company.
 4. P&S.
 5. Substitutions: Not permitted.
- B. **Product Description: NEMA WD 1, Heavy-duty general use receptacle.**
1. **Receptacles shall be Tamper-Resistant where required by section 406.12 of the National Electrical Code, 2017.**
- C. Device Body: White or match existing, nylon. Provide red device for receptacles on standby emergency power.
- D. Configuration: NEMA WD 6, type as indicated on Drawings.
- E. Convenience Receptacle: Type 5-20.

- F. GFCI Receptacle: Convenience receptacle with integral ground fault circuit interrupter to meet regulatory requirements.

2.4 WALL PLATES

- A. Manufacturers:
 - 1. Cooper Wiring Devices.
 - 2. Harvey Hubbell, Inc.
 - 3. Leviton Manufacturing Company.
 - 4. P&S.
 - 5. Substitutions: Not permitted.
- B. Decorative Cover Plate: White or to match existing. Provide red cover/plate for red receptacle unless noted otherwise.
- C. Jumbo Cover Plate: White or to match existing.
- D. Weatherproof Cover Plate: Gasketed cast metal plate with hinged and gasketed device cover. System shall be weatherproof while in use.
- E. Wall plates for devices in laboratories, kitchen areas, mechanical rooms, and other similar areas shall be beveled edge stainless steel plates, single or multi-gang as required by the outlet. Wall plates for devices in surface boxes, unless specified otherwise, shall be beveled edge satin finish stainless steel plates, single or multi-gang as required by the outlet. Blank plates shall be furnished and installed on all empty, blanked or unused outlets. Device plates manufactured by device manufacturer where available. Wall Plates shall be single and combination types that mate and match with corresponding devices.

2.5 MODULAR RECEPTACLE

- A. Manufacturers:
 - 1. Cooper – Arrow Link.
 - 2. Leviton – Lev-Lok.
 - 3. Hubbel – SNAPConnect.
 - 4. Legrand – PlugTail.
 - 5. Substitutions: Not Permitted.
- B. Description:

Manufactured UL Assembly, 20Amp, 120V, heavy duty, locking type straight blade or twist on modular connector with or without pigtails.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify outlet boxes are installed at proper height.

- C. Verify wall openings are neatly cut and completely covered by wall plates.
- D. Verify branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

3.2 PREPARATION

- A. Clean debris from outlet boxes.

3.3 INSTALLATION

- A. Install devices plumb and level.
- B. Install switches with OFF position down.
- C. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.
- D. Do not share neutral conductor on load side of dimmers.
- E. Install receptacles with grounding pole on bottom.
- F. Connect wiring device grounding terminal to outlet box with bonding jumper and branch circuit equipment grounding conductor.
- G. Install wall plates on flush mounted switches, receptacles, and blank outlets.
- H. Install decorative plates on switch, receptacle, and blank outlets in finished areas.
- I. Connect wiring devices by wrapping solid conductor around screw terminal. When stranded conductors are used in lieu of solid, use crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under device screws.
- J. Use jumbo size plates for outlets installed in masonry walls.
- K. Install galvanized steel plates on outlet boxes and junction boxes in unfinished areas, above accessible ceilings, and on surface mounted outlets.
- L. Match devices to plug connectors for Owner-furnished equipment. Verify type, configuration, etc., prior to providing devices. Including all such costs in bid submission.

3.4 INTERFACE WITH OTHER PRODUCTS

- A. Coordinate locations of outlet boxes provided under Section 26 05 33 to obtain mounting heights as indicated on drawings.
- B. Install wall switch 48 inches above finished floor.

- C. Install convenience receptacle 18 inches above finished floor.
- D. Install convenience receptacle 6 inches above back splash of counter.
- E. Install dimmer 48 inches above finished floor.

3.5 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Inspect each wiring device for defects.
- C. Operate each wall switch with circuit energized and verify proper operation.
- D. Verify each receptacle device is energized.
- E. Test each receptacle device for proper polarity.
- F. Test each GFCI receptacle device for proper operation.

3.6 ADJUSTING

- A. General Conditions: Testing, adjusting, and balancing.
- B. Adjust devices and wall plates to be flush and level.

3.7 CLEANING

- A. General Conditions: Final cleaning.
- B. Clean exposed surfaces to remove splatters and restore finish.

END OF SECTION 262726

SECTION 262813 - FUSES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes fuses and spare fuse cabinet.

1.2 REFERENCES

- A. National Electrical Manufacturers Association:
 - 1. NEMA FU 1 - Low Voltage Cartridge Fuses.

1.3 DESIGN REQUIREMENTS

- A. Select fuses to provide appropriate levels of short circuit and overcurrent protection for the following components: wire, cable, bus structures, and other equipment. Design system to maintain component damage within acceptable levels during faults.
- B. Select fuses to coordinate with time current characteristics of other overcurrent protective elements, including other fuses, circuit breakers, and protective relays. Design system to maintain operation of device closest to fault operates.

1.4 FUSE PERFORMANCE REQUIREMENTS

- A. Main Service Switches Larger than 600 amperes: Class L (time delay).
- B. Main Service Switches: Class RK1 (time delay).
- C. Power Load Feeder Switches Larger than 600 amperes: Class L (time delay).
- D. Power Load Feeder Switches: Class RK1 (time delay).
- E. Motor Load Feeder Switches: Class RK1 (time delay).
- F. Lighting Load Feeder Switches Larger than 600 amperes: Class L time delay.
- G. Lighting Load Feeder Switches: Class RK1 (time delay).
- H. Other Feeder Switches Larger than 600 amperes: Class L time delay.
- I. Other Feeder Switches: Class RK1 (time delay).
- J. General Purpose Branch Circuits: Class RK1 (time delay).
- K. Motor Branch Circuits: Class RK1 (time delay).

- L. Lighting Branch Circuits: Class G.

1.5 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit data sheets showing electrical characteristics, including time-current curves.

1.6 CLOSEOUT SUBMITTALS

- A. General Conditions: Closeout procedures.
- B. Project Record Documents: Record actual sizes, ratings, and locations of fuses.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.8 MAINTENANCE MATERIALS

- A. General Conditions: Spare parts and maintenance products.

1.9 EXTRA MATERIALS

- A. General Conditions: Requirements for extra materials.
- B. Furnish 20% spare fuses of each Class, size, and rating installed.

PART 2 - PRODUCTS

2.1 FUSES

- A. Manufacturers:
 - 1. Bussman
 - 2. Gould Shawmut
 - 3. Substitutions: General Conditions
- B. Dimensions and Performance: NEMA FU 1, Class as specified or as indicated on Drawings.
- C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.2 CLASS RK1 (TIME DELAY) FUSES

- A. Manufacturers:
 - 1. Bussman.

- 2. Gould Shawmut.
- 3. Substitutions: General Conditions.

B. Dimensions and Performance: NEMA FU 1.

C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.3 CLASS RK1 (NON-TIME-DELAY) FUSES

A. Manufacturers:

- 1. Bussman.
- 2. Gould Shawmut.
- 3. Substitutions: General Conditions.

B. Dimensions and Performance: NEMA FU 1.

C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.4 CLASS RK5 FUSES

A. Manufacturers:

- 1. Bussman.
- 2. Gould Shawmut.
- 3. Substitutions: General Conditions.

B. Dimensions and Performance: NEMA FU 1.

C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.5 CLASS J (TIME DELAY) FUSES

A. Manufacturers:

- 1. Bussman
- 2. Gould Shawmut.
- 3. Substitutions: General Conditions.

B. Dimensions and Performance: NEMA FU 1.

C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.6 CLASS J (NON-TIME-DELAY) FUSES

A. Manufacturers:

- 1. Bussman
- 2. Gould Shawmut.
- 3. Substitutions: General Conditions

B. Dimensions and Performance: NEMA FU 1.

- C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.7 CLASS L (FAST-ACTING) FUSES

- A. Manufacturers:
 - 1. Bussman
 - 2. Gould Shawmut.
 - 3. Substitutions: General Conditions.
- B. Dimensions and Performance: NEMA FU 1.
- C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.8 CLASS L (TIME DELAY) FUSES

- A. Manufacturers:
 - 1. Bussman
 - 2. Gould Shawmut.
 - 3. Substitutions: General Conditions
- B. Dimensions and Performance: NEMA FU 1.
- C. Voltage: Rating suitable for circuit phase-to-phase voltage.

2.9 SPARE FUSE CABINET

- A. Product Description: Wall-mounted sheet metal cabinet with shelves, suitably sized to store spare fuses and fuse pullers specified.
- B. Doors: Hinged, with hasp for Owner's padlock.
- C. Finish: Gray enamel.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install fuse with label oriented so manufacturer, type, and size are easily read.
- B. Install spare fuse cabinet at location as directed by Owner.

END OF SECTION 262813

SECTION 262819 - ENCLOSED SWITCHES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fusible.
 - 2. Nonfusible switches.
- B. Related Requirements
 - 1. Section 26 05 29 - Hangers and Supports for Electrical Systems.
 - 2. Section 26 05 53 - Identification for Electrical Systems.
 - 3. Section 26 28 13 - Fuses.

1.2 REFERENCE STANDARDS

- A. National Electrical Manufacturers Association:
 - 1. NEMA FU 1 - Low Voltage Cartridge Fuses.
 - 2. NEMA KS 1 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).
- B. International Electrical Testing Association:
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit switch ratings and enclosure dimensions.

1.4 CLOSEOUT SUBMITTALS

- A. General Conditions: Closeout procedures.
- B. Project Record Documents: Record actual locations of enclosed switches and ratings of installed fuses.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

PART 2 - PRODUCTS

2.1 FUSIBLE SWITCH ASSEMBLIES

- A. Description: NEMA KS 1, Type HD (Heavy Duty), enclosed load interrupter knife switch. Handle lockable in OFF position.
- B. Operation:
 - 1. Switch Ratings
 - a. Switch Rating: Horsepower rated for AC or DC as indicated on Drawings.
 - b. Short Circuit Current Rating: UL listed for 10,000 rms symmetrical amperes when used with or protected by Class H or K fuses (30-600 ampere).
200,000 rms symmetrical amperes when used with or protected by Class L fuses (800-1200 ampere).
- C. Materials:
 - 1. Fuse clips: Designed to accommodate NEMA FU 1, Class R fuses.
 - 2. Enclosure: NEMA KS 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
 - a. Interior Dry Locations: Type 1.
 - b. Exterior Locations: Type 3R.
 - 3. Service Entrance: Switches identified for use as service equipment are to be labeled for this application. Furnish solid neutral assembly and equipment ground bar.
 - 4. Furnish switches with entirely copper current carrying parts.

2.2 NONFUSIBLE SWITCH ASSEMBLIES

- A. Description: NEMA KS 1, Type HD (Heavy Duty) enclosed load interrupter knife switch. Handle lockable in OFF position.
- B. Operation:
 - 1. Switch Ratings
 - a. Switch Rating: Horsepower rated for AC or DC as indicated on Drawings.
 - b. Short Circuit Current Rating: UL listed for 10,000 rms symmetrical amperes when used with or protected by Class H or K fuses (30-600 ampere).
- C. Materials:
 - 1. Enclosure: NEMA KS 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
 - a. Interior Dry Locations: Type 1.
 - b. Exterior Locations: Type 3R.
 - 2. Service Entrance: Switches identified for use as service equipment are to be labeled for this application. Furnish solid neutral assembly and equipment ground bar.
 - 3. Furnish switches with entirely copper current carrying parts.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install enclosed switches where indicated. Secure switches to building or equipment surface as shown. Where the surface is not adaptable for mounting, provide unistrut P-1000 rack mounted as required to secure switch.
- B. Install enclosed switches plumb. Provide supports in accordance with Section 26 05 29.
- C. Height: 5 feet (1500 mm) to operating handle.
- D. Install fuses for fusible disconnect switches. Refer to Section 26 28 13 for product requirements.
- E. Install engraved plastic nameplates in accordance with Section 26 05 53. Engrave nameplates with the equipment served and the panel and circuit number supplying the switch.
- F. Apply adhesive tag on inside door of each fused switch indicating NEMA fuse class and size installed.
- G. Secure switches and circuit breakers to building structure in accordance with seismic zone specified in other sections of this specification.
- H. All exterior mounted switches shall comply with NEC 312.2.
- I. All switches shall be mounted to comply with NEC 404.8.

3.2 FIELD QUALITY CONTROL

- A. General Conditions: Requirements for testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Perform inspections and tests listed in NETA ATS, Section 7.5.

3.3 CLEANING

- A. General Conditions: Requirements for cleaning.
- B. Clean existing enclosed switches to remain or to be reinstalled.

END OF SECTION 262819

SECTION 263213 – PACKAGE GENERATOR SET

PART 1 - GENERAL

1.1 REFERENCES AND STANDARDS

The generator set covered by these specifications shall be designed, tested, rated, assembled and installed in strict accordance with all applicable standards below:

- CSA C22.2 No14
- CSA 282
- CSA 100
- EN61000-6
- EN55011
- FCC Part 15 Subpart B
- ISO8528
- IEC61000
- UL508
- UL2200
- UL142
- Designed to allow for installed compliance to NFPA 70, NFPA99 and NFPA 110
- **IBC 1.5**

1.2 RELATED SECTIONS

- A. Division 3 - Concrete
- B. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.

1.3 WORK INCLUDED

- A. Installation
The work includes supplying and installing a complete integrated generator system. The system consists of a diesel generator set with related component accessories. All major parts shall be manufactured and assembled by a single manufacturer.
- B. Fuel System
The CONTRACTOR shall provide a full tank of diesel fuel for the completion of all testing. A full tank of fuel shall also be furnished at completion of project.
- C. System Test
A complete system load test shall be performed after all equipment is installed. See guidelines in the Start-up Section.
- D. Requirements, Codes and Regulations

The equipment supplied and installed shall meet the requirements of the NEC and all applicable local codes and regulations. All equipment shall be of new and current production by a MANUFACTURER who has 25 years of experience building this type of equipment. Manufacturer shall be ISO9001 certified.

1.4 MANUFACTURERS

- A. Caterpillar
- B. Detroit Diesel
- C. Generac
- D. Or approved equal

1.5 SUBSTITUTIONS

- A. See General Conditions

1.6 SUBMITTALS

- A. Engine-generator submittals shall include the following information:
 - 1. Factory published specification sheet.
 - 2. Manufacturer's catalog cut sheets of all auxiliary components such as battery charger, control panel, enclosure, etc.
 - 3. Dimensional elevation and layout drawings of the generator set, enclosure and transfer switchgear and related accessories.
 - 4. Weights of all equipment.
 - 5. Concrete pad recommendation, layout and stub-up locations of electrical and fuel systems.
 - 6. Interconnect wiring diagram of complete emergency system, including generator, switchgear, day tank, remote pumps, battery charger, control panel, and remote alarm indications.
 - 7. Engine mechanical data, including heat rejection, exhaust gas flows, combustion air and ventilation air flows, fuel consumption, etc.
 - 8. Generator electrical data including temperature and insulation data, cooling requirements, excitation ratings, voltage regulation, voltage regulator, efficiencies, waveform distortion and telephone influence factor.
 - 9. Generator resistances, reactances and time constants.
 - 10. Generator locked rotor motor starting curves.
 - 11. Manufacturer's and dealer's written warranty.
 - 12. **Provide technician's names and factory training certificates of those who will be working on the genset on site.**

1.7 SYSTEM RESPONSIBILITY

- A. Generator Set Distributor
The completed engine generator set shall be supplied by the Manufacturer's authorized distributor only.
- B. Requirements, Codes and Regulations
The equipment supplied and installed shall meet the requirements of NEC and all-applicable local codes and regulations. All equipment shall be new, of current production. There shall be one source responsibility for warranty; parts and service through a local representative with factory trained service personnel.
- C. Automatic Transfer Switch
The automatic transfer switch(es) specified in another section shall be supplied by the generator set manufacturer in order to establish and maintain a single source of system responsibility and coordination.

1.8 WARRANTY

- A. Two Year Standby (ISO 8528-1: ESP) Generator Set Warranty
The manufacturer's standard warranty shall in no event be for a period of less than two (2) years from date of initial start-up of the system and shall include repair parts, labor, reasonable travel expense necessary for repairs at the job site, and expendables (lubricating oil, filters, antifreeze, and other service items made unusable by the defect) used during the course of repair. Running hours shall be limited to 500 hours annually for the system warranty by both the manufacturer and servicing distributor. Submittals received without written warranties as specified will be rejected in their entirety.

1.9 PARTS AND SERVICE QUALIFICATIONS

- A. Service Facility
The engine-generator supplier shall maintain 24-hour parts and service capability within **50 miles** of the project site. The distributor shall stock parts as needed to support the generator set package for this specific project. The supplier must carry sufficient inventory to cover no less than 80% parts service within 24hrs and 95% within 48 hours.
The above supplier shall have 3 or more service trucks within 50 miles of the project site. The supplier shall have an oil, fuel, coolant lab for testing samples at their location to process samples in 24 hours or less. The supplier must have a project manager, OSHA certified safety office in their location within 50 miles of the job site.
- B. Service Personnel
The dealer shall maintain qualified factory trained service technicians within **50 miles**.

PART 2 - PRODUCT SPECIFICATIONS

2.1 GENERAL REQUIREMENTS

A. Genset Requirements

The generator set shall be Standby/ESP Duty rated at 80ekW/100kVA, 0.8 power factor, 480V, 3-Phase, 60 hertz, including radiator fan and all parasitic loads. Generator set shall be sized to operate at the specified load at a maximum ambient of 104F and altitude of 4500 feet .

The generator set shall be sized to recover 90% of the rated voltage and 90% of the rated frequency within two seconds (120 cycles) at project site location/conditions (altitude/temperature).

Standby Rating as defined by the following:

Power is available for the duration of an emergency outage

Average power output = 70% of ESP rating

Load = Varying

Typical Hours per Year = 200 hours

Maximum Expected Usage = 500 hours/year

B. Material and Parts

All materials and parts comprising the unit shall be new and unused.

See Spec Section 260530 for seismic requirements.

C. Engine

The engine shall be diesel fueled, four (4) cycle, water-cooled, while operating with nominal speed not exceeding 1800 RPM. The engine will utilize in-cylinder combustion technology, as required, to meet applicable EPA non-road mobile regulations and/or the EPA NSPS rule for stationary reciprocating compression ignition engines. Additionally, the engine shall comply with the State Emission regulations at the time of installation/commissioning. Actual engine emissions values must be in compliance with applicable EPA emissions standards per ISO 8178 – D2 Emissions Cycle at specified ekW / bHP rating. Utilization of the “Transition Program for Equipment Manufacturers” (also known as “Flex Credits”) to achieve EPA certification is not acceptable. The in-cylinder engine technology must not permit unfiltered exhaust gas to be introduced into the combustion cylinder. Emissions requirements / certifications of this package: EPA T3.

1. Engine Governing

The engine will be equipped with an isochronous electronic governor to maintain +/- 6 RPM steady state frequency variation from steady state no load to steady state full load.

2.2 GENERATOR

A. Generator Specifications

The synchronous three phase generator shall be a single bearing, self-ventilated, drip-proof design in accordance with NEMA MG 1 and directly connected to the engine flywheel housing with a flex coupling. The generator shall meet performance class G2 of ISO 8528. The excitation system shall enable the alternator to sustain 300% (250% for 50Hz) of rated current based on the 125C (Class H) or 105C (Class F) rise rating for ten seconds during a fault condition and shall improve the immunity of the voltage regulator to non-linear distorting loads. The excitation system shall be of brushless construction and be independent of main stator windings (either permanent magnet or

auxiliary windings).

B. Voltage Regulator

The automatic voltage regulator (AVR) shall maintain generator output voltage within +/- 0.5% for any constant load between no load and full load. The regulator shall be a totally solid state design, which includes electronic voltage buildup, volts per Hertz regulation, over-excitation protection, shall limit voltage overshoot on startup, and shall be environmentally sealed.

2.3 CIRCUIT BREAKER

A. Circuit Breaker Specifications

Provide generator mounted 100% circuit breakers, molded case, quantity (2) 225, and (1) 125 amp trip, 3 pole, NEMA 1/IP22. Breakers shall utilize a solid state trip unit with LSI adjustment. The breakers shall be UL/CSA Listed and connected to engine/generator safety shutdowns. Breakers shall be housed in an extension terminal box which is isolated from vibrations induced by the generator set. Mechanical type lugs, sized for the circuit breaker feeders shown on drawing, shall be supplied on the load side of breaker.

Breakers shall be type as required by the required coordination study and shall provide a fully coordinated system. Changes to breaker type due to coordination study shall not result in additional costs to owner.

2.4 CONTROLS – GENERATOR SET MOUNTED

Provide a fully solid-state, microprocessor based, generator set control. The control panel shall be designed and built by the engine manufacturer. The control shall provide all operating, monitoring, and control functions for the generator set.

A. Environmental

The generator set control shall be tested and certified to the following environmental conditions.

1. -40°C to +70°C Operating Range
2. 0-95% humidity non-condensing, 30°C to 60°C
3. IP22 protection for rear of controller; IP55 when installed in control panel
4. 5% salt spray, 48 hours, +38°C, 36.8V system voltage
5. Sinusoidal vibration 4.3G's RMS, 24-1000Hz
6. Electromagnetic Capability (89/336/EEC, 91/368/EEC, 93/44/EEC, 93/68/EEC, BS EN 50081-2, 50082-2)
7. Shock: withstand 15G

B. Functional Requirements

The following functionality shall be integral to the control panel.

1. The control shall include a minimum 33 x 132 pixel, 24mm x 95mm, positive image, transfective LCD display with text based alarm/event descriptions.
2. The control shall include a minimum of 3-line data display
3. Audible horn for alarm and shutdown with horn silence switch
4. Standard ISO labeling
5. Multiple language capability

6. Remote start/stop control
7. Local run/off/auto control integral to system microprocessor
8. Cool down timer
9. Speed adjust
10. Lamp test
11. Emergency stop push button
12. Voltage adjust
13. Voltage regulator V/Hz slope - adjustable
14. Password protected system programming

C. Digital Monitoring Capability

The controls shall provide the following digital readouts for the engine and generator. All readings shall be indicated in either metric or English units.

Engine:

1. Engine oil pressure
2. Engine oil temperature
3. Engine coolant temperature
4. Engine RPM
5. Battery volts
6. Engine hours
7. Engine crank attempt counter
8. Engine successful start counter
9. Service maintenance interval
10. Real time clock
11. Engine exhaust stack temperature
12. Engine main bearing temperature

Generator:

1. Generator AC volts (Line to Line, Line to Neutral and Average)
2. Generator AC current (Avg and Per Phase)
3. Generator AC Frequency
4. Generator kW (Total and Per Phase)
5. Generator kVA (Total and Per Phase)
6. Generator kVAR (Total and Per Phase)
7. Power Factor (Avg and Per Phase)
8. Total kW-hr
9. Total kVAR-hr
10. % kW
11. % kVA
12. % kVAR
13. Generator bearing temperature
14. Generator stator winding temperature

Voltage Regulation

1. Excitation voltage
2. Excitation current

D. Alarms and Shutdowns

The control shall monitor and provide alarm indication and subsequent shutdown for the following conditions. All alarms and shutdowns are accompanied by an engine

hour stamp that are stored by the control panel for first and last occurrence.

Engine Alarm/Shutdown:

1. Low oil pressure alarm/shutdown
2. High coolant temperature alarm/shutdown
3. Loss of coolant shutdown
4. Overspeed shutdown
5. Overcrank shutdown
6. Emergency stop shutdown
7. Low coolant temperature alarm
8. Low battery voltage alarm
9. High battery voltage alarm
10. Control switch not in auto position alarm
11. Battery charger failure alarm

Generator Alarm/Shutdown:

1. Generator phase sequence
2. Generator over voltage
3. Generator under voltage
4. Generator over frequency
5. Generator under frequency
6. Generator reverse power (real and reactive)
7. Generator overcurrent

Voltage Regulator Alarm/Shutdown:

1. Loss of excitation alarm/shutdown
2. Instantaneous over excitation alarm/shutdown
3. Time over excitation alarm/shutdown
4. Rotating diode failure
5. Loss of sensing
6. Loss of PMG

E. Inputs and Outputs

Programmable Digital Inputs:

The Controller shall include the ability to accept programmable digital input signals.

The signals may be programmed for either high or low activation using programmable Normally Open or Normally Closed contacts.

Programmable Relay Outputs:

The control shall include the ability to operate programmable relay output signals, integral to the controller. The output relays shall be rated for 2A @ 30VDC and consist of six (6) Form A (Normally Open) contacts and two (2) Form C (Normally Open & Normally Closed) contacts.

Programmable Discrete Outputs:

The control shall include the ability to operate two (2) discrete outputs, integral to the controller, which are capable of sinking up to 300mA.

F. Maintenance

All engine, voltage regulator, control panel and accessory units shall be accessible through a single electronic service tool. The following maintenance functionality shall be integral to the generator set control

1. Engine running hours display
2. Service maintenance interval (running hours or calendar days)
3. Engine crank attempt counter
4. Engine successful starts counter
5. 40 events are stored in control panel memory
6. Programmable cycle timer that starts and runs the generator for a predetermined time. The timer shall use 7 user-programmable sequences that are repeated in a 7-day cycle. Each sequence shall have the following programmable set points:
 - a. Day of week
 - b. Time of day to start
 - c. Duration of cycle

G. REMOTE COMMUNICATIONS

The control shall include Modbus RTU communications as standard via RS-485 half duplex with configurable baud rates from 2.4k to 57.6k.

Remote Monitoring Software

The control shall provide Monitoring Software with the following functionality

1. Monitor up to eight (8) generator sets, plus ATS and UPS.
2. Provide access to all data and events on generator set communications network
3. Provide remote control capability for the generator set(s)
4. Ability to communicate via Modbus RTU or remote modem

H. LOCAL AND REMOTE ANNUNCIATION

Local Annunciator (NFPA 99/110, CSA 282)

Provide a local, control panel mounted, annunciator to meet the requirements of NFPA 110, Level 1.

1. Annunciators shall be networked directly to the generator set control
2. Local Annunciator shall include a lamp test pushbutton, alarm horn and alarm acknowledge pushbutton
3. Provide the following individual light indications for protection and diagnostics
 - a. Overcrank
 - b. Low coolant temperature
 - c. High coolant temperature warning
 - d. High coolant temperature shutdown
 - e. Low oil pressure warning
 - f. Low oil pressure shutdown
 - g. Overspeed
 - h. Low coolant level
 - i. EPS supplying load
 - j. Control switch not in auto
 - k. High battery voltage
 - l. Low battery voltage
 - m. Battery charger AC failure
 - n. Emergency stop
 - o. Spare

p. Spare

Remote Annunciator (NFPA 99/110, CSA 282)

Provide a remote annunciator to meet the requirements of NFPA 110, Level 1.

4. The annunciator shall provide remote annunciation of all points stated above and shall incorporate ring-back capability so that after silencing the initial alarm, any subsequent alarms will sound the horn.
5. Ability to be located up to 4000 ft from the generator set

2.5 COOLING SYSTEM

The generator set shall be equipped with a rail-mounted, engine-driven radiator with blower fan and all accessories. The cooling system shall be sized to operate at full load conditions and 110 F* ambient air entering the enclosure. The generator set supplier is responsible for providing a properly sized cooling system based on the enclosure static pressure restriction.

2.6 FUEL SYSTEM

A. Fuel System

The fuel system shall be integral with the engine. In addition to the standard fuel filters provided by the engine manufacturer, there shall also be installed a primary fuel filter/water separator in the fuel inlet line to the engine. All fuel piping shall be black iron or flexible fuel hose rated for this service. No galvanized piping will be permitted. Flexible fuel lines shall be minimally rated for 300 degrees F and 100 psi.

B. Fuel Sub Base Tank

Provide a double wall sub-base tank constructed to meet all local codes and requirements. A fuel tank base of 24-hour capacity shall be provided as an integral part of the enclosure. It shall be contained in a rupture basin with 110% capacity. The tank shall meet UL142 standards. A locking fill cap, a mechanical reading fuel level gauge, low fuel level alarm contact, and fuel tank rupture alarm contact shall be provided.

Provide with main vent and emergency vent.

2.7 STARTING SYSTEM

A. Starting Motor

A DC electric starting system with positive engagement shall be furnished. The motor voltage shall be as recommended by the engine manufacturer.

B. Jacket Water Heater

Jacket water heater shall be provided and shall be sized to insure that genset will start within the specified time period and ambient conditions.

C. Batteries

Batteries - A lead-acid storage battery set of the heavy-duty diesel starting type shall be provided. Battery voltage shall be compatible with the starting system.

D. Battery Charger

Battery Charger - A current limiting battery charger shall be furnished to automatically recharge batteries. The charger shall be dual charge rate with automatic switching to the boost rate when required. The battery charger shall be mounted on the genset package or inside the genset enclosure/room.

2.8 ENCLOSURE

A. Sound Attenuated Weatherproof Enclosure

The complete diesel engine generator set, including generator control panel, engine starting batteries and fuel oil tank, shall be enclosed in a factory assembled, sound enclosure mounted on the fuel tank base.

1. A weather resistant, sound attenuated enclosure of steel with electrostatically applied powder coated baked polyester paint. The enclosure shall have a resulting sound level of 78dba @ 23ft with the genset running under full load. It shall consist of a roof, side walls, and end walls. Fasteners shall be either zinc plated or stainless steel.
2. Enclosure Sound Attenuation: Acoustical foam shall be provided between all supports and inside doors and sound baffles on air intake and air discharge.
3. **Sound attenuated enclosure shall be painted white.**

PART 3 – EXECUTION

3.1 INSTALLATION

Install equipment in accordance with manufacturer's recommendations, the project drawings and specifications, and all applicable codes.

3.2 START-UP AND TESTING

- A. Coordinate all start-up and testing activities with the Engineer and Owner. After installation is complete and normal power is available, the manufacturer's local dealer shall perform the following:

1. Perform a 4-hour Reactive Load Bank Test at .8PF and .9PF of full nameplate rating. Load bank, cables and other equipment required for this test to be supplied by the genset supplier.
2. Perform a 4-hour load test with true building load.

3.3 OPERATION AND MAINTENANCE MANUALS

Provide operation and maintenance manuals (quantity per General Conditions) covering the generator, switchgear, and auxiliary components. Include final as-built wiring interconnect diagrams and recommended preventative maintenance schedules.

3.4 TRAINING

A. On-Site Training

Provide **minimum of 2 hours** on-site training by **factory trained personnel** to instruct the owner's personnel in the proper operation and maintenance of the equipment. Review operation and maintenance manuals, parts manuals, and emergency service procedures.

END OF SECTION 263213

SECTION 263556 – SURGE PROTECTIVE DEVICES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes SPD for low-voltage power, control, and communication equipment.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating weights, operating characteristics, furnished specialties, and accessories.
- B. Provide UL 1449, 3rd Edition test reports showing Suppressed Voltage Ratings (SVR) and all “Engineering Considerations”. The SPD shall also be complementary listed to UL 1283
- C. Qualification Data: Provide the following:
 - 1. Provide test reports from a recognized independent testing laboratory verifying the COMPLETE SPD will survive the published and specified maximum surge current rating. Test reports will clearly show that all components that make up a COMPLETE system were included in these tests (including but not limited to all necessary fuses, thermal disconnects, integral disconnects and monitoring systems).
 - 2. Provide data confirming that the SPD will survive the published and specified repetitive surge current rating (longevity characteristic).
 - 3. Per the requirements of NEC Article 285.6, provide test data demonstrating that the SPD is capable of surviving the published and specified short circuit current capability (AIC rating) without the use of external fusing.
 - 4. Provide a COMPLETE set of test and ratings data per the recommendations of NEMA LS1 – 1992.
- D. Operation and Maintenance Data: For transient voltage suppression devices to include in emergency, operation, and maintenance manuals.
- E. Warranties: Special warranties specified in the Section.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Testing agency as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the International Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- B. Source Limitations: Obtain suppression devices and accessories through one source from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with IEEE C62.41, "IEEE Guide for Surge Voltages in Low Voltage AC Power Circuits," and test devices according to IEEE C62.45, "IEEE Guide on Surge Testing for Equipment Connected to Lo-Voltage AC Power Circuits."
- E. Comply with NEMA LS1, "Low Voltage Surge Protection Devices."
- F. Comply with UL 1283, "Electromagnetic Interference Filters," and UL 1449, "Transient Voltage Surge Suppressors."
- G. MIL-STD-220A Compliance: Comply with military standard for measuring filter attenuation using the 50-ohm insertion loss method.

1.5 PROJECT CONDITIONS

- A. Placing into Service: Do not energize or connect **service entrance equipment or panelboard** to their sources until the surge protective devices are installed and connected.
- B. Service Conditions: Rate surge protection devices for continuous operation under the following conditions, unless otherwise indicated:
 - 1. Maximum Continuous Operating Voltage: Not less than 115% of nominal system operating voltage.
 - 2. Operating Temperature: 30 to 120 deg F (0 to 50 deg C)
 - 3. Humidity: 0 to 85 percent, noncondensing.
 - 4. Altitude: Less than 20,000 feet (6090 m) above sea level.

1.6 COORDINATION

- A. Coordinate location of field-mounted surge suppressor to allow adequate clearances for maintenance.

1.7 WARRANTY

- A. Most manufacturers offer five-year extended warranties on their equipment. Some manufacturers of cord-connected, plug-in surge suppressors offer extended warranties that either repair or replace damaged equipment that is protected by the suppressor. When warranties are required, verify with Owner's counsel that special warranties stated in this Article are not less than remedies available to Owner under prevailing local laws. Coordinate with Division 1 Section "Warranties".
- B. General Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within five years from date of Substantial Completion.
- C. Special Warranty for Cord-Connected, Plug-in Surge Suppressors: Manufacturer's standard form in which manufacturer agrees to repair or replace electronic equipment connected to circuits protected by surge suppressors.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Manufacturers of a Broad Line of Suppressors.
 - a. Liebert Corp.
 - b. Current Technology, Inc.
 - c. Eaton Cutler-Hammer (Externally Mounted SPD only).
 - d. Or equivalent.

2.2 SERVICE ENTRANCE SUPPRESSORS

- A. Surge Protection Device Description: Non-modular type from the following list of approved manufacturers and products provided the product meets all requirements of these Specifications:
 - 1. Liebert Corporation – LM Series
 - 2. Current Technology, Inc. – CG Plus Series
 - 3. Eaton Cutler-Hammer - CPS Series

The SPD will be provided with the following features and accessories:

- 1. Repetitive Rating: SPD shall be capable of surviving at least 10,000 ANSI/IEEE C62.41 Category C3 impulses (10kA) without failure or less than 10% degradation of original performance characteristics.
- 2. Fusing system to provide 200kAIC short circuit rating.
- 3. Individually fused MOVs to provide system redundancy
- 4. Integral disconnect (only when a breaker is NOT provided in distribution equipment)

5. LED indicator lights for power and protection status.
 6. Audible alarm, with silencing switch, to indicate when protection has failed.
 7. One set of dry contacts rated at 5A and 250V ac, for remote monitoring of protection status.
 8. NEMA 12 Enclosure
- B. Surge Protection Device Description: Modular type from the following list of approved manufacturers and products provided the product meets all requirements of these Specifications:
1. Liebert Corporation – Interceptor II Series
 2. Current Technology, Inc. – SEL Series
 3. Eaton Cutler-Hammer – CPS Series
- The modular SPD will be provided with the following features and accessories:
1. Repetitive Rating: SPD shall be capable of surviving at least 15,000 ANSI/IEEE C62.41 Category C3 impulses (10kA) without failure or less than 10% degradation of original performance characteristics.
 2. Fusing system to provide 200kAIC short circuit rating.
 3. Fabrication using bolted compression lugs for internal wiring.
 4. Integral disconnect switch (only when a breaker is NOT provided in distribution equipment).
 5. Individually fused MOVs to provide system redundancy.
 6. Built-in push-to-test feature that tests the integrity of each fuse/MOV pair. Manufacturers who accomplish by use of an external surge generator will provide the device with their quotation.
 7. Redundant replaceable modules
 8. Arrangement with copper bus bars and for bolted connection to phase buses, neutral bus, and ground bus.
 9. Arrangement with wire connection to phase buses, neutral bus, and ground bus.
 10. LED indicator lights for power and protection status.
 11. Audible alarm, with silencing switch, to indicate when protection has failed.
 12. One set of dry contacts rated at 5A and 250V ac, for remote monitoring of protection status.
 13. Surge event operations counter.
 14. NEMA 4 Enclosure
- C. Peak Single-Impulse Surge Current Rating: 250 kA per phase, 125kA per mode. **Manufacturer will provide a higher maximum surge current rating if necessary to meet the repetitive requirements listed above.**
- D. Connection Means: Permanently wired.
- E. Protection modes and UL 1449 SVR for grounded wye circuits with voltages of 480Y/277, 208Y/120, 3-phase, 4-wire circuits shall be as follows:
1. Line to Neutral: 700V for 480Y/277, 400V for 208Y/120.
 2. Line to Ground: 700V for 480Y/277, 400V for 208Y/120.
 3. Neutral to Ground: 700V for 480Y/277, 400V for 208Y/120.

2.3 ENCLOSURES

- A. NEMA 250, with type matching the enclosure of panel or device being protected.

PART 3 – EXECUTION

3.1 INSTALLATION OF SURGE PROTECTION DEVICES

- A. Install devices at service entrance on load side, with ground lead bonded to service entrance ground.
- B. Install devices for panelboard and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Locate the externally mounted SPD as close as possible to the panelboard neutral lug. Locate the recommended breaker as close as possible to the SPD location. The panelboard manufacturer will supply the breaker. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.
 - 1. Provide a 60A, multi-pole circuit breaker in the service entrance equipment and a 30A, multi-pole circuit breaker in branch panel equipment to serve as a dedicated disconnect for suppressor, unless otherwise indicated.

3.2 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

- A. Testing: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing: Engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
- C. Testing: Perform the following field quality control testing:
 - 1. After installing surge protection devices, but before electrical circuitry has been energized, test for compliance with requirements.
 - 2. Complete startup checks according to manufacturer's written instructions.
 - 3. Perform each visual and mechanical inspection and electrical test stated in NETA ATS, Section 7.19. Certify compliance with test parameters.
- D. Repair or replace malfunctioning units. Retest after repairs or replacements are made.
- E. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.

1. Verify that electrical wiring installation complies with manufacturer's installation requirements.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain surge protective devices.
 1. Train Owner's maintenance personnel on procedures and schedules for maintaining suppressors.
 2. Review data in maintenance manuals. Refer to Division 1 Section "Contract Closeout."
 3. Review data in maintenance manuals. Refer to Division 1 Section "Operation and Maintenance Data."
 4. Schedule training with Owner, through Architect, with at least seven days' advanced notice.

END OF SECTION 263556

SECTION 263623 – AUTOMATIC TRANSFER SWITCH

PART 1 – GENERAL

1.1 RELATED SECTIONS

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.

1.2 SCOPE

- A. It is the intent of this specification to secure a transfer switch that has been prototype tested, factory built, production tested and site tested. A transfer switch with the number of poles, voltage and current ratings shown on the plans and specified herein shall be provided.

1.2 CODES AND STANDARDS

- A. The automatic transfer switch shall conform to the requirements of:
 - 1. UL 1008: Underwriters Laboratories standard for automatic transfer Switches
 - 2. CSA: C22.2 No. 178 certified
 - 3. IEC: 947-6-1 certified at 480 VAC
 - 4. NFPA 70: National Electrical Code including use in emergency and standby systems in accordance with Articles 517, 700, 701, 702
 - 5. NFPA 101: Life safety code
 - 6. NFPA 110: Standard for emergency and standby power systems
 - 7. IEEE 241: I.E.E.E. recommended practice for electrical power systems in commercial buildings
 - 8. IEEE 446: I.E.E.E. recommended practice for emergency and standby power systems
 - 9. NEMA ICS10: AC automatic transfer switch equipment
 - 10. UL 50/508: Enclosures
 - 11. ICS 6: Enclosures
 - 12. ANSI C33.76: Enclosures

- 22. IBC 1.5: Seismic Requirements.

1.3 APPROVED MANUFACTURES

- A. Caterpillar – Model ATC Contactor Based Automatic Transfer Switch Series.
- B. ASCO
- C. Zenith
- D. Or approved equivalent.

PART 2 – PRODUCTS

2.1 PERFORMANCE AND CONSTRUCTION

- A. The closed transition automatic transfer switch shall be operated by a reliable dual-solenoid driven mechanism. There shall be direct mechanical couplings to facilitate transfer in 6 cycles or less. The closed transition ATS shall have a capability to operate in the delayed transition mode (with 'center-off' or 'neutral' switch position) on transfer from a failed source or when pre-selected to do so.
- B. For switches installed in systems having ground fault protective devices, and/or wired so as to be designated a separately derived system by the NEC, a 4th pole shall be provided. This additional pole shall isolate the normal and emergency neutrals. The neutral pole shall have the same withstand and operational ratings as the other poles and shall be arranged to break last and make first to minimize neutral switching transients. Add-on or accessory poles that are not of identical construction and withstand capability will not be considered.
- C. The contact structure shall consist of a main current carrying contact, which is a silver alloy with a minimum of 50% silver content. The current carrying contacts shall be protected by silver tungsten arcing contacts on all sizes above 400 Amps.
- D. The transfer switch manufacturer shall submit test data for each size switch, showing it can withstand fault currents of the magnitude and the duration necessary to maintain the system integrity. Each ATS shall be in strict accordance and listed to UL 1008 withstand standards, including 3 cycle ratings, 480V RMS, 20% power factor.
- E. A dielectric test shall be performed at the conclusion of the withstand and closing tests.
- F. The automatic transfer switch manufacturer shall certify sufficient arc interrupting capabilities for 50 cycles of operation between a normal and emergency source that are 120 degrees out of phase at 480 volts, 600% of rated current at .50 power factor. This certification is to ensure that there will be no current flow between the two isolated sources during switching.

- G. All relays shall be continuous duty industrial type with wiping contacts. Coils, relays, timers and accessories shall be readily front accessible. The control panel and power section shall be interconnected with a harness and keyed disconnect plugs for maintenance.
- H. Main and arcing contacts shall be visible without major disassembly to facilitate inspection and maintenance.
- I. A manual handle shall be provided for maintenance purposes with the switch de-energized. An operator disconnect switch shall be provided to defeat automatic operation during maintenance, inspection or manual operation.
- J. Switches composed of molded case breakers, lighting contactors or components thereof will not be acceptable.
- K. The current rating shall be a continuous rating when the switch is installed in an enclosure, and shall conform to NEMA temperature rise standards.
- L. The unit shall be rated based on all classes of loads, i.e., resistive, tungsten, ballast and inductive loads. Switches rated 400 amperes or less shall be UL listed for 100% tungsten lamp load.
- M. Temperature rise tests in accordance with UL 1008 shall have been conducted after the overload and endurance tests to confirm the ability of the units to carry their rated currents within the allowable temperature limits.
- N. Unless specified otherwise on the drawings, the switch shall be mounted in a NEMA 1 enclosure.

2.2 Bypass-Isolation Switch

- A. A two-way bypass-isolation switch shall provide manual bypass of the load to either source and permit isolation of the automatic transfer switch from all source and load power conductors. All main contacts shall be manually driven.
- B. Power interconnections shall be silver-plated copper bus bar. The only field installed power connections shall be at the service and load terminals of the bypass-isolation switch. All control interwiring shall be provided with disconnect plugs.
- C. Separate bypass and isolation handles shall be utilized to provide clear distinction between the functions. Handles shall be permanently affixed and operable without opening the enclosure door. Designs requiring insertion of loose operating handles or opening of the enclosure door to operate are not acceptable.
- D. Bypass to the load-carrying source shall be accomplished with no interruption of power to the load (make before break contacts). Designs which disconnect the load when bypassing are not acceptable. The bypass handle shall have three operating modes: "Bypass to Normal," "Automatic," and "Bypass to Emergency." The operating speed of the bypass contacts shall be the same as the associated transfer switch and shall be independent of the speed at which the manual handle is operated. In the "Automatic"

mode, the bypass contacts shall be out of the power circuit so that they will not be subjected to fault currents to which the system may be subjected.

- E. The isolation handle shall provide three operating modes: "Closed," "Test," and "Open." The "Test" mode shall permit testing of the entire emergency power system, including the automatic transfer switches with no interruption of power to the load. The "Open" mode shall completely isolate the automatic transfer switch from all source and load power conductors. When in the "Open" mode, it shall be possible to completely withdraw the automatic transfer switch for inspection or maintenance to conform to code requirements without removal of power conductors or the use of any tools.
- F. When the isolation switch is in the "Test" or "Open" mode, the bypass switch shall function as a manual transfer switch.
- G. Designs requiring operation of key interlocks for bypass isolation or ATSS which cannot be completely withdrawn when isolated are not acceptable.

2.3 CONTROL

- A. The control panel shall be opto-isolated from electrical noise and provided with the following inherent control functions and capabilities:
 - 1. Easy-to-view 4x20 LCD display with long lasting LED indicators.
 - 2. Control panel shall display voltage and frequency of both sources.
 - 3. The user shall be able to view the last 16 recorded events.
 - 4. Capability for external communication and network interface.
 - 5. Adjustments to all settings shall be made from the front of the panel without opening the door.
- B. The transfer switch shall be equipped with a microprocessor based control panel. The control panel shall perform the operational and display functions of the transfer switch. The display functions of the control panel shall include ATS position, source availability, sequence indication and diagnostics.
- C. All programmable and control functions shall be pass code protected and accessible through the keypad.
- D. The control panel shall be provided with a simple user interface for transfer switch monitoring, control and field changeable functions and settings.
- E. Touch pad test switch with Fast Test/Load/No Load selection capability to simulate a normal source failure.
- F. The controller shall include a built in synchroscope to display the phase angle differential and ensure disturbance-free transfer operation between sources.
- G. The controller shall provide digital timer adjustments with 1-second resolution. Voltage and Frequency shall be adjustable to 1% resolution to facilitate accurate transfer.

- H. To ensure reliable and consistent user operation the controls must be equipped with nonvolatile memory and allow automatic daylight savings time adjustment.
- I. Provide lockable cover for keypad.

PART 3 – OPERATION

3.1 SEQUENCE OF OPERATION

- A. The closed transition switch shall transfer the load in a parallel mode, thus momentarily connecting both sources of power. A closed transition transfer shall occur only when both sources are available and within specified limits. The transfer switch shall operate in an open transition mode when the power source servicing the load fails.
- B. The ATS shall incorporate adjustable three phase under/over voltage and frequency sensing on the normal source.
- C. When the voltage of any phase of the normal source is reduced to 80% of nominal voltage, for a period of 0-10 seconds (programmable) a pilot contact shall close to initiate starting of the engine generator.
- D. The ATS shall incorporate adjustable three phase under/over voltage and frequency sensing on the emergency source.
- E. When the emergency source has reached a voltage value of 90% of nominal and achieved frequency within 95% of the rated value, the load shall be transferred to the emergency source after a programmable time delay.
- F. When the normal source has been restored to not less than 90% of rated voltage on all phases, the load shall be retransferred to the normal source after a time delay of 0 to 60 minutes (programmable). The generator shall run unloaded for 5 minutes (programmable) and then automatically shut down. The generator shall be ready for automatic operation upon the next failure of the normal source.
- G. If the engine generator should fail while carrying the load, retransfer to the normal source shall be made instantaneously upon restoration of proper voltage (90%) on the normal source.
- H. During closed transition operation, the control circuit shall monitor interconnect time. Should connection exceed 100 ms, the set of power contacts last closed shall reopen and an alarm circuit shall be energized. If the main contacts fail to open, the control system shall energize a 24 VDC shunt trip circuit to the standby feeder breakers to disconnect this source and the alarm circuit shall be closed. 24 VDC from the engine batteries shall be supplied for the shunt trip and backup circuits
- I. A sync check function shall be provided for closed transition operation. The monitor shall control transfer and retransfer between live sources and operate by sensing the

zero voltage point. It shall be factory set to accomplish transfer within 5 electrical degrees and +/-5% voltage differential. If closed transition transfer is not accomplished within 60 seconds, an alarm message shall be displayed to indicate the failure.

- J. Closed transition transfer in conjunction with over/under-voltage, phase rotation and angle sensing shall be accomplished when both sources are within specified parameters without any power interruption though passive synchronization. To ensure the utmost in compatibility, the ATS must be supplied by the same manufacturer of the engine generator set.

3.2 STANDARD ACCESSORIES

- A. Adjustable time delay to override momentary normal source failure prior to engine start. Field programmable 0-10 seconds factory set at 3 seconds.
- B. Adjustable time delay on retransfer to normal source, programmable 0-60 minutes factory set at 30 minutes. If the emergency source fails during the retransfer time delay, the transfer switch controls shall automatically bypass the time delay and immediately retransfer to the normal position.
- C. A time delay on transfer to emergency, programmable 0-5 minutes, factory set at 1 second.
- D. An in-phase monitor shall be provided. The monitor shall compare the phase angle difference between the normal and emergency sources and be programmed to anticipate the zero-crossing point to minimize switching transients.
- E. An exerciser timer with momentary test pushbutton shall be incorporated within the microprocessor and shall be capable of starting the engine generator set and transferring the load (when selected) for exercise purposes on a daily, weekly or monthly basis. The exerciser shall contain a battery for memory retention during an outage.
- F. Provide a momentary pushbutton to bypass the time delays on transfer and retransfer and programmable commit/no commit control logic.
- G. A set of customer contacts shall be provided to indicate both emergency and normal source position.
- H. An adjustable over/under frequency and voltage sensor for both emergency and normal sources.
- I. Indication of switch position and source acceptability shall be provided for both emergency and normal sources.
- J. An engine start contact with an adjustable cool down timer.
- K. A three phase Voltage Imbalance Monitor shall detect an imbalance and initiate a transfer to the alternate source. Adjustable 5-20% of nominal with a time delay of 10-30 seconds for nuisance conditions.

The following Exerciser Package shall be included:

- A. Additional Auxiliary Contact (A3) - Closed when the transfer switch is in Source 2 position.
- B. Additional Auxiliary Contact (A4) - Closed when the transfer switch is in Source 1 position.
- C. Programmable Clock Exerciser (CDP) – This will replace the timer exerciser and allow for a 365-day cycle.

The following additional accessories shall be included:

- A. Universal Motor Load Disconnect (UMD) - Auxiliary contacts opens 0 – 5 minutes prior to transfer in either direction, re-closes after transfer. Can be configured for pre-transfer, post transfer or both.
- B. Test Switch (6A) - Maintained
- C. Additional Auxiliary Contacts (A3) - Closed when the transfer switch is in Source 2 position.
- D. Additional Auxiliary Contacts (A4) - Closed when the transfer switch is in Source 1 position.
- E. Alarm panel (CTAP) – Alarm on transfer to emergency w/silence button & light
- F. Engine Mode Switch (SW1) – Three-position engine selector switch (auto/test/off).

PART 4 – EXECUTION

4.1 GENERAL

- A. The transfer switch shall be installed as shown on the plans, in accordance with the manufacture's recommendations and all applicable codes.
- B. The transfer switch

4.2 FACTORY TESTS

- A. The transfer switch manufacturer shall perform a complete functional test on the switch, controller and accessories prior to shipping from the factory. A certified test report shall be available upon request.

4.3 SERVICE

- A. The manufacturer shall maintain a national service organization that is factory trained and certified for transfer switch equipment. In addition, the service organization shall be available 24 hours per day, 365 days per year **within 100 miles of the project site.**

4.4 FACTORY WARRANTY

- A. The automatic transfer switch shall be warranted against defective workmanship for a period of two years, including both parts and labor.

END OF SECTION 263623

SECTION 265100 – INTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes interior luminaires, lamps, ballasts, and accessories.
- B. **LIGHTING AGENCIES, DISTRIBUTORS, ETC. ARE REQUIRED TO HAVE A COMPLETE FIXTURE SCHEDULE, ALL LIGHTING PLANS, ARCHITECTURAL REFLECTED CEILING PLANS AND SPECIFICATIONS IN ORDER TO BID THE PROJECT. PRICING SHALL NOT BE BASED ON CATALOG NUMBERS ALONE. COORDINATE AND PROVIDE ALL MOUNTING HARDWARE AND ACCESSORIES AS REQUIRED BY ARCHITECTURAL CEILING TYPES AND CEILING TILE CONFIGURATIONS. CHANGE ORDERS WILL NOT BE ALLOWED FOR FAILURE TO USE THE COMPLETE SET OF PLANS FOR BID PURPOSES.**
- C. Related Sections:
 - 1. Section 26 05 19 – Low Voltage Electrical Power Conductors and Cables
 - 2. Section 26 05 23 – Lighting Control Devices
 - 3. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

1.3 SYSTEM DESCRIPTION

- A. Catalog numbers indicated in the Luminaire Schedule are a design series reference and do not necessarily represent the exact catalog number, size, voltage, wattage, type of light bar, driver, finish trim, ceiling type, mounting hardware or special requirements as specified or as required by the particular installations. Provide complete luminaire to correspond with the features, accessories, number of LED's, wattage and/or size specified in the text description of each luminaire type. Additional features, accessories and options specified shall be included.
- B. Provide all frames, supplementary support structures, hangers, spacers, stems, aligner canopies, auxiliary junction boxes and other hardware as required for a complete and proper installation. Recessed luminaires shall have frames that are compatible with the ceiling systems.

C. Luminaire voltage shall match the voltage of the circuit serving same.

1.4 SUBMITTALS

A. SUBSTITUTIONS

1. See General Conditions of the specifications for information regarding substitutions. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples if requested by Engineer are provided. Alternate products shall meet or exceed design criteria.
2. If submitted fixtures are not as specified, provide footcandle calculations showing the actual rooms, correct ceiling heights, mounting heights, and surface reflections. Provide IES files in digital format of all substituted fixtures to the Engineer for review.

B. PRODUCT DATA

For each type of luminaire, arranged in order of luminaire designation. Include data on features, accessories, finishes, and the following:

1. Material and physical description of luminaire including dimensions.
2. Emergency lighting units including battery and charger.
3. Energy-efficiency data.
4. Life, output (lumens, CCT, and CRI), Kelvin temperature, and energy-efficiency data for LED light bars.
5. Photometric data and adjustment factors based on laboratory tests, complying with IESNA Lighting Measurements Testing & Calculation Guides, of each luminaire type. The adjustment factors shall be for light bars, drivers, and accessories identical to those indicated for the luminaire as applied in this Project.
 - a. Testing Agency Certified Data: For indicated luminaires, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer. LM-79 and LM-80 data for solid state lighting.
 - b. Manufacturer Certified Data: Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
6. Photometric data, certified by a qualified independent testing agency, in IESNA format, based on certified results of laboratory tests of each luminaire type, outfitted with light bars, drivers and accessories identical to those indicated for the luminaire as applied in the Project.
7. Low voltage transformers.
8. LED power supplies.
9. Types of LED's, including manufacturer, wattage, and Color Rendering Index (CRI) and color temperature in degrees Kelvin (K).

C. SHOP DRAWINGS

1. Show detail of nonstandard or custom luminaires.
 2. Indicate dimensions, weights, method of field assembly, components, features and accessories.
 3. For custom luminaires, modified luminaires or linear luminaires mounted in continuous rows, submit scaled drawings prepared by the manufacturer showing all details of construction, lengths in runs, pendant or power feed locations, accessories, finishes and lists of materials.
 4. This Contractor shall provide the manufacturer with accurate field dimensions where required.
 5. Include wiring diagrams, power and control wiring.
- D. Wiring diagrams shall detail wiring for luminaires and differentiate between manufacturer installed and field installed wiring.
- E. Dimming Driver Compatibility Certificates shall be signed by the manufacturer of driver certifying that drivers are compatible with dimming systems and equipment with which they are used.
- F. Maintenance Data shall be provided for luminaires and equipment to include in emergency, operation and maintenance manuals specified in specifications section describing Operations and Maintenance Data.
- G. Field quality control test reports.
- H. Special Warranties specified in the Section.
- I. Review of luminaire submittals which indicate voltage, mounting condition, or quantities shall not be considered to be approval of said voltage, mounting condition or quantities. This Contractor shall field verify voltage and actual mounting condition and method.
- J. Product samples complete with housing, trim, specified lumen package, and 8' cord with plug for 120 V shall be submitted if requested.

1.5 CUSTOM LUMINAIRES

- A. All custom luminaires require a prototype to be submitted prior to commencement of fabrication. The purpose of the prototype will be to review construction, LED placement within luminaire, LED type, optical assembly, finishes, etc. Modifications may be required as a result of prototype review. These modifications and others that do not materially affect the cost of the luminaire shall be incorporated at no additional cost to the Owner, Architect, or Engineer.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For lighting equipment and luminaires to include in emergency, operation, and maintenance manuals.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.8 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Authorities Having Jurisdiction, and marked for intended use.
- C. FM Global Compliance: Luminaires for hazardous locations shall be listed and labeled for indicated class and division of hazard by FM Global.
- D. Comply with NFPA 70.
- E. Designated manufacturers are listed to define the requirements for quality and function of the specified product.
- F. Mockups: Provide interior luminaires for room or module mockups complete with power and control connections.
 - 1. Obtain Lighting Designer's and Architect's approval of luminaires for mockups prior to starting installations.
 - 2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 3. Remove mockups when directed. Luminaires may be reinstalled in the Work with approval from the University.
 - 4. Install luminaires for mockups with power and control connections.
 - 5. Mockups evaluated on the Project site may become part of the complete Work with the approval of the University, Lighting Designer and Architect if the mockup is undisturbed at the time of substantial completion.

1.8 COORDINATION

- A. Coordinate layout and installation of luminaires with ceiling system and other construction that penetrates ceilings or is supported by them including mechanical system, fire suppression, and technology and partition assemblies.
- B. Provide all frames, supplementary support structures, hangers, spacers, stems, aligner canopies, auxiliary junction boxes and other hardware as required for a complete and proper installation.
- C. Recessed luminaires shall have frames that are compatible with the ceiling system indicated on the Architectural Drawings.

- D. Coordination Meetings: This Contractor shall meet at least twice with the ceiling installer. Hold first meeting before submittal of shop drawings to coordinate each luminaire mounting condition with ceiling type. During second meeting, coordinate luminaire layout in each area. This Contractor shall meet at least twice with the mechanical systems installer prior to fabrication and installation of ductwork. Coordinate depth and location of all luminaires with ductwork, fire suppression, and technology in all areas.

1.9 MAINTENANCE MATERIALS

- A. General Conditions: Spare parts and maintenance products.
- B. Furnish two of each plastic lens type.
- C. Furnish 10% of each type of driver type.
- D. Furnish five (5) of each type of exit sign.

1.10 SUPPORT AND BRACING

- A. All luminaires shall be installed with supports and bracing required for the seismic zone in which the project is located. See Spec Section 26 05 30.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. Recessed Luminaires: Comply with NEMA LE 4 for ceiling compatibility for recessed luminaires.
- B. Luminaires: Comply with UL 1598.
- C. Metal Parts: Free of burrs, sharp corners and edges. Metal work shall be free of tool marks and dents and shall have accurate angles bent as sharply as compatible with the gauges of the required metal. Intersections and joints shall be formed true and of adequate strength and structural rigidity to prevent any distortion after assembly. All miters shall be in accurate alignment with abutting intersection members.
- D. Sheet Metal Components: Steel unless otherwise indicated. Form and support to prevent warping and sagging. Luminaires to be painted after fabrication. Finish ferrous mounting hardware and accessories to prevent corrosion and discoloration to adjacent materials.
- E. Luminaire hardware to comply with the following material standards: For steel and aluminum luminaires, all screws, bolts, nuts and other fastening and latching hardware shall be cadmium or equivalent plated. For stainless steel luminaires, all hardware shall be stainless steel.
- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools.

Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Safety devices shall be detachable if necessary and shall not interfere with luminaire performance, maintenance or the seating of any luminaire element. Safety device shall not be visible during normal luminaire operation and from normal viewing angles.

G. Luminaires provided shall have means for disconnection from power source during service, as required in NEC Article 410.

H. Reflecting Surfaces: Minimum reflectance as follows, unless indicated otherwise:

1. White Surfaces: 85%
2. Specular Surfaces: 90%
3. Diffusing Specular Surfaces: 75%

I. Reflector cones shall adhere to the following:

1. Cones shall provide a minimum of 50-degree cutoff to source and source image.
2. Plastic material shall not be used for reflector cones.
3. Cones shall not be permanently fastened to the housing and shall be removable without tools. Retention devices shall not deform the cone or be visible from normal viewing angles.
4. Trim shall be flush to ceiling without gaps or light leaks. Where the flange trim is separate from the cone, it shall have the same finish as the reflector cone.
5. Reflector cones shall be uniform gauge, not less than 0.032" thick, high purity aluminum Alcoa 3002 alloy. Cones shall be free from spin marks or other defects.
6. Manufacture cones using the Alzak® process. Refer to Luminaire Schedule for cone color and finish, i.e., specular or diffuse requirements.

J. Lenses, Covers, Diffusers and Globes:

1. Acrylic Lighting Diffusers: 100% virgin acrylic plastic. UV stabilized high resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 - a. Lens Thickness: At least 0.125 inch minimum unless otherwise indicated.
 - b. Lenses shall have uniform brightness throughout the entire visible area without LED pixelation.
2. Glass Globes: Annealed crystal glass unless otherwise indicated.

K. Adjustable luminaires shall have positive locking devices to fix aiming angle. Luminaires shall be capable of being relamped without adjusting aiming angle.

L. Each luminaire that has an array with a beam pattern or a spread lens that defines beam orientation shall contain locking devices to insure the orientation is not disturbed during array replacement or cleaning.

M. All luminaires and drivers shall operate within the temperature limits of their design and as specified by UL in the applications and mounting conditions specified.

- N. Luminaires recessed in suspended ceilings where the space above the ceiling is either an air supply or return plenum shall conform to NEC Article 300-22.
- O. Provide plaster frame for recessed luminaires mounted in other than T-bar ceilings. Verify mounting with architectural reflected ceiling plan before ordering luminaires.
- P. Fixtures installed in "hard" ceilings shall have all connections accessible through the luminaire.
- Q. For weatherproof or vapor-tight installations, finishes of luminaires and accessories shall be a premium 5 stage TGIC polyester powder coat paint minimum 2.5 mils thick, applied to factory-assembled and -tested luminaires before shipping, so that the entire assembly is completely corrosion resistant for the service intended. Exterior finishes shall have an outdoor life expectancy of not less than 20 years without any visible rust or corrosion. Where aluminum parts come in contact with bronze or steel parts, apply a coating material to both surfaces to prevent corrosion.
- R. Luminaires for use in areas designated as damp locations shall be suitable gasketed to prevent the entrance of moisture. Provide approved wire mesh screens for ventilation openings. Dissimilar metals shall be separated by non-conductive material to prevent galvanic action.
- S. Factory-Applied Labels: Comply with UL 1598. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when light bars are in place.
- T. Luminaires shall be free of light leaks while providing sufficient ventilation of LED's and drivers to provide the required photometric performance.
- U. Luminaires shall hold LED arrays securely against normal vibration and maintenance handling.

2.2 LED LUMINAIRES

- A. Shall be tested according to the Illuminating Engineering Society of North America (IESNA) LM-79 and LM-80.
 - 1. Shall supply third party testing and data in compliance with Commercially Available LED Product Evaluation and Reporting (CALiPER) or National Voluntary Laboratory Accreditation Program (NVLAP).
 - 2. The testing laboratory must be listed on the U.S. Department of Energy's Solid-State Lighting website as an accredited testing laboratory.

3. Manufacturers shall provide supporting evidence of lamp life calculation based on junction temperature and drive current upon request.
- B. Shall be listed and labeled in accordance with the U.S. Department of Energy Lighting Facts Program.
- C. Shall provide independent test laboratories IES photometrics which verify light levels.
- D. Correlated Color Temperature (CCT) measured in Kelvin's shall meet Nominal CCTs and tolerances as defined in ANSI_NEMA_ANSI C78.377-2008.
 1. Nominal CCT: 3000 K: 3045 ± 175 K or
 2. Nominal CCT 3500 K: 3465 ± 245 K
 3. Nominal CCT: 4000 K: 3985 ± 275 K or
 4. Nominal CCT 4500 K: 4503 ± 243 K
 5. Nominal CCT 5000 K: 5028 ± 283 K or
 6. Nominal CCT 5700 K: 5665 ± 355 K
 7. Nominal CCT: 6500 K: 6530 ± 510 K
- E. Minimum CRI > 80 or as noted in the fixture schedule.
- F. The LED light source shall be fully dimmable with use of compatible dimmers switch designated for low voltage loads.
- G. Luminaires shall have internal thermal protection.
- H. Luminaires shall not draw power in the off state. Luminaires with integral occupancy, motion, photo-controls, or individually addressable luminaires with external control and intelligence are exempt from this requirement. The power draw for such luminaires shall not exceed 0.5 watts when in the off state.
- I. Luminaire manufacturers shall adhere to device manufacturer guidelines, certification programs, and test procedures for thermal management
- J. LED package(s)/module(s)/array(s) used in qualified luminaires shall deliver a minimum 70% of initial lumens, when installed in-situ, for a minimum of 50,000 hours.
- K. Luminaires shall be fully accessible from below ceiling plane for changing drivers, power supplies and arrays.
- L. Power Supplies and Drivers
 1. Power Factor: 0.90 or higher
 2. Maximum driver case temperature not to exceed driver manufacturer recommended in-situ operation.
 3. Output operating frequency: 60Hz.
 4. Interference: EMI and RFI compliant with FCC 47 CFR Part 15.
 5. Total Harmonic Distortion Rating: 20% Maximum.
 6. Meet electrical and thermal conditions as described in LM-80 Section 5.0.

7. Fully dimmable, 0 – 10 VDC standard.
8. Secondary Current: Confirm secondary current specified by individual luminaire manufacturers.
9. Compatibility of dimming switches: Certified by manufacturer for use with individually specified luminaire and individually specified control components.

M. LED ARRAYS

1. All LED's of the same type are to be provided by the same manufacturer.
2. Equip each luminaire with the proper LED array of the type shown or specified in the Luminaire Schedule.

N. WIRING

1. No internal wiring shall be visible at normal viewing angles.

2.6 RECESSED LUMINAIRES

- A. Furnish all recessed luminaires in compliance with U.L. Standards for:
 1. Suspended Ceilings Non-Type I.C.
 - a. Where luminaire is used in a suspended ceiling.
 2. Thermally Protected Fixture - Non-Type I.C.
 - a. Where luminaire is installed in a ceiling with the possibility of overheating.
 3. DC - IC Luminaire - Type I.C.
 - a. Where luminaire is intended to be installed where direct contact with insulation is expected.
- B. Check Architectural drawings, sections and specifications for insulation methods and ceiling types for additional information to determine the correct method to furnish luminaires for U.L. compliance.

2.7 STEMS

- A. Ball aligned, swivel 30 or 45 degrees from vertical with swivel below canopy. Painted same color as luminaire trim unless otherwise noted.

2.8 EXIT LIGHTS

- A. Exit lights furnished with 6" high stencil letters. Use green LED's. Verify color used with local codes, if a different color is required, indicate on the shop drawing submittal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Support of luminaires responsibility of this Section.

- B. See Spec Section 26 05 30, Seismic Protection for Electrical Equipment for additional requirements.
- C. Fixtures mounted in grid ceilings and in hard ceilings shall be supported independently of the ceiling or ceiling grid. See details on plans. For recessed fixtures in hard ceilings provide one support at each corner of 2' x 4' and larger luminaires and one at each end at opposite corners of 1' x 4' and 2' x 2' luminaires. In hard ceilings, galvanized hanger wires may be used.
- D. Provide devices for securing luminaire to ceiling grid to comply with Article 410-16(c) of National Electrical Code. ("Earthquake Clips").
- E. Wire luminaires with flexible conduit individually to junction boxes. Do not wire luminaire to luminaire.
- F. Anchor high intensity discharge luminaires mounted in ceiling or on wall to structure. Support recessed ceiling luminaires independent of ceiling construction. Supports to consist of 1/4" diameter bolts or rods.
- G. Support recessed luminaires with 3/4" black iron ceiling channel, one piece on each side of luminaire, anchored to ceiling system. Support large recessed luminaires over 20 pounds independent of furred ceiling system with rods, size as required, anchored to structure.
- H. Support surface and pendant luminaires from 3/8" fixture stud in outlet box. Large surface or pendant luminaires (in excess of 20 pounds) with 3/8" rod run through the outlet box to structure and anchored independent of ceiling and conduit systems.
- I. Provide plaster frames for recessed luminaires in plaster and concealed spline ceilings supported independent of ceiling construction with 1/4" rod anchored to structure.
- J. Individual flexible connections to luminaires shall be made with 2#14 and 1#14 (ground) THHN-2 in 3/8" flexible conduit not to exceed 6'. Bond ground wire at each end. Provide additional wire(s) as required for a/b and similar switching schemes.
- K. Stems on linear luminaires shall be installed as follows (except luminaires with slide grip hangers): First and last stem in row shall be installed in first knockout from end of luminaires; one stem shall be installed between each two luminaires connect intermediate stems to center joint where luminaires join and attach by use of "joining plates". Provide adequate number of stems to completely support luminaires and keep luminaires aligned straight and plumb.
- L. Connect luminaires in continuous rows other than recessed grid type connected by nipples with locknuts and bushings.
- M. Furnish complete manufacturers shop drawing for continuous luminaires showing mounting, ceiling interface and complete luminaire layout.

- N. Refer to architectural reflected ceiling plans for coordination of luminaire locations with mechanical, fire protection, technology and fire safety equipment. Where conflicts occur, coordinate with Architect, Engineer and Lighting Designer prior to installing any of the Systems.
- O. Install surface mounted luminaires plumb and adjust to align with building lines and with each other. Secure to prevent movement.
- P. Luminaires located in recessed ceilings with a fire resistive rating of 1 hour or more shall be enclosed in an approved fire resistive rated box equal to that of the ceiling. Acoustical ceiling tiles are not acceptable.
- P. Install recessed luminaires to permit removal from below.
- Q. Install recessed luminaires where installed in rated assemblies using accessories and firestopping materials to meet regulatory requirements for fire rating.
- R. Install wall-mounted luminaires at height as indicated on Drawings.
- S. Remote mounting of drivers: Distance between the driver and fixture shall not exceed that recommend by manufacturer. Verify the maximum distance between the driver and luminaire with the manufacturer.
- T. Pendant Mounted Fixtures
 - 1. Where suspended below accessible ceiling, provide structural support at suspended ceiling level from structural members above ceiling. Do not run hanger rods through ceiling.
 - 2. Continuous Runs of Luminaires: Laser sight to insure luminaires are straight and true when sighting from end to end, regardless of irregularities in the ceiling. Where luminaires are so installed, omit ornamental ends between sections. All seams/joints shall be tightly fitted.
 - 3. All power feeds shall originate from the same location/end of each run.
- U. Install accessories furnished with each luminaire.
- V. Make wiring connections to branch circuit using building wire with insulation suitable for temperature conditions within luminaire.
- W. Ground and bond interior luminaires in accordance with Section 26 05 26.

3.2 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Operate each luminaire after installation and connection. Inspect for proper connection and operation.

3.3 ADJUSTING

- A. General Conditions: Testing, adjusting, and balancing.

- B. Aim and adjust luminaires as indicated on Drawings.

3.4 CLEANING AND ADJUSTING

- A. Remove protective plastic covers from luminaires and luminaire diffusers only after construction work, painting and clean-up are completed. Remove, clean, and reinstall all dirty reflectors and diffusers.
- B. Clean luminaires internally and externally after installation. Use methods and materials recommended by manufacturer for cleaning Alzak reflectors and other surfaces.
- C. Make final adjustment of aimable luminaires and adjustable light settings under the direction of the Architect and/or Lighting Designer during a scheduled period of time prior to the completion of the Project, after normal business hours if required. Include all equipment and personnel expenses including overtime required for focusing.

3.5 PROTECTION OF FINISHED WORK

- A. General Conditions: Protecting finished work.
- B. Replace all inoperable LED arrays at the end of construction prior to substantial completion.

4.6 GUARANTEE

- A. All luminaires, components, accessories etc., shall be guaranteed against defects in materials and workmanship for five (5) years from date of in-service acceptance by owner. Replacement shall include parts and labor at the site of the work for the term of the warranty.

END OF SECTION 265100

SECTION 265600 - EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section provides general requirements for a complete and fully operational Exterior Lighting System including:

1. Exterior Luminaires
2. Accessories
3. Luminaire supports
4. Poles
5. LED Arrays
6. Controls
7. Standard Fixture Schedule

- B. Related Sections:

1. Section 26 05 19 Low Voltage Electrical Power Conductors and Cables.
2. Section 26 05 26 Grounding and Bonding for Electrical Systems

1.3 SYSTEM DESCRIPTION

- A. Catalog numbers indicated in the Luminaire Schedule are a design series reference and do not necessarily represent the exact catalog number, size, voltage, wattage, type of LED, driver, finish trim, mounting hardware or special requirements as specified or as required by the particular installations. Provide complete luminaire to correspond with the features, accessories, number of LED's, wattage and/or size specified in the text description of each luminaire type. Additional features, accessories and options specified shall be included.

- B. Luminaire voltage shall match the voltage of the circuit serving same.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.5 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION

- A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4-M.
- B. Live Load: Single load of 500 lbf, distributed as stated in AASHTO LTS-4-M.
- C. Ice Load: Load of 3 lbf/sq. ft., applied as stated in AASHTO LTS-4-M Ice Load Map.
- D. Wind Load: Pressure of wind on pole and luminaire and banners and banner arms, calculated and applied as stated in AASHTO LTS-4-M.
 - 1. Basic wind speed of calculating wind load for poles 50 feet (15 M) high or less is 105 MPH. See details on plans.
 - a. Wind Importance Factor: 1.3.
 - b. Minimum Design Life: 25 years.
 - c. Wind induced vibration.

1.6 SUBMITTALS

A. SUBSTITUTIONS

- 1. See General Conditions of the specifications for information regarding substitutions. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples if requested by Engineer are provided. Alternate products shall meet or exceed design criteria.
 - 2. If submitted fixtures are not as specified, provide footcandle calculations showing the actual site plan. Provide IES files in digital format of all substituted fixtures to the Engineer for review.
- B. The authorized manufacturer's representative for the Project area shall prepare Submittals for each luminaire type. In addition to the luminaire Submittals, a list shall be provided identifying the manufacturer representative for each luminaire type. Provide manufacturers' names, addresses, and telephone numbers. Requests for prior approval shall also include this information. Submittals or requests for prior approval without this information will be rejected.
- C. Product Data shall indicate that luminaire, LED arrays, and drivers fully comply with Contract Documents. Data shall be submitted for each type of luminaire indicated, arranged in order of luminaire designation. For standard catalog luminaires provide original product catalog sheets indicating data on features, accessories, finishes, and the following:
- 1. Materials and dimensions of luminaires.
 - 2. Photometric data, in IESNA format, based on certified results of laboratory tests of each luminaire type, outfitted with LED arrays, drivers and accessories identical to those indicated for the luminaire as applied in the Project.

- a. Photometric data shall be certified by a qualified independent testing agency.
- b. Foot-candle map including existing fixtures' contributions
3. Low voltage transformers.
4. LED power supplies.
5. Types of LED's, including manufacturer, wattage, and Color Rendering Index (CRI) and color temperature in degrees Kelvin (K).
6. Wireless controls: nodes, gateways, modems, and server.

D. Shop Drawings shall:

1. Show details of nonstandard or custom luminaires.
2. Indicate dimensions, weights, method of field assembly, components, features, and accessories.
3. This Contractor shall provide the manufacturer with accurate field dimensions where required.
4. Include wiring diagrams, power and control wiring.

E. Wiring Diagrams shall detail wiring for luminaires and differentiate between manufacturer- installed and field-installed wiring.

F. Product Certificates shall be signed by manufacturers of luminaires certifying that products comply with requirements.

G. Maintenance Data shall be provided for luminaires and equipment to include in emergency, operation, and maintenance manuals Specified in Specifications Section describing Operations and Maintenance Data.

H. Field quality control test reports.

I. Special Warranties Specified in this Section.

J. Review of luminaire submittals which indicate voltage, mounting condition, or quantities shall not be considered to be approval of said voltage, mounting condition, or quantities. This Contractor shall field verify voltage and actual mounting condition and method.

K. Product samples complete with housing, trim, specified lumen package, and 8' cord with plug for 120 V shall be submitted if requested.

L. Pole and Support Component Certificates: Signed by Manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4-M and that load imposed by luminaire and attachments has been included in design. The certification shall be based on design calculations by a Professional Engineer.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For lighting equipment and luminaires to include in emergency, operation, and maintenance manuals.

1. Provide a list of all driver types used on Project; use ANSI and manufacturers' codes.
2. Submit site map showing dimensioned locations all exterior lighting fixtures and poles with tags consistent with the University's standard naming convention. Also show stubbed-out spare conduits, in-ground junction boxes, and underground sleeves. Indicate dimensioned locations of sleeve ends, conduits, and junction boxes from a permanent building or landscape feature. Circuit numbers for all loads shall be shown. Electronic files of site lighting maps be provided at Substantial Completion and submitted to the Electric Shop.

1.8 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Glass, Plastic Diffusers and Lenses: 10% or one dozen (whichever is less) of each type and rating installed. Furnish at least one of each type.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Package poles for shipping according to ASTM B 660.
- B. Store poles on decay-resistant-treated skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.
- C. Retain factory-applied pole wrappings on metal poles until right before pole installation. Handle with web fabric straps.

1.10 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Authorities Having Jurisdiction, and marked for intended use.
- C. Comply with IESNA TM-15-11 and Addendum A for Backlight, Uplight, and Glare (BUG) ratings.
- D. Comply with ANSI C7.3777.208 Standards for chromaticity of SSL products.
- E. Comply with NFPA 70.
- F. All luminaires shall bear a UL or ETL label.
- G. Comply with IEEE C2, "National Electrical Safety Code."
- H. Designated manufacturers are listed in the Luminaire Schedule to define the requirements for quality and function of the specified product.

1.11 COORDINATION

- A. Coordinate layout and installation of luminaires with plantings, paving, site walls, other site work elements, and existing luminaires.
- B. Coordination Meetings: This Contractor shall meet at least twice with the sitework installer(s). Hold first meeting before submittal of shop drawings to coordinate each luminaire mounting condition and location. During second meeting, coordinate layout with other site components. Coordinate depth and location of all luminaire pole bases in all areas.

1.12 WARRANTY

A. Comply with Division 1 requirements.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.

1. Warranty Period for Fixture, including the LEDs, drivers and electrical components: Five years from date of Certificate of Occupancy.
2. Warranty Period for housing paint and finish: Five years from date of Certificate of Occupancy.
3. Warranty Period for Color Retention: Five years from date of Certificate of Occupancy.
4. Warranty Period for Poles: Repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less five years from date of Certificate of Occupancy.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide one of the products indicated on Drawings.

2.2 GENERAL REQUIREMENTS FOR LUMINAIRES

A. Luminaires shall be listed and labeled for installation in wet locations.

B. Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.

C. Comply with IESNA TM-15-07 Luminaire Classification System for Outdoor Luminaires.

D. Metal Parts: Free of burrs and sharp corners and edges.

E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use.

F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit easy replacement of drivers. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during maintenance and when secured in operating position. Doors shall be removable for cleaning or replacing lenses.

- G. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

- H. Optical assemblies: where specified, full cutoff with zero uplight, “dark sky” compliant. LED assemblies shall comply with IESNA BUG rating system.
- I. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses in luminaire doors.

2.3 LED DRIVERS AND ARRAYS

- A. UL 1598 listing.
 - 1. Lumen Depreciation Data: maintain greater than 95% lumen maintenance at 60,000 hours per IES TM-21.
 - 2. LED color: neutral white, 4000 deg K, minimum CRI of 70, or as scheduled on the drawings.
- B. LED arrays shall have an IP66 enclosure rating.
- C. Power supply / driver shall be field replaceable by means quick-disconnect connectors and easy access mounting hardware.
- D. Drives shall accept 120 – 277 volts or 480 volts, 60 Hz.
- E. Power Factor > 0.9@ full load.
- F. THD < 20% @ full load.
- G. Surge protection: 10kA/10kV per ANSI/IEEE C136.2-2014
- H. The housing shall have an integral thermal management system with extruded aluminum radiation fins and lateral airways for passive cooling, no devices using moving parts are permitted.
- I. Minimum starting temperature: minus 30 deg C, 40 deg C ambient.
- J. Comply with IES LM-79-08 and LM-90-08 Approved Methods.

2.4 GENERAL REQUIREMENTS FOR POLES AND SUPPORT COMPONENTS

- A. Structural Characteristics: Comply with AASHTO LTS-4-M.
 - 1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in "Structural Analysis Criteria for Pole Selection" Article, with a gust factor of 1.3.

2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.
- B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.
- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
1. Materials: Shall not cause galvanic action at contact points.
 2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.
 3. Anchor-Bolt Template: Plywood or steel.
- D. Handhole: Minimum clear opening of 2-1/2 by 5 inches with cover secured by stainless-steel captive screws.
- E. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 3 Concrete Sections.

2.5 STEEL POLES

- A. Poles: Seamless, extruded structural tube complying with ASTM 1A123/A123M hot-dipped galvanized steel, unless noted otherwise, and with access handhole in pole wall.
1. Shape: Refer to Luminaire Schedule or shall match existing site poles.
 2. Mounting Provisions: Butt flange for bolted mounting on foundation.
- B. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- C. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Section 26 05 26 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- D. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast steel. Adapter fitting welded to pole and bracket, and then bolted together with stainless-steel bolts or high strength galvanized carbon steel.
1. Finish: Match pole and luminaire material and finish.
- E. Steel Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Finish: Premium five (5) stage TGIC polyester powder coat paint.
 - a. Color: As selected by Architect from manufacturer's full range or to match existing adjacent poles.

2.6 POLE ACCESSORIES

- A. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.
- B. Fusing: One in each ungrounded power supply conductor. Voltage and current ratings as recommended by driver manufacturer. Fuseholders shall be completely waterproof and shall grip the fuse in the load side section when opened. The circuit shall be fused in the base of the pole and accessible through the handhole.
- C. Wind Mitigation Devices: Provide in areas of consistent, high, uneven winds.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

- A. Fasten luminaire to indicated structural supports.
 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- B. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources, favoring a north orientation.
 1. Provide house side shields where necessary to control spill light.

3.2 POLE INSTALLATION

- A. Alignment: Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.
- B. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 3 Concrete Sections.
- C. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.
 1. Grout void between pole base and foundation. Use non-shrink or expanding concrete grout firmly packed to fill space.
 2. Install base covers unless otherwise indicated.
 3. Use a short piece of 1/2-inch diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

- D. Raise and set poles using web fabric slings (not chain or cable).

3.3 BOLLARD AND INDIVIDUAL GROUND MOUNTED LUMINAIRES

- A. Align units for optimum directional alignment of light distribution.
- B. Install on concrete base with top 4 inches above finished grade or surface at bollard location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 3 Concrete Section.

3.4 CORROSION PREVENTION

- A. Steel Conduits: Comply with Section 26 05 33 "Raceways and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.5 GROUNDING

- A. Ground metal poles and support structures according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole unless otherwise indicated.
 - 2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
 - 3. Provide a continuous grounding conductor in all exterior lighting circuits.

3.6 FIELD QUALITY CONTROL

- A. Inspect each installed luminaire for damage. Replace damaged luminaires and components.
- B. Replace all burned out or inoperative LED arrays at the end of Construction prior to Certificate of Occupancy.
- C. Advance Notice: Give dates and times for field tests.
- D. Provide instruments to make and record test results.
- E. Test as follows:
 - 1. Verify proper operation, switching and phasing of each luminaire after installation.
 - 2. Emergency Lighting: Interrupt electrical supply to demonstrate proper operation. Verify normal transfer to generator and retransfer to normal.
 - 3. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to the lighting system, retest to demonstrate compliance with standards.

F. Malfunctioning Luminaires and Components: Replace or repair, then retest. Repeat procedure until units operate properly.

G. Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.

1. Verify operation of photoelectric controls.

END OF SECTION 265600

SECTION 266000 – ELECTRICAL SYSTEMS TESTING

PART 1 – GENERAL

- A. The Contractor shall retain the services of an independent testing firm to perform International Electrical Testing Association (NETA) testing. Testing services shall be as described in this specification and shall be paid for and coordinated by the Contractor.
- B. NETA testing procedures and requirements for tested values shall be in accordance with the most current edition of the NETA Acceptance Testing Specifications.
- C. Any deficiencies or failures discovered during the NETA testing procedures shall be promptly corrected by the Contractor to ensure timely completion of the project and to minimize the time required for the independent testing firm to complete their work.
- D. Independent testing firms shall be as listed below, or approved equal.
 - A.Nat'l Field Services
 - B.Electrical Professional Consultants
 - C.Electrical Reliability Services | Vertiv

1.1 TEST REPORTS

A. Intermediate Test Reports

- 1. Intermediate test reports shall be issued by the independent testing firm immediately following each site visit. Intermediate test reports shall identify the general results of all field testing and field observations, and shall specifically identify any deficiencies, problems, or failures noted during the site visit.
- 2. Intermediate test reports shall be issued/distributed to the electrical subcontractor, the general contractor, the electrical engineer, and to the Owner. The intent of this direct communication and/or notification to multiple parties is to ensure the 'independent' function of the independent testing firm and to prevent such information from being delayed or filtered by processing it through the electrical subcontractor and/or the general contractor.

B. Final Test Report

- 1. Six copies of the final test report shall be issued by the independent testing firm following successful completion all required electrical systems testing. The final test report shall be typed, bound, and indexed, and shall include a cover page that identifies the project name, project location, and project number. The final test report shall include a separate section for each area of required testing (tests as summarized below).
 - a. Grounding Systems
 - b. Ground Fault Protection Systems

- c. Circuit Breakers (Over 100 Amps)
- d. Transformers (Dry Type)
- e. Low Voltage Feeders (up to 600 Volts) Serving Loads of 100 Amps or Greater
- f. Main Switchboard
- g. Distribution Boards

1.2 TESTING REQUIREMENTS

A. Grounding Systems

1. The following grounding system testing shall be conducted on two separate occasions, once prior to initializing electrical power for construction activities, and once when all electrical systems have been finalized.
2. Perform fall-of-potential testing of the main grounding electrode or grounding system in accordance with IEEE Standard No. 81. If suitable locations for test rods are not available, a low resistance dead earth or reference ground shall be utilized.
3. Perform point-to-point testing to determine the resistance (bonding) between the main grounding system and all major electrical equipment frames, system neutral, and/or derived neutral points.
4. Measure system neutral-to-ground insulation resistance with the neutral disconnect link temporarily removed (replace neutral disconnect link after testing).
5. This testing shall be performed at the origination point of all separately derived systems.
6. Verification shall be made that the grounding electrode system is installed per NEC at all connection points.

B. Ground Fault Protection Systems

1. Perform pickup tests utilizing primary injection. Verify that the relay does not operate at 90% of the pickup setting. Verify pickup is less than 125% of setting or 1200 amps (whichever is less).
2. On summation type systems utilizing phase and neutral current sensors verify correct polarities by applying current to each phase-neutral current transformer pair).
3. Measure time delay of the relay at 150% of pickup or greater by injecting current into the sensor. Total trip time shall be electronically monitored.
4. Verify that the reduced control voltage tripping capability is 55% of rated voltage for systems with external control power (reference UL-1053).
5. Test zone interlock systems by simultaneous sensor current injection and monitoring of zone blocking function.

C. Circuit Breakers (Over 100 Amps)

1. Test requirements apply to adjustable molded case, insulated case, and metal frame circuit breakers.
2. Measure contact resistance by millivolt drop method at rated current or by digital low resistance ohmmeter method.
3. Test insulation resistance from pole-to-pole and from pole-to-ground with breaker closed and across open contacts of each phase.

4. Adjust trip settings in accordance with coordination study.
5. Measure instantaneous pickup current by primary current injection.
6. Measure long-time pickup and delay by primary current injection.
7. Measure short-time pickup and delay by primary current injection.
8. Verify trip unit reset operation.

D. Transformers (Dry Type)

1. Test insulation resistance winding-to-winding and winding-to-ground and calculate the polarization index.
2. Test turns ratio between windings for all tap positions. Verify that winding polarities match the transformer nameplate.
3. Measure resistance of each high voltage winding in each no-load tap-changer position. Also measure resistance of each low voltage winding in each load tap-changer position (when applicable).

E. Low Voltage Feeders (up to 600 Volts) Serving Loads of 100 Amps or Greater

1. Conduct megohm (Megger) testing of shield continuity resistance utilizing a megohmmeter.
2. Test insulation resistance phase-to-ground and phase-to-phase for one minute.
3. Test voltages shall be as recommended by the feeder manufacturer (or by NETA Acceptance Testing Specification).

END OF SECTION 266000

SECTION 270500 – COMMON WORK RESULTS FOR COMMUNICATIONS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.
- B. Include all labor, materials, tools, transportation, storage costs, excavation, training, equipment, insurance, temporary protection, permits, inspections, taxes and all necessary and related items required to provide a complete and operational communications system as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 05 28: Interior Communications Pathways.
 - 3. 27 05 43: Exterior Communications Pathways
 - 4. 27 08 00: Commissioning of Communications
 - 5. 27 11 00: Communications Equipment Room Fittings
 - 6. 27 13 00: Communications Backbone Cabling
 - 7. 27 15 00: Communications Horizontal Cabling
 - 8. 27 51 13: Paging Systems
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 QUALITY ASSURANCE

- A. The Contractor installing communications cabling and termination equipment shall have a minimum of (5) years experience installing communications systems of similar size and scope.
- B. The Contractor must be licensed by the Nevada State Contractors Board.
- C. Formal, written evidence of the following shall be presented to the WCSD Project Manager during the BID process and before contract is awarded:
 - 1. The Contractor, including any subcontractor, must have BICSI® Registered Installers and Technicians on staff and assign them to the Project. The project shall be staffed at all times by Installers and Technicians who, in the role of lead craftsperson, shall be able to provide leadership and technical resources for the

remaining craftspersons on the project. At all times, a minimum of 30 percent of on-site Contractor personnel shall be BICSI® registered communications installers. The Field Supervisor must be a BICSI® Technician or RCDD.

2. If requested, the Contractor, including any subcontractor, shall show proven expertise in the implementation of communications projects including details of at least three projects involving the design and installation of Category 6 unshielded twisted-pair cabling systems and optical fiber cabling systems within the past two year period. Names, addresses, and telephone numbers of references for the three projects shall be included.
3. The Contractor shall accept complete responsibility for the design, installation, acceptance testing and certification of the Belden 10GX, 2400 and/or IBDN FiberExpress System. Objections to the design shown on the Drawings and Specifications shall be made prior to bidding the project.
4. In the event subcontractors are used for any portion of the installation or acceptance testing, The Contractor shall be responsible for any subsequent corrective action required on that portion.

D. Manufacturer Product Data Sheets

1. Submit product data sheets in electronic PDF (portable document format).
2. Provide table of contents for each submittal indicating the items being submitted. Products listed in the table of contents should be in the same order as they appear in the Specifications.
3. Provide product data sheets for all items listed in each specification section. Partial submittals will not be accepted.
4. Where product data sheets include more than one distinct item, clearly mark data sheet with arrow or other identifying means to indicate the items being submitted for approval. Delete or cross-out all non-applicable data.

E. Shop Drawings and Coordination Drawings

1. Submit shop drawings and coordination drawings in electronic PDF (portable document format).
2. Shop drawings and coordination drawings shall bear the stamp of approval of the Communications Contractor as evidence that they have checked the drawings. Drawings submitted without this stamp of approval will not be considered and will be returned for proper resubmission. All shop drawings shall be submitted as a single complete package. Partial packages will not be reviewed.
3. Shop drawings and coordination drawings must be submitted and approved prior to the installation of the work. Installation of work prior to the submittal and approval of the shop drawings will proceed at the contractor's risk.
4. See individual Division 27 specification sections for specific shop drawing and coordination drawing requirements. At a minimum, drawings shall be submitted for the following items:
 - a. Routing of conduits 2" and larger.
 - b. Routing of basket tray and or cable tray.
 - c. Routing of telecom cable pathway in telecom equipment rooms.
 - d. Layout of floor and wall mounted equipment in telecom equipment rooms.

F. Cable Test Reports

1. Submit test reports signed and dated by the technician performing the cable testing.

G. Other Submittals

1. See individual Specification Sections for requirements.

1.4 REGULATIONS AND CODE COMPLIANCE

- A. The Contractor will comply with all applicable governmental regulations including Federal, State, City, and Local applicable codes and ordinances.
- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- C. All work and materials shall conform to and be installed, inspected and tested in accordance with the governing rules and regulations of the telecommunications industry, as well as federal, state and local governmental agencies, including, but not limited to the following:

1. ANSI/TIA-568.0-E: Generic Telecommunications Cabling for Customer Premises (Revision E, March 2020).
2. ANSI/TIA-568.1-E: Commercial Building Telecommunications Infrastructure Standard (Revision E, March 2020).
3. ANSI/TIA-568.2-D: Balanced Twisted-Pair Telecommunications Cabling And Components Standards (Revision D, September 2018).
4. ANSI/TIA-568.3-D: Optical Fiber Cabling and Component Standard (Revision D, October 2016).
5. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
6. ANSI/TIA-598-D: Optical Fiber Cable Color Coding (Revision D, July 2014).
7. ANSI/TIA-606-D: Administration Standard for Telecommunications Infrastructure (Revision D, October 2021).
8. ANSI/TIA-607-D: Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises (Revision D, July 2019).
9. ANSI/TIA-758-B: Customer-Owned Outside Plant Telecommunications Infrastructure Standard (Revision B, March 2012).
10. ANSI TIA-526-7-A: Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant (Revision A, July 2015).
11. ANSI/TIA-526-14-C: Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant (Revision C, 2015).
12. ANSI/TIA-1152-A: Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling (Revision A, November 2016).
13. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
14. Underwriter's Laboratories, Inc. (UL).
15. Federal Communications Commission (FCC).
16. Americans with Disabilities Act (ADA).

1.5 DEFINITIONS

A.	Accessible Ceiling	Space above a ceiling constructed of removable tiles (clipped or unclipped). Acoustical ceiling grid with removal tiles would be considered an accessible ceiling. A gypboard ceiling would not be considered an accessible ceiling.
B.	Approved/Approval	Written permission to use a material or system.
C.	As Called For	Materials, equipment including the execution specified/shown in the Specifications.
D.	Code Requirements	Minimum requirements.
E.	Concealed	Work installed in pipe and duct shafts, chases or recesses, inside walls, above ceilings, in slabs or below grade.
F.	Exposed	Work not identified as concealed.
G.	Final Acceptance	Owner acceptance of the project from the Contractor upon certification by the Owner's Representative.
H.	Furnish	Supply and deliver to installation location.
I.	Furnished by Others	Receive delivery at job site or where called for and install.
J.	Inspection	Visual observations by Owner or Owner's Representative.
K.	Install	Mount and connect equipment and associated materials ready for use.
L.	Listed	Refers to classification by a standards agency.
M.	Or Approved Equal	Approved equal or equivalent as determined by Owner or Owner's Representative.
N.	Owner's Representative	Design professional or Consultant representing the Owner.
O.	Provide	Furnish, install and connect ready for use.
P.	Relocate	Disassemble, disconnect, and transport equipment to new locations: then clean, test, and install ready for use.
Q.	Replace	Remove and provide new item.
R.	Review	A general contractual conformance check of specified products.

- S. Satisfactory As specified in Specifications.

1.6 INTENT OF DRAWINGS

- A. All drawings are diagrammatic unless otherwise noted as detailed dimensioned drawings. Drawings show approximate locations of equipment and devices. Exact locations are subject to the approval of the Owner or Owner's Representative. The Contractor shall verify dimensions and shall be responsible for their accuracy
- B. Items mentioned in the Specifications and not shown in the Drawings, or shown in the Drawings and not mentioned in the Specifications, shall be of like effect as if shown and mentioned in both. In the case of differences between the Drawings and the Specifications, the stricter provision as determined by the Owner or Owner's Representative shall govern.
- C. Omissions from the Drawings or Specifications, or the incorrect description of details of Work which are necessary to carry out the intent of the Drawings and Specifications, or work which is customarily performed, shall not relieve the Contractor from performing such omitted or incorrectly described work.
- D. No exclusion from, or limitations in, the language used in the Project Documents shall be interpreted as meaning that ancillary or accessory items necessary to complete any required system or item of equipment are to be omitted.

1.7 REVIEW OF SPECIFICATIONS

- A. The Contractor shall carefully study and compare the Drawings and Specifications. Any error, inconsistency or omission discovered shall be immediately reported to the Owner or Owner's Representative. If the Contractor performs any construction activity knowing it involves a recognized error, inconsistency or omission without such notice to the Owner or Owner's Representative, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the cost for any correction.

1.8 EXAMINATION OF THE PREMISES

- A. The Contractor shall visit the Site to become familiar with the local conditions under which the work is to be performed and correlate the observations with the requirements of the Drawings and Specifications. No allowance will be made for claims of concealed conditions which the Contractor learned or should have learned in exercising due diligence in its observations of the site and review of the local conditions.
- B. Before ordering any materials or performing any work, the Contractor shall coordinate the installation with the work of other trades and shall verify all measurements. No extra charge or compensation will be allowed for duplicate work or material required because of an unverified difference between an actual dimension and the measurement indicated in the Drawings. Any discrepancies found shall be submitted in writing to the Owner or Owner's Representative for consideration before proceeding with the work.

1.9 COORDINATION OF TELECOM CABLING PATHWAYS AND TELECOM EQUIPMENT ROOMS

- A. The telecom drawings are diagrammatic in depicting the routing of communications pathways and the layout of communications equipment.
- B. The contractor shall coordinate the installation of all telecom work with the work of other trades including Mechanical, Electrical, Plumbing, Sprinkler, Structural and Architectural.
- C. The contractor shall participate in coordination meetings with other trades prior to the installation of the work. For a specific space/area, the telecom contractor shall coordinate the routing and installation of all telecom work with all other trades that have work in that specific space/area.
- D. Prior to the installation of telecom cabling pathway including conduit, basket tray, cable tray, ladder rack, sleeves, etc., the contractor shall coordinate the routing of this pathway to avoid conflicts with and provide necessary clearances from the work of other trades. The contractor shall provide all horizontal offsets, vertical offsets and radius bends as necessary to coordinate the routing of the telecom pathway with the work of other trades and building structure.
- E. Prior to the installation of equipment and/or cabling in the communication rooms, the contractor shall coordinate the layout of all equipment and cable pathways. The contractor shall submit shop drawings for approval of each room. At a minimum, the following information shall be included on the shop drawings:
 - 1. Layout of all floor mounted equipment including racks, cabinets and uninterruptible power supplies. Drawings shall show the required clearances with dimensions in the front, rear and side of all floor and wall mounted equipment.
 - 2. Layout of all floor mounted sleeves and cable openings.
 - 3. Layout of horizontal and vertical ladder rack.
 - 4. Layout of light fixtures, HVAC equipment and ductwork serving the room. Coordinate the layout of this equipment with the overhead cable pathways.
 - 5. Provide elevations of each wall showing the location of all wall mounted equipment including racks, ground bars, electrical panels, electrical outlets, wall mounted termination equipment, cable slack storage rings, security panels, etc.

1.10 WARRANTY AND SERVICES

- A. The installed Belden 10GX, 2400, and/or FiberExpress System shall be covered by a certification program provided by BELDEN/CDT and the Certified System Vendor (Contractor).
- B. All Contractor-installed cabling shall be certified as per BELDEN/CDT requirements for the Belden 10GX, System 2400, and/or FiberExpress System. Any requirements for Belden Certification not specified within the Plans and Specifications but necessary for certification are assumed.
- C. Lifetime Application Assurance

1. Belden certification shall provide the assurance that all present and future applications engineered for the performance level of the cabling system used shall work for the lifetime of the certified Belden 10GX, System 2400, and/or FiberExpress System.
 2. Should the certified Belden 10GX, System 2400, or FiberExpress System fail to support the application(s) designed to operate over it—whether at the time of cutover to the new cabling system, during subsequent use, or after upgrading to a newer supported application (for example, to a Gigabit Ethernet or an ATM network from a lower-speed network environment)—BELDEN/CDT and The Certified System Vendor (Contractor) shall take prompt corrective action.
- D. 25-Year Product Warranty
1. Belden certification shall provide a twenty-five (25) year product warranty for all Belden passive components used in the installed Belden 10GX, System 2400, and/or FiberExpress System. Defective and/or improperly installed products shall be replaced and/or correctly installed at no cost to the Owner.

PART 2 – PRODUCTS

2.1 EQUIPMENT AND MATERIALS MINIMUM REQUIREMENTS

- A. Electrical equipment and systems shall meet UL Standards and requirements of the National Electric Code. This listing requirement applies to the entire assembly. Any modifications to equipment to suit the intent of the Specifications shall be performed in accordance with these requirements.
- B. Equipment shall meet all applicable FCC Regulations.
- C. All materials, unless otherwise specified, shall be new and be the standard products of the manufacturer. Used equipment or damaged material will be rejected.
- D. The listing of a manufacturer as “acceptable” does not indicate acceptance of a standard or cataloged item of equipment. All equipment and systems must conform to the Specifications.

2.2 WORKMANSHIP, SUBSTITUTIONS, WARRANTY

- A. Materials and workmanship shall meet or exceed industry standards and be fully guaranteed for a minimum of one (1) year from the date of final acceptance. Cable integrity and associated terminations shall be thoroughly inspected, fully tested and guaranteed free from defects, transpositions, open shorts, tight kinks, damaged jacket insulation, etc.

- B. Refer to the individual Division 27 Specifications for additional and/or extended warranty requirements.
- C. All labor must be thoroughly competent, skilled and trained, and all work shall be executed in strict accordance with the best practice of the trades.
- D. The Contractor shall be responsible for and make good, without expense to the Owner, any and all defects arising during this warranty period that are due to imperfect materials, improper installation or poor workmanship.
- E. After the Contract is awarded, requests to substitute for specified materials shall be submitted by the Contractor to the Owner or Owner's Representative within thirty (30) days, complete with reasons for the substitution and savings which accrue to the Owner if the substitutions are approved. Substitutions after Contract award will be considered only if the substitutions are equal or superior to the products specified.
- F. No material substitutions will be allowed except by written acceptance from the Consultant. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples are provided.
- G. Approval of alternate or substitute equipment or material in no way voids the Specification requirements.
- H. Under no circumstances shall the Owner be required to prove that an item proposed for substitution is not equal to the specified item. It shall be mandatory that the Contractor submit to the Owner or Owner's Representative all evidence to support the contention that the item proposed for substitution is equal to the specified item. The Owner's decision as to the equality of substitution shall be final and without further recourse.

2.3 FACTORY ASSEMBLED PRODUCTS

- A. Manufacturers of equipment assemblies that include components made by others shall assume complete responsibility for the final assembled unit.
 - 1. All components of an assembled unit need not be products of the same manufacturer.
 - 2. Component parts, which are alike, shall be from a single manufacturer.
 - 3. Components shall be compatible with each other and with the total assembly for the intended service.
 - 4. Components of equipment shall bear the manufacturer's name or trademark model number and serial number on a name plate securely affixed in a conspicuous place, or cast integral with, stamped or otherwise permanently marked upon the components of the equipment.
- B. Major items of equipment that serve the same function must be the same make and model.
- C. Equipment and materials installed shall be compatible in all respects with other items being furnished and with existing items so that a complete and fully operational system

will result.

- D. Maximum standardization of components shall be provided to reduce spare part requirements.

PART 3 – EXECUTION

3.1 ROUGH-IN

- A. Before construction work commences, the Contractor shall visit the site and identify the exact routing of horizontal and backbone cable pathways.
- B. All equipment locations and cabling pathway shall be coordinated with other trades and existing conditions to eliminate interference with required clearances for equipment maintenance and inspections.
- C. Coordinate work with other trades and existing conditions to determine exact location of equipment and routing of cable pathways.
 - 1. Where more than one trade is involved in an area, space or chase, all shall cooperate and install their own work to utilize the space equally between them in proportion to their individual requirements. If, after installation of any equipment, piping, ducts, conduit, etc., it is determined that adequate space has not been provided for passage or maintenance, rearrange the work. Any changes in the size or location of the material or equipment supplied or proposed, which may be necessary in order to meet field conditions or in order to avoid conflicts between trades, shall be brought to the immediate attention of the Owner's Representative and approval received before such alterations are made.
- D. Provide easy, safe and code mandated clearances at equipment racks and enclosures.

3.2 CUTTING, CORING AND PATCHING

- A. The Contractor shall be responsible for all cutting, patching, coring and associated work to complete the communications cabling pathway system.
- B. Protect existing finishes from water damage during core/cutting work and cleanup all related water and debris. Patch adjacent work disturbed by installation of new work including insulation, walls and wall covering, ceiling and floor covering or other finished surfaces.
- C. Contractor to submit all proposed concrete wall or floor penetrations to the Structural Engineer for approval prior to performing the work. Contractor shall locate and avoid cutting concrete reinforcing steel using current x-ray or pachometer equipment.

3.3 FIRESTOPPING

- A. All penetrations through fire-rated building structures (walls and floors) shall be sealed with an appropriate fire stop system. This requirement applies to through penetrations (complete penetration) and membrane penetrations (through one side of a hollow fire rated structure). Any penetrating item i.e., riser slots and sleeves, cables, conduit, cable tray, and raceways, etc. shall be properly fire stopped.
- B. Firestopping assemblies shall meet or exceed the rating of the wall or floor being penetrated.
- C. Fire stopping References:
 - 1. ASTM E814, Standard Method of Fire Tests of Through-Penetration Fire Stops.
 - 2. ASTM E 119, Fire Tests of Building Construction and Materials (for fire-rated architectural barriers).
 - 3. 2002 NFPA National Electrical Code, Section 800-52, Paragraph 2(b), Spread of Fire and Products of Combustion.

3.4 CONCEALMENT

- A. Telecom cabling pathways including conduit, sleeves and tray shall be concealed above ceilings, in walls, below slabs, and elsewhere throughout building. If concealment is impossible or impractical, or in areas without ceilings, the Owner's Representative shall be notified of the proposed routing prior to starting that portion of the work.
- B. All telecom cabling must be routed concealed above accessible ceilings or in conduit. No exposed telecom cabling is permitted with the exception of telecom cabling routed within the telecom rooms.

3.5 CONDUIT SEALING

- A. The Contractor shall seal all foundation penetrating conduits and all service entrance conduits and sleeves to eliminate the intrusion of moisture, gases and rodents into the building. This requirement also applies to spare conduits.
- B. Spare conduits shall be plugged with expandable plugs.
- C. All service entrance conduits shall be sealed or resealed after cable installation.

3.6 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate ordering and installation of all equipment with long lead times or having a major impact on work by other trades so as not to delay the job or impact the schedule.
- B. Where mounting heights are not dimensioned, install systems, materials and equipment to provide the maximum headroom possible.

- C. Set all equipment to accurate line and grade, level all equipment and align all equipment components.
- D. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery of equipment and apparatus furnished into the premises.
- E. No equipment shall be hidden or covered up prior to inspection by the Owner's Representative. All work that is determined to be unsatisfactory shall be corrected immediately.
- F. All work shall be installed level and plumb, parallel and perpendicular to other building systems and components.
- G. The Contractor shall replace all ceiling tiles damaged by work performed as part of the communications contract.
- H. Storage and security of material and equipment shall be the responsibility of the Contractor.

END OF SECTION 270500

SECTION 270528 – INTERIOR COMMUNICATION PATHWAYS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.
- B. The Contractor shall provide all equipment, materials, labor, and services necessary to complete interior communication pathways and to ensure that the pathways are in compliance with requirements stated or reasonably inferred by this Specifications, and the Constructions Drawings.
- C. This section includes minimum requirements for communication pathways for horizontal and backbone cabling.
- D. This section includes minimum requirements for the following
 - 1. Conduit
 - 2. Sleeves
 - 3. Wire Cable Tray
 - 4. Pull Boxes
 - 5. Velcro Tie Wraps
 - 6. Cable Hangers (J-Hooks)
 - 7. Measuring Tape and Pull String
 - 8. Innerduct
 - 9. Fire Stop

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 11 00: Communications Equipment Room Fittings
 - 3. 27 13 00: Communications Backbone Cabling
 - 4. 27 15 00: Communications Horizontal Cabling
 - 5. 27 51 13: Paging Systems
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of 27 01 00 1.4 and in particular the following code requirements
 - 1. ANSI/TIA-568.0-E: Generic Telecommunications Cabling for Customer Premises (Revision E, March 2020).
 - 2. ANSI/TIA-568.1-E: Commercial Building Telecommunications Infrastructure Standard (Revision E, March 2020).
 - 3. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
 - 4. ANSI/TIA-607-D: Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises (Revision D, July 2019).
 - 5. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 - 6. Underwriter's Laboratories, Inc. (UL).

1.4 QUALITY ASSURANCE

- A. All pathways and associated equipment shall be installed in a neat and workmanlike manner. Conduit, J-hooks, cable tray and pull boxes shall be installed and properly coordinated with other trades so that they are fully accessible for installation and pulling of cable. All methods of construction that are not specifically described or indicated in the Specifications shall be subject to the control and approval of the Owner's Representative.

1.5 SUBMITTALS

- A. The Contractor shall provide product manufacturers data sheets for the following Items
 - 1. Cable Tray.
 - 2. Velcro tie wraps.
 - 3. Measuring tape / pull string.
 - 4. Innerduct.
 - 5. Firestop.
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.
- C. Shop drawings indicating the proposed layout and elevation of the following items shall be submitted for review and approval. Shop drawings shall be coordinated with the work of other trades.
 - 1. Cable tray.
 - 2. Conduit 2" and larger.
 - 3. Pull boxes.
 - 4. Main J-Hook runs.
 - 5. Sleeves.
- D. As-built drawings shall be submitted at the completion of the project showing the actual routing and location of the following items:

1. Cable Tray.
2. Conduit 2" and larger.
3. Pull boxes.
4. Sleeves
5. Main J-Hook runs.

PART 2 – PRODUCTS

2.1 CONDUITS

- A. See Electrical Specifications for additional raceway and j-box products and additional requirements.
- B. Install conduit where shown on the drawings.
- C. All backbone fiber and copper telecom cabling shall be installed in conduit.
- D. Conduit shall be routed concealed unless otherwise noted on the drawings.
- E. Install conduit for routing of horizontal telecom cabling where cable is routed through inaccessible areas including but not limited to walls, floors, chases, above gypboard or plaster ceilings, etc. Provide access doors as required to provide reasonable access for the installation of telecom cabling in inaccessible ceiling and wall spaces.
- F. Install conduit for routing of horizontal telecom cabling where cabling is routed in areas subsequent to damage including mechanical and electrical rooms.
- G. Install conduit for routing of horizontal telecom cabling in areas without ceilings or exposed to structure.
- H. Install ground bushing on the ends of conduit at telecommunication rooms. Install a #6 green insulated ground conductor from the ground bushing to the grounding bar in the telecommunication room.
- I. At each wall or ceiling mounted telecom outlet, the contractor shall install a 4 11/16" wide by 4 11/16" high by 2 1/2" deep box with 1" conduit (UON) to an accessible ceiling space. Where the conduit stubs into an accessible ceiling space, install a plastic bushing on the end of the conduit to prevent damage to the cable jacket.
- J. Where conduit penetrations are exposed in finished areas, install steel, chrome plated split ring escutcheon plates.
- K. At all exterior locations or in areas subject to damage, install rigid or IMC conduit. Exposed conduit shall be painted to match existing surfaces.

2.2 WIRE CABLE TRAY

- A. Provide wire cable tray where shown on the drawings meeting the following specifications:
 - 1. UL Classified.
 - 2. 12" width x 4" depth, 18" width x 4" depth and 24" width x 4" depth. See plans for sizes.
 - 3. Constructed of high strength steel wires formed into 2 inch by 4 inch wire mesh pattern.
 - 4. Continuous welded construction.
 - 5. Yellow Zinc Dichromate finish meeting ASTM B633 SC2.
- B. The wire cable tray routing shown on the drawings is diagrammatic. Prior to the installation of wire cable tray, the contractor shall coordinate the routing to avoid conflicts with and provide necessary clearances from the work of other trades. The contractor shall provide all horizontal offsets, vertical offsets and radius bends as necessary to coordinate the routing of the wire cable tray with the work of other trades and building structure.
- C. The basket tray shall be designed of adequate strength to support the entire volume of the tray filled with horizontal 4-pair UTP communications cables.
- D. Provide Manufacturer's splice connections between all sections of tray. Provide quantity of splice connectors as required by the Manufacturer. Splice connectors shall provide a continuous ground path for the tray in accordance with the NEC. All splicing assemblies shall be bolted with serrated flange lock nuts.
- E. Provides "T" sections and radius bends in the basket tray at all perpendicular tray intersections.
- F. Provide grounding jumpers to bond discontinuous sections of the wire cable tray. At transitions between the cable tray and conduit/sleeves, install ground bushings on the conduit/sleeves and install a #6 ground wire to bond the cable tray to the conduit/sleeves.
- G. Wire cable tray shall be supported using a trapeze system consisting of horizontal 1 5/8" Unistrut and two 3/8" threaded rods. Install "drop-in" anchors, wedge anchors and beam clamps to support the threaded rod from the building structure. Space supports per manufacturer's requirements but not to exceed 8'-0" on center.
- H. Provide Unistrut lateral and longitudinal bracing every 40'-0", at 90 degree turns, and where required by local building codes. Provide rod stiffeners as necessary.
- I. Installed wire cable tray shall have rounded edges and smooth surfaces to prevent damage to cable jackets.
- J. Provide radius corners at all 90 degree bends, tees and crosses.
- K. Acceptable products:

1. Cooper B-Line WB400 Series (WB412, WB418 and WB424 tray and associated connectors, splices, supports, etc).
2. Cablofil CF 105 series (CF 105/300, CF 105/450 and CF 105/600 tray and associated connectors, splices, supports, etc).
3. Chatsworth OnTrac Wire Mesh Cable Tray System (CPI P/N's 34821-512, 34821-518 and 34821-524 and associated connectors, splices, supports, etc).
4. Or approved equal.

2.3 SLEEVES

- A. Contractor shall provide sleeves as shown on the drawings and as required to route telecom cabling through floor, ceiling and wall penetrations.
- B. Contractor shall provide size and quantity of sleeves so as not to exceed 20% fill ratio and to accommodate future telecom cabling.
- C. See the Electrical Specifications for acceptable products and additional requirements.
- D. Provide 4" vertical steel sleeves where shown on the drawings and to accommodate conduit or cable routing through floor slabs. Sleeves shall extend 6 inches above and below the floor slab and shall be cast into the concrete. Where sleeves are core drilled into the concrete, install firestopping material between the sleeve and the floor slab to maintain the floor rating. Provide plastic or nylon bushings on both sides of sleeves to prevent damage to cabling.
- E. Provide 4" horizontal sleeves where shown at telecom rooms or rated walls to accommodate routing of horizontal cabling from the corridors. Sleeves should extend 2" beyond the wall on both sides. Provide plastic or nylon bushings on both sides of sleeves to prevent damage to cabling.
- F. Install split sleeves (not shown on the drawings) to accommodate routing of horizontal cabling through non-rated full height gypboard walls. Sleeves shall be sized so as not to exceed a 20% fill rate.
- G. Provide separate sleeves for routing of CAT 6 and CAT 6A cabling.
- H. Install firestopping between the sleeve and structure, and between the telecom cables and the sleeve to maintain the wall rating.
- I. Where sleeve penetrations are exposed in an architectural finished area, install chrome plated steel split ring escutcheon plates.

2.4 PULL BOXES

- A. See the Electrical Specifications for additional pull box requirements and acceptable manufacturers.
- B. Provide pull boxes where shown on the drawings to accommodate copper backbone cable splices.

- C. Provide pull boxes in backbone cabling conduit every 100 feet and every 180 degrees of bend (whichever is the more strict provision) to facilitate pulling of backbone cabling.
- D. Pull boxes shall be sized so as not to exceed the minimum bend radius of the backbone fiber and copper cabling.
- E. Coordinate location of pull boxes with other trades. Provide access doors where required to access pull boxes in inaccessible wall or ceiling spaces.

2.5 CABLE HANGERS (J-HOOKS) AND SUPPORTS

- A. Provide cable hangers (J-hooks) spaced at 5'-0" centers to support horizontal cable from the workstation outlet to the cable tray.
- B. Hangers shall be prefabricated, zinc coated, carbon steel hangers designed specifically for 4-pair UTP communications cabling installations.
- C. Hangers shall have an open top and rolled edges. Hangers shall have a minimum 2" and maximum 4" diameter loop.
- D. Hangers shall be supported directly from the building structure. The Contractor shall provide anchors, beam clamps, threaded rod, rod fasteners, flange clips and brackets as needed to support the cable hangers from the building structure. Do not attach hangers to ceiling support wires or other support systems installed by other building trades.
- E. J-hooks shall not support more cables than recommended by the manufacturer. J-hooks shall be sized to provide a minimum 20 percent spare capacity.
- F. Cable bundles shall not exceed (24) cables and shall be loosely bound with Velcro cable straps.
- G. Acceptable Products
 - 1. Erico Caddy CableCat Clips.
 - 2. B-Line Cable Hook System.
 - 3. Panduit J-Pro Cable Support System.
 - 4. Or approved equal.

2.6 VELCRO CABLE STRAPS

- A. Install Velcro cable ties cut to length from a continuous roll to loosely bundle horizontal cabling routed down J-hook lines, on the cable tray and ladder rack.
- B. Install Velcro cable ties at 2'-0" intervals outside of the telecom room and 1'-0" intervals inside the telecom room.
- C. Do not exceed qty (24) cables per bundle.
- D. Provide plenum rated Velcro tie wraps where cable is routed in plenum spaces.

E. The use of plastic tie-wraps to bundle cabling is not permitted.

F. Acceptable Products

1. Panduit HLS-15R6 or HLSP (plenum rated).
2. Leviton 43115-075.
3. Or approved equal.

2.7 MEASURING TAPE AND PULL STRING

A. Install pull string in all telecom conduit and innerduct. Pull string shall be ½" pre-lubricated high strength woven polyester with sequential foot markings. The tensile strength of the pull string shall be greater than or equal to 1,250 lbs.

B. Pull string shall meet or exceed the requirements of Bellcore GR-356-CORE "Generic Requirements for Optical Cable Innerduct and Accessories".

C. Acceptable Products

1. Carlon TL145xx.
2. A-D Technologies Bull-Line WP12xx.
3. Or approved equal.

2.8 INNERDUCT

A. Provide multi-cell fabric innerduct where shown on the drawings and for installation of backbone fiber and copper cabling.

B. Innerduct should be terminated at the conduit entrance in the telecom rooms and secured to the plywood backboard.

C. Provide fabric innerduct size and cell count as shown on the drawings.

D. Acceptable Products

1. Maxcell Fabric Innerduct
2. No Known Equal.

2.9 FIRE STOPPING

A. Provide fire stopping and backing material between sleeves/conduit penetrations through rated partitions or floors. Provide fire stopping in sleeves/conduits after all cables have been installed.

B. The minimum required fire resistance ratings of the wall or floor assembly shall be maintained by the fire stop system. The installation shall provide an air and watertight seal.

C. Fire stopping shall be listed or classified by an approved independent testing laboratory. The system shall meet the requirements of "Fire Tests of Through-Penetration Fire

Stops” designated ASTM E814.

- D. Manufacturer’s recommended installation standards shall be closely followed (i.e. minimum depth of material, use of ceramic fiber and installation procedures).
- E. For each firestopping system on the project, submit the page from the UL fire resistance directory showing the firestopping system.
- F. Acceptable Manufacturers:
 - 1. 3M.
 - 2. Hilti.
 - 3. Nelson.
 - 4. Specified Technology.
 - 5. Or approved equal.

PART 3 – EXECUTION

3.1 CONCEALMENT

- A. Telecom cabling pathways including conduit, sleeves and cable tray shall be concealed above ceilings, in walls, below slabs, and elsewhere throughout building. If concealment is impossible or impractical, or in areas without ceilings, Contractor shall submit proposed routing of the raceway for review and approval prior to starting that portion of the work.
- B. All telecom cabling must be routed concealed above accessible ceilings or in conduit. No exposed telecom cabling is permitted with the exception of telecom cabling routed within the telecom rooms.

3.2 COORDINATION DRAWINGS

- A. The telecom drawings are diagrammatic in depicting the routing of telecom cabling pathways.
- B. The contractor shall coordinate the installation of all telecom pathways with the work of other trades including Mechanical, Electrical, Plumbing, Sprinkler, Structural and Architectural.
- C. The contractor shall participate in coordination meetings with other trades prior to the installation of telecom cabling pathways. For a specific space/area, the telecom contractor shall coordinate the routing of telecom pathways with all other trades that have work in that specific space/area.
- D. Prior to the installation of telecom cabling pathway including conduit, basket tray, cable tray, ladder rack, sleeves, etc., the contractor shall coordinate the routing of this pathway to avoid conflicts with and provide necessary clearances from the work of other trades. The contractor shall provide all horizontal offsets, vertical offsets and

radius bends as necessary to coordinate the routing of the telecom pathway with the work of other trades and building structure.

3.3 COMMUNICATION PATHWAYS

- A. Prior to cable installation, the Contractor shall verify that the telecommunications pathways are installed as specified in the Drawings and Specifications. Any variations or violations from these documents shall be immediately reported to the Owner's Representative. No portion of the Structured Cabling System shall be installed in any component of the Telecommunications Pathways and Spaces which deviates from these documents. All cabling designated on the Blueprints as terminating within a specific Telecom Room shall be installed as such unless otherwise specified in writing by the Owner's Representative.
- B. Cabling for other trades shall not occupy any pathway utilized for telecommunications cabling.
- C. The cable tray shall be installed so that a minimum of 6" clear space is maintained above the top of the tray to facilitate cable installation. The contractor shall coordinate the routing of the cable tray with other trades so that plumbing piping, fire sprinkler piping, ductwork, conduits, etc are not routed within the 6" clear space above the tray.
- D. Where the routing of telecom pathways conflicts with the work of other trades, the telecom contractor shall reroute the telecom pathway (cable tray, conduit, sleeves, etc.) as required to eliminate the conflict.
- E. The drawings are diagrammatic and provide a general routing for conduit, J-hooks and cable tray. The Contractor shall coordinate the exact routing of the communication raceway systems with other trades and the building structure. Access doors shall be installed as necessary to provide access for cable installation, inspection and maintenance.
- F. Install conduit where shown on the drawings or as required to route telecom cabling in inaccessible ceiling or wall spaces. Install conduit to protect cable where routed through areas subject to damage including mechanical and electrical rooms.
- G. Cable pathways including conduit, cable tray, sleeves, and J-hooks shall be sized for 20% fill capacity.
- H. When installing conduit, J-hooks and cable tray, the Contractor shall maintain the following minimum clearance from sources of electro-magnetic interference (EMI).
 - 1. 6" clear from power conductors.
 - 2. 12" clear from fluorescent lighting fixtures and ballasts.
 - 3. 36" clear from transformers and motors.
- I. Provide all items necessary for the support and seismic bracing of conduit and cable tray including concrete anchors, clamps, brackets, hanger rods, rod stiffeners, unistrut, splice plates, couplers, expansion joint assemblies, etc.

- J. The conduit and cable tray system shall provide a continuous ground path per the National Electrical Code. Conduit and tray shall be bonded to ground at the telecom rooms. All sections of the backbone conduit and tray shall be mechanically fastened and bonding jumpers shall be installed as necessary to provide continuous ground path.
- K. In order to maximize floor and wall space in the telecom rooms, all conduit must be stubbed into the room above the ladder rack UON. Conduits shall not be stubbed up through the floor slab unless specifically shown on the drawings.

3.4 SLEEVES

- A. Install sleeves through walls and floors as required to route horizontal and backbone telecom cabling.
- B. Firestop all penetrations through rated or acoustical walls. Firestop assemblies shall meet or exceed the rating of the walls or floors being penetrated.
- C. Coordinate layout and installation of concrete wall and floor sleeves prior to concrete pours. Contractor is responsible for providing, installing, securing and covering sleeves. The contractor shall have field personnel on site during concrete pours to ensure that sleeves are not dislodged or moved during concrete pours. Contractor will be responsible for core drilling costs related to missed or improperly located sleeves.
- D. Provide sleeves for penetration of all gypboard walls. Layout wall penetrations as directed by the General Contractor and provide split sleeves to the framing contractor for installation.
- E. Where sleeves are installed more than 24" above the overhead ladder rack in the telecom rooms, install wall mounted vertical ladder rack below the sleeves to support cabling.
- F. Provide separate sleeves for routing of CAT 6 and CAT 6A cabling.

3.5 CUTTING, CORING AND PATCHING

- A. The Contractor shall be responsible for all cutting, patching, coring and associated work to complete the telecommunications cabling pathway system.
- B. Protect existing finishes from water damage during core/cutting work and cleanup all related water and debris. Patch adjacent work disturbed by installation of new work including insulation, walls and wall covering, ceiling and floor covering or other finished surfaces.
- C. Contractor to submit all proposed concrete wall or floor penetrations to the Structural Engineer for approval prior to performing the work. Contractor shall locate and avoid cutting concrete reinforcing steel using current x-ray or pachometer equipment.

3.6 CABLE HANGERS

- A. Secure cable tray and J-hook hanger supports directly to the building structure. Hangers shall not be supported from the work of other trades including ceiling supports, electrical conduits, plumbing pipes, sprinkler piping, ductwork, ceiling mounted equipment or their supports unless it is part of an engineered system.
- B. Install J-hooks on a maximum of 5'-0" centers. Install J-hooks a minimum of 6" above ceiling tiles to facilitate ceiling tile removal.

END OF SECTION 270528

SECTION 270543 – EXTERIOR COMMUNICATION PATHWAYS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. The Contractor shall provide all equipment, materials, labor, and services necessary to complete the exterior communication pathways and to ensure that they are in compliance with requirements stated or reasonably inferred by the Specifications and the Construction Drawings.
- B. This section includes requirements for underground conduit and communication vaults as shown on the Telecom Site Plans.
- C. Minimum requirements and installation methods are included for the following:
 - 1. PVC and Rigid Conduit.
 - 2. Precast Concrete Hand Holes and Covers 10" Wide x 17" Long (Non Traffic Rated).
 - 3. Precast Concrete Hand Holes and Covers 13" Wide X 24" Long (Non Traffic Rated).
 - 4. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (Non Traffic Rated).
 - 5. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (H-20 Traffic Rated).
 - 6. Precast Concrete Pull Boxes and Covers 30" Wide X 48" Long (Incidental H-20 Traffic Rated).
 - 7. Precast Concrete Pull Boxes and Covers 36" Wide X 60" Long (H-20 Traffic Rated).
 - 8. Multi-cell fabric innerduct.
 - 9. Pull rope.
 - 10. Waterproofing.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 05 43: Exterior Communications Pathways
 - 3. 27 11 00: Communications Equipment Room Fittings
 - 4. 27 13 00: Communications Backbone Cabling
 - 5. 27 15 00: Communications Horizontal Cabling
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 01 00 1.4 and in particular the following code requirements:
 - 1. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
 - 2. ANSI/TIA-606-D: Administration Standard for Telecommunications Infrastructure (Revision D, October 2021).
 - 3. ANSI/TIA-607-D: Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises (Revision D, July 2019).
 - 4. ANSI/TIA-758-B: Customer-Owned Outside Plant Telecommunications Infrastructure Standard (Revision B, March 2012).
 - 5. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 - 6. Underwriter's Laboratories, Inc. (UL).

1.4 SUBMITTALS

- A. Manufacturer's Data Sheets: Provide data sheets for the following products:
 - 1. PVC and Rigid Conduit.
 - 2. Precast Concrete Hand Holes and Covers 10" Wide x 17" Long (Non Traffic Rated).
 - 3. Precast Concrete Hand Holes and Covers 13" Wide X 24" Long (Non Traffic Rated).
 - 4. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (Non Traffic Rated).
 - 5. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (H-20 Traffic Rated).
 - 6. Precast Concrete Pull Boxes and Covers 30" Wide X 48" Long (Incidental H-20 Traffic Rated).
 - 7. Multi-cell fabric innerduct.
 - 8. Pull rope.
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.
- C. As-Built Drawings: Provide as-built drawings for the outside plant conduit and vaults. Drawings must be dimensioned off of building lines or curbs indicating the exact routing of the conduit and location of vaults.

PART 2 – PRODUCTS

2.1 PVC CONDUIT

- A. Provide PVC conduit as shown on the Site Plan. Conduit shall be rated for direct burial, ultraviolet resistant, and conforming to UL Standard 651, NEC 347, Federal Specification W-C-1094A, Schedule 40 or Schedule 80 as specified on drawings.

- B. PVC fittings shall be the same material as conduit and installed with watertight joint compound recommended by manufacturer.
- C. Install pre-manufactured conduit supports and spaces spacers as required to maintain proper conduit separation between multiple conduits routed in a trench.
 - 1. Acceptable PVC Conduit manufactured by:
 - a. Carlon
 - b. Queen City Plastics
 - c. Certaineed Corporation
 - d. Pacific Western Extruded Plastics
 - e. Georgia Pipe Company
 - f. Hubbell Incorporation
 - g. Cantex Incorporation
 - h. Triangle

2.2 RIGID METAL CONDUIT

- A. The PVC conduit shall transition to rigid metal conduit a minimum of 10 feet from the building foundation. Rigid metal conduit shall be routed from that point to the stub up location in the building.
- B. Conduit stub-ups in the telecom rooms shall be vinyl coated rigid steel.
- C. Rigid metal galvanized steel conduit (RMC) shall conform to Federal Specification WW-C-581E, NEC Article 346, ANSI Standard C80.1 and U.L. Standard No. 6 for rigid metallic conduit, except hot dipped galvanized after threading.
- D. Fittings, sweeps, couplings, etc., shall be galvanized threaded type meeting above standards. Threadless fittings shall not be used.
 - 1. Acceptable RMC Manufacturers:
 - a. Allied Tube and Conduit Corporation
 - b. LTV Steel Tubular Productions Co.
 - c. Midwest Electric-Cooper Industries
 - d. Wheatland Tube Company
 - e. Western Tube and Conduit Corp.
 - f. Triangle Wire and Cable Inc.
 - 2. Acceptable Bushing Manufacturers:
 - a. Appleton
 - b. Thomas & Betts
 - c. OZ/Gedney
 - d. Midwest
 - e. Steel City

2.3 MULTI-CELL FABRIC INNERDUCT

- A. Provide UL Listed fabric innerduct for routing of all backbone copper and fiber optic communications cabling between the MDF and all IDF.

- B. Provide qty (1) 2" 3-Cell MaxCell fabric innerduct "packs" in each 2" conduit between the MDF and the IDF's.
- C. The MaxCell innerduct shall be terminated at the entry point of the telecom rooms and secured to the plywood backboard. 1 1/4" non-split orange corrugated innerduct shall be installed to route fiber optic backbone cabling from this point to the fiber termination cabinet(s).
- D. Acceptable Products:
 - 1. MaxCell Edge 2" 3-Cell Part Number MXE52223xx1000 (for installation in 2" conduits).
 - 2. No Substitutions accepted.

2.4 PULL ROPE

- A. Pull rope shall be installed within each outside plant conduit and within each innerduct.
- B. Pull rope shall be secured to the plywood backboard at the telecom rooms and to the unistrut racking in the pull boxes.
- C. Provide 3/8" nylon pull rope with sequential foot markings.

2.1 TELECOM HAND HOLES AND COVERS (10" WIDE X 17" LONG) NON-TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Provide 10" wide x 17" long x 12" deep reinforced concrete pull box.
- C. Provide qty (2) 10" wide x 17" long x 12" deep reinforced concrete extensions.
- D. Provide reinforced concrete lockable bolt down lid.
- E. Provide additional reinforced concrete extensions as required to maintain conduit depth as shown on the drawings.
- F. Acceptable Products:
 - 1. Jensen Precast HN1017-B pull box, HN1017-E Extension and HN1017-L01 Lid.
 - 2. Or Approved Equal.

2.2 TELECOM HAND HOLES AND COVERS (13" WIDE X 24" LONG) NON-TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.

- B. Provide 13" wide x 24" long x 12" deep reinforced concrete pull box.
- C. Provide qty (2) 13" wide x 24" long x 12" deep reinforced concrete extensions.
- D. Provide reinforced concrete lid.
- E. Provide additional reinforced concrete extensions as required to maintain conduit depth as shown on the drawings.
- F. Acceptable Products:
 - 1. Jensen Precast HN1324 pull box, HN1324-E extension and HN1324-L02 Lid.
 - 2. Or Approved Equal.

2.3 TELECOM PULL BOXES AND COVERS (17" WIDE X 30" LONG) NON-TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Provide 17" wide x 30" long x 12" deep reinforced concrete pull box.
- C. Provide qty (2) 17" wide x 30" long x 12" deep reinforced concrete extensions.
- D. Provide reinforced concrete lockable bolt down lid.
- E. Provide additional reinforced concrete extensions as required to maintain conduit depth as shown on the drawings.
- F. Acceptable Products:
 - 1. Jensen Precast HN1730-B pull box, HN1730-E extension and HN1730-L01 Lid.
 - 2. Or Approved Equal.

2.4 TELECOM PULL BOXES AND COVERS (17" WIDE X 30" LONG) H-20 TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Pull boxes, risers and lids shall be H-20 traffic rated.
- C. Provide 17" wide x 30" long x 12" deep reinforced concrete pull box.
- D. Provide 17" wide x 30" long x 12" deep reinforced concrete extensions.
- E. Provide steel diamond plate bolt down lid.

- F. Provide additional reinforced concrete risers as required to maintain conduit depth as shown on the drawings.
- G. Acceptable Products:
 - 1. Jensen Precast HT1730-B pull box, HT1730-E extension and HT1730-L-11-01 Lid.
 - 2. Or Approved Equal.

2.5 TELECOM INTERCEPT PULL BOXES AND COVERS (30" WIDE X 48" LONG)
INCIDENTAL H-20 TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Provide 30" wide x 48" long x 30" deep reinforced concrete intercept pull box with 4" deep base.
- C. Provide 30" wide x 48" long x 12" deep reinforced concrete riser.
- D. Provide split incidental H-20 steel bolt down diamond plate surface. Covers shall be labeled "COMMUNICATIONS".
- E. Provide corrosion resistant galvanized steel channel racking and cable support hooks in all pull boxes. Racking and cable support hooks shall be installed on both sides of each pull box.
- F. Acceptable Products:
 - 1. Jensen Precast PB3048-I intercept pull box (PB3048-I), 12" Riser RS304812 and incidental H-20 Cover CA3048C61.
 - 2. Or Approved Equal.

PART 3 – EXECUTION

3.1 UTILITY COORDINATION

- A. Contact local utility companies and utility locating services prior to excavation to locate and mark existing underground utilities.
- B. Coordinate conduit routing with existing underground utilities. Reroute conduit and provide horizontal and vertical offsets as required to avoid and to provide necessary clearances from existing utilities.

3.2 CONDUIT

- A. OSP conduits shall be installed with a slight drain slope (0.125 inches-per-foot) away from buildings to prevent the accumulation of water in the conduit or ingress to the buildings.
- B. Factory-manufactured sweeps which meet ANSI/TIA-569-B bend radius requirements shall be used for all telecommunications conduit. The bend radius of the sweeps must be a minimum of 10-times the internal conduit diameter. Bending conduit in the field using manual or mechanical methods is not acceptable.
- C. Any 4" conduit with a sweep of more than 11 degrees is to have a minimum concrete encasement of 4".
- D. OSP conduits shall be installed a minimum of 48" below finished grade. Conduits shall be encased in hard-tamped sand a minimum of 6" above and below the conduits. 6" clear space shall be maintained between conduits. Backfill above the conduits shall be installed and compacted to 95% density.
- E. OSP conduit and duct bank runs must have a continuous orange colored, metal detectable warning tape installed half the distance between the top of the conduit and the finished grade.
- F. All cable shall be installed in the lowest available conduit in a duct bank, working up as additional cables are installed.
- G. Prior to installing cables, all new or unused OSP conduits must be cleaned with a brush pulled through the conduit at least two times in the same direction and swabbed with clean rags until the rag comes out of the conduit clean and dry. Conduits shall then be tested with a mandrel to prove compliance with the sweep radius requirements throughout the conduit run.
- H. Spare OSP conduits and innerducts shall be plugged with watertight plugs at both ends to prevent the intrusion of moisture, gasses, and rodents throughout the construction project.
- I. All OSP conduits and innerduct shall have a 3/8" nylon pull rope installed. Pull rope shall be re-pulled each time an additional cable is installed.

3.3 PULL BOXES

- A. Install pull boxes and set covers to match finished grade.
- B. Conduits shall enter pull boxes from the side. Do not sweep conduits into the bottom of the pull box.

3.4 CUTTING AND PATCHING

- A. Sawcut and remove existing pavement, sidewalks, gutters, etc., to accommodate installation of outside plant conduit and pull boxes.

- B. Replace sub-base, pavement, sidewalks gutters, etc., to match existing.
- C. Repair and replace all landscaping and sitework disturbed by excavation including but not limited to irrigation lines, lawns, planting, etc. Resod lawn areas disturbed by excavation.

END OF SECTION 270543

SECTION 270800 – COMMISSIONING OF COMMUNICATIONS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.
- B. The Contractor shall provide all equipment, materials, labor, and services necessary to complete the testing, labeling and documentation of the telecom cabling system in compliance with requirements stated or reasonably inferred by the Specifications and the Contract Drawings.
- C. This section includes the minimum requirements for the testing, identification and administration for the telecommunications cabling system, including the following:
 - 1. Testing
 - a. Category 6 Cable Test Equipment and Test Procedures.
 - b. Category 6A Cable Test Equipment and Test Procedures.
 - c. Copper backbone cable test equipment and test procedures.
 - d. Fiber optic cable test equipment and test procedures.
 - e. Cable test reports.
 - 2. Identification
 - a. Labeling of work area outlet faceplates and jacks.
 - b. Labeling of horizontal data, voice and video cabling.
 - c. Labeling of Copper Patch Panels.
 - d. Labeling of fiber optic patch panels.
 - e. Labeling of 110 wiring blocks.
 - f. Labeling of racks and cabinets.
 - g. Labeling of copper and fiber backbone cable.
 - h. Labeling of innerduct.
 - 3. Administration
 - a. As-built drawings.
 - b. Materials listing.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 11 00: Communications Equipment Room Fittings
 - 3. 27 13 00: Communications Backbone Cabling

4. 27 15 00: Communications Horizontal Cabling

- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 01 00 1.4 and in particular the following requirements
1. ANSI/TIA-568.2-D: Balanced Twisted-Pair Telecommunications Cabling And Components Standards (Revision D, September 2018).
 2. ANSI/TIA-568.3-D: Optical Fiber Cabling and Component Standard (Revision D, October 2016).
 3. ANSI/TIA-598-D: Optical Fiber Cable Color Coding (Revision D, July 2014).
 4. ANSI/TIA-606-D: Administration Standard for Telecommunications Infrastructure (Revision D, October 2021).
 5. ANSI TIA-526-7-A: Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant (Revision A, July 2015).
 6. ANSI/TIA-526-14-C: Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant (Revision C, 2015).
 7. ANSI/TIA-1152-A: Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling (Revision A, November 2016).
 8. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 9. Underwriter's Laboratories, Inc. (UL).

1.4 SUBMITTALS

- A. Test Equipment: Submit manufacturers' catalog sheets and specifications for the following cable testers
1. Category 6 cable tester.
 2. Category 6A cable tester.
 3. Multimode and singlemode fiber optic cable tester.
- B. Calibration Reports: Provide calibration reports for all test equipment to be used on the Project. The calibration must have been performed by a manufacturer certified calibration facility and be dated no more than 60 days prior to the start of testing.
- C. Cable Test Reports: Provide bound test reports for all cables signed by the technician performing the cable testing. Include Manufacturers data sheets for the cabling being tested.
- D. Labels: Submit manufacturer's data sheets on the type of labels to be used for each labeling application.

PART 2 – PRODUCTS

2.1 HORIZONTAL CATEGORY 6 UNSHIELDED TWISTED-PAIR CABLE TESTER

- A. Cable tester shall comply with the requirements of ANSI/TIA-1152.
- B. Cable tester shall perform all tests necessary to certify the horizontal Category 6 UTP cabling in accordance with ANSI/TIA 568 C.2.
- C. Shall be a UL certified Level III test set calibrated by a manufacturer certified calibration facility. The calibration shall be dated no more than 60 days prior to the start of testing.
- D. Acceptable Manufacturers
 - 1. Fluke Networks
 - 2. Ideal Industries
 - 3. Agilent Wirescope
 - 4. AEM
 - 5. Softing/WireXpert
 - 6. Trend Networks.
 - 7. Or equal.

2.2 CATEGORY 6A (AUGMENTED) UNSHIELDED TWISTED-PAIR CABLE TESTER

- A. Cable tester shall comply with the requirements of ANSI/TIA-1152.
- B. Cable tester shall perform all copper UTP Cat 6A CMP-rated cable with tester set-up to identify the cable manufacturer with associated NVP as well as the connectivity manufacturer.
- C. Shall be a UL certified Level IIIe test set calibrated by a manufacturer certified calibration facility.
- D. The software calibration date shall be current throughout the testing phase of the project and be stated in the test results documentation or, by hard copy from the manufacturer.
- E. The tester set-up should include the application to support 10GBase-T (IEEE 802.3an).
- F. Test results shall be in PDF format and, if requested, manufacturer proprietary software.
- G. Acceptable Manufacturers
 - 1. Fluke Networks
 - 2. Ideal Industries
 - 3. Agilent Wirescope
 - 4. AEM
 - 5. Softing/WireXpert
 - 6. Trend Networks.

7. Or equal.

2.3 SINGLEMODE OPTICAL FIBER CABLE TESTER

- A. Tier 1 certification is defined as the measurement of the total insertion loss, length, and polarity of the optical cable cabling from one end of the link to the other. The test equipment used is a 'combined' optical power meter and light source called an OLTS or Optical Loss Test Set.
- B. Test Reference Cables (TRCs) minimum standards; 2.8-3.0 OD jacketing, zirconia ceramic UPC LC ferrule < 0.25 dB IL (insertion loss) and > 0.50 RL (reflection loss).
- C. Tier 2 optical fiber testing includes Tier 1 OLTS testing and is used to define the graphical precise characterization of the fiber link. The tester used for Tier 2 testing is an OTDR or Optical Time Domain Reflectometer.
- D. When using an OTDR, use only high-quality, low-loss, dual launch boxes having the same optical cable and connectors being tested and are required at both transmit and receiving ends.
- E. Both Tier 1 and Tier 2 testing shall be bi-directional and dual wavelengths (1310 & 1550 nm).
- F. The tester shall be capable of performing the tests required by ANSI/TIA-568.1-E, ANSI/TIA-568.3-D, ANSI/TIA-526-7A and TR 42.11.
- G. The software calibration date shall be current throughout the testing phase of the project and be stated in the test results documentation or by hard copy from the manufacturer.
- H. The tester set-up should include the application to support QSFP28-100GBase-LR4 (IEEE 802.3 bm).
- I. Acceptable Manufacturers
 1. Agilent Wirescope
 2. AEM
 3. AFL
 4. EXFO
 5. FIS
 6. Fluke Networks
 7. Fujikura
 8. Ideal Industries
 9. Jonard
 10. Softing/WireXpert
 11. VIAVI
 12. Or equal.

2.4 LABELS

- A. Labels shall be laser printed and shall meet the legibility, defacement, exposure and adhesion requirements of UL 969.
- B. Acceptable manufacturers
 - 1. Belden
 - 2. Brady
 - 3. Brother
 - 4. HellermannTyton.
 - 5. Or approved equal

2.5 WORK AREA OUTLET FACEPLATE LABELS

- A. Label each port in each faceplate in accordance with Labeling Scheme identified on the Drawings. Label must be machine printed and inserted in the faceplate label window. Labels shall be provided by the faceplate manufacturer of the faceplate.
- B. Acceptable manufacturers
 - 1. Belden
 - 2. Brother
 - 3. HellermannTyton.
 - 4. No Substitution

2.6 HORIZONTAL CABLE SHEATH LABELS

- A. Label horizontal cable sheaths at work area outlets and at patch panels with laser printed self-laminating wrap around vinyl labels. Labels shall be in accordance with the Labeling Scheme identified in WCSD SCS-015.
- B. Labels shall be white with black type. Label size shall be 1.0" wide by 1.5" high.
- C. At the Telecom Room, cable labels will be affixed to cable a minimum of 1 inch from the termination on the patch panel, and placed in such a way as to be clearly visible.
- D. At the work area outlet, cable labels shall be affixed to the cable 2 inches from the termination on the jack.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.7 COPPER PATCH PANEL LABELS.

- A. Label each patch panel with a single panel ID label in accordance with the labeling scheme identified WCSD SCS-015.

- B. Labels shall be compatible with the patch panels provided for the Project.
- C. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- D. Label each patch panel port with a laser printed label. Label each port with the room number of the room housing the work area outlet.
- E. Labels shall be compatible with the patch panels provided for the Project.
- F. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.375" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.8 TELECOM ROOM FIBER OPTIC TERMINATION CABINET LABELS

- A. Label each fiber optic patch panel with a single panel ID label in accordance with the labeling scheme identified WCSD SCS-015.
- B. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- C. A label will be affixed to the fiber termination cabinet as shown using the Backbone Cable Labeling Scheme.
- D. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.

- e. Or approved equal

2.9 EQUIPMENT ROOM FIBER OPTIC TERMINATION CABINET LABELS

- A. Label each fiber termination cabinets in accordance with the labeling scheme identified in WCSD-SCS-015.
- B. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- C. Label fiber modules in accordance with the labeling scheme identified in WCSD-SCS-015. Labels shall be affixed to the fiber termination cabinet directly on the Plexiglas front cover so labels will be visible when the cover is closed. Each label will indicate the exact location and position of the cable's far end according to the Backbone Cable Labeling Scheme.
- D. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- E. Label each Connector Module with its Slot in accordance with the labeling scheme identified on the drawings.
- F. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.10 EQUIPMENT RACK LABELS

- A. Provide labels on the top angle of all equipment racks. Labels shall in accordance with the labeling scheme identified in WCSD-SCS-015.
- B. Racks shall be labeled with Space ID and Rack ID.

- C. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 1.0" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.11 COPPER BACKBONE CABLE SHEATH LABELS

- A. The backbone cable sheaths in the Telecom rooms and at pull boxes shall be labeled. Labels shall be in accordance with the labeling scheme identified in WCSD-SCS-015.
- B. Labels must be clearly visible at the rear of the rack.
- C. Labels shall be self-laminating vinyl labels and must be compatible with the diameter of the backbone cable. Labels shall be 2.5" high by 1.5" wide.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

PART 3 – EXECUTION

3.1 CABLE TESTING – GENERAL

- A. Visually inspect all cables, cable reels, and shipping cartons to detect cable damage incurred during shipping and transport. Return visibly damaged items to the manufacturer.
- B. Where post-manufacture test data has been provided by the manufacturer on the reel or shipping carton, submit copies to the Owner's Representative as part of the cable test results.
- C. The Owner's Representative reserves the right to observe any or all portions of the cable testing process.
- D. The Owner's Representative further reserves the right to conduct, using contractors equipment and labor, a random re-test of up to ten percent (10%) of the cable plant to confirm documented test results.
- E. Test results and corrective procedures are to be documented and submitted to the Owner's Representative within five (5) working days of test completion.

3.2 CATEGORY 6 UTP CABLE TESTING

- A. A representative of the end-user shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase 5 business days before testing commences.
- B. Field test measurements shall be made in accordance with Annex I of TIA 568-C.2 unless otherwise noted.
- C. Field test measurements shall be conducted from 1 MHz to 250 MHz.
- D. Field testing shall be conducted using a level III tester. The accuracy of the level III tester shall meet or exceed the requirements of ANSI/TIA-1152. The tester shall be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.
- E. Every cabling link shall be tested in accordance with the TIA 568-C.2 Annex C: "Cabling and Component Test Procedures".
- F. The installed twisted-pair horizontal links shall be tested from the patch panel in the telecommunications room to the work area outlet. The cable must pass the "Permanent Link" performance limits specification as defined in TIA 568-C.2 Section 6.3.
- G. 100% of the installed cabling links must be tested and must pass the requirements of the standards mentioned above. Any failing link must be diagnosed and corrected. The corrective action shall be followed with a new test to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation.
- H. Trained technicians who have successfully attended an appropriate training program shall execute the tests. Appropriate training programs include but are not limited to installation certification programs provided by BICSI or the ACP (Association of Cabling Professionals).
- I. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter. The test result of a parameter shall be marked with an asterisk (*) when the result is closer to the test limit than the accuracy of the field tester. The field tester manufacturer must provide documentation as an aid to interpret results marked with asterisks. (Reference TIA-568-C.2; Annex I: Section I.2.2).
- J. The Contractor shall provide Category 6, 250 MHz channel test results on all pairs of cable. The following minimum field test parameters are required:
 - 1. Wire map (including cable shield if present).
 - 2. Length.
 - 3. Insertion loss.
 - 4. Near-end crosstalk (NEXT) loss.

5. Power sum near-end crosstalk (PSNEXT) loss.
 6. Equal-level far-end crosstalk (ELFEXT).
 7. Power-sum equal-level far-end crosstalk (PSELFEXT).
 8. Return loss.
 9. Propagation delay.
 10. Delay skew.
- K. Test results shall be provided in electronic format and printed 8.5" x 11" format signed by the technician performing the testing. The electronic format should be a Microsoft Word .doc file. Along with the above test parameters, the following information must be included for each cable tested:
1. Name of Owner and name of project (building name).
 2. Date and time of test.
 3. Name of technician performing the field testing.
 4. Manufacturer, model number, serial number and software revision of field tester.
 5. Cable ID (Telecom Room # - Patch Panel # - Port # / Work Area Room # - Telecom Outlet – Jack #).
 6. Overall Pass/Fail result.
 7. Manufacturer, category and model number of cable.
 8. NVP used to determine cable length.

3.3 CATEGORY 6A (AUGMENTED) UTP CABLE TESTING

- A. A representative of the end-user shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase 5 business days before testing commences.
- B. Field test measurements shall be made in accordance with ANSI/TIA-568-C.2.
- C. Field test measurements shall be conducted from 1 MHz to 500 MHz.
- D. Field testing shall be conducted using a level IIIe tester. The accuracy of the level IIIe tester shall meet or exceed the requirements of ANSI/TIA-1152.
- E. The software calibration date shall be current throughout the testing phase of the project and be stated in the test results documentation or, by hard copy from the manufacturer.
- F. Every cabling link shall be tested to copper 100-ohm UTP Cat 6A cable with tester set-up to identify the cable manufacturer with associated NVP as well as the connectivity manufacturer.
- G. The cable must be tested to "Permanent Link" performance as defined in ANSI/TIA 568.2-D having a maximum length of 295 feet (90m).
- H. 100% of the installed cabling links must be tested and must pass the requirements of the standards mentioned above. Any failing link must be diagnosed and corrected. The corrective action shall be followed with a new test

to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation.

- I. Trained technicians who have successfully attended an appropriate training program shall execute the tests. Appropriate training programs include but are not limited to installation certification programs provided by BICSI or the ACP (Association of Cabling Professionals).
- J. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter. The test result of a parameter shall be marked with an asterisk (*) when the result is closer to the test limit than the accuracy of the field tester. The field tester manufacturer must provide documentation as an aid to interpret results marked with asterisks.
- K. The Contractor shall provide Category 6A, 500 MHz channel test results on all pairs of cable. The following minimum field test parameters are required:
 - 1. Wire Map
 - 2. Length
 - 3. Propagation Delay
 - 4. Delay Skew
 - 5. DC Loop Resistance
 - 6. Insertion Loss
 - 7. NEXT (Near-End Crosstalk)
 - 8. PS NEXT (Power Sum Near-End Crosstalk)
 - 9. ACR-N (Attenuation to Crosstalk Ratio Near-End)
 - 10. PS ACR-N (Power Sum Attenuation to Crosstalk Ratio Near-End)
 - 11. ACR-F (Attenuation to Crosstalk Ratio Far-End)
 - 12. PS ACR-F (Power Sum Attenuation to Crosstalk Ratio Far-End)
 - 13. Return Loss
- L. Test results shall be provided in electronic PDF and raw data format within 5 days after the completion of the project. Test documentation shall be saved in Fluke LinkWare file format version 11.0 or later and must include (along with the above test parameters), the following information:
 - 1. Test results as downloaded from the tester. The following information shall be included in the test results:
 - a. Record of test frequencies.
 - b. Cable type.
 - c. Conductor pair and cable I.D.
 - d. Measurement direction.
 - e. Reference setup.
 - f. Crew member name(s).
 - g. Date and time.
 - 2. Additional documentation required to provide the following (if not included in test results):

- a. Test equipment name, manufacturer, model number, serial number, software version and last calibration date.
 - b. The test method used and the specific settings of the equipment during the test as well as the software version being used in the field test equipment.
 - c. Any required information not listed in test results (crew member, etc.).
3. Unless the manufacturer specifies a more frequent calibration cycle, an annual calibration cycle is anticipated on all test equipment used for this installation. The Contractor must provide a copy of the last calibration certification with submitted test results.
4. When repairs and re-tests are performed, the problem found and corrective action taken shall be noted, and both the failed and passed test data shall be documented. Once corrective measures have been taken and the failed tests passes, only retain the PASS test and discard the FAIL for final documentation.

3.4 SINGLEMODE OPTICAL FIBER CABLE TESTING

- A. A representative of the end-user shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase 5 business days before testing commences.
- B. 100% of the installed fiber strands shall be tested and must pass the field test specifications defined by the Telecommunications Industry Association (TIA) standards ANSI/TIA-568.1-E, ANSI/TIA-568.3-D and ANSI/TIA-526-7-A. Any failing fiber strands must be diagnosed and corrected. The corrective action shall be followed with a new test to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation.
- C. Trained technicians who have successfully attended an appropriate training program and have obtained a certificate as proof thereof shall execute the tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
 1. The manufacturer of the fiber optic cable and/or the fiber optic connectors.
 2. The manufacturer of the test equipment used for the field certification tests.
 3. Training organizations authorized by BICSI or by the ACP (Association of Cabling Professionals™) Cabling Business Institute.
- D. Field test instruments for multimode fiber cabling shall meet the requirements of ANSI/TIA-526-7A. The light source shall meet the launch requirements of ANSI/TIA-455-50B, Method A. This launch condition can be achieved either within the field test equipment or by use of an external mandrel wrap (as

described in clause 11 of ANSI/TIA-568-1-E) with a Category 1 light source. Field test instruments for singlemode fiber cabling shall meet the requirements of ANSI/TIA-526-7-A.

- E. The tester shall be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.
- F. The fiber optic launch cables and adapters must be of high quality and the cables shall not show excessive wear resulting from repetitive coiling and storing of the tester interface adapters. Test Reference Cables (TRCs) minimum standards; 2.8-3.0 OD jacketing, zirconia ceramic UPC LC ferrule < 0.25 dB IL (insertion loss) and >0.50 RL (reflection loss).
- G. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter.
- H. Performance Test Parameters:
 - 1. Singlemode backbone links shall be tested at 1310 nm and 1550 nm in accordance with ANSI/TIA-526-7-A, Method A.1, One Reference Jumper or equivalent method.
 - 2. The link attenuation shall be calculated by the following formulas specified in ANSI/TIA-568.3-D.

Link Attenuation = Cable Attenuation + Connector Insertion Loss + Splice Insertion Loss

Where:

Cable Attenuation(dB) = Attenuation Coefficient(dB/Km) x Length(km)

Connector Insertion Loss(dB) = # of connector pairs x connector loss(dB)

Splice Insertion loss(dB) = # of splices(S) x splice loss(dB)

The values for the Attenuation Coefficient are listed in the following table below:

Wavelength	OSI (ISP)	OS1A (ISP OS2)	OS2 (OSP)
1310 nm	1.0 dB/km	0.4 dB/km	0.4 dB/km
1310 nm	0.3 dB/Mft	0.12 db/Mft	0.12 dB/Mft
1550 nm	1.0 dB/km	0.4 dB/km	0.4 dB/km
1550 nm	0.3 dB/Mft	0.12 db/Mft	0.12 dB/Mft

- 3. Maximum insertion loss (IL) per mated pair is 0.35 dB and 0.02 dB per fusion (only) splice.

- I. The Contractor shall test all fiber optic cables and provide test results in electronic PDF format signed by the technician performing the testing. The following field test documentation shall be provided for each fiber optic strand:
 1. Wavelength of test (1310 nm or 1550 nm for Singlemode)
 2. Length of segment.
 3. Number of splices.
 4. Link attenuation (for each wavelength).
 5. Overall Pass/Fail result.
 6. Margin by which the strand passed the test (difference between the allowable link attenuation and the measured link attenuation).
 7. Name of Owner and name of project (building name).
 8. Date and time of test.
 9. Name of technician performing the field testing.
 10. Manufacturer, model number, serial number and software revision of field tester.
 11. Cable ID (Telecom Room # - Patch Panel # - Port # / Telecom Room # - Patch Panel # - Port #. Telecom Outlet – Jack #).
 12. Manufacturer, model number of cable, type of cable and strand count.

3.5 IDENTIFICATION AND LABELING

- A. The Contractor shall confirm the telecom room and work area room numbers with the Owner or Owner's Representative prior to labeling.
- B. Labeling scheme shall follow the requirements of Washoe County School District Structured Cabling Specification WCSD-SCS-015 dated October 21, 2016.
- C. Work Area Outlet Face Plates: See WCSD-SCS-015 for requirements.
- D. Work Area Data and Voice Jacks: See WCSD-SCS-015 for requirements.
- E. Work Area Horizontal Data, Voice and Video Cable: See WCSD-SCS-015 for requirements.
- F. Telecom Room Horizontal Data, Voice and Video Cable: See WCSD-SCS-015 for requirements.
- G. Patch Panels: See WCSD-SCS-015 for requirements.
- H. Patch Panel Ports: See WCSD-SCS-015 for requirements.
- I. Fiber Termination Cabinets: See WCSD-SCS-015 for requirements.
- J. 110 Blocks: See WCSD-SCS-015 for requirements.
- K. Backbone Cables: See WCSD-SCS-015 for requirements.
- L. Equipment Racks and Cabinets: See WCSD-SCS-015 for requirements.

3.6 ADMINISTRATION

A. As-Built Drawings.

1. The Contractor shall provide As-Built drawings at the end of the project in electronic PDF format. The following information shall be provided on the As-Built Drawings:
 - a. Plan location of all telecom outlets.
 - b. Quantity and type of drops at each telecom outlet.
 - c. Telecom room where the drops are terminated.
 - d. Cable tray layout. Provide dimensions from building grid lines to locate cable tray.
 - e. J-hook layout. Provide dimensions from building grid lines to locate J-hook runs.
 - f. Conduits and pull box layout. Provide dimensions from building grid lines to locate conduits and pull boxes.
 - g. Backbone cable runs and pair/strand counts.
 - h. Horizontal and vertical sleeve layout.
 - i. Outside plant vaults and pull boxes. Provide dimensions from curbs to locate vaults and pull boxes.
 - j. Outside plant conduits. Provide dimensions from curbs to locate conduit.

B. Materials Listing

1. The contractor shall provide a spreadsheet indicating the materials and quantities used on the project. At a minimum, the spreadsheet will contain the following information: Item description, manufacturer, part number, quantity and color (where applicable).

END OF SECTION 270800

SECTION 271100 – COMMUNICATION EQUIPMENT ROOM FITTINGS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.
- B. The Contractor shall provide all equipment, materials, labor, and services necessary to complete communication equipment rooms and spaces, and to ensure that they are in compliance with requirements stated or reasonably inferred by the Specifications and the Contract Drawings.
- C. Minimum requirements and installation methods are included for the following:
 - 1. 4-Post Equipment Racks (45 RU)
 - 2. Concrete Expansion Anchors
 - 3. Plywood Backboards
 - 4. Horizontal Cable Managers
 - 5. Vertical Cable Managers for Floor Standing Racks
 - 6. Category 5E Copper Patch Panels
 - 7. Category 6 Copper Patch Panels
 - 8. Category 6 Copper Patch Cords
 - 9. Category 6A Copper Patch Panels
 - 10. Category 6A (Augmented) Copper Patch Cords
 - 11. Category 6 Entrance Terminals with Primary Protector Modules
 - 12. Rack Mounted Optical Fiber Termination Cabinets
 - 13. Optical Fiber Patch Cords
 - 14. Wall Mounted "Re-closeable" Fiber Optic Cable Storage Rings
 - 15. Cable Runway (Ladder Rack)
 - 16. Velcro Cable Ties
 - 17. Grounding Bars and Ground Conductors
 - 18. Wall Mounted Telecom Cabinets (Small TE).
 - 19. Outdoor Pole Mounted NEMA 4X Telecom Cabinet

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 05 28: Interior Communications Pathways.
 - 3. 27 05 43: Exterior Communications Pathways
 - 4. 27 08 00: Commissioning of Communications
 - 5. 27 13 00: Communications Backbone Cabling

6. 27 15 00: Communications Horizontal Cabling
7. 27 41 00: Audio Visual Systems
8. 27 41 16: AV and Safety Alert Systems
9. 27 51 13: Paging Systems
10. 27 53 13: Wireless Clock Systems

- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 05 00 1.4 and in particular the following standards and code requirements.
1. ANSI/TIA-568.0-E: Generic Telecommunications Cabling for Customer Premises (Revision E, March 2020).
 2. ANSI/TIA-568.1-E: Commercial Building Telecommunications Infrastructure Standard (Revision E, March 2020).
 3. ANSI/TIA-568.2-D: Balanced Twisted-Pair Telecommunications Cabling And Components Standards (Revision D, September 2018).
 4. ANSI/TIA-568.3-D: Optical Fiber Cabling and Component Standard (Revision D, October 2016).
 5. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
 6. ANSI/TIA-598-D: Optical Fiber Cable Color Coding (Revision D, July 2014).
 7. ANSI/TIA-606-D: Administration Standard for Telecommunications Infrastructure (Revision D, October 2021).
 8. ANSI/TIA-607-D: Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises (Revision D, July 2019).
 9. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 10. Underwriter's Laboratories, Inc. (UL).

1.4 QUALITY ASSURANCE

- A. All cable, raceways and equipment in the telecom rooms shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Specifications shall be subject to the control and approval of the Owner's Representative.

1.5 SUBMITTALS

- A. Manufacturer's Data Sheets: Submit manufacturer's data sheets in electronic PDF format for the following items:
1. 4-Post Equipment Racks (45 RU)
 2. Concrete Expansion Anchors
 3. Plywood Backboards
 4. Horizontal Cable Managers
 5. Vertical Cable Managers for Floor Standing Racks
 6. Category 5E Copper Patch Panels

7. Category 6 Copper Patch Panels
8. Category 6 Copper Patch Cords
9. Category 6A Copper Patch Panels
10. Category 6A (Augmented) Copper Patch Cords
11. Category 6 Entrance Terminals with Primary Protector Modules
12. Rack Mounted Optical Fiber Termination Cabinets
13. Optical Fiber Patch Cords
14. Wall Mounted "Re-closeable" Fiber Optic Cable Storage Rings
15. Cable Runway (Ladder Rack)
16. Velcro Cable Ties
17. Grounding Bars and Ground Conductors

B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.

C. Shop Drawings: Submit shop drawings indicating the proposed layout of all telecom cabling pathways and equipment located in the telecommunication rooms. Shop drawings shall be coordinated with all trades having work in the telecom rooms. Shop drawings shall include the following items:

1. Plan view showing the layout of all floor mounted telecom and electrical equipment including cabinets, racks, UPS's and vertical cable management devices. Dimensions shall be provided showing required maintenance clearances in the front, rear and side of all equipment.
2. Plan view of all vertical floor sleeves and floor openings.
3. Plan view showing the layout of all cable pathway including horizontal ladder rack, horizontal basket tray, cable radius drop outs, vertical ladder rack and sleeves.
4. Plan view showing the location of all lighting fixtures, HVAC ductwork, fan coil units and/or split units serving the room. The contractor shall coordinate this work so that it does not conflict with the overhead cabling pathways or other telecom equipment.
5. Plan view showing the layout of all wall mounted equipment including ground bars, wall mounted racks, building entrance terminals, wall mounted termination fields, security panels, electrical panels, etc.
6. Wall elevations showing the layout and elevation of all wall mounted equipment.

1.6 DELIVERY, STORAGE & HANDLING

- A. Protect all wiring blocks, patch panels, jacks and patch cords from moisture, dust and debris prior to installation.
- B. Install equipment in the telecom rooms only after the room construction is complete and the room clean. This includes all gypboard walls, gypboard ceilings, floor finishes, t-bar grid, plywood backboards, door frames, doors and paint. Notify the Owner's Representative of any incomplete items prior to installing equipment.

1.7 GUARANTEE

- A. See Specification Section 270500 1.10 for warranty requirements which apply to the patch panels and cabling specified in this section.

PART 2 – PRODUCTS

2.1 4-POST OPEN EQUIPMENT RACKS (45 RU)

- A. Floor mounted racks shall meet the following physical specifications
 - 1. UL Listed.
 - 2. Lightweight aluminum construction with black finish.
 - 3. 19" rack mounting space, 84" high.
 - 4. 15" deep x 20.25" wide base with four (4) ¾" bolt down holes.
 - 5. 3" deep channel side rails with double-sided tapped holes. Tapped holes shall conform to the standard EIA/TIA hole pattern.
 - 6. Provide square-punched hardware kits (cage nuts – color black) to mount all hardware and owner furnished equipment.
 - 7. Provide 50 Phillips head equipment mounting screws with each rack.
 - 8. Provide a ground termination bracket with each rack to enable connection of a 2 hole grounding lug.
- B. Acceptable Products
 - 1. Chatsworth Quad rack 4-Post Rack 15053-703.
 - 2. No Substitutions.
- C. Provide base dust cover for each rack:
 - 1. Acceptable Products:
 - a. Chatsworth p/n 16341-719.
 - b. No Substitutions.
- D. Provide rack grounding kit with each rack:
 - 1. Acceptable Products:
 - a. Rack Grounding Kit (Chatsworth p/n 40167-001).
 - b. No Substitutions.
- E. Provide Square-Punched Hardware Kits with each rack.
 - 1. Acceptable Products:
 - a. Chatsworth p/n 12639-001.
 - b. No Substitutions.
- F. Provide 1RU blank filler panels where shown on the rack elevations.

1. Acceptable Products:
 - a. Chatsworth p/n 30024-701.
 - b. No Substitutions.

G. Provide 4RU lock boxes where shown on the rack elevations.

1. Acceptable Products:
 - a. Middle Atlantic P/N LBX-4
 - b. No Substitutions.

2.2 CONCRETE EXPANSION ANCHORS

- A. Secure equipment racks and cabinets to the concrete floor with a minimum of four (4) 1/2" diameter concrete expansion anchors. Expansion anchors shall be manufactured of carbon steel with zinc plating.
- B. Anchors shall have a minimum concrete embedment depth of 2 3/4" inches.
- C. Expansion anchors shall have a minimum allowable pull out strength of 1,800 lbs and a minimum ultimate pull out strength of 7,000 lbs in 3,000 psi concrete.
 1. Acceptable manufacturers
 - a. Hilti.
 - b. Red Head.
 - c. Or approved equal.

2.3 PLYWOOD BACKBOARDS

- A. Install fire treated 4'-0" x 8'-0" x 3/4" AC void free plywood in all telecom rooms.
- B. Install plywood to completely cover all 4 walls in each telecom room unless noted otherwise on the drawings.
- C. Install plywood sheets from 6" to 8'-6" AFF.
- D. Paint plywood with 2 coats of white paint. Mask fire treatment labels prior to painting.
- E. Secure plywood to walls with sufficient anchors to support 1,500 lbs of equipment weight.

2.4 HORIZONTAL CABLE MANAGEMENT

- A. Horizontal and vertical cable managers shall be provided from the same manufacturer and shall be compatible with the specified racks.

- B. Horizontal cable managers shall be 2 rack units in height and have. See rack elevations for quantity.
- C. All components shall be color black.
 - 1. Acceptable Products:
 - a. Chatsworth P/N 11564-719 with slip on cover P/N 11764-719.
 - b. No Substitutions.

2.5 VERTICAL CABLE MANAGEMENT FOR FLOOR STANDING RACKS

- A. Horizontal and vertical cable managers shall be provided from the same manufacturer and shall be compatible with the specified racks.
- B. Provide 6" wide by 84" high or 10" wide x 84" high vertical cable managers for all racks. See rack elevations for size and quantity:
 - 1. Vertical cable managers shall be bolted to the racks. Where vertical cable managers are located between racks, the vertical managers shall be bolted to both racks.
 - 2. Each vertical cable manager shall provide separate front and rear raceways.
 - 3. Holes shall be provided between the front and rear raceway sections to facilitate cable routing.
 - 4. Vertical cable managers shall have 6" wide x 5.35" deep slotted ducts on the front of the rack and open ring cabling sections on the rear of the rack.
 - 5. Hinged black plastic covers shall be provided on the front of the vertical cable manager to conceal cable after installation.
 - 6. All components shall be color black.
 - 7. Acceptable Products
 - a. Chatsworth CCS Combination Cabling Section p/n 30162-703 (6" wide), Chatsworth CCS Combination Cabling Section p/n 30163-703 (10" wide)
 - b. No Substitutions.
- C. Provide (12) fiber management spools within the vertical cable management sections installed on each side of the main fiber rack in the MDF room (6 spools in each vertical section). Attach spools to the 2.5" pass-through holes in the CCS combination cabling section. The top 6 pass-through holes shall be used, leaving the bottom pass-through hole empty.

2.6 CATEGORY 5E COPPER PATCH PANELS

- A. Provide 19" rack mounted 48-port or 24-port Category 5E data patch panels as shown on the drawings.
- B. Patch panels shall be constructed of black anodized aluminum or black powder coated steel.
- C. Patch panels shall have fixed outlet jacks with 110 IDC connectors on the rear of the panel.
- D. Patch panels shall be wired in accordance with the T568B standard.
- E. The same manufacturer will be used for both the patch panels and workstation outlets throughout the Project.
- F. Provide rear cable termination bracket with each patch panel.
- G. Patch panels shall conform to ANSI/TIA/EIA-568-A Addendum 5 as shown below.

Parameter	Worst Case Channel Performance at 100MHz
Specified Frequency Range	1-100 MHz
Attenuation	0.4 dB
NEXT	43.0 dB
Return Loss	20.0 dB

- H. Acceptable Products:
 - 1. Belden/CDT P/N AX103258 (24-port), AX103259 (48-port). Provide cable tie-bar for each patch panel AX101173.
 - 2. No Substitutions.

2.7 CATEGORY 5E COPPER PATCH CORDS FOR BACKBONE VOICE CABLING.

- A. For every installed 25-pair CAT 5E backbone cable, provide qty (4) 7'-0" cat 5E patch cords jacket color blue.
- B. Acceptable Products:
 - 1. Belden/CDT P/N C501106007.
 - 2. No Substitutions.

2.8 CATEGORY 6A (AUGMENTED) COPPER DATA PATCH PANELS

- A. Patch Panels shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.

- B. Provide 19" rack mounted 48-port Category 6A data patch panels as shown on the drawings.
- C. Patch Panels shall be 100% pre-loaded with CAT 6A modules.
- D. Each patch panel CAT 6A module shall be provided with a color coded icon insert to designate its relationship to the following systems:
 - 1. Data Port: Icon Insert – No icon insert required.
 - 2. Wireless Access Point Port: Icon Insert color "White".
 - 3. CCTV System: Icon insert color "Black".
 - 4. Audio Enhancement System: Icon insert color "Gray".
 - 5. Paging System: Icon insert color "Green".
 - 6. Access Control System: Icon insert color "Blue".
- E. Patch panels shall conform to the performance requirements of ANSI/TIA/EIA–568-B.2-10 for Augmented Category 6 Cable as outlined below.

Frequency (MHz)	NEXT (dB) (min.)	PSANEXT (dB) (min.)	RETURN LOSS (dB) (min.)
0.772	96.2	112.2	70.2
1	94.0	110.0	68
4	82.0	98.0	56
8	75.9	91.9	49.9
10	74.0	90.0	48.0
16	69.9	85.9	43.9
20	68.0	84.0	42.0
25	66.0	82.0	40.0
31.25	64.1	80.1	38.1
62.5	58.1	74.1	32.1
100	54.0	70.0	28.0
200	48.0	64.0	22.0
250	46.0	62.0	20.0
300	44.5	60.5	18.5
350	43.1	59.1	17.1
400	42.0	58.0	16.0
450	40.9	56.9	14.9
500	40.0	56.0	14.0
550	39.2	55.2	13.2
600	38.4	54.4	12.4
625	38.1	54.1	12.1

- F. Acceptable Products:
 - 1. 48-Port Cat 6A Patch Panels:

- a. Belden/CDT RevConnect P/N RVAPPF2U48BK.
- b. No Substitutions.

2. Colored Icon Inserts:

- a. Belden/CDT RevConnect P/N RVUICxx-B24 (provide icon insert colors for different systems as indicated above).
- b. No Substitutions.

2.9 CATEGORY 6 COPPER PATCH CORDS

- A. Patch cords shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Provide Category 6 UTP patch cords for interconnection of owner furnished switches and patch panels in all IDF's and the MDF.
- C. Provide one (1) 4'-0" CAT 6 patch cord for each data drop related to the following systems:
 - 1. CCTV System: Patch Cord Color "Black".
 - 2. Audio Enhancement System: Patch Cord Color "Gray".
 - 3. Paging System: Patch Cord Color "Green".
 - 4. Access Control System: Patch Cord Color "Blue".
- D. Cabling used for patch cords shall be manufactured by the same manufacturer as the horizontal cabling and shall be of the same product line. Cable shall conform to the requirements of ANSI/TIA/EIA-568-B.2 Addendum 1. Electrical characteristics and performance of the patch cables shall be nearly identical to the horizontal cable with exceptions given due to differences between solid and stranded conductors as indicated in the following table.

Frequency (MHz)	Stranded Conductor Cable Insertion Loss (dB)
1	2.4
4	4.5
8	6.4
10	7.1
16	9.1
20	10.2
25	11.4
31.25	12.8
62.5	18.5
100	23.8
200	34.8
250	39.4

- E. Patch cords shall be rated for use as communications cable and shall have the designation "CM" or "CMR" printed on the jacket.

F. Acceptable Products:

1. Belden/CDT GigaFlex PS6+ Modular Cord P/N C60110xxxx (provide patch cord jacket colors for different systems as indicated above).
2. No Substitutions..

2.10 CATEGORY 6A (AUGMENTED) PATCH CORDS

- A. Patch cords shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Provide Category 6A patch cords for interconnection of owner furnished switches and patch panels in all IDF's and the MDF. Provide one (1) 4'-0" CAT 6A patch cord for each data drop related to the following systems:
1. Telecom Outlet: Patch Cord Color "Yellow".
 2. Wireless Access Point: Patch Cord Color "White".
- C. Provide Category 6A "work-area" patch cords for interconnection of owner furnished workstations and phones at the work-area outlets. Provide one (1) 15'-0" CAT 6A patch cord for each data drop related to the following systems:
3. Telecom Outlet: Work-Area" Patch Cord Color "Yellow".
- D. Patch cords shall be 4-pair, Category 6A unshielded twisted pair with solid conductors. Patch cords shall be manufactured by the same manufacturer of the horizontal cabling.
- E. Physical Characteristics:
1. Category 6A cable shall meet or exceed the requirements of ANSI/TIA/EIA-568-B.2-10 -- for Augmented Category 6 Cable.
 2. Cable shall have a listed riser rated jacket (CMR).
 3. Cables shall be constructed of 4-pair, 23 AWG solid copper conductors.
 4. The cable jacket must have the following legible markings
 - a. Manufacturer's name.
 - b. Copper conductor gauge.
 - c. Pair count.
 - d. UL and CSA listing.
 - e. Manufacturer's trademark.
 - f. Category rating.
 - g. Jacket rating (CMR).
- F. Acceptable Products:

1. Belden/CDT CA21104004 (4'-0" data drop patch cord - color yellow), CA21109004 (4'-0" WAP drop patch cord - color white), CA21104015 (15'-0" data drop "work-area" patch cord – color yellow).
2. No substitutions.

2.11 WALL MOUNTED CATEGORY 5E 110 BLOCKS

- A. Provide 100-pair Category 5E wall mounted 110 IDC blocks with plastic stand-off mounting legs for termination of voice cabling from the AT&T demarc location to the 24-port demarc patch panel in the voice rack (see drawings for location).
- B. Provide label kit w/plastic holders.
- C. Provide plastic jumper troughs with stand-off legs at the top, bottom and side of each 100-pair wiring block for routing of cross connect wire.
- D. Completely load 110 blocks with C5 connecting blocks.
- E. Acceptable Products
 1. Belden/CDT AX100694-S.
 2. Or approved equal.

2.12 CATEGORY 6 ENTRANCE TERMINALS WITH PRIMARY PROTECTOR MODULES

- A. Provide CAT 6 building entrance protectors where OSP CAT 6 cable from pole mounted camera(s) enters the building.
- B. Surge protectors shall be bonded to ground with #6 green insulated ground conductors.
- C. Surge Protectors shall have the following physical characteristics:
 1. UL 497, UL 497A and UL 497B listed for primary, secondary and isolated loop circuit protection.
 2. Ultra low capacitance solid state technology providing protection transparent to frequencies up to 250 MHz.
 3. Factory loaded with 65V solid state modules.
 4. 110 style terminations.
- D. Acceptable Products:
 1. Tii Networks (Formally Porta Systems) P/N 606-65 with LVP65 protection modules.
 2. Or Approved Equal.

2.13 RACK MOUNTED OPTICAL FIBER TERMINATION CABINETS & PIGTAIL SPLICE CASSETTES

- A. Provide 19" rack mounted optical fiber termination cabinets. See rack elevations for quantity, size and port density of panels.
- B. Provide fiber termination cabinets with the following physical characteristics:
 - 1. 2RU (accepts 8 pigtail splice cassettes) and 4RU (accepts 16 pigtail splice cassettes).
 - 2. Black powder coat finish.
 - 3. Integral cable strain relief clamps.
 - 4. Panels shall accept factory manufactured fusion splice cassettes.
 - 5. Provide blank covers over unused cassette openings.
- C. Acceptable Products:
 - 1. Fiber Termination Cabinets & Fusion Splice Cassettes:
 - 2.
 - a. 2RU Cabinet - Belden/CDT P/N AX105564.
 - b. 24-Fiber Multimode duplex LC fusion splice cassette – Belden/CDT P/N FCH12LDFS. Provide 12-fiber OM4 multimode fusion splice pigtails to terminate all multimode fiber (Belden P/N FT4LD900PR123ME).
 - c. 24-Fiber Singlemode duplex LC fusion splice cassette – Belden/CDT P/N FCS4H12LDFS. Provide 12-fiber OS2 singlemode fusion splice pigtails to terminate all singlemode fiber (Belden P/N FTSLD900PR123MY).
 - d. Provide blank covers for all unused fiber termination panel cassette openings (Belden P/N FFZH00BB).
 - e. No Substitutions.

2.14 OPTICAL FIBER PATCH CORDS

- A. Provide duplex LC singlemode and multimode fiber optic patch cords for interconnection of owner furnished switches and fiber backbone cabling. Polarization of fiber optic patch cords shall comply with ANSI/TIA/EIA – 568-B.1 Section 10.3.3.
- B. Fiber optic cabling shall comply with the requirements of ANSI/TIA/EIA-568-B.3 and ANSI/TIA/EIA-568-B.3 Addendum 1.
- C. Fiber patch cords shall be manufactured of fiber optic cabling meeting the transmission characteristics of the fiber optic backbone cabling. The manufacturer of the fiber patch cord cabling and the fiber backbone cabling shall be identical.
- D. For every 48-port copper patch panel (including spare patch panels), contractor shall provide qty (2) 5-meter duplex LC OM4 multimode fiber patch cords (Belden/CDT P/N FP4LDLD005MR2XA) and qty (2) 3-meter duplex LC OM4 multimode fiber patch cords (Belden/CDT P/N FP4LDLD003MR2XA).

- E. For every installed 12-strand and 6-strand Singlemode fiber optic cable, provide qty (2) 3-meter duplex LC OS2 singlemode fiber patch cord (Belden/CDT P/N FPSLDLD003MR1XY).
- F. Acceptable Products:
 - 1. 3-Meter duplex LC OM4 Multimode Patch Cords – Belden/CDT P/N FP4LDLD003MR2XA.
 - 2. 5-Meter duplex LC OM4 Multimode Patch Cords - Belden/CDT P/N FP4LDLD005MR2XA.
 - 3. 3-Meter duplex LC OS2 singlemode patch cords – Belden/CDT P/N FPSLDLD003MR1XY.
 - 4. No Substitutions.

2.15 TELECOM ROOM HORIZONTAL CABLE RUNWAY AND SUPPORTS

- A. Horizontal cable runway, angle support brackets, butt splices, junction splices, mounting plates, elevation kits, grounding straps, etc. shall be provided by a single manufacturer. Installed system shall be grounded per ANSI/TIA/EIA-607-A.
- B. Provide 18" wide horizontal universal style ladder rack in the telecom rooms where shown on the drawings. Ladder rack will be constructed of welded steel tubing. Stringers will be 1.5" in depth with 1.5" wide cross members spaced at 12" OC. Cable runway shall have a black finish.
 - 1. Acceptable Products:
 - a. Chatsworth Universal Cable Runway - CPI Part Number 1125-718, alternate space cable runway – CPI Part Number 31472-718.
 - b. No Substitutions.
- C. Provide 15" radius corner brackets at perpendicular intersections of the cable runway.
 - 1. Acceptable Products:
 - a. Chatsworth Cable Runway Corner Bracket, 15 Wide (Black). CPI Part Number 11959-715.
 - b. No Substitutions.
- D. Provide corner radius E-bends where shown on the drawings.
 - 1. Acceptable Products:
 - a. Chatsworth Cable Runway E-Bend (Black). CPI Part Number 10822-718.
 - b. No Substitutions.
- E. Provide qty (2) cable runway radius drops above each vertical cable manager to maintain cable bend radius. Coordinate layout of overhead ladder rack cross

members so that radius drops are located directly above vertical cable managers. Where cross members conflict with the vertical cable managers, cut and remove cross members and replace with removable cross members. Where radius drops are connected to removable cross members, install custom radius drops. All components to have a black finish.

1. Acceptable Products:
 - a. Chatsworth Cable Runway Radius Drop, Cross Member (Black). CPI Part Number 12100-718 (for 18" wide runway).
 - b. No Substitutions.
- F. Provide steel triangular support brackets to support the horizontal cable runway. Triangular support brackets shall be fastened to the stud wall framing. Spacing of the support brackets shall not exceed 4'-0" on center. Support brackets shall have a load capacity of 100 pounds (for 12" wide runway) and 400 pounds (for 18" runway) and shall have a black finish.
 1. Acceptable Products:
 - a. Chatsworth Triangular Support Bracket, Steel, 12" and 18" Wide (Black). CPI Part Number 11312-712 (12") and 11746-718 (18").
 - b. No Substitutions.
- G. Provide manufacturer's butt-splice connections between continuous sections of horizontal ladder rack.
 1. Acceptable Products:
 - a. Chatsworth Butt Splice Kit 1 1/2" x 3/8" Stringer (Black). CPI Part Number 11301-701.
 - b. No Substitutions.
- H. Provide manufacturer's junction-splice connections at 90 degree intersections of horizontal ladder rack.
 1. Acceptable Products:
 - a. Chatsworth Junction Splice Kit 1 1/2" x 3/8" Stringer (Black). CPI Part Number 11302-701.
 - b. No Substitutions.
- I. Provide cable runway wall angle supports.
 1. Acceptable Products:
 - a. Chatsworth Wall Angle Support Kit, Cable Runway (Black). CPI Part Number 11746-718.
 - b. No Substitutions.

- J. Provide cable runway elevation kit to secure the top of the equipment racks to the overhead ladder rack. Provide Qty (1) elevation kit per rack.
 - 1. Acceptable Products:
 - a. Chatsworth Cable Runway Elevation Kit (Black). CPI Part Number 10506-706. 3" Channel Rack-to-Runway Mounting Plate, 18" Wide (Black). CPI Part Number 10595-718.
 - b. No Substitutions.
- K. Provide cable runway end closing kit to close unspliced ends of the cable runway.
 - 1. Acceptable Products:
 - a. Chatsworth End Closing Kit, Cable Runway, 12" (Black). CPI Part Number 11700-712.
 - b. No Substitutions.
- L. Provide cable runway ground straps to bond each section of the cable runway system together.
 - 1. Acceptable Products:
 - a. Chatsworth Cable Runway Ground Strap. CPI Part Number 40164-001.
 - b. No Substitutions.
- M. Install plastic dust protectors on exposed threaded rod supports (color black).
 - 1. Acceptable Products:
 - a. Panduit Pan-Wrap split harness wrap.
 - b. Or approved equal.

2.16 VELCRO CABLE TIES

- A. Provide Velcro cable ties cut to length from a continuous roll to loosely bundle horizontal cabling in the telecom rooms routed on the ladder rack to the patch panels. Install Velcro cable ties at 1'-0" intervals.
- B. Do not exceed qty (50) cables per bundle.
- C. Do not attach cable bundles to the runway with the Velcro cable ties. Do not use plastic tie-wraps.
- D. Acceptable Products
 - 1. Panduit HLS-15R6.
 - 2. Leviton 43115-075.

3. Or approved equal.

2.17 GROUNDING BARS

- A. The entire telecom grounding system including grounding bars, grounding conductors, lugs, etc shall be installed in accordance with ANSI-J-STD-607-B “Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications”.
- B. Provide UL listed copper grounding bars with insulated standoffs and stainless steel mounting brackets. Provide the size and quantity of grounding bars as shown on the drawings.
- C. Telecommunications grounding bus bars (TGB) located in the telecom rooms (IDF's) shall be copper 12" x 2" x 1/4" UON on the Drawings.
- D. The telecommunications main grounding bus bar (TMGB) located in the Equipment Room (MDF) shall be copper 20" x 4" x 1/4" UON on the Drawings.
- E. Grounding bars shall have BICSI patterned pre-drilled lug mounting holes to accommodate two hole lug attachment. 5/16" hole sets shall be spaced on 5/8" centers. 7/16" hole sets shall be spaced on 1" centers.
 1. Acceptable Products
 - a. Chatsworth 13622-012 (2" high), 40153-020 (4" high).
 - b. Erico TGB-A20L12PT (2" high), TMGB-A20L27PT (4" high).
 - c. Harger GBI14220TGB (2" high), GBI14420TMGB (4" high).
 - d. Or approved equal.
- F. Provide separate green insulated #6 AWG grounding conductors from equipment racks, cabinets, metallic backboards, cable sheaths, metallic strength members, ladder rack, conduits, splice cases and building entrance terminals to the grounding bar in each telecom room. Do not “daisy chain” ground conductors.
- G. Grounding bars (TGB's) located in the telecom rooms shall be bonded to the grounding bar (TMGB) located in the Equipment Room with a telecom bonding backbone (TBB) conductor. The TBB shall be continuous without splices. The minimum TBB conductor size shall be 3/0.
- H. Provide an insulated grounding conductor (#2 AWG minimum) from the ground bar in each telecom room to building steel. The grounding conductor shall be cad welded to the building steel. See grounding riser detail for conductor sizes and additional grounding requirements.
- I. Provide an insulated grounding conductor (#2 AWG minimum) from the ground bar in each telecom room to an approved electrical ground (electrical panel ground serving the telecom room). See grounding riser detail for conductor sizes and additional grounding requirements.

- J. Ground wires shall have solderless, copper, two bolt, two-hole long barrel compression lugs placed on both ends. The two bolt lug holes shall be 1/4" and on 3/4" centers.
- K. All grounding conductors shall be green in color. All cables and bus bars shall be identified and labeled in accordance with the recommendations made in ANSI/TIA/EIA-606-A.

2.18 WALL MOUNTED TELECOM ENCLOSURES (SMALL TE)

- A. Provide wall mounted telecom enclosures where shown on the drawings.
- B. Enclosures shall be secured to wall with minimum qty (4) lag bolts.
- C. Enclosures shall be UL Listed with black powder coat finish.
- D. Acceptable Products (provide all of the following part numbers):
 - 1. Enclosure: Chatsworth P/N 13050-223.
 - 2. Fan Kit: Chatsworth P/N 13051-001.
 - 3. Horizontal Cable Manager: Chatsworth P/N AO403977.
 - 4. Filler panel: Chatsworth P/N 30024-701.
 - 5. Line Thermostat: Dayton P/N 4LZ94.
 - 6. Fiber Enclosure: Belden P/N AO643207.
 - 7. Fiber Singlemode LC Adapter: Belden P/N AX102215.
 - 8. 48-port CAT 6A patch panel: Belden P/N RVAPPF2U48BK.
 - 9. Keyconnect side entry box (Belden P/N AX102652).
 - 10. No substitutions.

2.19 OUTDOOR POLE MOUNTED NEMA 4X NETWORK EQUIPMENT CABINET

- A. Furnish and install pole mounted network equipment cabinets where shown on the drawings. Cabinets shall meet the following physical specifications:
 - 1. UL Listed.
 - 2. NEMA 4X rating.
 - 3. Approximate dimensions 21" high x 24" wide x 24" deep.
 - 4. Qty (9) 19" rack mounting spaces (9 RU).
 - 5. Outdoor pole mount enclosure with solid lockable front door.
 - 6. 3-point locking system. Stainless steel door hardware / hinge.
 - 7. Top solar shield.
 - 8. Heavy duty outdoor 0.125" minimum aluminum construction.
 - 9. 1-pair L shaped 19" EIA mounting rails w/#12-24 mounting screws.
 - 10. Outdoor pole mounting "C" channels.
 - 11. 15-year warranty.
- B. Secure cabinets to light poles with stainless steel mounting hardware.
- C. Acceptable Products:

1. DDB Unlimited SOD-192420 (NEMA 4X Rated).
2. Or Approved Equal.

PART 3 – EXECUTION

3.1 TELECOM EQUIPMENT ROOM COORDINATION

- A. The electrical and telecom contractors are responsible for coordinating the installation of all equipment and cabling pathways located within the telecom rooms.
- B. The electrical and telecom contractors shall coordinate the work of all other trades that have work located within the telecom equipment rooms.
- C. The electrical and telecom contractors shall create and submit for approval coordinated scaled shop drawings of the telecom room showing the proposed location of all work. Shop drawings shall be submitted and approved prior to installing any work in the telecom rooms.

3.2 UTILITIES INSTALLED AND ROUTED THROUGH COMMUNICATION ROOMS

- A. Telecom rooms are dedicated for the installation and support of telecom and security related equipment. Other equipment and utilities not specifically dedicated to the support of the telecom room are not permitted. This includes the telecom room and the space above the finished ceiling (where occurs) to the structure above. The following items are permitted:
 1. Telecom and security related equipment and cabling.
 2. Electrical panels, electrical outlets and uninterruptable power supplies directly serving equipment within the telecom room.
 3. Electrical lighting and switches directly serving the telecom room.
 4. HVAC ductwork, AC units, fan coil units and piping directly serving the telecom room.
 5. Sprinkler piping directly serving sprinkler heads located in the telecom room.
 6. Fire protection devices including smoke detectors and heat detectors directly serving the telecom room.
- B. The following items are not permitted to be installed or routed through the telecom equipment rooms:
 1. Electrical panels, transformers, feeders and/or conduit not specifically dedicated to the telecom room.
 2. Fire alarm panels (unless specifically shown on the drawings or approved by the Owner's representative).
 3. HVAC ductwork, fan coil units, chilled water piping, heating hot water piping, and/or control panels not specifically dedicated to the telecom room.

- 4. Plumbing piping including cold water piping, hot water piping, condensate piping, waste piping and/or drain piping not specifically dedicated to the support of the telecom room.
- C. Any utilities routed through a telecom equipment room that do not directly serve the room must be rerouted and/or relocated at the contractor's expense.
- D. Any equipment located in the telecom equipment rooms not directly serving the room shall be relocated at the Contractor's expense.
- E. Any utilities within a telecom room that pose a leak hazard to the equipment located within the room (with the exception of dedicated sprinkler piping) shall have a drip pan and appropriate drain piping installed to mitigate the leak risk.

3.3 FLOOR MOUNTED RACKS

- A. Floor mounted racks and cabinets shall be secured to structure with a minimum of (4) 1/2" diameter concrete expansion anchors or as required by local codes.
- B. Racks and cabinets shall be placed with a minimum of 36" clearance from the walls on at least three sides (two of which must be front and rear) of the rack. When mounted in a row, maintain a minimum of 36" from the wall behind and in front of the row of racks and from the wall to at least one end of the row.
- C. All racks, free-standing cabinets, and wall-mount cabinets shall be bonded to the ground bar in each room with a separate #6 green insulated grounding conductor.
- D. Rack mount cage nuts/screws not used for installing patch panels and other hardware shall be bagged and left with the rack or cabinet upon completion of the installation.

3.4 PLYWOOD BACKBOARDS

- A. Mechanically fasten fire treated plywood sheets to the walls.
- B. Install plywood on all 4 walls of the telecom room unless specifically noted otherwise on the drawings.
- C. Run plywood sheets vertically from 6" AFF to 8'-6" AFF.
- D. Where plywood will support backbone cabling, secure plywood to wall with sufficient fasteners to support 1,500 pounds of weight.
- E. Paint plywood with 2 coats of white paint. Mask fire treatment labels on plywood prior to painting.

3.5 HORIZONTAL CABLE PATHWAY

- A. Should vertical or horizontal clearances not be possible due to physical constraints of the designated space, the Contractor shall immediately contact the Owner's Representative for alternative routing.
- B. Coordinate routing of cable pathway with lighting and HVAC serving the room. Secure cable pathway to walls, overhead structure and or equipment racks/cabinets as required.
- C. Bond cable pathway sections together with #6 green insulated bonding jumpers. Bond pathway to telecom room ground bar with #6 green insulated conductor.

3.6 CABLE MANAGEMENT

- A. Neatly bundle cabling with Velcro tie wraps on the horizontal ladder rack. Space Velcro tie wraps at 1'-0" on center.
- B. Do not exceed qty (24) cables per bundle.
- C. Neatly dress horizontal cable from the horizontal ladder rack, through the rear vertical cable managers to the rear of the patch panels. Use Velcro cable ties as necessary to maintain cable bundles. Do not exceed the manufacturer's cable bend radius.
- D. Do not install cable ties to bundle patch cables.

3.7 PATCH PANELS

- A. Terminate and dress cables on the rear of the patch panels in accordance with manufacturer instructions using the provided rear cable management bar or bracket.
- B. Maintain cable twists within ½" of the patch panel IDC blocks.

3.8 OPTICAL FIBER PATCH PANELS

- A. Fusion splice all backbone fibers to duplex LC fusion splice cassettes.
- B. Secure backbone fiber cable sheath to the fiber patch panel with manufacturer supplied clamps. Route exposed fibers through fiber guides.

3.9 HORIZONTAL AND VERTICAL LADDER RACK

- A. Install horizontal ladder rack at elevations shown on the drawings. Bolt horizontal ladder rack to tops of equipment racks with custom cable runway elevation kit.
- B. Install vertical ladder to route cabling from floor sleeves to the overhead ladder rack.
- C. Install vertical ladder to route cabling from overhead wall and deck conduit penetrations to the overhead ladder rack.

- D. Install triangular ladder rack support brackets (knee braces) at a maximum of 4'-0" O.C. Secure support brackets to the stud wall framing with manufacturer's recommended lag bolts.
- E. Secure continuous sections of runway together with butt splices. Install "L" brackets to bolt together perpendicular intersections of runway. Install wall support angles at perpendicular intersections of the ladder rack to the wall.
- F. Support and brace ladder rack from the building structure with threaded rod and Unistrut where runway is not routed adjacent to the wall and the span exceeds 4'-0".
- G. Seismically brace ladder rack and tops of equipment racks as required by local building codes.
- H. De-burr all field cut sections of ladder rack prior to installation.
- I. Install bonding jumpers between sections of ladder rack to maintain ground continuity.
- J. Install touch-up paint to repair scratched or damaged ladder rack finish.

3.10 GROUNDING AND BONDING

- A. All components of the Telecommunications system shall be bonded and grounded in accordance with ANSI/TIA-607-B "Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications".
- B. Bond equipment racks, cabinets, wiring blocks, conduits, cable tray, ladder rack, building entrance terminals and cable shields to the ground bar in each telecom room with #6 AWG ground conductors. Provide a separate ground conductor for each item. Do not daisy chain ground conductors.
- C. Bond the ground bar in each Telecom room to building steel (#2 AWG minimum). Cad weld the grounding conductor to the building steel. See grounding riser diagram for ground conductor sizes.
- D. Bond the ground bar in each Telecom room to the electrical panel serving that Telecom room (#2 AWG minimum). See grounding riser diagram for ground conductor sizes.
- E. Bond the Telecommunications Ground Bar (TGB) in each Telecom room to the Telecommunications Main Ground Bus (TMGB) with a Telecommunications Bonding Backbone (TBB) conductor. The minimum TBB conductor size shall be minimum 3/0. See grounding riser diagram for ground conductor sizes.
- F. Bond the Telecommunications Main Ground Bus (TMGB) to the main electrical building ground (#2 AWG minimum). See grounding riser diagram for ground conductor sizes.

- G. Grounding conductors shall be installed continuous. There shall be no splices or mechanical couplers.
- H. Locate the Telecommunications Main Grounding Bar within 5'-0" of the building entrance terminal(s) (BET).
- I. The Electrical Contractor shall test the continuity of all grounding conductors.

END OF SECTION 271100

SECTION 271300 – COMMUNICATIONS BACKBONE CABLING

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.
- B. The Contractor shall provide all equipment, materials, labor, and services necessary to complete the backbone cabling system, and to ensure that it is in compliance with requirements stated or reasonably inferred by the Specifications and the Contract Drawings.
- C. Backbone cabling includes inter-building (Outside Plant) and intra-building (Premise) copper and fiber optic cabling.
- D. This section includes minimum requirements for the following
 1. Singlemode Tight Buffered Fiber Optic Cabling – Indoor/Outdoor

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 1. 27 05 00: Common Work Results for Communications.
 2. 27 05 28: Interior Communications Pathways.
 3. 27 05 43: Exterior Communications Pathways
 4. 27 08 00: Commissioning of Communications
 5. 27 11 00: Communications Equipment Room Fittings
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 05 00 and in particular the following code requirements
 1. ANSI/TIA-568.0-E: Generic Telecommunications Cabling for Customer Premises (Revision E, March 2020).
 2. ANSI/TIA-568.1-E: Commercial Building Telecommunications Infrastructure Standard (Revision E, March 2020).
 3. ANSI/TIA-568.3-D: Optical Fiber Cabling and Component Standard (Revision D, October 2016).
 4. ANSI/TIA-598-D: Optical Fiber Cable Color Coding (Revision D, July 2014).

5. ANSI/TIA-607-D: Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises (Revision D, July 2019).
6. ANSI/TIA-758-B: Customer-Owned Outside Plant Telecommunications Infrastructure Standard (Revision B, March 2012).
7. ANSI TIA-526-7-A: Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant (Revision A, July 2015).
8. ANSI/TIA-526-14-C: Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant (Revision C, 2015).
9. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
10. Underwriter's Laboratories, Inc. (UL).

1.4 QUALITY ASSURANCE

- A. All materials shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Specifications shall be subject to the control and approval of the Owner's Representative. Equipment and materials shall be of the quality and manufacturer indicated. The equipment specified is based upon the acceptable manufacturers listed.
- B. All fiber optic cabling and related fiber termination equipment shall be installed by a trained technician with a minimum of (2) years experience in the termination of fiber optic cabling. The technician will have received training through a nationally recognized program offered by BICSI, Corning, AT&T, 3M or equivalent. The contractor shall provide all specialized tools required for proper installation.

1.5 SUBMITTALS

- A. Submit manufacturers' data sheets for the following
 1. Singlemode Tight Buffered Fiber Optic Cabling – Indoor/Outdoor
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.
- C. Submit all factory test information of cables prior to installation of the product.

1.6 DELIVERY, STORAGE & HANDLING

- A. Visually examine cable spools and boxes for damage after delivery to the jobsite prior to installation. Visibly damaged goods are to be returned to the supplier and replaced at no additional cost to the Owner.

1.7 GUARANTEE

- A. The outside plant (OSP) and premise fiber optic cabling system including fiber termination cabinets, fiber connectors, fiber optic patch cords, etc. shall be covered by a 25-year system warranty from Belden/CDT.

PART 2 – PRODUCTS

2.1 SINGLEMODE TIGHT BUFFERED FIBER OPTIC CABLING – INDOOR/OUTDOOR

- A. Provide cables with fiber strand counts as shown on the drawings.
- B. Fiber optic cable shall be indoor/outdoor rated suitable for underground duct installation.
- C. Fiber Optic cabling shall have a riser rated jacket (OFNR).
- D. Fiber optic cables shall be tight buffered with a black colored jacket.
- E. Maximum attenuation characteristics
 - 1. Maximum attenuation 0.80/0.50 dB/Km @ 1310/1550 nm.
- F. Physical Characteristics
 - 1. Cable will have 900 µm buffer with mechanically strippable PVC jacket.
 - 2. The designation "UL" and "OFNR" shall be printed on the jacket with length markings every 2'-0".
 - 3. The cable shall have individual fiber tube colors per TIA/EIA-606 and overall yellow jacket.
 - 4. The cable shall contain an aramid yarn strength member with cables stranded around center.
 - 5. The cable shall be suitable for operating temperatures of -40° to +70° C.
- G. Acceptable Products:
 - 1. Belden/CDT P/N FDSD012R9 (12-Strand SM) and P/N FDSD006R9 (6-Strand SM)
 - 2. No Substitutions.

2.2 SINGLEMODE LC CONNECTORS

- A. Terminate single mode cable on fusion splice on LC connectors (see rack elevations).
- B. Acceptable Products:
 - 1. Belden/CDT P/N FTSLC900FS01.
 - 2. No Substitutions.

PART 3 – EXECUTION

3.1 BACKBONE CABLING

- A. Ten (10) feet of fiber cable slack shall be stored at the telecom room in a figure eight configuration in the overhead ladder rack. Additional cable slack will be installed within the vertical cable managers in a "drip loop" configuration.
- B. No more than 50'-0" of exposed "non-listed" outside plant cabling shall be permitted inside the building.

- C. Vertical runs of cable shall be supported to a messenger strand, cable ladder, or other method to provide proper support for the weight of the cable.
- D. Backbone cables spanning more than three floors shall be securely attached at the top of the cable run with a wire mesh grip and on alternating floors or as required by local codes.
- E. Three feet of fiber slack shall be neatly coiled within the fiber enclosure.
- F. Each optical fiber cable shall be individually attached to its enclosure by mechanical means. The cables strength member shall be securely attached the cable strain relief bracket in the enclosure. Refer to manufacturer installation instructions.
- G. Each optical fiber cable shall be clearly labeled at the entrance to the fiber termination enclosure. Cables labeled within the bundle where the label is obscured from view shall not be acceptable.
- H. Prior to installation of fiber optic backbone cable, test one fiber strand using an OTDR or light meter to verify continuity of the cable.
- I. All fiber optic cable shall be installed within fabric innerduct. Where the innerduct terminates at the telecom room wall or floor, install riser rated corrugated innerduct from that point to the fiber termination cabinet.

3.2 OPTICAL FIBER CONNECTORS

- A. Adhere to all manufacturer installation guidelines.
- B. Polarization for entire system shall be maintained as described in ANSI/TIA – 568-B.1 Section 10.3.2.

END OF SECTION 271300

SECTION 271500 – COMMUNICATIONS HORIZONTAL CABLING

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. The Contractor shall provide all equipment, materials, labor, and services necessary to complete the horizontal cabling system, and to ensure that it is in compliance with requirements stated or reasonably inferred by the Specifications and the Contract Drawings.
- B. The horizontal cabling is that portion of the communication cabling system that extends from the work area communications outlets to the patch panels in the communications rooms.
- C. This section includes minimum requirements for the following
 1. Horizontal Category 6 Cabling.
 2. Horizontal Category 6A (Augmented) Cabling.
 3. CAT 6A Patch Cords.
 4. Category 6A 8-Position Jacks.
 5. Category 6A Field Mount Plugs
 6. Work Area 4-Port Plastic Faceplates
 7. Work Area 4-Port Stainless Steel Faceplates
 8. Velcro Cable Straps
 9. OSP CAT 6 Cable (For Parking Lot Pole Mounted Cameras)

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 1. 27 05 00: Common Work Results for Communications.
 2. 27 05 28: Interior Communications Pathways.
 3. 27 05 43: Exterior Communications Pathways
 4. 27 08 00: Commissioning of Communications
 5. 27 11 00: Communications Equipment Room Fittings
 6. 27 41 00: Audio Visual Systems
 7. 27 41 16: AV and Safety Alert Systems
 8. 27 51 13: Paging Systems
 9. 27 53 13: Wireless Clock Systems
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 05 00 and in particular the following code requirements:
 - 1. ANSI/TIA-568.0-E: Generic Telecommunications Cabling for Customer Premises (Revision E, March 2020).
 - 2. ANSI/TIA-568.1-E: Commercial Building Telecommunications Infrastructure Standard (Revision E, March 2020).
 - 3. ANSI/TIA-568.2-D: Balanced Twisted-Pair Telecommunications Cabling And Components Standards (Revision D, September 2018).
 - 4. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
 - 5. ANSI/TIA-1152-A: Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling (Revision A, November 2016).
 - 6. Underwriter's Laboratories, Inc. (UL).

1.4 QUALITY ASSURANCE

- A. All materials shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Specification shall be subject to the control and approval of the Owner's Representative. Equipment and materials shall be of the quality and the manufacturer indicated. The equipment specified is based upon the acceptable manufacturers listed.
- B. The Contractor shall strictly adhere to all Category 6 and Category 6A installation practices when installing unshielded twisted-pair cabling.

1.5 SUBMITTALS

- A. Manufacturer's Data Sheets: Submit manufacturers data sheets for the following items
 - 1. Horizontal Category 6 Cabling.
 - 2. Horizontal Category 6A (Augmented) Cabling.
 - 3. Category 6A 8-Position Jacks.
 - 4. Category 6A Field Mount Plugs
 - 5. Work Area 4-Port Plastic Faceplates
 - 6. Work Area 4-Port Stainless Steel Faceplates
 - 7. Velcro Cable Straps
 - 8. OSP CAT 6 Cable (For Parking Lot Pole Mounted Cameras)
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.

1.6 DELIVERY, STORAGE & HANDLING

- A. Visually inspect all cables, cable reels, and shipping cartons to detect possible cable damage incurred during shipping and transport. Visibly damaged goods are to be returned to the supplier and replaced at no additional cost to the Owner.

1.7 GUARANTEE

- A. The Category 6 and 6A horizontal cabling system including work area jacks, horizontal cabling, patch panels and patch cords shall be covered by a minimum 25-year system warranty from Belden/CDT (see section 270500 1.10 for warranty requirements).

PART 2 – PRODUCTS

2.1 HORIZONTAL CATEGORY 6 CABLE

- A. Horizontal cabling shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Horizontal cabling shall be 4-pair, Category 6 unshielded twisted pair.
- C. Physical Characteristics
1. Category 6 cable shall meet or exceed the requirements of ANSI/TIA/EIA–568-B.2 and ANSI/TIA/EIA–568-B.2 Addendum 1.
 2. Cable shall have a listed plenum rated jacket (CMP).
 3. The cable jacket must have the following legible markings
 - a. Manufacturer's name.
 - b. Copper conductor gauge.
 - c. Pair count.
 - d. UL and CSA listing.
 - e. Manufacturer's trademark.
 - f. Category rating.
 - g. Sequential foot markings, in one foot increments.
 - h. Jacket rating (CMP).
 4. Horizontal data cable shall have a GRAY jacket with black lettering.
- D. Transmission Characteristics
1. Cable shall conform to ANSI/TIA/EIA–568-B.2 Addendum 1 as shown below.

Frequency (MHz)	Solid Conduct or Cable Insertion Loss (dB)	NEXT Loss (dB)	PSNEX T Loss (dB)	ELFEXT Loss (dB)	Power Sum ELFEXT (dB)	Return Loss (dB)
1	2.0	74.3	72.3	67.8	64.8	20.0
4	3.8	65.3	63.3	55.8	52.8	23.0
8	5.3	60.8	58.8	49.7	46.7	24.5
10	6.0	59.3	57.3	47.8	44.8	25.0
16	7.6	56.2	54.2	43.7	40.7	25.0
20	8.5	54.8	52.8	41.8	38.8	25.0
25	9.5	53.3	51.3	39.8	36.8	24.3

31.25	10.7	51.9	49.9	37.9	34.9	23.6
62.5	15.4	47.4	45.4	31.9	28.9	21.5
100	19.8	44.3	42.3	27.8	24.8	20.1
200	29.0	39.8	37.8	21.8	18.8	18.0
250	32.8	38.3	36.3	19.8	16.8	17.3

2. Propagation delay skew shall not exceed 45 ns per 100 meters for all frequencies from 1 MHz to 250 MHz.

E. Acceptable Products:

1. Belden/CDT Gigaflex 2400 P/N 2413 08U1000 (jacket color gray).
2. No Substitutions.

2.2 CATEGORY 6A (AUGMENTED) HORIZONTAL CABLE

- A. CAT 6A Horizontal cabling shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.

- B. Horizontal data cabling for standard telecom outlets and wireless access points shall be 4-pair, Category 6A unshielded twisted pair.

C. Physical Characteristics

1. Category 6A cable shall meet or exceed the requirements of ANSI/TIA/EIA–568-B.2-10 -- for Augmented Category 6 Cable.
2. Cable shall have a listed plenum rated jacket (CMP).
3. Cables shall be constructed of 4-pair, 23 AWG solid copper conductors.
4. The cable jacket must have the following legible markings
 - a. Manufacturer's name.
 - b. Copper conductor gauge.
 - c. Pair count.
 - d. UL and CSA listing.
 - e. Manufacturer's trademark.
 - f. Category rating.
 - g. Sequential foot markings, in one foot increments.
 - h. Jacket rating (CMP).
5. Horizontal data cable shall have a YELLOW jacket with black lettering.

D. Transmission Characteristics

1. Cable shall conform to ANSI/TIA/EIA–568-B.2-10 as shown below.

Frequency (MHz)	NEXT (dB) (min.)	PSANEXT (dB) (min.)	RETURN LOSS (dB) (min.)
0.772	96.2	112.2	70.2

1	94.0	110.0	68.0
4	82.0	98.0	56.0
8	75.9	91.9	49.9
10	74.0	90.0	48.0
16	69.9	85.9	43.9
20	68.0	84.0	42.0
25	66.0	82.0	40.0
31.25	64.1	80.1	38.1
62.5	58.1	74.1	32.1
100	54.0	70.0	28.0
200	48.0	64.0	22.0
250	46.0	62.0	20.0
300	44.5	60.5	18.5
350	43.1	59.1	17.1
400	42.0	58.0	16.0
450	40.9	56.9	14.9
500	40.0	56.0	14.0
550	39.2	55.2	13.2
600	38.4	54.4	12.4
625	38.1	54.1	12.1

2. Propagation delay skew shall not exceed 35 ns per 100 meters for all frequencies from 1 MHz to 625 MHz.

E. Acceptable Products.

1. Belden 10GXS CAT 6A Cabling. Belden/CDT Part Number 10GXS13 0041000 (jacket color yellow).
2. No Substitutions.

2.3 CATEGORY 6A FIELD MOUNT PLUGS

- A. Field mount plugs shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Terminate CAT 6 cabling at all device locations for the following systems on CAT 6A field mount plugs and connect directly to the device.
 1. CCTV System.
 2. Audio Enhancement System.
 3. Paging System.
 4. Access Control System.
- C. Terminate CAT 6A cabling at all device locations for the following systems on CAT 6A field mount plugs and connect directly to the device.
 1. Wireless Access Points.
- D. Field mount plugs shall be 8-pin Category 6A and will conform to the requirements of ANSI/TIA/EIA-568-B.2-10.

- E. Pin/Pair assignment shall be in accordance with T568B.
- F. Acceptable Products:
 - 1. Belden/CDT RevConnect P/N RVAFPUBK-S1.
 - 2. No Substitutions.

2.4 CATEGORY 6A MODULAR JACKS

- A. CAT 6A modular jacks shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Modular jacks shall be 8-pin Category 6A and will conform to the requirements of ANSI/TIA/EIA–568-B.2-10.
- C. Pin/Pair assignment shall be in accordance with T568B.
- D. Modular jacks shall be manufactured by the same manufacturer as the patch panels in the telecommunication rooms.
- E. Modular data jacks shall be color YELLOW.
- F. Modular jacks shall be compatible with plastic faceplates and stainless steel faceplates.
- G. Modular jacks shall be “Keystone” style.
- H. Transmission characteristics for a mated-connection (jack and cord) shall conform to ANSI/TIA/EIA–568-B.2-10 as shown below.

Frequency (MHz)	NEXT (dB) (min.)	PSANEXT (dB) (min.)	RETURN LOSS (dB) (min.)
0.772	96.2	112.2	70.2
1	94.0	110.0	68.0
4	82.0	98.0	56.0
8	75.9	91.9	49.9
10	74.0	90.0	48.0
16	69.9	85.9	43.9
20	68.0	84.0	42.0
25	66.0	82.0	40.0
31.25	64.1	80.1	38.1
62.5	58.1	74.1	32.1
100	54.0	70.0	28.0
200	48.0	64.0	22.0
250	46.0	62.0	20.0
300	44.5	60.5	18.5
350	43.1	59.1	17.1
400	42.0	58.0	16.0
450	40.9	56.9	14.9

500	40.0	56.0	14.0
550	39.2	55.2	13.2
600	38.4	54.4	12.4
625	38.1	54.1	12.1

- I. Acceptable Products:
 - 1. Belden/CDT 10GX RevConnect Jacks P/N RVAMJKUYL-S1.
 - 2. No Substitutions.

2.5 WORK AREA 4-PORT PLASTIC FACEPLATES

- A. Faceplates shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Provide UL listed faceplates. Faceplates should be white (verify with Architect), flush mounted and manufactured of high impact thermoplastic.
- C. Faceplates shall have top and bottom label holders with plastic inserts.
- D. Provide faceplates with a minimum of 4 and a maximum of 6 modules. Provide blank inserts in unused openings.
- E. Faceplates shall accept "Keystone" style modular jacks.
- F. Faceplates shall be manufactured by the same manufacturer as the outlet jacks and shall be compatible with the submitted outlet jacks.
- G. Acceptable Products:
 - 1. Belden/CDT 4-Port Faceplate P/N AX102249 (color white) – verify color w/Architect.
 - 2. No Substitutions.

2.6 WORK AREA 4-PORT STAINLESS STEEL FACEPLATES

- A. Provide UL listed stainless steel faceplates at workstation outlets in the gym and where shown on the drawings.
- B. Provide 4-port faceplates. Provide blank inserts in unused openings.
- C. Faceplates shall accept "Keystone" style modular jacks.
- D. Faceplates shall be manufactured by the same manufacturer as the outlet jacks and shall be compatible with the submitted outlet jacks. Provide "keystone" jacks as necessary.
- E. Acceptable Products:
 - 1. Stainless SG Faceplate. Belden/CDT AX102009.
 - 2. No Substitutions.

2.7 VELCRO CABLE STRAPS

- A. Loosely bundle horizontal cabling with Velcro tie wraps.
- B. Velcro tie wraps shall ¾" in width and cut from a continuous roll.
- C. Install Velcro cable ties at 2'-0" intervals outside of the telecom rooms and 1'-0" intervals inside the telecom rooms.
- D. Do not exceed qty (24) cables per bundle.
- E. Acceptable Products
 - 1. Panduit TAK-TY HLSP (plenum).
 - 2. Leviton 43115-075.
 - 3. Or equal.

2.2 HORIZONTAL CATEGORY 6 CABLE - OUTSIDE PLANT

- A. Provide 4-pair CAT 6 OSP rated cabling.
- B. Cables shall be filled and flooded with a water-blocking compound. The cable shall consist of 4-pair 24 AWG insulated conductors. Cable shall be suitable for underground duct installation.
- C. Cable jacket marking: Must be legible and shall contain the following information:
 - 1. Manufacturer's name.
 - 2. Copper conductor gauge.
 - 3. Pair count.
 - 4. Manufacturer's trade mark.
 - 5. Sequential foot markings.
- D. Acceptable Products:
 - 1. Belden P/N OSP6u 01010000.
 - 2. No substitutions.

PART 3 – EXECUTION

3.1 HORIZONTAL CABLE ROUTING AND TERMINATION

- A. Ten feet of cable slack shall be stored at the telecom room and three feet of cable slack shall be provided in the ceiling space above the telecom outlet for every installed horizontal cable.
- B. All horizontal cables shall be installed in cable bundles. Cable bundles shall not exceed qty (24) cables per bundle and will be loosely bound with velcro straps. Cables in a bundle should be uncombed until entry into each rack's vertical cable management, where the cables are to be combed and dressed together until terminated on each patch panel.

- C. Category 6 and Category 6A cables shall be bundled separately.
- D. Cables shall be installed in continuous lengths from origin to destination (no splices) except for transition points or consolidation points specifically shown on the drawings.
- E. The cable's minimum bend radius and maximum pulling tension shall not be exceeded. Refer to manufacturers requirements and reference documents.
- F. All telecom cables shall be supported by approved telecom pathways having dedicated support systems directly attached to structure (i.e. conduit, j-hooks, cable tray, etc.). Cables shall not be attached to or supported by ceiling grid, ceiling grid support wires, lighting fixture support wires or the work of other mechanical, electrical, plumbing or sprinkler trades.
- G. All telecom cables shall be stored in accordance with the manufacturer's requirements.
- H. Any cable damaged or exceeding the manufacturer's recommended installation parameters during installation shall be replaced by the Contractor prior to final acceptance at no cost to the Owner.
- I. All telecom cables shall be labeled with self-adhesive labels. At the work area outlet, the cable label shall be applied to the cable behind the faceplate on a section of cable that can be accessed by removing the cover plate. At the Telecom Room, each cable shall be clearly labeled on the cable jacket behind the patch panel at a location that can be viewed without removing the bundle support ties. Cable labels located within the bundle or where obscured from view shall not be acceptable.
- J. Cables shall be installed in accordance with the recommendations made in the ANSI/TIA/EIA-568-B standard document, manufacturer's recommendations and installation guides, and best industry practices.
- K. Plastic "zip-ties" shall not be permitted within the Structured Cabling System. "Velcro" type (hook and loop) tie wraps shall be used for the purpose of bundling / managing horizontal and backbone cabling (must be plenum rated if installed within a plenum space).
- L. Horizontal UTP pair untwist at the termination shall not exceed 0.5".
- M. Jack pin/pair assignments shall be T568B for all installed horizontal cabling unless otherwise specified within the Project Documents.
 - 1. T568B Jack pin/pair assignments are as follows:

- N. For horizontal cabling, if a J-hook System is used to support cable bundles, all horizontal cables shall be supported at a maximum of 60" intervals. J-hooks must be secured to the permanent building structure. J-Hooks shall not be attached to ceiling tiles, ceiling grid, ceiling support wires or to the work of other mechanical, electrical, plumbing and sprinkler trades.
- O. The horizontal telecom pathway and pathway support system shall not permit significant lateral or vertical motion. Cable quantities shall not exceed J-Hook System manufacturer recommendations or qty (24) cables, whichever is fewer.
- P. Telecom cables may not rest on acoustic ceiling grids or panels, or be attached to any portion of the building except for dedicated telecom pathway including conduit, innerduct, ladder rack, cable tray and/or J-hooks.
- Q. The cable length between the work area outlet and the termination in the telecommunications closet shall not exceed 295 feet. Any horizontal cable runs longer than 295 feet should be brought to the immediate attention of the Owner's Representative prior to installation.
- R. When placing cable, the Contractor shall maintain the following minimum clearance from sources of electro-magnetic interference (EMI).
 - 1. 6" clear from power conductors.
 - 2. 12" clear from fluorescent lighting fixtures and ballasts.
 - 3. 36" clear from transformers and motors.

3.2 WORK AREA OUTLETS

- A. Work Area outlets and connectors shall be installed in accordance with manufacturer's recommendations and installation guides, and best industry practices.

- B. Cables shall be dressed and terminated in accordance with the recommendations made in the ANSI/TIA/EIA-568-B standard document, manufacturer's recommendations and best industry practices.
- C. Pair untwist at the termination shall not exceed 0.5".
- D. Bend radius of the cable in the termination area shall not be less than 4 times the outside diameter of the cable.

END OF SECTION 271500

SECTION 275113 – PAGING SYSTEM

PART 1 – GENERAL

1.1 SUMMARY OF WORK

- A. This section includes a fully operational IP platform for a facility-wide internal communications:
 - 1. The platform shall provide complete internal communications and employ state of the art IP Technology including the minimum functions listed.
 - a. Emergency announcements that will override any pre-programmed audio.
 - b. District-wide, Emergency, Group, All School and Zone live voice paging.
 - c. District-wide, Emergency, Group, All School and Zone paging for pre-recorded audio – tones, music and voice.
 - d. Web-based user interface.
 - 2. The system shall support a minimum of 1000 level priorities which shall be user-definable, allowing each end point to place a minimum of 5 different priority calls at the same time.
 - 3. Any authorized administrator shall be able to call from outside the facility directly via the School District supplied SIP enabled Telephone Network.
 - 4. Automated message strings shall be manually initiated from a single-button access on the console, on a SIP connected telephone, a panic button, from the web-based user interface or via interface with third party systems.
 - 5. Paging and two-way intercom features shall be accessible from any system console or SIP connected telephone for each campus.
 - 6. The platform shall synchronize its system time to the network timeserver or a web-based time server.
 - 7. Each single campus installation shall be locally survivable for intercom, paging, even when the district connection is unavailable.
 - 8. This specification establishes a minimum level of quality, features, and performance for individual components as well as the integrated system.
 - 9. Systems that do not comply with the feature-sets highlighted in this Specification will not be considered.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.

2. 27 05 28: Interior Communications Pathways.
3. 27 08 00: Commissioning of Communications
4. 27 11 00: Communications Equipment Room Fittings
5. 27 15 00: Communications Horizontal Cabling

- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 DEFINITION OF TERMS

- A. Installer(s): Shall refer to the person, persons, or company who or which actually contracts to perform the work specified herein.

1.4 SUBMITTALS

- A. Product data for each component.
- B. Shop Drawings: Prior to proceeding with the work: Provide detailed equipment assemblies and indicate dimensions, weights, required clearances, method of field assembly, components, location of each field connection, and a complete schedule of all equipment and materials with associated manufacturer's product data sheets which are to be used.
1. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Identify terminals to facilitate installation, operation, and maintenance. Include a single-line diagram showing cabling interconnection of components and levels throughout system and impedances.
 2. Drawings and lists indicating proposed nameplate nomenclature and arrangements for control panels and plug panels prior to fabrication reflecting equipment used.
 3. Each drawing shall have a descriptive title and all sub-parts of each drawing shall be labeled. All drawings shall have the name and locations of the project, Systems Contractor's name in the title block.
 4. Details and descriptions of any other aspect of the system, which must differ from the contract documents due to field conditions or equipment, furnished.
- C. FCC Approval: The system shall be approved for direct interconnection to the telephone utility under Part 68 of FCC rules and regulations. Systems, which are not FCC approved or utilize an intermediary device for connection, will not be considered. Provide the FCC registration number of the system being proposed as part of the submittal process.
- D. Product Certificates: Signed by manufacturers certifying that products furnished comply with specified requirements.
- E. Installer Certificates: Signed by manufacturers certifying that Installers comply with specified requirements.

- F. Manufacturer Certificates: Signed by manufacturers certifying that they comply with specified requirements.
- G. Field Test Reports: Indicate and interpret test results for compliance with performance requirements. Include record of final matching transformer-tap settings, and signal ground-resistance measurement certified by Installer.
- H. Maintenance Data: For equipment to be included in maintenance manuals specified in Division 1.
 - 1. Record of Owners equipment-programming option decisions.
 - 2. All instructions necessary for proper operation and manufacturer's instructions.
 - 3. "Proof of Performance" information.
 - 4. Manufacturer's maintenance information.
 - 5. Copies of non-proprietary computer programs and system set up disks documenting all programmable features of the installed system.
- I. Record Drawings: Prior to final acceptance, provide three (3) complete sets of drawings indicating all cable numbers and construction details in accordance with the actual system installation. Revise all shop drawings to represent actual installation conditions. These Record Drawings will be used during "Final Acceptance Testing".
- J. System Training: Submit the following information describing the training programs and system trainers as outlined in paragraph 1.6 of this specification and in accordance with Division 1 specifications.
 - 1. Include with the submittal a preliminary staff development training program in outline form for review and approval by the owner's representative.
 - 2. Include with the submittal a current copy of the trainer's certification from the manufacturer that certifies and identifies the trainer(s) who are eligible to provide training and support for the project.
 - 3. Include with the submittal a current copy of trainer's needs assessment form which will be reviewed with the owner's designated representative for the system's preliminary system programming and configuration.
 - 4. Include with the submittal copies of all documentation used to identify for the owner those participants attending and completing the training programs.
- K. A copy of the manufacturer's standard statement of warranty proving all equipment provided for the school communications network is covered with the required five-year warranty shall be included with the project submittal. This statement of warranty shall be provided on the manufacturer's stationary.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced Installer who is an authorized representative of equipment manufacturer for both installation and maintenance

of equipment required for this Section. Provide the following within thirty (30) days after notification to proceed:

1. Provide a list of installations that the Installer has specifically installed for verification by the Owner. Random installations from other vendors and/or Installers shall not be accepted. The Installer, not its employees, must meet these qualifications.
 2. The Installer shall be bondable.
 3. The Installer shall demonstrate to the satisfaction of the Owner or his representative that he has:
 - a. Adequate plant and equipment to pursue the work properly and expeditiously.
 - b. Adequate staff and technical experience to implement the work.
 - c. Suitable financial status to meet the obligations of the work.
 - d. Technically capable and factory trained service personnel at a local service facility to provide routine and emergency service for all products used in this project.
- B. Any Contractor, who intends to bid on this work and does not meet the requirements of the "Quality Assurance" paragraph(s), shall employ the services of an "Installer" who does meet the requirements and who shall provide the equipment, make all connections and continuously supervise the installation. A subcontractor so employed as the "Installer" must be acceptable to the Architect/Engineer. The "Installer" shall be identified within thirty (30) days of notification to proceed for acceptance by the Architect/Engineer.
- C. Because the life expectancy of this type of communications structure normally exceeds 10 years, the owner expects continuity from the service provider. If the installing/servicing company has not been an authorized provider of the manufacturers product for at least three (3) years, the following is required:
1. A list of (2) systems manufacturers of which they currently are authorized service providers where the relationship exceeds three (3) years.
 2. A letter from the manufacturer outlining the details of changes in service providers over the last three (3) years and what actions they will take to ensure continuity of service to the customer.
- D. Each major component of equipment shall have the manufacturers name, address and model number on a plate securely affixed in a conspicuous place. NEMA code ratings, UL Label, or other data that is die-stamped into the surface of the equipment shall be easily visible.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- F. Comply with NFPA 70

G. Comply with NEMA Standard SB-40 for Emergency Communications in K-12 schools.

H. Comply with UL 60950.

1.6 IN-SERVICE TRAINING

A. The contractor shall provide and implement a complete and comprehensive staff training program for all administrators, facility staff members, and teachers. This mandatory training program will provide school staff a complete understanding of how to utilize and properly operate all functions.

B. The training program shall be implemented by a staff member/trainer employed by the contractor. The trainer must be factory certified to provide training on their product.

C. All staff development training is to be coordinated through the owner's designated representative. As training sessions are completed, the trainer will provide the school's administrative staff and school district's staff a document listing all of the staff and faculty members who attended, received, and completed the training program.

1.7 WARRANTY

A. Provide a manufacturer's five-year warranty of the school communications network equipment against defects in material and workmanship. This warranty will cover all electronic system components. Additional warranties cover clocks, speakers, and call in switches. If any defects are found within the warranty period, the defective equipment shall be replaced at no cost (equipment only); a one year warranty shall be provided for labor.

B. A copy of the manufacturer's standard statement of warranty proving all equipment provided for the school communications network is covered with the required five-year warranty shall be included with the project submittal. This statement of warranty shall be provided on the manufacturer's stationary. The standard five-year warranty is an important element in establishing a standard in quality. Manufacturers who circumvent the five-year warranty by offering special "extended warranties" that are not part of their normal published warranty will not be accepted.

C. Contractor shall respond, excluding weekends and holidays, within 24 hours to any warranty service calls. If equipment cannot be repaired within 24 hours of service visit, the contractor shall provide "loaner" equipment to the facility at no charge.

D. Make available a service contract offering continuing factory authorized service of the system after the initial warranty period.

1.8 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide the following system:
 - 1. Telecenter manufactured by Rauland
 - a. Authorized Rauland Distributor contact:
 - (1) Jeff Bowers
Innovative Communications Systems, Inc.
775-825-2011
jbowers@innovativecomsys.com

PART 2 – PRODUCTS

2.1 SYSTEM REQUIREMENTS

- A. The platform shall utilize state of the art IP Technology for Call-in Notification, School Safety Paging and Evacuation tones, Atomic Time Synchronization, Class Change Tones utilizing multiple, programmable schedules for each zone, Two-way hands-free Internal Communications and Paging, and Program Distribution. The system shall be easy to learn and operate. All standard programming shall be web-based and user friendly to allow the system administrator the ability to easily program system features.
- B. Provide complete and satisfactorily operating district/school communications and district/school safety as described herein, using materials and equipment of types, sizes, ratings, and performances as indicated. Use materials and equipment that comply with referenced standards and manufacturers' standard design and construction, in accordance with published product information. Coordinate the features of all materials and equipment so they form an integrated system, with components and interconnections matched for optimum performance of specified functions.
- C. The platform shall be a single electronic system consisting of a minimum of 10 audio channels for each campus, (classroom) IP Speaker Modules and call switches, IP Zone Modules connecting corridor speakers, inside and outside horns, IP Administrative Consoles, SIP enabled PBX integration and district-wide integration for paging, emergency notifications, calendar scheduling and configuration.
- D. Each Classroom shall be provided with a Speaker Module interface and a minimum of 5 different call switches, each with their own annunciation path and priority.
- E. Call-ins may automatically annunciate (display of priority and location) to administrative consoles, SIP enabled phones, and outside phones.
- F. Call-ins shall be programmed to automatically change priority and annunciation route based on age of call-in and original priority.

- G. Call-ins may have priority (and annunciation route) changed by user action from a console or SIP enabled phone.
- H. Call-in annunciation route shall include playing pre-recorded audio over speakers, sending a pre-configured email, and activating relays.
- I. The platform shall lend itself to expansion by simple addition of hardware modules.
- J. The platform shall connect directly to an existing, standard protocol WAN/LAN network, without the need for a separate server at each school location. Configuration, including bell schedules, calendars, and emergency sequences can be remotely created, changed, stored and downloaded to the system by an authorized user from a web-based user interface.
- K. The platform shall provide the ability to initiate school safety paging announcements, evacuation tones and take cover tones from any telephone or connected web browser within the facility or outside the facility to any other location within the facility or district.
- L. The platform shall provide the ability to selectively communicate or monitor individual classrooms in emergency situations from any telephone within the facility or outside the facility to any other location within the facility; all communication within the classroom shall be hands-free and will not require any interaction by the classroom user.
- M. The platform shall provide classroom users the ability to confirm that they have safely secured their classrooms during an emergency with a single button press. The front office administrator will receive confirmation that the classroom is safely secured via an administrative console and web-based user interface. The front office administrator can view classrooms that are not safely secured via the administrative console. The front office administrator can view classrooms that are not safely secured via the web-based user interface. The front office administrator shall be able to initiate two-way communication, without a pre-announcement tone, to the classroom during an emergency via the administrative console. Web-based user interface will still identify that a school is in an emergency, even if all classrooms are safely secured. Individual classroom check-in and school emergency status shall be viewed from the web-based user interface, both on-site and remotely.
- N. IP Addressable and POE powered Speaker Modules for individual rooms shall be system programmable and may be assigned any two, three, four, five or six digit number as well as name and description. Any extension may be reassigned at any time.
- O. IP-enabled two-way voice communication shall be available from any provided telephone or administrative console through any speaker in a campus. This shall allow hands-free communication to any classroom or any individual loudspeaker unit. A programmable pre-announce tone shall sound immediately before the intercom path is opened and a supervisory tone shall continue to sound at

regular intervals when speaker monitoring is active, complying fully with all privacy legislation. Pre announce tone and supervisory tones shall be disabled during designated emergencies automatically.

- P. The platform shall allow users to configure multiple schedules per school, with a minimum of 500 unique events per schedule, and automatic Daylight Savings time correction. Schedules can be programmed to occur once, daily, weekly, monthly, or in any combination of the preceding recurrences. Each school may have a minimum of 20 unique bell schedules, with a minimum of 5 active schedules on any given day for each campus. User shall be able to select from 25 standard included tones as well additional user created and uploaded audio files for class change signaling and messaging. In addition, scheduled events shall include relay actions, email notifications, and paging exclusions as system configuration changes. The platform shall allow control of the bell schedules via the district WAN/LAN without the need for a separate server at each school location. Bell schedules can be remotely created, changed, stored and assigned to calendar days for the local school by an authorized user from a web-based user interface.
- Q. The platform shall be able to integrate with an existing PA system or operate as a fully independent IP solution. The platform shall be able to function in combination of said configurations, and allow for seamless communication within a school or district-wide, regardless of the type of configuration used. The platform shall be scalable, with the ability to easily add, install, and configure additional equipment to a system.
- R. The platform allows for customization of preprogrammed sequences, used for emergencies, events, and everyday communications. Preprogrammed sequences can be activated from the push of a relay button, soft key of an administrative console, a dial string of a SIP phone, or a web browser configured to the district network. Sequences can be initiated automatically as part of a schedule or on the fly. Preprogrammed sequences can be customized to utilize any combination of audio tones, emails, relays, tone exclusions, swings, delays, duples, SIP phone notifications, and program distribution. Audio tones can include customized audio files and voice messages, recorded in any language. Uploaded audio tones and messages can be preprogrammed to announce repeatedly or individually, as part of a scheduled sequence or on the fly. Each school in a district can have its own customized sequences, and can be activated individually, in groups, or district-wide.

2.2 EQUIPMENT AND MATERIAL

- A. Server Software
 - 1. Provides district-wide paging, bell event scheduling, emergency notification and configuration for entire district.
 - 2. Ability to configure system and initiate system features, per school and district-wide via web-based user interface.
 - 3. The software has the ability to sync system time to the Atomic Clock Signal or to the school's or district's network time server.

4. The software will provide a web browser to deliver district-wide emergency paging, pre-recorded messages and tones from any authorized computer in the facility or the district. The software must be capable of automatically notifying district personnel via the WAN/LAN of an alarm condition.
5. The software can automatically broadcast emergency instructions via associated system hardware throughout an entire district when an alarm (e.g. lockdown, lockout, security, fire) is initiated via the web-based user interface. The emergency instructions are preprogrammed and require no user intervention. Bell tones are able to be halted during an emergency. The system provides redundant alarm annunciation over intercom/paging speakers and is not meant to replace primary fire alarm or security systems.
6. The software allows for user-uploaded pre-recorded messages and tones. Software supports the upload of MP3 and WAV file types. User-uploaded pre-recorded messages and tones can be part of emergencies, sequences, and bell schedules.
7. The software can be installed in cloud, virtual or physical server environments.
8. The web-based user interface supports secure HTTP browsing.
9. The software supports encryption to ensure secure access.
10. The system shall monitor itself if devices go offline and system actions are not received. Specified users shall receive email notifications when devices go offline. The software shall be able to keep a log and report on system activity within a school or all schools district-wide for a minimum of one year. These reports can be exported to excel spreadsheets.
11. The software will support a minimum of 20 bell schedules per school, with 5 schedules assignable to a specific school day. Bell schedules can be programmed to annunciate tones, activate relays, send emails, activate program distribution, and notify SIP phones.
12. The system allows programmable end points to be automatically included or excluded for live paging, bell tones, or prerecorded audio, depending on the time or day or day of the week. These inclusions/exclusions can be applied manually or automatically depending on their schedule.
13. The software can automatically send an email, as part of a programmed sequence of events, to district administrators alerting them of an emergency within the district.
14. The software provides the ability to view schools that are in an emergency status, using any web browser on the district's network. The software shall identify the name of the school in an emergency as well the type of emergency that school is in.
15. The software provides the ability to view individual classrooms that are not checked-in during an emergency, using any web browser on the district's network. The software shall identify the name, extension, and description of the classroom that is not checked-in during the emergency.
16. The system has a minimum of 5 customizable emergencies, one of them being an All-Clear – with the ability to return the system from an emergency to normal status. Each emergency shall have a minimum of 500 unique events.

17. As a district-wide communications solution, the system shall be able to provide simultaneous communications to all schools or groups of schools within a district. The system shall allow a user to initiate district-wide communications to individual schools, all schools or groups of schools, from a web-based user interface. The system shall allow a user to initiate prerecorded audio, live paging, or programmed sequences to individual schools, all schools or groups of schools, from the web-based user interface. Programmed sequences shall be customizable per school, and the system shall be able to activate them simultaneously to individual schools, all schools or groups of schools, from the web-based user interface.
18. The communications software must allow upgrade from an individual school system to multiple schools, or an entire school district, using the same web-based user interface. The communications software from an individual school system must be identical in typical user operation to the multiple schools or entire school district communications system software.

B. Campus Controller

1. Provides call routing for paging and intercom for a single facility.
2. System shall connect to the district provided Telephone Network via a SIP connection.
3. Support a flexible numbering plan allowing two, three, four, five, or six digit extensions.
4. SIP interface to a district provided Telephone Network shall be capable of allowing connected phones to display classroom call-ins, answer internal intercom call-ins, make pages and change priorities of call-ins in progress.
5. Direct dialing, two-way amplified voice intercom between any provided telephone or admin console and speaker without the use of a press-to-talk or talk-listen switch.
6. Ability to upgrade priority level from individual call switch.
7. The ability to answer intercom call-ins registered at administrative consoles and pre-selected telephones.
8. The ability to automatically escalate incoming call-ins to an alternate telephone or group of telephones if they remain unanswered for a predetermined amount of time.
9. The ability to manually upgrade an intercom call-in to an alternate telephone or group of telephones.
10. The ability for classrooms to “check-in” via push button when they have successfully secured their location during emergency.
11. Administrative console shall display locations that have not checked in to confirm their secured location and provide hands-free audio monitoring and communication to unsecured locations.
12. The controller shall not need direct connection to any classroom via home run or distributed wiring. It shall communicate solely through the IP network.
13. Single button access from any console on the system to distribute emergency announcements within the facility to all or select locations equipped with speakers. Emergency announcements originating from any

assigned administrative console shall have priority over all regular system functions.

14. Ability for administrative consoles and connected phones to selectively monitor audio at any two way speaker during an emergency.
15. Stores a minimum of 48 hours' worth of Bell Event Schedules, all emergency notification sequences as well as facility wide configuration.
16. System has the ability to sync system time to the Atomic Clock Signal or to the school's or districts network time server.
17. System's SIP Interface shall provide:
 - a. Audio paging access from any telephone to any single intercom speaker, zone (group) of intercom/paging speakers, or all speakers/paging horns throughout the entire facility.
 - b. Ability to answer a call-in directed to that SIP extension.
 - c. Ability to upgrade a call-in directed to that SIP extension.
 - d. Single button access from any telephone on the system to initiate alarm signals within the facility to all or select locations equipped with speakers. A minimum of 25 separate distinct alarm signals shall be provided. Alarm signals originating from any assigned administrative telephone shall have priority over all regular system functions.
 - e. Ability to initiate a school-wide emergency including lockdown and evacuate sequences.
 - f. SIP device shall display call-in information from call in switch. Information will include a minimum of Classroom Name, Number, and Priority Level.
18. The system will have the ability to utilize a web browser and a USB microphone connected to the PC to deliver district-wide live emergency paging, pre-recorded messages and tones from any authorized computer in the facility or the district. The system must be capable of automatically notifying district personnel via the WAN of an alarm condition.
19. The system can automatically broadcast emergency instructions throughout an entire campus when an alarm (e.g. lockdown, lockout, security, fire) is tripped or manually activated. The emergency instructions are preprogrammed and require no user intervention. Bell tones are able to be halted during an emergency. The system provides redundant alarm annunciation over intercom/paging speakers and is not meant to replace primary fire alarm or security systems.

C. IP Addressable Modules:

1. System shall provide multiple IP Addressable Modules for intercom, paging and relay activation.
 - a. All Modules are POE 802.3af compliant
 - b. All Modules support DHCP.
 - c. All Modules connect to network with a single RJ45 connector
2. IP Addressable Speaker Module

- a. Shall interface to school's data network, a classroom speaker, and multiple call switches.
 - b. A minimum of 5 levels of call-in can be placed from an IP Speaker Module. The call-ins are routed to administrative consoles and select SIP connected telephones and can only be cleared from the system once answered. If a call-in is not answered within a preprogrammed time the call-in may reroute to other telephones, consoles, and speakers.
 - c. An option for Privacy call in switches is supported. When the Privacy switch is activated it prevents administrative or classroom telephones from monitoring the specific classroom/location intercom speaker.
 - d. The ability to belong to one or more of a minimum of 100 independent zones for zone paging, program/music distribution zones and class change tone zones; this assignment is a programmable function, changeable by time of day. Each IP Speaker Module's location shall be programmed in software to belong to any combination of software zones. IP Speaker Modules shall be designed to mount near ceiling and wall speakers and in the plenum space.
 - e. Intercom and paging volume adjustable from Software interface.
- 3. IP Addressable Zone Paging Module
 - a. Zone Paging Module shall connect multiple speakers for district all page, all page, zone paging, bells, audio events and, emergency notification.
 - b. Zone Paging Modules shall be rack and wall mountable.
 - c. Zone Paging Modules shall be able to belong to one or more of 100 independent zones for live paging, bells, pre-recorded audio and emergency notification.
- 4. IP Addressable Aux I/O Module
 - a. Aux I/O Module shall have two input contacts and two output contacts.
 - b. Input and output contacts are individually addressable.
 - c. Aux I/O Module shall be wall and rack mountable.
 - d. User can program relays to be activated manually, through an event/bell schedule, or during emergency notification.
 - e. Aux I/O Module can perform school lockdown from a single press of a panic button.
- 5. IP Addressable Program Line Input Module
 - a. Program Line Input Module shall provide line level audio program distribution into system.
 - b. Program Line Input Module shall have a 3.5mm cable jack.

- c. Program Line Input Module shall be configured via web-based user interface.
- d. User can configure program distribution to be activated manually or automatically through an event/bell schedule.
- e. Program Line Input Module will have a system priority level such that emergency communications override program distribution.

D. IP Addressable Analog Gateway

- 1. IP Addressable Gateway provides integration with existing analog wiring infrastructure – consisting of shielded two-pair classroom field wiring. The Gateway provides the ability to reuse speaker wiring, speakers, and punch blocks to integrate analog infrastructure with IP platform.
- 2. Each Gateway will have 5 watts of power per port and 25 watts total per device.
- 3. Supports 24 classrooms that utilize 25 Volt speakers and all current Telecenter call switches for front office notification.
- 4. Supports minimum of 5 call switch priorities per classroom, capable of lockdown check-in functionality, while reusing existing shielded two-pair classroom field wiring.
- 5. Classroom intercom volume adjustable from Software interface.
- 6. Classroom paging volume adjustable from Software interface.
- 7. Configured to the school network and can be used in conjunction with IP Addressable Modules.

E. IP Addressable Administrative Console

- 1. A full color screen with 64 soft keys, 3 line select, volume control, push to talk, speakerphone mode and left/right and up/down scrolling.
- 2. Audio paging access from any Console to any single intercom speaker, zone (group) of intercom/paging speakers, or all speakers/paging horns throughout the entire school.
- 3. Programmable soft key access from any console on the system to initiate alarm signals within the school to all or select locations equipped with speakers. A minimum of 25 separate distinct alarm signals shall be provided. Alarm signals originating from any assigned administrative console shall have priority over all regular system functions.
- 4. Programmable soft key access from any console to automatically broadcast page emergency instructions throughout an entire school when an alarm (e.g. lockdown, lockout, security, fire) is tripped or manually activated. The emergency instructions are preprogrammed and require no user intervention. The system provides redundant alarm annunciation over intercom/paging speakers and is not meant to replace primary fire alarm or security systems.
- 5. Ability to perform intercom to any single IP Addressable Speaker Module.
- 6. Ability to display 3 call-ins at a time on the screen while other call-ins are annunciating and the ability to scroll to view all call-ins.
- 7. Ability to upgrade a call-in via soft key.
- 8. Programmable soft key access from any console for activating relays, campus wide.

9. Ability to maintain, along with controller and other IP Modules system functions, including intercom, bells and paging for the local campus in the event of district-wide connection loss.
 10. Classrooms that have not 'checked-in' during an emergency are listed on the Administrative Console's screen.
 11. The time duration of an emergency is shown on the screen of the administrative console. The check-in timer is shown on the screen of the administrative console.
- F. Audio Paging/Program Amplifiers
1. Power amplifier(s) shall be provided to provide a minimum of 2 watts of power to all paging speakers, and 15 watts of power to all paging horns.
 2. The maximum load on the paging/program amplifiers shall be 80% of the rated maximum output of the amplifiers.
- G. Visual Status Indicator Lights
1. Visual status indicator lights shall be provided at locations shown on the drawings. Lights shall have multi-color status lights and shall be programmed to display colors associated with an initiated "code" event.
- H. Equipment Racks
1. Where shown on the drawings, equipment shall be rack mounted in 4-post telecom racks (see telecom drawings).
 2. Provide dedicated paging system equipment racks where shown on the drawings.
- I. Wireless Clock System
1. Provide complete and satisfactorily operating NTP Synchronized Wireless Clock System with analog and/or digital secondary clocks as described herein, using materials and equipment of types, sizes, ratings, and performances as indicated.
 2. (NTP) Network Time Protocol is a network standard protocol that assures accurate synchronization to the millisecond of computer clock times in a network of computers. Based on UTC, NTP synchronizes client workstation clocks to the U.S. Naval Observatory Master Clocks in Washington, DC and Colorado Springs, CO. Running as a continuous background client program on a computer, NTP sends periodic time requests to servers, obtaining server time stamps and using them to adjust computer clocks.
 3. The system shall be easy to learn and operate. All standard system programming shall be user friendly to allow the system administrator the ability to easily program system features.
 4. Use materials and equipment that comply with referenced standards and manufacturers' standard design and construction, in accordance with published product information.

5. Coordinate the features of all materials and equipment so they form an integrated system, with components and interconnections matched for optimum performance of specified functions.
6. The NTP Synchronized Wireless System consists of a master transmitter located on the inside of the building, and a NTP receiver connected to a time server. Wireless analog and digital clocks are synchronized to the NTP time. System shall synchronize all clocks to each other. System shall utilize NTP technology to provide atomic time to components.
7. System shall not require hard wiring for its components except for AC Power. Analog Clocks may be battery operated for full portability if required.
8. Analog Clocks shall synchronize to +/- 1 second of the transmitter displayed time.
9. Clocks shall automatically adjust for Daylight Saving per settings on the transmitter
10. The system shall have an internal clock that is continually updated by the NTP receiver. If a NTP failure were to occur, the clocks would continue to be synchronized to the internal clock and would not deviate from each other. Once NTP time is restored, all clocks would once again be synchronized to the NTP time.
11. The system must have a failsafe design so that if a power interruption were to occur, the clocks will continue to operate. If a sync signal is not received by the analog clocks for 48 hours, the second hand will double pulse to indicate this condition. Upon restoration of power, the transmitter will once again communicate with the clocks and normal operation will resume.
12. Battery Powered Analog Clocks shall require 2 "D" cell batteries.
13. System shall be 100% programmable from the front operational panel with lights that indicate power status and NTP reception. Panel programming will also include Time Zone, Frequency, 12 or 24 hour operation and DST on/off.
14. The wireless backbone must support expansion of the system to include wireless alphanumeric displays for emergency crisis communications for district-wide communications.
15. The system may be modified to use GPS instead of NTP as the time source without the need to replace the transmitter. A GPS receiver would need to be added with access to the outside of the building.
16. The system shall lend itself to expansion by simple addition of wireless secondary clocks and their required power source.

J. Interior Ceiling Speakers

1. Provide Ceiling Speaker Assembly consisting of 8 Ohm, 8" speaker mounted in a 2 foot by 2 foot, or 2 foot by 1 foot, lay-in baffle, with an integrated back box that covers the full area of the baffle.
2. The speaker shall be connected by inserting an 8-pin RJ45 terminated CAT 5e or Cat 6 cable.
3. The speaker shall include provisions to allow attachment of a safety cable if required.

K. Wall Mounted Horns

1. Provide double re-entrant type horn loudspeakers with integral driver. The horn loudspeaker shall be impervious to weather and vandalism. Horn shall be constructed of heavy-duty ABS plastic. Horn loudspeaker drivers shall be rated at 15 watts with a frequency response of 480 Hz to 14 KHz. Sensitivity shall be 106 dB 1 watt, 1 meter. Transformer assembly shall be dual voltage multi-tap type suitable for 25 or 70-volt installations. Dispersion pattern shall be 180 degrees conical. The horn loudspeaker shall be constructed of treated heavy gauge aluminum, with all exposed parts potted and a sealed driver. Wiring terminal shall be fully enclosed. The speaker flange and mounting surface shall have a cork-rubber gasket. The horn loudspeakers finish shall be gray baked on enamel.
2. The recessed back box shall be of heavy gauge cold-rolled steel, spot welded for stability with a rust-retardant gray primer finish. Acoustically treat the interior to eliminate mechanical resonance. The back box shall be 10-3/4"x10-3/4"x6" deep.
3. The baffle shall be vandal proof, the faceplate constructed of 14-gauge carbon steel with a minimum tensile strength of 55,000 PSI. A lattice grid sub-plate shall deny access to the horn but be acoustically transparent for sound projection. Provide tamper proof, stainless steel mounting hardware. The baffle shall have a mar/scratch baked epoxy rust inhibitive finish.

L. Uninterruptible Power Supplies (UPS)

1. UPS equipment provided for this system will include Power Conditioning to smooth current and voltage fluctuations.
2. UPS equipment will be sized in accordance with the system manufacturer's recommendations.
3. Provide an individual UPS for EACH SYSTEM CONTROLLER (Gateway) furnished with the system.
4. Provide additional UPS(s) for protection of all other equipment furnished with the system and housed in the equipment racks.
5. All UPS equipment shall be rack mounted.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with the Installer present, for compliance with requirements and other conditions affecting the performance of the School Communications and School Safety Network.
- B. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install system in accordance with NFPA 70 and other applicable codes. Install equipment in accordance with manufacturer's written instructions.
- B. Furnish and install all material, devices, components and equipment for a complete operational system.
- C. Impedance and Level Matching: Carefully match input and output impedance's and signal levels at signal interfaces. Provide matching networks where required.
- D. Control Circuit Wiring: Install control circuits in accordance with NFPA 70 and as indicated. Provide number of conductors as recommended by system manufacturer to provide control functions indicated or specified.
- E. All housings are to be located as indicated.
- F. The contractor shall provide necessary transient protection on the AC power feed, all copper station lines leaving or entering the building, and all central office trunks. All protection shall be as recommended by the equipment supplier and referenced to earth ground.
- G. Wiring within Enclosures: Provide adequate length of conductors. Bundle, lace, and train the conductors to terminal points with no excess. Provide and use lacing bars.
- H. Provide physical isolation from speaker-microphone, telephone, line-level wiring, and power wiring. Run in separate raceways, or where exposed or in same enclosure, provide 12 inch minimum separation between conductors to speaker-microphones, telephone wiring and adjacent parallel power. Provide physical separation as recommended by equipment manufacturer for other system conductors.
- I. Identification of Conductors and Cables: Use color coding of conductors and apply wire and cable marking tape to designate wires and cables so all media are identified in coordination with system wiring diagrams.
- J. Weatherproofing: Provide weatherproof enclosures for items to be mounted outdoors or exposed to weather.

3.3 GROUNDING

- A. Provide equipment grounding connections for Integrated Electronic Communications Network systems as indicated. Tighten connections to comply with tightening torques specified in UL Standard 486A to assure permanent and effective grounds.
- B. Ground equipment, conductor, and cable shields to eliminate shock hazard and to minimize to the greatest extent possible, ground loops, common mode returns, noise pickup, cross talk, and other impairments. Provide 5-ohm ground at main equipment location. Measure, record, and report ground resistance.

- C. Provide all necessary transient protection on the AC power feed and on all copper station lines leaving or entering the building. Note in system drawings, the type and location of these protection devices as well as all wiring information.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Services: Provide services of a duly factory authorized service representative for this project location to supervise the field assembly and connection of components and the pre-testing, testing, and adjustment of the system.
- B. Inspection: Make observations to verify that units and controls are properly labeled and interconnecting wires and terminals are identified. Provide a list of final tap settings of paging speaker line matching transformers.
- C. Testing: Rectify deficiencies indicated by tests and completely re-test work affected by such deficiencies at Contractor's expense. Verify by the system test that the total system meets the Specifications and complies with applicable standards.

3.5 FINAL ACCEPTANCE TESTING

- A. The Final Acceptance Testing shall be provided to the Owner or the Owners designated representative only. Final acceptance testing to any other trade or service provider for the project will not comply with the requirements of this section.
- B. The contractor will provide a Final Acceptance Test record document signed by both the contractor and the Owner or designated Owner's Representative establishing the "In Warranty" date. The warranty period will not commence until the Final Acceptance Test is completed.
- C. Be prepared to verify the performance of any portion of the installation by demonstration, listening and viewing test, and instrumented measurements. Make additional adjustments within the scope of work and which are deemed necessary by the Owner because of the acceptance test.

3.6 COMMISSIONING

- A. The contractor shall train the Owner's maintenance personnel in the procedures and schedules involved in operating, troubleshooting, servicing, and preventative maintenance of the system. This training will be in accordance with the training as outlined in Section 1.6 of these specifications. In addition to the Training Materials provided, the contractor will also furnish Operators Manuals and Users Guides at the time of this training.
- B. Schedule training with Owner through the owners representative, with at least seven days advance notice.

3.7 OCCUPANCY ADJUSTMENTS

- A. The contractor shall provide Occupancy Adjustments in accordance with Section 1.6 of these specifications. A response scenario amenable to both the owner and the contractor will be established and followed for the first year of service.

3.8 CLEANING AND PROTECTION

- A. Prior to final acceptance, the contractor shall vacuum, wipe down and clean all system components and protect them from damage and deterioration. All blank spaces in equipment cabinets will be covered with blank panels. Top and side panels, and all cabinet doors will be installed. All general areas within and around all equipment rack/cabinets in the facility will be swept, vacuumed, and cleaned up. No cabinets will be left unlocked and all cabinet keys will be turned over to the owner or designated owner's representative.

END OF SECTION 275113

SECTION 27 53 19 – EMERGENCY RESPONDER RADIO SYSTEM

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Project includes installation of an Emergency Responder Radio Communication Systems (ERRCS).
- B. Provide all labor, materials, equipment, tools, transportation, storage costs, permits, programming, testing, adjusting, tuning and all necessary and related items as required to provide complete and operational ERRCS as shown on the Drawings and described in the Specifications.
- C. Contractor shall be responsible for the design, installation, testing and certification of the new ERRCS in accordance with the following codes:
 - 1. 2017 National Electric Code (NEC)
 - 2. 2018 International Fire Code (IFC) - Section 510.
 - 3. 2022 NFPA 1225 Standard for Emergency Services Communications - Chapters 18 and 20.
- D. Contractor shall submit a deferred permit submittal to the local Fire Code Official for review, approval and permit.
- E. ERRCS shall be compatible with and shall communicate with the Washoe County Regional Communication System (WCRCS).
- F. ERRCS shall use a channelized Class "A" Building Distribution Amplifier (BDA). The system must be compatible with both Harris P25 Phase 1 and P25 Phase 2 for all channels.
- G. ERRCS shall provide coverage in the 700MHz-800MHz frequency bands as specified by the WCRCS. System shall be expandable to operate on the FirstNet 700 MHz National Public Safety Broadband Network frequencies 758-768/ 788-798MHz.
- H. The downlink from the WCRCS shall include the following two passbands, 769 to 775MHz and 851 to 861MHz. The uplink to the WCRCS shall include 799 to 816MHz.
- I. The remote radio tower site and orientation of the donor antenna shall be determined and coordinated with the WCRCS Radio Division. Donor antenna shall maintain isolation from the in-building distributed antenna system and shall be 15db minimum above the signal booster gain under all operating conditions.
- J. Provide Uninterruptable Power Supplies (UPS's) to backup the entire Emergency Responder Radio System for a duration of not less than 12 hours in accordance with 2018 International Fire Code Section 510.4.2.3.

- K. All Emergency Responder signal booster components and UPS's shall be mounted in NEMA 4 or NEMA 4X type waterproof enclosures in accordance with 2018 International Fire Code Section 510.4.2.4.
- L. Antenna cabling routed within the building from the building distribution amplifier (BDA) to the roof mounted donor antenna shall be 2-hour rated.
- M. Antenna cabling routed exterior to the building on the roof from the BDA to the donor antenna shall be outdoor rated and routed in conduit.
- N. ERRCS equipment and battery systems shall be electronically monitored by a dedicated annunciator panel located adjacent to the existing fire alarm control panel per 2022 NFPA 1225 section 8.14.2.
- O. ERRCS equipment and battery systems shall be electronically supervised by the fire alarm system per 2022 NFPA 1225 section 8.14.1.
- P. At a minimum, the Contractor shall furnish and install the following Emergency Radio System components:
 - 1. Roof mounted 700/800 MHz yagi donor antenna.
 - 2. Roof mounted donor antenna non-penetrating galvanized steel support mast and frame. Provide 3/8" thick pad below support frame. Provide ballast as required.
 - 3. Sealed roof penetrations.
 - 4. Outdoor rated antenna cabling routed on the roof from the donor antenna to the roof penetration. Outdoor cable to be routed in conduit.
 - 5. 2-hour rated plenum antenna cabling routed within the building from the BDA to the roof.
 - 6. Bonding and grounding equipment including isolated ground bar, antenna cable shield ground kit, surge protector (PolyPhaser), and related bonding/grounding conductors.
 - 7. Class "A" channelized building distribution amplifier (BDA) wall mounted in NEMA 4 or 4X enclosure. BDA to have alarm contacts monitored by a dedicated annunciator panel. BDA cabinet to be bonded to the ground bar with #6 green insulated bonding conductor.
 - 8. Dedicated Emergency Responder Radio System annunciator panel mounted adjacent to the main fire alarm control panel (FACP). Multi-pair cable from annunciator panel to BDA.
 - 9. Sign at FACP stating: "This building is equipped with an emergency responder radio coverage system". Sign shall be red with 1" high white letters.
 - 10. Fire alarm supervision of all "points" monitored by the dedicated annunciator panel.
 - 11. 50-Ohm 1/2" diameter plenum rated coax antenna distribution cabling and related raceway, boxes, supports, connectors, splitters and taps. Provide fire stop assemblies at penetrations through rated walls and floors. Coax cabling routed in accessible ceiling spaces shall be supported by j-hooks. All exposed coax cabling to be routed in EMT conduit (no exposed cabling is permitted).

12. Provide outdoor rated 50-Ohm coax antenna distribution cabling where routed in underground conduit.
 13. Coax splitters, directional couplers and attenuators.
 14. 120VAC to 48VDC batter backups mounted in NEMA 4 or 4X enclosures capable of backing up all equipment for a minimum of 12 hours. Battery backups to have alarm contacts monitored by a dedicated annunciator panel. UPS cabinets to be bonded to the ground bar with #6 green insulated bonding conductor.
 15. Surface ceiling or wall mounted indoor 700/800 MHZ omni-directional antennas.
 16. Miscellaneous Equipment interconnect jumper cables as required.
- Q. At the completion of the project, the contractor shall verify minimum radio signal strength and delivered audio quality (DAQ) inside the building. Acceptance tests shall be conducted in accordance with 2018 IFC Section 510.5.3, 2022 NFPA 1225 sections 18.9 and 20.
- R. Contractor shall provide a system certification report in PDF format. Report shall be submitted to the Owner and posted at the fire alarm control panel (FACP). Report shall include the following information:
1. Test procedure.
 2. Test equipment used.
 3. Certificate(s) of test equipment calibration
 4. Floor plans divided into grids indicating radio signal strength/DAQ with pass/fail results.
 5. Certified cable sweep test results.
 6. Pictures of electronic equipment.
 7. Equipment configuration settings.
- S. Final acceptance, approval and permit sign off are required in writing from the local Fire code official Department prior to contract closeout.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
1. 27 05 28: Interior Communications Pathways.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest

edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.

- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
1. NFPA-70, 2017 -- National Electrical Code (NEC).
 2. NFPA-72, 2019 – National Fire Alarm And Signaling Code.
 3. NFPA-1225, 2022 – Standard for Emergency Services Communications.
 4. 2018 International Fire Code.
 5. FCC Regulations:
 - a. Part 15 – Radio Frequency Devices & Radiation Limits
 - b. 47 CFR Part 90.219.
 6. Underwriter's Laboratories, Inc. (UL).
 7. Electronic Industry Association (EIA) testing standards
 8. American Standard Code for Information Interchange (ACSI)
 9. American Society for Testing and Materials (ASTM)
 10. National Electrical Manufacturers' Association (NEMA)

1.4 QUALITY ASSURANCE

A. Contractor Qualifications:

1. The minimum qualifications of the system designer and lead installation personnel shall include both of the following in accordance with 2018 International Fire Code Section 510.5.2:
 - a. A valid FCC-issued general radio operators license.
 - b. Certification of in-building system training issued by a nationally recognized organization, school or a certificate issued by the manufacturer of the equipment being installed.
 - c. The above qualifications shall not be required where demonstration of adequate skills and experience satisfactory to the fire code official is provided.
2. The contractor shall be licensed by the Nevada State Contractors Board.
3. The Contractor shall have a minimum of five (5) years experience in the installation, integration and testing of Emergency Responder Radio Systems of similar size and scope.
4. The Contractor shall be a firm normally engaged in the design, installation and maintenance of Emergency Responder Radio Systems. The Contractor shall provide details of at least three (3) projects of similar size and scope involving the design, installation and testing of Emergency Responder Radio Systems in the last 5 years. Names, addresses and telephone numbers of references for the three projects shall be included.
5. The Contractor shall have service facilities within 4 hours of the project site and shall respond to service phone calls within one (1) business day of receipt. The Contractor shall provide an on-site response time of three (3) business days for critical system items during regular business hours.

- B. UL Listing and Labeling: Unless specific equipment specified within the radio system Specifications is not listed or labeled by UL, provide components listed and labeled by UL.
- C. All work shall conform to the National Electrical Code (NEC) and to applicable National Fire Protection Association (NFPA) and International Fire codes.
- D. Compliance with Local Requirements: Comply with the applicable building code, state and local ordinances, and regulations and the requirements of the authority having jurisdiction.
- E. All equipment supplied shall be listed by a nationally recognized test laboratory where applicable.
- F. All equipment and accessories to be the product of a manufacturer regularly engaged in its manufacture.
- G. All items of a given type shall be the products of the same manufacturer.
- H. All items shall be of the latest technology; no discontinued models or products are acceptable.
- I. The manufacturer, or their Authorized Representative, shall confirm that within 300 miles of the project site there is an established agency which:
 - 1. Stocks a full complement of parts.
 - 2. Offers service during normal working hours as well as emergency service on all equipment to be furnished.
 - 3. Will supply parts and service without delay and at reasonable cost.
 - 4. Contractor shall be capable of performing service or maintenance work on these specified or accepted systems. Contractor shall be factory-certified where such certification is available or required.

1.5 INTENT OF DRAWINGS

- A. Layout: Follow the general layout shown on the Drawings except where other work may conflict with the Drawings.
- B. Accuracy: The Drawings show a diagrammatic representation of the system. Field verify all dimensions and locations.

1.6 REVIEW OF SPECIFICATIONS

- A. The Contractor shall carefully study and compare the Drawings and Specifications and shall at once report to the Owner or Owner's Representative any error, inconsistency or omission discovered. If the Contractor performs any construction activity knowing it involves a recognized error, inconsistency or omission in the Specifications without such notice to the Owner or Owner's Representative, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the cost for any correction.

1.7 EXAMINATION OF THE PREMISES

- A. The Contractor shall visit the Site to become familiar with the local conditions under which the work is to be performed and correlate observations with the requirements of the Drawings and Specifications. No allowance will be made for claims of concealed conditions which the Contractor learned or should have learned in exercising due diligence in its observations of the site and review of the local conditions.
- B. Before ordering any materials or performing any work, the Contractor shall verify all measurements and be responsible for correctness of same. No extra charge or compensation will be allowed for duplicate work or material required because of an unverified difference between an actual dimension and the measurement indicated in the Drawings. Any discrepancies found shall be submitted in writing to the Owner or Owner's Representative for consideration before proceeding with the work.

1.8 SUBMITTALS

- A. Submit manufacturer product data sheets in electronic PDF format for all system components and cabling.
- B. Product Data Sheet Submittals shall comply with the following:
 - 1. Product data submittals must be submitted to and approved by the Owner prior to release of order for equipment and prior to installation.
 - 2. Provide the following information in the submittal:
 - a. Client Name.
 - b. Project Number and Contract Number.
 - c. Project Name and Address.
 - d. Contractor's Submittal Number.
 - e. Submittal Title.
 - f. Specification Section Number.
 - g. Date of Submittal.
 - h. Contractor Name and contact information.
 - 3. Provide a table of contents indicating the products submitted.
 - 4. Products listed in the table of contents should be in the same order as they appear in the Specifications.
 - 5. Submittals must include all items identified in each specification section. Partial submittals will not be accepted.
 - 6. Where product data sheets cover more than one distinct item, clearly indicate by arrows or brackets precisely what is being submitted including optional accessories. Delete or cross-out non-applicable data.
- C. Shop drawings:
 - 1. Shop drawings generated for this project shall be created utilizing AutoCAD 2018 or newer file format.
 - 2. Drawings shall be drafted on 24" x 36" sheets to match the contract drawings.

3. Submit shop drawings for all equipment showing:
 - a. Location and layout of all field devices including donor antennas, omni-directional antennas, splitters and taps.
 - b. Location and layout of all equipment including building distribution amplifiers, remote units, surge protectors, uninterruptable power supplies, annunciator panel, etc.
 - c. Oneline wiring/cabling diagrams for devices, equipment and components. Oneline diagrams shall identify all devices and equipment and shall include all interconnecting wiring, cable types and sizing. Provide manufacturers wire/cable type as required.
 - d. Block diagram(s) depicting system integration details including fire alarm monitoring locations.
 - e. Elevations of all equipment mounting enclosures showing equipment mounting locations, electrical outlet locations, termination equipment.
 - f. Drawings for each field device type detailing wiring and mounting instructions.
 - g. Point-to-point wiring data, utilizing a combination of AutoCAD generated drawings and device/equipment Excel schedules.

D. Calculations:

1. Building Radio Signal Strength Coverage Calculations:
 - a. Provide color "heat maps" indicating required radio signal strength coverage of -95 dBm in 95% of the building in accordance with 2018 IFC Section 510.4.1. Contractor to adjust quantity and location of indoor antennas as required to meet the IFC signal coverage requirements.
2. Donor Antennas Gain and Placement Calculations:
 - a. Contractor to measure signal strength from the remote "distant" emergency responder radio site to verify the required gain, placement and aiming of the outdoor donor roof antennas.
3. Battery Backup Calculations:
 - a. Provide battery backup calculations to verify that uninterruptable power supplies are sized to provide backup of the entire emergency responder radio system for a duration of not less than 12 hours.
4. RF Cable dB Loss Calculations:
 - a. Submit RF cable dB loss calculations from the signal amplifiers to the omni-directional distribution antennas. Based on the calculated RF cable and jumper losses, the contractor shall design the required RF cable splitters and directional couplers to balance the RF signal strength at each antenna throughout the building.

Submit proposed cable splitters and directional couplers for approval and provide calculations indicating the resulting signal strength at each indoor omni-directional antenna.

E. Radio System Certification Report:

1. Submit radio system certification report in PDF and printed 8 ½" x 11" format. Report shall be submitted to the Owner and posted at the fire alarm control panel (FACP). Report shall include the following information:
 - a. Test procedure.
 - b. Test equipment used.
 - c. Certificate(s) of test equipment calibration
 - d. Floor plans divided into grids indicating radio signal strength/DAQ with pass/fail results.
 - e. Certified cable sweep test results.
 - f. Pictures of electronic equipment.
 - g. Equipment configuration settings.

F. Operation and Maintenance Manuals

1. Provide O&M Manuals in PDF format.
2. Include Table Of Contents listing contents.
3. O&M's shall include the following content:
 - a. Functional Design Manual: Includes a detailed explanation of the operation of the system.
 - b. Operator's Manual which explains procedures and instructions for the operation of the system including:
 - (1) System start up and shut down procedures.
 - (2) Use of system.
 - (3) Equipment recovery and restart procedures.
 - (4) Software and firmware backup procedures (where applicable).
 - c. Manufacturer's warranty certificates.

G. Record Drawings

1. Content:
 - a. Fully represent actual installed conditions and incorporate all revisions made during the course of construction.
 - b. Include drawings submitted as part of the Shop Drawing package, plus any additional information required to accurately document installed conditions.
 - c. Floor plans shall show:
 - (1) Locations and identifiers of all devices.
 - (2) Size, quantity, location, and routes of all pathways (such as cable trays, conduits, J-hangers, and other cable support devices).

1.9 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery.

1. Do not deliver products to the site until protected storage space is available. Coordinate delivery of materials with scheduled installation date to allow minimum storage time at jobsite.
1. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels (name of the manufacturer, product name, type, grade, UL classification, etc.) intact.
2. Replace materials damaged during shipping at no cost to the Owner.

B. Storage.

1. Store materials in clean, dry, ventilated space free from temperature and humidity conditions (as recommended by manufacturer) and protected from exposure to harmful weather conditions.
2. Comply with manufacturer's requirements for each product. Comply with recommended procedures, precautions or remedies as described in the Material Safety Data Sheets (MSDS) as applicable.
3. Maintain factory wrapping or provide a heavy canvas/plastic cover to protect units from dirt, water, construction debris, and traffic.
4. Storage outdoors covered by rainproof material is not acceptable.
5. Provide heat where required to prevent condensation or temperature related damage.

C. Handling.

1. Handle in accordance with manufacturer's written instructions.
2. Damaged equipment shall not be installed.
3. Replace damaged equipment at no cost to the Owner.
4. Handle with care to prevent internal component damage, breakage, denting, and scoring.

1.10 SUBSTITUTIONS

- A. No material substitutions will be allowed except by written acceptance from the Owner's Representative. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples are provided.
- B. Approval of alternate or substitute equipment or material in no way voids the Specification requirements.
- C. Under no circumstances shall the Owner's Representative be required to prove that an item proposed for substitution is not equal to the specified item. It shall be mandatory that the Contractor submit to the Owner or Owner's Representative all evidence to support the contention that the item proposed for substitution is equal to the specified item. The Owner's decision as to the equality of substitution shall be final and without further recourse.

1.11 WARRANTY

- A. The warranty period will begin after substantial completion of the project.
- B. The complete Emergency Responder Radio System including all devices, equipment, software and programming shall be guaranteed to be free from defects in workmanship and materials for a minimum period of one (1) year from date of substantial completion. Promptly remedy such defects and any subsequent damage caused by the defects or repair thereof at no expense to the Owner.
- C. Provide maintenance of systems and equipment for a period of one (1) year from date of substantial completion.
- D. Emergency Responder Radio System equipment shall have a three (3) year warranty. Defective or damaged equipment shall be replaced by the manufacturer during this three (3) year warranty period at no cost to the Owner. Replacement equipment shall be delivered to the project site. During year one (1) of this warranty period, the contractor shall provide all labor to replace the equipment at no cost to the owner. During years two (2) and three (3) of this warranty period, the Owner will be responsible for the Contractor's labor costs to replace the equipment.
- E. The Contractor shall demonstrate that they maintain a service organization capable of providing all necessary service and maintenance of the systems. This includes providing replacement parts and making additions or changes to the software systems used in the project.
- F. During the warranty period, all service (including equipment, labor, travel, expenses, etc.) is to be provided during normal working hours at no cost to the Owner. The Contractor shall provide the Owner with a phone number for service. The Contractor shall provide the Owner a phone response within one (1) business day of receipt of service call. The Contractor shall provide an on-site response time of two (2) business days for system critical items during regular business hours.
- G. The guarantee shall exclude acts of God, vandalism, physical abuse or operator misuse.

PART 2 -PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. All equipment shall have FCC certification prior to installation in accordance with 2018 International Fire Code Section 510.4.2.4.
- B. All products must be new and unused and without blemish or defect.
- C. All products used in parts replacement shall meet the specifications for the original equipment.

- D. Materials and equipment furnished shall be of current production by manufacturers regularly engaged in the manufacture of such items, for which replacement parts are available.
- E. Equipment and materials installed shall be compatible in all respects with other items being furnished and with existing items so that a complete and fully operational system will result.
- F. The contractor shall download and install the most current "stable" firmware version from the manufacturer's website for each device and piece of equipment (where applicable).

2.2 PRODUCTS

- A. See drawings for equipment list which provide the description, manufacturer and part number for each Emergency Responder Radio System component.
- B. The Contractor may propose alternate components that are equivalent to the specified components. Substitutions will be reviewed in accordance with the Substitutions section above. The contractor will be responsible for integrating all alternate system components into an overall operational system.

PART 3 -EXECUTION

3.1. INSTALLATION

- A. Install systems and equipment in accordance with applicable codes. Install, mount, connect tune, adjust and test all equipment in accordance with manufacturer's written instructions. Systems shall be complete and operational in all respects.
- B. Furnish and install in-building ceiling and wall mounted omni-directional antennas as required to meet the signal strength coverage requirements required by Section 510 of the 2018 International Fire Code and 2022 NFPA 1225.
- C. Coordinate the mounting of all equipment in the telecommunication and electrical rooms with existing equipment.
- D. Install alarm monitoring cabling from the BDA, remote units, power supplies and battery backups to the dedicated annunciator panel.
- E. Install cabling from the existing fire alarm control panel to the dedicated annunciator panel to supervise all alarm points. Program existing fire alarm panel as required to supervise alarm points.
- F. All roof mounted antenna supports, masts, frames, fasteners, etc. shall be pre-galvanized or hot dipped galvanized steel. Provide pad between support frame and existing roofing surface.

- G. Cabling routed within the building from the BDA to the donor roof antenna shall be 2-hour rated.
- H. Roof penetrations shall be installed by a certified roofing contractor. The certified roofing contractor shall provide all materials and labor necessary to properly seal all penetrations.
- I. Terminate indoor and outdoor coax antenna cabling with "N" type RF connectors.
- J. All raceway shall be run perpendicular to building grid lines UON.
- K. Install, support and seismic brace all raceway and cabling.
- L. Install raceway so that the following minimum clear distances are maintained from sources of electro-magnetic interference (EMI). 6" clear from power cables, 12" clear from fluorescent lighting and 36" clear from transformers and motors.
- M. Seal all penetrations through rated walls and floors with UL fire stopping assemblies. Fire stopping assemblies shall be UL listed and shall meet or exceed the rating of the wall or floor being penetrated.
- N. Bond and ground all raceways, exterior antennas, antenna supports, exterior antenna cabling, surge arrestors and equipment enclosures.
- O. Label all components of the emergency responder radio system. In-building antenna cables shall be labeled at both ends indicating the antenna number and at all pull box locations. All antenna cabling shall be tested and certified.

3.2. SYSTEM TESTING AND COMMISSIONING

- A. Test and demonstrate all equipment and system functionality at the completion of the project.
- B. The Emergency Responder Radio System shall be tested in accordance with the acceptance test procedure outlined in Section 510.5.3 of the 2018 International Fire Code and Section Chapter 20 of the 2022 NFPA 1225.
- C. Submit system certification report to Owner and Fire Code Official. Post copy of report at FACP.
- D. Final acceptance and approval are required from the local Fire Code Official in writing prior to contract closeout.

3.3. CLEANING AND PROTECTION

- A. Prior to final acceptance, the contractor shall vacuum, wipe down and clean all system components and protect them from damage and deterioration. Top and side panels, and all cabinet doors shall be installed. No cabinets will be left

unlocked and all cabinet keys will be turned over to the Owner or designated Owner's representative.

END OF SECTION 275319

SECTION 280000 – COMMON WORK RESULTS FOR ELECTRONIC SAFETY & SECURITY

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Include all labor, materials, tools, transportation, storage costs, excavation, training, equipment, insurance, temporary protection, permits, inspections, taxes and all necessary and related items required to provide complete and operational electronic safety and security systems as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 26: Grounding and Bonding for Electronic Safety & Security.
 - 4. Section 28 05 28: Conduits and Backboxes for Electronic Safety and Security.
 - 5. Section 28 05 53: Identification for Electronic Safety & Security.
 - 6. Section 28 10 00: Access Control.
 - 7. Section 28 20 00: Video Surveillance.
 - 8. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 QUALITY ASSURANCE

- A. The Contractor installing the Electronic Safety and Security systems shall have a minimum of (5) years experience installing commercial security systems of similar size and scope.
- B. See individual Division 28 specifications for additional requirements.

1.4 REGULATIONS AND CODE COMPLIANCE

- A. The Contractor will comply with all applicable governmental regulations including Federal, State, City, and Local applicable codes and ordinances.

- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- C. All work and materials shall conform to and be installed, inspected and tested in accordance with the governing rules and regulations as well as federal, state and local governmental agencies, including, but not limited to the following:
 - 1. NFPA-70, 2011 -- National Electrical Code (NEC).
 - 2. Underwriters Laboratories (UL):
 - a. UL 50 - Enclosures for Electrical Equipment.
 - b. UL 294 – Access Control Systems
 - c. UL 365 – Police Station Connected Burglar Alarm Units and Systems
 - d. UL 609 – Local Burglar Alarm Units and Systems
 - e. UL 611 – Central Station Burglar-Alarm Units
 - f. UL 636 – Hold up alarms
 - g. UL 1076 – Proprietary Burglar Alarm Units and Systems
 - h. UL 1610 – Central Station Burglar-Alarm Units
 - i. UL 60950-1 - Information Technology Equipment - Safety.
 - 3. Federal Communications Commission (FCC):
 - j. Code of Federal Regulations Title 47 - Part 15 – Radio Frequency Devices.
 - k. Code of Federal Regulations Title 47 - Part 68 – Connection of Terminal Equipment to the Telephone Network.
 - 4. Americans with Disabilities Act (ADA).

1.5 DEFINITIONS

- | | | |
|----|--------------------------|--|
| A. | Accessible Ceiling tiles | Space above a ceiling constructed of removable (clipped or unclipped). Acoustical ceiling grid with removal tiles would be considered an accessible ceiling. A gypboard ceiling would not be considered an accessible ceiling. |
| B. | Approved/Approval | Written permission to use a material or system. |
| D. | As Called For | Materials, equipment including the execution specified/shown in the Specifications. |
| D. | Code Requirements | Minimum requirements. |

E.	Concealed	Work installed in pipe and duct shafts, chases or recesses, inside walls, above ceilings, in slabs or below grade.
F.	Exposed	Work not identified as concealed.
G.	Final Acceptance	Owner acceptance of the project from the Contractor upon certification by the Owner's Representative.
H	Furnish	Supply and deliver to installation location.
I.	Furnished by Others	Receive delivery at job site or where called for and install.
J.	Inspection	Visual observations by Owner or Owner's Representative.
K.	Install	Mount and connect equipment and associated materials ready for use.
L.	Listed	Refers to classification by a standards agency.
M.	Or Approved Equal	Approved equal or equivalent as determined by Owner or Owner's Representative.
N.	Owner's Representative	Design professional or Consultant representing the Owner.
O.	Provide	Furnish, install and connect ready for use.
P.	Relocate	Disassemble, disconnect, and transport equipment to new locations: then clean, test, and install ready for use.
Q.	Replace	Remove and provide new item.
R.	Review	A general contractual conformance check of specified products.
S.	Satisfactory	As specified in Specifications.

1.6 INTENT OF DRAWINGS

- A. All drawings are diagrammatic unless otherwise noted as detailed dimensioned drawings. Drawings show approximate locations of equipment and devices. Exact locations are subject to the approval of the Owner or Owner's Representative. The Contractor shall verify dimensions and shall be responsible for their accuracy

- B. Items mentioned in the Specifications and not shown in the Drawings, or shown in the Drawings and not mentioned in the Specifications, shall be of like effect as if shown and mentioned in both. In the case of differences between the Drawings and the Specifications, the stricter provision as determined by the Owner or Owner's Representative shall govern.
- C. Omissions from the Drawings or Specifications, or the incorrect description of details of Work which are necessary to carry out the intent of the Drawings and Specifications, or work which is customarily performed, shall not relieve the Contractor from performing such omitted or incorrectly described work.
- D. No exclusion from, or limitations in, the language used in the Project Documents shall be interpreted as meaning that ancillary or accessory items necessary to complete any required system or item of equipment are to be omitted.

1.7 REVIEW OF SPECIFICATIONS

- A. The Contractor shall carefully study and compare the Drawings and Specifications. Any error, inconsistency or omission discovered shall be immediately reported to the Owner or Owner's Representative. If the Contractor performs any construction activity knowing it involves a recognized error, inconsistency or omission without such notice to the Owner or Owner's Representative, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the cost for any correction.

1.8 EXAMINATION OF THE PREMISES

- A. The Contractor shall visit the Site to become familiar with the local conditions under which the work is to be performed and correlate the observations with the requirements of the Drawings and Specifications. No allowance will be made for claims of concealed conditions which the Contractor learned or should have learned in exercising due diligence in its observations of the site and review of the local conditions.
- B. Before ordering any materials or performing any work, the Contractor shall coordinate the installation with the work of other trades and shall verify all measurements. No extra charge or compensation will be allowed for duplicate work or material required because of an unverified difference between an actual dimension and the measurement indicated in the Drawings. Any discrepancies found shall be submitted in writing to the Owner or Owner's Representative for consideration before proceeding with the work.

1.9 COORDINATION OF CABLING PATHWAYS AND EQUIPMENT ROOMS

- A. Drawings are diagrammatic in depicting the routing of security cabling pathways and the layout of security equipment.
- B. The contractor shall coordinate the installation of all work with other trades including Mechanical, Electrical, Plumbing, Sprinkler, Structural and Architectural.

- C. The contractor shall participate in coordination meetings with other trades prior to the installation of the work. For a specific space/area, the security contractor shall coordinate the routing and installation of all work with all other trades that have work in that specific space/area.
- D. Prior to the installation of security cabling pathway including conduit, sleeves, etc., the contractor shall coordinate the routing of this pathway to avoid conflicts with and provide necessary clearances from the work of other trades. The contractor shall provide all horizontal offsets, vertical offsets and radius bends as necessary to coordinate the routing of the security pathways with the work of other trades and building structure.
- E. Prior to the installation of equipment and/or cabling in the communication rooms, the contractor shall coordinate the layout of all equipment and cable pathways with the Telecom Contractor.

1.10 WARRANTY AND SERVICES

- A. See individual Division 28 Specifications for warranty requirements.

PART 2 – PRODUCTS

2.1 EQUIPMENT AND MATERIALS MINIMUM REQUIREMENTS

- A. Electrical equipment and systems shall meet UL Standards and requirements of the National Electric Code. This listing requirement applies to the entire assembly. Any modifications to equipment to suit the intent of the Specifications shall be performed in accordance with these requirements.
- B. Equipment shall meet all applicable FCC Regulations.
- C. All materials, unless otherwise specified, shall be new and be the standard products of the manufacturer. Used equipment or damaged material will be rejected.
- D. The listing of a manufacturer as “acceptable” does not indicate acceptance of a standard or cataloged item of equipment. All equipment and systems must conform to the Specifications.

2.2 WORKMANSHIP, SUBSTITUTIONS, WARRANTY

- A. Materials and workmanship shall meet or exceed industry standards and be fully guaranteed for a minimum of one (1) year from the date of final acceptance. Cable integrity and associated terminations shall be thoroughly inspected, fully tested and guaranteed free from defects, transpositions, open shorts, tight kinks, damaged jacket insulation, etc.

- B. All labor must be thoroughly competent, skilled and trained, and all work shall be executed in strict accordance with the best practice of the trades.
- C. The Contractor shall be responsible for and make good, without expense to the Owner, any and all defects arising during this warranty period that are due to imperfect materials, improper installation or poor workmanship.
- D. After the Contract is awarded, requests to substitute for specified materials shall be submitted by the Contractor to the Owner or Owner's Representative within thirty (30) days, complete with reasons for the substitution and savings which accrue to the Owner if the substitutions are approved. Substitutions after Contract award will be considered only if the substitutions are equal or superior to the products specified.
- E. No material substitutions will be allowed except by written acceptance from the Consultant. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples are provided.
- F. Approval of alternate or substitute equipment or material in no way voids the Specification requirements.
- G. Under no circumstances shall the Owner be required to prove that an item proposed for substitution is not equal to the specified item. It shall be mandatory that the Contractor submit to the Owner or Owner's Representative all evidence to support the contention that the item proposed for substitution is equal to the specified item. The Owner's decision as to the equality of substitution shall be final and without further recourse.

2.3 FACTORY ASSEMBLED PRODUCTS

- A. Manufacturers of equipment assemblies that include components made by others shall assume complete responsibility for the final assembled unit.
 - 1. All components of an assembled unit need not be products of the same manufacturer.
 - 2. Component parts, which are alike, shall be from a single manufacturer.
 - 3. Components shall be compatible with each other and with the total assembly for the intended service.
 - 4. Components of equipment shall bear the manufacturer's name or trademark model number and serial number on a name plate securely affixed in a conspicuous place, or cast integral with, stamped or otherwise permanently marked upon the components of the equipment.
- B. Major items of equipment that serve the same function must be the same make and model.
- C. Equipment and materials installed shall be compatible in all respects with other items being furnished and with existing items so that a complete and fully

operational system will result.

- D. Maximum standardization of components shall be provided to reduce spare part requirements.

PART 3 – EXECUTION

3.1 ROUGH-IN

- A. Before construction work commences, the Contractor shall visit the site and identify the exact routing of horizontal and backbone cable pathways.
- B. All equipment locations and cabling pathway shall be coordinated with other trades and existing conditions to eliminate interference with required clearances for equipment maintenance and inspections.
- C. Coordinate work with other trades and existing conditions to determine exact location of equipment and routing of cable pathways.
 - 1. Where more than one trade is involved in an area, space or chase, all shall cooperate and install their own work to utilize the space equally between them in proportion to their individual requirements. If, after installation of any equipment, piping, ducts, conduit, etc., it is determined that adequate space has not been provided for passage or maintenance, rearrange the work. Any changes in the size or location of the material or equipment supplied or proposed, which may be necessary in order to meet field conditions or in order to avoid conflicts between trades, shall be brought to the immediate attention of the Owner's Representative and approval received before such alterations are made.
- D. Provide easy, safe and code mandated clearances at equipment racks and enclosures.

3.2 CUTTING, CORING AND PATCHING

- A. The Contractor shall be responsible for all cutting, patching, coring and associated work to complete the security cabling pathway system.
- B. Protect existing finishes from water damage during core/cutting work and cleanup all related water and debris. Patch adjacent work disturbed by installation of new work including insulation, walls and wall covering, ceiling and floor covering or other finished surfaces.
- C. Contractor to submit all proposed concrete wall or floor penetrations to the Structural Engineer for approval prior to performing the work. Contractor shall locate and avoid cutting concrete reinforcing steel using current x-ray or pachometer equipment.

3.3 FIRESTOPPING

- A. All penetrations through fire-rated building structures (walls and floors) shall be sealed with an appropriate fire stop system. This requirement applies to through penetrations (complete penetration) and membrane penetrations (through one side of a hollow fire rated structure). Any penetrating item i.e., riser slots and sleeves, cables, conduit, cable tray, and raceways, etc. shall be properly fire stopped.
- B. Firestopping assemblies shall meet or exceed the rating of the wall or floor being penetrated.
- C. Fire stopping References:
 - 1. ASTM E814, Standard Method of Fire Tests of Through-Penetration Fire Stops.
 - 2. ASTM E 119, Fire Tests of Building Construction and Materials (for fire-rated architectural barriers).
 - 3. 2002 NFPA National Electrical Code, Section 800-52, Paragraph 2(b), Spread of Fire and Products of Combustion.

3.4 CONCEALMENT

- A. Security cabling pathways including conduit, sleeves and tray shall be concealed above ceilings, in walls, below slabs, and elsewhere throughout building. If concealment is impossible or impractical, or in areas without ceilings, the Owner's Representative shall be notified of the proposed routing prior to starting that portion of the work.
- B. All CAT 6 security cabling must be routed concealed above accessible ceilings or in conduit. No exposed security cabling is permitted with the exception of CAT 6 security cabling routed within the telecom rooms.
- C. All intrusion detection system cabling must be routed in conduit from the field devices to the controllers located in the telecom rooms.

3.5 CONDUIT SEALING

- A. The Contractor shall seal all building penetrations to prevent the intrusion of moisture.

3.6 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate ordering and installation of all equipment with long lead times or having a major impact on work by other trades so as not to delay the job or impact the schedule.
- B. Where mounting heights are not dimensioned, install systems, materials and equipment to provide the maximum headroom possible.

- C. Set all equipment to accurate line and grade, level all equipment and align all equipment components.
- D. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery of equipment and apparatus furnished into the premises.
- E. No equipment shall be hidden or covered up prior to inspection by the Owner's Representative. All work that is determined to be unsatisfactory shall be corrected immediately.
- F. All work shall be installed level and plumb, parallel and perpendicular to other building systems and components.
- G. The Contractor shall replace all ceiling tiles damaged by work performed as part of the communications contract.
- H. Storage and security of material and equipment shall be the responsibility of the Contractor.

END OF SECTION 280000

SECTION 280500 - CONDUCTORS AND CABLES FOR ELECTRONIC SAFETY AND SECURITY

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs, testing, training and all necessary and related items required to provide a complete and operational Access Control, Video Surveillance and Intrusion Detection System Cabling System as shown on the Drawings and described in the Specifications.
- B. Provide all necessary wiring, cabling and termination equipment required for the entire Access Control, Video Surveillance and Intrusion Detection System.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 28: Conduits and Backboxes for Electronic Safety and Security.
 - 4. Section 28 05 53: Identification for Electronic Safety & Security.
 - 5. Section 28 10 00: Access Control.
 - 6. Section 28 20 00: Video Surveillance.
 - 7. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.
- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
 - 1. NFPA-70, 2011 -- National Electrical Code (NEC).
 - 2. FCC Regulations:

- a. Part 15 – Radio Frequency Devices & Radiation Limits
3. Underwriter's Laboratories (UL): Applicable listing and ratings.
 - a. UL 294: Access Control System Units
 - b. UL 1076: Proprietary Burglar Alarm Units and Systems
4. Electronic Industry Association (EIA) testing standards
5. American Society for Testing and Materials (ATSM)
6. National Electrical Manufacturers' Association (NEMA)

1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's product data sheets for the following items:
 1. Wire and Cable for each system identified in the Division 28 Specifications.

PART 2 - PRODUCTS

2.1 WIRE AND CABLE

- A. Install Category 6 cabling to access control door controllers and video surveillance cameras as shown on the Drawings. Category 6 cabling shall be installed, terminated and tested by the Telecom Contractor in accordance with the Division 27 Specifications.
- B. All other electronic safety and security cabling shall be routed in conduit. No exposed cabling is permitted. Conduit shall be sized so as not to exceed 40% fill rate. Outdoor exposed conduit shall be rigid or IMC. Concealed conduit routed in walls or above ceilings shall be EMT.
- C. Provide cable type, conductor size, conductor quantity and shielding as recommended by the manufacturer of the equipment.
- D. Do not share conduits with fire alarm or electrical systems.
- E. Provide required wire and cable sized to allow for voltage drop on long runs and effectively shielded as required to allow the routing of 12 & 24V power and signal cable in the same conduit without interference or signal noise.
- F. Cable installed outdoors or in underground conduit shall contain a PVC or Polyethylene jacket, flooded to prevent water intrusion.
- G. Acceptable Manufacturers:
 1. Belden.
 2. Commscope.
 3. Honeywell Genesis
 4. Tappan.
 5. Westpenn.
 6. Or approved equal.

PART 3 – EXECUTION

280500 - 2 CONDUCTORS AND CABLES FOR ELECTRONIC SAFETY AND SECURITY

3.1 INSTALLATION

- A. Identify and label all wire and cable clearly with permanent labels. Indicate the number designated on the associated field or shop drawings or run sheet, as applies. Assign wire or cable designations consistently throughout a given system; i.e., each wire or cable shall carry the same labeled designation over its entire run, regardless of intermediate terminations.
- B. Secure all wire and cable run vertically in conduit for continuous distances greater than thirty (30) feet at the vertical run terminations. Non-coaxial cables shall be secured by screw-flange nylon cable ties or similar approved devices, Thomas and Betts or equal. Symmetrical clamping devices with split, circular or other wire conforming, nonmetallic bushings shall be provided for all other cables.
- C. All wire and cable shall be continuous and splice-free for the entire length of run between designated connections or terminations.
- D. Make all connections to screw-type barrier strips on panels and with insulated crimp-type spade lugs when appropriate. Size all lugs properly to assure high electrical integrity, i.e., low resistance connections.
- E. Lace, tie or harness wire or cable as required herein, and in accordance with accepted professional practice. Dress, lace or harness all wire and cable to prevent mechanical stress on electrical connections; no wire or cable shall be supported by a connection point.
- F. Wiring for shielding certain conductors from others or routing in separate raceways, shall be as recommended by the manufacturer's current requirements.
- G. All wiring shall be installed in conduit and shall be of the size recommended by the equipment supplier.
- H. Provide all necessary tie wires.
- I. Follow manufacturers recommended guidelines for installation.

END OF SECTION 280500

SECTION 280526 - GROUNDING AND BONDING FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs, testing, and all necessary and related items required to provide a complete and operational grounding and bonding system for the Electronic Safety and Security System as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 10 00: Access Control.
 - 3. Section 28 20 00: Video Surveillance.
 - 4. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.
- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
 - 1. American Society for Testing and Materials (ASTM):
 - a. B1-07 Standard Specification for Hard-Drawn Copper Wire.
 - b. B3-07 Standard Specification for Soft or Annealed Copper Wire.
 - c. B8-04 Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
 - 2. Institute of Electrical and Electronics Engineers, Inc. (IEEE):

- a. 81-1983 IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Ground System.
 - b. C2-07 National Electrical Safety Code.
- 3. National Fire Protection Association (NFPA):
 - a. NFPA-70, 2011 -- National Electrical Code (NEC).
- 4. Underwriters Laboratories, Inc. (UL):
 - a. 44-05 Thermoset-Insulated Wires and Cables
 - b. 83-08 Thermoplastic-Insulated Wires and Cables
 - c. 467-07 Grounding and Bonding Equipment
 - d. 486A-486B-03 Wire Connectors

1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's product data sheets for the following items:
 - 1. Ground Bars.
 - 2. Ground Lugs.
 - 3. Specialty Equipment Grounding Connectors
 - 4. Grounding and Bonding Conductors.
- B. Shop Drawings: Submit shop drawings indicating the following:
 - 1. Include the location of ground bar. Show the location of equipment to be grounded to the ground bars and the size of the ground conductors. Show the routing and size of ground conductors from the ground bars to electrical panels, building steel, etc.
- C. Test Reports: Provide certified test reports of ground resistance.
- D. Certifications: Submit the following grounding certifications at the completion of the project:
 - 1. Certification that the materials and installation are in accordance with the drawings and specifications.
 - 2. Certification by the Contractor that the complete installation has been properly installed and tested.

PART 2 - PRODUCTS

2.1 GROUNDING AND BONDING CONDUCTORS

- A. Equipment grounding conductors shall be UL 83 insulated stranded copper, except that sizes 10 AWG and smaller shall be solid copper. Insulation color shall be continuous green for all equipment grounding conductors, except that wire sizes 4 AWG and larger shall be permitted to be identified per NEC.

- B. Bonding conductors shall be ASTM B8 bare stranded copper, except that sizes 10 AWG and smaller shall be ASTM B1 solid bare copper wire.

2.2 SPLICES AND TERMINATION COMPONENTS

- A. Components shall meet or exceed UL 467 and be clearly marked with the manufacturer, catalog number, and permitted conductor size(s).

2.3 GROUND CONNECTIONS

- A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.
- B. Below Grade: Exothermic-welded type connectors.
- C. Above Grade:
 1. Bonding Jumpers: Compression-type connectors, using zinc-plated fasteners and external tooth lockwashers.
 2. Connection to Building Steel: Exothermic-welded type connectors.
 3. Ground Busbars: Two-hole compression type lugs, using tin-plated copper or copper alloy bolts and nuts.
 4. Rack and Cabinet Ground Bars: One-hole compression-type lugs, using zinc-plated or copper alloy fasteners.
 5. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, pressure type with at least two bolts.
 6. Pipe Connectors: Clamp type, sized for pipe.
 7. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.4 GROUND TERMINAL BLOCKS

- A. At any equipment mounting location (e.g., backboards and hinged cover enclosures) where rack-type ground bars cannot be mounted, provide screw lug-type terminal blocks.

2.5 SPLICE CASE GROUND ACCESSORIES

- A. Splice case grounding and bonding accessories shall be supplied by the splice case manufacturer when available. Otherwise, use 6 AWG insulated ground wire with shield bonding connectors.

PART 3 – EXECUTION

3.1 GENERAL

- A. Ground in accordance with the NEC, as shown on drawings, and as specified herein.

B. System Grounding:

1. Secondary service neutrals: Ground at the supply side of the secondary disconnecting means and at the related transformers.
2. Separately derived systems (transformers downstream from the service entrance): Ground the secondary neutral.

3.2 INACCESSIBLE GROUNDING CONNECTIONS

- A. Make grounding connections, which are buried or otherwise normally inaccessible (except connections for which periodic testing access is required) by exothermic weld.

3.3 CORROSION INHIBITORS

- A. When making ground and ground bonding connections, apply a corrosion inhibitor to all contact surfaces. Use corrosion inhibitor appropriate for protecting a connection between the metals used.

3.4 CONDUCTIVE PIPING

- A. Bond all conductive piping systems, interior and exterior, to the building to the grounding electrode system. Bonding connections shall be made as close as practical to the equipment ground bus.

3.5 SECURITY EQUIPMENT ROOM GROUNDING

- A. Conduit: Ground and bond metallic conduit systems as follows:
1. Ground metallic service conduit and any pipes entering or being routed within the computer room at each end using 6AWG bonding jumpers.
 2. Bond at all intermediate metallic enclosures and across all joints using 6 AWG bonding jumpers.

3.6 WIREWAY GROUNDING

- A. Ground and Bond Metallic Wireway Systems as follows:
1. Bond the metallic structures of wireway to provide 100 percent electrical continuity throughout the wireway system by connecting a 6 AWG bonding jumper at all intermediate metallic enclosures and across all section junctions.
 2. Install insulated 6 AWG bonding jumpers between the wireway system bonded as required in paragraph 1 above, and the closest building ground at each end and approximately every 50 feet.
 3. Use insulated 6 AWG bonding jumpers to ground or bond metallic wireway at each end at all intermediate metallic enclosures and cross all section junctions.
 4. Use insulated 6 AWG bonding jumpers to ground cable tray to column-mounted building ground plates (pads) at each end and approximately every 50 feet.

3.7 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.

B. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Owner promptly and include recommendations to reduce ground resistance.

END OF SECTION 280526

SECTION 280528 - CONDUITS AND BACK BOXES FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs, testing, training and all necessary and related items required to provide a complete and operational raceway system for the Intrusion Detection and Access Control System Cabling as shown on the Drawings and described in the Specifications.
- B. Provide a complete end-to-end raceway system for the entire Door Access Control System including conduit, fittings, back boxes, cover plates, j-boxes, pullboxes, fittings, supports, braces, pull string and firestopping.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 26: Grounding and Bonding for Electronic Safety & Security.
 - 4. Section 28 05 53: Identification for Electronic Safety & Security.
 - 5. Section 28 10 00: Access Control.
 - 6. Section 28 20 00: Video Surveillance.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.
- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
 - 1. National Electrical Manufacturers Association (NEMA):

- a. TC-3-04 PVC Fittings for Use with Rigid PVC Conduit and Tubing
- b. FB1-07 Fittings, Cast Metal Boxes and Conduit Bodies for Conduit, Electrical Metallic Tubing and Cable
- 2. National Fire Protection Association (NFPA):
 - a. 70-11 National Electrical Code (NEC)
 - b. D. Underwriters Laboratories, Inc. (UL):
 - c. 1-05 Flexible Metal Conduit
 - d. 5-04 Surface Metal Raceway and Fittings
 - e. 6-07 Rigid Metal Conduit
 - f. 50-07 Enclosures for Electrical Equipment
 - g. 360-09 Liquid-Tight Flexible Steel Conduit
 - h. 467-07 Grounding and Bonding Equipment
 - i. 514A-04 Metallic Outlet Boxes
 - j. 514B-04 Fittings for Cable and Conduit
 - k. 514C-02 Nonmetallic Outlet Boxes, Flush-Device Boxes and Covers
 - l. 651-05 Schedule 40 and 80 Rigid PVC Conduit
 - m. 651A-07 Type EB and A Rigid PVC Conduit and HDPE Conduit
 - n. 797-07 Electrical Metallic Tubing
 - o. 1242-06 Intermediate Metal Conduit
- 3. ASTM International:
 - a. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - b. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
 - c. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
 - d. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.
- 4. Underwriters Laboratories Inc.:
 - a. UL 1479 - Fire Tests of Through-Penetration Firestops.
 - b. UL - Fire Resistance Directory.

1.4 SUBMITTALS

- A. See Specification Section 28 00 00 for additional submittal requirements including quantity and format of submittals.
- B. Product Data: Submit manufacturer's product data sheets for the following items:
 - 1. EMT (Electrical Metallic Tubing) Conduit.

2. IMC (Intermediate Metal Conduit)
3. RMC (Rigid Metal Conduit).
4. Schedule 40 PVC.
5. Back boxes.
6. Pull boxes.
7. Hinged cover enclosures and cabinets.
8. Fittings.
9. Firestopping.

C. Shop Drawings: Submit shop drawings indicating the following:

1. Show size and routing of all conduits 2" and larger including the location of pullboxes.
2. Show the size and location of conduit penetrations through fire rated and smoke partitions.
3. Show the size and location of penetrations through structural items including beams, columns and floors. Structural penetrations must be reviewed and approved by the Structural Engineer prior to installing.
4. Show the location of flexible conduit required at expansion joints and seismic joints.

1.5 APPLICABLE PUBLICATIONS

A. Publications listed below (including amendments, addenda, revisions, supplements and errata) form a part of this specification to the extent referenced. Publications are referenced in the text by the basic designation only.

1.6 QUALITY ASSURANCE

A. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10 inch water gage (24.9 Pa) minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

a. Floor Penetrations Within Wall Cavities: T-Rating is not required.

B. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.

1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

- C. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: [ASTM E1966 or] UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.
- D. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10 inch water gage (24.9 Pa) minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.
- E. Surface Burning Characteristics: 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

PART 2 – PRODUCTS

2.1 GENERAL

- A. Conduit Size: In accordance with the NEC, but not less than 3/4 inch unless otherwise shown.

2.2 CONDUIT

- A. Rigid galvanized steel: Shall Conform to UL 6, ANSI C80.1.
- B. Rigid intermediate steel conduit (IMC): Shall Conform to UL 1242, ANSI C80.6.
- C. Electrical metallic tubing (EMT): Shall Conform to UL 797, ANSI C80.3. Maximum size not to exceed 105 mm (4 inches) and shall be permitted only with cable rated 600 volts or less.
- D. Flexible galvanized steel conduit: Shall Conform to UL 1.
- E. Liquid-tight flexible metal conduit: Shall Conform to UL 360.
- F. Direct burial plastic conduit: Shall conform to UL 651 and UL 651A, heavy wall PVC or high density polyethylene (PE).

2.3 CONDUIT FITTINGS

- A. Rigid steel and IMC conduit fittings:
 - 1. Fittings shall meet the requirements of UL 514B and ANSI/ NEMA FB1.
 - 2. Standard threaded couplings, locknuts, bushings, and elbows: Only steel or malleable iron materials are acceptable. Integral retractable type IMC couplings are also acceptable.
 - 3. Locknuts: Bonding type with sharp edges for digging into the metal wall of an enclosure.
 - 4. Bushings: Metallic insulating type, consisting of an insulating insert molded or locked into the metallic body of the fitting. Bushings made entirely of metal or nonmetallic material are not permitted.
 - 5. Erickson (union-type) and set screw type couplings: Approved for use in concrete are permitted for use to complete a conduit run where conduit is

installed in concrete. Use set screws of case hardened steel with hex head and cup point to firmly seat in conduit wall for positive ground. Tightening of set screws with pliers is prohibited.

6. Sealing fittings: Threaded cast iron type. Use continuous drain type sealing fittings to prevent passage of water vapor. In concealed work, install fittings in flush steel boxes with blank cover plates having the same finishes as that of other electrical plates in the room.

B. Rigid aluminum conduit fittings:

1. Standard threaded couplings, locknuts, bushings, and elbows: Malleable iron, steel; Zinc or cadmium plate iron or steel fittings. Locknuts and bushings: As specified for rigid steel and IMC conduit.
2. Set screw fittings: Not permitted for use.

C. Electrical metallic tubing fittings:

1. Fittings shall meet the requirements of UL 514B and ANSI/ NEMA FB1.
2. Only steel or malleable iron materials are acceptable.
3. Couplings and connectors: Concrete tight and rain tight, with connectors having insulated throats. Use gland and ring compression type couplings and connectors for conduit sizes 2 inches and smaller. Use set screw type couplings with four set screws each for conduit sizes over 2 inches. Use set screws of case-hardened steel with hex head and cup point to firmly seat in wall of conduit for positive grounding.
4. Indent type connectors or couplings are prohibited.
5. Die-cast or pressure-cast zinc-alloy fittings or fittings made of "pot metal" are prohibited.

D. Flexible steel conduit fittings:

1. Conform to UL 514B. Only steel or malleable iron materials are acceptable.
2. Clamp type, with insulated throat.

E. Liquid-tight flexible metal conduit fittings:

1. Fittings shall meet the requirements of UL 514B and ANSI/ NEMA FB1.
2. Only steel or malleable iron materials are acceptable.
3. Fittings must incorporate a threaded grounding cone, a steel or plastic compression ring, and a gland for tightening. Connectors shall have insulated throats.

F. Direct burial plastic conduit fittings:

1. Fittings shall meet the requirements of UL 514C and NEMA TC3.
2. As recommended by the conduit manufacturer.

G. Expansion and deflection couplings:

1. Conform to UL 467 and UL 514B.
2. Accommodate, 0.75 inch deflection, expansion, or contraction in any direction, and allow 30 degree angular deflections.
3. Include internal flexible metal braid sized to guarantee conduit ground continuity and fault currents in accordance with UL 467, and the NEC code tables for ground conductors.
4. Jacket: Flexible, corrosion-resistant, watertight, moisture and heat resistant molded rubber material with stainless steel jacket clamps.

2.4 CONDUIT SUPPORTS

- A. Parts and hardware: Zinc-coat or provide equivalent corrosion protection.
- B. Individual Conduit Hangers: Designed for the purpose, having a pre-assembled closure bolt and nut, and provisions for receiving a hanger rod.
- C. Multiple conduit (trapeze) hangers: Not less than 1-1/2 by 1-1/2 inch, 12 gage steel, cold formed, lipped channels; with not less than 3/8 inch diameter steel hanger rods.
- D. Solid Masonry and Concrete Anchors: Self-drilling expansion shields, or machine bolt expansion.

2.5 OUTLET, JUNCTION, AND PULL BOXES

- A. UL-50 and UL-514A.
- B. Cast metal where required by the NEC or shown, and equipped with rustproof boxes.
- C. Nonmetallic Outlet and Device Boxes: NEMA OS 2.
- D. Metal Floor Boxes: Cast or sheet metal, semi-adjustable, rectangular.
- E. Sheet metal boxes: Galvanized steel, except where otherwise shown.
- F. Flush mounted wall or ceiling boxes shall be installed with raised covers so that front face of raised cover is flush with the wall. Surface mounted wall or ceiling boxes shall be installed with surface style flat or raised covers.

2.6 CABINETS

- A. NEMA 250, Type 1 or 4, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
- B. Hinged door in front cover with flush latch and concealed hinge.
- C. Key latch to match panelboards.
- D. Metal barriers to separate wiring of different systems and voltage.

- E. Accessory feet where required for freestanding equipment.

2.7 WIREWAYS

- A. Equip with hinged covers, except where removable covers are shown.

2.8 WARNING TAPE

- A. Standard, 4-Mil polyethylene 3 inches wide tape non-detectable type, red with black letters, and imprinted with "CAUTION BURIED ELECTRONIC SAFETY AND SECURITY CABLE BELOW".

2.9 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

- A. Description: Comply with SCTE 77.
 1. Color of Frame and Cover: Gray.
 2. Configuration: Units shall be designed for flush burial and have closed bottom, unless otherwise indicated.
 3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
 4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 5. Cover Legend: Molded lettering, as indicated for each service.
 6. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
 7. Handholes 2 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.
- B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel or fiberglass or a combination of the two.

2.10 SLEEVES FOR RACEWAYS

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- C. Sleeves for Rectangular Openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch thickness as indicated and of length to suit application.

2.11 FIRESTOPPING

- A. Manufacturers:
 1. Dow Corning Corp.
 2. 3M fire Protection Products.

3. Specified Technology, Inc.
 4. Or Approved Equal.
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
1. Silicone Firestopping Elastomeric Firestopping: Single component silicone elastomeric compound and compatible silicone sealant.
 2. Foam Firestopping Compounds: Single component foam compound.
 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral fiber stuffing insulation with silicone elastomer for smoke stopping.
 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
 7. Firestop Pillows: Formed mineral fiber pillows.
- C. Color: Dark gray.

2.12 FIRESTOPPING ACCESSORIES

- A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.
- B. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- C. General:
1. Furnish UL listed products.
 2. Select products with rating not less than rating of wall or floor being penetrated.
- D. Non-Rated Surfaces:
1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
 2. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

PART 3 – EXECUTION

3.1 PENETRATIONS

A. Cutting or Holes:

1. Locate holes in advance where they are proposed in the structural sections such as ribs or beams. Obtain the approval of the Owner prior to drilling, cutting or coring through structural sections.
2. Cut holes through concrete and masonry in new and existing structures with a diamond core drill or concrete saw. Pneumatic hammer, impact electric, hand or manual hammer type drills are not allowed, except where permitted by the Owner required by limited working space.

B. Fire Stop: Where conduits, wireways, and other electronic safety and security raceways pass through fire partitions, fire walls, smoke partitions, or floors, install a fire stop that provides an effective barrier against the spread of fire, smoke and gases with rock wool fiber or silicone foam sealant only. Completely fill and seal clearances between raceways and openings with the fire stop material.

C. Waterproofing: At floor, exterior wall, and roof conduit penetrations, completely seal clearances around the conduit and make watertight.

3.2 INSTALLATION, GENERAL

A. Install conduit as follows:

1. In complete runs before pulling in cables or wires.
2. Flattened, dented, or deformed conduit is not permitted. Remove and replace the damaged conduits with new undamaged material.
3. Assure conduit installation does not encroach into the ceiling height head room, walkways, or doorways.
4. Cut square with a hacksaw, ream, remove burrs, and draw up tight.
5. Mechanically continuous.
6. Independently support conduit at 8 foot on center. Do not use other supports i.e., (suspended ceilings, suspended ceiling supporting members, lighting fixtures, conduits, mechanical piping, or mechanical ducts).
7. Support within 12 inches of changes of direction, and within 12 inches of each enclosure to which connected.
8. Close ends of empty conduit with plugs or caps at the rough-in stage to prevent entry of debris, until wires are pulled in.
9. Secure conduits to cabinets, junction boxes, pull boxes and outlet boxes with bonding type locknuts. For rigid and IMC conduit installations, provide a locknut on the inside of the enclosure, made up wrench tight. Do not make conduit connections to junction box covers.
10. Do not use aluminum conduits in wet locations.
11. Unless otherwise indicated on the drawings or specified herein, all conduits shall be installed concealed within finished walls, floors and ceilings.

B. Conduit Bends:

1. Make bends with standard conduit bending machines.
2. Conduit hickey may be used for slight offsets, and for straightening stubbed out conduits.
3. Bending of conduits with a pipe tee or vise is prohibited.

C. Layout and Homeruns:

1. Install conduit with wiring, including homeruns, as shown.

3.3 CONCEALED WORK INSTALLATION

A. In Concrete:

1. Conduit: Rigid steel, IMC or EMT. Do not install EMT in concrete slabs that are in contact with soil, gravel or vapor barriers.
2. Align and run conduit in direct lines.
3. Make couplings and connections watertight. Use thread compounds that are UL approved conductive type to insure low resistance ground continuity through the conduits. Tightening set screws with pliers is prohibited.

B. Furred or Suspended Ceilings and in Walls:

1. Conduit for conductors 600 volts and below:
 - a. Rigid steel, IMC, rigid aluminum, or EMT. Different type conduits mixed indiscriminately in the same system is prohibited.
2. Align and run conduit parallel or perpendicular to the building lines.
3. Tightening set screws with pliers is prohibited.

3.4 EXPOSED WORK INSTALLATION

A. Unless otherwise indicated on the drawings, exposed conduit is only permitted on the exterior of the building and in mechanical and electrical rooms.

B. Conduit for Conductors 600 volts and below:

1. Rigid steel, IMC, or EMT. Different type of conduits mixed indiscriminately in the system is prohibited.

C. Align and run conduit parallel or perpendicular to the building lines.

D. Install horizontal runs close to the ceiling or beams and secure with conduit straps.

E. Support horizontal or vertical runs at not over eight foot intervals.

F. Surface metal raceways: Use only where shown.

G. Painting:

1. Paint exposed conduit.

3.5 EXPANSION JOINTS

- A. Conduits 3 inches and larger, that are secured to the building structure on opposite sides of a building expansion joint, require expansion and deflection couplings. Install the couplings in accordance with the manufacturer's recommendations.
- B. Provide conduits smaller than 3 inches with junction boxes on both sides of the expansion joint. Connect conduits to junction boxes with sufficient slack of flexible conduit to produce 5 inch vertical drop midway between the ends. Flexible conduit shall have a copper green ground bonding jumper installed. In lieu of this flexible conduit, expansion and deflection couplings as specified above for 15 inches and larger conduits are acceptable.
- C. Install expansion and deflection couplings where shown.
- D. Seismic Areas: In seismic areas, provide conduits rigidly secured to the building structure on opposite sides of a building expansion joint with junction boxes on both sides of the joint. Connect conduits to junction boxes with 15 inches of slack flexible conduit. Flexible conduit shall have a copper green ground bonding jumper installed.

3.6 CONDUIT SUPPORTS, INSTALLATION

- A. Safe working load shall not exceed 1/4 of proof test load of fastening devices.
- B. Use pipe straps or individual conduit hangers for supporting individual conduits.
- C. Maximum distance between supports is 8 foot on center.
- D. Support multiple conduit runs with trapeze hangers. Use trapeze hangers that are designed to support a load equal to or greater than the sum of the weights of the conduits, wires, hanger itself, and 200 pounds. Attach each conduit with U-bolts or other approved fasteners.
- E. Support conduit independently of junction boxes, pull boxes, fixtures, suspended ceiling T-bars, angle supports, and similar items.
- F. Fasteners and Supports in Solid Masonry and Concrete:
 1. New Construction: Use steel or malleable iron concrete inserts set in place prior to placing the concrete.
 2. Existing Construction:
 - a. Steel expansion anchors not less than 1/4 inch bolt size and not less than 1-1/8 inch embedment.

- b. Power set fasteners not less than 1/4 inch diameter with depth of penetration not less than 3 inches.
 - c. Use vibration and shock resistant anchors and fasteners for attaching to concrete ceilings.
- G. Hollow Masonry: Toggle bolts are permitted.
- H. Bolts supported only by plaster or gypsum wallboard are not acceptable.
- I. Metal Structures: Use machine screw fasteners or other devices specifically designed and approved for the application.
- J. Attachment by wood plugs, rawl plug, plastic, lead or soft metal anchors, or wood blocking and bolts supported only by plaster is prohibited.
- K. Chain, wire, or perforated strap shall not be used to support or fasten conduit.
- L. Spring steel type supports or fasteners are prohibited for all uses except: Horizontal and vertical supports/fasteners within walls.
- M. Vertical Supports: Vertical conduit runs shall have riser clamps and supports in accordance with the NEC and as shown. Provide supports for cable and wire with fittings that include internal wedges and retaining collars.

3.7 BOX INSTALLATION

- A. Boxes for Concealed Conduits:
 - 1. Flush mounted.
 - 2. Provide raised covers for boxes to suit the wall or ceiling, construction and finish.
- B. In addition to boxes shown, install additional boxes where needed to prevent damage to cables and wires during pulling in operations.
- C. Remove only knockouts as required and plug unused openings. Use threaded plugs for cast metal boxes and snap-in metal covers for sheet metal boxes.
- D. Outlet boxes in the same wall mounted back-to-back are prohibited. A minimum 24 inch, center-to-center lateral spacing shall be maintained between boxes).
- E. Minimum size of outlet boxes for ground fault interrupter (GFI) receptacles is 4 inches square by 2-1/8 inches deep, with device covers for the wall material and thickness involved.
- F. Stencil or install phenolic nameplates on covers of the boxes identified on riser diagrams; for example "SIG-FA JB No. 1".
- G. On all Branch Circuit junction box covers, identify the circuits with black marker.

3.8 ELECTRONIC SAFETY AND SECURITY CONDUIT

- A. Contractor shall design and install a complete end-to-end raceway system for the entire Door Access Control and Intrusion Detection Systems.
- B.
- C. Minimum conduit size of 3/4 inch, but not less than the size shown on the drawings.
- D. All conduit ends shall be equipped with insulated bushings.
- E. All four inch conduits within buildings shall include pull boxes after every two 90 degree bends. Size boxes per the NEC.
- F. Vertical conduits/sleeves through closets floors shall terminate not less than 3 inches below the floor and not less than 3 inches below the ceiling of the floor below.
- G. Terminate conduit runs to/from a backboard in a closet or interstitial space at the top or bottom of the backboard. Conduits shall enter communication closets next to the wall and be flush with the backboard.
- H. Where drilling is necessary for vertical conduits, locate holes so as not to affect structural sections such as ribs or beams.
- I. All empty conduits located in communications closets or on backboards shall be sealed with a standard non-hardening duct seal compound to prevent the entrance of moisture and gases and to meet fire resistance requirements.
- J. Conduit runs shall contain no more than four quarter turns (90 degree bends) between pull boxes/backboards. Minimum radius of communication conduit bends shall be as follows (special long radius):

Sizes of Conduit Trade Size	Radius of Conduit Bends mm, Inches
$\frac{3}{4}$	(6)
1	(9)
1-1/4	(14)
1-1/2	(17)
2	(21)
2-1/2	(25)
3	(31)
3-1/2	(36)
4	(45)

- K. Furnish and install 3/4 inch thick fire retardant plywood specified in on the wall of communication closets where shown on drawings . Mount the plywood with the bottom edge 6 inches above the finished floor.
- L. Furnish and pull wire in all empty conduits. (Sleeves through floor are exceptions).

3.9 INSTALLATION – FIRESTOPPING

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.
- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.
- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating, to uniform density and texture.
- D. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.
- E. Fire Rated Surface:
 - 1. Seal opening at floor, wall, partition, ceiling, and roof as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch (25 mm) on both sides of building element.

- b. Size sleeve allowing minimum of 1 inch (25 mm) void between sleeve and building element.
 - c. Pack void with backing material.
 - d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
 - 2. Where cable tray, conduit, wireway, and cable penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.
- F. Non-Rated Surfaces:
- 1. Seal opening through non-fire rated wall, partition, floor, ceiling and roof opening as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch (25 mm) on both sides of building element.
 - b. Size sleeve allowing minimum of 1 inch (25 mm) void between sleeve and building element.
 - c. Install type of firestopping material recommended by manufacturer.
 - 2. Install floor plates or ceiling plates where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
 - 3. Exterior wall openings below grade: Assemble rubber links of mechanical seal to size of conduit and tighten in place, in accordance with manufacturer's instructions.
 - 4. Interior partitions: Seal pipe penetrations at computer rooms and data rooms. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

END OF SECTION 280528

SECTION 280553 - IDENTIFICATION FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs and all necessary and related items required to provide a complete identification system for the Electronic Safety and Security (ESS) Systems including the Access Control, Intrusion Detection and Video Surveillance systems as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 10 00: Access Control.
 - 4. Section 28 20 00: Video Surveillance.
 - 5. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.
- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
 - 6. National Electric Code (NEC), NFPA 70.

1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's product data sheets for the following items:
 - 1. Equipment cabinet and equipment enclosure labels.
 - 2. Wire and cable labels.

B. Samples: Submit samples of the following items:

1. Include physical samples of each labeling material.

PART 2 - PRODUCTS

2.1 LABELS

A. Phenolic two tone for exterior mounting on equipment enclosures. White lettering on black background.

2.2 WIRE AND CABLE LABELS

A. Provide self-laminating adhesive laser labels.

B. Labels shall be machine printable with a laser printer.

C. Text Attributes:

1. Black
2. 1/8" high, minimum, or #12 font size
3. Font: Verdana preferred, SansSerif, or Arial acceptable
4. Printable area: 1.0" X .375" and 1.0" X 0.50".
5. Cable size: 0.16 – 0.32" OD
6. Color: White

D. Manufacturer:

1. Brady wire marking labels WML-211-295 and WML-311-292.
2. Brother.
3. Thomas and Betts.
4. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Physically label all of the ESS Systems components including but not limited to the following:

1. Cables:
 - a. Label at all termination points.
 - b. Label at pullboxes, junction boxes and outlet boxes.
2. Label Access Control and Intrusion Detection System Cabinets.
3. Label Field equipment cabinets.
4. Label equipment within the cabinets and enclosures indicating its function.
5. Label equipment with its IP address (where applicable).
6. Label Terminal blocks.
7. Label Relays.
8. Label Patch panels, and the termination positions within the patch panels.

- B. Identify wire and cable clearly with permanent labels wrapped about the full circumference within one (1) inch of each connection. Indicate the number designated on the associated field or shop drawings or run sheet, as applicable. Assign wire or cable designations consistently throughout a given system; i.e., each wire or cable shall carry the same labeled designation over its entire run, regardless of intermediate terminations. Label cables where cable first enters and exits from conduit, junction or distribution boxes; labels shall be located within six (6) inches of the point of exit.
- C. Label all equipment mounted in the equipment enclosures indicating its function. This includes servers, switches, controllers, power supplies, batteries, etc.
- D. Components, such as racks and patch panels, must be permanently marked with machine-generated labels, according to current practices and as approved by the Owner before installation.
- E. Labels shall coincide with device id's use on the record drawings.
- F. Equipment Enclosures.
 - 1. Label all Enclosures, alarm monitoring, and powers supply enclosures associated with the security system with an adhesive backed phenolic label. Use 12 point text.
 - 2. Labels shall be represented in and match the security system record drawings.
- G. Security Devices.
 - 1. Label all equipment associated with the security system with a permanent machine generated, laminated, label. Use 12 point text with a clear background. Use white or black lettering depending upon the color of the device.
 - 2. Label device in a concealed location with the system point number and address.
 - 3. Label power supply batteries with the month and year they were installed.
- H. Wire and Cable.
 - 1. Label all wire and cable associated with the security system with permanent machine generated, laminated, labels. Use 12 point, black text on a white label.
 - 2. All wire and cable labels shall be clearly visible without the need to remove wire management or any other obstructions.

END OF SECTION 280553

SECTION 281000 - ACCESS CONTROL

PART 1 – GENERAL

1.1 SUMMARY

- A. Section includes access control field devices, intelligent controllers, power supplies, equipment enclosures, cabling, software and licenses.

1.2 DESCRIPTION OF WORK

- A. Washoe County School District has an existing door access control system including head-end server, software and licensing. The existing access control system software is Genetec Security Center v5.6. Washoe County School District has installed the Genetec Synergis Pro Package w/256 readers and 10 clients. The contractor will be responsible for integrating the door access control at this site with this existing system. The contractor shall follow the established naming convention for sites, doors and card holder security groups.
- B. Include all equipment, materials, labor and all necessary and related items required to provide a complete and operational access control system as shown on the drawings and described in the specifications.
- C. Furnish, install, program and test access control system head-end software, gateways, intelligent controllers, door controllers, I/O boards, add-in boards, power supplies, battery chargers, batteries, relays, software and licensing as identified on the drawings.
- D. Furnish and install door access control field devices including POE+ door controllers, card readers, magnetic door position contacts, request to exit motion detectors, etc. as shown on the drawings.
- E. Furnish and install manual push button door release where shown.
- F. Prep existing door frames to receive access control devices.
- G. Electrified door hardware including electric strikes, power transfer hinges and electric locks are specified in the Architectural door hardware schedule and installed by the door hardware contractor. The Division 28 contractor is responsible for connecting the electrified door hardware to the access control system. Coordinate installation and connection of power supplies and electrified door hardware with the door installer.
- H. Furnish, install, terminate and label signal and power cabling for all door access control devices.
- I. Furnish and install end-to-end raceway system for access control cabling.

- J. Furnish and install Category 6 network cabling to the POE+ door controllers located above the doors. Network cabling to be installed and tested in accordance with the Division 27 specifications. POE+ network switches will be provided, installed and programmed by the Owner.
- K. Configure existing access control system head-end software and licensing to integrate access control system installed at the school.
- L. Assign group security accounts to local door controllers as directed by WCSD.
- M. Furnish, install and configure access control software and access control software licenses as described in these specifications. Provide training to the Owner on the use of the software.
- N. Furnish, install and configure access control monitoring software on (1) client workstation as directed by the Owner. Provide training to the Owner on the operation of the monitoring software and printing reports.
- O. Furnish and install relays, input devices and cabling to interface the access control system panel with the existing fire alarm system. In the event of a fire alarm, egress doors shall fail open.
- P. Perform system testing and commissioning of all security devices shown on the drawings.
- Q. Meet with the Owner to determine the required operation and functionality of the system. Program the security system in accordance with the Owner's requirements including user/group access rights and schedules on a per door basis.
- R. Demonstrate the entire security system to the Owner at the completion of the project. Provide four (4) hours of training to the admin staff on the operation and maintenance of the system.

1.3 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 26: Grounding and Bonding for Electronic Safety & Security.
 - 4. Section 28 05 28: Conduits and Back Boxes for Electronic Safety and Security.
 - 5. Section 28 05 53: Identification for Electronic Safety & Security.

6. Section 28 30 00: Security Detection, Alarm & Monitoring.

- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.4 REGULATIONS AND CODE COMPLIANCE

- A. The Contractor will comply with all applicable governmental regulations including Federal, State, City, and local applicable codes and ordinances.
- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- C. All work and materials shall conform to and be installed, inspected and tested in accordance with the governing rules and regulations of the security industry, as well as federal, state and local governmental agencies, including, but not limited to the following
1. ANSI/NFPA-70, 2011 -- National Electrical Code (NEC).
 2. Underwriter's Laboratories, Inc. (UL) 294 – Access Control Systems.
 3. Underwriter's Laboratories, Inc. (UL) 1076 – Burglar Alarm and Systems.
 4. Federal Communications Commission (FCC).
 5. Americans with Disabilities Act (ADA).

1.5 CONTRACTOR QUALIFICATIONS

- A. The Contractor installing the access control system shall have a minimum of five (5) years experience installing access control systems of similar size and scope.
- B. The Contractor installing the access control system must be a firm normally engaged in the design, installation and maintenance of integrated security systems including access control, intrusion detection and video surveillance.
- C. The Contractor shall be a Genetec Certified Partner and have the necessary certifications to purchase, install and configure the specified access control system equipment and software.
- D. The Contractor's system programmer shall have attended manufacturer training and obtained certification in Genetec™ Security Center - Synergis™ Technical Certification.
- E. Contractor must be capable of responding to service calls within four (4) business hours of receipt and providing an onsite response time of one (1) business day for repair of critical system items.
- F. The Contractor must be licensed by the Nevada State Contractors Board.
- G. Formal, written evidence of the following may be requested at any point during the Bid or installation:

1. If requested, the Contractor, including any subcontractor, shall show proven expertise in the implementation of access control projects. This expertise can be illustrated through the inclusion of details of at least three (3) projects involving the design and installation of access control systems within the past three (3) year period of similar size and scope. Names, addresses, and telephone numbers of references for the three projects shall be included.
2. In the event subcontractors are used for any portion of the installation or acceptance testing, the Contractor shall be responsible for any subsequent corrective action required on that portion of the work.

1.6 SUBMITTALS

- A. Manufacturer's Data Sheets: Submit manufacturer's data sheets in electronic PDF format for the following items:
 1. Access control system equipment enclosures.
 2. Access control system gateways, intelligent controllers, POE+ based door controllers & I/O boards.
 3. Relays.
 4. Power supplies & battery chargers.
 5. Batteries.
 6. Proximity/smart card readers.
 7. Magnetic door position contacts.
 8. Request to exit motion detectors.
 9. Access control system card stock.
 10. Access control system software and licenses.
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.
- C. Shop Drawings: Submit shop drawings in electronic PDF format that include the following items:
 1. Submit floor plans indicating all security devices installed at each door.
 2. Provide a spreadsheet for each security device and its ID (point) within the security system.
 3. Submit point-to-point wiring diagrams and block diagrams showing all door security devices, power supplies, relays, card reader panels, security panel I/O boards, battery backups, etc.
 4. Submit layout drawings of the components mounted in the equipment enclosures located in the telecom rooms including system controllers, card reader boards, I/O boards, relays, power supplies, battery chargers, cable management wireways, overhead gutters, data outlets, electrical outlets, etc.
 5. Submit security panel battery calculations (batteries shall backup the entire system for a minimum of 4 hours).
- D. Naming Convention Scheme for Access Control Doors and Security Groups:

1. Contractor to submit a naming convention scheme for the site, doors and card holder security groups. Naming convention shall match existing. The proposed naming scheme to be reviewed and approved by School Police prior to implementing.

1.7 DELIVERY, STORAGE & HANDLING

- A. Protect all controllers, devices and equipment from moisture, dust and debris prior to installation.

1.8 WARRANTY

- A. See Division 1 Specifications and General Conditions regarding Guarantee and Warranty requirements which apply to this Specification Section.
- B. The Contractor shall provide the following warranty for the Door Access Control System described in this specification section:
 1. Warranty Start Date: The warranty period will begin after substantial completion of the project.
 2. Complete System Warranty: The complete Access Control System including all devices, equipment, cabling, software and programming shall be guaranteed to be free from defects in workmanship and materials for a minimum period of two (2) years from date of substantial completion. Promptly remedy such defects and any subsequent damage caused by the defects or repair thereof at no expense to the Owner.
 3. Labor Warranty: Contractor to provide all labor as necessary to complete warranty repairs for a period of one (1) year from the date of substantial completion. During this labor warranty period, all services including equipment, labor, travel, expenses, etc., shall be provided during normal working hours at no cost to the Owner. The Contractor shall provide the Owner with a phone number for service. The Contractor shall respond within four (4) business hours of receipt of a service call. The Contractor shall provide an on-site response time of one (1) business day for repair of critical system items during normal business hours.
 4. Equipment Warranty: The Access Control System equipment shall carry a three (3) year manufacturer warranty. Damaged or defective equipment shall be replaced by the manufacturer during this three (3) year warranty period at no cost to the Owner. Replacement equipment shall be delivered to the project site. During year one (1) of this warranty period, the contractor shall provide all labor to replace the equipment at no cost to the owner. During years two (2) and three (3) of this warranty period, the Owner will be responsible for the Contractor's labor costs to replace the equipment.

5. Software Warranty: The Access Control System software and licenses shall carry a five (5) year manufacturer warranty. During the warranty period, the manufacturer shall provide telephone based technical support and shall provide software upgrades free of charge.
6. Warranty Exclusions: The guarantee shall exclude acts of God, vandalism, physical abuse or operator misuse.

PART 2 – PRODUCTS

2.1 ACCESS CONTROL SYSTEM EQUIPMENT ENCLOSURES

- A. Provide minimum 36" wide x 36" high x 8" deep equipment enclosure where shown on the drawings.
- B. Provide a separate lockable equipment enclosure to house the batteries and power supplies immediately adjacent or below the security panel.
- C. Equipment enclosures shall have a lockable hinged door. Lock shall be keyed alike with other security enclosures on the project.
- D. Install plastic slotted duct to route cabling within the enclosure.
- E. Ground security equipment enclosures to ground bar in telecom room with #6 green insulated ground conductor.
- F. Label outside of enclosure with an engraved plate.
- G. Provide the following accessories inside the enclosures.
 1. Tamper switch on each equipment enclosure door.
 2. 5" electric fan with thermostat to cool enclosure.
- H. Acceptable Products:
 1. Hoffman Concept CSD36368 Enclosure, CP3636 Panel, A4AXFNGQ Fan, ABRKT4 Fan Mounting Bracket and ATEMNO Thermostat.
 2. Or Approved Equal.

2.2 ACCESS CONTROL SYSTEM GATEWAY APPLIANCE, INTELLIGENT CONTROLLER AND I/O BOARDS

- A. Furnish and install site gateway, intelligent controller and input/output (I/O) boards as shown on the drawings. Devices will control all doors with access control on the project.
- B. Mount all devices in the equipment enclosure located in the main telecom room.

- C. Gateway and intelligent controller shall be assigned IP addresses as directed by WCSD IT department. Contractor will be responsible for providing a list of devices requiring an IP address including a description of the device, its location, MAC address and patch panel port that it is connected to.
- D. Configure gateway appliance to communicate with the remote access control system head-end server software. Configure intelligent controller to communicate with the site gateway appliance and the local POE+ based door controllers at each site.
- E. Intelligent controllers shall meet the following physical specifications
 - 1. UL 294 recognized.
 - 2. CE Compliant
 - 3. NIST Certified Encryption
 - 4. Manages up to 64 Card Readers.
 - 5. 2 onboard reader ports.
 - 6. 4 Form C Relays, 5A 30VDC output..
 - 7. 1 Ethernet connection.
- F. Acceptable Products:
 - 1. Site gateway appliance (Provide 1 gateway per site):
 - a. Synergis Cloud Link Appliance (Genetec P/N SY-CLOUDLINK).
 - b. No Substitutions.
 - 2. Intelligent Controller (Provide 1 controller per site):
 - a. Mercury Security P/N sy-LP1502.
 - b. No Substitutions.
 - 3. 16-Input Card (Provide 1 input card per site):
 - a. Mercury Security P/N Sy-MR16IN.
 - b. No Substitutions.
 - 4. 16-Output Card (Provide 1 output card per site).
 - a. Mercury Security Sy-MR16OUT.
 - b. No Substitutions.

2.3 POE+ DOOR CONTROLLERS

- A. Provide POE+ based door controllers where shown on the drawings.
- B. Door controllers shall be installed in a lockable enclosure above each door. All enclosures to be keyed alike.

- C. Provide plenum CAT 6 network cable from each POE+ door controller to the telecom serving the area. Category 6 cable shall be installed, terminated and tested in accordance with the Division 27 specifications.
- D. POE+ based door controllers shall be assigned IP addresses as directed by WCSD IT department. Contractor will be responsible for providing a list of devices requiring an IP address including a description of the device, its location, MAC address and patch panel port that it is connected to.
- E. Configure POE+ door controllers to communicate with the intelligent controllers at each site.
- F. POE+ door controllers shall have the following physical characteristics:
 - 1. UL 294 recognized.
 - 2. CE Compliant.
 - 3. NIST Certified Encryption.
 - 4. 1.25 Amp Power at Door for card reader, lock and REX.
 - 5. 1 Ethernet Port.
 - 6. 2 card reader ports (controls up to 2 readers at 1 door).
 - 7. OSDP Protocol between reader and controller.
 - 8. Local cardholder database with 240,000 cardholder capacity.
- G. Acceptable Products:
 - 1. POE+ Door Controller:
 - a. Mercury Security P/N LP1501.
 - b. No Substitutions.
 - 2. Lockable Enclosure for POE+ Door Controller:
 - a. Life Safety Power FlexPower E5M Enclosure.
 - b. Or Approved Equal.

2.4 RELAYS

- A. Provide DIN rail mounted relays for all equipment requiring relay activation. Mount relays in lockable equipment enclosures.
- B. Provide 24V plug-in type relays with LED lights that indicate when the relay is energized.
 - 1. Acceptable Manufacturers:
 - a. IDEC.
 - b. Or Approved Equal.

2.5 POWER SUPPLIES & BATTERY CHARGERS

- A. Provide UL listed supervised power supplies for access control equipment located in the main telecom room including intelligent controllers, gateways, I/O boards, etc. Provide quantity of power supplies to accommodate all equipment.
- B. Power supply input shall be 120v. Output shall be 12V or 24V as required by the specific equipment.
- C. Power supplies shall have integrated battery charger.
- D. Mount power supplies / battery chargers in lockable enclosures.
 - 1. Acceptable Products:
 - a. Altronix Maximal 11E. Size as required to accommodate all devices.
 - b. Or Approved Equal.

2.6 BATTERIES

- A. Provide UL listed rechargeable batteries to backup all security power supplies. Mount batteries in power supply enclosure.
- B. Provide 12V 12Ah, leak proof lead acid batteries.
- C. Batteries shall be equipped with safety release valves designed to operate between and 2 and 5 psi and shall automatically reseal.
- D. The Contractor shall perform calculations to determine the number of batteries required to backup each power supply. In the case of a power failure, the batteries shall provide a minimum of 2 hours of continuous backup for the entire door access control system.
- E. Note – POE+ based door controllers to be backed up by UPS's connected to the POE+ switches in the telecom rooms. POE+ switches and UPS's will be provided and installed by the Owner.
- F. Acceptable products:
 - 1. Altronix BT1212.
 - 2. Or Approved Equal.

2.7 PROXIMITY / CONTACTLESS SMART CARD READERS

- A. Provide proximity / contactless smart card readers as shown on the drawings.
- B. Readers shall be color black.
- C. Provide narrow mullion mount readers where required at storefront doors.
- D. Provide readers with a 12V operating voltage and 4" read range.

- E. Connect card readers to the POE+ based door controller located above each card reader door.

- 1. Acceptable Products:

- a. Standard Size Readers:

- (1) HID Global Signo 40 (P/N 40TKS-T2-000000).
 - (2) No Substitutions.

- b. Narrow Mullion Mount Readers:

- (1) HID Global Signo 20 (P/N 20TKS-T2-000000).
 - (2) No Substitutions.

2.8 MAGNETIC DOOR POSITION CONTACTS

- A. Provide recessed magnetic door contacts where indicated on the drawings.
- B. Door contacts shall be double pole, double throw type. The first set of leads will be connected to the access control system and the second set of leads will be connected to the intrusion detection system.
- C. Connect door position contacts to the POE+ based door controller located above each card reader door.
- D. Acceptable Products:
 - 1. GE/Sentrol 1078.
 - 2. Or Approved Equal.

2.9 REQUEST TO EXIT MOTION DETECTORS

- A. Provide UL listed 24V request to exit motion detectors as shown on the drawings (color white).
- B. Devices shall have 2 form “C” contacts adjustable up to 60 seconds.
- C. Devices shall have programmable fail safe and fail secure modes.
- D. Provide device trim plates as necessary.
- E. Connect request to exit to the POE+ based door controller located above each card reader door.
- F. Acceptable Products:
 - 1. Bosch P/N DS160.
 - 2. Or Approved Equal.

2.10 ELECTRIFIED DOOR LOCKS AND STRIKES

- A. Electrified door hardware is specified in the Architectural door hardware schedule and installed by the door contractor.
- B. Connect electrified door hardware to the POE+ based door controller located above each card reader door as required.

2.11 ACCESS CONTROL CABLING

- A. Install plenum rated Category 6 cable (jacket color gray) from the POE+ door controller above each card reader door to the telecom room serving the area. Category 6 cabling to be installed, terminated and tested in accordance with the Division 27 specifications.
- B. Install 18/6 shielded twisted pair cable from proximity/smart card readers to the POE+ door controller located above each card reader door.
 - 1. Acceptable Products:
 - a. Alpha Wire 5386C.
 - b. Or Equal by Belden, CommScope or WestPenn.
- C. Install 18/2 stranded twisted pair from request to exit devices, door contacts and remote audible alarms to the POE+ door controller located above each card reader door.
 - 1. Acceptable Products:
 - a. Belden 8461.
 - b. Or Equal by Alpha Wire, CommScope or Westpenn.
- D. Install 18/2 stranded twisted cables to provide power to locks, request to exits and local alarms from the POE+ door controller located above each card reader door.
 - 1. Acceptable Products:
 - a. Belden 8461.
 - b. Or Equal by Alpha Wire, CommScope or Westpenn.

2.12 CABLE SHEATH LABELS

- A. Label cable sheaths at the point of termination with laser printed self-laminating wrap around vinyl labels.
- B. Labels shall be white with black type. Label size shall be 1.0" wide by 1.5" high.
 - 1. Acceptable Manufacturers:

- a. Brady.
- b. Belden.
- c. Hellermann Tyton.
- d. Or Approved Equal.

2.13 ACCESS CONTROL SYSTEM CARD STOCK

- A. Provide qty (100) composite cards compatible with the smart card readers.
- B. Contractor to enroll the cards in the access control system and shall train the owner on assigning the enrolled cards to specific users.
- C. Acceptable Products:
 - 1. Qty (100) HID iCLASS SE composite cards (P/N 3000PGGMN).
 - 2. No Substitutions.

2.14 ACCESS CONTROL SYSTEM SOFTWARE

- A. Washoe County School District has an existing door access control system including head-end server, software and licensing. The existing access control system software is Genetec Security Center v5.6. Washoe County School District has installed the Genetec Synergis Pro Package w/256 readers and 10 clients.
- B. The contractor shall provide one (1) card reader license with five (5) year product maintenance agreement for each card reader on the project.
- C. Acceptable Products;
 - 1. Card Reader License with 5-year license – Provide Qty (1) license for each card reader on the project (Genetec P/N ADV-RDR-P-5Y).
 - 2. No Substitutions.

PART 3 – EXECUTION

A. SECURITY CABLE ROUTING AND TERMINATION

- 1. Roughin conduit at doors with access control as shown on the drawings.
- 2. Prep door frames as required for access control devices.
- 3. Connect electrified door hardware provided by the door hardware installer to the access control system.
- 4. Route all cabling in conduit from the access control field devices at each door to the POE+ door controller located above each door. Terminate conduit at the lockable enclosure housing the POE+ door controller.
- 5. Route Category 6 cable from the POE+ based door controller located above each card reader door to the telecom room serving the area. Category 6 cabling shall be installed, terminated and tested in accordance with the Division 27 specifications.

6. All conduit shall be routed concealed. Where this is not possible, notify the Architect and provide proposed routing of exposed conduit for review and approval. Paint exposed conduit to match existing surfaces.
7. Install access doors as necessary to provide reasonable access to POE+ door controllers, security cable and junction boxes located above inaccessible ceilings.
8. Ten feet of cable slack shall be stored in the security cable above the security panel enclosure.
9. Cables shall be installed in continuous lengths from origin to destination (no splices are permitted).
10. The cable's minimum bend radius and maximum pulling tension shall not be exceeded. Refer to manufacturer's requirements and reference documents.
11. Any cable damaged or exceeding recommended installation parameters during installation shall be replaced by the Contractor prior to final acceptance at no cost to the Owner.
12. Cables shall be labeled with self-adhesive labels. At the security panel, each cable shall be clearly labeled on the cable jacket 1" from the termination location.
13. When installing conduit, the Contractor shall maintain the following minimum clearance from sources of electro-magnetic interference (EMI).
 - a. 6" clear from power conductors.
 - b. 12" clear from fluorescent lighting fixtures and ballasts.
 - c. 36" clear from transformers and motors.

3.2 LABELING

- A. Label all gateways, intelligent controllers and POE+ door controllers indicating their function and IP address.
- B. Label all security devices. Labels shall be placed in a concealed location and shall identify the ID of the device.
- C. Label all equipment enclosures, power supplies and relays.
- D. Label all batteries with the date that the batteries were installed.
- E. Label all cables at the equipment enclosures. Affix labels a minimum of 1 inch from the point of termination. Labels shall be placed so that they are clearly visible. Labels shall identify the ID of the device.
- F. Install engraved name plate on the equipment enclosure in the main telecom room.

3.3 SYSTEM PROGRAMMING

- A. Meet with the Owner to determine the required naming convention for sites, doors and card holder security groups. Meet with the Owner to determine the required system operation, functionality, user/group access rights and scheduling.

- B. Provide list of equipment requiring an IP address to the WCSD IT Department prior to starting the work. The list shall include a description of the device, its location, MAC address and patch panel port in the telecom room that it is connected to. Assign IP addresses to devices as directed by WCSD.
- C. Configure POE+ door controllers to communicate with the intelligent controllers at each site. Configure the intelligent controllers to communicate the gateway device at each site. Configure the gateway appliance to communicate with the access control head-end server.
- D. Integrate access control system at the site with existing head-end server. Work with the Owner to establish access permissions to logon to the software.
- E. Program the security system in accordance with the Owner's requirements.

3.4 SYSTEM TESTING AND COMMISSIONING

- A. The contractor shall perform 100% testing of the security doors and devices. All deficiencies shall be corrected and the devices re-tested. At a minimum, the following items shall be tested:
 - 1. Card reader door:
 - a. Valid card read.
 - b. Invalid card read.
 - c. Valid request-to-exit.
 - d. Door forced open.
 - e. Door held open.
 - f. Door shunt.
 - 2. Main Exterior Door Video Intercom System:
 - a. Verify call button.
 - b. Verify 2-way audio functionality.
 - c. Verify camera operation.
 - d. Verify master station door release functionality.
 - 3. Single point of entry Interior Door:
 - a. Verify manual push button door release.
 - b. Verify wireless push button door release.
 - 4. Magnetic Door Hold Open Release.
 - a. Verify interface to paging system emergency code red push button.
 - b. Verify release of magnetic door hold opens.

3.5 SYSTEM DEMONSTRATION AND TRAINING

- A. Provide four (4) hours of training to the Owner's staff on the operation of the system. Training shall consist of two (2) 2-hour training sessions as scheduled by the Owner. Contractor shall provide a sign-in sheet indicating the date, time, location, name of trainer and names of staff personnel trained. A copy of the sign-in sheet shall be included with the O&M submittals at the completion of the project.

END OF SECTION 281000

SECTION 282000 – VIDEO SURVEILLANCE SYSTEM

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs, testing, training and all necessary and related items required to provide a complete and operational video surveillance system as shown on the Drawings and described in the Specifications.
- B. Furnish cameras. Provide MAC address information to WCSD Project Manager. Assign IP addresses to cameras as provided by WCSD Project Manager. Provide temporary camera login credentials to WCSD Project Manager.
- C. Install, mount, secure, aim, focus and adjust all IP video surveillance cameras. Aim cameras as directed by WCSD Project Manager.
- D. Install CAT 6 cabling from each camera to patch panels as shown on the drawings. All CAT 6 cabling to be installed and tested in accordance with the Division 27 Specifications.
- E. Furnish CAT 6 patch cords at the patch panel to connect the camera patch panel ports to owner furnished POE switches. WCSD Project Manager will provide designated pre-configured POE switch port numbers to the contractor. Contractor shall install patch cords and cross connect the cameras to the designated switch ports.
- F. WCSD IT will furnish and install Milestone cameras licenses.
- G. WCSD IT will furnish and configure Milestone software.
- ~~B. Furnish, install, mount, secure, aim, focus, adjust, connect power to, connect to the network, assign IP addresses, configure, test, commission and demonstrate all IP video surveillance cameras.~~
- ~~C. Furnish and install all necessary camera mounts and supports including ceiling mount kits, trim rings, gooseneck supports, corner mounts, pendant mounts, brackets, support arms, pole mounts, back boxes, etc. All screws and fasteners used for camera supports, raceway supports, junction boxes and pull boxes shall be vandal resistant (Torx Pin Head style).~~
- ~~D. Install CAT 6 cabling from each camera to CAT 6A patch panels as shown on the drawings. Furnish CAT 6 patch cords at the patch panel to connect the camera patch panel ports to owner furnished POE switches. NOTE—WCSD will cross connect cameras to the network switches at the Telecom Room. All CAT 6 cabling to be installed and tested in accordance with the Division 27 Specifications.~~
- ~~E. Furnish and install Milestone XProtect Corporate Version 10.x device “channel” software licenses for each new camera at each project location unless otherwise~~

~~noted. See camera schedule on the drawings for licensing requirements. Software licenses shall include a Milestone 1-year "Care Plus" Product Maintenance Agreement. Load license packs on WCSD's existing Milestone Management Server located at the East 9th Street Administration Offices and assign licenses to the camera at each project site.~~

- ~~F. Furnish, install, update and configure Milestone XProtect Corporate Version 10.x video "recording" software on the video recording server (video recording server hardware and server operating system provided and installed by WCSD).~~
- ~~G. Furnish, install, update and configure Milestone XProtect Smart Client video management software on a minimum of (3) client computers at each project location to enable users to view surveillance camera images and control cameras. Configure logical camera viewing groups and for each client computer as directed by WCSD.~~
- ~~H. Test, commission and demonstrate the entire IP video surveillance system in the presence of the Owner's Representative.~~
- ~~I. Provide a minimum of four (4) hours training to the Owner on the usage and operation of the IP video surveillance cameras, video recording server management software and client software. Training shall consist of two (2) 2-hour training sessions as scheduled by the Owner.~~

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 28: Conduits and Backboxes for Electronic Safety and Security.
 - 4. Section 28 05 53: Identification for Electronic Safety & Security.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 QUALITY ASSURANCE

- A. The Contractor installing the IP video surveillance cameras and video recording software must have a minimum of (5) years experience installing video surveillance systems of similar size and scope.
- B. The Contractor installing the IP video surveillance system must be a firm normally engaged in the design, installation and maintenance of integrated

security systems including access control, intrusion detection and video surveillance.

~~C. The Contractor installing the IP video surveillance system shall be a "Milestone Certified Partner" and shall have a Milestone Advanced Certification required to purchase and install the Milestone XProtect Corporate software.~~

~~D. The Contractor must be a Sony Security Preferred Reseller (SSPR).~~

~~E.C.~~ The contractor installing the Category 6 cabling to the cameras must comply with the qualification requirements and installation requirements listed in the Division 27 Specifications.

~~F.D.~~ The Contractor must be licensed by the Nevada State Contractors Board.

~~G.E.~~ Formal, written evidence of the following may be requested at any point during the Bid or installation processes:

1. If requested, the Contractor, including any subcontractor, shall show proven expertise in the implementation of video surveillance projects. This expertise can be illustrated through the inclusion of details of at least three (3) projects involving the design and installation of video surveillance systems within the past three year period of similar size and scope. Names, addresses, and telephone numbers of references for the three projects shall be included.
2. In the event subcontractors are used for any portion of the installation or acceptance testing, the Contractor shall be responsible for any subsequent corrective action required on that portion of the work.

1.4 SUBMITTALS

A. Manufacturer Product Data Sheets

1. Submit product data sheets in electronic PDF (portable document format).
2. Provide a table of contents for each submittal indicating the items being submitted. Products listed in the table of contents should be in the same order as they appear in the Specifications.
3. Provide product data sheets for all items listed in each specification section. Partial submittals will not be accepted.
4. Where product data sheets include more than one distinct item, clearly mark data sheet with arrow or other identifying means to clearly indicate the items being submitted for approval. Delete or cross-out non-applicable data.
5. Provide manufacturer data sheets for the following equipment and software:
 - a. Indoor fixed vandal resistant 1080P dome cameras.
 - b. Outdoor fixed 4-sensor vandal resistant dome cameras.

- c. Camera supports including wall mount kits, corner mount kits, pole mount kits, gooseneck support arms, ceiling pendant kits, back boxes, etc.
- ~~d. Video Recording Software and Camera Licenses.~~
- ~~e-d.~~ CAT 6 Cabling – Indoor Plenum Rated.
- ~~f-e.~~ CAT 6A Field Mount Plugs.
- ~~g-f.~~ 48-Port CAT 6A Patch Panels.
- ~~h-g.~~ CAT 6 Patch Cords.
- ~~i-h.~~ Parking Lot Camera Powered POE Extenders.

1.5 REGULATIONS AND CODE COMPLIANCE

- A. The Contractor will comply with all applicable governmental regulations including Federal, State, City, and local applicable codes and ordinances.
- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- C. All work and materials shall conform to and be installed, inspected and tested in accordance with federal, state and local governmental agencies, including, but not limited to the following:
 - 1. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 - 2. Underwriter's Laboratories, Inc. (UL).
 - 3. Federal Communications Commission (FCC).
 - 4. Americans with Disabilities Act (ADA).

1.6 INTENT OF DRAWINGS

- A. All drawings are diagrammatic unless otherwise noted as detailed dimensioned drawings. Drawings show approximate locations of equipment and devices. Exact locations are subject to the approval of the Owner or Owner's Representative. The Contractor shall verify dimensions and shall be responsible for their accuracy
- B. Items mentioned in the Specifications and not shown in the Drawings, or shown in the Drawings and not mentioned in the Specifications, shall be of like effect as if shown and mentioned in both. In the case of differences between the Drawings and the Specifications, the stricter provision as determined by the Owner or Owner's Representative shall govern.
- C. Omissions from the Drawings or Specifications, or the incorrect description of details of Work which are necessary to carry out the intent of the Drawings and Specifications, or work which is customarily performed, shall not relieve the Contractor from performing such omitted or incorrectly described work.
- D. No exclusion from, or limitations in, the language used in the Project Documents shall be interpreted as meaning that ancillary or accessory items necessary to complete any required system or item of equipment are to be omitted.

1.7 REVIEW OF SPECIFICATIONS

- A. Prior to submitting a bid for the Project, the Contractor shall carefully study and compare the Drawings and Specifications and shall at once report to the Owner or Owner's Representative any error, inconsistency or omission discovered. During construction, if the Contractor performs any construction activity knowing it involves a recognized error, inconsistency or omission in the Specifications without such notice to the Owner or Owner's Representative, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the cost for any correction.
- B. The Contractor shall not deviate from the specified scope of work as indicated in the Project Documents. Deviations include (but are not limited to):
 - 1. Alteration of video surveillance camera locations from those specified in Plans.
 - 2. Installation of horizontal cables to a different Telecom Room than indicated on the Plans.

1.8 EXAMINATION OF THE PREMISES

- A. The Contractor shall visit the Site(s) to become familiar with the local conditions under which the work is to be performed and correlate his observations with the requirements of the Drawings and Specifications. No allowance will be made for claims of concealed conditions which the Contractor learned or should have learned in exercising due diligence in its observations of the site and review of the local conditions.
- B. Before ordering any materials or performing any work, the Contractor shall verify all measurements and be responsible for correctness of same. No extra charge or compensation will be allowed for duplicate work or material required because of an unverified difference between an actual dimension and the measurement indicated in the Drawings. Any discrepancies found shall be submitted in writing to the Owner or Owner's Representative for consideration before proceeding with the work.

1.9 DELIVERY, STORAGE AND HANDLING

- A. All items to be installed as a component of the IP video surveillance system for the Project shall be stored according to manufacturer's recommendations. In addition, all items must be stored in a location protected from vandalism and weather. Items shall not be stored outside. If air temperature at the storage location shall be below 40 degrees F, the equipment shall be moved to a heated 50 degrees F (minimum) location. If necessary, equipment shall be stored off site at The Contractor's expense.

1.1 WARRANTY

- A. See Division 1 Specifications and General Conditions regarding Guarantee and Warranty requirements which apply to this Specification Section.
- B. The Contractor shall provide the following warranty for the Video Surveillance System described in this specification section:
 - 1. Warranty Start Date: The warranty period will begin after substantial completion of the project.
 - 2. Complete System Warranty: The complete Video Surveillance System including all devices, equipment, cabling, software and programming shall be guaranteed to be free from defects in workmanship and materials for a minimum period of one (1) year from date of substantial completion. Promptly remedy such defects and any subsequent damage caused by the defects or repair thereof at no expense to the Owner.
 - 3. Labor Warranty: Contractor to provide all labor as necessary to complete warranty repairs for a period of one (1) year from the date of substantial completion. During this labor warranty period, all services including equipment, labor, travel, expenses, etc., shall be provided during normal working hours at no cost to the Owner. The Contractor shall provide the Owner with a phone number for service. The Contractor shall respond within one (1) business day of receipt of a service call. The Contractor shall provide an on-site response time of two (2) business day for repair of critical system items during normal business hours.
 - 4. Warranty Exclusions: The guarantee shall exclude acts of God, vandalism, physical abuse or operator misuse.

1.10 FINAL ACCEPTANCE

- A. General
 - 1. All cameras mounted in accordance with the drawings.
 - 2. IP address assigned to cameras and temporary login credentials provided to WCSD IT. Contractor to provide camera hardware MAC addresses to WCSD IT and WCSD IT will provide camera IP addresses to be assigned.
 - 3. _____
 - 4. All CAT 6 cables installed, terminated, labeled and tested. Certified test reports submitted to WCSD.
 - 5. All cameras properly aimed and focused as directed by WCSD IT.
 - 6. All Punchlist items completed.
 - 1. ~~All cameras mounted in accordance with the drawings.~~
 - 2. ~~All CAT 6 cables installed, terminated, labeled and tested. Certified test reports submitted to WCSD.~~
 - 3. ~~All cameras connected to the network and assigned IP addresses (WCSD to provide IP address scheme. WCSD to cross connect cameras to the network at the Telecom Room). Contractor to provide list of camera locations, hardware MAC addresses and IP addresses to WCSD.~~

4. ~~All cameras communicating and recording to the video "Recording" server.~~
5. ~~All cameras properly aimed and focused for both day and night operation.~~
6. ~~All cameras configured for proper aspect ratio, resolution, frame rate and video recording size.~~
7. ~~Video "Recording" software installed, updated and configured on the video recording server at each project location. Coordinate software installation with WCSD.~~
8. ~~The local video "Recording" server communicating with video "Management" server located at the East 9th Street Administration Offices over the wide area network.~~
9. ~~Device "channel" licenses for each camera installed on the video "Management" server.~~
10. ~~Client viewing and configuration software installed, updated and configured on a minimum of (3) client computers at each school location.~~
11. ~~Configure permissions on the recording servers to allow specific users to view live and recorded video.~~
12. ~~Entire video surveillance system tested and commissioned in the presence of the Owner's Representative.~~
13. ~~All Punchlist items identified during the testing and commissioning corrected to the satisfaction of the Owner's Representative.~~
14. ~~Operation and Maintenance manuals turned over to the Owner.~~
15. ~~Owner training completed.~~

B. Inspection Of Work

1. WCSD Project Manager shall perform an inspection of all Contractor work prior to final acceptance. Any items that are found to be in error at this time shall be documented.
2. Documentation shall then be provided to the Contractor, who shall provide a date (within 30 days of WCSD Project Manager inspection) by which all items shall be corrected. The Contractor has the option to coordinate a site visit with the WCSD Project Manager in order to clarify and/or dispute the issues.
3. WCSD Project Manager shall perform a re-inspection of all Contractor work. Any remaining or additional items that are found to be in error shall again be documented. WCSD/IT reserves the right at this point to employ a separate contractor to make corrections at a cost to The Contractor.

PART 2 – PRODUCTS

2.1 FIXED INDOOR VANDAL RESISTANT 1080P DOME CAMERAS

A. Provide cameras meeting the following requirements:

1. The camera shall be of manufacturer's official product line, designed for commercial/industrial 24/7/365 use.
2. The camera shall be based upon standard components and proven technology using open and published protocols.

3. Minimum 3MP, 1920x1080 Resolution.
4. RJ-45 Ethernet Connector. 10/100 Base-T.
5. IEEE 802.3af Compliant.
6. Mini-Dome.
7. Auto Zoom and Focus via Web Browser.
8. Vandal Resistant IK10 Rated.
9. H.264 video compression at 30fps.

B. Acceptable Products

1. Camera:
 - a. Axis P/N P3265-V.
 - b. No substitutions.
2. Recess ceiling mount.
 - a. Provide recess ceiling mount kit where shown on drawings (Axis P/N TP3201).
 - b. No substitutions.
3. Pendant Mount:
 - a. Provide pendant mount kit where shown on drawings including ceiling mount (Axis P/N T91B51), camera shroud (Axis P/N T94K01D) and custom length 1.5 NPT extension column to clear ceiling obstructions (color white).
 - b. No substitutions.

2.2 FIXED 8-20 MEGA PIXEL 4-IMAGE SENSOR 4-CAMERA VANDAL RESISTANT DOME CAMERAS

A. Provide cameras meeting the following requirements:

1. Camera will consist of 4 individual ~~2MP~~ 5MP fixed cameras installed in a single vandal resistant dome.
2. Each of the 4 cameras within the dome shall be capable of being repositioned within the dome by moving it around the perimeter of a circular support track.
3. Each of the 4 cameras within the dome shall be capable of being independently aimed up and down, side to side.
4. Each of the 4 cameras within the dome shall be capable of being remotely focused and zoomed over the IP network via a web browser.
5. Each of the 4 cameras will have a minimum ~~3MP~~ 5MP ~~1080P~~ 2560x1440 Resolution per sensor.
6. Dual encoder (H.264 and MJPEG).
7. The entire camera assembly will one RJ-45 Ethernet Connector, 10/100 Base-T.
8. The entire camera assembly will require 1 software camera license within the VMS software.
9. POE - IEEE 802.3af Compliant.
10. Vandal Resistant and IK10 Rated.
11. IP 66 Ingress and Weather Rated.

12. Indoor/Outdoor rated.
 13. Video frame rate (up to) 30FPS @ full resolution.
 14. Privacy masking.
 15. Operating temperature -30°C (-22 °F) to +50°C (122 °F).
- B. Provide corner mount kit, gooseneck support arm and shroud to mount cameras on exterior corners of buildings as shown on the drawings. Provide additional mounting plates, adapters and accessories as necessary for a vandal resistant and weatherproof installation.
- C. Acceptable Products
1. Camera:
 - a. Axis P/N ~~P3727~~P3737-PLE.
 - b. No known equal.
 2. Pendant Mount:
 - a. Provide pendant mount kit where shown on drawings including ceiling mount (Axis P/N T91B51), camera shroud (Axis P/N T94N01D) and custom length 1.5 NPT extension column to clear ceiling obstructions (color white).
 - b. No substitutions.
 3. Exterior Corner Mount:
 - a. Provide corner mount kit, gooseneck support arm, back box and camera shroud as required for exterior corner mounting (Axis T91A64, T91D61 and T94N01D).
 - b. No substitutions.
 4. Exterior Pole Mount:
 - a. Provide pole mount kit where shown on the drawings including stainless steel bands and mount (Axis P/N T91B57), mounting cabinet (Axis P/N T98A18-VE), wall mount arm (Axis P/N T91D61) and camera pendant kit (Axis P/N T94N01D).
 - b. No substitutions.
- 2.3 HORIZONTAL PLENUM RATED CATEGORY 6 CABLE.
- A. See Section 271500 for requirements.
- 2.4 HORIZONTAL OSP RATED CATEGORY 6 CABLE.
- B. See Section 271500 for requirements.
- 2.5 CATEGORY 6A FIELD MOUNT PLUGS
- A. See Section 271500 for requirements.
- 2.6 CATEGORY 6 COPPER PATCH PANELS

- A. See Section 271100 for requirements.

2.7 CATEGORY 6 COPPER PATCH CORDS

- A. See Section 271100 for requirements.

2.8 ETHERNET / POE EXTENDERS FOR PARKING LOT LIGHT POLE MOUNTED CAMERAS

- A. Provide long range Ethernet Extender for light pole mounted cameras in the parking lot where shown on camera schedule.
- B. Extenders shall be wall mounted in the telecom room adjacent to wall mounted CAT 6 lightning protection entrance terminals. Input to the POE extenders shall be cross-connected to rack mounted 48-port CAT patch panels (see telecom drawings) via CAT 6 cable. Output of POE extenders shall be cross connected to wall mounted lightning protection entrance terminals via CAT 6 cable.
- C. Acceptable Products.
 - 1. Powered Ethernet Extenders:
 - a. Veracity Longspan VLS-1P-B transmitter, VLS-1P-C receiver and VPSU-57V-800 power supply.
 - b. Or Approved Equal.
 - 2. CAT 6 Entrance Protection Panels:
 - a. TII 606 Series Protection Panel with 65V Solid State Protector Modules P/N 606-65.
 - b. Or approved equal.

2.9 VIDEO MANAGEMENT SOFTWARE SYSTEM

- A. WCSD IT will provide and install Milestone camera licenses.
- B. WCSD IT will provide, install and configure Milestone recording server and client viewing software.
- ~~A. Washoe County School District is currently standardized on the Milestone XProtect Corporate VMS software. The contractor shall integrate the cameras at each site with the existing software.~~
- ~~B. The contractor shall provide (1) Milestone XProtect Corporate "Device Channel License" for each camera as shown in the camera schedule. Each Device Channel License shall come with a Milestone 1 year "Care Plus" product maintenance agreement (PMA). During this 1-year period, Milestone will provide technical support and software upgrades at no cost to the School District.~~
- ~~C. See camera schedule for the required type and quantity of licenses.~~

- ~~D. Washoe County School District will provide and install a local "Recording Server" at each school. The contractor is responsible for providing, installing and configuring the Milestone XProtect Corporate "Recording Server" software on this server at each site.~~
- ~~E. Washoe County School District has an existing Milestone XProtect Corporate "Management Server" located at the East 9th Street Admin Office location. The contractor will be responsible for installing the "Device Channel Licenses" on this server and configuring the "Recording Server" at each site to communicate with this "Management Server".~~
- ~~F. At each project site (school) the contractor shall provide, install and configure "Client Viewing" software on (3) existing workstations as identified by WCSD. The contractor shall configure the client software to view cameras at the local school. Logical camera groups and screen layouts shall be configured on each computer.~~
- ~~A. Acceptable Products~~
 - ~~1. Milestone Systems XProtect Corporate Version 10.x Video Management System. Provide the following Software, Licenses and Product Maintenance Agreements (NOTE: Washoe County School Districts owns an XProtect Corporate "Base Server" license. The Contractor does not need to purchase an additional "Base Server" license for this project).~~
 - ~~a. Milestone Systems XProtect Corporate Version 10.x "Device Channel" License. Provide qty (1) license for cameras as shown in the Camera Schedule at each project site (Milestone P/N XPCODL).~~
 - ~~b. Milestone Systems XProtect Corporate Version 10.x "1 Year Care Plus" Produce Maintenance Agreement (PMA). Provide qty (1) 1-year PMA license for each camera shown in the Camera Schedule at each project site (Milestone P/N YXPCODL).~~
 - ~~c. No Substitutions accepted.~~

PART 3 – EXECUTION

3.1 CAMERA SYSTEM INSTALLATION SEQUENCE AND COORDINATION WITH WCSD

- A. The following is the installation sequence for the camera system. The contractor shall coordinate and schedule all work with WCSD's Project Manager.
 - 1. Contractor shall procure cameras and provide a spreadsheet to WCSD Project Manager indicating the camera number, MAC address and camera name. The camera numbers shall match the numbers in the camera schedule. WCSD will provide IP addresses for each camera. Contractor shall configure the cameras with the provided IP addresses and shall update all cameras with current manufacturer firmware.
 - 2. Contractor shall provide camera and temporary login credentials to WCSD Project Manager.

3. Contractor shall install, terminate and test cabling to the cameras. Contractor shall provide certified cable test results to WCSD Project Manager and provide patch cords for the cameras. WCSD IT will inspect the cabling installation and will issue a punchlist identifying any corrective action required.
 4. After the contractor has completed all punchlist items, WCSD IT will install the POE switches and will provide designated pre-configured POE switch port numbers to the contractor. Contractor shall install patch cords and cross connect the cameras to the designated switch ports.
 5. Contractor shall connect, aim, focus and adjust the cameras. Each camera view must be reviewed and signed off by WCSD Project Manager.
 6. WCSD IT will complete all remaining Milestone Software configuration including:
 - a. Installation of Milestone recording server and software at the project site.
 - b. Installation of camera licenses. Camera licenses provided and installed by WCSD IT.
 - c. Configuration of camera settings including frame rate, compression, motion detection, privacy masking, recording, etc.
 - a-d. Installation of Milestone Smart Client software on workstation computers at the project site.
-
- ~~2. Contractor shall procure cameras and provide a spreadsheet to WCSD indicating the camera number, MAC address and camera name. The camera numbers shall match the numbers in the camera schedule. WCSD will provide IP addresses for each camera. Contractor shall configure the cameras with the provided IP addresses and shall update all cameras with current manufacturer firmware.~~
 - ~~3. WCSD will procure the video recording server, install the server at the school and provide the contractor with logon credentials for the server.~~
 - ~~4. Contractor shall install, terminate and test cabling to the cameras. Contractor will provide certified cable test results to WCSD and provide patch cords for the cameras. WCSD will inspect the cabling installation and will issue a punchlist identifying any corrective action required. After the contractor has completed all punchlist items, WCSD IT will install the POE switches and patch cords to cross connect the cameras to the switches.~~
 - ~~5. Contractor shall connect, aim, focus and adjust the cameras. Each camera view must be reviewed and signed off by an Administrator or School Police Officer at the project site. WCSD's Project Manager will provide the contractor with the name of the person at each site responsible for signing off the camera views.~~
 - ~~6. Contractor shall install the Milestone Software on the recording server at the project site and shall configure communication between the recording server and the Milestone Management Server located at WCSD's East 9th Street administrative offices.~~
 - ~~7. Contractor shall assign new camera licenses to the Milestone Management Server as indicated in the camera schedule.~~
 - ~~8. Contractor shall configure all camera settings as required on the local site recording server including IP address, frame rate, compression, bit rate, motion detection, privacy masking, etc.~~
 - ~~9. Contractor shall configure storage locations for "live" recorded video and "archived" video on the server. Locate the recording server database on the local server hard drives (E: drive). Locate "archived" video on the~~

direct attached storage array (F: drive). Confirm storage locations with WCSD IT.

10. ~~Configure the recording server to overwrite "archived" video when the F: drive becomes greater than 80% full. Configure the software to overwrite the oldest video first.~~
11. ~~For each school site, the Contractor shall provide the names of the Principal, Vice Principal and Dean to the WCSD Project Manager. The Contractor shall assign view permissions to the cameras within the Milestone recording server software for the "STAFF" and "SCHOOL POLICE" groups. Only School Police, Principals, Vice Principals and Deans are allowed access via the Smart Client software. All other users must get permission from School Police.~~
12. ~~The Contractor shall configure logical site specific "camera viewing groups" within the Milestone Smart Client Software. The camera viewing groups shall be common to all users.~~
13. ~~WCSD IT will inspect the camera installation, software configuration and will issue a punchlist identifying any corrective action required. After the contractor has completed all punchlist items, the system will be re-inspected by WCSD IT.~~
14. ~~The Contractor shall install and configure the most current Milestone Smart Client software on three (3) computers at the project site as directed by the WCSD Project Manager.~~
15. ~~The Contractor shall provide 4 hours of training to the users at each project site. The training shall consist of (2) 2-hour training sessions as scheduled by WCSD.~~

3.2 ROUGH-IN

- A. Before construction work commences, the Contractor shall visit the site and identify the exact location and mounting of all cameras.
- B. Camera mounting locations shall be coordinated with the work of other trades including ductwork, return and supply grills, lights, switches, exit signs, fire sprinklers, smoke detectors and structure. Cameras, mounts, raceway and cabling shall be installed so as not to interfere with required clearances for maintenance and inspection of equipment.
- C. Notify the Owner's Representative of any obstructions that may block the camera views shown on the Drawings.
- D. The contractor shall minimize the amount of exposed conduit and boxes exposed to view. Paint all interior and exterior conduit exposed to view to match adjacent surfaces. All exterior conduit shall be rigid RMC with water tight boxes and fittings.
- E. All exposed screws and fasteners used for camera mounting hardware, conduit supports, j-boxes and pull boxes shall be vandal resistant (Torx Pin-Head Style).

3.3 CUTTING AND PATCHING

- A. The Contractor shall be responsible for all cutting, patching, coring and associated work to complete the camera installation. Patch adjacent work disturbed or damaged by installation of new work including insulation, walls and wall covering, ceiling and floor covering or other finished surfaces.
- B. The contractor shall be responsible for repairing any ceiling tile, ceiling grid, ceiling supports or adjacent surfaces damaged during the installation of the cameras.
- C. All penetrations through the building envelope shall be sealed and made water tight.
- D. All penetrations through fire rated walls, floors and ceilings shall be fire stopped with a UL listed fire stop system meeting or exceeding the rating of the assembly being penetrated.
- E. No roof penetrations are permitted.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate ordering and installation of all equipment with long lead times or having a major impact on work by other trades so as not to delay the job or impact the schedule.
- B. Set all cameras and associated supports to accurate line and grade, level all equipment and align all equipment components.
- C. Provide all scaffolding, rigging, hoisting and services necessary for installation of equipment.
- D. Storage and security of material and equipment prior to installation shall be the responsibility of the Contractor.

3.5 CEILING DOME CAMERA MOUNTING AND NETWORK CONNECTION

- A. Install ceiling mounted dome cameras and support brackets in accordance with the Manufacturer's instructions.
- B. Verify ceiling mounted camera locations shown on the drawings. The contractor shall verify that adequate clearances exist above the camera to allow installation at the locations shown. The contractor shall make minor adjustments to the camera locations to avoid clearance conflicts.
- C. Secure cameras to structure with mount kit called out in the camera schedule.
- D. Furnish, install and terminate Category 6 cabling from the IP camera to the telecom room identified on the Drawings.
- E. Terminate CAT 6 cable at the camera on CAT 6A Field Mount Plug and connect directly to the camera.

- F. The contractor shall work with the WCSD IT department to cross connect the cameras to the POE switches in the telecom rooms.
- G. The contractor shall assign static IP addresses to the camera with the IP address scheme specified by WCSD IT.
- H. Verify that the camera has the most current firmware version. If not, download and install the latest firmware version from the manufacturer's website.
- I. ~~Logon to the camera and set the date and time. Set the time to Pacific Standard Time and configure the camera to automatically adjust to daylight savings time. Configure the camera to connect to a Network Time Protocol (NTP) server once every 24 hours and synchronize the time. Use WCSD's NTP server (IP Address 10.0.0.1 — verify with WCSD).~~
- J. ~~Add the camera to the database on the VMS "Recording Server" and load the appropriate drivers for the camera.~~
- K. ~~Configure camera ID, description and date/time stamping. The camera ID should follow the following naming convention: "School Name — Camera # — Area — Location". For example, Camera 3 at McQueen High would be named: "McQueen — 3 — 100 Wing — Main Entrance".~~
- L. ~~Change the default logon password on the IP camera web interface as directed by WCSD.~~

3.6 EXTERIOR GOOSENECK CAMERA MOUNTING AND NETWORK CONNECTION

- A. Notify the Owner's representative where obstructions exist that may block the view from the camera prior to installing the camera.
- B. Install fixed dome cameras, corner mount kits, gooseneck supports and shrouds in accordance with the Manufacturer's instructions.
- C. Core drill exterior building and install rigid conduit to feed the camera via the support bracket.
- D. Route conduit to minimize the amount of conduit exposed to view. Install rigid (RMC) conduit at all exterior locations.
- E. Paint exposed conduit to match existing surfaces.
- F. Securely anchor corner mount kit and/or gooseneck support bracket to structure.
- G. Install camera shroud and connect camera to shroud.
- H. Verify that camera and mounts are level and plumb.

- I. Verify that all components are secure to prevent vibrating or unstable images caused by wind or vibration.
- J. All exposed screws and fasteners shall be vandal resistant (Torx Pin-Head Style).
- K. Furnish, install and terminate Category 6 cabling from the IP camera to the telecom room identified on the Drawings.
- L. Terminate CAT 6 cable at the camera on CAT 6A Field Mount Plug and connect directly to the camera.
- M. The contractor shall coordinate and work with the WCSD IT department to cross connect the cameras to the POE switches in the telecom rooms.
- N. The contractor shall assign static IP addresses to the camera with the IP address scheme specified by WCSD IT.
- O. Verify that the camera has the most current firmware version. If not, download and install the latest firmware version from the manufacturer's website.
- ~~P. Logon to the camera and set the date and time. Set the time to Pacific Standard Time and configure the camera to automatically adjust to daylight savings time. Configure the camera to connect to a Network Time Protocol (NTP) server once every 24 hours and synchronize the time. Use WCSD's NTP server (IP Address 10.0.0.1 – Verify with WCSD).~~
- ~~Q. Add the camera to the database on the VMS "Recording Server" and load the appropriate drivers for the camera.~~
- ~~R. Configure camera ID, description and date/time stamping. The camera ID should follow the following naming convention: "School Name – Camera # – Area – Location". For example, Camera 3 at McQueen High would be named: "McQueen – 3 – 100 Wing – Main Entrance".~~
- ~~S. Change the default logon password on the IP camera web interface as directed by WCSD.~~

3.7 FIXED CAMERA SETUP, FOCUSING AND ADJUSTMENT

- A. Contractor shall connect, aim, focus and adjust the cameras. Each camera view must be reviewed and signed off by WCSD IT.
- ~~A. Configure the resolution on the cameras to the maximum setting 1920x1080 or 2048x1536 as applicable for each camera.~~
- ~~B. Aim the camera with the horizontal field of view shown on the drawings. Cameras set to a wider field of view than shown on the drawings or in a "fish-eye" configuration will be required to be re-adjusted by the contractor.~~

- C. ~~Adjust the vertical field of view so that the ceiling is not visible. For outdoor cameras, adjust the vertical field of view so that the sky is not visible. Secure the camera lens per the manufacturer's instructions.~~
- D. ~~Use the camera's web interface to focus the camera based on the field of view set above. Adjust the focus as necessary to provide a clear field of view.~~
- E. ~~Each school will have a dedicated onsite Representative responsible for reviewing and approving the aiming, field of view and focus of each camera. The contractor will be responsible for working with this dedicated representative and shall obtain the representative's sign-off for each camera. The contractor shall re-aim and/or re-focus the cameras as requested by Representative during testing/commissioning of the surveillance camera system.~~
- F. ~~After the aim and focus of each camera is approved by the onsite Representative, the contractor shall obtain a "screen shot" consisting of a full resolution JPG image of each camera view. The contractor shall submit color print outs on 8 1/2" x 11" of these images at the completion of the project.~~
- G. ~~Adjust the image quality settings on the camera to provide the clearest picture quality for all lighting conditions. The cameras have several settings that affect the image quality. The contractor shall consult with the camera manufacturer and shall adjust these settings to provide optimum image quality depending on the particular "scene" viewed by the camera.~~
- H. ~~Configure the cameras to automatically switch to daytime color and nighttime black & white mode as applicable for the lighting conditions.~~
- I. ~~For indoor cameras, configure the "motion" sensitivity settings within the video management software for each indoor camera so that images are only recorded when people or objects are moving within the field of view. Mask areas of the image that should not trigger motion based recording where applicable (i.e. ceilings, walls above 6' 0", trees, shrubs, etc). NOTE — THE PROPER CONFIGURATION OF THE MOTION SENSITIVITY SETTINGS IS CRITICAL TO THE PERFORMANCE OF THE SYSTEM. If the motion sensitivity is set too low, not all activity will be recorded by the system. If the motion sensitivity is set too high, images will be unnecessarily recorded resulting in server performance degradation and archiving issues.~~
- J. ~~Configure camera frame rate, compression and stream rate as follows:~~
 - 1. ~~Indoor Fixed Dome Cameras:~~
 - a. ~~Frame Rate — 15 fps.~~
 - b. ~~Compression — H.264.~~
 - c. ~~Bit Rate: 3mbps.~~
 - d. ~~Motion Detection: On — Record only when motion detected.~~
 - 2. ~~Outdoor Fixed Dome Cameras:~~

- a. ~~Frame Rate—15 fps.~~
- b. ~~Compression—H.264.~~
- c. ~~Bit Rate: 4mbps.~~
- d. ~~Motion Detection: Off—Record 24x7.~~

3. ~~Outdoor Fixed 4 Camera Sensor Cameras:~~

- a. ~~Frame Rate—10 fps.~~
- b. ~~Compression—H.264.~~
- c. ~~Bit Rate: 3-4mbps for each sensor (depending on size of view area).~~
- d. ~~Motion Detection: Off—Record 24x7.~~

3.8 ~~TESTING AND COMMISSIONING~~

A. ~~After completion of the project, the contractor shall test and commission the IP Video Surveillance System including all cameras and video management software in the presence of the Owner's Representative. The contractor shall notify the Owner's Representative a minimum of (1) week prior to testing.~~

B. ~~At a minimum, the following tests shall be performed.~~

- 1. ~~Verify physical mounting of all cameras.~~
- 2. ~~Verify network connectivity to all cameras.~~
- 3. ~~Verify aim and focus of all cameras.~~
- 4. ~~Verify that cameras have been properly focused for both daytime and nighttime use.~~
- 5. ~~Verify frame rate and image recording settings on all cameras.~~
- 6. ~~Verify privacy masking of camera views where applicable.~~
- 7. ~~Verify proper motion sensitivity adjustment of cameras.~~
- 8. ~~Verify archiving settings.~~
- 9. ~~Verify that device "channel" licenses have been installed on the "Management" server.~~
- 10. ~~Verify proper installation and configuration of the digital video recording software.~~
- 11. ~~Verify proper installation and configuration of the client software including permissions.~~

C. ~~After completion of the commissioning, the Owner's Representative shall prepare a Punchlist of all items to be corrected. After the contractor has completed the Punchlist items to the satisfaction of the Owner's Representative, the Project will be considered "substantially complete" at which time the warranty period will begin.~~

3.9 ~~TRAINING~~

A. ~~After completion of the camera installation, software installation, testing and commissioning, the contractor shall provide a minimum of 4 hours training to the Owner at each project location. Training shall cover usage and operation of the~~

~~cameras, video recording server software and client software. The training shall consist of two (2) 2-hour training sessions as scheduled by the Owner.~~

END OF SECTION

SECTION 283000 – SECURITY DETECTION, ALARM AND MONITORING

PART 1 – GENERAL

1.1 SUMMARY

- A. Section includes Intrusion Detection System (IDS) head-end control panel, automatic dialer for central station monitoring, controllers, power supplies, batteries, magnetic door position contacts, passive infrared motion detectors, keypads, conduit and back boxes, signal and control wiring, system configuration, programming, testing, demonstration and training.

1.2 DESCRIPTION OF WORK

- A. The Contractor shall furnish and install all equipment, materials, labor, and services necessary to provide a complete and operable intrusion detection system and to insure that the system is in compliance with requirements stated or reasonably inferred by the Specifications and the Contract Drawings.
- B. Provide all equipment, cabling and ancillary items as normally provided for a complete and operational security intrusion detection system.
- C. Furnish and install intrusion detection control panel including control panel, lockable enclosure, tamper switch, controllers, relay boards, add-in boards, power supplies, batteries, battery chargers, automatic dialer, etc. Connect panel to phone lines and data network as required.
- D. Furnish and install addressable intrusion detection devices including magnetic door position contacts, magnetic rollup door position contacts, magnetic roof hatch position contacts and combination keypad/annunciators.
- E. Provide 120VAC power at security panels.
- F. Provide phone drop at automatic dialer for remote central station monitoring. Provide supervised telephone line interface.
- G. Prep door frames as necessary to receive intrusion detection devices.
- H. Furnish, install, terminate, test and label signal and power cabling for all intrusion detection devices.
- I. Furnish and install raceway for access control cabling including conduit and back boxes. All intrusion detection cabling to be routed in conduit from the devices to the control panel located in the telecom room.
- J. Perform system testing and commissioning of the entire intrusion detection system including all devices shown on the drawings.

- K. Meet with the Owner to determine the required operation, zoning and functionality of the system. Program the security system in accordance with the Owner's requirements.
- L. Demonstrate the entire security system to the Owner at the completion of the project. Provide two (2) hours of training to the admin staff on the system.

1.3 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 26: Grounding and Bonding for Electronic Safety & Security.
 - 4. Section 28 05 28: Conduits and Backboxes for Electronic Safety and Security.
 - 5. Section 28 05 53: Identification for Electronic Safety & Security.
 - 6. Section 28 10 00: Access Control.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.4 REGULATIONS AND CODE COMPLIANCE

- A. Comply with all applicable governmental regulations including Federal, State, City, and local applicable codes and ordinances. All work shall comply with local building codes, local and State fire marshal regulations and OSHA.
- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- C. All work and materials shall conform to and be installed, inspected and tested in accordance with the governing rules and regulations of the security industry, as well as federal, state and local governmental agencies, including, but not limited to the following
- D. Underwriters Laboratories (UL):
 - 1. UL 50 - Enclosures for Electrical Equipment.
 - 2. UL 365 – Police Station Connected Burglar Alarm Units and Systems
 - 3. UL 609 – Local Burglar Alarm Units and Systems
 - 4. UL 611 – Central Station Burglar-Alarm Units
 - 5. UL 636 – Hold up alarms

6. UL 1076 – Proprietary Burglar Alarm Units and Systems
7. UL 1610 – Central Station Burglar-Alarm Units
8. UL 60950-1 - Information Technology Equipment - Safety.

E. Federal Communications Commission (FCC):

1. Code of Federal Regulations Title 47 - Part 15 – Radio Frequency Devices.
2. Code of Federal Regulations Title 47 - Part 68 – Connection of Terminal Equipment to the Telephone Network.

A. ANSI/NFPA-70, 2011 -- National Electrical Code (NEC).

F. Americans with Disabilities Act (ADA).

1.5 QUALITY ASSURANCE

- A. The Contractor installing the intrusion detection security system shall have a minimum of (5) years experience installing commercial intrusion detection / burglar alarm systems of similar size and scope.
- B. The Contractor installing the intrusion detection system must be a firm normally engaged in the design, installation and maintenance of integrated security systems including access control, intrusion detection, fire alarm and video surveillance.
- C. The Contractor must be licensed by the Nevada State Contractors Board.
- D. Formal, written evidence of the following may be requested at any point during the Bid or installation processes:
 1. If requested, the Contractor, including any subcontractor, shall show proven expertise in the implementation of intrusion detection systems on commercial projects. This expertise can be illustrated through the inclusion of details of at least three (3) projects involving the design and installation of intrusion detection systems within the past three year period of similar size and scope. Names, addresses, and telephone numbers of references for the three projects shall be included.
 2. In the event subcontractors are used for any portion of the installation or acceptance testing, the Contractor shall be responsible for any subsequent corrective action required on that portion of the work.
- E. Provide new and un-used devices, equipment and cabling. Comply with all manufacturers' installation instructions.
- F. All cable, raceways and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Specifications shall be subject to the control and approval of the Owner's Representative.

- G. All work shall be supervised on a daily basis by qualified and competent personnel. The contractor shall keep the same foreman and workman on the job throughout the duration of the project.
- H. The manufacturer of the intrusion detection security system equipment shall be certified as being compliant with ISO 9001.

1.6 SUBMITTALS

- A. Manufacturer's Data Sheets: Submit manufacturer's data sheets in electronic PDF format for the following items:
 - 1. Intrusion Control Panel, Automatic Dialer, Zone Expansion Modules, Add-in Boards, Relays.
 - 2. Power Supplies & Battery Chargers.
 - 3. Batteries.
 - 4. Lockable Equipment Enclosures with Tamper Switch.
 - 5. Addressable Magnetic Door Position Contacts.
 - 6. Addressable Magnetic Rollup Door Position Contacts.
 - 7. Addressable Magnetic Roof Hatch Position Contacts.
 - 8. Addressable Passive Infrared Motion Detectors.
 - 9. Touch Screen Keypad/Annunciators.
 - 10. Security System Cabling.
 - 11. Labels.
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.
- C. Shop Drawings:
 - 1. Submit floor plans indicating the location of all intrusion field devices, control panels and keypads.
 - 2. Provide a spreadsheet for each security device and its ID (point) within the security system.
 - 3. Submit point-to-point wiring diagrams and block diagrams showing all intrusion detection, controllers, power supplies, relays, I/O boards, battery backups, etc.
 - 4. Submit layout drawings of the components mounted in the lockable security enclosures including controllers, dialers, I/O boards, relays, power supplies, battery chargers, batteries, cable management devices, overhead wiring gutters, phone outlets, data outlets, electrical outlets, etc.
 - 5. Submit security panel battery calculations.
 - 6. Drawings shall be submitted in electronic PDF format.

1.7 DELIVERY, STORAGE & HANDLING

- A. Deliver materials to the job site in OEM's original unopened containers, clearly labeled with the OEM's name, equipment model and serial identification numbers, and UL logo.

- B. Protect all security panels, devices and cabling from moisture, dust and debris prior to installation.

1.8 COORDINATION

- A. Coordinate arrangement, mounting, and support of intrusion detection system equipment:
 - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
 - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
 - 3. To allow right of way for piping and conduit installed at required slope.
 - 4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- C. Coordinate location of access panels and doors for electronic safety and security items that are behind finished surfaces or otherwise concealed.

1.9 WARRANTY

- A. See Division 1 Specifications and General Conditions regarding Guarantee and Warranty requirements which apply to this Specification Section.
- B. The Contractor shall provide the following warranty for the Intrusion Detection System described in this specification section:
 - 1. Warranty Start Date: The warranty period will begin after substantial completion of the project.
 - 2. Complete System Warranty: The complete Intrusion Detection System including all devices, equipment, cabling, software and programming shall be guaranteed to be free from defects in workmanship and materials for a minimum period of one (1) year from date of substantial completion. Promptly remedy such defects and any subsequent damage caused by the defects or repair thereof at no expense to the Owner.
 - 3. Labor Warranty: Contractor to provide all labor as necessary to complete warranty repairs for a period of one (1) year from the date of substantial completion. During this labor warranty period, all services including equipment, labor, travel, expenses, etc., shall be provided during normal working hours at no cost to the Owner. The Contractor shall provide the Owner with a phone number for service. The Contractor shall respond within four (4) business hours of receipt of a service call. The Contractor

shall provide an on-site response time of one (1) business day for repair of critical system items during normal business hours.

4. Warranty Exclusions: The guarantee shall exclude acts of God, vandalism, physical abuse or operator misuse.

PART 2 – PRODUCTS

2.1 INTRUSION DETECTION SYSTEM (IDS) MANUFACTURERS

A. Acceptable Manufacturer:

1. Bosch Security Systems.
2. No Substitutions.

2.2 GENERAL DESCRIPTION

A. Control Panel and Features:

1. The Intrusion Detection System (IDS) control panel shall be Bosch Security Systems, Inc. model B9512G comprising a fully integrated intrusion, fire, and access control system. The control panel shall support the following:
 - a. The IDS system is capable of being utilized as a combination Intrusion and Commercial Fire system per code. Fully integrated intrusion and fire functions allow users to interface with 1 system instead of 2
 - b. Optional Telephone Line Module, programmable for signaling and supervision.
 - c. Integrated Conettix IP based communication provides high-speed, secure alarm transport and control.
 - d. 32 programmable areas with perimeter and interior partitioning.
 - e. 8 on-board, hardwired points with expansion capability for a total of 599 using a combination of wired or wireless points.
 - f. Compatibility with Color Graphic Touch Screen, 2-line alpha numeric capacitive touch, ATM style LCD or 2-line LCD style Alarm Keypads.
 - g. Local or remote programming, test, and diagnostic capability via a computer running the Remote Programming Software (RPS).
 - h. The system shall include an integrated USB port for local programming and diagnostics using a computer running Remote Programming Software (RPS) and a male USB2.0 to male USB 2.0 cable with no additional hardware modules required.
 - i. The system shall support the use of an Apple iOS device and/or Android device for control. Functions to include arming, disarming and control of outputs and access door, viewing of connected IP cameras. This application shall connect directly to the IDS using

- internet, wifi or cellular communications and shall not require a third party server or network operations center (noc).
- j. The IDS will allow integration with up to 16 Bosch IP video cameras using the built-in Ethernet connection, allowing the cameras to act as inputs and outputs.
 - k. The IDS shall support integration with the Bosch Video Management System (BVMS) using the built-in Ethernet adapter.
 - l. The IDS shall support up to thirty-two (32) custom functions allowing the installer to combine up to 6 functions into one command. These custom functions shall be operated by keypad command, point activation, keyfob button, or programmable schedule
 - m. The IDS shall support up to 32 keypad shortcuts which allow the installer to define which commands are available at each keypad.
 - n. The system shall offer multiple language support that can be assigned per keypad. Languages supported must include English, Latin American Spanish, Portuguese and/or Canadian French.
 - o. The IDS shall support flash firmware upgrades of systems firmware for the control panel and peripherals, allowing for future updates.
 - p. Integrated real time clock, calendar, test timer and programmable scheduling capability for relay control and automatic execution of system functions based on a time / event.
 - q. Provide 1.4 amps of power for standby operation and 2.0 amps of alarm power, both rated at 12 VDC.
 - r. 3 configurable form 'C' wet or dry-contact relay outputs with expansion capability for up to an additional 472 dry-contact relay outputs.
 - s. Integrated battery charger with reverse hook up protection, battery supervision and battery deep discharge protection.
 - t. Supervision of peripheral devices and communications interface(s).

B. Point Functionality and Expansion:

- 1. Each point in the system shall be programmable to provide the following type of response in the system:
 - a. Always on (24 hour response).
 - b. On when the system is Master Armed.
 - c. Only on when the system is Perimeter Armed.
 - d. Displays / Does Not Display at the ACC when the point is activated.
 - e. Provides / Does Not Provide entry warning tone.
 - f. Sounds / Does Not Sound audible alarm indication.
 - g. The Point is bypassable / not bypassable.
 - h. Alarm Verification with programmable verification time.
 - i. Relay activation by Point.
 - j. Provides / Does Not Provide "watch point" capability.
 - k. Provides Swinger Bypass.

- I. Defers Bypass Report.
 - m. Can return to the system after being force armed and then restoring.
 - n. Can return to the system after being bypassed and then restoring.
- 2. The IDS shall be capable of supporting "group zoning." Group zoning refers to the combining of points into a separately identifiable and separately annunciated (programmable text) areas.
- 3. The IDS shall be capable of allowing variable point response times via programming. Point response times shall be programmable over a range of 300 milliseconds to 4.5 seconds.
- 4. The IDS shall have the capability to expand up to 246 separately identifiable points, of which 8 are on-board and 238 are off-board wired or wireless addressable points connected to multiplexed backbone trunks via wired modules and/or wireless receivers.
 - a. The 8 on-board points shall be able to accommodate powered class B functionality using a powered loop interface module.
 - b. Point Expansion Modules (Wired and Wireless) shall be able to be located remote to the main panel to a maximum distance of 1000 feet.
- 5. The IDS shall have the capability to expand up to 75 separately identifiable points, of which 8 are on-board and 67 are off-board addressable points connected to multiplexed backbone trunks via wired modules and/or wireless receivers.
 - a. The 8 on-board points shall be able to accommodate powered class B functionality using a powered loop interface module.
 - b. Point Expansion Modules (Wired and Wireless) shall be able to be located remote to the main panel to a maximum distance of 1000 feet.
- 6. Capability to expand up to 40 separately identifiable points, of which 8 are on-board and 32 are off-board addressable points connected to multiplexed backbone trunks via wired modules and/or wireless receivers.
 - a. The 8 on-board points shall be able to accommodate powered class B functionality using a powered loop interface module.
 - b. Point Expansion Modules (Wired and Wireless) shall be able to be located remote to the main panel to a maximum distance of 1000 feet.
- 7. Capability to expand up to 40 separately-identifiable points of which 8 are on-board points and 32 are off-board addressable points connected to point expansion modules and/or wireless receivers.
- 8. Capability to expand up to 24 separately-identifiable points of which 8 are on-board points and 16 are off-board addressable points connected to point expansion modules and/or wireless receivers.

C. Areas/Accounts:

1. The IDS shall support 32 independent areas. Each of the 32 areas shall have custom text associated with the armed state, disarmed state and point-off-normal state.
2. The IDS shall be capable of assigning 1 to 4 account identifiers to the areas depending on the distribution of areas per account.
3. The IDS shall be capable of assigning 1 to 2 account identifiers to the areas depending on the distribution of areas per account.
4. All of the areas must be capable of Master (All) and/or Perimeter (Part) arming (excluding predefined Interior protection).
5. The IDS shall be capable of logically grouping 1 or more points into an area, or conversely, dividing 2 or more points into two or more areas.
6. Any area shall be configurable to allow arming by specific users when a programmable number of devices are faulted or bypassed.
7. Areas shall be independently controlled by their corresponding ACC.
8. Area(s) shall accommodate assignment of independent account numbers to define annunciation, control, and reporting functions.
9. The IDS shall be capable of linking multiple areas to a shared area which may be automatically controlled (hallway or lobby).
10. The IDS shall accommodate conditional area arming dependent on the state of other areas (master or associate). Any area can be configured for perimeter and interior arming, not requiring a separate area for this function.

D. Output Relay Expansion: The IDS shall provide the capability for output relay expansion using relay expansion modules. Independent control of relay functions by area shall be possible through programming assignments.

1. The IDS shall be capable of activating 472 additional relay outputs for auxiliary functions based on its classifications (area vs. panel wide). Output Expansion Modules shall be able to be located remote to the main panel to a maximum distance of 1000 feet. 8 relays (Form C) are to be provided per octo-relay module.
2. The IDS shall be capable of activating 64 additional relay outputs for auxiliary functions based on its classifications (area vs. panel wide). Output Expansion Modules shall be able to be located remote to the main panel to a maximum distance of 1000 feet. 8 relays (Form C) are to be provided per octo-relay module.
3. The IDS shall be capable of controlling relays and automatically executing system functions based on a time / event scheduling program. The program can be hour, day of week or day of month based.
4. Relays and other outputs may be programmed to follow up to 14 different area conditions or up to 12 panel conditions. Relays may also be programmed to follow individual points or groups of points.
5. The IDS shall support 5 different types of alarm output selections: Steady, Pulsed, California Standard, Temporal Code 3 and Temporal Code 4.

E. Scheduling: The IDS shall support scheduling capabilities with the following characteristics:

1. Arm / Disarm specific area(s) based on open/close windows.
2. Bypass / Unbypass point(s).
3. Activate / Deactivate relay(s).
4. Send test reports.
5. Up to 4 programmable holiday schedules of 366 days each (includes leap year). Based on the holiday settings, different time windows for open/close and other system functions can be executed.
6. Automatic adjustment of system clock for daylight savings time.

F. Alarm Keypads:

1. The IDS shall accommodate connection with up to 32 ACCs, each capable of displaying custom English, Latin American Spanish, Portuguese or Canadian French text on a liquid crystal display.
2. The Alarm Keypads shall accommodate viewing and configuration of system parameters including:
 - a. Network Parameters:
 - (1) DHCP Enable/Disable for the selected network module.
 - (2) UPnP Enable/Disable for the selected network module.
 - (3) IP Address for the selected network module
 - (4) Subnet Mask for the selected network module.
 - (5) Default Gateway for the selected network module.
 - (6) Port Number for the selected network module - The module's port number shall range from 0 to 65,535.
 - (7) DNS Server Address for the selected module's DNS server IP address
 - (8) DNS Host Name for the selected module. The DNS host name shall contain up to 63 characters.
 - (9) AES Encryption Key Size – Enable/Disable encryption by selecting the AES encryption key size for the selected network module.
 - (10) AES Encryption Key String - The user shall be able to display, add and modify the AES encryption string based upon the key size previously configured for the selected network module.
 - b. Point Parameters:
 - (1) Point Selection between one and the maximum number of points in the control panel.
 - (2) Point Registration to allow system response from a specific physical point on any one of the expansion modules; On-board or Point expansion modules (wired or wireless)
 - (3) Wireless points shall be able to be enrolled in the system via an auto enrollment feature.

- c. Event Routing Parameters to allow programming of up to 4 report routing groups as well as configuration of primary and secondary paths.
- G. User Passcodes and Authority: Passcodes shall be programmable with authority levels to allow users to operate any or all areas.
 1. Up to 2000 different passcodes shall be accommodated.
 2. Each passcode shall be 3 to 6 digits (variable) and be assigned a 32-character user name.
 3. User access to System features and functions shall be configurable based on 14 individually programmable levels of authority assigned to the user passcode. Additionally, the system shall have the capability to assign to the user passcode, a different authority level in each of the areas. A service passcode can be assigned to the servicing agent allowing the agent limited access to system functions. User-programmable / activated functions include:
 - a. Arming the system: All areas, specific area(s) only, perimeter instant, perimeter delayed, perimeter partial, watch mode, and arming the system with a duress passcode.
 - b. Disarming the system: All areas, specific area(s) only and disarming with a duress passcode.
 - c. Viewing system status: Faulted points, event memory, bypassed points, area status and point status.
 - d. Implementation functions: Bypass a point, unbypass a point, reset sensors, silence bell, activating relays, initiating the remote programming function locally to allow programming the system from a remote location.
 - e. Testing the system: Local Walk test, Service Walk test, Fire test, send report to remote IDS controllers to check the telephone link, and programming the time and date for the next test report transmission.
 - f. Change system parameters: ACC display brightness, system time and date, and add/delete/change passcodes.
 - g. Extend the closing time of the system.
 - h. Transmitting special alerts and activating audible and visible signals.
 - i. Executing multiple commands / ACC keystrokes from a single Menu / Command List item. This function shall be able to have a 32 character (alphanumeric) title to identify it on the ACC display.
 - j. Editing of time / event based scheduling program from the ACC.
 - k. The IDS shall also provide a "service menu" to implement functions such as viewing and printing the system log, displaying the system firmware revision number, and defaulting (toggling) text displays between custom and default text displays for troubleshooting.
 4. The IDS shall allow users to change their own user passcode from the Alarm Keypad (ACC). Managers shall be capable of changing the user

- passcodes and authority assignments by area of other users from the ACC.
5. The IDS shall incorporate a programmable "Passcode Follows Scope" feature to allow users to arm or disarm only the area they are entering with one simple command or control all areas from one ACC.
- H. Communication: The IDS shall be capable of reporting system events and supervisory reports including alarm, trouble, missing modules, restorals, system status, AC failure, battery status to primary and secondary off-site remote IDS controllers. The following features shall be supported.
1. The IDS shall be capable of communicating via dial-up analog telephone lines, over a LAN/WAN/Internet using a wired network interface module, or over a cellular network using a CDMA Cellular interface module.
 2. The Bosch Modem4 communications format shall be utilized for optimum system performance. The Modem4 format provides the maximum data information to the receiver for alarms, troubles, restorals, bypasses, relay activation, opening/closings, and card access. The detailed information includes the point numbers with text, peripheral device numbers, user numbers with text, and area information. As an alternative format, Contact ID may be used although it will include less detailed information like point or user text.
 3. The IDS shall be capable of sending text (SMS) messages to compatible devices without requiring that these message are sent to a monitoring center.
 4. The IDS shall have the capability of communicating with up to 8 different remote IDS controllers using up to 4 different phone numbers, up to 24-digits in length and/or 4 URL/IP addresses over a network.
 5. The IDS shall report to a Commercial Central Station that is using a Bosch D6600 Receiver/Gateway or a Bosch D6100i Receiver using Modem4 as a preferred format or Contact ID as an alternate format.
 6. The remote IDS controllers shall provide the transmission information sent from the IDS that includes alarms, troubles, restorals, bypasses, relay activation, opening/closings, and card access. When using the Modem4² format the detailed information includes the point numbers with text, peripheral device numbers, user numbers with text, and area information.
 7. The IDS reports shall be classified, by event, into eleven subcategories or "report groups." Each group represents similar types of events. Individual events within each group shall be selectively enabled or disabled for transmission. The eleven report groups shall be as follows:
 - a. Fire Reports.
 - b. Burglar Reports.
 - c. User Reports.
 - d. Test Reports.
 - e. Diagnostic Reports.
 - f. Relay Reports.
 - g. Auto Function Reports.
 - h. RPS Reports.

- i. Point Reports.
 - j. User Change Reports.
 - k. Access Reports.
- 8. The IDS shall have the capability to verify the integrity of the remote communications path and switch to alternate paths when a communications failure occurs.
- 9. The IDS shall be capable of unattended mode of operation whereby programming and configuration updates are automatically transferred using the Remote Programming Software (RPS). These updates can initiate from either the control panel or the remote computer using RPS.
- I. Network Communication: The IDS shall be capable of network communications over a LAN, WAN, Intranet, or the Internet. The system shall include supervision of the network communication utilizing configurable periodic heartbeats to the Digital Alarm Communications Receiver (remote IDS controllers). The remote IDS controllers shall provide notification of the loss of communications from a networked system after a programmable timeframe since the last communication. The notification options shall be programmable and include local annunciation or indication to automation software.
 - 1. The network interface module shall be capable of supporting Dynamic Host Communication Protocol (DHCP) to obtain an IP Address.
 - 2. The system shall support a method of authentication between the control panel and the receiver to ensure that the control panel has not been compromised or replaced.
 - 3. The network interface modules shall be capable of supporting encryption using a minimum of 256-bit AES Encryption (Rijndael) certified by NIST (National Institute of Standards and Technology) utilizing the Cipher Block Chaining (CBC) method.
 - 4. The network interface module shall support a 10/100BaseT connection to an Ethernet network.
 - 5. The control panel shall be capable of network communication with a programmable poll time to send periodic heartbeats to the receiver, programmable ACK Wait time, and programmable retry time. In the situation where a communication path is unsuccessful, the control panel shall be capable of attempting backup communication through an available communication method to the same receiver or a backup receiver.
 - a. The control panel shall have the ability to automatically adjust the heartbeat rate of a backup path that is using cellular to the heartbeat rate of the primary path in case of a primary path failure. Upon restoral of the primary path, the heartbeat rate of the backup path shall automatically restore to the original rate. This allows a system utilizing cellular communications to keep the wireless charges low.
 - b. The network communication between the control panel and the receiver shall use Modem4 or Contact ID.

- c. The control panel shall be capable of two-way communication using a wired network interface module with a 10/100BaseT on a LAN/WAN/Internet configuration or with a cellular module on the Internet.
 - d. The control panel shall be capable of configuring the destination of the receiver using a URL or static IP Address.
 - e. The control panel shall be capable of using DNS to lookup the IP Address of the receiver when programmed with a URL.
 - f. The control panel shall support UPnP for automated Port Forward configuration in the router where the control panel is installed.
 - g. The control panel shall support AutoIP to enable the RPS software to connect to the control panel locally using an IP Direct connection.
 - h. The control panel shall support configuration of the IP parameters from the keypad eliminating the need for a PC to configure the IP device.
 - i. The control panel shall support network diagnostics from a keypad to allow local testing of network connectivity. The diagnostics should include, Ethernet cable connected, gateway configuration ok, DNS lookup operational, and external network connectivity (such as the Internet) operational.
 - j. The system shall be capable of meeting DCID 6/9 and UL 2050 standards.
- J. Event Log: The IDS shall maintain a log of events indicating time, day, month, year type of event, account number, area number, user ID, point text, user text and primary/secondary event route. The system shall allow the following characteristics:
 - 1. The IDS shall be capable of storing up to 10,000 events
 - 2. The IDS shall support viewing of logs locally at the ACC and remotely via an upload to a remote central station computer running the RPS software.
 - 3. The IDS shall provide notification via a report to the remote IDS controllers when the event log reaches a programmable "percent full capacity". This allows retrieval of stored events via RPS to prevent any loss of event history.
 - 4. Group, signal type and area can route events to specific receivers.
 - 5. Each remote IDS controllers shall be designated as a primary, backup, or duplicate destination for each report group. Assigning an event to multiple routing groups provides for duplicate destinations for the event. The transmission of grouped events allows the reporting of different types of information to different remote IDS controllers.
- K. Testing, Diagnostic, and Programming Facilities: The IDS shall be capable of sending (manually or automatically) test and status reports to remote IDS controllers.
 - 1. The IDS shall be capable of sending automatic tests daily, weekly or once every 28 days. Automatic test times shall be programmable to provide an offset of up to 24 hours from the current time.

2. Automatic test reports shall be programmable to be deferred by one test interval if any other report is transmitted in the current interval.
 3. Automatic test reports and remote system access for diagnostics shall be supported via a remote central station computer with Remote Programming Software (RPS).
 4. The IDS shall be programmable locally or remotely. Programming shall be accomplished via a Keypad or a computer with a remote programmer and diagnostic software package (RPS).
 5. The IDS shall allow an on-site user to initiate remote programming while on-line with the servicing location. The remote programming device must provide a compare feature and allow for downloading either the stored program or the (un)modified program copied from the panel.
 6. The IDS shall allow the local programming option to be disabled and must provide a method to program a panel while no one is on premises, when the panel shares a line with an answering machine.
 7. The IDS shall accommodate IP Diagnostic to verify settings and operation of the network interface modules; Host name, MAC address, IPV4 address assignment. The IP Connection test shall include; Link test to verify physical cable integrity, Ping test to verify gateway response, ping test to verify address on the internet.
 8. Wireless point diagnostics shall include signal strength and device states of registered wireless points in the system.
 9. The number of system testing and programming sessions shall be restricted via the use of program locking features and passwords. Passcode protection in excess of sixteen million combinations is required.
 10. New modules support enhanced diagnostics through RPS.
- L. Miscellaneous Features: Programmable alarm output timer, 4 programmable entry delay times, exit delay programmable by area, individually programmable point of protection text, point bypassing, key switch arming capability with LED outputs, and fire verification.
- M. Area Re-Arm: The System shall support programmable area re-arm time of 1 minute to 24 hour.
- N. User-Programmable Features: The IDS shall provide a menu driven interface to provide a user-friendly command structure for programming / customizing the system to the operational criteria of the application. The IDS shall be capable of being operated via:
1. The Command Structure.
 2. Menu / Command List.

2.3 SYSTEM INTERFACE REQUIREMENTS

- A. Grounding: The Contractor shall properly earth ground the IDS to prevent electrostatic charges and other transient electrical surges from damaging the IDS panel.

- B. Primary power: The Contractor shall provide a dedicated 120 VAC power circuit to the IDS system. This circuit shall be connected to the emergency power system. The 120 VAC is stepped down to power the IDS panel using a class two, plug-in transformer. This power circuit shall be properly rated to continuously power all points and functions indefinitely in full alarm condition.
- C. Primary power supervision: When the primary power source fails, the system can be configured to report an "AC Fail" message to a commercial central station.
 - 1. The message can also be programmed to "tag-along" with another message transmitted to the central station.
 - 2. The system will always display a loss of primary power on the ACC and may be configured to provide additional audible warning.
 - 3. The transmission delay of this message is programmable from 5 seconds to 86 minutes with an optional 6 to 12 hour transmission delay.
- D. Secondary power (standby battery): The Contractor shall provide adequate battery power as defined by the relevant application criteria, (UL 864 and UL 985 for alarm installations or NFPA 72 chapters for fire applications). Appropriate battery chargers shall be provided consistent with the battery back-up capacity. The most current accepted version of NFPA 72 and any applicable local codes or AHJ requirements must be met accordingly.
- E. Secondary power supervision: When the secondary power source experiences a 85 percent depletion of its standby capacity, the system can be configured to report a "Low Battery" message to a commercial central station. The system will always display a low battery condition on the ACC and may be configured to provide additional audible warning.
- F. Telephone interface: The control panel in the IDS shall be equipped with a phone line monitor and shall interface with the phone lines via RJ-31X jacks for supervision of the telephone line connection.
 - 1. The telephone line interface shall conform with FCC rules (Title 47 C.F.R. part 68).
 - 2. When a telephone line is determined to be out of service by the IDS panel, the event will be annunciated locally on the ACC and transmitted to the central station over the alternate communications interface. The transmission delay of this message is programmable from ten to two-hundred forty seconds.
- G. Ethernet Interface: The IDS may use an Ethernet interface module as the primary, or back-up means of communicating to a remote IDS controllers.
 - 1. The telephone line interface shall conform with FCC rules (Title 47 C.F.R. part 68).
- H. Cellular interface: The IDS may use a cellular radio module as the primary, or backup, means of communicating to a remote IDS controllers. Up to 4 IP Addresses shall be available for routing system events. The supervision time

shall be programmable with a range of 5 to 65,535 seconds. The module shall accommodate 128 and 256-bit AES encryption using CBC (Cipher Block Chaining) mode.

- I. Auxiliary function control interfaces: The IDS shall accommodate auxiliary functions such as activating bells, strobes, or lights and shall be accomplished using the optional application specific relay modules. These auxiliary interfaces shall be electrically isolated to avoid inter-system interferences or damage to the system.
- J. Wiring: The contractor shall provide cables consistent with the manufacturer's recommendations. The following general guidelines shall be followed for wiring installation:
 - 1. Wiring shall be appropriately color-coded with permanent wire markers. Copper conductors shall be used.
 - 2. All signal cables provided under this contract shall be Class II, plenum-rated cable where required. Where subject to mechanical damage, wiring shall be enclosed in metal conduits or surface metallic raceway.
 - 3. Data wires shall not be enclosed in conduit or raceways containing AC power wires.
 - 4. Where EMI may interfere with the proper operation of the IDS circuits, twisted/shielded cable shall be used.
- K. Environmental Conditions: The IDS shall be designed to meet the following environmental conditions:
 - 1. The system shall be designed for a storage temperature of -10° C to 70°C (14° F to 158°F).
 - 2. The system shall be designed for an operating temperature of 0° C to 50°C (32° F to 120°F).
 - 3. The system shall be designed for normal operation in an 85% relative humidity environment.
 - 4. The system shall meet or exceed the requirements of FCC rules Title 47 C.F.R. Part 15, Class B devices, and Part 68, IEC EMC directive

2.4 ACCEPTABLE PRODUCTS

- A. Intrusion Detection System Panel, Accessories and Field Devices. Provide quantity of field devices as shown on the drawings.
 - 1. Intrusion Detection Control Panel & Components:
 - a. Control Panel: Bosch B9512G.
 - b. PSTN Dialer Card: Bosch B430.
 - c. Universal Enclosure: Bosch B8103.
 - d. Lock and Key Set: Bosch D101.
 - e. Enclosure Tamper Switch: Bosch D110.
 - f. Transformer: Bosch D1640.
 - g. Power Supply: Bosch B520.

- h. Battery Backup: Bosch D1218.
 - i. No Substitutions.
 - 2. Addressable 8-Input Modules:
 - a. Bosch B208.
 - b. No Substitutions.
 - 3. Addressable Polling Modules:
 - a. Bosch B299.
 - b. No Substitutions.
 - 4. Addressable “POPIT” Modules:
 - a. Bosch D9127U.
 - b. No Substitutions.
 - 5. Magnetic Door Position Contacts.
 - a. Monitored Doors: GE 1078.
 - b. Doors with Access Control: GE1076D.
 - c. No Substitutions.
 - 6. PIR Motion Detectors:
 - a. Motion Detector: Bosch ISC-PPR1-WA16G.
 - b. Mounting Bracket: Bosch B328.
 - c. No Substitutions.
 - 7. Touch Panel Keypads:
 - a. Bosch B942W.
 - b. No Substitutions.
 - 8. Programming Software:
 - a. Bosch RPS-LITE.
 - b. No Substitutions.
 - 9. 8-Output Relay Module.
 - a. Bosch B308.
 - b. No Substitutions.
- B. Cabling:
 - 1. Install riser rated (CMR) 18/4 shielded cable from the security control panel to all devices.

- a. Acceptable Manufacturers:
 - (1) Alpha Wire, Belden, CommScope, Tappan or WestPenn.
 - (2) Or approved equal.
2. Install OSP rated 18/4 shielded cable suitable for underground duct installation from the main security control panel to all remote sub-panels.
 - a. Acceptable Manufacturers:
 - (1) Alpha Wire, Belden, CommScope, Tappan or WestPenn.
 - (2) Or approved equal.
3. Install indoor/outdoor rated 62.5 micron multimode between main panel and remote panels as shown on the drawings.
 - a. Acceptable Products:
 - (1) Corning P/N 006K8F-31130-29.
 - (2) Or approved equal.

PART 3 – EXECUTION

3.1 EXAMINATION OF SITE

- A. The site shall be visited on a regular basis to appraise ongoing progress of other trades and contracts, make allowances for all ongoing work, and coordinate the requirements of this contract in a timely manner.
- B. INTRUSION DETECTION CABLE ROUTING AND TERMINATION
 1. Route all cable in conduit. No exposed cabling is permitted. Conduit from the field devices to be terminated on a 4" high x 4" deep x 30" wide wiring gutter mounted above the security equipment enclosure in the telecom room.
 2. Installation of networking cabling and voice cabling to the main control panel and dialer shall follow the installation and testing requirements of the Division 27 specifications.
 3. All conduit shall be routed concealed. Where this is not possible, notify the Architect and provide proposed routing of exposed conduit for approval. Paint exposed conduit to match existing surfaces.
 4. Install access panels as necessary to provide reasonable access to security cable and junction boxes located above inaccessible ceilings.
 5. Ten feet of cable slack shall be stored in the security cable above the security panel enclosure.
 6. Cables shall be installed in continuous lengths from origin to destination (no splices).

7. The cable's minimum bend radius and maximum pulling tension shall not be exceeded. Refer to manufacturer's requirements and reference documents.
8. Any cable damaged or exceeding recommended installation parameters during installation shall be replaced by the Contractor prior to final acceptance at no cost to the Owner.
9. Cables shall be labeled with self-adhesive labels. At the intrusion detection panels, each cable shall be clearly labeled on the cable jacket 1" from the termination location.
10. Terminate security cables with insulated crimp type lugs.
11. When installing conduit, the Contractor shall maintain the following minimum clearance from sources of electro-magnetic interference (EMI).
 - a. 6" clear from power conductors.
 - b. 12" clear from fluorescent lighting fixtures and ballasts.
 - c. 36" clear from transformers and motors.

3.2 LABELING

- A. Label all intrusion detection system components and devices. Labels shall be placed in a concealed location and shall identify the ID of the device.
- B. Label all intrusion detection system enclosures, power supplies and relays.
- C. Label all batteries with the date that the batteries were installed.
- D. Label all cables at the intrusion detection panels. Affix labels a minimum of 1 inch from the point of termination. Labels shall be placed so that they are clearly visible. Labels shall identify the ID of the device.
- E. Install engraved name plates on all equipment enclosures.

3.3 GROUNDING

- A. Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

3.4 SYSTEM CONFIGURATION AND PROGRAMMING

- A. Install, configure, program and test the intrusion detection system.
- B. Meet with the Owner and determine the required operation, functionality, zoning and scheduling of the system. Program the system in accordance with the Owner's requirements.
- C. Program system configuration parameters (hardware and software, zone/circuit numbers, communication parameters).

- D. Program operational parameters such as opening/closing reports and windows, system response text (custom English) displays of events, activation of relays that drive auxiliary devices, and identifying types of zones/loops.
- E. Program passcodes according to the authorities and functions defined by the Owner.

3.5 TESTING AND COMMISSIONING

- A. The Contractor shall demonstrate the functionality of the System upon completion of installation, documenting the result of all tests and providing these results to the Owner. The System shall be tested in accordance with the following:
 - 1. The contractor shall perform 100% testing of the security intrusion detection devices. All deficiencies shall be corrected and the devices re-tested.
 - 2. The Contractor shall conduct a complete inspection and test of all installed equipment. This includes testing and verifying connection to equipment of other Divisions.
 - 3. The Contractor shall provide staff to test all devices and all operational features of the System for witness by the Owner's representative and the Authority having jurisdiction. The Contractor shall provide two-way radio communications to assist in the testing. All testing must be witnessed by the owner's representative, prior to acceptance.
 - 4. The testing and certification shall take place as follows:
 - a. System shall be tested in conjunction with the manufacturer's representative.
 - b. All deficiencies noted in the above test shall be corrected.
 - c. Test results shall be submitted to the consultant or owner's representative.
 - d. System test witnessed by owner's representative and correction of any deficiencies noted.
 - e. The owner's representative shall accept the System.
 - f. System test shall be witnessed by the Authority having Jurisdiction, and any deficiencies that are noted shall be corrected.
 - 5. A letter of certification shall be provided to indicate that the tests have been performed and all devices are operational.

3.6 SYSTEM TRAINING

- A. Provide qty two (2) hours of training to the Owner's staff on the operation of the system at the completion of the project.

END OF SECTION 283000

SECTION 283100 - FIRE ALARM SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

1. Section includes fire alarm control panels, manual fire alarm stations, automatic smoke, heat detectors and fire alarm signaling appliances, and auxiliary fire alarm equipment and power and signal wire and cable.
2. All equipment and components shall be the manufacturer's current model. The materials, appliances, equipment and devices shall be tested and listed by a nationally recognized approvals agency for use as part of a protected premises protective signaling (fire alarm) system. The authorized representative of the manufacturer of the major equipment, such as control panels, shall be responsible for the satisfactory installation of the complete system.
3. The contractor shall provide, from the acceptable manufacturer current product lines, equipment and components, which comply, with the requirements of these specifications. Equipment or components, which do not provide the performance and features, required by these specifications are not acceptable, regardless of manufacturer.
4. This section of the specification includes the furnishing, installation, and connection of an intelligent reporting, microprocessor controlled, addressable, fire detection system. It shall include, but not be limited to, alarm initiating devices, alarm notification appliances, control panels, auxiliary control devices, annunciators, power supplies, and wiring as shown on the drawings and specified herein.
5. The fire alarm system shall comply with requirements of NFPA standard 72 for protected premises signaling systems except as modified and supplemented by this specification. The system shall be electrically supervised and monitor the integrity of all conductors.
6. The system shall be an active/interrogative type system where each addressable device is repetitively scanned, causing a signal to be transmitted to the main fire alarm control panel (FACP) indicating that the device and its associated circuit wiring is functional. Loss of this signal at the main FACP shall result in a trouble indication as specified hereinafter for the particular input.
7. The system and its components shall be underwriters laboratories, Inc. Listed under the appropriate UL testing standard as listed herein for fire alarm applications and the installation shall be in compliance with the UL listing.
8. The installing company shall employ NICET (minimum level II fire alarm technology) technicians on site to guide the final check-out and to ensure the systems integrity.

9. Drawings and general provisions of the contract, including general and special conditions and the requirements of division 1 specifications, apply to this section.
10. The contract agreement, bidding documents, and all addenda issued prior to contract agreement execution form a part of these specifications and apply to all contracts or subcontracts relating to the electrical systems.
11. Division 28 31 00 is a performance specification. The Contractor shall include all labor and materials to design and complete the entire fire alarm work as herein specified and/or indicated.
12. The Contractor is to serve as the complete system designer and installer. A complete fire alarm system shall be designed, furnished, and installed by the Contractor including locations, types, and quantities of all devices, monitoring devices, and equipment required. Contractor's design shall be based on all bid documents, including but not limited to Electrical, Telecom, Mechanical, Fire Sprinkler, Kitchen, Architectural, and Structural documents. Contractor shall provide all devices, modules, etc. for a complete operating system as required by all applicable Codes and AHJ requirements. Therefore, it is the Contractor's responsibility to include in the bid price the complete design and installation of all devices (whether shown or not), wiring, head end equipment, etc. to meet the applicable code and AHJ requirements. The Fire Alarm System is indicated on the drawings and specifications in either criteria or schematic form only.
13. The Contractor shall refer to Telecom drawings for information regarding additional specific monitoring requirements other equipment within the project.
14. The fire alarm system shall comply with the following codes:
 - a. 2018 IFC
 - b. 2018 IBC
 - c. 2021 NFPA 72
 - d. 2017 NFPA 70
 - e. Latest revisions of the Nevada Administrative Code section 477 by the Nevada State Fire Marshal
 - f. NNICC 2018 Amendments

1.2 RELATED SECTIONS

- A. Section 21 12 00 – Fire Suppression Standpipes: Flow detection and alarm devices.
- B. Section 21 13 13 – Wet-Pipe Sprinkler Systems: Flow detection and alarm devices.
- C. Section 26 05 19 – Low-Voltage Electrical Power Conductors and Cables.

- D. Section 26 05 26 – Grounding and Bonding for Electrical Systems.
- E. Section 28 05 53 – Identification for Electronic Safety and Security.

1.4 SYSTEM DESCRIPTION

- A. This section of the specification includes the furnishing, installation, connection and testing of the microprocessor controlled, intelligent reporting fire alarm equipment required to form a complete, operative, coordinated system. It shall include, but not be limited to, alarm initiating devices, alarm notification appliances, Fire Alarm Control Panel (FACP), power supplies, auxiliary control devices, annunciators, and wiring as shown on the drawings and specified herein.
 1. The fire alarm system shall comply with requirements of NFPA Standard 72 for Protected Premises Signaling Systems except as modified and supplemented by this specification. The system shall be electrically supervised and monitor the integrity of all conductors.
 2. The fire alarm system shall be manufactured by an ISO 9001 certified company.
 3. The FACP and peripheral devices shall be manufactured 100% by a single U.S. manufacturer (or division thereof).
 4. The system and its components shall be Underwriters Laboratories, Inc. listed under the appropriate UL testing standard as listed herein for fire alarm applications and the installation shall be in compliance with the UL listing.

5. The installing company shall employ NICET (minimum Level II Fire Alarm Technology) technicians on site to guide the final checkout and to ensure the systems integrity.
6. A new intelligent reporting, microprocessor-controlled fire detection and notification system shall be installed in accordance with the specifications and as indicated on the Drawings.
7. Each Signaling Line Circuit (SLC) and Notification Appliance Circuit (NAC): Limited to only 80 percent of its total capacity during initial installation.
8. Control Panel shall be expandable, as necessary, to accommodate future expansion.

B. Basic Performance:

1. Alarm, trouble and supervisory signals from all intelligent reporting devices shall be encoded on Signaling Line Circuits (SLC).
2. Initiation Device Circuits (IDC) shall be wired as part of an addressable device connected by the SLC Circuit.
3. Notification Appliance Circuits (NAC) shall be wired as part of an addressable device connected by the SLC Circuit.
4. Alarm signals arriving at the FACP shall not be lost following a primary power failure (or outage) until the alarm signal is processed and recorded.
7. Notification Appliance Circuits (NAC) speaker circuits and control equipment shall be arranged such that loss of any one (1) speaker circuit will not cause the loss of any other speaker circuit in the system.

C. Basic System Functional Operation

When a fire alarm condition is detected and reported by one of the system initiating devices, the following functions shall immediately occur:

1. The system alarm LED on the system display shall flash.
2. A local piezo electric signal in the control panel shall sound.
3. A backlit LCD display shall indicate all information associated with the fire alarm condition, including the type of alarm point and its location within the protected premises.
4. Printing and history storage equipment shall log the information associated each new fire alarm control panel condition, along with time and date of occurrence.
5. All system output programs assigned via control-by-event interlock programming to be activated by the particular point in alarm shall be executed, and the associated system outputs (notification appliances and/or relays) shall be activated.

D. Sequence of Operations

1. Audible: Upon alarm activation of any area smoke detector, heat detector, manual pull station, and sprinkler waterflow, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel or command center.
 - b. The LCD Display shall indicate all applicable information associated with the alarm condition including: zone, device type, device location and time/date.
 - c. Any remote or local annunciator LCD/LED's associated with the alarm zone shall be illuminated.

- d. The building notification system devices shall activate.
2. Visual: Activate visual strobes. The visual strobe shall continue to flash until the system has been reset. The visual strobe shall not stop operating when the "Alarm Silence" is pressed.
 - a. Activate visual strobes on the fire floors immediately. The visual strobe shall continue to flash until the system has been reset.
 - b. Transmit signal to the central station with point identification.
 - c. All automatic events programmed to the alarm point shall be executed and the associated outputs activated.
 - d. All self-closing fire/smoke doors held open shall be released.
3. Duct Smoke Activation – (Supervisory) The activation of any duct smoke detector, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel or command center.
 - b. Display the event on the graphical workstation and display a pictorial image.
 - c. The LCD display shall indicate all applicable information associated with the condition including; zone, device type, device location and time/date.
 - e. Transmit signals to remote or local annunciator LED's.
 - f. Transmit signal to the building automation system.
 - g. Transmit signal to the central station with point identification.
 - h. Shutdown the local air handling unit.
 - i. All automatic events programmed to the alarm point shall be executed and the associated outputs activated.
4. Supervisory Operation
 - a. Upon supervisory activation of any sprinkler valve supervisory switch, fire pump off-normal, clean agent fire suppression system trouble, the following functions shall automatically occur:
 - b. The internal audible device shall sound at the control panel or command center.
 - c. Display the event on the graphical workstation and display a pictorial image.
 - d. The LCD display shall indicate all applicable information associated with the supervisory condition including; zone, device type, device location and time/date.
 - f. Any remote or local annunciator LCD/LED's associated with the supervisory zone shall be illuminated.
 - g. Transmit signal to the central station with point identification.
5. Trouble Operation
 - a. Upon activation of a trouble condition or signal from any device on the system, the following functions shall automatically occur:
 - b. The internal audible device shall sound at the control panel or command center.
 - c. Display the event on the graphical workstation and display a pictorial image.
 - d. The LCD keypad display shall indicate all applicable information associated with the trouble condition including; zone, device type, device location and time/date.
 - f. Any remote or local annunciator LCD/LED's associated with the trouble zone shall be illuminated.

- g. Transmit signal to the central station with point identification.

1.5 SUBMITTALS

- A. General Conditions: Submittal Procedures.
- B. Include sufficient information, clearly presented, to determine compliance with the specifications and the Drawings.
- C. Equipment Submittals:
 - 1. Cover Page: Indicate the following:
 - a. Project name and address.
 - b. Engineered systems distributor's name and other contact information.
 - c. Installing contractor's name and other contact information.
 - d. Date of equipment submittals. Indicate on revised submittals the original submittal date and revised submittal date.
 - 2. Table of Contents: Lists each section of equipment submittal.
 - 3. Scope of Work Narrative: Detail indented scope of work.
 - 4. Bill of Material: Indicate for each component of system the following:
 - a. Quantity.
 - b. Model number.
 - c. Description.
 - 5. Highlight, underline, etc, equipment being specified.
 - 6. Battery Calculations: Show load of each of, and total of, components of system along with standby and alarm times that calculations are based on. Show calculated spare capacity and size of intended battery.
 - 7. Voltage Calculations: Supply Voltage drops for each notification appliance circuit, either in submittal or on drawings.
- D. Shop Drawings:
 - 1. Cover Page: Indicate the following:
 - a. Project name and address.
 - b. Engineered systems distributor's name and other contact information.
 - c. Installing contractor's name and other contact information.
 - d. Date of equipment submittals. Indicate on revised submittals the original submittal date and revised submittal date.
 - 2. Floor Plans:
 - a. If a floor plan must be split using match lines to fit on the page, provide match lines and match line references that refer to sheet number that shows area on opposite side of match line.
 - b. Prepare using AutoCAD.
 - c. Show equipment and device locations.
 - d. Show wiring information in point-to-point format.
 - e. Include one line diagram showing all devices and circuiting as laid out on floor plan.
 - 3. Control Panel: Provide sheet that details exterior and interior views of control panel and clearly shows associated wiring information.
 - 4. Annunciator Panels: Provide sheet that details exterior and interior views of annunciator panels and clearly shows associated wiring information.

5. Sequence of Operations: Use matrix detailing activation of each type of device and associated resulting activation of the following:
 - a. Control panel.
 - b. Annunciator panels.
 - c. Smoke Detectors
 - d. Notification appliances.
 - e. Building fire safety functions, including elevator recall, elevator power shutdown, door lock release, door holder release, HVAC unit shutdown.
 - E. Certification: Submit with equipment submittals and shop drawings, letter of certification from major equipment manufacturer, indicating proposed engineered system distributor is an authorized representative of major equipment manufacturer. Include State of Nevada 'F' Card certifications and NICET II (Minimum) of employees in charge of project for the installing contractor.
 - F. Job Site Plans and Submittals: There shall be one set of original permitted drawings, submittals, and permit on the job site before any fire alarm installation can begin, this includes but is not limited to fire alarm back boxes. Coordinate with General Contractor. A copy of the permit shall be included with the operations and maintenance manuals once the job is completed.
 - G. Project Record Drawings:
 1. Project Record Documents: After construction "as-built" drawings shall be provided to the WCSD Plant Facilities and Capital Projects & Planning Departments. "As-built" drawings shall be as specified in Part 1 of these Guidelines. No marked "jobsite copies" will be allowed. As-built drawings shall show all horn/strobes, heat and duct detectors, splitter points, pull stations, and their specific addresses. As built shall also show floor to floor penetrations. In addition, door magnets (and their power source), burglar alarm devices, HVAC connections, dampers and contactors shall be shown. All other devices both electrical and mechanical not previously designated that are tied to Fire Alarm Panels or are a part of the Fire System Operation shall be shown.
 2. Project record drawings shall be similar to shop drawings but revised to reflect changes made during construction.
 3. Provide and install document box adjacent to FACP with printed copy of record drawings, full size. Provide USB Flash Drive with latest system program in document box.
 - H. Operation and Maintenance Manuals:
 1. Submit complete operation and maintenance manuals within 14 calendar days after acceptance test.
 2. Operation and maintenance manuals shall be similar to equipment submittals, but revised to reflect changes made during construction.
 3. Operations and maintenance manuals shall include copies of inspection and field testing reports, preliminary and final testing reports, and Certificate of Occupancy.
- 1.6 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience and with service facilities within 100 miles of project.
- B. Installer shall be NICET Level II certified and registered with the State Fire Marshal.
- C. Submit a copy of the system supplier's training certification issued by the manufacturer of the integrated life safety system, and a copy of the installing technician's NICET certification.
- D. Designer shall be NICET Level II certified and a copy of the designer's NICET certification shall be submitted and their certification number shall be displayed on the drawings.

1.7 QUALITY ASSURANCE

- A. To ensure reliability and complete compatibility, all items of fire alarm system, including control panels, power supplies, initiating devices, and notification appliances, shall be listed by Underwriters Laboratories Inc. (UL) and shall bear "UL" label.
- B. Fire Alarm Control Panel Equipment: UL-listed under UL 864 Ninth Edition.
- C. The contractor shall have in-house engineering and project management capability consistent with the requirements of this project. Qualified and approved representatives of the system manufacturer shall perform the detailed engineering design of central and remote control equipment. Qualified and approved representatives of the system manufacturer shall produce all panel and equipment drawings and submittals, operating manuals. The contractor is responsible for retaining qualified and approved representative(s) of those system manufacturers specified for detailed system design and documentation, coordination of system installation requirements, and final system testing and commissioning in accordance with these specifications.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.
- B. Storage: The owner will provide the Contractor with a lockable storage space for the Contractor's use during this project. Store materials in a clean dry indoor area and in accordance with manufacturer's instructions.
 - 1. In the event there is no overnight storage, materials brought to the job site shall be installed the same day. Contractor is responsible for the safe handling and storage of materials.
- C. Handling: Protect materials from damage during handling and installation.

1.9 COORDINATION

- A. Coordinate the Work of this section with the Work of other sections, including sprinkler systems as specified in Division 21, HVAC systems as specified in Division 23, and security/door locking systems as specified in Division 28.

1.10 WARRANTY

- A. Warranty Period for System Equipment: 1 year from date of final acceptance.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. GE EST-4, no exceptions. (Per WCSD Standards)
- B. References to manufacturer's model numbers and other information is intended to establish minimum standards of performance, function, and quality.
- C. All equipment and components shall be new, and the manufacturer's current model. The materials, appliances, equipment and devices shall be tested and listed by a nationally recognized approvals agency for use as part of a protective signaling system, meeting the National Fire Alarm Code.
- D. All equipment and components shall be installed in strict compliance with manufacturers' recommendations. Consult the manufacturer's installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning system installation.
- E. All equipment shall be attached to walls and ceiling/floor assemblies and shall be held firmly in place (e.g., detectors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.
- F. Substitute equipment proposed as equal to equipment specified shall meet or exceed requirements of this section.

2.2 CONDUIT AND WIRE

- A. Conduit:
 - 1. Conduit shall be in accordance with The National Electrical Code (NEC), local and state requirements.
 - 2. All wiring shall be installed in conduit or raceway. Conduit fill shall not exceed 40 percent of interior cross sectional area where three or more cables are contained within a single conduit.
 - 3. Cable must be separated from any open conductors of power, or Class 1 circuits, and shall not be placed in any conduit, junction box or raceway containing these conductors, per NEC Article 760.
 - 4. Wiring for 24 volt DC control, alarm notification, emergency communication and similar power-limited auxiliary functions may be run in the same conduit as initiating and signaling line circuits. All circuits shall be provided with transient suppression devices and the system shall be designed to permit simultaneous operation of all circuits without interference or loss of signals.
 - 5. Conduit shall not enter the fire alarm control panel, or any other remotely mounted control panel equipment or back boxes, except where conduit entry is specified by the FACP manufacturer.

6. Conduit shall be 3/4-inch (19.1 mm) minimum, factory painted red. Exposed conduit is not acceptable unless approved by the architect and WCSD Project Manager. Exposed conduit shall be painted at the direction of the architect.

B. Wire:

1. All fire alarm system wiring shall be new.
2. Wiring shall be in accordance with local, state and national codes (e.g., NEC Article 760) and as recommended by the manufacturer of the fire alarm system. Number and size of conductors shall be as recommended by the fire alarm system manufacturer, but not less than 18 AWG (1.02 mm) for Initiating Device Circuits, Signaling Line Circuits, and Notification Appliance Circuits.
3. All wire and cable shall be listed and/or approved by a recognized testing agency for use with a protective signaling system.
4. Wiring used for the multiplex communication circuit (SLC) shall be twisted and unshielded and support a minimum wiring distance of 12,500 feet. The design of the system shall permit use of IDC and NAC wiring in the same conduit with the SLC communication circuit.
5. All field wiring shall be electrically supervised for open circuit and ground fault.
6. T-Tapping of any fire alarm circuits is not acceptable unless approved by the manufacturers representative. T-Tapping of any notification circuits is strictly prohibited.

C. Terminal Boxes, Junction Boxes and Cabinets shall be UL listed for their use and purpose.

D. The fire alarm control panel shall be connected to a separate dedicated branch circuit, maximum 20 amperes. This circuit shall be labeled at the main power distribution panel as FIRE ALARM. Fire alarm control panel primary power wiring shall be 12 AWG. The control panel cabinet shall be grounded securely to either a cold water pipe or grounding rod.

2.3 SYSTEM COMPONENTS

A. Control Panel: Main FACP (or network node) shall be a modular type, analog/addressable, microprocessor based fire alarm panel designed specifically for fire alarm system. The control panel shall include all required hardware, software and site specific system programming to provide a complete and operational system.

1. The following shall apply:
 - a. Shall be capable of being front-panel programmed or by portable computer.
 - b. Individually supervised, panel mounted, power supply.
 - c. Backlit - LCD Display.
 - d. Support analog and addressable points plus 25% spare.

2.4 SYSTEM PERIPHERALS

A. Remote Annunciator:

1. Furnish and install as indicated on the Drawings a remote serial annunciator. Annunciator shall provide 80-character display, which shall duplicate all information on basic system display, including any network nodes its host panel is annunciating, with exception of menus. Contain the following function keys:
 - a. Alarm Acknowledge.
 - b. Trouble Acknowledge.
 - c. Signal Silence.
 - d. System Reset/Lamp Test.
 - e. System Drill Test.
2. Key Lock: Enable switches only when placed in "ON" position, with exception of Trouble Acknowledge, which is used to silence local trouble audible sounder. Annunciator shall contain the following LEDs:
 - a. Alarm.
 - b. Supervisory.
 - c. System Trouble.
 - d. Power Fault.
 - e. System Silenced.

B. Manual Fire Alarm Station:

1. Product Description: Manual Pull Stations shall be constructed of metal and double action. Provide with STI Stopper® II with Horn or equivalent (clear, tamperproof polycarbonate cover with sounder) where noted on plans.
2. Device shall be fully weatherproof rated and for wash down where shown on plans with 'WP' adjacent.
3. Mounting: Semi-Flush.

C. Spot Heat Detector

1. Product Description: Addressable combination rate-of-rise and fixed temperature, spot heat detector. Temperature Rating: 135 degrees F (57 degrees C). Rate-of-Rise: 15 degrees F (8.3 degrees C).
2. Devices in wash bay shall be conventional type with monitor module in backbox. Provide Thermotech 302-ET-135/194 or equivalent equal.

D. Ceiling Smoke Detector

1. Product Description: NFPA 72, addressable photoelectric type ceiling smoke detector with the following features:
 1. Adjustable sensitivity.
 2. Plug-in base.
 3. Integral thermal element rated 135 degrees F (57 degrees C).
 4. Visual indication of detector actuation.

E. Notification Devices

1. Devices shall be red with white lettering or white with red lettering, confirm with architect and owner prior to ordering material. All devices shall be LED type.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive fire alarm system.
 - 1. Notify Architect of conditions that would adversely affect installation or subsequent use.
 - 2. Do not begin installation until unacceptable conditions are corrected.

3.2 INSTALLATION

- A. Install fire alarm system in accordance with NFPA 72, NFPA 70, state codes, manufacturer's instructions, and as indicated on the Drawings.
- B. Conceal conduit, junction boxes, and conduit supports and hangers in finished areas. Conceal or expose conduit, junction boxes, and conduit supports and hangers in unfinished areas.
- C. Do not install smoke detectors before system programming and test period. If construction is ongoing during this period, take measures to protect smoke detectors from contamination and physical damage.
- D. Flush-mount fire detection and alarm system devices, control panels, and remote annunciators in finished areas. Flush-mount or surface-mount fire detection and alarm system devices, control panels, and remote annunciators in unfinished areas.
- E. Ensure manual stations are suitable for surface mounting or semi-flush mounting as indicated on the Drawings. Install not less than 42 inches, nor more than 48 inches, above finished floor measured to operating handle.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Services: Provide service of competent, factory-trained technician authorized by manufacturer to technically supervise and participate during pre-testing and acceptance testing of system.
- B. Testing:
 - 1. Conduct complete visual inspection of control panel connections and test wiring for short circuits, ground faults, continuity, and insulation before energizing cables and wires.
 - 2. Close each sprinkler system control valve and verify proper supervisory alarm at Control Panel.
 - 3. Verify activation of flow switches.
 - 4. Open initiating device circuits and verify that trouble signal actuates.
 - 5. Open signaling line circuits and verify that trouble signal actuates.
 - 6. Open and short notification appliance circuits and verify that trouble signal actuates.
 - 7. Ground initiating device circuits and verify response of trouble signals.
 - 8. Ground signaling line circuits and verify response of trouble signals.
 - 9. Ground notification appliance circuits and verify response of trouble signals.
 - 10. Check installation, supervision, and operation of intelligent smoke detectors.
 - 11. Introduce on system each of the alarm conditions that system is required to detect. Verify proper receipt and proper processing of signal at Control Panel and correct activation of control points.

12. Consult manufacturer's manual to determine proper testing procedures when system is equipped with optional features. This is intended to address such items as verifying controls performed by individually addressed or grouped devices, sensitivity monitoring, verification functionality, and similar.

C. Acceptance Testing:

1. Before installation shall be considered completed and acceptable by AHJ, a complete test using as a minimum, the following scenarios shall be performed and witnessed by representative approved by Engineer. Monitoring company and/or Nevada State Fire Marshal Division shall be notified before final test in accordance with local requirements.
2. Contractor's job foreman, in presence of representative of manufacturer, representative of Owner, and Nevada State Fire Marshal Division shall operate every installed device to verify proper operation and correct annunciation at control panel.
3. Open signaling line circuits and notification appliance circuits in at least 2 locations to verify presence of supervision.
4. When testing has been completed to satisfaction of both Contractor's job foreman and representatives of manufacturer and Owner, a notarized letter co-signed by each attesting to satisfactory completion of said testing shall be forwarded to Owner and Nevada State Fire Marshal Division.
5. Leave fire alarm system in proper working order and, without additional expense to Owner, replace defective materials and equipment provided within 1 year (365 days) from date of final acceptance by the owner.

3.4 DEMONSTRATION

- A. Provide instruction as required for operating fire alarm system.
- B. Provide hands-on demonstrations of operation of fire alarm system components and functions.
- C. Provide minimum 4-hour training session for owner upon completion of project.

3.5 SPARE PARTS

- A. Provide 2 spare of all intelligent devices on project.
- B. Provide 2 extra devices of each type of notification device.
- C. Provide 4 extra keys of each type.

END OF SECTION 283100

SECTION 328000 - IRRIGATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Plant irrigation system
 - 2. Automatic controller
 - 3. Remote control valves
 - 4. Trenching
 - 5. Sleeves
 - 6. Backfilling

1.3 DEFINITIONS

- A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
- B. Finish Grade: Elevation of finished surface of planting soil.
- C. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Before any irrigation system materials are delivered to the job site, submit to the Owner a complete list of all irrigation system materials proposed to be furnished and installed. Show manufacturer's name and catalog number for each item, furnish complete catalog cuts and technical data, and furnish the manufacturer's recommendations as to method of installation.
- B. Provide at least one person who shall be present at all times during execution of this portion of the work, and who shall be thoroughly familiar with the type of materials being installed, and material manufacturer's recommended methods of installation, and who shall direct all work performed under this section. The Contractor shall have a minimum of 5 years experience in commercial or residential irrigation installation

1.6 CLOSEOUT SUBMITTALS

A. Record Drawings

1. Dimension from two permanent points of reference (buildings, monuments, sidewalks, curbs, pavement, etc.). Locations shown on as-built drawings shall be kept day to day as the project is being installed. All dimensions noted on drawings shall be neat and legible. Show locations and depths of the following items: Point of connection, Routing of sprinkler lines, Ball valves, Sprinkler control valves, Quick coupling valves, Routing of control and power wires, Sprinkler heads, Other related equipment.
2. Record drawings must be delivered to the Owner upon completion.

B. Operations and Maintenance Manual

1. Prepare and deliver to the Owner within ten calendar days prior to completion of construction, all required and necessary descriptive material in complete detail and sufficient quantity, properly prepared in four individually bound copies of the operations and maintenance manual. The manual shall describe the material installed and shall be in sufficient detail to permit operating personnel to understand, operate and maintain all equipment. Spare parts lists and related manufacturer information shall be included for each equipment item installed. Each complete, bound manual shall include the following information:
 - a. Index sheet stating Contractor's address and telephone number, duration of guarantee period, list of equipment with names and addresses of local manufacturer representatives.
 - b. Complete operating and maintenance instructions on all major equipment.
2. In addition to the above maintenance manuals, provide the maintenance personnel with instructions for system operation and show written evidence to the Owner at the conclusion of the project that this service has been rendered.
3. Final payment will not be made until record drawings and operation and maintenance manuals have been submitted and approved.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.
4. Store materials per manufacturer's specifications.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

1.10 WARRANTY

- A. Warranty requirements will be submitted to Owner upon substantial completion of work.
- B. The Contractor shall winterize the system and perform spring start-up of the system during the guarantee period. These functions shall be coordinated in advance with the Owner, and the Owner's personnel shall be encouraged to participate.
 1. Upon re-energizing the system, the Contractor shall repair any leaks or breaks and shall check each head and valve, making any adjustment necessary.
 2. Warranty Period: 12 months from date of irrigation completion.

PART 2 - PRODUCTS

2.1 POLYVINYL CHLORIDE (PVC) PIPE

- A. All mainlines and transmission lines shall be Schedule 40 PVC; laterals shall be schedule 40 PVC. Pipe shall be rigid unplasticized conforming to ASTM D-1784 and D-2241 standard specifications for PVC pipe. The pipe shall be homogeneous throughout and free from visible cracks, holes, foreign materials, blisters, deleterious wrinkles, and dents.
- B. All pipe shall be continuously and permanently marked with the following information: Manufacturer's name or trademark, size, schedule and type of pipe, working pressure at 73F (23C), color pantone #512, and National Sanitation Foundation (N.S.F.) approval.
- C. All above ground piping shall be epoxy painted purple (pantone color #512) and have a purple tag attached with the wording "warning recycled/reclaimed water do not drink" and "aviso agua impura no tomar" (t. christy enterprises, maxi valve identification tag, id-max-p2-rc006 or city of sparks approved equal).

2.2 MANUAL VALVES

- A. All manual ball valves, sizes three-inch (3") (75mm) and smaller, shall be full ported ball valves with maximum working pressure of 175 psi (1200kPa) and 350 psi (2400kPa) hydrostatic test pressure.
- B. All manual gate valves of four-inch (4") (100mm) size or larger shall be iron body, brass trimmed, double disc wedge type with integral taper seats and with non-rising stems, and shall be Mueller A-2360 resilient wedge gate valves with mechanical joints or equal accepted in advance by the owner. All manual gate valves shall be 200 psi (1380kPa) rated.

2.3 VALVE BOXES

- A. All remote control valves, manual control valves, zone shut-off valves, ball valves, or globe valves unless otherwise indicated, shall be installed in valve access box of proper size as required for easy access to the valve.
- B. Valve boxes shall not be located within a planting area. Valve boxes shall be placed with a minimum of five feet (5') (1.5m) separation between each valve box.
- C. All covers for meter boxes, valve boxes, flush valves, pressure reducing vaults, air/vac release assemblies, and all other appurtenances requiring vaults or boxes shall be purple in color (pantone color #512), labeled "reclaimed water" or "effluent", and have secured or locking lids. purple coloration shall be obtained from the manufacturer or be applied by powder coating or epoxy paint. all appurtenances shall have a purple tag attached with the wording "warning recycled/reclaimed water do not drink" and "aviso agua impura no tomar" (t. christy enterprises, maxi valve identification tag, id-max-p2-rc006 or city of sparks approved equal). a debris cap with purple coloration shall be installed inside of all round boxes.

2.4 EMITTERS

- A. All emitters of a particular type and for a particular function in the system shall be of the same manufacture and shall be marked with the manufacturer's name and identification, in such a position that they can be identified without being removed from the system.

2.5 IRRIGATION CONTROLLERS

- A. Field controllers shall be model numbers and manufacturers as shown on the plans or an acceptable equal.
- B. Field controllers shall be installed on approved concrete bases in accordance with the manufacturer's recommendations as shown on the drawings.
- C. Field controllers shall be installed with manufacturer's lightning and surge protection.
- D. Central controller shall be model number and manufacturers as shown on the plans, or acceptable equal. Central controller shall be located as shown on the drawings.

- E. On site lockable disconnects or lockable fuse block and a 110 volt outlet shall be installed at each controller in a separate lockable water-tight enclosure.
- F. All irrigation controller enclosures shall be labeled inside and outside warning that the system uses reclaimed water (t. christy enterprises, controller marking decal, part number #id-4100, or city of sparks approved equal).

2.6 REMOTE CONTROL VALVES

- A. All remote control valves shall be model numbers and manufacturers as shown on the plans or an acceptable equal. All splices shall be installed with 3M DBY and DBR types and all splices shall be made inside the valve box.

2.7 CONTROL WIRE

- A. All electric control and ground wire shall be irrigation control cable or approved equal, 14-gauge unless otherwise indicated on the drawings. All wiring to be used for connecting the automatic remote control valve to the automatic controllers shall be Type "UF", 600 volt, solid copper, single conductor wire with PVC insulation and bear UL approval for direct underground burial feeder cable.
- B. Insulation shall be 4/64-inch (1.6mm) thick minimum covering of ICC-100 compound for positive waterproofing protection. When more than one valve is operated by a single controller station, provide separate control wire from the controller to each valve, and one valve per box. Each valve should have no less than twenty-four inches (24") (600mm) of control cable inside valve box. Each wire shall be labeled at the valve box and at the controller to what zone each wire controls.
- C. Verification of wire types and installation procedures shall be checked to conform to local codes.

2.8 FITTINGS

- A. All plastic pipe fittings shall be permanently marked with the following information: Manufacturer's name or trademark, size, schedule and type of pipe, working pressure at 73F (23C), and National Sanitation Foundation (N.S.F.) approval.
- B. All plastic pipe fittings to be installed shall be molded fittings manufactured of the same material as the pipe and shall be suitable for solvent weld or screwed connections.
- C. Slip fitting socket taper shall be so sized that a dry unsoftened pipe end, conforming to these special provisions, can be inserted no more than halfway into the socket. Plastic saddle and flange fittings will not be permitted. Only schedule 80 fittings may be threaded.

- D. When connection is plastic to metal, plastic male adapters shall be used. The male adapter shall be hand tightened, plus one turn with a strap wrench. Joint compound shall be Teflon Tape and Teflon paste. No oil-based products permitted.
- E. Solvent weld fittings shall be manufactured by Lasco, Spears, or acceptable equal. All lateral line fittings and mainline fittings two inches (2") (50mm) and smaller shall be schedule 40 solvent weld fittings.

2.9 SLEEVES

- A. Pipe sleeves shall be Schedule 40 PVC pipe, or equal.

2.10 CONCRETE

- A. All concrete shall be 3,000 psi (20,700kPa) at 28 days, transit mixed. Provide certifications with each delivery.

2.11 OTHER MATERIALS

- A. All other materials, not specifically described, but required for a complete and proper irrigation system installation, shall be new, first quality of their respective kinds, and included within the submittal to the Owner for approval.

PART 3 - EXECUTION

3.1 PRODUCT HANDLING

- A. Use all means necessary to protect irrigation system materials before, during, and after installation and to protect the installed work and materials of all other trades.
- B. In the event of damage, immediately make all repairs and replacements necessary to the approval of the owner and at no additional cost to the owner.

3.2 SURFACE CONDITIONS

- A. Inspection
 - 1. Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
 - 2. Verify that trenching may be completed in accordance with the original design and the referenced standards.
 - 3. In the event of discrepancy, immediately notify the owner. Do not proceed with installation in areas of discrepancy until all discrepancies have been fully resolved.

3.3 TRENCHING

- A. Perform all trenching required for the installation of items where the trenching is not specifically described in other sections of these Specifications.
- B. Make all trenches in accordance with OSHA Requirements with sufficient width to provide free working space at both sides of the trench and around the installed item as required for gluing, joining, backfilling, and compacting while minimizing width of trenches.
- C. All mainline shall have a minimum cover of thirty six inches (36") and a maximum cover of forty eight (48") above the pipe. All laterals shall be the same depth as the mainline. All lateral and main lines shall be installed in a straight line with no arching or bending of pipe. Change in direction of pipe shall occur only with the use of proper fittings only.
- D. Where trench excavation is inadvertently carried below proper elevations, backfill with material approved by the owner and then compact to provide a firm and unyielding subgrade to the approval of the owner and at no additional cost to the owner.
- E. Trench Bracing
 - 1. Properly support all trenches in strict accordance with all pertinent rules and regulations.
 - 2. Brace, sheet, and support trench walls in such a manner that they will be safe and that the ground alongside the excavation will not slide or settle, and that all existing improvements of every kind will be fully protected from damage.
 - 3. In the event of damage to such improvements, immediately make all repairs and replacements necessary to the approval of the owner and at no additional cost to the owner.
 - 4. Arrange all bracing, sheeting and shoring so as to not place stress on any portion of the completed work until the general construction thereof has proceeded far enough to provide sufficient strength.
 - 5. Exercise care in the drawing and removal of sheeting, shoring, bracing, and timbering to prevent collapse or caving of the excavation faces being supported.
- F. Grading and Stockpiling Trenched Material
 - 1. Control the stockpiling of trenched material in a manner to prevent water running into the excavations.
 - 2. Do not obstruct surface drainage but provide means whereby storm and waste waters are diverted into existing gutters, other surface drains, or temporary drains.
- G. All trench excavation shall be made by open cut. During excavation, material suitable for backfilling shall be piled in an orderly manner a sufficient distance from the banks of the trench to avoid overloading, and to prevent slides or cave-ins. The Contractor shall

remove all material not required for backfill or not suitable for backfill, from the site. Banks of trenches shall be kept as nearly vertical as possible, and shall be properly sheeted and braced as may be necessary to prevent caving.

- H. Trench widths in paved streets or in areas where proximity to other structures require vertical cuts, shall not be wider than is required for proper handling, jointing and bedding of the pipe.
- I. The bottom of the trenches shall be accurately graded to line and grade, and provide uniform bearing and support for each section of the pipe on undisturbed soil, at every point along its entire length. Depressions for joints shall be dug after the trench bottom has been graded, and shall be only of such length, depth and width as required for properly making the particular type joint. Care shall be taken not to excavate below the depths indicated.
- J. Where rock occurs in trench excavation, the rock shall be removed to a depth of six inches (6") (150mm) below the established grade line, and to a width of twelve inches (12") (300mm) greater than the outside diameter of the pipe to be installed in the trench.
- K. Where excavation of trenches requires the removal of asphalt pavement, the pavement shall be cut in a straight line along the edge of the excavation by use of a spade-bitted air hammer, concrete saw, or similar approved equipment to obtain straight, square and clean break; and, after backfilling and subgrade preparations are completed, hot plant mix asphalt concrete shall be replaced and compacted in accordance with the appropriate standard specification. Replaced base course and asphalt shall match removed sections.
- L. Excess material, including rock, broken concrete, bituminous materials, debris, or other materials not suitable for backfill, shall be removed from the site and disposed of by the Contractor.

3.4 SLEEVES

- A. Sleeves shall be installed wherever routing of a pipe, wiring, or both crosses a paved area or passes through a bored hole.
- B. Sleeves laid in open trenches shall be uniformly and evenly supported by undisturbed soil on the trench bottom. Backfill shall conform to standards hereinafter specified.

3.5 BACKFILL

- A. The trenching shall not be backfilled until inspection by the City has been completed and the pipe installation, including the grade, alignment, and jointing has been found to be in compliance with the requirements of the plans and specifications.

- B. Select backfill material consisting of sand, fine gravel or select earth, free of large lumps or rocks larger than one inch (1") (25mm) shall be used in backfilling around and over the installed pipe.
- C. The select material shall be obtained from the excavation material removed from the trench and shall be processed by screening, sifting, or selective sorting, so as to produce the type of backfill herein specified. The Contractor may at his option and own expense provide an acceptable imported material.
- D. This backfill material shall be carefully deposited around and over the pipe in layers not more than six inches (6") (150mm) thick, loose measurement, unless otherwise permitted by the City, wetted to optimum moisture content and uniformly compacted to at least 95 percent of the maximum density obtainable at optimum moisture content as determined by AASHTO T99 Method A or D (latest revision), until the pipe has a cover depth of at least twenty four inches (24").
- E. The remaining depth of the trench shall be backfilled with excavation material removed from the trench, which shall be wetted or dried to near optimum moisture content.

3.6 INSTALLATION OF PIPING

- A. Perform all trenching and backfilling as specified by the specifications in this Section.
- B. Lay out the piping system in strict accordance with the plans. Where piping is shown on the plans to be under paved areas, but running parallel and adjacent to planted areas, the intention is to install the piping in the planted areas.
- C. All mainlines and laterals shall be installed with thirty six inches (36") minimum cover, and a maximum of forty eight inches (48") cover, over the pipe.
- D. All lines shall have a minimum clearance (horizontal and vertical) of four inches (4") (100mm) of adjacent pipe from each other, and six inches (6") (150mm) from lines of other trades, except through pipe sleeves. Parallel lines shall not be installed directly over one another.
- E. Carefully inspect all pipe and fittings before installation, removing all dirt, scale, and burrs and reaming as required; install all pipe with all markings up for visual inspection and verification.
- F. PVC Pipe
 - 1. Plastic pipe shall be installed in a manner so as to provide for expansion and contraction as recommended by the manufacturer.
 - 2. All plastic joints shall be solvent-weld joints. Only the solvent cement recommended by the pipe manufacturer shall be used. All plastic pipe and fittings shall be installed as outlined and instructed by the pipe manufacturer and it shall

be the Contractor's responsibility to make arrangements with the pipe manufacturer for any field assistance that may be necessary. The Contractor shall assume full responsibility for the correct installation.

3. All plastic to metal joints shall be made with plastic adapters.
4. The solvent-weld joints shall be made dry.
5. The solvent-weld joints shall be allowed to set at least 24 hours before pressure is applied to the system on PVC pipe.
6. Swing joints shall be installed on the same side of the pipe as the head. Swing joints may not cross pipe laterally.

3.7 INSTALLATION OF EQUIPMENT

- A. All fittings, valves, etc. shall be carefully placed in the trenches as shown on the plans.
- B. All control wires shall be clearly labeled, by station, using weatherproof material, both at the controller and at the valve. The outside cover of all automatic valve boxes shall also have the station number clearly stamped on the cover.

3.8 TESTING AND INSPECTION

- A. Closing-in Work
 1. Do not allow or cause any of the work in this section to be covered up or enclosed until it has been inspected, tested, and approved by the owner.
 2. Where trenches are not closed at the end of the day Contractor shall accept all liability for any damage or injury that may result from open trenches. Provide barricades and warning tape as necessary around all open trenches.
- B. Before backfilling the mainline, and with all control valves in place, completely flush and test the mainline and repair all leaks; flush out each section of lateral pipe before sprinkler heads are attached.
- C. Testing
 1. Make all necessary provisions for thoroughly bleeding the line of air and debris.
 2. Before testing, fill the line with water for a period of at least 24 hours.
 3. After valves have been installed, test all installed irrigation lines for leaks at a pressure of 150 psi (1035 kPa) for a period of two hours, with all couplings exposed and with all pipe sections center loaded.
 4. Furnish all necessary testing equipment and personnel.
 5. Correct all leaks and retest until acceptance by the Engineer.
- D. Final Inspection
 1. Thoroughly clean, adjust, and balance all systems.

- E. Demonstrate the entire system to the Engineer, proving that all remote control valves are properly balanced, that all heads are properly adjusted for radius and arc of coverage, and that the installed system is workable, clean, and efficient.

END OF SECTION 328000

SECTION 329113 - SOIL PREPARATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes planting soils.

1.3 DEFINITIONS

- A. AAPFCO: Association of American Plant Food Control Officials.
- B. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.
- C. CEC: Cation exchange capacity.
- D. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.
- E. Duff Layer: A surface layer of soil, typical of forested areas, that is composed of mostly decayed leaves, twigs, and detritus.
- F. Imported Soil: Soil that is transported to Project site for use.
- G. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.
- H. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.
- I. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.
- J. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."
- K. Planting Soil: Imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

- L. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.
- M. SSSA: Soil Science Society of America.
- N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.
- O. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.
- P. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.
- Q. USCC: U.S. Composting Council.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Material Certificates: For each type of imported soil and soil amendment and fertilizer before delivery to the site, according to the following:
 - a. Manufacturer's qualified testing agency's certified analysis of standard products.
 - b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.

1.6 PRECONSTRUCTION TESTING

- A. Preconstruction Soil Analyses: For each unamended soil type, perform testing on soil samples and furnish soil analysis and a written report containing soil-amendment and fertilizer recommendations by a qualified testing agency performing the testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.
 - 1. Have testing agency identify and label samples and test reports according to sample collection and labeling requirements.

1.7 TESTING REQUIREMENTS

- A. General: Perform tests on soil samples according to requirements in this article.
- B. Physical Testing:
 - 1. Soil Texture: Soil-particle, size-distribution analysis by one of the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":

- a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.
 - b. Hydrometer Method: Report percentages of sand, silt, and clay.
 2. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
 3. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
 4. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85% compaction according to ASTM D 698 (Standard Proctor).
- C. Chemical Testing:
1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."
 2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1- Physical and Mineralogical Methods."
 3. Metals Hazardous to Human Health: Test for presence and quantities of RCRA metals including aluminum, arsenic, barium, copper, cadmium, chromium, cobalt, lead, lithium, and vanadium. If RCRA metals are present, include recommendations for corrective action.
 4. Phytotoxicity: Test for plant-available concentrations of phytotoxic minerals including aluminum, arsenic, barium, cadmium, chlorides, chromium, cobalt, copper, lead, lithium, mercury, nickel, selenium, silver, sodium, strontium, tin, titanium, vanadium, and zinc.
- D. Fertility Testing: Soil-fertility analysis according to standard laboratory protocol of SSSA NAPT WERA-103, including the following:
1. Percentage of organic matter.
 2. CEC, calcium percent of CEC, and magnesium percent of CEC.
 3. Soil reaction (acidity/alkalinity pH value).
 4. Buffered acidity or alkalinity.
 5. Nitrogen ppm.
 6. Phosphorous ppm.
 7. Potassium ppm.
 8. Manganese ppm.
 9. Manganese-availability ppm.
 10. Zinc ppm.
 11. Zinc availability ppm.
 12. Copper ppm.
 13. Sodium ppm[and sodium absorption ratio].
 14. Soluble-salts ppm.
 15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.
 16. Other deleterious materials, including their characteristics and content of each.

- E. Recommendations: Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory planting soil suitable for healthy, viable plants indicated. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.
 - 1. Fertilizers and Soil Amendment Rates: State recommendations in weight per cu yd of soil.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 - 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 - 2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 - 3. Do not move or handle materials when they are wet or frozen.
 - 4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 PLANTING SOILS

- A. General: Soil amendments, fertilizers, and rates of application specified in this article are guidelines that may need revision based on testing laboratory's recommendations after preconstruction soil analyses are performed.
- B. Planting-Soil: Manufactured soil consisting of manufacturer's basic topsoil, blended in a manufacturing facility with sand, stabilized organic soil amendments, and other materials to produce viable planting soil.
 - 1. Additional Properties of Manufacturer's Basic Soil before Amending: Soil reaction of pH 6 to 7 and minimum of 5 percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration.
 - 2. Unacceptable Properties: Manufactured soil shall not contain the following:
 - a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
 - b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 5 percent by dry weight of the manufactured soil.
 - c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 2 inches (50 mm) in any dimension.

2.2 INORGANIC SOIL AMENDMENTS

- A. Lime: ASTM C 602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:
 - 1. Class: T, with a minimum of 99 percent passing through a No. 8 (2.36-mm) sieve and a minimum of 75 percent passing through a No. 60 (0.25-mm) sieve.
 - 2. Class: O, with a minimum of 95 percent passing through a No. 8 (2.36-mm) sieve and a minimum of 55 percent passing through a No. 60 (0.25-mm) sieve.
- B. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent elemental sulfur, with a minimum of 99 percent passing through a No. 6 (3.35-mm) sieve and a maximum of 10 percent passing through a No. 40 (0.425-mm) sieve.
- C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.
- D. Perlite: Horticultural perlite, soil amendment grade.
- E. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through a No. 50 (0.30-mm) sieve.
- F. Sand: Clean, washed, natural or manufactured, free of toxic materials, and according to ASTM C 33/C 33M.

2.3 ORGANIC SOIL AMENDMENTS

- A. Compost: Well-composted, stable, and weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance".
- B. Wood Derivatives: Shredded and composted, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.
- C. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

2.4 FERTILIZERS

- A. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:
 - 1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

PART 3 - EXECUTION

3.1 GENERAL

- A. Place planting soil and fertilizers according to requirements in other Specification Sections.
- B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.
- C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.2 CLEANING

- A. Protect areas adjacent to planting-soil preparation and placement areas from contamination. Keep adjacent paving and construction clean and work area in an orderly condition.
- B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off Owner's property unless otherwise indicated.
 - 1. Dispose of excess subsoil and unsuitable materials on-site where directed by Owner.

END OF SECTION 329113

SECTION 329300 - PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Plants.
 - 2. Tree stabilization.
 - 3. Landscape edgings.

1.3 DEFINITIONS

- A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
- B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.
- C. Balled and Potted Stock: Plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less diameter and depth recommended by ANSI Z60.1 for type and size of plant required.
- D. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than the minimum root spread according to ANSI Z60.1 for type and size of plant required.
- E. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.
- F. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.
- G. Finish Grade: Elevation of finished surface of planting soil.

- H. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.
- I. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.
- J. Planting Area: Areas to be planted.
- K. Planting Soil: Imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.
- L. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.
- M. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.
- N. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.
- O. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
- B. Samples for Verification: For each of the following:
 - 1. Mineral Mulch: 2 lb (1.0 kg) of each mineral mulch required, in sealed plastic bags labeled with source of mulch. Sample shall be typical of the lot of material to be delivered and installed on-site; provide an accurate indication of color, texture, and makeup of the material.
 - 2. Weed Control Barrier: 12 by 12 inches (300 by 300 mm).
 - 3. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.
- B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:
 - 1. Manufacturer's certified analysis of standard products.
 - 2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.
- C. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of required maintenance periods.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.
 - 1. Experience: Three > years' experience in landscape installation in addition to requirements in Section 014000 "Quality Requirements."
- B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.
 - 1. Selection of plants purchased under allowances is made by Architect, who tags plants at their place of growth before they are prepared for transplanting.
- C. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.
 - 1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches (150 mm) above the root flare for trees up to 4-inch (100-mm) caliper size, and 12 inches (300 mm) above the root flare for larger sizes.
- D. Plant Material Observation: Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Architect of sources of planting materials seven days in advance of delivery to site.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 3. Accompany each delivery of bulk materials with appropriate certificates.
- C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.
- D. Handle planting stock by root ball.
- E. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.
- F. Deliver plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.
 1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
 2. Do not remove container-grown stock from containers before time of planting.
 3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.
- B. Planting Restrictions: Plant during one of the following periods..
 1. Spring Planting: April 1 – June 15.
 2. Fall Planting: September 1 – November 15.

- C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

- A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
 - b. Structural failures including plantings falling or blowing over.
 - 2. Warranty Periods: From date of planting completion.
 - a. Trees, Shrubs, Vines, and Ornamental Grasses: 12 months.
 - b. Ground Covers, Biennials, Perennials, and Other Plants: Three months.
 - 3. Include the following remedial actions as a minimum:
 - a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
 - b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
 - c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
 - d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

- A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.
 - 1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch (19 mm) in diameter; or with stem girdling roots are unacceptable.
 - 2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.
- B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

- C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.
- D. Labeling: Label each plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant.
- E. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.

2.2 FERTILIZERS

- A. Planting Tablets: Tightly compressed chip-type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.
 - 1. Size: 10-gram tablets.
 - 2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.3 MULCHES

- A. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color:
 - 1. Type: [Rounded riverbed gravel or smooth-faced stone] [Crushed stone or gravel] [Marble chips] [Granite chips] <Insert stone type>.
 - 2. Size Range: As indicated on plans.
 - 3. Color: Readily available natural gravel color range acceptable to Architect.

2.4 WEED-CONTROL BARRIERS

- A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. (101g/sq. m) minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.

2.5 PESTICIDES

- A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.
- B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.
- C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.6 TREE-STABILIZATION MATERIALS

A. Trunk-Stabilization Materials:

1. Upright and Guy Stakes: Rough-sawn, sound, new hardwood free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal (38-by-38-mm actual) by length indicated, pointed at one end.
2. Guy Cables: Five-strand, 3/16-inch- (4.8-mm-) diameter, galvanized-steel cable, with zinc-coated turnbuckles a minimum of 3 inches (75 mm) long, with two 3/8-inch (10-mm) galvanized eyebolts.
3. Flags: Standard surveyor's plastic flagging tape, white, 6 inches (150 mm) long.

2.7 LANDSCAPE EDGINGS

a.

B. Aluminum Edging: Standard-profile extruded-aluminum edging, ASTM B 221 (ASTM B 221M), Alloy 6063-T6, fabricated in standard lengths with interlocking sections with loops stamped from face of sections to receive stakes.

1. Edging Size: [3/16 inch (4.8 mm) thick by 5-1/2 inches (140 mm) deep.
2. Stakes: Aluminum, ASTM B 221 (ASTM B 221M), Alloy 6061-T6, approximately 1-1/2 inches (38 mm) wide by 12 inches (300 mm) long.
3. Finish: Manufacturer's standard finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.
 1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
 2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
 3. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
 4. Uniformly moisten excessively dry soil that is not workable or which is dusty.
- B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

- B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
- C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.
- D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.3 PLANTING AREA ESTABLISHMENT

- A. General: Prepare planting area for soil placement and mix planting soil according to Section 329113 "Soil Preparation."
- B. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.4 EXCAVATION FOR TREES AND SHRUBS

- A. Planting Pits and Trenches: Excavate circular planting pits.
 - 1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
 - 2. Excavate approximately three times as wide as ball diameter for balled and burlapped and container-grown stock.
 - 3. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
 - 4. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
 - 5. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
 - 6. Maintain supervision of excavations during working hours.
 - 7. Keep excavations covered or otherwise protected [overnight] [after working hours] [when unattended by Installer's personnel].
- B. Backfill Soil: Subsoil and topsoil removed from excavations may not be used as backfill soil unless otherwise indicated.
- C. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.
- D. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

- A. Inspection: At time of planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.
- B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.
- C. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.
 - 1. Backfill: Planting soil.
 - 2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
 - 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 - 4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
 - a. Quantity: Two per plant.
 - 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- D. Container-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.
 - 1. Backfill: Planting soil.
 - 2. Carefully remove root ball from container without damaging root ball or plant.
 - 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 - 4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
 - a. Quantity: Two per plant.
 - 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- E. Slopes: When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.6 TREE, SHRUB, AND VINE PRUNING

- A. Remove only dead, dying, or broken branches. Do not prune for shape.
- B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.
- C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.
- D. Do not apply pruning paint to wounds.

3.7 TREE STABILIZATION

- A. Trunk Stabilization by Upright Staking and Tying: Install trunk stabilization as follows unless otherwise indicated:
 - 1. Upright Staking and Tying: Stake trees of 2- through 5-inch (50- through 125-mm) caliper. Stake trees of less than 2-inch (50-mm) caliper only as required to prevent wind tip out. Use a minimum of two stakes of length required to penetrate at least 18 inches (450 mm) below bottom of backfilled excavation and to extend at least 72 inches (1830 mm) above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.
 - 2. Support trees with bands of flexible ties at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
 - 3. Support trees with two strands of tie wire, connected to the brass grommets of tree-tie webbing at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.

3.8 GROUND COVER AND PLANT PLANTING

- A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on Drawings in even rows with triangular spacing.
- B. Use planting soil for backfill.
- C. Dig holes large enough to allow spreading of roots.
- D. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.
- E. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.
- F. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.9 PLANTING AREA MULCHING

- A. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 6 inches (150 mm) and secure seams with galvanized pins.

- B. Mulch backfilled surfaces of planting areas and other areas indicated.
 - 1. Mineral Mulch in Planting Areas: Apply 3-inch (75-mm) average thickness of mineral mulch extending 12 inches (300 mm) beyond edge of individual planting pit or trench and over whole surface of planting area], and finish level with adjacent finish grades. Do not place mulch within 3 inches (75 mm).

3.10 PLANT MAINTENANCE

- A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.
- B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.
- C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.11 REPAIR AND REPLACEMENT

- A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Architect.
 - 1. Submit details of proposed pruning and repairs.
 - 2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
 - 3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.
- B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.
 - 1. Species of Replacement Trees: Species selected by Architect.

3.12 CLEANING AND PROTECTION

- A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.
- B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.
- C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

- D. After installation and before Substantial Completion remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.
- E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

END OF SECTION 329300

SECTION 335210 – FUEL SYSTEMS SERVICE STATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Delegated Design-Build requirements for fueling system service station
- B. Related Requirements:
 - 1. Section 011000 "Summary" for use of the premises and phasing requirements.

1.2 REFERENCES

- A. ASME B31.3: Process Piping
- B. NFPA 30: Flammable and Combustible Liquids Code
- C. NFPA 30A: Code for Motor Fuel Dispensing Facilities and Repair Garages
- D. NFPA 70: National Electrical Code

1.3 PREINSTALLATION MEETINGS

- A. Preconstruction Conference: Conduct conference at Project site.

1.4 INFORMATIONAL SUBMITTALS

- A. Shop Drawings: Provide drawings and specifications as required by the Nevada LP-Gas Board for permit application.
- B. Product Data: For all components
- C. Certificates:
 - 1. Contractor Qualifications
 - 2. Licensed Personnel
- D. Operation and Maintenance Data

1.5 QUALITY ASSURANCE

- A. Each installation Contractor must have successfully completed at least 3 projects of the same scope and the same size, or larger, within the last 6-years; demonstrate specific installation experience in regard to the specific system installation to be performed; have taken, if applicable, manufacturer's training courses on the installation of piping; and meet the licensing requirements in the state. Experience must include the erection of piping systems in compliance with the requirements of ASME B31.3, NFPA 30, and NFPA 30A. Submit a letter listing prior projects, the date of construction, a point of contact for each prior project, the scope of work of each prior project, and a detailed list

of work performed providing in the letter evidence of prior manufacturer's training and state licensing.

1.6 REGULATORY REQUIREMENTS

- A. Licensed Personnel: Pipe installers must be licensed/certified when the state, city or locality requires licensed installers.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Handle, store, and protect system components and materials to prevent damage before and during installation in accordance with the manufacturer's recommendations. Replace damaged or defective items.

1.8 FIELD CONDITIONS

- A. Fuel required for the testing, flushing and cleaning efforts will be provided and delivered by the Contractor. Fuel used in the system will remain the property of Washoe County School District.

1.9 COORDINATION

- A. Arrange construction so as not to interfere with Owner's on-site operations or operations of adjacent occupied buildings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with all applicable laws and regulations.
- B. Delegated Design Build Criteria: Fueling area to be design-build. Refer to Sheet A1.21. Not all elements (piping, hanging hardware, turbines, valves, etc.) are shown on the plans or listed in the schedule provided on sheet A1.21. Contractor is to provide all elements required for a functional and code compliant fueling system. Fueling contractor is to provide required drawings and specifications for required permit applications and make any revisions as required by the permitting agencies. Contractor is responsible for obtaining the permits, including any permit fees.
- C. Permits:
 - 1. Nevada LP-Gas Board: Class 5 License
 - 2. Washoe County Health District: Gasoline Dispensing Facility Air Quality Stationary Source Permit to Operate
 - 3. City of Sparks: Construction Permit
 - 4. Any other required permits
- D. Related Drawings:
 - 1. A1.21 – Fueling Area
 - 2. All Civil drawings
 - 3. Structural Detail 4/S4.2
 - 4. Electrical **sheets E6.04 and WB-E3.05** (Volume 2)

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Installation, workmanship, fabrication, assembly, erection, examination, inspection, and testing must be in accordance with ASME B31.3 and NFPA 30. Safety rules as specified in NFPA 30 must be strictly observed. Never direct bury threaded connections, socket welded connections, unions, flanges, valves, air vents, or drains. Install all work so that parts requiring periodic inspection, operation, maintenance, and repair are readily accessible.

3.2 FIELD QUALITY CONTROLS

- A. Testing:
 - 1. Furnish labor, materials, equipment, electricity, repairs, and retesting necessary to ensure a functional system.

3.3 DEMONSTRATIONS

- A. Conduct a training session for designated Washoe County School District personnel in the operation and maintenance procedures related to the system components and specified herein. Include pertinent safety operational procedures in the session as well as physical demonstrations of the routine maintenance operations. Furnish instructors who are familiar with the installation/system components/systems, both operational and practical theories, and associated routine maintenance procedures. The training session must start after the system is functionally completed, but prior to final system acceptance. Submit a letter, at least 14 working days prior to the proposed training date, scheduling a proposed date for conducting the onsite training.

END OF SECTION 335210

SECTION 41 22 46 – CEILING MOUNTED WORK STATION BRIDGE CRANE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes: Ceiling mounted, work station, steel bridge crane including hanger assemblies, runways, movable bridge, hoist trolley, tractor drive, hoist, festooning system, and other accessories.
- B. Related sections:
 - 1. Section 133419 “Metal Building Systems” for engineered metal building system designed to support crane and live loads.
 - 2. Division 26 - Electrical: Electrical supply, conduit, wiring, and other electrical components for powering lifting device hoist trolley tractor drive.
 - 3. **Section 416720 “Fall Arrest Anchor System” for overhead mounted fall arrest system that may be combined with bridge crane.**

1.2 REFERENCES

- A. American Institute of Steel Construction (AISC): Manual of Steel Construction, Part 5, Specification for Structural Joints Using ASTM A325 or ASTM A490 Bolts.
- B. American National Standards Institute (ANSI):
 - 1. ANSI B30.11 - Monorails and Underhung Cranes.
- C. American Society for Testing and Materials (ASTM) Publications:
 - 1. ASTM A36 - Carbon Structural Steel.
 - 2. ASTM A325 - Structural Bolts, Steel, Heat Treated, 120/150 ksi Minimum Tensile Strength.
 - 3. ASTM A490 - Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength.
- D. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
- E. Occupational Safety and Health Administration (OSHA): OSHA Specification 1910.179 - Overhead and Gantry Cranes.

1.3 PERFORMANCE REQUIREMENTS

- A. Crane shall provide coverage of rectangular area of size indicated on Drawings and consist of:
 - 1. Overhead hanger assemblies leaving crane operating area free of support structures.
 - 2. Two rigid, parallel runways. Cranes with more than two runways or with articulating runways are not acceptable.
 - 3. Rigid, single girder bridge moving perpendicular to runways. Double girder bridges and ones with articulating or threaded connections are not acceptable.
- B. Modular, pre-engineered design: Crane system shall be capable of expansion, disassembly and relocation, and accepting additional or multiple mixed capacity bridges.
- C. Productivity ratio: Crane shall be designed to manually move load with maximum force of 1/100 load weight.
- D. Runway and bridge track: Enclosed type limiting dust and dirt collection on rolling surfaces with maximum deflection of 1/450 span based on capacity plus 15 percent for lifting device weight.
- E. Crane operating temperature: 5 to 200 degrees F.
- F. Crane shall be designed to withstand:
 - 1. Crane and hoist dead load.
 - 2. Live load capacity equal to net rated hook load: 3,000 lbs .
 - 3. Inertia forces from crane and load movement.

1.4 SUBMITTALS

- A. Provide in accordance with Section 01 33 00 - Submittal Procedures:
 - 1. Product data for crane and accessories. Describe capacities, performance, operation, and applied forces to foundation.
 - 2. Shop drawings showing crane configuration, dimensions, wiring diagrams, and construction and installation details.
 - 3. Copy of warranty required by Paragraph 1.6 for review by Architect.
 - 4. Manufacturer's installation instructions.
 - 5. Manufacturer's operation and maintenance manual.

1.5 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in designing and manufacturing cranes with 25 years successful experience.
- B. Installer: Company experienced in assembly and installation of cranes with 5 years successful experience and acceptable to crane manufacturer.
- C. Crane shall be designed, fabricated, and installed in accordance with ANSI B30.11, and OSHA 1910.179.
- D. Base crane structural design includes full rated load capacity plus 15 percent for hoist and trolley weight and 25 percent impact factor for speed of lifting device and weight of tooling.
- E. Perform welding by certified operators in accordance with AWS D14.1.
- F. Bolted connections shall be in accordance with torque tightening procedures specified in AISC Manual, Part 5.
- G. Clearly label crane with rated load capacity. Place label at height and location easily read from floor level and loading position.

1.6 WARRANTY

- A. Provide under provisions of Section 01 78 00 - Closeout Submittals:
 - 1. 10 year warranty for crane to cover defects in materials and workmanship.
 - 2. 2 years warranty for motorized tractor drive.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Gorbel, Inc., P.O. Box 593, Fishers, New York 14453-0593; 800-828-0086; www.gorbel.com.
- B. Requests to use equivalent products of other manufacturers shall be submitted in accordance with Section 01 25 13 - Product Substitution Procedures.

2.2 CEILING MOUNTED WORK STATION STEEL BRIDGE CRANE

GLCS: Cranes with trussed steel runways supported at 20 feet ~~(6.1 meters)~~ maximum **17 feet 9 inches**.

- A. Type: Ceiling mounted, work station, all-steel construction, bridge crane with overhead hanger assemblies, two runways, bridge moving perpendicular to runways, and equipped with enclosed track, end trucks, hoist trolley, tractor drive, festooning system, bumpers, and other accessories; Model No. GLCS-4000-16S-110 as manufactured by Gorbel, Inc.
- B. Runway length: 110 feet.
- C. Bridge length: ~~46~~ **15** feet
- D. Construction: Fabricate from ASTM A36 steel sections with finished ends and surfaces.
 - 1. Hanger assemblies: Provide number and type of hanger assemblies required for suspending runways from overhead steel beam support structure.
 - a. Equip assemblies with upper hanger bracket adjustable for mounting to 1 to 10 inch [25 to 254mm] wide flanges.
 - b. Two-piece hangers suspending runways below support beams shall consist of upper hanger bracket with beam clips and lower runway bracket connected with B7 alloy threaded steel rod. Provide rods in 20 and 72 inch lengths for field cutting. Assemblies shall be designed for supporting either plain enclosed steel track runways or trussed steel runways.
 - c. Hangers for flush mounting plain or trussed enclosed steel track shall be one-piece assembly designed for runways either parallel or perpendicular to support beams.
 - 2. Sway bracing: ~~Brace runways as detailed on Drawings and specified in Section 05 12 00 – Structural Steel. Provide runways with sway brace fittings for attachment of 1 inch diameter diagonal pipe bracing to top chord of trussed runway.~~ **Brace runways as required for seismic classification designated on drawings and for other design loads. Design of bracing part of metal building system delegated design.**
 - 3. Runways: Vierendeel truss fabricated from square steel tubes and enclosed steel track.
 - a. Track: Enclosed, cold formed, steel box track which serves as bottom cord of runway and permits end trucks and festoon carriers to ride on lower inside flanges. Fabricate lower running flanges with 2 degrees taper to center trolley within track. Flat, non-centering tracks are not acceptable.
 - b. Splice joint: Provide truss splice plates, channel-shaped track splice joint, bolts, lockwashers, and nuts for joining runway sections.

4. Bridge: Single girder, Vierendeel truss fabricated from rectangular steel tubes and enclosed steel box track.
 - c. Track serves as bottom cord of bridge and permits hoist trolley and festoon carriers to ride on lower inside flanges.
 - d. Fabricate track lower running flanges with 2 degrees taper to center trolley within track. Flat, non-centering tracks are not acceptable.
5. End trucks: Rigid frame end truck designed to ride inside enclosed runway track and connect to and suspend bridge.
 - a. Construction: Stamped steel fabrication with both vertical and horizontal wheels to prevent binding in runway. Designs with welds in tension are not acceptable.
 - b. Wheels: Removable, self-centering wheels with sealed lifetime lubricated bearings. Vertical wheels shall be tapered 2 degrees to match track profile. Non-removable or non-tapered wheels are not acceptable. Duracomp 4® wheel material is preferred. Steel wheels are not acceptable.
 - c. Drop lugs: Provide on both sides of truck to limit truck drop to 1 inch [25mm] maximum in event of wheel, axle, or load bar failure.
 - d. Connection to the bridge: Provide a rigid connection between bridge and end truck. Articulating connections with threaded hardware are not acceptable.
6. Hoist trolley: Rigid-body trolley designed to ride inside enclosed track of bridge and carry hoist and load. Articulating trolleys are not acceptable.
 - a. Construction: Two-piece stamped steel body with two wheels each side and tapered clevis positioning hoist hook at center of trolley so load weight is evenly distributed to all four trolley wheels. Provide removable clevis pin of type and size determined by manufacturer for specified capacity. Trolleys with non-removable clevis pins are not acceptable.
 - b. Wheels: Removable, self-centering wheels with sealed lifetime lubricated bearings. Vertical wheels shall be tapered 2 degrees to match track profile. Non-removable or non-tapered wheels are not acceptable. Duracomp 4® wheel material is preferred. Steel wheels are not acceptable.
 - c. Drop lugs: Provide on both sides of trolley to limit trolley drop to [1 inch] [25mm] maximum in event of wheel, axle, or load bar failure.
7. End stops: Molded composite, resilient bumper installed in runway and

bridge tracks to prevent end trucks, hoist trolley, and festoon carriers from rolling out of track. Bolt stops without energy absorbing bumper are not acceptable.

8. Hoist: 94876

a. **Capacity: 2 tons**

9. **Voltage: 230 V**

2.3 TRACTOR DRIVE

- A. Provide electric tractor drive for motorized operation of hoist trolley and end truck; Tractor Drive as manufactured by Gorbel, Inc.
- B. Type: Variable frequency drive assembly with worm gear reducer, molded polyurethane tread, and adjustable counter-balance to ensure proper drive wheel alignment.
- C. Speed: 70 feet [21.3] per minute.
- D. Motor: 1/3 HP, 1800 RPM, 3 phase, 208-460 volt, with thermal overload protection.
- E. Controls: 120 volt control package with transformer, terminal strips, fusing, enclosure, and mounting brackets to be field wired to drive motor.
 - a. Confirm with electrical engineer.

2.4 ACCESSORIES

- A. Provide ~~length of flat electrical cable~~ **conductor bar** to supply **electricity to** lifting device ~~and festoon along bridge and runway.~~
- B. ~~Festoon trolleys: Four wheeled trolleys with pivoting saddle and U-bolt clamp to support electrical cable on runway or bridge and allowing festooning as end truck or hoist trolley travels.~~
- ~~C. Festoon clamp: Steel clamp assembly attached to track to prevent festoon trolleys exiting track.~~

2.5 SHOP FINISHING

- A. Steam wash steel crane components with iron phosphate solution and apply baked enamel finish. Colors shall be:
 - 1. Hanger assemblies and runways: Blue. Other colors available upon request.
 - 2. Bridge: Yellow. Other colors available upon request.

- B. Provide spray cans of matching colors, air-drying paint for field touch-up. Blue and yellow only.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Coordinate provision of crane with:
 - 1. Design and construction of overhead steel framing to receive ceiling mounted crane and sway bracing as detailed on Drawings and specified in other sections. Ensure that accurate crane applied forces are provided for structural support design.
 - 2. Provision of electrical supply, conduit, wiring, and other electrical components for powering [motorized tractor drives] electrically operated lifting device.
- B. Prior to installation:
 - 1. Verify overhead support structure is ready to receive ceiling mounted work station bridge crane.
 - 2. Verify type and location of power supply.
 - 3. Inventory parts. Verify all required components are available and undamaged.

3.2 INSTALLATION

- A. Install crane and accessories in accordance with manufacturer's instructions and shop drawings.
- B. Do not modify crane components in any manner without advance, written approval from crane manufacturer.
- C. Clearances for moving crane components:
 - 1. 3 inch minimum vertical clearance from any overhead obstruction.
 - 2. 2 inch minimum horizontal clearance from any lateral obstruction.
- D. Tighten mounting bolts to manufacturer recommended torque ratings.
- E. Mark hanger placement on overhead support structure and on runways in accordance with shop drawings.
- F. Sway brace fittings: Attach to runways at locations indicated on drawings and installation manual.

- G. B7 Alloy threaded suspension rod hanger assemblies: Assemble upper hanger bracket and bolt beam clips to steel support beams. Shim as required to ensure hanger is plumb. Attach lower hanger brackets to runways.
- H. Lift runways into place and temporarily support. Connect threaded rod on upper hanger bracket to lower bracket. Ensure two minimum threads are beyond hexnut and rods are plumb and not bent.
- I. Flush mounted hanger assemblies: Bolt onto runways.
- J. Lift runways into place and temporarily support. Bolt hanger beam clips to support beams.
- K. Prior to torquing bolts, ensure runways are accurately spaced and:
 - 1. Level to within plus or minus 1/8 inch in 20 feet.
 - 2. Parallel with opposite runway to within plus or minus 1/8 inch in 20 feet.
 - 3. Track splice transitions are smooth with no raised areas to inhibit end truck operation.
- L. End stops: Bolt stops into runway track end opposite festooning end.
- M. End trucks: Mount bracket and drive to end truck. Slide one end truck onto festooning end of bridge track and clamp firmly into place. Slide other non-clamping truck onto end opposite festooning end (do not clamp this end truck into place).
- N. Prior to installing bridge, use clean dry cloth to clean inside flanges of runway and bridge tracks. Bolt end stop in bridge track opposite festooning end.
- O. Bridge: Lift bridge with end trucks to runways and insert end trucks into open ends of runways. Roll bridge down length of runway. Verify and adjust for smooth travel.
- P. Hoist trolley: Attach lifting device to hoist trolley saddle clevis. Secure clevis pin with cotter pin. Roll hoist trolley into open end of bridge track.
- Q. Hoist trolley tractor drive: Insert tractor drive into bridge track such that tow arm faces hoist trolley drive bracket. Adjust drive counterweight so drive frame hangs level from track. Adjust drive wheel to contact underside of top surface of track. Position trolley up to tractor drive and install self locking pin connecting tow arm to bracket on trolley.
- ~~R. Festoon stack section: Install section to end of runway track. Use leveling screws to align section and runway track. Position end stop and make welded connection as indicated on shop drawings.~~

- ~~_____ S. Festoon system: Install on runway and bridge.~~
- ~~_____ 1. Bolt festoon clamps to enclosed tracks. Slide festoon trolleys through open end of tracks. Thread electrical cable through festoon trolleys.~~
- ~~_____ 2. Equally space trolleys along track and secure cable with clamps.~~
- ~~_____ a. Runway: 72 inch [1829mm] spacing.~~
- ~~_____ b. Bridge: 36 inch [914mm] spacing.~~
- T. Make electrical connections from tractor drive to power source and install controls.

3.3 FIELD QUALITY CONTROL

- A. Move bridge and hoist trolley through entire travel to ensure crane is clear of obstructions and moves freely and smoothly.
- B. Inspect installed crane. Verify all bolts are tight and lock washers fully compressed.
- C. Field test crane and accessories for operating functions. Ensure crane movement is smooth and proper. [Verify motorized operation and controls function properly.] Adjust as required and correct deficiencies.
- D. Clean surfaces. If necessary, touch-up paint damage, scratches, and blemishes with manufacturer provided matching paint.
- E. Protect crane from other construction operations.

3.4 DEMONSTRATING AND TRAINING

- A. In accordance with Section 01 79 00 – Demonstration and Training, provide demonstration and training session for Owner's representative covering operation and maintenance of ceiling mounted work station bridge crane.

END OF SECTION

SECTION 41 67 20 - FALL ARREST ANCHOR SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes: Monorail fall arrest anchor system consisting of rigid, overhead mounted, enclosed track rail and wheeled tether trolleys.
- B. Related sections:
 - 1. Section 133419 "Metal Building Systems" for engineered metal building system designed to support fall arrest anchor system and live loads.
 - 2. **Section 412246 "Ceiling Mounted Work Station Bridge Crane" for bridge crane system that fall arrest system may be combined with.**

1.2 REFERENCES

- A. American Institute of Steel Construction (AISC): Manual of Steel Construction, Part 5, Specification for Structural Joints Using ASTM A325 or ASTM A490 Bolts.
- B. American National Standards Institute (ANSI):
 - 1. ANSI Z359 - Fall Protection Code.
- C. American Society for Testing and Materials (ASTM) Publications:
 - 1. ASTM A36 - Carbon Structural Steel.
 - 2. ASTM A325 - Structural Bolts, Steel, Heat Treated, 120/150 ksi Minimum Tensile Strength.
 - 3. ASTM A490 - Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength.
- D. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
- E. Occupational Safety and Health Administration (OSHA): OSHA Specification 1926 Subpart M - Fall Protection.

1.3 PERFORMANCE REQUIREMENTS

- A. Fall arrest anchor system in conjunction with connectors and harnesses provided by others shall provide a means of protecting worker from fall in elevated work environments while providing for worker mobility to perform tasks.

- B. System shall be overhead suspended, monorail type interior installation providing protection for area indicated on Drawings.
 - 1. Bridge system if combined with work station crane.**
- C. Installed track with tether trolleys shall be positioned at height indicated on drawings and should be straight and level to eliminate potential binding or drift.
- D. Fall arrest anchor system shall be designed to support multiple workers each weighing up to 310 pounds with tools.
- E. Anchor system shall support full impact of falls vertically and at inclines up to 30 degree angle.
- F. System and components shall be rated for 900 pounds maximum arresting force (MAF).
- G. Modular, pre-engineered design: Fall arrest anchor system shall be capable of expansion, disassembly, and relocation.
- H. Tether track: Enclosed type limiting dust and dirt collection on rolling surfaces.

1.4 SUBMITTALS

- A. Provide in accordance with Section 01 33 00 - Submittal Procedures:
 - 1. Product data for fall arrest anchor system and accessories. Describe materials, capacities, performance, and operation.
 - 2. Shop drawings showing system layout, configuration, dimensions, connections, supports, and fabrication and installation details.
 - 3. Design loads: Calculations of loads transmitted from fall arrest anchor system to supporting structure.
 - 4. Copy of warranty required by Paragraph 1.6 for review by Architect.
 - 5. Manufacturer's installation and maintenance instructions.

1.5 QUALITY ASSURANCE

- A. Manufacturer: Company specializing in designing and manufacturing overhead rail systems and lifting devices with 25 years successful experience.
- B. Fall arrest anchor system shall be designed, fabricated, and installed in accordance with ANSI Z359 and OSHA 1926, Subpart M.
- C. Perform welding by certified operators in accordance with AWS D14.1.

- D. Bolted connections shall be in accordance with torque tightening procedures specified in AISC Manual, Part 5.

1.6 WARRANTY

- A. Provide under provisions of Section 01780 - Closeout Submittals:
 - 1. 5 years warranty for fall arrest anchor system to cover defects in materials and workmanship.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Gorbelt, Inc., P.O. Box 593, Fishers, New York 14453-0593; 800-821-0086; www.gorbelt.com.
- B. Requests to use equivalent products of other manufacturers shall be submitted in accordance with Section 01 25 13 - Product Substitution Procedures.

2.2 FALL ARREST ANCHOR SYSTEM

- A. Type: Fall arrest anchor system consisting of rigid, overhead mounted, enclosed track rail and wheeled tether trolleys designed to protect workers from falls in elevated work environments; Tether Track Rigid Rail Anchor System as manufactured by Gorbelt, Inc. Wire rope anchor systems are not acceptable.
- B. Configuration: Monorail system designed to provide worker mobility along a single straight line axis.
- C. Layout: As indicated and dimensioned on Drawings and reviewed shop drawings.
- D. Number of workers each weighing no more than 310 pounds with tools to be supported: 2.
 - 1. **If combined with bridge crane, provide separate bridge for each worker, one on each side of crane bridge.**
- E. ~~Maximum~~ Distance between track supports: ~~48 feet.~~ **17 feet 9 inches.**
- F. ~~Maximum~~ Track cantilever: ~~4'-6"~~ **1 foot 9 inches.**
- G. **Track Length: 110 feet.**

2.3 COMPONENTS

- A. Tether track: Cold-rolled steel, enclosed track designed to accommodate

easy, smooth movement without forcing or jamming of tether trolley with attached connector and to effortlessly follow worker.

1. Profile: Rectangular, tubular section with continuous bottom slot to allow movement of trolley and connector. Bottom running flanges to have 2 degree taper to keep trolley centered. Flat, non-centering tracks are not acceptable.
- B. Fall arrest rails: Truss fabricated from tubular steel sections with tether track used as bottom cord; Trussed Tether Track, Model F500SLX as manufactured by Gorbel, Inc.
- C. Tether trolleys: Wheeled, steel fabrication designed specifically to use with tether track specified in Paragraph 2.3.A for fall arrest systems and provide fluid movement and stability; Tether Trolleys as manufactured by Gorbel, Inc.
2. Wheels: Equip each trolley with 3 pairs of wheels sized to roll within tether track.
 - a. Material: DURACOMP4 as provided Gorbel, Inc.
 - b. Profile: Provide wheels with 2 degree taper to match taper of tether track.
3. Connection device: Equip bottom of trolley with swivel eye for securing shock-absorbing lanyard or self-retracting lifeline and which allows free movement beneath trolley and prevents twisting of the connector.

D. Recovery Trolley

- E. **Bridge for fall arrest bridge system: Extruded aluminum beam with tether track enclosed profile as specified in Paragraph 2.3.A.1 for bottom flange.**
 1. **Maximum span between supporting side trolleys: 12 feet 6 inches**
 2. **Length: 14 feet 6 inches**
 3. **Finish: Aluminum mill finish.**
 4. **Hardware: Equip ends of aluminum bridge with means for attachment to side trolleys.**

2.4 ACCESSORIES

- A. Provide fall arrest anchor system with end stops, splices, connecting devices, fasteners, anchors, and other hardware and accessories as required for a complete, secure, structurally sound, safe installation as indicated on Drawings and reviewed shop drawings.

- B. Design and provide attachment or suspension system for overhead mounted fall arrest anchor system including anchors, brackets, clamps, fasteners, suspension assemblies, fittings, auxiliary framing, bracing, and other components for complete, functional installation.

2.5 SHOP FINISHING

- A. Steam wash steel components with iron phosphate solution and apply baked enamel finish. Colors shall be as selected by Architect from manufacturer's full range.
- B. Provide spray cans of matching colors, air-drying paint for field touch-up.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Coordinate provision of fall arrest anchor system with:
 - 1. Provision of fall arrest harnesses and connectors provided by others. Ensure that attachment of connectors is compatible with tether trolleys being provided.
 - 2. Design and installation of structural framing for overhead support of fall arrest anchor system as specified in Section 133419 "Metal Building Systems".
 - a. Verify that structure, spacing, and bracing of supports are compatible with structural capacities of fall arrest rails.
 - b. Verify that connections of fall arrest rails to overhead mounted supports have been adequately designed and that required anchors, fasteners, and other hardware has been provided.
- B. Prior to installation:
 - 1. Verify support structure is ready to receive fall arrest anchor system.
 - 2. Inventory parts. Verify all required components are available and undamaged.

3.2 INSTALLATION

- A. Install fall arrest anchor system in accordance with manufacturer's instructions and reviewed shop drawings.
- B. Do not modify system components in any manner without advance, written approval from system manufacturer.
- C. Rigidly attach fall arrest rails to overhead structural steel framing with

clamps, brackets, bolts, and other fittings as detailed on reviewed shop drawings.

- D. Install fall arrest rails with threaded suspension rod hanger assemblies as detailed on reviewed shop drawings. Attach upper hanger bracket to steel support framing and attach lower hanger brackets to rails. Lift rails into place and temporarily support. Connect threaded rods to upper and lower bracket. Ensure two minimum threads are beyond hexnut and rods are plumb and not bent.
- E. Install auxiliary bracing as required to prevent lateral and longitude sway and movement of system as detailed on Drawings and reviewed shop drawings.
- F. Prior to torquing bolts, ensure rails are:
 - 1. Accurately spaced and level.
 - 2. Tether track splice transitions are smooth with no raised areas to inhibit movement of trolley.
- G. Tighten mounting bolts to manufacturer recommended torque ratings.
- H. Tether trolleys: Insert into fall arrest track [and bridge rail] in quantities and at locations indicated on Drawings and reviewed shop drawings.
- I. End stops: Bolt stops into open ends of fall arrest track [and bridge rail] in accordance with manufacturer's instructions and reviewed shop drawings.

3.3 FIELD QUALITY CONTROL

- A. Move tether trolleys through entire travel to ensure system is clear of obstructions and trolleys move freely and smoothly.
- B. Inspect installed fall arrest anchor system. Verify all bolts are tight and lockwashers fully compressed.
- C. Field test system with connector and simulated load attached to swivel eye of tether trolley. Ensure system operates functionally, safely, and smoothly. Adjust as required and correct deficiencies.
- D. Clean surfaces. If necessary, touch-up paint damage, scratches, and blemishes with manufacturer provided matching paint.
- E. Protect fall arrest anchor system from other construction operations.

3.4 DEMONSTRATING AND TRAINING

- A. In accordance with Section 01 79 00 - Demonstration and Training, provide demonstration and training session for Owner's representative covering operation and maintenance of fall arrest anchor system.

SECTION 024116 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Demolition and removal of buildings and site improvements.
 - 2. Removing below-grade construction.
 - 3. Disconnecting, capping or sealing, and removing site utilities.
 - 4. Salvaging items for reuse by Owner.
- B. Related Requirements:
 - 1. Section 011000 "Summary" for use of the premises and phasing requirements.
 - 2. Section 013200 "Construction Progress Documentation" for preconstruction photographs taken before building demolition.
 - 3. Section 311000 "Site Clearing" for site clearing and removal of above- and below-grade site improvements not part of building demolition.

1.2 DEFINITIONS

- A. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be salvaged.
- B. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and deliver to Owner ready for reuse. Include fasteners or brackets needed for reattachment elsewhere.

1.3 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.4 PREINSTALLATION MEETINGS

- A. Predemolition Conference: Conduct conference at Project site.
 - 1. Inspect and discuss condition of construction to be demolished.
 - 2. Review structural load limitations of existing structures.
 - 3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review and finalize protection requirements.
 - 5. Review procedures for dust control.
 - 6. Review procedures for protection of adjacent buildings.
 - 7. Review items to be salvaged and returned to Owner.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For refrigerant recovery technician.
- B. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, and for dust control. Indicate proposed locations and construction of barriers.
- C. Schedule of Building Demolition Activities: Indicate the following:
 - 1. Detailed sequence of demolition work, with starting and ending dates for each activity.
 - 2. Temporary interruption of utility services.
 - 3. Shutoff and capping or re-routing of utility services.
- D. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.6 QUALITY ASSURANCE

- A. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.

1.7 FIELD CONDITIONS

- A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.
- B. Buildings immediately adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.
 - 1. Provide not less than 72 hours' notice of activities that will affect operations of adjacent occupied buildings.
 - 2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.
 - a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.
- C. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
 - 1. Before building demolition, Owner will remove the following items:
 - a. Equipment scheduled for reuse.
- D. Hazardous Materials: Present in buildings and structures to be demolished. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
 - 1. Hazardous material remediation is specified elsewhere in the Contract Documents.

2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.
3. Owner will provide material safety data sheets for materials that are known to be present in buildings and structures to be demolished because of building operations or processes performed there.

E. On-site storage or sale of removed items or materials is not permitted.

1.8 COORDINATION

- A. Arrange demolition schedule so as not to interfere with Owner's on-site operations or operations of adjacent occupied buildings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ANSI/ASSP A10.6 and NFPA 241.

2.2 SOIL MATERIALS

- A. Satisfactory Soils: Comply with requirements in Section 312000 "Earth Moving."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting demolition operations.
- B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.
- C. Verify that hazardous materials have been remediated before proceeding with building demolition operations.
- D. Inventory and record the condition of items to be removed and salvaged.

3.2 PREPARATION

- A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.
- B. Salvaged Items: Comply with the following:
 1. Clean salvaged items of dirt and demolition debris.

2. Pack or crate items after cleaning. Identify contents of containers.
3. Store items in a secure area until delivery to Owner.
4. Transport items to storage area designated by Owner.
5. Protect items from damage during transport and storage.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

- A. Existing Utilities to Be Disconnected: Locate, identify, disconnect, and seal or cap off utilities serving buildings and structures to be demolished.
 1. Arrange to shut off utilities with utility companies.
 2. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
 3. Cut off pipe or conduit to the mainline. Cap, valve, or plug and seal at the mainline according to requirements of authorities having jurisdiction.
 4. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.

3.4 PROTECTION

- A. Existing Facilities: Protect adjacent walkways, loading docks, building entries, and other building facilities during demolition operations. Maintain exits from existing buildings.
- B. Existing Utilities to Remain: Maintain utility services to remain and protect from damage during demolition operations.
 1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction.
 2. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and authorities having jurisdiction.
 - a. Provide at least 72 hours' notice to occupants of affected buildings if shutdown of service is required during changeover.
- C. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Section 015000 "Temporary Facilities and Controls."
 1. Protect adjacent buildings and facilities from damage due to demolition activities.
 2. Protect existing site improvements, appurtenances, and landscaping to remain.
 3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.
 4. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 5. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
- D. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION, GENERAL

- A. General: Demolish indicated buildings and site improvements completely. Use methods required to complete the Work within limitations of governing regulations and as follows:
 - 1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
 - 2. Maintain fire watch during and for duration required by AHJ after flame-cutting operations.
 - 3. Maintain adequate ventilation when using cutting torches.
 - 4. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
- B. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed trafficways if required by authorities having jurisdiction.
 - 2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.
- C. Explosives: Use of explosives is not permitted.

3.6 DEMOLITION BY MECHANICAL MEANS

- A. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.
- B. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
 - 1. Remove structural framing members and lower to ground by method suitable to minimize ground impact and dust generation.
- C. Salvage: Items to be removed and salvaged are indicated on Drawings, including, but not limited to:
 - 1. Exterior round concrete patio table and benches with associated plaque.
- D. Below-Grade Construction: Demolish foundation walls and other below-grade construction.
 - 1. Remove below-grade construction, including basements, foundation walls, and footings, completely.
- E. Existing Utilities: Demolish and remove existing utilities and below-grade utility structures.

3.7 SITE RESTORATION

- A. Below-Grade Areas: Rough grade below-grade areas ready for further excavation or new construction.
- B. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.8 REPAIRS

- A. Promptly repair damage to adjacent buildings caused by demolition operations.

3.9 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove demolition waste materials from Project site and dispose of them in an EPA-approved construction and demolition waste landfill acceptable to authorities having jurisdiction.
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Do not burn demolished materials.

3.10 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.
 - 1. Clean roadways of debris caused by debris transport.

END OF SECTION 024116

SECTION 260001 – ELECTRICAL GENERAL PROVISIONS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. The Drawings and General provisions of the Contract including the "General Conditions", "Supplementary Conditions", and "General Requirements" of the Contract as written and referred to here are adopted and made part of Division 26.
- B. The Contract Agreement, Bidding documents, and all Addenda issued prior to Contract Agreement execution form a part of these specifications and apply to all Contracts or Subcontracts relating to the electrical systems.

1.2 SUMMARY

- A. The work under this Division shall consist of all labor, materials, equipment, services and related accessories, etc., necessary and required to complete all work as shown or inferred on the Drawings and in the Specifications (Contract Documents).
- B. Provide fixed electrical equipment, except where specifically noted otherwise.
- C. Provide portable electrical equipment for the complete system(s).
- D. Provide equipment and/or wiring normally furnished or required for complete electrical systems but not specifically specified on the drawings and/or in specifications, as though specified by both.
- E. All equipment and wiring shall be new, except where specifically shown or specified otherwise.
- F. Provide flexible electrical conduit and conductors having a slack, 90-degree bend or loop in any plane between connections at all vibration isolated equipment and the first attachment to building structure or cabinets, panels or boxes mounted thereon.

1.3 WORK INCLUDED IN THIS DIVISION

- A. Electrical work includes, but is not limited to
 - 1. Arranging and coordinating with utility services required as shown or specified.
 - 2. Removal or relocation of electrical services and electrical work located on or crossing through project property, above or below grade, obstructing construction of project or conflicting with completed project or any applicable code.
 - 3. Provide meters, switchboards, panelboards, circuit breakers, power outlets, convenience outlets, switches, and/or other equipment forming part of system.
 - 4. Complete lighting system.
 - 5. Complete communication system.
 - 6. Complete Audio/Visual system.
 - 7. Connection of all appliances and equipment including Owner furnished equipment.
 - 8. Complete grounding system.

- 9. Complete temporary facilities for construction power.
- 10. Complete fire alarm system.

1.4 WORK NOT INCLUDED IN THIS DIVISION (REFER TO OTHER DIVISIONS OF THESE SPECIFICATIONS)

- A. Flashing of conduits into roofs and outside walls. Inform General Contractor of number and size of roof penetrations prior to bidding.
- B. Furring of building structure or finishes for conduit and equipment.
- C. Finish painting of conduit and equipment except for factory applied prime or finish painting specified for equipment, fixtures, devices or materials furnished under this section.
- D. Installation of motors except where specifically noted. See Division 23.
- E. Control wiring for mechanical systems, except where specifically indicated to be provided by Electrical Contractor. See Division 23.

1.5 RELATED WORK SPECIFIED ELSEWHERE

- A. Classification of Excavation: Division 02 – Site work.
- B. Concrete Work: Division 03.
- C. Painting: Division 09.
- D. Firestopping: Division 07.

1.7 ADOPTED CODES

- A. 2018 International Building Code (IBC) Published by the International Code Council (ICC).
- B. 2017 National Electrical Code (NEC) published by the National Fire Protection Association (NFPA)
- C. 2018 International Fire Code (IFC) published by the International Code Council.
- D. National Fire Codes (NFPA Standards) published by the National Fire Protection Association (NFPA) as referenced in the 2018 International Fire Code.
- E. 2018 International Energy Conservation Code (IECC) published by the International Code Council. ASHRAE/IESNA Standard 90.1 is incorporated by reference.
- F. All applicable provisions of the Nevada Revised Statutes (NRS) and the Nevada Administrative Code (NAC), including those listed below.
- G. The most current regulations of the State Fire Marshal, Nevada Department of Public Safety, Carson City, Nevada (NAC Chapter 477, State Fire Marshal).
- H. The most current edition of the Americans with Disabilities Act (ADA) published by the United States Department of Justice including the Americans with Disabilities Act Accessibility Guidelines (ADAAG)
- I. Other codes, regulations, and standards referenced in the body of this document.
- J. Local codes and ordinances do not apply to projects constructed on state-owned land, except for zoning requirements pursuant to Nevada Revised Statutes Section 278.580.
- K. Northern Nevada ICC 2018 Adopted Amendments.

1.8 DEFINITIONS

Provide:	Furnish, install, connect and test until complete.
Wire:	Furnish all necessary wiring, connect and test until complete.
Install:	Furnish, set in place, wire and test until complete.
Work:	Materials completely installed, connected, and tested until complete.
AWG:	American Wire Gage.

Equal:	Acceptable equal as determined by the Engineer.
--------	---

1.9 REQUIREMENTS OF REGULATORY AGENCIES

- A. Obtain and pay for all permits and inspections required for the work. Comply with all ordinances pertaining to work described herein. Pay all expenses arising from the procurement of these certificates and include in the base contract price.
- B. Install work under this Division per drawings, specifications, latest adopted edition of the National Electrical Code, (NFPA-70) including local amendments and interpretations, Local adopted Building Codes, and any special codes having jurisdiction over specific portions of work within complete installation. In event of conflict, install work per most stringent code requirements determined by Engineer. This does not relieve the Contractor from furnishing and installing work shown or specified which may exceed the requirements of such ordinances, laws, regulations and codes.
- C. All materials, products, devices, fixtures, forms or types of construction included in this project shall meet or exceed the published requirements of National Electrical Code (NEC), American National Standards Institute (ANSI), Institute of Electrical and Electronics Engineers (IEEE) and National Electrical Manufacturers Associations (NEMA). All equipment shall bear the Underwriter's Laboratories (UL) label or equivalent from approved independent testing laboratory.
- D. Arrange, pay fees for and complete work to pass required tests by agencies having authority over work. Deliver to Engineer copies of the Certificates of Inspection and approval issued by authorities and provide original copy of each certificate to Owner.
- E. When required by law or regulations, the governmental agency having jurisdiction for inspections shall be given reasonable notice and opportunity to inspect the work. Any work that is enclosed or covered up before such inspection and test shall be uncovered at the Contractor's expense; after it has been inspected, the Contractor shall restore the work to its original condition at his own expense.

1.10 INSURANCE

- A. The Contractor shall procure and maintain, at his expense, such insurance as required by law and/or specified in the General Conditions.

1.11 DRAWINGS AND SPECIFICATIONS

- A. Drawings and specifications are complementary. Work called for by one is binding as if called for by both. Any discrepancies between drawings and specifications shall be brought to the attention of the Engineer for clarification during the bidding period. No allowance shall subsequently be made to the Contractor by reason of his failure to have brought said discrepancies to the attention of the Consultant during the bidding period or by reason of any error on the Contractor's part.
- B. Drawings are schematic and diagrammatic in nature. Drawings show general run of circuits and approximate location of equipment. The contractor shall review drawings of all trades to assure coordination prior to placement of work. Right is reserved to

change location of equipment and devices, and routing of conduits within 10 feet, without extra cost to Owner (prior to rough-in).

- C. Use dimensions in figures, shop drawings, etc. and actual site measurements in preference to scaled dimensions. Do not scale drawings for exact sizes or locations – use dimensioned details or actual field conditions. Verify item mounting heights as required by project conditions prior to rough-in.
- D. The architectural drawings shall take precedence over all other drawings in matters of dimensions. Discrepancies between different drawings or between drawings and specifications, or regulations and codes governing the installation shall be brought to the attention of the Engineer in writing for determination.
- E. Layout equipment as shown on drawings as close as possible. Verify access requirements for equipment actually furnished, and adjust layout to comply with NEC 110. Right is reserved to change layout within 10 feet without additional cost (prior to rough-in).
- F. All devices, light fixtures, etc. located in ceiling tiles shall be located in the center of the ceiling tile UNLESS specifically noted or approved to do otherwise.
- G. The Contractor is responsible to field measure and confirm the mounting heights and location of electrical equipment with respect to counters, doorways, and other architectural, mechanical or structural work. Do not scale distances off the electrical drawings: Use actual building dimensions.
- H. Execution of Contract is evidence that Contractor has examined all existing conditions, drawings and specifications related to work, and is informed to extent and character of work. Later claims for labor and materials required due to difficulties encountered, which could have been foreseen had examination been made, will not be recognized.
- I. All work called for in this Section of the plans and specifications shall be performed under this Section, regardless of whether such work may also have been called for in other Section(s). Discrepancies in or conflicts among the various parts of the contract drawings shall not relieve Contractor of his obligation to perform.
- J. No attempt has been made to establish the required sections or splits of equipment relative to the size of access into the space, building, etc. Contractor shall establish all said splits, sections, etc. necessary to install equipment complete without undue disassembly of equipment or demolition of building parts at site of work.
- K. Charges for extra work are not allowed unless work is authorized by written order from the Owner's Representative approving charges for work.
- L. Check all door swings so light switches are not located behind doors. Relocate switches as required with the Engineer's review.
- M. Elevators: The location of switches, GFCI receptacles, lights, telephone outlets, disconnect switches, fire alarm devices, etc., in elevator pits, shafts, equipment rooms

shall be located as required by the Elevator Shop Drawings and applicable codes. Coordinate size and type of all electrical devices with Elevator Contractor prior to purchase of equipment.

1.12 SEISMIC QUALIFICATIONS & REQUIREMENTS

A. Equipment Seismic Qualification

Major equipment and components shall be suitable for and certified to meet all applicable seismic requirements of the California Building Code (CBC) through zone 4 application. Guidelines for the installation consistent with these requirements shall be provided by the manufacturer and be based upon testing of representative equipment. The test response spectrum shall be based upon a 5% minimum damping factor, CBC: a peak of 2.15g's and a ZPA of 0.86g's applied at the base of the equipment. The tests shall fully envelop this response spectrum for all equipment natural frequencies up to at least 35 Hz.

B. Structural Design Requirements

1. **Include in the bid, hiring of a structural engineer, registered in the state of Nevada, to provide calculations and details for equipment pads and mounting and bracing of all major equipment. Attach equipment according to those calculations.**
2. **Major equipment and components include:**
 - a) **Conduit racks and supports.**
 - b) **Transformers.**
 - c) **Panelboards.**
 - d) **Service and Distribution switchboards.**
3. Equipment anchoring and bracing shall be designed to conform to IBC 2018 and NRS 341.143.

C. See Spec Section 26 05 30 Seismic Protection for Electrical Equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. All material shall be new, and have a UL label where available. If UL label is not available, material shall be manufactured in accordance with applicable NEMA, IEEE and Federal Standards. Use UL labeled components in assemblies that do not have overall UL label. All equipment shall comply with the terms "listed and labeled" as defined in the NEC 70, Article 100. Submit letter stating compliance with these requirements.
- B. Utilize one of the manufacturers listed to furnish all of the major equipment (i.e., transformers, bus duct, switchgear, circuit breakers, etc.) required for this project.
- C. Basis-of-Design Products: Where Specifications name a product, or refer to a product indicated on Drawings, and include a manufacturer or list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements

in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers or a comparable substitution.

2.2 COMPARABLE PRODUCTS

- A. Conditions for Consideration: Engineer will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Engineer may return requests without action, except to record noncompliance with these requirements:
1. Evidence that the proposed product does not require revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
 2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
 3. Evidence that proposed product provides specified warranty.
 4. List of similar installations for completed projects with project names and addresses and names and addresses of engineers and owners, if requested.
 5. Samples, if requested.

PART 3 - EXECUTION

3.1 VISIT TO SITE

- A. Visit site, and survey existing conditions affecting work prior to bid. Include necessary materials and labor to accomplish the electrical work, including relocation of existing services and utilities on building site in bid. No consideration shall be given to future claims due to existing conditions. Any discrepancies or interference's shall be reported immediately to the Engineer.

3.2 WORKMANSHIP

- A. All work performed shall be first class work in every aspect. The work shall be performed by mechanics skilled in their respective trades, who shall at all times be under the supervision of competent persons. All work shall be installed to comply with NECA's "Standard of Installation."
- B. Work under this Division shall be first class with emphasis on neatness and workmanship. All work shall be installed square and plumb and concealed where possible. Work that is deficient, defective, poorly laid out, not perfectly aligned, or that is not consistent with the requirements generally accepted in the trade for "first class work" will not be acceptable.
- C. In addition to the materials specified elsewhere, furnish and install all other miscellaneous items necessary for the completion of the work to the extent that all systems are complete and operative.
- D. All work under this Section shall be performed in cooperation with the work performed under all other Sections of the Specifications for the Project in order to avoid interference with other work and to secure the proper installation of all work. Refer the Drawings and Specifications covering the work to be performed under all Sections, so

that the relation and extent of the work of this Section with respect to the work of all other Sections is understood. Give right of way to raceways and piping systems installed at a required slope.

- E. Install work using competent mechanics, under supervision of foreman, all duly certified by local authorities. The installation shall be subject to the Engineer's observation, and final acceptance. The Engineer may reject unsuitable work.
- F. Conduit systems must be complete prior to installation of wiring.

3.3 CHANGE ORDERS

- A. Additional work may be required on the project which is outside the scope of the contract. Such additional work will be described in Supplemental Instructions and/or Clarifications, to be estimated and priced by the Contractor, and accepted by the Owner, prior to commencing work. Proposals shall include a list of quantities of all material being used with unit costs broken down into material and labor costs per unit, along with quotations from suppliers for equipment/devices/components.
- B. Material costs and labor units shall not exceed the latest edition of RS Means Electrical Cost Data.
- C. See the General Conditions of the Specifications for acceptable charges.

3.4 GUARANTEE

- A. Furnish the Owner a written guarantee, stating that if workmanship and/or material executed under this Division is proven defective within one (1) year after final acceptance by the Owner, such defects and other work damaged will be repaired and/or replaced. Submit with Operations and Maintenance Manuals.
- B. Obtain from the various manufacturers or vendors guarantees or warranties for their particular equipment or components, and deliver them to the Owner. All guarantees and warranties provided shall be referenced to this project.
- C. In event that systems are placed in operation in several phases at the Owner's request, guarantee will begin on date each system or item of equipment is accepted for service by the Owner. Provide O&M manuals for all equipment when equipment is accepted for service by the Owner.
- D. All guarantees and warranties shall include labor and material at the site of installation for the duration of the guarantee period.

3.5 OBSERVATIONS OF WORK AND DEMONSTRATION OF OPERATION (ACCEPTANCE)

- A. At all observations of work, open panel covers, junction box covers, pull box covers, device covers, and other equipment with removable plates for observation. Provide sufficient personnel to expedite cover removal and replacement.
- B. Contractor to demonstrate operation of new equipment and/or systems to satisfaction of Owner/Engineer. Contractor to have manufacturer available for demonstration of

equipment and/or systems where requested by Owner/Engineer. Furnish affidavit signed by Owner's representative indicating that demonstration of operation has been performed.

3.6 COOPERATION AND COORDINATION

- A. Carefully coordinate work with other contractors and subcontractors. Refer conflicts between trades to Engineer. Provide necessary information to other trades for such coordination. Such information shall include Shop Drawings, Product Data and all other required data. There shall be no additional cost to the owner for any post-bid changes made to the electrical design and/or construction that are generated by changes to the basis-of-design equipment of any discipline. This includes changes made by substituted, alternate or comparable products regardless of manufacturer.
- B. Provide a system erection/coordination drawing showing electrical, HVAC, plumbing and architectural for installation in congested areas. Drawings shall be in plan view for work above the ceilings and also sections shall be provided showing the elevations of conduit racks and routing and the coordination with mechanical piping and ductwork.**
- C. Whenever such information is not provided in a timely manner or whenever such information is incorrect, this contractor shall bear all costs for providing or correcting affected work of related trades with no change to the Contract Price or Construction Schedule.
- D. Work to be installed as progress of project will allow. Schedule of work determined by General Contractor, Owner, and/or Architect/Engineer.

3.7 COORDINATION OF UTILITY SERVICES

- A. Drawings indicate proposed service layouts. The Contractor shall provide all concrete structures, pads, pullboxes, vaults, trenching, raceways, protective bollards, etc., as required per NV Energy standards.

3.8 HVAC CONTROL WIRING

- A. Control Wiring including low voltage and line voltage interlock wiring will be furnished and installed under Division 23, except where specifically shown otherwise. Carefully coordinate power and control wiring interface.
- B. This Contractor shall obtain from Division 23 all wiring diagrams associated with the HVAC work and furnish all power and 120V control wiring, disconnects and starters for equipment not already packaged with these items. All wiring and conduit associated with the HVAC Temperature Control System is included under Division 23. Wiring and conduit shall comply with Division 26. All electrical work associated with the HVAC system shall be done under the supervision of Division 23.**

3.9 STARTERS

- A. Separately mounted starters are furnished and installed under Division 26 unless specifically shown otherwise. All power wiring, fuses, thermal overloads, and

disconnect switches and connection of all motors is under this division. Provide the proper feeders and connections as recommended by the manufacturer of the equipment. See Spec Section 26 29 13 Enclosed Controllers.

3.10 PROTECTING

- A. Provide warning lights, bracing, shoring, rails, guards and covers necessary to prevent damage or injury. All persons working around electrical equipment shall have electrical shock and flash protection per OSHA 1910.301-309 & 331-335.
- B. Do not leave exposed or unprotected, electrical items carrying current. Protect visitors and workers from exposure to contact with electrically energized surfaces, parts, etc. in accordance with OSHA standards.

3.11 DELIVERY, STORAGE AND HANDLING

- A. Deliver equipment and materials to job site in original, unopened, labeled container. Products shall be properly identified with names, model numbers, types, grades, compliance labels and other information needed for identification. Store to prevent damage and injury. Store materials to prevent corroding. Store finished materials and equipment to prevent staining and discoloring. Store materials affected by condensation in warm dry areas. Provide heaters. Contractor shall verify the availability of on site storage space, if no on site storage space is available then the contractor shall cover the cost for off site storage. Materials stored at the project site that becomes soiled with construction dirt, concrete, or moisture shall be removed from the site and replaced with new. Do not install soiled material.
- B. Protect work and materials from damage by weather, entrance of water or dirt. Cap and mark conduit during installation.
- C. Avoid damage to materials and equipment in place. Repair, or remove and replace damaged work and materials.
- D. Protection and safekeeping of products stored on premises is responsibility of Contractor supplying products.
- E. Schedule of deliveries and unloading to prevent traffic congestion blocking of access or interference with work. Arrange deliveries to avoid larger accumulations of materials than can be suitably stored at site.
- F. Install equipment per manufacturer's recommendations. Conflicts between contract documents and these recommendations shall be referred to Engineer for remedy.
- G. Electrical or electronic equipment that has been damaged, exposed to weather or is, in the opinion of the Engineer or Architect, otherwise unsuitable because of improper fabrication, storage or installation shall be removed and replaced by this Contractor at his expense.

3.12 ANCHORS

- A. Provide anchors for all equipment, raceways, hangers, etc. to safely support weight of item involved plus 100% for dead loads. Live loads shall be considered in addition to dead loads.

- B. Anchors to consist of expansion type devices similar to "Redhead" or lead expansion anchors. Plastic anchors are not acceptable.
- C. Use preset anchor steel inserts in concrete slabs. Provide preset anchor size and type for anticipated or specified rod/bolt size and live/dead load.

3.13 CLEANING AND PAINTING

- A. Clean equipment furnished in this Division after completion of work. Clean wipe the interior of all conduit, pullboxes, junction boxes, outlet boxes, and panelboard backboxes, soiled with dirt and debris prior to installation of wiring.
- B. Touch-up or re-paint damaged painted finishes as determined by the Engineer.
- C. Remove debris, packing cartons, scrap, etc., from site daily.

3.14 SPARE PARTS

- A. Where spare parts are specified in the Technical Sections, furnish spare parts to Owner with itemized receipt. Contractor is responsible to deliver parts and have receipt signed by Owner's representative. Turn over receipt with as-built documents.

3.15 HOUSEKEEPING PADS

- A. Furnish 2500 # concrete pads, 4" high (interior locations) or 6" high (exterior locations) unless otherwise noted, for all freestanding equipment, i.e.: switchboards, panels, control panels, motor control centers, transformers, etc. Pads shall have 1" x 45° chamfered edges, and shall extend 2" to 4" beyond equipment mountings.

3.16 TRAINING

- A. Training for operation and maintenance of new systems or modifications to existing systems is specified in Technical sections. Contractor shall submit with record documents an itemized receipt signed by Owner's representative that all specified training has been received.

3.17 ACCESS PANELS

- A. The contractor shall furnish all access panels for walls, partitions, etc., and shall give access panel to the General Contractor for installation at locations as directed by the Electrical Contractor. It shall be the responsibility of the Electrical Contractor that access panels are provided for access to all boxes, bus joints, equipment, etc., which may be concealed by building construction to comply with the NEC and NFPA. Access panels shall be installed so as not to interfere with lighting arrangements.

3.18 CONDUIT ROUTING

- A. All penetrations through slab-on-grade and concrete-filled metal decks to be sealed watertight. See Section 07 92 00 – Joint Sealants.

END OF SECTION 260001

SECTION 260002 – ELECTRICAL SUBMITTALS

PART 1 – GENERAL

1.1 DESCRIPTION OF SUBMITTAL CATEGORIES

- A. The required submittals are defined below and specified in each section.
1. Requests for substitutions are written requests to use materials, equipment, etc., different from that specified.
 2. Shop Drawings include fabrication, layout, wiring diagrams, erection, setting, coordination, drawings and diagrams and performance data.
 3. Samples are units of work, materials or equipment items, showing the workmanship, pattern, trim and similar qualities proposed.
 4. Manufacturer's Data is standard printed product information concerning the standard portions of the manufacturer's products.
 5. Certifications are written statements, executed specifically for the project application by an authorized officer of the contracting firm, manufacturer, or other firm as designated, certifying to compliance with the specified requirements.
 6. Test Reports are specific reports prepared by independent testing laboratories, showing the results of specified testing.
 7. Industry Standards are printed copies of the current standards in the industry.
 8. Manufacturer's Product Warranties are manufacturer's standard printed commitment in reference to a specific product and normal application, stating that certain acts of restitution will be performed by the manufacturer if the product fails under certain conditions and times limits.
 9. Operating Instructions are the written instructions by the manufacturer, fabricator or installer of equipment or systems, detailing the procedures to be followed by the Owner's in operation, control and shut-down.
 10. Maintenance Manuals are the compiled information provided for the Owner's maintenance of each system of operating equipment.
 11. Maintenance Materials (spare parts) are extra stock of parts or materials for the Owner's initial use in maintaining the equipment and systems in operation.
 12. Record Drawings are accurate representations of the installed systems and wiring as recorded on a daily "as-installed" basis.
 13. Guarantees are signed commitments to the Owner that certain acts of restitution will be performed if certain portions of work fail within certain conditions and time limits.
 14. Product Data includes manufacturer's data pertaining to the products, materials and equipment of the work.
 15. Method of Procedures are detailed sequences of work required during interruption of service and/or connection to energized parts of systems requiring special sequences or protections.
 16. Training – Materials and sign-off of completion.
 17. Identification nomenclature – See section 26 05 53.

PART 2 – PRODUCTS

2.1 PROPOSED MATERIAL MANUFACTURERS

- A. Submit to Consultant within 30 days after award of contract a complete list of proposed material manufacturers. List does not preclude submission of shop drawings. Acceptance of manufacturer on list does not constitute acceptance of specific material or equipment. If shop drawings are submitted with non approved substitutions, the contractor will pay the expense incurred by the consultant to review the shop drawings of any re-submittal.

PART 3 – EXECUTION

3.1 SUBSTITUTIONS

- A. See General Conditions of the specifications for information regarding substitutions. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples if requested by Engineer are provided. Alternate products shall meet or exceed design criteria.

3.2 SUBMITTAL FORM AND PROCEDURES

- A. Shop and Erection Drawings
 - 1. Submit shop drawings for material and equipment furnished under Division 26 of specifications, to Consultant for review within 30 days after award of contract. Shop drawings shall be submitted on timely basis to allow adequate lead time for review, re-submission if necessary, manufacture and delivery to allow access of material to project at correct time based on schedule established by Consultant/Contractor. Provide index with thumb tabs collated with Table of Contents for sections. Include complete descriptive data with dimensions, operating data and weight for each item of equipment. Carefully examine shop drawings to assure compliance with drawings and specifications prior to submittal to Consultant. **Shop drawings and submittals shall bear the stamp of approval of the Electrical Contractor as evidence that they have checked the drawings.** Drawing submitted without this stamp of approval will not be considered and will be returned for proper re-submission. All shop drawings shall be submitted as a single one time complete package. Partial packages shall not be reviewed.
 - 2. Submit copies per general project conditions.
 - 3. Clearly mark each shop drawing item to correspond to drawings and specifications. Any drawings not clearly marked will be rejected.
 - 4. Review of shop drawings does not relieve Contractor of responsibility for errors and omissions in shop drawings. Contractor is responsible for dimensions and sizes of equipment. Inform Engineer in writing of equipment differing from that specified.
- B. "Record" Drawings
 - 1. One complete set of prints will be furnished to the Contractor to indicate actual location of conduit systems, outlets, and equipment. Keep set of prints on job and record day to day changes to Contract drawings with red pencil. Provide

"Record" drawings as specified in the General Conditions or Division 01 of the specifications at the completion of job.

C. Maintenance Materials

1. Submit a list of all warranties and guarantees.
2. Submit with final close out documents a signed receipt for all maintenance materials (spare parts) specified. See Technical Sections for required materials.

D. Product Warranties and Guarantees

1. Submit fully executed Product Warranties and Contractor Guarantees to the Owner with final close out documents.

E. Maintenance Manuals

1. Submit to Consultant data prepared by manufacturer for each item and/or device of electrical equipment furnished in this contract completely describing and identifying equipment. Data to include serial numbers, catalog/model numbers, parts lists, description of operation, final shop drawings, wiring diagrams, all electrical ratings, set-up and maintenance procedures and other literature required for maintenance of equipment. See Technical Sections for other required information.

F. Summary of Project Closeout Items for Owner

1. Certificates of inspection and approval from authorities having jurisdiction.
2. Executed Guarantees and Product Warranties.
3. "Record" drawings.
4. Final shop drawings.
5. Final Erection drawings.
6. Receipt for maintenance materials (spare parts).
7. Maintenance manuals.
8. Receipt for keys.
9. Completed test reports.
10. Signed off observation and punch lists.
11. Lien waivers.

3.3 SPECIFIC SUBMITTAL REQUIREMENTS

A. Shop drawings shall include, but not be limited to the following:

1. Shall be drawn to accurate scale except where diagrammatic representations are specifically indicated.
2. Shall show clearance dimensions of critical locations and show dimensions of spaces required for operation and maintenance of equipment.
3. Shall show conduit and conductor connections and other service connections.
4. Shall show interfaces with other work including structural support.
5. Shall include complete descriptive data, with dimensions, operating data and weight.
6. Shall indicate deviation from the contract documents.
7. Shall explain deviations.
8. Shall show short circuit current ratings for all electrical equipment.
9. Shall show how deviations coordinate with portions of the work, currently or previously submitted.

- B. Review of shop drawings shall not relieve Contractor of responsibility for errors or omissions in shop drawings. Any equipment that will not fit into space shown on drawings shall be called to the attention of the Engineer in writing.
- C. Samples: Submit samples where requested by Engineer. Engineer's review of sample submittals
 - 1. Shall be limited to general type, pattern and finish.
 - 2. Shall not include testing and inspection of the submitted samples.
 - 3. Shall not indicate complete compliance with specified requirements. Complete compliance with specifications is the exclusive responsibility of the Contractor.
- D. Manufacturer's Data
 - 1. Where pre-printed data covers more than one distinct item, mark copy to *clearly* indicate which item is to be provided.
 - 2. Contractor shall delete portions of data not applicable.
 - 3. Contractor shall mark data showing portion of operating range required for project application.
 - 4. Elaboration of standard data describing a non-standard product shall be processed as a shop drawing.
 - 5. For each product Contractor shall include the following information summarized into a single sheet document for each product
 - a) Manufacturer's production specifications including catalog/model number.
 - b) Manufacturer's Serial Number.
 - c) Installation or fabrication instructions.
 - d) Source of supply.
 - e) Sizes, weights, speeds and operating capacities.
 - f) All electrical ratings, including temperature rating of terminals.
 - g) Conduit and wire connection sizes and locations.
 - h) All thermal ratings.
 - i) Statements of compliance with required standard and governing regulations.
 - j) Cooling requirements and makeup and/or ventilating air requirements.
 - k) Performance data, where applicable.
 - l) All sound ratings.
 - m) Other information needed to confirm compliance.
 - n) Manufacturers recommended parts list.
 - o) Other information required by Technical Sections.
- E. Source Codes: Provide Source Code in both electronic and paper format and Source Code Licenses for all equipment that is computer driven. Provide Development licenses so Source Code can be examined, modified, and maintained. These Development Licenses, along with all software licenses shall become property of the Owner. At the discretion of the owner, third parties will be allowed to use the software as necessary, for the life of the work in this project. No encryption or other obfuscation will be allowed.
- F. Certifications: Contractor shall submit with notarized execution.
- G. Test Reports: Submit notarized test reports signed and dated by firm performing test.

- H. Manufacturer's Product Warranties: Contractor shall submit product warranties in accordance with the technical sections. Where published warranty includes deviation from required warranty, product is disqualified from use on project, unless manufacturer issues a specific project warranty.

- I. Operating Instructions required
 - 1. Submit manufacturer's operating instructions for each item of electrical equipment.
 - 2. Submit supplement with additional project application instructions where necessary.
 - 3. Submit specific operating instructions for each electrical system that involves multiple items of equipment.
 - 4. Submit instructions for charging, start-up, control or sequencing of operation, phase or seasonal variations, shut-down, safety and similar operations.
 - 5. All operating instructions shall be typewritten in completely explained and easily understood English language.

- J. Maintenance Manual Requirements
 - 1. Provide emergency instructions including addresses and telephone numbers for service sources.
 - 2. Provide regular system maintenance procedures.
 - 3. Indicate proper use of tools and accessories.
 - 4. Provide wiring and control diagram for each system.
 - 5. Provide manufacturer's data for each operational item in each system.
 - 6. Provide source code submittal for all software controlled equipment.
 - 7. Provide manufacturer's product warranties, and guarantee relating to the system and equipment items in the system.
 - 8. Provide Final Shop and Erection drawings relating to the system.
 - 9. Bind each operating and maintenance manual in one or more vinyl-covered, 2" 3-ring binders, plus pocket-folders for folded drawings. Index with thumb tab collated with Table of Contents for sections. Mark the back spine and front cover of each binder with system identification and volume number.

- K. Maintenance Materials: Deliver all materials to the Owner in fully identified containers or packages suitable for storage. Obtain receipt for all delivered materials signed by the Owner's Representative.

- L. Guarantees: Where indicated as "Certified", provide guarantee which, in addition to execution by an authorized officer of each guarantor, is attested to by the Secretary of each guarantor and bears the corporate seal. Submit draft of each guarantee prior to execution.

END OF SECTION 260002

SECTION 260003 – TEMPORARY ELECTRICAL FACILITIES FOR CONSTRUCTION

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Furnish temporary electrical facilities to provide lighting and power for construction. Temporary power must be installed in accordance with the National Electrical Code, National Electrical Safety Code, local utility, local codes and authority having jurisdiction.
- B. Coordinate temporary electrical facilities with other trades.
- C. See General Conditions, Supplemental General Conditions and Spec Section 01 50 00, Temporary Facilities and Controls for additional information.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. General: Provide new or used materials and equipment suitable for intended use. Ensure safe, adequate performance of facilities in accordance with governing regulations. Used equipment shall be in good, safe working order.

PART 3 - EXECUTION

3.1 INSTALLATION AND OPERATION

- A. Except for self-contained facilities, connect and terminate temporary electrical facilities at locations required for proper distribution.
- B. Do not subject electrical facilities on either temporary work or temporary use of permanent work to excess demand or overload.

3.2 SERVICE CONNECTION

- A. Obtain temporary service from Nevada Energy. Install service in conformance with NEC 230 and 590.

3.3 GROUNDING

- A. Power service and distribution system shall be properly grounded in accordance with NEC requirements.
- B. Ground the system neutral in accordance with NEC 250.

- C. Provide feeders and branch circuits with ground wire sized per NEC 250-122.

3.4 POWER SYSTEM AND DISTRIBUTION

- A. Provide required distribution and capacity of system. Over-current protection, fusible and/or circuit breakers sized per NEC.
- B. For 120/240 volts, single-phase system; use 3-wire 120/240-volt feeders and branch circuits.
- C. For 120/208 volt, 3 phase, 4-wire system; use 120/208 volt balanced single-phase 3-wire distribution or 120/208 volts, 3 phase, 4-wire distribution.
- D. For 480 volt, 3 phase, 3-wire distribution system; use balanced 2-wire single phase or 3-wire, 3 phase feeders for step-down to 120/240 volt or 120/208 volt utilization.
- E. For 277/480 volt distribution system; use balanced 2-wire single phase or 3 and 4-wire, 3 phase feeders for step-down to 120/240 volt or 120/208 volt utilization.
- F. Step-down transformers inside building shall be dry-type construction; protect from weather and construction damage.
- G. Use No. 12 wire for branch circuits less than 100 feet to last outlet, and No. 10 wire for circuits beyond 100 feet. Install branch circuits using NEC approved wiring methods.
- H. Balance loads connected to 3 phase services within reasonable limits.

3.5 PLUG-IN RECEPTACLES

- A. Use 20A, duplex, NEMA grounded type or as required for special equipment.
- B. Branch circuits feeding receptacles shall be 20A or as required for special equipment.
- C. Provide receptacles to be reached by 50-foot extension cord.
- D. All receptacle circuits shall be protected by dynamic type ground-fault circuit interrupters, which automatically disconnect circuit when leakage current of 4-6MA is detected.
- E. Receptacles shall not be placed on the same circuit with temporary lighting.

3.6 TEMPORARY LUMINARIES

- A. Provide luminaries approved by NEC for temporary construction wiring.
- B. Lamps shall be rough service incandescent 150 watt to 300 watt equipped with guards to protect from contact and damage (sizes as directed).

3.7 LAMPS AND REPLACEMENTS

- A. Provide lamps.
- B. Replace burned out lamps to maintain required lighting levels throughout the duration of the project.

3.8 INSTALLATION OF CIRCUITS

- A. Install required lighting and receptacle circuits along a route least objectionable to construction work as determined by Contractor. Protect circuits where exposed to damage.

3.9 PERMANENT WIRING SYSTEM

- A. Do not use permanent wiring for construction without specific acceptance of the Owner. Before using permanent wiring for temporary service, submit a list of uses to the Owner. The Owner may refuse use of permanent equipment for temporary service. Use of permanent equipment prior to Substantial Completion shall not affect warranty period.

3.10 REMOVAL AND RESTORATION

- A. Temporary wiring shall be removed immediately upon completion of construction or purpose for which the wiring was installed. Repair or replace work damaged by temporary electrical facilities. Clean and restore permanent electrical system used to provide temporary services to condition of new and unused work.
 - 1. Electrical work installed as temporary facilities, upon removal, remains property of Installer.
 - 2. Replace lamps of permanent light fixtures used for temporary lighting that have burned out or are noticeable dim. All permanently installed fixtures in the construction area lamps shall be removed and cleaned.
 - 3. Where temporary use of lamps exceeds 50 percent of lamp life, replace lamps.
- B. At Substantial Completion, clean permanent electrical work used as temporary facilities. Remove debris accumulated in electrical spaces.

END OF SECTION 260003

SECTION 260503 – EQUIPMENT WIRING CONNECTIONS

PART 1 – GENERAL

1.1 SUMMARY

- A. Section includes electrical connections to equipment.
- B. Related Sections:
 - 1. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.
 - 2. Section 26 05 33 - Raceway and Boxes for Electrical Systems.

1.2 REFERENCES

- A. National Electrical Manufacturers Association:
 - 1. NEMA WD 1 - General Requirements for Wiring Devices.
 - 2. NEMA WD 6 - Wiring Devices-Dimensional Requirements.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit wiring device manufacturer's catalog information showing dimensions, configurations, and construction.
- C. Manufacturer's installation instructions.

1.4 CLOSEOUT SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Project Record Documents: Record actual locations, sizes, and configurations of equipment connections.

1.5 COORDINATION

- A. General Conditions: Coordination and project conditions.
- B. Obtain and review shop drawings, product data, manufacturer's wiring diagrams, and manufacturer's instructions for equipment furnished under other sections.
- C. Determine connection locations and requirements.
- D. Sequence rough-in of electrical connections to coordinate with installation of equipment.
- E. Sequence electrical connections to coordinate with start-up of equipment.

PART 2 - PRODUCTS

2.1 CORD AND PLUGS

- A. Attachment Plug Construction: Conform to NEMA WD 1.
- B. Configuration: NEMA WD 6; match receptacle configuration at outlet furnished for equipment.
- C. Cord Construction: Type SO multiconductor flexible cord with identified equipment grounding conductor, suitable for use in damp locations.
- D. Size: Suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify equipment is ready for electrical connection, for wiring, and to be energized.

3.2 INSTALLATION

- A. Make electrical connections.
- B. Make conduit connections to equipment using flexible conduit. Use liquidtight flexible conduit with watertight connectors in damp or wet locations and to motors.
- C. Connect heat producing equipment using wire and cable with insulation suitable for temperatures encountered.
- D. Install receptacle outlet to accommodate connection with attachment plug.
- E. Install cord and cap for field-supplied attachment plug.
- F. Install suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.
- G. Install disconnect switches, controllers, control stations, and control devices to complete equipment wiring requirements.
- H. Install terminal block jumpers to complete equipment wiring requirements.
- I. Install interconnecting conduit and wiring between devices and equipment to complete equipment wiring requirements.
- J. Coolers and Freezers: Cut and seal conduit openings in freezer and cooler walls, floor, and ceilings.

3.3 ADJUSTING

- A. Cooperate with utilization equipment installers and field service personnel during checkout and starting of equipment to allow testing and balancing and other startup operations. Provide personnel to operate electrical system and checkout wiring connection components and configurations.

END OF SECTION 260503

SECTION 260519 – LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes building wire and cable and wiring connectors and connections.
- B. Related Sections:
 - 1. Section 26 05 53 - Identification for Electrical Systems: Product requirements for wire identification.
 - 2. Section 31 20 00 - Trenching: Execution requirements for trenching required by this section.
 - 3. Section 31 20 00 - Fill: Requirements for backfill to be placed by this section.

1.2 REFERENCES

- A. International Electrical Testing Association:
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.
- B. National Fire Protection Association:
 - 1. NFPA 70 - National Electrical Code.
 - 2. NFPA 262 - Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces.
- C. Underwriters Laboratories, Inc.:
 - 1. UL 1277 - Standard for Safety for Electrical Power and Control Tray Cables with Optional Optical-Fiber Members.

1.3 SYSTEM DESCRIPTION

- A. Product Requirements: Provide products as follows:
 - 1. Solid conductor for feeders and branch circuits 12 AWG and smaller.
 - 2. Stranded conductors for feeders and branch circuits 10 AWG and larger.
 - 3. Stranded conductors for control circuits.
 - 4. Conductor not smaller than 12 AWG for power and lighting circuits.
 - 5. Conductor not smaller than 16 AWG for control circuits.
 - 6. Increase wire size in branch circuits to limit voltage drop to a maximum of 3 percent.
- B. Wiring Methods: Provide the following wiring methods:
 - 1. All Locations Unless Noted Otherwise: Use only building wire, Type THHN/THWN or XHHW insulation, in raceway.

1.4 DESIGN REQUIREMENTS

- A. Conductor sizes are based on copper, aluminum conductors are not acceptable.

1.5 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Product Data: Submit for building wire.
- C. Design Data: Indicate voltage drop and ampacity calculations for aluminum conductors substituted for copper conductors.
- D. Test Reports: Indicate procedures and values obtained.

1.6 CLOSEOUT SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Project Record Documents: Record actual locations of components and circuits.

1.7 QUALITY ASSURANCE

- A. Provide wiring materials located in plenums with peak optical density not greater than 0.5, average optical density not greater than 0.15, and flame spread not greater than 5 feet (1.5 m) when tested in accordance with NFPA 262.
- B. Maintain one copy of each document on site.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.9 FIELD MEASUREMENTS

- A. Verify field measurements are as indicated on Drawings.

1.10 COORDINATION

- A. General Conditions: Requirements for coordination.
- B. Where wire and cable destination is indicated and routing is not shown, determine routing and lengths required.
- C. Wire and cable routing indicated is approximate unless dimensioned.

PART 2 - PRODUCTS

2.1 BUILDING WIRE

- A. Product Description: Single conductor insulated wire.
- B. Conductor: Copper.

260519 - 2 LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

- C. Insulation Voltage Rating: 600 volts.
- D. Insulation Temperature Rating: 90 degrees C.
- E. Insulation Material: Thermoplastic.

2.2 ARMORED CABLE

- A. Type AC Cable may not be used on this project.

2.3 METAL CLAD CABLE

- A. Type MC Cable may not be used on this project and is strictly prohibited.

2.4 CONNECTORS AND SPLICES

- A. Provide UL-listed factory-fabricated wiring connectors of size, ampacity rating, material, type and class for application and for service indicated. Select connectors to comply with Project's installation requirements and as specified in Part 3 "Applications" of this Article.
- B. For Conductors #10 AWG and Smaller: Wire and cable connectors shall be solderless, twist on, 600 volts, 105°C., shall comply with UL 486A/C standards. Connectors coded for easy selection compatible with wiring to be spliced. Install connectors as recommended by manufacturer. Use proper crimping tool where crimp sleeves are used.
 - 1. Acceptable Connector Manufacturers
 - a) 3M- "Scotchlock"
 - b) Buchanan - "B Cap"
 - c) Thomas & Betts - "Stak-On"
 - d) Ideal - "Wing Nuts"
- C. Compression Splices: Splice conductors #8 and larger with solid copper barrel, type fittings applied with an appropriate hydraulic tool. Splices used only where approved. Splice fittings: Burndy "Hydent". Insulate splices with 600 volt, 105°C, "heat shrink", "cold shrink" covers, or taped insulation consisting of rubber, friction and vinyl tapes applied per manufacturer for 600 volt, 105°C covering to 150 percent of installation rating of conductor.
 - 1. Acceptable Splice and Tape Manufacturers
 - a) Burndy
 - b) Thomas & Betts
 - c) IlSCO
 - d) Anderson
 - e) Blackburn
 - f) Oz/Gedney
- D. Connectors and/or Terminations for Conductors #6 AWG and larger: Tin plated, 98% copper, dual crimp long barrel compression lugs with two bolt holes, insulated with molded covers to accommodate 1/2" bolts. Apply with hydraulic tool recommended by manufacturer.
 - 1. Acceptable Manufacturers and Products

- a) O-Z Gedney
 - b) Burndy Engineering Company "Hylugs"
 - c) Thomas and Betts, "Color Keyed"
 - d) Anderson
- E. Use pulling lubricant which will not be detrimental to insulation of conductors indicated by published user information.
 - 1. Acceptable Manufacturers of Lubricant
 - a) Ideal Industries
 - b) Panduit Corp.
 - c) OZ/Gedney
 - d) Plymouth/Bishop
 - e) American Polywater Corp.
 - f) Thomas & Betts
- F. Insulate all live joints to 600 volts with strip rubber, friction tape, and electrical vinyl tape installed in accordance with manufacturers recommendations.
 - 1. Acceptable Tape Manufacturers
 - a) 3M
 - b) Plymouth

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify interior of building has been protected from weather.
- C. Verify mechanical work likely to damage wire and cable has been completed.
- D. Verify raceway installation is complete and supported.

3.2 PREPARATION

- A. Completely and thoroughly swab raceway before installing wire.

3.3 INSTALLATION

- A. Route wire and cable to meet Project conditions.
- B. Neatly train and lace wiring inside boxes, equipment, and panelboards.
- C. Identify and color code wire and cable under provisions of Section 260553. Identify each conductor with its circuit number or other designation indicated.
- D. Install wiring complete with connections to equipment.
- E. Install wiring so conductors are not in tension in completed system.

- F. Form wiring neatly and group in circuit. Tie grouped conductors with nylon ties, T&B "Tyrap" or approved equivalent.
- G. Each conduit run shall be run complete end to end before conductors are installed.
- H. Use pulling lubricant to decrease pulling tension for all feeder cables, and all difficult cable pulls of any type or size. Pull all conductors into raceway at the same time.
- I. Provide cable supports, at locations required by NEC and/or as shown. Supports with malleable screwed conduit fitting and non-conductive wedges drilled for the size conductors installed. Provide supports rated for all types of insulation and all voltage. Cable supports shall be O.Z./Gedney type "R" or accepted equivalent. Furnish pullbox, sized per NEC for each cable support.
- J. Bond circuit ground wires where installed to all devices, equipment, outlet and junction boxes, and grounding bushings (where provided) with a full size conductor and lugged type connection.
- K. Securely fasten non-ferrous identifying tapes, pressure sensitive labels or engraved nameplates to all cables, feeders and power cables exposed in vaults, inside pull boxes, exposed in manholes, exposed in switchboard, termination compartments, etc
- L. Join and terminate copper conductors individually. Do not mix voltages in the same raceway.
- M. Provide lugs where not furnished as part of equipment - furnish as specified above, to connect all conductors.
- N. Furnish lugs for conductors #1/0 and larger with two bolt tongue or accepted equivalent single bolt tongue with anti-turn devices.
- O. Mark all branch circuit conductors at panel terminations including neutrals with pressure sensitive numbers to correspond to circuit numbers connected. See Section 260553 for labels.
- P. Connect circuits and feeders as shown on drawings. Drawings are diagrammatic and do not show every detail required in the wiring system. Detail wiring accomplished per NEC.
- Q. All conductors making up parallel feeders to be same size, same type, and same insulation, all cut same length. Bond each group of conductors making up a phase or neutral at both ends in an approved manner. Parallel conductors shall not be run in the same raceway.
- R. DO NOT COMBINE CIRCUITS into more than three circuits per homerun unless specifically approved by the Consultant.
- S. Neutral conductors shall not be used for equipment grounding.
- T. Circuitry shall not be run in elevator shafts and hoistways.

- U. Provide a separate neutral and grounding conductor for all GFI circuits or GFI devices to ensure an adequate ground-fault return path.

V. Conductors for receptacle and lighting circuits shall be installed in accordance with the following conditions:

Maximum one-way circuit length in feet for 90°C copper conductors with unity power factor to first device on circuit. Assumed 1920VA/120V, 4432VA/277V loading per circuit.

1. 120V – Single Phase
 - a. #12AWG – 53'
 - b. #10AWG – 88'
 - c. #8AWG – 138'
 - d. #6 AWG – 223'
2. 277V – Single Phase
 - a. #12AWG – 123'
 - b. #10AWG – 205'
 - c. #8AWG – 319'
 - d. #6AWG – 515'

- W. Panelboards may not be used as raceways.
- X. Install crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under screws.
- Y. Install terminal lugs on ends of 600-volt wires unless lugs are furnished on connected device, such as circuit breakers.
- Z. Size lugs in accordance with manufacturer's recommendations terminating wire sizes. Install 2-hole type lugs to connect wires 4 AWG and larger to copper bus bars.
- AA. For terminal lugs fastened together such as on motors, transformers, and other apparatus, or when space between studs is small enough that lugs can turn and touch each other, insulate for dielectric strength of 2-1/2 times normal potential of circuit.
- BB. Clean conductor surfaces before installing lugs and connectors.
- CC. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.

3.4 WIRE COLOR

- A. General:
 1. For wire sizes 10 AWG and smaller, install wire colors in accordance with the following:
 - a. Black and red for single phase circuits at 120/240 volts.
 - b. Black, red, and blue for circuits at 120/208 volts single or three phase.
 - c. Orange, brown, and yellow for circuits at 277/480 volts single or three phase.
 2. For wire sizes 8 AWG and larger, identify wire with colored tape at terminals, splices and boxes. Colors are as follows:
 - a. Black and red for single phase circuits at 120/240 volts.

- b. Black, red, and blue for circuits at 120/208 volts single or three phase.
 - c. Orange, brown, and yellow for circuits at 277/480 volts single or three phase.
 - B. Neutral Conductors: White. When two or more neutrals are located in one conduit, individually identify each with proper circuit number.
 - C. Branch Circuit Conductors: Install three or four wire home runs with each phase uniquely color coded.
 - D. Feeder Circuit Conductors: Uniquely color code each phase.
 - E. Ground Conductors:
 - 1. For 6 AWG and smaller: Green.
 - 2. For 4 AWG and larger: Identify with green tape at both ends and visible points including junction boxes.
- 3.5 FIELD QUALITY CONTROL
- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
 - B. Inspect and test in accordance with NETA ATS, except Section 4.
 - C. Perform inspections and tests listed in NETA ATS, Section 7.3.1.

END OF SECTION 260519

SECTION 260526 – GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Rod electrodes.
 - 2. Wire.
 - 3. Grounding well components.
 - 4. Mechanical connectors.
 - 5. Exothermic connections.
- B. Related Sections:
 - 1. Section 03 20 00 - Concrete Reinforcing: Bonding or welding bars when reinforcing steel is used for electrodes.

1.2 REFERENCES

- A. Institute of Electrical and Electronics Engineers:
 - 1. IEEE 142 - Recommended Practice for Grounding of Industrial and Commercial Power Systems.
 - 2. IEEE 1100 - Recommended Practice for Powering and Grounding Electronic Equipment.
- B. International Electrical Testing Association:
 - 1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.
- C. National Fire Protection Association:
 - 1. NFPA 70 - National Electrical Code.

1.3 SYSTEM DESCRIPTION

- A. Grounding systems use the following elements as grounding electrodes:
 - 1. Metal underground water pipe.
 - 2. Metal building frame.
 - 3. Concrete-encased electrode.
 - 4. Rod electrode.

1.4 PERFORMANCE REQUIREMENTS

- A. Grounding System Resistance: 5 ohms maximum.

1.5 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Product Data: Submit data on grounding electrodes and connections.
- C. Test Reports: Indicate overall resistance to ground and resistance of each electrode.
- D. Manufacturer's Installation Instructions: Submit for active electrodes.
- E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

1.6 CLOSEOUT SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Project Record Documents: Record actual locations of components and grounding electrodes.

1.7 QUALITY ASSURANCE

- A. Provide grounding materials conforming to requirements of NEC, IEEE 142, and UL labeled.
- B. Maintain one copy of each document on site.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum three years documented experience.

1.9 PRE-INSTALLATION MEETINGS

- A. General Conditions: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Requirements for transporting, handling, storing, and protecting products.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

- D. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.

1.11 COORDINATION

- A. General Conditions: Requirements for coordination.
- B. Complete grounding and bonding of building reinforcing steel prior concrete placement.

PART 2 - PRODUCTS

2.1 ROD ELECTRODES

- A. Product Description:
 - 1. Material: Copper-clad steel.
 - 2. Diameter: 3/4 inch (19 mm).
 - 3. Length: 8 feet (2.4 m).
- B. Connector: Connector for exothermic welded connection.

2.2 WIRE

- A. Material: Stranded copper.
- B. Foundation Electrodes: As shown on drawings.
- C. Grounding Electrode Conductor: Copper conductor bare.
- D. Bonding Conductor: Copper conductor bare.

2.3 GROUNDING WELL COMPONENTS

- A. Well Pipe: 8 inches NPS (DN200) by 18 inches (600 mm) long concrete pipe with belled end.
- B. Well Cover: Cast iron with legend "GROUND" embossed on cover.

2.4 MECHANICAL CONNECTORS

- A. Description: Bronze connectors, suitable for grounding and bonding applications, in configurations required for particular installation. Where connection is made to domestic water with a bonding connector, contractor shall remove all paint/tape at connection point to adequately expose bare copper for a proper bonding connection.

2.5 EXOTHERMIC CONNECTIONS

- A. Product Description: Exothermic materials, accessories, and tools for preparing and making permanent field connections between grounding system components.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Verification of existing conditions before starting work.
- B. Verify final backfill and compaction has been completed before driving rod electrodes.

3.2 PREPARATION

- A. Remove paint, rust, mill oils, surface contaminants at connection points.

3.3 EXISTING WORK

- A. Modify existing grounding system to maintain continuity to accommodate renovations.
- B. Extend existing grounding system using materials and methods as specified.

3.4 INSTALLATION

- A. Install in accordance with IEEE 142.
- B. Install grounding and bonding conductors concealed from view.
- C. Install grounding well pipe with cover at each rod location. Install well pipe top flush with finished grade.
- D. Install grounding electrode conductor and connect to reinforcing steel in foundation footing as indicated on Drawings. Electrically bond steel together.
- E. Bond together metal siding not attached to grounded structure; bond to ground.
- F. Equipment Grounding Conductor: Install separate, insulated conductor within each feeder and branch circuit raceway. Terminate each end on suitable lug, bus, or bushing.
- G. Install continuous grounding using underground cold water system and building steel as grounding electrode. Where water piping is not available, install artificial station ground by means of driven rods or buried electrodes.
- H. Permanently ground entire light and power system in accordance with NEC, including service equipment, distribution panels, lighting panelboards, switch and starter enclosures, motor frames, grounding type receptacles, and other exposed non-current carrying metal parts of electrical equipment.
- I. Accomplish grounding of electrical system by using insulated grounding conductor installed with feeders and branch circuit conductors in conduits. Size grounding conductors in accordance with NEC. Install from grounding bus of serving panel to ground bus of served panel, grounding screw of receptacles, lighting fixture housing, light switch outlet boxes or metal enclosures of service equipment. Ground conduits by

means of grounding bushings on terminations at panelboards with installed number 12 conductor to grounding bus.

- J. Grounding electrical system using continuous metal raceway system enclosing circuit conductors in accordance with NEC.
- K. Permanently attach equipment and grounding conductors prior to energizing equipment.

3.5 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Inspect and test in accordance with NETA ATS, except Section 4.
- C. Grounding and Bonding: Perform inspections and tests listed in NETA ATS, Section 7.13.
- D. Perform ground resistance testing in accordance with IEEE 142.
- E. Perform continuity testing in accordance with IEEE 142.
- F. When improper grounding is found on receptacles, check receptacles in entire project and correct. Perform retest.

END OF SECTION 260526

SECTION 260529 – HANGERS, SUPPORTS AND FIRESTOPPING FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Conduit supports.
 - 2. Formed steel channel.
 - 3. Spring steel clips.
 - 4. Sleeves.
 - 5. Mechanical sleeve seals.
 - 6. Firestopping relating to electrical work.
 - 7. Firestopping accessories.
 - 8. Equipment bases and supports.
- B. Related Sections:
 - 1. Section 03 30 00 - Cast-In-Place Concrete: Product requirements for concrete for placement by this section.

1.2 REFERENCES

- A. ASTM International:
 - 1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - 2. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
 - 3. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
 - 4. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.
- B. FM Global:

- D. Underwriters Laboratories Inc.:
 - 1. UL 263 - Fire Tests of Building Construction and Materials.
 - 2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
 - 3. UL 1479 - Fire Tests of Through-Penetration Firestops.
 - 4. UL 2079 - Tests for Fire Resistance of Building Joint Systems.
 - 5. UL - Fire Resistance Directory.
- E. Intertek Testing Services (Warnock Hersey Listed):

1. WH - Certification Listings.

1.3 DEFINITIONS

- A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.4 SYSTEM DESCRIPTION

- A. Firestopping Materials: ASTM E119, ASTM E814, UL 263, UL 1479, to achieve fire ratings of adjacent construction. In accordance with Design Numbers.
- B. Surface Burning: UL 723 with maximum flame spread / smoke developed rating of 25/450.
- C. Firestop interruptions to fire rated assemblies, materials, and components.

1.5 PERFORMANCE REQUIREMENTS

- A. Firestopping: Conform to UL for fire resistance ratings and surface burning characteristics.

1.6 SUBMITTALS

- A. General Conditions: Requirements for submittals.
- B. Shop Drawings: Indicate system layout with location and detail of trapeze hangers.
- C. Product Data:
 1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
 2. Firestopping: Submit data on product characteristics, performance and limitation criteria.
- D. Firestopping Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.
- E. Design Data: Indicate load carrying capacity of trapeze hangers and hangers and supports.
- F. Manufacturer's Installation Instructions:
 1. Hangers and Supports: Submit special procedures and assembly of components.
 2. Firestopping: Submit preparation and installation instructions.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- H. Engineering Judgements: For conditions not covered by UL or WH listed designs, submit judgements by licensed professional engineer suitable for presentation to

authority having jurisdiction for acceptance as meeting code fire protection requirements.

1.7 QUALITY ASSURANCE

- A. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10 inch water gage (24.9 Pa) minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.
 - 1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
 - 2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.
 - a. Floor Penetrations Within Wall Cavities: T-Rating is not required.
- B. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.
 - 1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
 - 2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.
- C. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.
- D. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10-inch water gage (24.9 Pa) minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.
- E. Surface Burning Characteristics: 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum three years documented experience approved by manufacturer.

1.9 PRE-INSTALLATION MEETINGS

- A. General Conditions: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Requirements for transporting, handling, storing, and protecting products.
- B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- C. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

1.11 ENVIRONMENTAL REQUIREMENTS

- A. General Conditions: Environmental conditions affecting products on site.
- B. Do not apply firestopping materials when temperature of substrate material and ambient air is below 60 degrees F (15 degrees C).
- C. Maintain this minimum temperature before, during, and for minimum 3 days after installation of firestopping materials.
- D. Provide ventilation in areas to receive solvent cured materials.

PART 2 – PRODUCTS

2.1 CONDUIT SUPPORTS

- A. Hanger Rods: Threaded high tensile strength galvanized carbon steel with free running threads.
- B. Beam Clamps: Malleable Iron, with tapered hole in base and back to accept either bolt or hanger rod. Set screw: hardened steel.
- C. Conduit clamps for trapeze hangers: Galvanized steel, notched to fit trapeze with single bolt to tighten.
- D. Conduit clamps - general purpose: One hole malleable iron for surface mounted conduits.

2.2 FORMED STEEL CHANNEL

- A. Product Description: Galvanized 12 gage (2.8 mm) thick steel. With holes 1-1/2 inches (38 mm) on center.

2.3 SPRING STEEL CLIPS

- A. Product Description: Mounting hole and screw closure.

2.4 SLEEVES

- A. Furnish materials in accordance with project standards.
- B. Sleeves Through Non-fire Rated Floors: 18 gage (1.2 mm) thick galvanized steel.
- C. Sleeves for Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 mm thick galvanized steel.
- D. Sleeves for Through Fire Rated and Fire Resistive Floors and Walls, and Fire Proofing: Prefabricated fire rated sleeves including seals, UL listed.
- E. Fire-stopping Insulation: Glass fiber type, non-combustible.

2.5 MECHANICAL SLEEVE SEALS

- A. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.6 FIRESTOPPING

- A. Manufacturers:
 - 1. Dow Corning Corp.
 - 2. 3M fire Protection Products.
 - 3. Specified Technology, Inc.
 - 4. Substitutions: General Conditions
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
 - 1. Silicone Firestopping Elastomeric Firestopping: Single component silicone elastomeric compound and compatible silicone sealant.
 - 2. Foam Firestopping Compounds: Single component foam compound.
 - 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
 - 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral fiber stuffing insulation with silicone elastomer for smoke stopping.
 - 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
 - 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
 - 7. Firestop Pillows: Formed mineral fiber pillows.
- C. Color: Dark gray.

2.7 FIRESTOPPING ACCESSORIES

- A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.
- B. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- C. General:
 - 1. Furnish UL listed products.
 - 2. Select products with rating not less than rating of wall or floor being penetrated.
- D. Non-Rated Surfaces:
 - 1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
 - 2. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. General Conditions: Verification of existing conditions before starting work.
- B. Verify openings are ready to receive sleeves.
- C. Verify openings are ready to receive firestopping.

3.2 PREPARATION

- A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.
- B. Remove incompatible materials affecting bond.
- C. Obtain permission from Architect/Engineer before using powder-actuated anchors.
- D. Do not drill or cut structural members.

3.3 INSTALLATION - HANGERS AND SUPPORTS

- A. Anchors and Fasteners:
 - 1. Concrete Structural Elements: Provide precast inserts, expansion anchors, and preset inserts.
 - 2. Steel Structural Elements: Provide beam clamps, spring steel clips, steel ramset fasteners, and welded fasteners.
 - 3. Concrete Surfaces: Provide self-drilling anchors and expansion anchors.

4. Hollow Masonry, Plaster, and Gypsum Board Partitions: Provide toggle bolts and hollow wall fasteners.
 5. Solid Masonry Walls: Provide expansion anchors and preset inserts.
 6. Sheet Metal: Provide sheet metal screws.
 7. Wood Elements: Provide wood screws.
- B. Inserts:
1. Install inserts for placement in concrete forms.
 2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
 3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches (100 mm).
 4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
 5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut flush with top of slab.
- C. Install conduit and raceway support and spacing in accordance with NEC.
- D. Do not fasten supports to pipes, ducts, mechanical equipment, or conduit.
- E. Install multiple conduit runs on common hangers.
- F. Supports:
1. Fabricate supports from structural steel or formed steel channel. Install hexagon head bolts to present neat appearance with adequate strength and rigidity. Install spring lock washers under nuts.
 2. Install surface mounted cabinets and panelboards with minimum of four anchors.
 3. In wet and damp locations install steel channel supports to stand cabinets and panelboards
1 inch (25 mm) off wall.
 4. Support vertical conduit at every floor.
- G. Support EMT within twelve inches of each outlet, junction box, cabinet or fitting and every eight-foot thereafter. Combination box/conduit hangers are not allowed.
1. Acceptable Individual conduit hanger manufacturers
 - a. Appleton
 - b. Minerallac
 - c. OZ Mfr. Co.
 - d. Erico-Products
 - e. Steel City
 - f. Thomas & Betts
- H. Support for multiple conduit runs shall consist of trapeze type hangers as required. Galvanized bolts or rods shall be 3/8" minimum diameter and anchored to structure. Provide support system clamp for each conduit on hangers. Support systems shall utilize 1-5/8" x 1-5/8" x 12 gage multi-purpose steel channels, complete with all necessary hardware, clamps, etc. all channel hardware shall be galvanized and/or plated to prevent corrosion. Channel sizes and quantity, and number of support rods shall be increased to support increased weights. Design each assembly to carry the combined weight of conduit and wire, assembly itself plus 100 pounds. Provide space for 25 percent additional conduit of the same size.

- I. 1. Acceptable Manufacturers of channel support Systems
 - a. B-Line
 - b. Kindorf
 - c. Superstrut
 - d. Unistrut

- I. **All hangars for electrical items (conduit, boxes, fixtures and all other related equipment) where an “Epic Deck” system occurs shall be compatible for use with this system, “Epic Deck” is by Epic Metals Corporation. See Architectural and Structural drawings for locations.**

3.4 INSTALLATION - FIRESTOPPING

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.
- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.
- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating, to uniform density and texture.
- D. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.
- E. Fire Rated Surface:
 1. Seal opening at floor, wall, partition, ceiling, and roof as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch (25 mm) on both sides of building element.
 - b. Size sleeve allowing minimum of 1 inch (25 mm) void between sleeve and building element.
 - c. Pack void with backing material.
 - d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
 2. Where cable tray, conduit, wireway, and cable penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.
- F. Non-Rated Surfaces:
 1. Seal opening through non-fire rated wall, partition, floor, ceiling and roof opening as follows:
 - a. Install sleeve through opening and extending beyond minimum of 1 inch (25 mm) on both sides of building element.
 - b. Size sleeve allowing minimum of 1 inch (25 mm) void between sleeve and building element.
 - c. Install type of firestopping material recommended by manufacturer.
 2. Install floor plates or ceiling plates where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
 3. Exterior wall openings below grade: Assemble rubber links of mechanical seal to size of conduit and tighten in place, in accordance with manufacturer's instructions.

4. Interior partitions: Seal pipe penetrations at computer rooms and data rooms. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

3.5 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

- A. Provide housekeeping pads of concrete, minimum 3-1/2 inches (87 mm) thick and extending 4 inches (150 mm) beyond supported equipment. Refer to Section 03 30 00.
- B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
- C. Construct supports of steel members. Brace and fasten with flanges bolted to structure.

3.6 INSTALLATION - SLEEVES

- A. Exterior watertight entries: Seal with adjustable interlocking rubber links.
- B. Conduit penetrations not required to be watertight: Sleeve and fill with silicon foam.
- C. Set sleeves in position in forms. Provide reinforcing around sleeves.
- D. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- E. Extend sleeves through floors 1 inch above finished floor level. Caulk sleeves.
- F. Where conduit or raceway penetrates floor, ceiling, or wall, close off space between conduit or raceway and adjacent work with fire stopping insulation and caulk airtight. Provide close fitting metal collar or escutcheon covers at both sides of penetration.
- G. Install chrome plated steel escutcheons at finished surfaces.

3.7 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Inspect installed firestopping for compliance with specifications and submitted schedule.

3.8 CLEANING

- A. General Conditions: Requirements for cleaning.
- B. Clean adjacent surfaces of firestopping materials.

3.9 PROTECTION OF FINISHED WORK

- A. General Conditions: Requirements for protecting finished Work.
- B. Protect adjacent surfaces from damage by material installation.

END OF SECTION 260529

SECTION 260533 – RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.1 SUMMARY

- A. Section includes conduit and tubing, surface raceways, wireways, outlet boxes, pull and junction boxes, and handholes.
- B. Related Sections:
 - 1. Section 26 05 03 - Equipment Wiring Connections.
 - 2. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
 - 3. Section 26 05 29 - Hangers and Supports for Electrical Systems.
 - 4. Section 26 05 53 - Identification for Electrical Systems.
 - 5. Section 26 27 16 - Electrical Cabinets and Enclosures.
 - 6. Section 26 27 26 - Wiring Devices.
 - 7. Section 27 05 33 - Conduits and Backboxes for Communications Systems.
 - 8. Section 27 05 36 - Cable Trays for Communications Systems.
 - 9. Section 28 05 28 - Conduits and Backboxes for Electronic Safety and Security.

1.2 REFERENCES

- A. American National Standards Institute:
 - 1. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
 - 2. ANSI C80.3 - Specification for Electrical Metallic Tubing, Zinc Coated.
- B. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
 - 3. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 4. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 5. NEMA RN 1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
 - 6. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
 - 7. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.

1.3 SYSTEM DESCRIPTION

- A. Raceway and boxes located as indicated on Drawings, and at other locations required for splices, taps, wire pulling, equipment connections, and compliance with regulatory requirements. Raceway and boxes are shown in approximate locations unless dimensioned. Provide raceway to complete wiring system. Exposed junction/pull boxes are not acceptable in finished areas, pull/spare boxes shall be above ceilings and hidden from view.

- B. Underground: Provide schedule 40 PVC. Provide pre-cast concrete or nonmetallic handholes, vaults or manholes.
- C. In or Under Slab on Grade: Under slab on grade provide PVC conduit. Minimum size $\frac{3}{4}$ " conduit. Conduit not allowed to be run within slab on grade.
- D. Outdoor Locations, Above Grade: Provide rigid steel conduit and electrical metallic tubing. Provide cast metal or nonmetallic outlet, pull, and junction boxes.
- E. In or Under Slab on Grade: Under slab on grade provide PVC conduit. Minimum size $\frac{3}{4}$ " conduit. Conduit not allowed to be run within slab on grade.
- F. Interior Wet Locations: Provide rigid steel conduit. Provide cast metal outlet, junction, and pull boxes. Provide flush mounting outlet box in finished areas.
- G. Concealed Dry Locations: Provide electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.
- H. Exposed Dry Locations: Provide electrical metallic tubing, except where exposed to physical damage; provide rigid steel conduit. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes. Exposed conduit in finished areas not acceptable. Exposed conduit shall be kept to a minimum in all cases.

1.4 DESIGN REQUIREMENTS

- A. Minimum Raceway Size: 1/2inch (13mm) unless otherwise specified. Comply with NEC for minimum size conduit and installation requirements. Minimum size 1/2 inch diameter for branch circuits, minimum size 3/4 inch diameter for homeruns. Minimum size for PVC conduit shall be 3/4 inch in diameter. Conduits shall be installed complete end-to-end prior to installing conductors.

1.5 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit for the following:
 - 1. Flexible metal conduit.
 - 2. Liquidtight flexible metal conduit.
 - 3. Nonmetallic conduit.
 - 4. Raceway fittings.
 - 5. Conduit bodies.
 - 6. Surface raceway.
 - 7. Wireway.
 - 8. Pull and junction boxes.
 - 9. Handholes.
- C. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements.

Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

1.6 CLOSEOUT SUBMITTALS

- A. General Conditions: Closeout procedures.
- B. Project Record Documents:
 - 1. Record actual routing of conduits 2" and larger.
 - 2. Record actual locations and mounting heights of outlet, pull, and junction boxes.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. General Conditions: Product storage and handling requirements.
- B. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.
- C. Protect PVC conduit from sunlight.

1.8 COORDINATION

- A. General Conditions: Coordination and project conditions.
- B. Coordinate installation of outlet boxes for equipment connected under Section 26 05 03.
- C. Coordinate mounting heights, orientation and locations of outlets mounted above counters, benches, and backsplashes.

PART 2 - PRODUCTS

2.1 METAL CONDUIT

- A. Rigid Steel Conduit: ANSI C80.1.
- B. Intermediate Metal Conduit (IMC): Rigid steel.
- C. Fittings and Conduit Bodies: NEMA FB 1; all steel fittings. Threadless fittings shall not be used.
- D. Terminate rigid conduit in dry locations with two steel locknuts, one inside, one outside of the cabinet, junction box or outlet box and an insulated bushing. Bushings shall be malleable iron or steel with smooth insulating ring molded into edge of bushing to prevent damage to cable. Insulated bushings shall be 150 degree C self extinguishing thermoplastic. Provide grounding bushings on 1 ½ inch conduit and larger. Construction of bushings shall be similar to steel bushings described above except provide lugs for grounding connection.

- E. Where conduits are installed underground, the threaded joints shall be sealed with a conductive joint sealing compound.

2.2 PVC COATED METAL CONDUIT

- A. Product Description: NEMA RN 1; rigid steel conduit with external PVC coating, 40 mil (0.05 mm) thick.
- B. Fittings and Conduit Bodies: NEMA FB 1; steel fittings with external PVC coating to match conduit.

2.3 FLEXIBLE METAL CONDUIT

- A. Product Description: Interlocked steel construction.
- B. Fittings: NEMA FB 1.
- C. Connectors and fittings galvanized steel, threadless type with insulated throats, U.L. approved for grounding means.

2.4 LIQUIDTIGHT FLEXIBLE METAL CONDUIT

- A. Product Description: Interlocked steel construction with PVC jacket.
- B. Fittings: NEMA FB 1.
- C. Fitting Assembly – Sealing type, with steel gland, nylon ring and ground cone inside locknut. All fittings with insulated throat, U.L. approved for grounding means.

2.5 ELECTRICAL METALLIC TUBING (EMT)

- A. Product Description: ANSI C80.3; galvanized tubing.
- B. Fittings and Conduit Bodies: NEMA FB 1; use insulated throat galvanized steel, rain tight, compression or set screw type. Compression type must be used in all medical facilities and in damp locations. Provide grounding bushing on 1¼ inch and larger. **Zinc alloy and similar soft metal castings are not allowed.**

2.6 NONMETALLIC CONDUIT

- A. Product Description: NEMA TC 2; Schedule 40 PVC. Minimum sizes shall be 3/4 inch by diameter.
- B. Fittings and Conduit Bodies: NEMA TC 3.
- C. Fittings same material as conduit and installed with watertight joint compound recommended by manufacturer.

2.7 WIREWAY

- A. Product Description: NEMA Type 1, General purpose, Oiltight and dust-tight. NEMA Type 3R, raintight type wireway as required to meet project conditions. Open top assembly.
- B. Knockouts: NEMA Type 1, Manufacturer's standard. NEMA Type 3R – none.
- C. Size: As indicated on Drawings.
- D. Cover: NEMA Type 1 – removable hinged cover latches with captive screws. NEMA Type 3R – removable cover with quick release latches and full gaskets.
- E. Connector: Slip-in.
- F. Fittings: Lay-in type with removable top, bottom, and side; captive screws.
- G. Finish: Rust inhibiting primer coating with gray enamel finish.

2.8 OUTLET BOXES

- A. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.
 - 1. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; furnish 1/2 inch (13 mm) male fixture studs where required.
 - 2. Concrete Ceiling Boxes: Concrete type.
- B. Cast Boxes: NEMA FB 1, Type FD, cast fer alloy. Furnish gasketed cover by box manufacturer.
- C. Wall Plates for Finished Areas: As specified in Section 26 27 26.
- D. Wall Plates for Unfinished Areas: Galvanized industrial raised rings suitable for device type.
- E. Welded boxes are not acceptable.

2.9 PULL AND JUNCTION BOXES

- A. Sheet Metal Boxes: NEMA OS 1, galvanized steel.
- B. Hinged Enclosures: As specified in Section 26 27 16.
- C. Surface Mounted Cast Metal Box: NEMA 250, Type 4; flat-flanged, surface mounted junction box:
 - 1. Material: Galvanized cast iron.
 - 2. Cover: Furnish with ground flange, neoprene gasket, and stainless steel cover screws.
- D. Flush pull boxes installed in walls shall have oversized covers and be painted to match surface.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify outlet locations and routing and termination locations of raceway prior to rough-in.

3.2 INSTALLATION

- A. Ground and bond raceway and boxes in accordance with Section 26 05 26.
- B. Fasten raceway and box supports to structure and finishes in accordance with Section 26 05 29.
- C. Identify raceway and boxes in accordance with Section 26 05 53.
- D. Arrange raceway and boxes to maintain headroom and present neat appearance.

3.3 INSTALLATION – RACEWAY

- A. Electrical conduits shall be run concealed where building construction allows. Any exposed conduit shall be approved by the owner or architect prior to installation. Any exposed conduit, fittings, supports, etc shall be painted to match the surface on which they are installed.
- B. Conduit within the roof deck assembly shall be installed in accordance with NEC 300.4(E) and (F). Utilize Galvanized Rigid Conduit (GRC), or Intermediate Metallic Conduit (IMC) with steel plates to protect junction boxes from roof insulation attachment anchors.
- C. Raceway routing is shown in approximate locations unless dimensioned. Route to complete wiring system.
- D. Arrange raceway supports to prevent misalignment during wiring installation.
- E. Support raceway using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
- F. Group related raceway; support using conduit rack. Construct rack using steel channel specified in Section 26 05 29; provide space on each for 25 percent additional raceways.
- G. Do not support raceway with wire or perforated pipe straps. Remove wire used for temporary supports
- H. Do not attach raceway to ceiling support wires or other piping systems.
- I. Construct wireway supports from steel channel specified in Section 26 05 29.

- J. Route exposed raceway parallel and perpendicular to walls.
- K. Route raceway installed above accessible ceilings parallel and perpendicular to walls.
- L. Route conduit in and under slab from point-to-point.
- M. Maintain clearance between raceway and piping for maintenance purposes.
- N. Maintain 12 inch (300 mm) clearance between raceway and surfaces with temperatures exceeding 104 degrees F (40 degrees C).
- O. Cut conduit square using saw or pipe cutter; de-burr cut ends.
- P. Bring conduit to shoulder of fittings; fasten securely.
- Q. Join nonmetallic conduit using cement as recommended by manufacturer. Wipe nonmetallic conduit dry and clean before joining. Apply full even coat of cement to entire area inserted in fitting. Allow joint to cure for minimum 20 minutes.
- R. Install conduit hubs to fasten conduit to sheet metal boxes in damp and wet locations and to cast boxes.
- S. Install no more than equivalent of three 90 degree bends (270 degrees total) between boxes. Install conduit bodies to make sharp changes in direction, as around beams. Use hydraulic one-shot bender to fabricate or factory elbows for bends in metal conduit larger than 2 inch (50 mm) size.
- T. Avoid moisture traps; install junction box with drain fitting at low points in conduit system.
- U. Install suitable pull string or cord in each empty raceway except sleeves and nipples.
- V. Install suitable caps to protect installed conduit against entrance of dirt and moisture.
- W. Surface Wireway: Install flat-head screws, clips, and straps to fasten raceway channel to surfaces; mount plumb and level. Install insulating bushings and inserts at connections to outlets and corner fittings.
- X. Close ends and unused openings in wireway.
- Y. Exterior buried conduit shall be scheduled 40 PVC with PVC coated RGS 90 degree bends when penetrating through floor slabs.
- Z. Use rigid steel conduit for all motor circuits where subject to physical damage.
- AA. Intermediate grade metal conduit, (threaded only), may be used in lieu of rigid steel conduit where allowed by NEC.
- BB. Use flexible steel conduit for:
 - 1. Connection to vibrating equipment in dry locations between rigid conduit and connection box on equipment.

2. Final connections to equipment in dry locations.
 3. Final connections to equipment requiring adjustments.
 4. Final connections to recessed lighting fixtures from conduit system.
 5. Connection to distribution transformers.
 6. Maximum length 6'.
- CC. Use Liquidtight flexible conduit in damp or wet locations for same circuit categories listed for flexible conduit above. Engineer will determine "damp or wet" locations if questionable.
- DD. EMT shall not be installed underground and shall not be encased in concrete.
- EE. Conduit must be installed high enough above lay in ceiling to permit removal of ceiling panels and light fixtures.
- FF. In concrete slab on grade or elevated slabs: Conduit may penetrate slabs but will **NOT** be allowed to run in slabs on grade or elevated slabs.
- GG. In accordance with NEC 300.4 conduit may not be run exposed across roof.
- HH. Due to the corrosive nature of the soil all metal conduit, couplings, elbows and fittings in contact with the soil or buried below grade shall be factory coated with PVC or two-lap wrapped with 20 mil 3M Scotchwrap with Pipe Primer applied as recommended by Manufacturer. Make underground conduit fittings watertight using conductive compound tape. Do not use split couplings and similar fittings underground and exposed to moisture.
- II. Route underground conduits minimum 24" below grade.
- JJ. Paint conduit threads exposed to moisture with exterior grade, rust preventive silver paint after installation.
- KK. Where conduit crosses expansion joints, install expansion type fittings with bonding jumper. Use expansion joint with lateral conduit movement of 4" or 8" as indicated. When both vertical and lateral movement is expected the joint shall be a 1" braided flexible coupling allowing both directional movements.
- LL. Vibrating equipment and equipment requiring adjustment, i.e.: motors, transformers, etc: make final connections with flexible metal conduit.
- MM. Isolate conduit connections to equipment on roof from roof penetration of conduit with short section of liquid-tight flexible conduit between roof penetration and equipment to prevent leak in roof penetration due to equipment vibration.
- NN. Supports shall be installed in accordance with Seismic standards. Provide necessary side braces and swing joints as required. See Spec Section 26 05 30 Seismic Protection for Electrical Equipment.
- OO. All conduit penetrations through or within CMU walls shall be rigid steel. Conduit run within CMU walls encased in concrete shall be PVC.

3.4 INSTALLATION - BOXES

- A. Install wall mounted boxes at elevations to accommodate mounting heights as indicated on Drawings.
- B. Adjust box location up to 10 feet prior to rough-in to accommodate intended purpose.
- C. Orient boxes to accommodate wiring devices oriented as specified in Section 26 27 26.
- D. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.
- E. In Accessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches (150 mm) from ceiling access panel or from removable recessed luminaire.
- F. Locate flush mounting box in masonry wall to require cutting of masonry unit corner only. Coordinate masonry cutting to achieve neat opening.
- G. Do not install flush mounting box back-to-back in walls; install with minimum 6 inches (150 mm) separation (non-rated or acoustically rated). Install with minimum 24 inches (600 mm) separation in fire-rated walls.
- H. Secure flush mounting box to interior wall and partition studs. Accurately position to allow for surface finish thickness.
- I. Install stamped steel bridges to fasten flush mounting outlet box between studs.
- J. Install flush mounting box without damaging wall insulation or reducing its effectiveness.
- K. Install adjustable steel channel fasteners for hung ceiling outlet box.
- L. Do not fasten boxes to ceiling support wires or other piping systems.
- M. Support boxes independently of conduit.
- N. Install gang box where more than one device is mounted together. Do not use sectional box.
- O. Install gang box with plaster ring for single device outlets.
- P. Seal boxes during construction to prevent entrance of construction debris.
- Q. Paint wiring connections in ground mounted outlets or floor outlets in wet locations with "Scotchkote" and fill box with "Duxseal".
- R. Where outlet boxes are installed in unfinished concrete walls or columns, provide 1" deep plaster ring with box and ring set in position before the concrete is poured so concrete will fill around the ring and cover plate can be installed flush with the

unfinished surface. In case of brick walls, follow same procedure with mason filling around the plaster ring with mortar.

- S. Install all outlets located on columns or walls, provide 6" x 6" x 3" deep wood box placed in the forms before concrete is poured. Remove wood box before waterproofing is applied. General Contractor will waterproof wall and opening, after which Electrical Contractor will install outlet box. General Contractor will grout around box. Set boxes carefully so that cover plates will be flush with the surface and square.
- T. **Refer to structural details regarding installation of boxes and conduit within CMU walls and adjacent to openings. All boxes and conduit must maintain minimum spacing requirements per structural details. See 1/S021.**

3.5 INTERFACE WITH OTHER PRODUCTS

- A. Install conduit to preserve fire resistance rating of partitions and other elements, using materials and methods in accordance with Section 07 84 00.
- B. Route conduit through roof openings for piping and ductwork or through suitable roof jack with pitch pocket. Coordinate location with roofing installation specified.
- C. Locate outlet boxes to allow luminaires positioned as indicated on Drawings.
- D. Align adjacent wall mounted outlet boxes for switches, thermostats, and similar devices.

3.6 ADJUSTING

- A. General Conditions: Testing, adjusting, and balancing.
- B. Adjust flush-mounting outlets to make front flush with finished wall material.
- C. Install knockout closures in unused openings in boxes.

3.7 CLEANING

- A. General Conditions: Final cleaning.
- B. Clean interior of boxes to remove dust, debris, and other material.
- C. Clean exposed surfaces and restore finish.

END OF SECTION 260533

SECTION 260553 – ELECTRICAL IDENTIFICATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Provide and install required identification for the systems and equipment shown on the drawings and/or specified. The extent of identification is specified herein and in individual technical sections of work.
- B. Coordinate with Consultant and Owner for proper equipment identification nomenclature. Nameplates must be approved by Consultant prior to ordering and installation.
- C. Types of electrical identification include:
 - 1. Conduit labeling.
 - 2. Buried cable and conduit warnings.
 - 3. Cable/conductor identification.
 - 4. Operational instructions and warnings.
 - 5. Danger signs.
 - 6. Equipment/system identification labels and signs.
 - 7. Device plate labeling.
 - 8. Junction box labeling.

1.2 RELATED WORK

- A. Painting of conduit and color-coded painting of conduit if required. See Division 9.

1.3 SUBMITTALS

- A. Manufacturer's Data
 - 1. Product specifications and installation instructions for each material and device.
- B. Samples
 - 1. Provide for each color, lettering style and other graphic representation.
- C. Labels
 - 1. Provide a list of labels with actual designations as they will be printed.

PART 2 - PRODUCTS

2.1 ELECTRICAL IDENTIFICATION MATERIAL

Conform to ANSI A13.1, Table 3 for minimum size of legend letters and minimum length of color field for each raceway or cable size. Use colors prescribed by ANSI A13.7, NFPA 70 and these specifications.

- A. Color-Coded Conduit Markers
 - 1. Manufacturer's standard preprinted, flexible or semi-rigid, permanent, plastic-sheet conduit markers, extending 360 degrees around conduits. Attach with

adhesive, adhesive lap joint of marker, matching adhesive plastic tape at each end of marker, or pre-tensioned snap-on. Lettering to indicate voltage, function of conductors in conduit and shall be 8" minimum length (i.e. ac power, dc power, fire alarm).

B. Color-Coded Plastic Tape

1. Manufacturer's standard self-adhesive vinyl tape, minimum 3 mils thick by 1-1/2" wide.
2. Color: Orange.

C. Underground Plastic Line Marker

1. Manufacturer's standard permanent, bright-colored, continuous-printed plastic tape, for direct-burial service; minimum 4" wide x 4 mils thick. Printing to indicate type service of cable; with large (minimum 2-1/2") high letters.

D. Cable/Conductor Identification Bands

1. Manufacturer's standard vinyl self-adhesive self laminating cable/conductor markers, wrap-around type; pre-numbered plastic coated, or write-on type with clear plastic self-adhesive cover flap, lettered to show circuit identification. Similar to Panduit "Instacode" or accepted equivalent by T&B, or Tyton. Refer to Section 26 05 19 Low Voltage Electrical Power Conductors and Cables.

E. Self-Adhesive Plastic Signs

1. Manufacturer's standard, self-adhesive, pre-printed, flexible vinyl signs for operational instructions or warnings. Sizes suitable for application and visibility, with proper wording for application.
2. Color: Orange or Yellow with black lettering.

F. Danger Signs

1. Manufacturer's standard "DANGER" signs, baked enamel finish on 20 gage steel; standard red, black and white graphics; 14" x 10" unless 10" x 7" is largest which can be applied, or where larger size is needed for visibility use recognized explanation wording (as examples: HIGH VOLTAGE, KEEP AWAY, BURIED CABLE, DO NOT TOUCH SWITCH, DANGER-STARTS AUTOMATICALLY).

G. Engraved Signs (Nameplates)

1. Use 1/8" thick melamine plastic laminate, complying with FS LP-387, sizes as indicated, engrave with standard letter style of sizes and wording indicated (1/4" letters minimum).
2. Color: Black field with white letters for normal power service;
3. Fasteners: Self adhesive backing or double stick tape.

H. Permanent Polyester Tape:

1. Use Permanent Metalized Polyester Tapes for Industrial purposes that are resistant to oil, solvents and chemicals, these durable tapes adhere to all surface.
2. DYMO #18485, Black on Silver, 3/8" wide, or equivalent.

I. Lettering and Graphics

1. Coordinate names, abbreviations and other designations used with those shown or specified. Provide numbers, lettering, and wording as indicated or required for identification and operation/maintenance.

PART 3 - EXECUTION

3.1 APPLICATION AND INSTALLATION

A. General Installation Requirements

1. Install after completion of painting.
2. Comply with governing regulations and requests of governing authorities for identification of electrical work.

B. Conduit Identification

1. Use adhesive marking tape labels, Brother or Kroy labels 1" high x 12" long (min.), at 20 foot intervals to identify all conduits run exposed or located above accessible ceilings. Conduits located above non-accessible ceiling or in floors and walls shall be labeled within 3 feet of becoming accessible. Labels for multiple conduits shall be aligned. Use the following colors:
 - a. Above 600 Volts: Conduit 2" and larger - Black letters on orange background indicating feeder identification and voltage. Feeders within walls: provide identification on wall surfaces directly external to the conduits. Alternate identification labels with "DANGER - HIGH VOLTAGE" warning signs of the same color.
 - b. 600 Volt and Below Normal: Conduit 2" and larger - White letters on black background indicating feeder identification and voltage. Not required unless otherwise noted.
 - c. 600 Volt and Below Emergency: All conduit - White or black letters on red background indicating feeder identification and voltage. Not required unless otherwise noted
 - d. 600 Volt and Below UPS: All conduit - Black letters on yellow background indicating feeder identifications, circuit number and voltage. Not required unless otherwise noted
 - e. Fire Alarm: All conduit shall be manufactured red.
 - f. Temperature Control: White or black letters on blue background indicating "TEMP. CONTROL"
 - g. Ground: All conduit - White or black letters on green background
 - h. Network Fiber: All conduit - Black letters on white background indicating "NETWORK FIBER."
2. Where conduits enter or exit a panelboard, pull or junction box, switchboard, or other distribution equipment, conduit labels shall include circuit number in addition to feeder identification and voltage.
3. For overhead conduits, place identification such that it can be read standing on the floor below.

C. Underground Cable Identification

1. During back-filling of underground cable, install continuous underground marker, directly over buried line 6" to 8" below finished grade. Where multiple lines are buried in common trench not exceeding 24" width, install a single line marker. Install additional line markers for each increment of 24" width, i.e., 36" wide

- trench - 2 markers; 54" wide trench, 3 markers. Install multiple markers evenly spaced.
 - 2. Install line marker for every buried ductbank and/or conduits 3" diameter or larger.
 - 3. Electric Lines: Use red colored tape with lettering stating "CAUTION BURIED ELECTRIC LINE BELOW".
 - 4. Communication Lines: Use orange colored tape with lettering stating "CAUTION COMMUNICATION LINE BELOW".
- D. Operational Identification and Warnings
- 1. Provide operational signs for:
 - a. Switchgear
 - b. Large motor starters
 - c. All rotating equipment
- E. Danger Signs
- 1. Provide as required by codes.
- F. Engraved Plastic Laminated Signs
- 1. Install on each major unit of electrical equipment in the building. Provide single line of text, 1/4" high lettering on 1" high sign (1-1/2" high where 2 lines required). Matching terminology and numbering as indicated in contract documents.
 - 2. Provide signs for each unit of the following categories:
 - a. Electrical cabinets and enclosures: Indicate cabinet designation, voltage, phase and feeder origin.
 - b. Access panel/doors to electrical facilities: Indicate room name and use.
 - c. Major electrical switchgear: Indicate equipment designation, voltage, phase and feeder origin.
 - d. Electrical substations: Indicate equipment designation, voltage, phase and feeder origin.
 - e. Safety switches, circuit breakers and portable engine disconnects: Indicate equipment designation, voltage, phase, feeder origin and circuit number.
 - f. Transformers: Indicate transformer designation, voltages, phases, feeder origin, circuit number and equipment served.
 - g. Feeder cables inside pull and junction boxes and inside all switchgear at terminals indicating source and destination: Fasten with nylon ties.
 - h. All equipment furnished in this Division of the specifications: Indicate equipment designation, voltage, phase, feeder origin and circuit number.
- G. Install signs where indicated or most visible. Secure with at least two cadmium-plated screws. Where substrate cannot receive screws, use industrial epoxy cement to secure signs. Self-adhesive or double stick tape is acceptable. Secure with cadmium plated screws on porous surfaces.
- H. Identify all conduits installed for future use.
- I. Junction, Pull and Connection boxes. Identification of systems and circuits shall indicate system voltage and identity of contained circuits on outside of box cover. Color code shall be same as conduits for pressure sensitive labels. Use self-adhesive marking tape labels at exposed locations and indelible black marker at concealed

boxes. All fire alarm boxes shall have red covers. All temperature control boxes shall have blue covers.

- J. Branch Circuit Conductors shall be identified in each junction box and pull box with wire markers as manufactured by T & B, Panduit, 3M or Ideal to indicate panel/circuit number.
- K. Junction Boxes in branch circuit wiring shall be labeled with panel and circuit numbers. Junction boxes for special systems shall be labeled with system name and other identification as directed; for example, "fire alarm-zone 1". Where boxes are installed flush mounted in finished areas or surface mounted in unfinished areas, labeling shall be with engraved plastic nameplate as specified herein. Where boxes are installed above accessible ceilings, labeling may be neat hand written lettering with indelible marker.
- L. Device Plates – switches and receptacles. Identify the panelboard and branch circuit number from which served on the front of the device plate with Permanent Polyester Clear Tape with black letters. Locate all labels at the bottom of the plate in the same location throughout.

END OF SECTION 260553

SECTION 262716 - CABINETS AND ENCLOSURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Hinged cover enclosures.
 - 2. Cabinets.
 - 3. Terminal blocks.
 - 4. Accessories.
- B. Related Requirements:
 - 1. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
 - 2. Section 26 05 29 - Hangers and Supports for Electrical Systems.
 - 3. Section 26 05 33 - Raceway and Boxes for Electrical Systems.

1.2 REFERENCE STANDARDS

- A. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA ICS 4 - Industrial Control and Systems: Terminal Blocks.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit manufacturer's standard data for enclosures, cabinets, and terminal blocks.
- C. Manufacturer's Instructions: Submit application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. General Conditions: Requirements for maintenance materials.
- B. Extra Stock Materials:
 - 1. Furnish two of each key.

1.5 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.

PART 2 - PRODUCTS

2.1 HINGED COVER ENCLOSURES

- A. Description: NEMA 250, Type 1 or 3R steel enclosure.
 - 1. Covers: Continuous hinge, held closed by hasp and staple for padlock.
 - 2. Furnish interior metal panel for mounting terminal blocks and electrical components; finish with white enamel.
 - 3. Enclosure Finish: Manufacturer's standard enamel.

2.2 CABINETS

- A. Description:
 - 1. Boxes: Galvanized steel with removable end walls.
 - 2. Backboard: Furnish 3/4 inch (19 mm) thick plywood backboard for mounting terminal blocks. Paint matte white.
 - 3. Fronts: Steel.
- B. Fabrication
 - 1. Furnish metal barriers to form separate compartments wiring of different systems and voltages.
 - 2. Furnish accessory feet for free-standing equipment.
- C. Finishes:
 - 1. Finish with gray baked enamel.

2.3 TERMINAL BLOCKS

- A. Description:
 - 1. Terminal Blocks: NEMA ICS 4.
 - 2. Power Terminals: Unit construction type with closed back and tubular pressure screw connectors, rated 600 volts.
 - 3. Signal and Control Terminals: Modular construction type, suitable for channel mounting, with tubular pressure screw connectors, rated 300 volts.
 - 4. Furnish ground bus terminal block, with each connector bonded to enclosure.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install enclosures and boxes plumb. Anchor securely to wall and structural supports at each corner in accordance with Section 26 05 29.
- B. Install cabinet fronts plumb.

3.2 CLEANING

- A. General Conditions: Final cleaning.
- B. Clean existing cabinets and enclosures to remain or to be reinstalled.

- C. Clean electrical parts to remove conductive and harmful materials.
- D. Remove dirt and debris from enclosure.
- E. Clean finishes and touch up damage.

END OF SECTION 262716

SECTION 262726 – WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes wall switches; wall dimmers; wall and ceiling occupancy sensors; receptacles; multioutlet assembly; and device plates and decorative box covers.
- B. Related Sections:
 - 1. Section 26 05 33 - Raceway and Boxes for Electrical Systems: Outlet boxes for wiring devices.
 - 2. Section 26 09 23 – Lighting Control Devices; Wall and ceiling occupancy sensors.

1.2 REFERENCES

- A. National Electrical Manufacturers Association:
 - 1. NEMA WD 1 - General Requirements for Wiring Devices.
 - 2. NEMA WD 6 - Wiring Devices-Dimensional Requirements.

1.3 SUBMITTALS

- A. General Conditions: Submittal procedures.
- B. Product Data: Submit manufacturer's catalog information showing dimensions, colors, and configurations.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.5 EXTRA MATERIALS

- A. General Conditions: Spare parts and maintenance products.
- B. Furnish two of each style, size, or switch, receptacle type and finish wall plate.

PART 2 - PRODUCTS

2.1 WALL SWITCHES

- A. Manufacturers:
 - 1. Cooper Wiring Devices.
 - 2. Hubbell, Inc.

3. Leviton Manufacturing Company.
 4. P&S.
 5. Substitutions: Upon review.
- B. Product Description: NEMA WD 1, Heavy-Duty, AC only general-use snap switch.
- C. Body and Handle: White plastic with toggle handle.
- D. Indicator Light: Lighted handle type switch; green color handle.
- E. Locator Light: Lighted handle type switch; red color handle.
- F. Ratings:
1. 120-277 volts, AC.
 2. Current: 20 amperes.

2.2 WALL DIMMERS

- A. Manufacturers:
1. Eagle.
 2. Hubbell Wiring Devices.
 3. Leviton.
 4. Lutron.
 5. P&S.
 6. Synergy Lighting Controls.
 7. Substitutions: Not Permitted.
- B. Product Description: NEMA WD 1; Semiconductor dimmer for the following load types.
1. Dimmers shall provide full range, continuously variable control of light intensity.
 2. Controls shall provide preset single pole, 3-way, or multi-location control from the dimmer location regardless of the position of the other 3-way switch location.
 3. Ten-year operational life while operating continually at any temperature in an ambient temperature range of 0 degrees C (32 degrees F) to 40 degrees C (104 degrees F) and 90 percent non-condensing relative humidity.
 4. Operate at the rated capacity across the full ambient temperature range including modified capacities for ganging configurations with require the removal of fins.
 5. Control should be designed to not interfere with audio, video, or radio equipment.
 6. Utilize air gap off, activated when user selects "off" at any control to disconnect the load from line supply eliminating any leakage current.
 7. Possess power failure memory such that if power is interrupted and subsequently returned, lights will automatically return to same levels (dimmed setting, full on, or off) prior to power interruption.
 8. Designed and tested with withstand electrostatic discharges up to 15,000 V without impairment per IEC 801-2.

9. Design and test dimmers to withstand line-side surges without impairment to performance when subjected to surges of 6,000 volts, 200 amps per ANSI/ IEEE C62.41C.
 10. Capable of operating at the rated capacity; this includes modified capacities for ganging configurations which require the removal of fins. Operation at rated capacity shall be possible across the full ambient temperature range, without shortening design lifetime.
- C. Load Specific Requirements: Within rated capacity, dimmers shall be available for direct control of the following loads.
1. Dimming LED Lamps:
 - a. Contain circuitry specifically designed to control dimmable self ballasted CFL loads.
 - b. Provide with lower dimming range adjustment.
 - c. Listed to UL 172.
 2. Electronic Low Voltage (ELV):
 - a. Dimmers shall contain circuitry specifically designed to control the input of electronic solid state low voltage transformers.
 - b. Shall have a maximum output of no less than 92% of line voltage.
 - c. Dimmers using standard phase control shall not be acceptable.
 3. Fan Speed Control:
 - a. Fully Variable fan speed controls for paddle fans, ventilation fans and exhaust fans.
 - b. Quiet fan speed controls shall provide low-medium-high speeds settings and off.
 - c. Shall be listed to UL 1917.
 4. Remote Dimming Modules:
 - a. Provide high power module and wall dimmer from a single manufacturer.
 - b. High power module listed to UL 508 for control of incandescent/ halogen, magnetic low voltage, electronic low voltage, fluorescent, and neon/cold cathode loads. Provide high power modules as defined on project drawings.
- D. Body and Handle: White Nylon or match existing with linear slide.
- E. Voltage: 120 or 277 volts.
- F. Power Rating: Match load shown on drawings; 600 watts minimum.
- G. Accessory Wall Switch: Match dimmer appearance.

2.3 OCCUPANCY SENSORS AND POWER PACKS

- A. Occupancy Sensors
1. Ceiling sensors.
 2. Wall sensors.
 3. Dual technology sensors shall:
 - a. Either corner mounted or ceiling mounted in such a way as to minimize coverage in unwanted areas

- b. Passive infrared and ultrasonic technologies for occupancy detection. Products that react to noise or ambient sound shall not be considered.
 - 4. Ultrasonic sensors shall:
 - a. Utilize Advanced Signal Processing to adjust the detection threshold dynamically to compensate for constantly changing levels of activity and airflow throughout controlled space.
 - b. Have an ultrasonic operating frequency that is crystal controlled at 25 kHz within $\pm 0.005\%$ tolerance, 32 kHz within $\pm 0.002\%$ tolerance, or 40 kHz $\pm 0.002\%$ tolerance to assure reliable performance and eliminate sensor cross-talk. Sensors using multiple frequencies are not acceptable.
 - 5. All sensors shall be capable of operating normally with electronic ballasts, PL lamp systems and rated motor loads.
 - 6. Coverage of sensors shall remain constant after sensitivity control has been set. No automatic reduction shall occur in coverage due to the cycling of air conditioner or heating fans.
 - 7. All sensors shall have readily accessible, user adjustable settings for time delay and sensitivity. Settings shall be located on the sensor (not the control unit) and shall be recessed to limit tampering.
 - 8. In the event of failure, a bypass manual override shall be provided on each sensor. When bypass is utilized, lighting shall remain on constantly or control shall divert to a wall switch until sensor is replaced. This control shall be recessed to prevent tampering.
 - 9. All sensors shall provide an LED as a visual means of indication at all times to verify that motion is being detected during both testing and normal operation.
 - B. Products
 - 1. Wall Mounted Single Level Motion Sensor Switch.
 - 2. Wall Mounted Bi-Level Motion Sensor Switch.
 - 3. Ceiling Mounted Dual Technology Occupancy Sensor with Power Pack.
 - C. Circuit Control Hardware – (Power Packs)
 - 1. Control Units - For ease of mounting, installation and future service, control unit(s) shall be able to externally mount through a 1/2" knock-out on a standard electrical enclosure and be an integrated, self-contained unit consisting internally of an isolated load switching control relay and a transformer to provide low-voltage power. Control unit shall provide power to a minimum of two (2) sensors.
 - 2. Provide power packs as required. Power Pack shall be installed in jbox.
 - 3. Relay Contacts shall have ratings of:
 - a. 13A - 120 VAC Tungsten
 - b. 20A - 120 VAC Ballast
 - c. 20A - 277 VAC Ballast
 - d. 20A – 347 VAC Ballast
 - D. Control wiring between sensors and control units shall be Class II, 18-20 AWG, stranded U.L. Classified, PVC insulated or TEFLON jacketed cable suitable for use in plenums, where applicable.
 - 1. Minimum acceptable wire gauge from the circuit control hardware relays shall be #14 AWG.

- E. Mount switches and occupancy sensors as indicated on Drawings and by manufacturer's requirements.

CONTROL TYPE	COMMISSIONING AND CALIBRATION
Occupancy sensors	Ensure that the sensor is correctly placed and oriented per the specifications and/ or construction drawings. If unanticipated obstructions are present, it may be necessary to adjust the sensor location and orientation.
Occupancy sensors	Adjust the sensitivity and time delay of the occupancy sensor, and test to ensure it provides appropriate response. For optimal user acceptance, energy savings and lamp life, set the time delay initially for a minimum of 15 minutes (NEMA recommendation).
Manual dimming	Ensure correct placement of the dimmer per the construction drawings. Adjust the upper limit of the dimming range according to the task being performed, and set the lower limit of the range so that the minimum light level meets the use/application of the space.

2.3 RECEPTACLES

- A. Manufacturers:
1. Cooper Wiring Devices.
 2. Harvey Hubbell, Inc.
 3. Leviton Manufacturing Company.
 4. P&S.
 5. Substitutions: Not permitted.
- B. **Product Description: NEMA WD 1, Heavy-duty general use receptacle.**
1. **Receptacles shall be Tamper-Resistant where required by section 406.12 of the National Electrical Code, 2017.**
- C. Device Body: White or match existing, nylon. Provide red device for receptacles on standby emergency power.
- D. Configuration: NEMA WD 6, type as indicated on Drawings.
- E. Convenience Receptacle: Type 5-20.

- F. GFCI Receptacle: Convenience receptacle with integral ground fault circuit interrupter to meet regulatory requirements.

2.4 WALL PLATES

- A. Manufacturers:
 - 1. Cooper Wiring Devices.
 - 2. Harvey Hubbell, Inc.
 - 3. Leviton Manufacturing Company.
 - 4. P&S.
 - 5. Substitutions: Not permitted.
- B. Decorative Cover Plate: White or to match existing. Provide red cover/plate for red receptacle unless noted otherwise.
- C. Jumbo Cover Plate: White or to match existing.
- D. Weatherproof Cover Plate: Gasketed cast metal plate with hinged and gasketed device cover. System shall be weatherproof while in use.
- E. Wall plates for devices in laboratories, kitchen areas, mechanical rooms, and other similar areas shall be beveled edge stainless steel plates, single or multi-gang as required by the outlet. Wall plates for devices in surface boxes, unless specified otherwise, shall be beveled edge satin finish stainless steel plates, single or multi-gang as required by the outlet. Blank plates shall be furnished and installed on all empty, blanked or unused outlets. Device plates manufactured by device manufacturer where available. Wall Plates shall be single and combination types that mate and match with corresponding devices.

2.5 MODULAR RECEPTACLE

- A. Manufacturers:
 - 1. Cooper – Arrow Link.
 - 2. Leviton – Lev-Lok.
 - 3. Hubbel – SNAPConnect.
 - 4. Legrand – PlugTail.
 - 5. Substitutions: Not Permitted.
- B. Description:

Manufactured UL Assembly, 20Amp, 120V, heavy duty, locking type straight blade or twist on modular connector with or without pigtails.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. General Conditions: Coordination and project conditions.
- B. Verify outlet boxes are installed at proper height.

- C. Verify wall openings are neatly cut and completely covered by wall plates.
- D. Verify branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

3.2 PREPARATION

- A. Clean debris from outlet boxes.

3.3 INSTALLATION

- A. Install devices plumb and level.
- B. Install switches with OFF position down.
- C. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.
- D. Do not share neutral conductor on load side of dimmers.
- E. Install receptacles with grounding pole on bottom.
- F. Connect wiring device grounding terminal to outlet box with bonding jumper and branch circuit equipment grounding conductor.
- G. Install wall plates on flush mounted switches, receptacles, and blank outlets.
- H. Install decorative plates on switch, receptacle, and blank outlets in finished areas.
- I. Connect wiring devices by wrapping solid conductor around screw terminal. When stranded conductors are used in lieu of solid, use crimp on fork terminals for device terminations. Do not place bare stranded conductors directly under device screws.
- J. Use jumbo size plates for outlets installed in masonry walls.
- K. Install galvanized steel plates on outlet boxes and junction boxes in unfinished areas, above accessible ceilings, and on surface mounted outlets.
- L. Match devices to plug connectors for Owner-furnished equipment. Verify type, configuration, etc., prior to providing devices. Including all such costs in bid submission.

3.4 INTERFACE WITH OTHER PRODUCTS

- A. Coordinate locations of outlet boxes provided under Section 26 05 33 to obtain mounting heights as indicated on drawings.
- B. Install wall switch 48 inches above finished floor.

- C. Install convenience receptacle 18 inches above finished floor.
- D. Install convenience receptacle 6 inches above back splash of counter.
- E. Install dimmer 48 inches above finished floor.

3.5 FIELD QUALITY CONTROL

- A. General Conditions: Field inspecting, testing, adjusting, and balancing.
- B. Inspect each wiring device for defects.
- C. Operate each wall switch with circuit energized and verify proper operation.
- D. Verify each receptacle device is energized.
- E. Test each receptacle device for proper polarity.
- F. Test each GFCI receptacle device for proper operation.

3.6 ADJUSTING

- A. General Conditions: Testing, adjusting, and balancing.
- B. Adjust devices and wall plates to be flush and level.

3.7 CLEANING

- A. General Conditions: Final cleaning.
- B. Clean exposed surfaces to remove splatters and restore finish.

END OF SECTION 262726

SECTION 265600 - EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section provides general requirements for a complete and fully operational Exterior Lighting System including:

1. Exterior Luminaires
2. Accessories
3. Luminaire supports
4. Poles
5. LED Arrays
6. Controls
7. Standard Fixture Schedule

- B. Related Sections:

1. Section 26 05 19 Low Voltage Electrical Power Conductors and Cables.
2. Section 26 05 26 Grounding and Bonding for Electrical Systems

1.3 SYSTEM DESCRIPTION

- A. Catalog numbers indicated in the Luminaire Schedule are a design series reference and do not necessarily represent the exact catalog number, size, voltage, wattage, type of LED, driver, finish trim, mounting hardware or special requirements as specified or as required by the particular installations. Provide complete luminaire to correspond with the features, accessories, number of LED's, wattage and/or size specified in the text description of each luminaire type. Additional features, accessories and options specified shall be included.

- B. Luminaire voltage shall match the voltage of the circuit serving same.

1.4 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.5 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION

- A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4-M.
- B. Live Load: Single load of 500 lbf, distributed as stated in AASHTO LTS-4-M.
- C. Ice Load: Load of 3 lbf/sq. ft., applied as stated in AASHTO LTS-4-M Ice Load Map.
- D. Wind Load: Pressure of wind on pole and luminaire and banners and banner arms, calculated and applied as stated in AASHTO LTS-4-M.
 - 1. Basic wind speed of calculating wind load for poles 50 feet (15 M) high or less is 105 MPH. See details on plans.
 - a. Wind Importance Factor: 1.3.
 - b. Minimum Design Life: 25 years.
 - c. Wind induced vibration.

1.6 SUBMITTALS

A. SUBSTITUTIONS

- 1. See General Conditions of the specifications for information regarding substitutions. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples if requested by Engineer are provided. Alternate products shall meet or exceed design criteria.
 - 2. If submitted fixtures are not as specified, provide footcandle calculations showing the actual site plan. Provide IES files in digital format of all substituted fixtures to the Engineer for review.
- B. The authorized manufacturer's representative for the Project area shall prepare Submittals for each luminaire type. In addition to the luminaire Submittals, a list shall be provided identifying the manufacturer representative for each luminaire type. Provide manufacturers' names, addresses, and telephone numbers. Requests for prior approval shall also include this information. Submittals or requests for prior approval without this information will be rejected.
- C. Product Data shall indicate that luminaire, LED arrays, and drivers fully comply with Contract Documents. Data shall be submitted for each type of luminaire indicated, arranged in order of luminaire designation. For standard catalog luminaires provide original product catalog sheets indicating data on features, accessories, finishes, and the following:
- 1. Materials and dimensions of luminaires.
 - 2. Photometric data, in IESNA format, based on certified results of laboratory tests of each luminaire type, outfitted with LED arrays, drivers and accessories identical to those indicated for the luminaire as applied in the Project.

- a. Photometric data shall be certified by a qualified independent testing agency.
- b. Foot-candle map including existing fixtures' contributions
3. Low voltage transformers.
4. LED power supplies.
5. Types of LED's, including manufacturer, wattage, and Color Rendering Index (CRI) and color temperature in degrees Kelvin (K).
6. Wireless controls: nodes, gateways, modems, and server.

D. Shop Drawings shall:

1. Show details of nonstandard or custom luminaires.
2. Indicate dimensions, weights, method of field assembly, components, features, and accessories.
3. This Contractor shall provide the manufacturer with accurate field dimensions where required.
4. Include wiring diagrams, power and control wiring.

E. Wiring Diagrams shall detail wiring for luminaires and differentiate between manufacturer- installed and field-installed wiring.

F. Product Certificates shall be signed by manufacturers of luminaires certifying that products comply with requirements.

G. Maintenance Data shall be provided for luminaires and equipment to include in emergency, operation, and maintenance manuals Specified in Specifications Section describing Operations and Maintenance Data.

H. Field quality control test reports.

I. Special Warranties Specified in this Section.

J. Review of luminaire submittals which indicate voltage, mounting condition, or quantities shall not be considered to be approval of said voltage, mounting condition, or quantities. This Contractor shall field verify voltage and actual mounting condition and method.

K. Product samples complete with housing, trim, specified lumen package, and 8' cord with plug for 120 V shall be submitted if requested.

L. Pole and Support Component Certificates: Signed by Manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4-M and that load imposed by luminaire and attachments has been included in design. The certification shall be based on design calculations by a Professional Engineer.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For lighting equipment and luminaires to include in emergency, operation, and maintenance manuals.

1. Provide a list of all driver types used on Project; use ANSI and manufacturers' codes.
2. Submit site map showing dimensioned locations all exterior lighting fixtures and poles with tags consistent with the University's standard naming convention. Also show stubbed-out spare conduits, in-ground junction boxes, and underground sleeves. Indicate dimensioned locations of sleeve ends, conduits, and junction boxes from a permanent building or landscape feature. Circuit numbers for all loads shall be shown. Electronic files of site lighting maps be provided at Substantial Completion and submitted to the Electric Shop.

1.8 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Glass, Plastic Diffusers and Lenses: 10% or one dozen (whichever is less) of each type and rating installed. Furnish at least one of each type.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Package poles for shipping according to ASTM B 660.
- B. Store poles on decay-resistant-treated skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.
- C. Retain factory-applied pole wrappings on metal poles until right before pole installation. Handle with web fabric straps.

1.10 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Authorities Having Jurisdiction, and marked for intended use.
- C. Comply with IESNA TM-15-11 and Addendum A for Backlight, Uplight, and Glare (BUG) ratings.
- D. Comply with ANSI C7.3777.208 Standards for chromaticity of SSL products.
- E. Comply with NFPA 70.
- F. All luminaires shall bear a UL or ETL label.
- G. Comply with IEEE C2, "National Electrical Safety Code."
- H. Designated manufacturers are listed in the Luminaire Schedule to define the requirements for quality and function of the specified product.

1.11 COORDINATION

- A. Coordinate layout and installation of luminaires with plantings, paving, site walls, other site work elements, and existing luminaires.
- B. Coordination Meetings: This Contractor shall meet at least twice with the sitework installer(s). Hold first meeting before submittal of shop drawings to coordinate each luminaire mounting condition and location. During second meeting, coordinate layout with other site components. Coordinate depth and location of all luminaire pole bases in all areas.

1.12 WARRANTY

A. Comply with Division 1 requirements.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.

1. Warranty Period for Fixture, including the LEDs, drivers and electrical components: Five years from date of Certificate of Occupancy.
2. Warranty Period for housing paint and finish: Five years from date of Certificate of Occupancy.
3. Warranty Period for Color Retention: Five years from date of Certificate of Occupancy.
4. Warranty Period for Poles: Repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less five years from date of Certificate of Occupancy.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide one of the products indicated on Drawings.

2.2 GENERAL REQUIREMENTS FOR LUMINAIRES

A. Luminaires shall be listed and labeled for installation in wet locations.

B. Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.

C. Comply with IESNA TM-15-07 Luminaire Classification System for Outdoor Luminaires.

D. Metal Parts: Free of burrs and sharp corners and edges.

E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use.

F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit easy replacement of drivers. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during maintenance and when secured in operating position. Doors shall be removable for cleaning or replacing lenses.

- G. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

- H. Optical assemblies: where specified, full cutoff with zero uplight, “dark sky” compliant. LED assemblies shall comply with IESNA BUG rating system.
- I. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses in luminaire doors.

2.3 LED DRIVERS AND ARRAYS

- A. UL 1598 listing.
 - 1. Lumen Depreciation Data: maintain greater than 95% lumen maintenance at 60,000 hours per IES TM-21.
 - 2. LED color: neutral white, 4000 deg K, minimum CRI of 70, or as scheduled on the drawings.
- B. LED arrays shall have an IP66 enclosure rating.
- C. Power supply / driver shall be field replaceable by means quick-disconnect connectors and easy access mounting hardware.
- D. Drives shall accept 120 – 277 volts or 480 volts, 60 Hz.
- E. Power Factor > 0.9@ full load.
- F. THD < 20% @ full load.
- G. Surge protection: 10kA/10kV per ANSI/IEEE C136.2-2014
- H. The housing shall have an integral thermal management system with extruded aluminum radiation fins and lateral airways for passive cooling, no devices using moving parts are permitted.
- I. Minimum starting temperature: minus 30 deg C, 40 deg C ambient.
- J. Comply with IES LM-79-08 and LM-90-08 Approved Methods.

2.4 GENERAL REQUIREMENTS FOR POLES AND SUPPORT COMPONENTS

- A. Structural Characteristics: Comply with AASHTO LTS-4-M.
 - 1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in "Structural Analysis Criteria for Pole Selection" Article, with a gust factor of 1.3.

2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.
- B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.
- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
1. Materials: Shall not cause galvanic action at contact points.
 2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.
 3. Anchor-Bolt Template: Plywood or steel.
- D. Handhole: Minimum clear opening of 2-1/2 by 5 inches with cover secured by stainless-steel captive screws.
- E. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 3 Concrete Sections.

2.5 STEEL POLES

- A. Poles: Seamless, extruded structural tube complying with ASTM 1A123/A123M hot-dipped galvanized steel, unless noted otherwise, and with access handhole in pole wall.
1. Shape: Refer to Luminaire Schedule or shall match existing site poles.
 2. Mounting Provisions: Butt flange for bolted mounting on foundation.
- B. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- C. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Section 26 05 26 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- D. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast steel. Adapter fitting welded to pole and bracket, and then bolted together with stainless-steel bolts or high strength galvanized carbon steel.
1. Finish: Match pole and luminaire material and finish.
- E. Steel Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Finish: Premium five (5) stage TGIC polyester powder coat paint.
 - a. Color: As selected by Architect from manufacturer's full range or to match existing adjacent poles.

2.6 POLE ACCESSORIES

- A. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.
- B. Fusing: One in each ungrounded power supply conductor. Voltage and current ratings as recommended by driver manufacturer. Fuseholders shall be completely waterproof and shall grip the fuse in the load side section when opened. The circuit shall be fused in the base of the pole and accessible through the handhole.
- C. Wind Mitigation Devices: Provide in areas of consistent, high, uneven winds.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

- A. Fasten luminaire to indicated structural supports.
 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- B. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources, favoring a north orientation.
 1. Provide house side shields where necessary to control spill light.

3.2 POLE INSTALLATION

- A. Alignment: Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.
- B. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 3 Concrete Sections.
- C. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.
 1. Grout void between pole base and foundation. Use non-shrink or expanding concrete grout firmly packed to fill space.
 2. Install base covers unless otherwise indicated.
 3. Use a short piece of 1/2-inch diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

- D. Raise and set poles using web fabric slings (not chain or cable).

3.3 BOLLARD AND INDIVIDUAL GROUND MOUNTED LUMINAIRES

- A. Align units for optimum directional alignment of light distribution.
- B. Install on concrete base with top 4 inches above finished grade or surface at bollard location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 3 Concrete Section.

3.4 CORROSION PREVENTION

- A. Steel Conduits: Comply with Section 26 05 33 "Raceways and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.5 GROUNDING

- A. Ground metal poles and support structures according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole unless otherwise indicated.
 - 2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
 - 3. Provide a continuous grounding conductor in all exterior lighting circuits.

3.6 FIELD QUALITY CONTROL

- A. Inspect each installed luminaire for damage. Replace damaged luminaires and components.
- B. Replace all burned out or inoperative LED arrays at the end of Construction prior to Certificate of Occupancy.
- C. Advance Notice: Give dates and times for field tests.
- D. Provide instruments to make and record test results.
- E. Test as follows:
 - 1. Verify proper operation, switching and phasing of each luminaire after installation.
 - 2. Emergency Lighting: Interrupt electrical supply to demonstrate proper operation. Verify normal transfer to generator and retransfer to normal.
 - 3. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to the lighting system, retest to demonstrate compliance with standards.

F. Malfunctioning Luminaires and Components: Replace or repair, then retest. Repeat procedure until units operate properly.

G. Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.

1. Verify operation of photoelectric controls.

END OF SECTION 265600

SECTION 266000 – ELECTRICAL SYSTEMS TESTING

PART 1 – GENERAL

- A. The Contractor shall retain the services of an independent testing firm to perform International Electrical Testing Association (NETA) testing. Testing services shall be as described in this specification and shall be paid for and coordinated by the Contractor.
- B. NETA testing procedures and requirements for tested values shall be in accordance with the most current edition of the NETA Acceptance Testing Specifications.
- C. Any deficiencies or failures discovered during the NETA testing procedures shall be promptly corrected by the Contractor to ensure timely completion of the project and to minimize the time required for the independent testing firm to complete their work.
- D. Independent testing firms shall be as listed below, or approved equal.
 - A. Nat'l Field Services
 - B. Electrical Professional Consultants
 - C. Electrical Reliability Services | Vertiv

1.1 TEST REPORTS

- A. Intermediate Test Reports
 - 1. Intermediate test reports shall be issued by the independent testing firm immediately following each site visit. Intermediate test reports shall identify the general results of all field testing and field observations, and shall specifically identify any deficiencies, problems, or failures noted during the site visit.
 - 2. Intermediate test reports shall be issued/distributed to the electrical subcontractor, the general contractor, the electrical engineer, and to the Owner. The intent of this direct communication and/or notification to multiple parties is to ensure the 'independent' function of the independent testing firm and to prevent such information from being delayed or filtered by processing it through the electrical subcontractor and/or the general contractor.
- B. Final Test Report
 - 1. Six copies of the final test report shall be issued by the independent testing firm following successful completion all required electrical systems testing. The final test report shall be typed, bound, and indexed, and shall include a cover page that identifies the project name, project location, and project number. The final test report shall include a separate section for each area of required testing (tests as summarized below).
 - a. Grounding Systems
 - b. Ground Fault Protection Systems

- c. Circuit Breakers (Over 100 Amps)
- d. Transformers (Dry Type)
- e. Low Voltage Feeders (up to 600 Volts) Serving Loads of 100 Amps or Greater
- f. Main Switchboard
- g. Distribution Boards

1.2 TESTING REQUIREMENTS

A. Grounding Systems

1. The following grounding system testing shall be conducted on two separate occasions, once prior to initializing electrical power for construction activities, and once when all electrical systems have been finalized.
2. Perform fall-of-potential testing of the main grounding electrode or grounding system in accordance with IEEE Standard No. 81. If suitable locations for test rods are not available, a low resistance dead earth or reference ground shall be utilized.
3. Perform point-to-point testing to determine the resistance (bonding) between the main grounding system and all major electrical equipment frames, system neutral, and/or derived neutral points.
4. Measure system neutral-to-ground insulation resistance with the neutral disconnect link temporarily removed (replace neutral disconnect link after testing).
5. This testing shall be performed at the origination point of all separately derived systems.
6. Verification shall be made that the grounding electrode system is installed per NEC at all connection points.

B. Ground Fault Protection Systems

1. Perform pickup tests utilizing primary injection. Verify that the relay does not operate at 90% of the pickup setting. Verify pickup is less than 125% of setting or 1200 amps (whichever is less).
2. On summation type systems utilizing phase and neutral current sensors verify correct polarities by applying current to each phase-neutral current transformer pair).
3. Measure time delay of the relay at 150% of pickup or greater by injecting current into the sensor. Total trip time shall be electronically monitored.
4. Verify that the reduced control voltage tripping capability is 55% of rated voltage for systems with external control power (reference UL-1053).
5. Test zone interlock systems by simultaneous sensor current injection and monitoring of zone blocking function.

C. Circuit Breakers (Over 100 Amps)

1. Test requirements apply to adjustable molded case, insulated case, and metal frame circuit breakers.
2. Measure contact resistance by millivolt drop method at rated current or by digital low resistance ohmmeter method.
3. Test insulation resistance from pole-to-pole and from pole-to-ground with breaker closed and across open contacts of each phase.

4. Adjust trip settings in accordance with coordination study.
5. Measure instantaneous pickup current by primary current injection.
6. Measure long-time pickup and delay by primary current injection.
7. Measure short-time pickup and delay by primary current injection.
8. Verify trip unit reset operation.

D. Transformers (Dry Type)

1. Test insulation resistance winding-to-winding and winding-to-ground and calculate the polarization index.
2. Test turns ratio between windings for all tap positions. Verify that winding polarities match the transformer nameplate.
3. Measure resistance of each high voltage winding in each no-load tap-changer position. Also measure resistance of each low voltage winding in each load tap-changer position (when applicable).

E. Low Voltage Feeders (up to 600 Volts) Serving Loads of 100 Amps or Greater

1. Conduct megohm (Megger) testing of shield continuity resistance utilizing a megohmmeter.
2. Test insulation resistance phase-to-ground and phase-to-phase for one minute.
3. Test voltages shall be as recommended by the feeder manufacturer (or by NETA Acceptance Testing Specification).

END OF SECTION 266000

SECTION 270500 – COMMON WORK RESULTS FOR COMMUNICATIONS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.
- B. Include all labor, materials, tools, transportation, storage costs, excavation, training, equipment, insurance, temporary protection, permits, inspections, taxes and all necessary and related items required to provide a complete and operational communications system as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 05 28: Interior Communications Pathways.
 - 3. 27 05 43: Exterior Communications Pathways
 - 4. 27 08 00: Commissioning of Communications
 - 5. 27 11 00: Communications Equipment Room Fittings
 - 6. 27 13 00: Communications Backbone Cabling
 - 7. 27 15 00: Communications Horizontal Cabling
 - 8. 27 51 13: Paging Systems
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 QUALITY ASSURANCE

- A. The Contractor installing communications cabling and termination equipment shall have a minimum of (5) years experience installing communications systems of similar size and scope.
- B. The Contractor must be licensed by the Nevada State Contractors Board.
- C. Formal, written evidence of the following shall be presented to the WCSD Project Manager during the BID process and before contract is awarded:
 - 1. The Contractor, including any subcontractor, must have BICSI® Registered Installers and Technicians on staff and assign them to the Project. The project shall be staffed at all times by Installers and Technicians who, in the role of lead craftsperson, shall be able to provide leadership and technical resources for the

remaining craftspersons on the project. At all times, a minimum of 30 percent of on-site Contractor personnel shall be BICSI® registered communications installers. The Field Supervisor must be a BICSI® Technician or RCDD.

2. If requested, the Contractor, including any subcontractor, shall show proven expertise in the implementation of communications projects including details of at least three projects involving the design and installation of Category 6 unshielded twisted-pair cabling systems and optical fiber cabling systems within the past two year period. Names, addresses, and telephone numbers of references for the three projects shall be included.
3. The Contractor shall accept complete responsibility for the design, installation, acceptance testing and certification of the Belden 10GX, 2400 and/or IBDN FiberExpress System. Objections to the design shown on the Drawings and Specifications shall be made prior to bidding the project.
4. In the event subcontractors are used for any portion of the installation or acceptance testing, The Contractor shall be responsible for any subsequent corrective action required on that portion.

D. Manufacturer Product Data Sheets

1. Submit product data sheets in electronic PDF (portable document format).
2. Provide table of contents for each submittal indicating the items being submitted. Products listed in the table of contents should be in the same order as they appear in the Specifications.
3. Provide product data sheets for all items listed in each specification section. Partial submittals will not be accepted.
4. Where product data sheets include more than one distinct item, clearly mark data sheet with arrow or other identifying means to indicate the items being submitted for approval. Delete or cross-out all non-applicable data.

E. Shop Drawings and Coordination Drawings

1. Submit shop drawings and coordination drawings in electronic PDF (portable document format).
2. Shop drawings and coordination drawings shall bear the stamp of approval of the Communications Contractor as evidence that they have checked the drawings. Drawings submitted without this stamp of approval will not be considered and will be returned for proper resubmission. All shop drawings shall be submitted as a single complete package. Partial packages will not be reviewed.
3. Shop drawings and coordination drawings must be submitted and approved prior to the installation of the work. Installation of work prior to the submittal and approval of the shop drawings will proceed at the contractor's risk.
4. See individual Division 27 specification sections for specific shop drawing and coordination drawing requirements. At a minimum, drawings shall be submitted for the following items:
 - a. Routing of conduits 2" and larger.
 - b. Routing of basket tray and or cable tray.
 - c. Routing of telecom cable pathway in telecom equipment rooms.
 - d. Layout of floor and wall mounted equipment in telecom equipment rooms.

F. Cable Test Reports

1. Submit test reports signed and dated by the technician performing the cable testing.

G. Other Submittals

1. See individual Specification Sections for requirements.

1.4 REGULATIONS AND CODE COMPLIANCE

- A. The Contractor will comply with all applicable governmental regulations including Federal, State, City, and Local applicable codes and ordinances.

- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.

- C. All work and materials shall conform to and be installed, inspected and tested in accordance with the governing rules and regulations of the telecommunications industry, as well as federal, state and local governmental agencies, including, but not limited to the following:

1. ANSI/TIA-568.0-E: Generic Telecommunications Cabling for Customer Premises (Revision E, March 2020).
2. ANSI/TIA-568.1-E: Commercial Building Telecommunications Infrastructure Standard (Revision E, March 2020).
3. ANSI/TIA-568.2-D: Balanced Twisted-Pair Telecommunications Cabling And Components Standards (Revision D, September 2018).
4. ANSI/TIA-568.3-D: Optical Fiber Cabling and Component Standard (Revision D, October 2016).
5. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
6. ANSI/TIA-598-D: Optical Fiber Cable Color Coding (Revision D, July 2014).
7. ANSI/TIA-606-D: Administration Standard for Telecommunications Infrastructure (Revision D, October 2021).
8. ANSI/TIA-607-D: Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises (Revision D, July 2019).
9. ANSI/TIA-758-B: Customer-Owned Outside Plant Telecommunications Infrastructure Standard (Revision B, March 2012).
10. ANSI TIA-526-7-A: Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant (Revision A, July 2015).
11. ANSI/TIA-526-14-C: Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant (Revision C, 2015).
12. ANSI/TIA-1152-A: Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling (Revision A, November 2016).
13. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
14. Underwriter's Laboratories, Inc. (UL).
15. Federal Communications Commission (FCC).
16. Americans with Disabilities Act (ADA).

1.5 DEFINITIONS

A.	Accessible Ceiling	Space above a ceiling constructed of removable tiles (clipped or unclipped). Acoustical ceiling grid with removal tiles would be considered an accessible ceiling. A gypboard ceiling would not be considered an accessible ceiling.
B.	Approved/Approval	Written permission to use a material or system.
C.	As Called For	Materials, equipment including the execution specified/shown in the Specifications.
D.	Code Requirements	Minimum requirements.
E.	Concealed	Work installed in pipe and duct shafts, chases or recesses, inside walls, above ceilings, in slabs or below grade.
F.	Exposed	Work not identified as concealed.
G.	Final Acceptance	Owner acceptance of the project from the Contractor upon certification by the Owner's Representative.
H.	Furnish	Supply and deliver to installation location.
I.	Furnished by Others	Receive delivery at job site or where called for and install.
J.	Inspection	Visual observations by Owner or Owner's Representative.
K.	Install	Mount and connect equipment and associated materials ready for use.
L.	Listed	Refers to classification by a standards agency.
M.	Or Approved Equal	Approved equal or equivalent as determined by Owner or Owner's Representative.
N.	Owner's Representative	Design professional or Consultant representing the Owner.
O.	Provide	Furnish, install and connect ready for use.
P.	Relocate	Disassemble, disconnect, and transport equipment to new locations: then clean, test, and install ready for use.
Q.	Replace	Remove and provide new item.
R.	Review	A general contractual conformance check of specified products.

- S. Satisfactory As specified in Specifications.

1.6 INTENT OF DRAWINGS

- A. All drawings are diagrammatic unless otherwise noted as detailed dimensioned drawings. Drawings show approximate locations of equipment and devices. Exact locations are subject to the approval of the Owner or Owner's Representative. The Contractor shall verify dimensions and shall be responsible for their accuracy
- B. Items mentioned in the Specifications and not shown in the Drawings, or shown in the Drawings and not mentioned in the Specifications, shall be of like effect as if shown and mentioned in both. In the case of differences between the Drawings and the Specifications, the stricter provision as determined by the Owner or Owner's Representative shall govern.
- C. Omissions from the Drawings or Specifications, or the incorrect description of details of Work which are necessary to carry out the intent of the Drawings and Specifications, or work which is customarily performed, shall not relieve the Contractor from performing such omitted or incorrectly described work.
- D. No exclusion from, or limitations in, the language used in the Project Documents shall be interpreted as meaning that ancillary or accessory items necessary to complete any required system or item of equipment are to be omitted.

1.7 REVIEW OF SPECIFICATIONS

- A. The Contractor shall carefully study and compare the Drawings and Specifications. Any error, inconsistency or omission discovered shall be immediately reported to the Owner or Owner's Representative. If the Contractor performs any construction activity knowing it involves a recognized error, inconsistency or omission without such notice to the Owner or Owner's Representative, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the cost for any correction.

1.8 EXAMINATION OF THE PREMISES

- A. The Contractor shall visit the Site to become familiar with the local conditions under which the work is to be performed and correlate the observations with the requirements of the Drawings and Specifications. No allowance will be made for claims of concealed conditions which the Contractor learned or should have learned in exercising due diligence in its observations of the site and review of the local conditions.
- B. Before ordering any materials or performing any work, the Contractor shall coordinate the installation with the work of other trades and shall verify all measurements. No extra charge or compensation will be allowed for duplicate work or material required because of an unverified difference between an actual dimension and the measurement indicated in the Drawings. Any discrepancies found shall be submitted in writing to the Owner or Owner's Representative for consideration before proceeding with the work.

1.9 COORDINATION OF TELECOM CABLING PATHWAYS AND TELECOM EQUIPMENT ROOMS

- A. The telecom drawings are diagrammatic in depicting the routing of communications pathways and the layout of communications equipment.
- B. The contractor shall coordinate the installation of all telecom work with the work of other trades including Mechanical, Electrical, Plumbing, Sprinkler, Structural and Architectural.
- C. The contractor shall participate in coordination meetings with other trades prior to the installation of the work. For a specific space/area, the telecom contractor shall coordinate the routing and installation of all telecom work with all other trades that have work in that specific space/area.
- D. Prior to the installation of telecom cabling pathway including conduit, basket tray, cable tray, ladder rack, sleeves, etc., the contractor shall coordinate the routing of this pathway to avoid conflicts with and provide necessary clearances from the work of other trades. The contractor shall provide all horizontal offsets, vertical offsets and radius bends as necessary to coordinate the routing of the telecom pathway with the work of other trades and building structure.
- E. Prior to the installation of equipment and/or cabling in the communication rooms, the contractor shall coordinate the layout of all equipment and cable pathways. The contractor shall submit shop drawings for approval of each room. At a minimum, the following information shall be included on the shop drawings:
 - 1. Layout of all floor mounted equipment including racks, cabinets and uninterruptible power supplies. Drawings shall show the required clearances with dimensions in the front, rear and side of all floor and wall mounted equipment.
 - 2. Layout of all floor mounted sleeves and cable openings.
 - 3. Layout of horizontal and vertical ladder rack.
 - 4. Layout of light fixtures, HVAC equipment and ductwork serving the room. Coordinate the layout of this equipment with the overhead cable pathways.
 - 5. Provide elevations of each wall showing the location of all wall mounted equipment including racks, ground bars, electrical panels, electrical outlets, wall mounted termination equipment, cable slack storage rings, security panels, etc.

1.10 WARRANTY AND SERVICES

- A. The installed Belden 10GX, 2400, and/or FiberExpress System shall be covered by a certification program provided by BELDEN/CDT and the Certified System Vendor (Contractor).
- B. All Contractor-installed cabling shall be certified as per BELDEN/CDT requirements for the Belden 10GX, System 2400, and/or FiberExpress System. Any requirements for Belden Certification not specified within the Plans and Specifications but necessary for certification are assumed.
- C. Lifetime Application Assurance

1. Belden certification shall provide the assurance that all present and future applications engineered for the performance level of the cabling system used shall work for the lifetime of the certified Belden 10GX, System 2400, and/or FiberExpress System.
 2. Should the certified Belden 10GX, System 2400, or FiberExpress System fail to support the application(s) designed to operate over it—whether at the time of cutover to the new cabling system, during subsequent use, or after upgrading to a newer supported application (for example, to a Gigabit Ethernet or an ATM network from a lower-speed network environment)—BELDEN/CDT and The Certified System Vendor (Contractor) shall take prompt corrective action.
- D. 25-Year Product Warranty
1. Belden certification shall provide a twenty-five (25) year product warranty for all Belden passive components used in the installed Belden 10GX, System 2400, and/or FiberExpress System. Defective and/or improperly installed products shall be replaced and/or correctly installed at no cost to the Owner.

PART 2 – PRODUCTS

2.1 EQUIPMENT AND MATERIALS MINIMUM REQUIREMENTS

- A. Electrical equipment and systems shall meet UL Standards and requirements of the National Electric Code. This listing requirement applies to the entire assembly. Any modifications to equipment to suit the intent of the Specifications shall be performed in accordance with these requirements.
- B. Equipment shall meet all applicable FCC Regulations.
- C. All materials, unless otherwise specified, shall be new and be the standard products of the manufacturer. Used equipment or damaged material will be rejected.
- D. The listing of a manufacturer as “acceptable” does not indicate acceptance of a standard or cataloged item of equipment. All equipment and systems must conform to the Specifications.

2.2 WORKMANSHIP, SUBSTITUTIONS, WARRANTY

- A. Materials and workmanship shall meet or exceed industry standards and be fully guaranteed for a minimum of one (1) year from the date of final acceptance. Cable integrity and associated terminations shall be thoroughly inspected, fully tested and guaranteed free from defects, transpositions, open shorts, tight kinks, damaged jacket insulation, etc.

- B. Refer to the individual Division 27 Specifications for additional and/or extended warranty requirements.
- C. All labor must be thoroughly competent, skilled and trained, and all work shall be executed in strict accordance with the best practice of the trades.
- D. The Contractor shall be responsible for and make good, without expense to the Owner, any and all defects arising during this warranty period that are due to imperfect materials, improper installation or poor workmanship.
- E. After the Contract is awarded, requests to substitute for specified materials shall be submitted by the Contractor to the Owner or Owner's Representative within thirty (30) days, complete with reasons for the substitution and savings which accrue to the Owner if the substitutions are approved. Substitutions after Contract award will be considered only if the substitutions are equal or superior to the products specified.
- F. No material substitutions will be allowed except by written acceptance from the Consultant. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples are provided.
- G. Approval of alternate or substitute equipment or material in no way voids the Specification requirements.
- H. Under no circumstances shall the Owner be required to prove that an item proposed for substitution is not equal to the specified item. It shall be mandatory that the Contractor submit to the Owner or Owner's Representative all evidence to support the contention that the item proposed for substitution is equal to the specified item. The Owner's decision as to the equality of substitution shall be final and without further recourse.

2.3 FACTORY ASSEMBLED PRODUCTS

- A. Manufacturers of equipment assemblies that include components made by others shall assume complete responsibility for the final assembled unit.
 - 1. All components of an assembled unit need not be products of the same manufacturer.
 - 2. Component parts, which are alike, shall be from a single manufacturer.
 - 3. Components shall be compatible with each other and with the total assembly for the intended service.
 - 4. Components of equipment shall bear the manufacturer's name or trademark model number and serial number on a name plate securely affixed in a conspicuous place, or cast integral with, stamped or otherwise permanently marked upon the components of the equipment.
- B. Major items of equipment that serve the same function must be the same make and model.
- C. Equipment and materials installed shall be compatible in all respects with other items being furnished and with existing items so that a complete and fully operational system

will result.

- D. Maximum standardization of components shall be provided to reduce spare part requirements.

PART 3 – EXECUTION

3.1 ROUGH-IN

- A. Before construction work commences, the Contractor shall visit the site and identify the exact routing of horizontal and backbone cable pathways.
- B. All equipment locations and cabling pathway shall be coordinated with other trades and existing conditions to eliminate interference with required clearances for equipment maintenance and inspections.
- C. Coordinate work with other trades and existing conditions to determine exact location of equipment and routing of cable pathways.
 - 1. Where more than one trade is involved in an area, space or chase, all shall cooperate and install their own work to utilize the space equally between them in proportion to their individual requirements. If, after installation of any equipment, piping, ducts, conduit, etc., it is determined that adequate space has not been provided for passage or maintenance, rearrange the work. Any changes in the size or location of the material or equipment supplied or proposed, which may be necessary in order to meet field conditions or in order to avoid conflicts between trades, shall be brought to the immediate attention of the Owner's Representative and approval received before such alterations are made.
- D. Provide easy, safe and code mandated clearances at equipment racks and enclosures.

3.2 CUTTING, CORING AND PATCHING

- A. The Contractor shall be responsible for all cutting, patching, coring and associated work to complete the communications cabling pathway system.
- B. Protect existing finishes from water damage during core/cutting work and cleanup all related water and debris. Patch adjacent work disturbed by installation of new work including insulation, walls and wall covering, ceiling and floor covering or other finished surfaces.
- C. Contractor to submit all proposed concrete wall or floor penetrations to the Structural Engineer for approval prior to performing the work. Contractor shall locate and avoid cutting concrete reinforcing steel using current x-ray or pachometer equipment.

3.3 FIRESTOPPING

- A. All penetrations through fire-rated building structures (walls and floors) shall be sealed with an appropriate fire stop system. This requirement applies to through penetrations (complete penetration) and membrane penetrations (through one side of a hollow fire rated structure). Any penetrating item i.e., riser slots and sleeves, cables, conduit, cable tray, and raceways, etc. shall be properly fire stopped.
- B. Firestopping assemblies shall meet or exceed the rating of the wall or floor being penetrated.
- C. Fire stopping References:
 - 1. ASTM E814, Standard Method of Fire Tests of Through-Penetration Fire Stops.
 - 2. ASTM E 119, Fire Tests of Building Construction and Materials (for fire-rated architectural barriers).
 - 3. 2002 NFPA National Electrical Code, Section 800-52, Paragraph 2(b), Spread of Fire and Products of Combustion.

3.4 CONCEALMENT

- A. Telecom cabling pathways including conduit, sleeves and tray shall be concealed above ceilings, in walls, below slabs, and elsewhere throughout building. If concealment is impossible or impractical, or in areas without ceilings, the Owner's Representative shall be notified of the proposed routing prior to starting that portion of the work.
- B. All telecom cabling must be routed concealed above accessible ceilings or in conduit. No exposed telecom cabling is permitted with the exception of telecom cabling routed within the telecom rooms.

3.5 CONDUIT SEALING

- A. The Contractor shall seal all foundation penetrating conduits and all service entrance conduits and sleeves to eliminate the intrusion of moisture, gases and rodents into the building. This requirement also applies to spare conduits.
- B. Spare conduits shall be plugged with expandable plugs.
- C. All service entrance conduits shall be sealed or resealed after cable installation.

3.6 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate ordering and installation of all equipment with long lead times or having a major impact on work by other trades so as not to delay the job or impact the schedule.
- B. Where mounting heights are not dimensioned, install systems, materials and equipment to provide the maximum headroom possible.

- C. Set all equipment to accurate line and grade, level all equipment and align all equipment components.
- D. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery of equipment and apparatus furnished into the premises.
- E. No equipment shall be hidden or covered up prior to inspection by the Owner's Representative. All work that is determined to be unsatisfactory shall be corrected immediately.
- F. All work shall be installed level and plumb, parallel and perpendicular to other building systems and components.
- G. The Contractor shall replace all ceiling tiles damaged by work performed as part of the communications contract.
- H. Storage and security of material and equipment shall be the responsibility of the Contractor.

END OF SECTION 270500

SECTION 270543 – EXTERIOR COMMUNICATION PATHWAYS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. The Contractor shall provide all equipment, materials, labor, and services necessary to complete the exterior communication pathways and to ensure that they are in compliance with requirements stated or reasonably inferred by the Specifications and the Construction Drawings.
- B. This section includes requirements for underground conduit and communication vaults as shown on the Telecom Site Plans.
- C. Minimum requirements and installation methods are included for the following:
 - 1. PVC and Rigid Conduit.
 - 2. Precast Concrete Hand Holes and Covers 10" Wide x 17" Long (Non Traffic Rated).
 - 3. Precast Concrete Hand Holes and Covers 13" Wide X 24" Long (Non Traffic Rated).
 - 4. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (Non Traffic Rated).
 - 5. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (H-20 Traffic Rated).
 - 6. Precast Concrete Pull Boxes and Covers 30" Wide X 48" Long (Incidental H-20 Traffic Rated).
 - 7. Precast Concrete Pull Boxes and Covers 36" Wide X 60" Long (H-20 Traffic Rated).
 - 8. Multi-cell fabric innerduct.
 - 9. Pull rope.
 - 10. Waterproofing.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 05 43: Exterior Communications Pathways
 - 3. 27 11 00: Communications Equipment Room Fittings
 - 4. 27 13 00: Communications Backbone Cabling
 - 5. 27 15 00: Communications Horizontal Cabling
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 01 00 1.4 and in particular the following code requirements:
1. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
 2. ANSI/TIA-606-D: Administration Standard for Telecommunications Infrastructure (Revision D, October 2021).
 3. ANSI/TIA-607-D: Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises (Revision D, July 2019).
 4. ANSI/TIA-758-B: Customer-Owned Outside Plant Telecommunications Infrastructure Standard (Revision B, March 2012).
 5. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 6. Underwriter's Laboratories, Inc. (UL).

1.4 SUBMITTALS

- A. Manufacturer's Data Sheets: Provide data sheets for the following products:
1. PVC and Rigid Conduit.
 2. Precast Concrete Hand Holes and Covers 10" Wide x 17" Long (Non Traffic Rated).
 3. Precast Concrete Hand Holes and Covers 13" Wide X 24" Long (Non Traffic Rated).
 4. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (Non Traffic Rated).
 5. Precast Concrete Pull Boxes and Covers 17" Wide X 30" Long (H-20 Traffic Rated).
 6. Precast Concrete Pull Boxes and Covers 30" Wide X 48" Long (Incidental H-20 Traffic Rated).
 7. Multi-cell fabric innerduct.
 8. Pull rope.
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.
- C. As-Built Drawings: Provide as-built drawings for the outside plant conduit and vaults. Drawings must be dimensioned off of building lines or curbs indicating the exact routing of the conduit and location of vaults.

PART 2 – PRODUCTS

2.1 PVC CONDUIT

- A. Provide PVC conduit as shown on the Site Plan. Conduit shall be rated for direct burial, ultraviolet resistant, and conforming to UL Standard 651, NEC 347, Federal Specification W-C-1094A, Schedule 40 or Schedule 80 as specified on drawings.

- B. PVC fittings shall be the same material as conduit and installed with watertight joint compound recommended by manufacturer.
- C. Install pre-manufactured conduit supports and spaces spacers as required to maintain proper conduit separation between multiple conduits routed in a trench.
 - 1. Acceptable PVC Conduit manufactured by:
 - a. Carlon
 - b. Queen City Plastics
 - c. Certaineed Corporation
 - d. Pacific Western Extruded Plastics
 - e. Georgia Pipe Company
 - f. Hubbell Incorporation
 - g. Cantex Incorporation
 - h. Triangle

2.2 RIGID METAL CONDUIT

- A. The PVC conduit shall transition to rigid metal conduit a minimum of 10 feet from the building foundation. Rigid metal conduit shall be routed from that point to the stub up location in the building.
- B. Conduit stub-ups in the telecom rooms shall be vinyl coated rigid steel.
- C. Rigid metal galvanized steel conduit (RMC) shall conform to Federal Specification WW-C-581E, NEC Article 346, ANSI Standard C80.1 and U.L. Standard No. 6 for rigid metallic conduit, except hot dipped galvanized after threading.
- D. Fittings, sweeps, couplings, etc., shall be galvanized threaded type meeting above standards. Threadless fittings shall not be used.
 - 1. Acceptable RMC Manufacturers:
 - a. Allied Tube and Conduit Corporation
 - b. LTV Steel Tubular Productions Co.
 - c. Midwest Electric-Cooper Industries
 - d. Wheatland Tube Company
 - e. Western Tube and Conduit Corp.
 - f. Triangle Wire and Cable Inc.
 - 2. Acceptable Bushing Manufacturers:
 - a. Appleton
 - b. Thomas & Betts
 - c. OZ/Gedney
 - d. Midwest
 - e. Steel City

2.3 MULTI-CELL FABRIC INNERDUCT

- A. Provide UL Listed fabric innerduct for routing of all backbone copper and fiber optic communications cabling between the MDF and all IDF.

- B. Provide qty (1) 2" 3-Cell MaxCell fabric innerduct "packs" in each 2" conduit between the MDF and the IDF's.
- C. The MaxCell innerduct shall be terminated at the entry point of the telecom rooms and secured to the plywood backboard. 1 1/4" non-split orange corrugated innerduct shall be installed to route fiber optic backbone cabling from this point to the fiber termination cabinet(s).
- D. Acceptable Products:
 - 1. MaxCell Edge 2" 3-Cell Part Number MXE52223xx1000 (for installation in 2" conduits).
 - 2. No Substitutions accepted.

2.4 PULL ROPE

- A. Pull rope shall be installed within each outside plant conduit and within each innerduct.
- B. Pull rope shall be secured to the plywood backboard at the telecom rooms and to the unistrut racking in the pull boxes.
- C. Provide 3/8" nylon pull rope with sequential foot markings.

2.1 TELECOM HAND HOLES AND COVERS (10" WIDE X 17" LONG) NON-TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Provide 10" wide x 17" long x 12" deep reinforced concrete pull box.
- C. Provide qty (2) 10" wide x 17" long x 12" deep reinforced concrete extensions.
- D. Provide reinforced concrete lockable bolt down lid.
- E. Provide additional reinforced concrete extensions as required to maintain conduit depth as shown on the drawings.
- F. Acceptable Products:
 - 1. Jensen Precast HN1017-B pull box, HN1017-E Extension and HN1017-L01 Lid.
 - 2. Or Approved Equal.

2.2 TELECOM HAND HOLES AND COVERS (13" WIDE X 24" LONG) NON-TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.

- B. Provide 13" wide x 24" long x 12" deep reinforced concrete pull box.
- C. Provide qty (2) 13" wide x 24" long x 12" deep reinforced concrete extensions.
- D. Provide reinforced concrete lid.
- E. Provide additional reinforced concrete extensions as required to maintain conduit depth as shown on the drawings.
- F. Acceptable Products:
 - 1. Jensen Precast HN1324 pull box, HN1324-E extension and HN1324-L02 Lid.
 - 2. Or Approved Equal.

2.3 TELECOM PULL BOXES AND COVERS (17" WIDE X 30" LONG) NON-TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Provide 17" wide x 30" long x 12" deep reinforced concrete pull box.
- C. Provide qty (2) 17" wide x 30" long x 12" deep reinforced concrete extensions.
- D. Provide reinforced concrete lockable bolt down lid.
- E. Provide additional reinforced concrete extensions as required to maintain conduit depth as shown on the drawings.
- F. Acceptable Products:
 - 1. Jensen Precast HN1730-B pull box, HN1730-E extension and HN1730-L01 Lid.
 - 2. Or Approved Equal.

2.4 TELECOM PULL BOXES AND COVERS (17" WIDE X 30" LONG) H-20 TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Pull boxes, risers and lids shall be H-20 traffic rated.
- C. Provide 17" wide x 30" long x 12" deep reinforced concrete pull box.
- D. Provide 17" wide x 30" long x 12" deep reinforced concrete extensions.
- E. Provide steel diamond plate bolt down lid.

- F. Provide additional reinforced concrete risers as required to maintain conduit depth as shown on the drawings.
- G. Acceptable Products:
 - 1. Jensen Precast HT1730-B pull box, HT1730-E extension and HT1730-L-11-01 Lid.
 - 2. Or Approved Equal.

2.5 TELECOM INTERCEPT PULL BOXES AND COVERS (30" WIDE X 48" LONG)
INCIDENTAL H-20 TRAFFIC RATED

- A. Provide reinforced precast concrete telecom pull boxes where shown on the drawings.
- B. Provide 30" wide x 48" long x 30" deep reinforced concrete intercept pull box with 4" deep base.
- C. Provide 30" wide x 48" long x 12" deep reinforced concrete riser.
- D. Provide split incidental H-20 steel bolt down diamond plate surface. Covers shall be labeled "COMMUNICATIONS".
- E. Provide corrosion resistant galvanized steel channel racking and cable support hooks in all pull boxes. Racking and cable support hooks shall be installed on both sides of each pull box.
- F. Acceptable Products:
 - 1. Jensen Precast PB3048-I intercept pull box (PB3048-I), 12" Riser RS304812 and incidental H-20 Cover CA3048C61.
 - 2. Or Approved Equal.

PART 3 – EXECUTION

3.1 UTILITY COORDINATION

- A. Contact local utility companies and utility locating services prior to excavation to locate and mark existing underground utilities.
- B. Coordinate conduit routing with existing underground utilities. Reroute conduit and provide horizontal and vertical offsets as required to avoid and to provide necessary clearances from existing utilities.

3.2 CONDUIT

- A. OSP conduits shall be installed with a slight drain slope (0.125 inches-per-foot) away from buildings to prevent the accumulation of water in the conduit or ingress to the buildings.
- B. Factory-manufactured sweeps which meet ANSI/TIA-569-B bend radius requirements shall be used for all telecommunications conduit. The bend radius of the sweeps must be a minimum of 10-times the internal conduit diameter. Bending conduit in the field using manual or mechanical methods is not acceptable.
- C. Any 4" conduit with a sweep of more than 11 degrees is to have a minimum concrete encasement of 4".
- D. OSP conduits shall be installed a minimum of 48" below finished grade. Conduits shall be encased in hard-tamped sand a minimum of 6" above and below the conduits. 6" clear space shall be maintained between conduits. Backfill above the conduits shall be installed and compacted to 95% density.
- E. OSP conduit and duct bank runs must have a continuous orange colored, metal detectable warning tape installed half the distance between the top of the conduit and the finished grade.
- F. All cable shall be installed in the lowest available conduit in a duct bank, working up as additional cables are installed.
- G. Prior to installing cables, all new or unused OSP conduits must be cleaned with a brush pulled through the conduit at least two times in the same direction and swabbed with clean rags until the rag comes out of the conduit clean and dry. Conduits shall then be tested with a mandrel to prove compliance with the sweep radius requirements throughout the conduit run.
- H. Spare OSP conduits and innerducts shall be plugged with watertight plugs at both ends to prevent the intrusion of moisture, gasses, and rodents throughout the construction project.
- I. All OSP conduits and innerduct shall have a 3/8" nylon pull rope installed. Pull rope shall be re-pulled each time an additional cable is installed.

3.3 PULL BOXES

- A. Install pull boxes and set covers to match finished grade.
- B. Conduits shall enter pull boxes from the side. Do not sweep conduits into the bottom of the pull box.

3.4 CUTTING AND PATCHING

- A. Sawcut and remove existing pavement, sidewalks, gutters, etc., to accommodate installation of outside plant conduit and pull boxes.

- B. Replace sub-base, pavement, sidewalks gutters, etc., to match existing.
- C. Repair and replace all landscaping and sitework disturbed by excavation including but not limited to irrigation lines, lawns, planting, etc. Resod lawn areas disturbed by excavation.

END OF SECTION 270543

SECTION 270800 – COMMISSIONING OF COMMUNICATIONS

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Drawings and general provisions of the Contract, Including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.
- B. The Contractor shall provide all equipment, materials, labor, and services necessary to complete the testing, labeling and documentation of the telecom cabling system in compliance with requirements stated or reasonably inferred by the Specifications and the Contract Drawings.
- C. This section includes the minimum requirements for the testing, identification and administration for the telecommunications cabling system, including the following:
 - 1. Testing
 - a. Category 6 Cable Test Equipment and Test Procedures.
 - b. Category 6A Cable Test Equipment and Test Procedures.
 - c. Copper backbone cable test equipment and test procedures.
 - d. Fiber optic cable test equipment and test procedures.
 - e. Cable test reports.
 - 2. Identification
 - a. Labeling of work area outlet faceplates and jacks.
 - b. Labeling of horizontal data, voice and video cabling.
 - c. Labeling of Copper Patch Panels.
 - d. Labeling of fiber optic patch panels.
 - e. Labeling of 110 wiring blocks.
 - f. Labeling of racks and cabinets.
 - g. Labeling of copper and fiber backbone cable.
 - h. Labeling of innerduct.
 - 3. Administration
 - a. As-built drawings.
 - b. Materials listing.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.
 - 2. 27 11 00: Communications Equipment Room Fittings
 - 3. 27 13 00: Communications Backbone Cabling

4. 27 15 00: Communications Horizontal Cabling

- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 01 00 1.4 and in particular the following requirements
1. ANSI/TIA-568.2-D: Balanced Twisted-Pair Telecommunications Cabling And Components Standards (Revision D, September 2018).
 2. ANSI/TIA-568.3-D: Optical Fiber Cabling and Component Standard (Revision D, October 2016).
 3. ANSI/TIA-598-D: Optical Fiber Cable Color Coding (Revision D, July 2014).
 4. ANSI/TIA-606-D: Administration Standard for Telecommunications Infrastructure (Revision D, October 2021).
 5. ANSI TIA-526-7-A: Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant (Revision A, July 2015).
 6. ANSI/TIA-526-14-C: Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant (Revision C, 2015).
 7. ANSI/TIA-1152-A: Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling (Revision A, November 2016).
 8. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 9. Underwriter's Laboratories, Inc. (UL).

1.4 SUBMITTALS

- A. Test Equipment: Submit manufacturers' catalog sheets and specifications for the following cable testers
1. Category 6 cable tester.
 2. Category 6A cable tester.
 3. Multimode and singlemode fiber optic cable tester.
- B. Calibration Reports: Provide calibration reports for all test equipment to be used on the Project. The calibration must have been performed by a manufacturer certified calibration facility and be dated no more than 60 days prior to the start of testing.
- C. Cable Test Reports: Provide bound test reports for all cables signed by the technician performing the cable testing. Include Manufacturers data sheets for the cabling being tested.
- D. Labels: Submit manufacturer's data sheets on the type of labels to be used for each labeling application.

PART 2 – PRODUCTS

2.1 HORIZONTAL CATEGORY 6 UNSHIELDED TWISTED-PAIR CABLE TESTER

- A. Cable tester shall comply with the requirements of ANSI/TIA-1152.
- B. Cable tester shall perform all tests necessary to certify the horizontal Category 6 UTP cabling in accordance with ANSI/TIA 568 C.2.
- C. Shall be a UL certified Level III test set calibrated by a manufacturer certified calibration facility. The calibration shall be dated no more than 60 days prior to the start of testing.
- D. Acceptable Manufacturers
 - 1. Fluke Networks
 - 2. Ideal Industries
 - 3. Agilent Wirescope
 - 4. AEM
 - 5. Softing/WireXpert
 - 6. Trend Networks.
 - 7. Or equal.

2.2 CATEGORY 6A (AUGMENTED) UNSHIELDED TWISTED-PAIR CABLE TESTER

- A. Cable tester shall comply with the requirements of ANSI/TIA-1152.
- B. Cable tester shall perform all copper UTP Cat 6A CMP-rated cable with tester set-up to identify the cable manufacturer with associated NVP as well as the connectivity manufacturer.
- C. Shall be a UL certified Level IIIe test set calibrated by a manufacturer certified calibration facility.
- D. The software calibration date shall be current throughout the testing phase of the project and be stated in the test results documentation or, by hard copy from the manufacturer.
- E. The tester set-up should include the application to support 10GBase-T (IEEE 802.3an).
- F. Test results shall be in PDF format and, if requested, manufacturer proprietary software.
- G. Acceptable Manufacturers
 - 1. Fluke Networks
 - 2. Ideal Industries
 - 3. Agilent Wirescope
 - 4. AEM
 - 5. Softing/WireXpert
 - 6. Trend Networks.

7. Or equal.

2.3 SINGLEMODE OPTICAL FIBER CABLE TESTER

- A. Tier 1 certification is defined as the measurement of the total insertion loss, length, and polarity of the optical cable cabling from one end of the link to the other. The test equipment used is a 'combined' optical power meter and light source called an OLTS or Optical Loss Test Set.
- B. Test Reference Cables (TRCs) minimum standards; 2.8-3.0 OD jacketing, zirconia ceramic UPC LC ferrule < 0.25 dB IL (insertion loss) and > 0.50 RL (reflection loss).
- C. Tier 2 optical fiber testing includes Tier 1 OLTS testing and is used to define the graphical precise characterization of the fiber link. The tester used for Tier 2 testing is an OTDR or Optical Time Domain Reflectometer.
- D. When using an OTDR, use only high-quality, low-loss, dual launch boxes having the same optical cable and connectors being tested and are required at both transmit and receiving ends.
- E. Both Tier 1 and Tier 2 testing shall be bi-directional and dual wavelengths (1310 & 1550 nm).
- F. The tester shall be capable of performing the tests required by ANSI/TIA-568.1-E, ANSI/TIA-568.3-D, ANSI/TIA-526-7A and TR 42.11.
- G. The software calibration date shall be current throughout the testing phase of the project and be stated in the test results documentation or by hard copy from the manufacturer.
- H. The tester set-up should include the application to support QSFP28-100GBase-LR4 (IEEE 802.3 bm).
- I. Acceptable Manufacturers
 1. Agilent Wirescope
 2. AEM
 3. AFL
 4. EXFO
 5. FIS
 6. Fluke Networks
 7. Fujikura
 8. Ideal Industries
 9. Jonard
 10. Softing/WireXpert
 11. VIAVI
 12. Or equal.

2.4 LABELS

- A. Labels shall be laser printed and shall meet the legibility, defacement, exposure and adhesion requirements of UL 969.
- B. Acceptable manufacturers
 - 1. Belden
 - 2. Brady
 - 3. Brother
 - 4. HellermannTyton.
 - 5. Or approved equal

2.5 WORK AREA OUTLET FACEPLATE LABELS

- A. Label each port in each faceplate in accordance with Labeling Scheme identified on the Drawings. Label must be machine printed and inserted in the faceplate label window. Labels shall be provided by the faceplate manufacturer of the faceplate.
- B. Acceptable manufacturers
 - 1. Belden
 - 2. Brother
 - 3. HellermannTyton.
 - 4. No Substitution

2.6 HORIZONTAL CABLE SHEATH LABELS

- A. Label horizontal cable sheaths at work area outlets and at patch panels with laser printed self-laminating wrap around vinyl labels. Labels shall be in accordance with the Labeling Scheme identified in WCSD SCS-015.
- B. Labels shall be white with black type. Label size shall be 1.0" wide by 1.5" high.
- C. At the Telecom Room, cable labels will be affixed to cable a minimum of 1 inch from the termination on the patch panel, and placed in such a way as to be clearly visible.
- D. At the work area outlet, cable labels shall be affixed to the cable 2 inches from the termination on the jack.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.7 COPPER PATCH PANEL LABELS.

- A. Label each patch panel with a single panel ID label in accordance with the labeling scheme identified WCSD SCS-015.

- B. Labels shall be compatible with the patch panels provided for the Project.
- C. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- D. Label each patch panel port with a laser printed label. Label each port with the room number of the room housing the work area outlet.
- E. Labels shall be compatible with the patch panels provided for the Project.
- F. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.375" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.8 TELECOM ROOM FIBER OPTIC TERMINATION CABINET LABELS

- A. Label each fiber optic patch panel with a single panel ID label in accordance with the labeling scheme identified WCSD SCS-015.
- B. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- C. A label will be affixed to the fiber termination cabinet as shown using the Backbone Cable Labeling Scheme.
- D. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.

- e. Or approved equal

2.9 EQUIPMENT ROOM FIBER OPTIC TERMINATION CABINET LABELS

- A. Label each fiber termination cabinets in accordance with the labeling scheme identified in WCSD-SCS-015.
- B. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- C. Label fiber modules in accordance with the labeling scheme identified in WCSD-SCS-015. Labels shall be affixed to the fiber termination cabinet directly on the Plexiglas front cover so labels will be visible when the cover is closed. Each label will indicate the exact location and position of the cable's far end according to the Backbone Cable Labeling Scheme.
- D. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal
- E. Label each Connector Module with its Slot in accordance with the labeling scheme identified on the drawings.
- F. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 0.5" wide by 0.5" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.10 EQUIPMENT RACK LABELS

- A. Provide labels on the top angle of all equipment racks. Labels shall in accordance with the labeling scheme identified in WCSD-SCS-015.
- B. Racks shall be labeled with Space ID and Rack ID.

- C. Label material shall be permanent polyester. Labels shall be white with black type. Label size shall be 1.0" high.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

2.11 COPPER BACKBONE CABLE SHEATH LABELS

- A. The backbone cable sheaths in the Telecom rooms and at pull boxes shall be labeled. Labels shall be in accordance with the labeling scheme identified in WCSD-SCS-015.
- B. Labels must be clearly visible at the rear of the rack.
- C. Labels shall be self-laminating vinyl labels and must be compatible with the diameter of the backbone cable. Labels shall be 2.5" high by 1.5" wide.
 - 1. Acceptable Manufacturers:
 - a. Belden
 - b. Brady
 - c. Brother
 - d. HellermannTyton.
 - e. Or approved equal

PART 3 – EXECUTION

3.1 CABLE TESTING – GENERAL

- A. Visually inspect all cables, cable reels, and shipping cartons to detect cable damage incurred during shipping and transport. Return visibly damaged items to the manufacturer.
- B. Where post-manufacture test data has been provided by the manufacturer on the reel or shipping carton, submit copies to the Owner's Representative as part of the cable test results.
- C. The Owner's Representative reserves the right to observe any or all portions of the cable testing process.
- D. The Owner's Representative further reserves the right to conduct, using contractors equipment and labor, a random re-test of up to ten percent (10%) of the cable plant to confirm documented test results.
- E. Test results and corrective procedures are to be documented and submitted to the Owner's Representative within five (5) working days of test completion.

3.2 CATEGORY 6 UTP CABLE TESTING

- A. A representative of the end-user shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase 5 business days before testing commences.
- B. Field test measurements shall be made in accordance with Annex I of TIA 568-C.2 unless otherwise noted.
- C. Field test measurements shall be conducted from 1 MHz to 250 MHz.
- D. Field testing shall be conducted using a level III tester. The accuracy of the level III tester shall meet or exceed the requirements of ANSI/TIA-1152. The tester shall be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.
- E. Every cabling link shall be tested in accordance with the TIA 568-C.2 Annex C: "Cabling and Component Test Procedures".
- F. The installed twisted-pair horizontal links shall be tested from the patch panel in the telecommunications room to the work area outlet. The cable must pass the "Permanent Link" performance limits specification as defined in TIA 568-C.2 Section 6.3.
- G. 100% of the installed cabling links must be tested and must pass the requirements of the standards mentioned above. Any failing link must be diagnosed and corrected. The corrective action shall be followed with a new test to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation.
- H. Trained technicians who have successfully attended an appropriate training program shall execute the tests. Appropriate training programs include but are not limited to installation certification programs provided by BICSI or the ACP (Association of Cabling Professionals).
- I. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter. The test result of a parameter shall be marked with an asterisk (*) when the result is closer to the test limit than the accuracy of the field tester. The field tester manufacturer must provide documentation as an aid to interpret results marked with asterisks. (Reference TIA-568-C.2; Annex I: Section I.2.2).
- J. The Contractor shall provide Category 6, 250 MHz channel test results on all pairs of cable. The following minimum field test parameters are required:
 - 1. Wire map (including cable shield if present).
 - 2. Length.
 - 3. Insertion loss.
 - 4. Near-end crosstalk (NEXT) loss.

5. Power sum near-end crosstalk (PSNEXT) loss.
 6. Equal-level far-end crosstalk (ELFEXT).
 7. Power-sum equal-level far-end crosstalk (PSELFEXT).
 8. Return loss.
 9. Propagation delay.
 10. Delay skew.
- K. Test results shall be provided in electronic format and printed 8.5" x 11" format signed by the technician performing the testing. The electronic format should be a Microsoft Word .doc file. Along with the above test parameters, the following information must be included for each cable tested:
1. Name of Owner and name of project (building name).
 2. Date and time of test.
 3. Name of technician performing the field testing.
 4. Manufacturer, model number, serial number and software revision of field tester.
 5. Cable ID (Telecom Room # - Patch Panel # - Port # / Work Area Room # - Telecom Outlet – Jack #).
 6. Overall Pass/Fail result.
 7. Manufacturer, category and model number of cable.
 8. NVP used to determine cable length.

3.3 CATEGORY 6A (AUGMENTED) UTP CABLE TESTING

- A. A representative of the end-user shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase 5 business days before testing commences.
- B. Field test measurements shall be made in accordance with ANSI/TIA-568-C.2.
- C. Field test measurements shall be conducted from 1 MHz to 500 MHz.
- D. Field testing shall be conducted using a level IIIe tester. The accuracy of the level IIIe tester shall meet or exceed the requirements of ANSI/TIA-1152.
- E. The software calibration date shall be current throughout the testing phase of the project and be stated in the test results documentation or, by hard copy from the manufacturer.
- F. Every cabling link shall be tested to copper 100-ohm UTP Cat 6A cable with tester set-up to identify the cable manufacturer with associated NVP as well as the connectivity manufacturer.
- G. The cable must be tested to "Permanent Link" performance as defined in ANSI/TIA 568.2-D having a maximum length of 295 feet (90m).
- H. 100% of the installed cabling links must be tested and must pass the requirements of the standards mentioned above. Any failing link must be diagnosed and corrected. The corrective action shall be followed with a new test

to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation.

- I. Trained technicians who have successfully attended an appropriate training program shall execute the tests. Appropriate training programs include but are not limited to installation certification programs provided by BICSI or the ACP (Association of Cabling Professionals).
- J. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter. The test result of a parameter shall be marked with an asterisk (*) when the result is closer to the test limit than the accuracy of the field tester. The field tester manufacturer must provide documentation as an aid to interpret results marked with asterisks.
- K. The Contractor shall provide Category 6A, 500 MHz channel test results on all pairs of cable. The following minimum field test parameters are required:
 - 1. Wire Map
 - 2. Length
 - 3. Propagation Delay
 - 4. Delay Skew
 - 5. DC Loop Resistance
 - 6. Insertion Loss
 - 7. NEXT (Near-End Crosstalk)
 - 8. PS NEXT (Power Sum Near-End Crosstalk)
 - 9. ACR-N (Attenuation to Crosstalk Ratio Near-End)
 - 10. PS ACR-N (Power Sum Attenuation to Crosstalk Ratio Near-End)
 - 11. ACR-F (Attenuation to Crosstalk Ratio Far-End)
 - 12. PS ACR-F (Power Sum Attenuation to Crosstalk Ratio Far-End)
 - 13. Return Loss
- L. Test results shall be provided in electronic PDF and raw data format within 5 days after the completion of the project. Test documentation shall be saved in Fluke LinkWare file format version 11.0 or later and must include (along with the above test parameters), the following information:
 - 1. Test results as downloaded from the tester. The following information shall be included in the test results:
 - a. Record of test frequencies.
 - b. Cable type.
 - c. Conductor pair and cable I.D.
 - d. Measurement direction.
 - e. Reference setup.
 - f. Crew member name(s).
 - g. Date and time.
 - 2. Additional documentation required to provide the following (if not included in test results):

- a. Test equipment name, manufacturer, model number, serial number, software version and last calibration date.
 - b. The test method used and the specific settings of the equipment during the test as well as the software version being used in the field test equipment.
 - c. Any required information not listed in test results (crew member, etc.).
3. Unless the manufacturer specifies a more frequent calibration cycle, an annual calibration cycle is anticipated on all test equipment used for this installation. The Contractor must provide a copy of the last calibration certification with submitted test results.
4. When repairs and re-tests are performed, the problem found and corrective action taken shall be noted, and both the failed and passed test data shall be documented. Once corrective measures have been taken and the failed tests passes, only retain the PASS test and discard the FAIL for final documentation.

3.4 SINGLEMODE OPTICAL FIBER CABLE TESTING

- A. A representative of the end-user shall be invited to witness field testing. The representative shall be notified of the start date of the testing phase 5 business days before testing commences.
- B. 100% of the installed fiber strands shall be tested and must pass the field test specifications defined by the Telecommunications Industry Association (TIA) standards ANSI/TIA-568.1-E, ANSI/TIA-568.3-D and ANSI/TIA-526-7-A. Any failing fiber strands must be diagnosed and corrected. The corrective action shall be followed with a new test to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links shall be provided in the test results documentation.
- C. Trained technicians who have successfully attended an appropriate training program and have obtained a certificate as proof thereof shall execute the tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
 1. The manufacturer of the fiber optic cable and/or the fiber optic connectors.
 2. The manufacturer of the test equipment used for the field certification tests.
 3. Training organizations authorized by BICSI or by the ACP (Association of Cabling Professionals™) Cabling Business Institute.
- D. Field test instruments for multimode fiber cabling shall meet the requirements of ANSI/TIA-526-7A. The light source shall meet the launch requirements of ANSI/TIA-455-50B, Method A. This launch condition can be achieved either within the field test equipment or by use of an external mandrel wrap (as

described in clause 11 of ANSI/TIA-568-1-E) with a Category 1 light source. Field test instruments for singlemode fiber cabling shall meet the requirements of ANSI/TIA-526-7-A.

- E. The tester shall be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.
- F. The fiber optic launch cables and adapters must be of high quality and the cables shall not show excessive wear resulting from repetitive coiling and storing of the tester interface adapters. Test Reference Cables (TRCs) minimum standards; 2.8-3.0 OD jacketing, zirconia ceramic UPC LC ferrule < 0.25 dB IL (insertion loss) and >0.50 RL (reflection loss).
- G. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter.
- H. Performance Test Parameters:
 - 1. Singlemode backbone links shall be tested at 1310 nm and 1550 nm in accordance with ANSI/TIA-526-7-A, Method A.1, One Reference Jumper or equivalent method.
 - 2. The link attenuation shall be calculated by the following formulas specified in ANSI/TIA-568.3-D.

Link Attenuation = Cable Attenuation + Connector Insertion Loss + Splice Insertion Loss

Where:

Cable Attenuation(dB) = Attenuation Coefficient(dB/Km) x Length(km)

Connector Insertion Loss(dB) = # of connector pairs x connector loss(dB)

Splice Insertion loss(dB) = # of splices(S) x splice loss(dB)

The values for the Attenuation Coefficient are listed in the following table below:

Wavelength	OSI (ISP)	OS1A (ISP OS2)	OS2 (OSP)
1310 nm	1.0 dB/km	0.4 dB/km	0.4 dB/km
1310 nm	0.3 dB/Mft	0.12 db/Mft	0.12 dB/Mft
1550 nm	1.0 dB/km	0.4 dB/km	0.4 dB/km
1550 nm	0.3 dB/Mft	0.12 db/Mft	0.12 dB/Mft

- 3. Maximum insertion loss (IL) per mated pair is 0.35 dB and 0.02 dB per fusion (only) splice.

- I. The Contractor shall test all fiber optic cables and provide test results in electronic PDF format signed by the technician performing the testing. The following field test documentation shall be provided for each fiber optic strand:
 1. Wavelength of test (1310 nm or 1550 nm for Singlemode)
 2. Length of segment.
 3. Number of splices.
 4. Link attenuation (for each wavelength).
 5. Overall Pass/Fail result.
 6. Margin by which the strand passed the test (difference between the allowable link attenuation and the measured link attenuation).
 7. Name of Owner and name of project (building name).
 8. Date and time of test.
 9. Name of technician performing the field testing.
 10. Manufacturer, model number, serial number and software revision of field tester.
 11. Cable ID (Telecom Room # - Patch Panel # - Port # / Telecom Room # - Patch Panel # - Port #. Telecom Outlet – Jack #).
 12. Manufacturer, model number of cable, type of cable and strand count.

3.5 IDENTIFICATION AND LABELING

- A. The Contractor shall confirm the telecom room and work area room numbers with the Owner or Owner's Representative prior to labeling.
- B. Labeling scheme shall follow the requirements of Washoe County School District Structured Cabling Specification WCSD-SCS-015 dated October 21, 2016.
- C. Work Area Outlet Face Plates: See WCSD-SCS-015 for requirements.
- D. Work Area Data and Voice Jacks: See WCSD-SCS-015 for requirements.
- E. Work Area Horizontal Data, Voice and Video Cable: See WCSD-SCS-015 for requirements.
- F. Telecom Room Horizontal Data, Voice and Video Cable: See WCSD-SCS-015 for requirements.
- G. Patch Panels: See WCSD-SCS-015 for requirements.
- H. Patch Panel Ports: See WCSD-SCS-015 for requirements.
- I. Fiber Termination Cabinets: See WCSD-SCS-015 for requirements.
- J. 110 Blocks: See WCSD-SCS-015 for requirements.
- K. Backbone Cables: See WCSD-SCS-015 for requirements.
- L. Equipment Racks and Cabinets: See WCSD-SCS-015 for requirements.

3.6 ADMINISTRATION

A. As-Built Drawings.

1. The Contractor shall provide As-Built drawings at the end of the project in electronic PDF format. The following information shall be provided on the As-Built Drawings:
 - a. Plan location of all telecom outlets.
 - b. Quantity and type of drops at each telecom outlet.
 - c. Telecom room where the drops are terminated.
 - d. Cable tray layout. Provide dimensions from building grid lines to locate cable tray.
 - e. J-hook layout. Provide dimensions from building grid lines to locate J-hook runs.
 - f. Conduits and pull box layout. Provide dimensions from building grid lines to locate conduits and pull boxes.
 - g. Backbone cable runs and pair/strand counts.
 - h. Horizontal and vertical sleeve layout.
 - i. Outside plant vaults and pull boxes. Provide dimensions from curbs to locate vaults and pull boxes.
 - j. Outside plant conduits. Provide dimensions from curbs to locate conduit.

B. Materials Listing

1. The contractor shall provide a spreadsheet indicating the materials and quantities used on the project. At a minimum, the spreadsheet will contain the following information: Item description, manufacturer, part number, quantity and color (where applicable).

END OF SECTION 270800

SECTION 271500 – COMMUNICATIONS HORIZONTAL CABLING

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. The Contractor shall provide all equipment, materials, labor, and services necessary to complete the horizontal cabling system, and to ensure that it is in compliance with requirements stated or reasonably inferred by the Specifications and the Contract Drawings.
- B. The horizontal cabling is that portion of the communication cabling system that extends from the work area communications outlets to the patch panels in the communications rooms.
- C. This section includes minimum requirements for the following
 1. Horizontal Category 6 Cabling.
 2. Horizontal Category 6A (Augmented) Cabling.
 3. CAT 6A Patch Cords.
 4. Category 6A 8-Position Jacks.
 5. Category 6A Field Mount Plugs
 6. Work Area 4-Port Plastic Faceplates
 7. Work Area 4-Port Stainless Steel Faceplates
 8. Velcro Cable Straps
 9. OSP CAT 6 Cable (For Parking Lot Pole Mounted Cameras)

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 1. 27 05 00: Common Work Results for Communications.
 2. 27 05 28: Interior Communications Pathways.
 3. 27 05 43: Exterior Communications Pathways
 4. 27 08 00: Commissioning of Communications
 5. 27 11 00: Communications Equipment Room Fittings
 6. 27 41 00: Audio Visual Systems
 7. 27 41 16: AV and Safety Alert Systems
 8. 27 51 13: Paging Systems
 9. 27 53 13: Wireless Clock Systems
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Materials and work specified herein shall comply with the requirements of Specification Section 27 05 00 and in particular the following code requirements:
 - 1. ANSI/TIA-568.0-E: Generic Telecommunications Cabling for Customer Premises (Revision E, March 2020).
 - 2. ANSI/TIA-568.1-E: Commercial Building Telecommunications Infrastructure Standard (Revision E, March 2020).
 - 3. ANSI/TIA-568.2-D: Balanced Twisted-Pair Telecommunications Cabling And Components Standards (Revision D, September 2018).
 - 4. ANSI/TIA-569-E: Telecommunications Pathways and Spaces (Revision E, May 2019)
 - 5. ANSI/TIA-1152-A: Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling (Revision A, November 2016).
 - 6. Underwriter's Laboratories, Inc. (UL).

1.4 QUALITY ASSURANCE

- A. All materials shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Specification shall be subject to the control and approval of the Owner's Representative. Equipment and materials shall be of the quality and the manufacturer indicated. The equipment specified is based upon the acceptable manufacturers listed.
- B. The Contractor shall strictly adhere to all Category 6 and Category 6A installation practices when installing unshielded twisted-pair cabling.

1.5 SUBMITTALS

- A. Manufacturer's Data Sheets: Submit manufacturers data sheets for the following items
 - 1. Horizontal Category 6 Cabling.
 - 2. Horizontal Category 6A (Augmented) Cabling.
 - 3. Category 6A 8-Position Jacks.
 - 4. Category 6A Field Mount Plugs
 - 5. Work Area 4-Port Plastic Faceplates
 - 6. Work Area 4-Port Stainless Steel Faceplates
 - 7. Velcro Cable Straps
 - 8. OSP CAT 6 Cable (For Parking Lot Pole Mounted Cameras)
- B. Bill of Materials: Submit a detailed bill-of-materials listing all manufacturers, part numbers, and quantities proposed for use on this project.

1.6 DELIVERY, STORAGE & HANDLING

- A. Visually inspect all cables, cable reels, and shipping cartons to detect possible cable damage incurred during shipping and transport. Visibly damaged goods are to be returned to the supplier and replaced at no additional cost to the Owner.

1.7 GUARANTEE

- A. The Category 6 and 6A horizontal cabling system including work area jacks, horizontal cabling, patch panels and patch cords shall be covered by a minimum 25-year system warranty from Belden/CDT (see section 270500 1.10 for warranty requirements).

PART 2 – PRODUCTS

2.1 HORIZONTAL CATEGORY 6 CABLE

- A. Horizontal cabling shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Horizontal cabling shall be 4-pair, Category 6 unshielded twisted pair.
- C. Physical Characteristics
1. Category 6 cable shall meet or exceed the requirements of ANSI/TIA/EIA-568-B.2 and ANSI/TIA/EIA-568-B.2 Addendum 1.
 2. Cable shall have a listed plenum rated jacket (CMP).
 3. The cable jacket must have the following legible markings
 - a. Manufacturer's name.
 - b. Copper conductor gauge.
 - c. Pair count.
 - d. UL and CSA listing.
 - e. Manufacturer's trademark.
 - f. Category rating.
 - g. Sequential foot markings, in one foot increments.
 - h. Jacket rating (CMP).
 4. Horizontal data cable shall have a GRAY jacket with black lettering.
- D. Transmission Characteristics
1. Cable shall conform to ANSI/TIA/EIA-568-B.2 Addendum 1 as shown below.

Frequency (MHz)	Solid Conductor or Cable Insertion Loss (dB)	NEXT Loss (dB)	PSNEX T Loss (dB)	ELFEXT Loss (dB)	Power Sum ELFEXT (dB)	Return Loss (dB)
1	2.0	74.3	72.3	67.8	64.8	20.0
4	3.8	65.3	63.3	55.8	52.8	23.0
8	5.3	60.8	58.8	49.7	46.7	24.5
10	6.0	59.3	57.3	47.8	44.8	25.0
16	7.6	56.2	54.2	43.7	40.7	25.0
20	8.5	54.8	52.8	41.8	38.8	25.0
25	9.5	53.3	51.3	39.8	36.8	24.3

31.25	10.7	51.9	49.9	37.9	34.9	23.6
62.5	15.4	47.4	45.4	31.9	28.9	21.5
100	19.8	44.3	42.3	27.8	24.8	20.1
200	29.0	39.8	37.8	21.8	18.8	18.0
250	32.8	38.3	36.3	19.8	16.8	17.3

2. Propagation delay skew shall not exceed 45 ns per 100 meters for all frequencies from 1 MHz to 250 MHz.

E. Acceptable Products:

1. Belden/CDT Gigaflex 2400 P/N 2413 08U1000 (jacket color gray).
2. No Substitutions.

2.2 CATEGORY 6A (AUGMENTED) HORIZONTAL CABLE

- A. CAT 6A Horizontal cabling shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.

- B. Horizontal data cabling for standard telecom outlets and wireless access points shall be 4-pair, Category 6A unshielded twisted pair.

C. Physical Characteristics

1. Category 6A cable shall meet or exceed the requirements of ANSI/TIA/EIA–568-B.2-10 -- for Augmented Category 6 Cable.
2. Cable shall have a listed plenum rated jacket (CMP).
3. Cables shall be constructed of 4-pair, 23 AWG solid copper conductors.
4. The cable jacket must have the following legible markings
 - a. Manufacturer's name.
 - b. Copper conductor gauge.
 - c. Pair count.
 - d. UL and CSA listing.
 - e. Manufacturer's trademark.
 - f. Category rating.
 - g. Sequential foot markings, in one foot increments.
 - h. Jacket rating (CMP).
5. Horizontal data cable shall have a YELLOW jacket with black lettering.

D. Transmission Characteristics

1. Cable shall conform to ANSI/TIA/EIA–568-B.2-10 as shown below.

Frequency (MHz)	NEXT (dB) (min.)	PSANEXT (dB) (min.)	RETURN LOSS (dB) (min.)
0.772	96.2	112.2	70.2

1	94.0	110.0	68.0
4	82.0	98.0	56.0
8	75.9	91.9	49.9
10	74.0	90.0	48.0
16	69.9	85.9	43.9
20	68.0	84.0	42.0
25	66.0	82.0	40.0
31.25	64.1	80.1	38.1
62.5	58.1	74.1	32.1
100	54.0	70.0	28.0
200	48.0	64.0	22.0
250	46.0	62.0	20.0
300	44.5	60.5	18.5
350	43.1	59.1	17.1
400	42.0	58.0	16.0
450	40.9	56.9	14.9
500	40.0	56.0	14.0
550	39.2	55.2	13.2
600	38.4	54.4	12.4
625	38.1	54.1	12.1

2. Propagation delay skew shall not exceed 35 ns per 100 meters for all frequencies from 1 MHz to 625 MHz.

E. Acceptable Products.

1. Belden 10GXS CAT 6A Cabling. Belden/CDT Part Number 10GXS13 0041000 (jacket color yellow).
2. No Substitutions.

2.3 CATEGORY 6A FIELD MOUNT PLUGS

- A. Field mount plugs shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Terminate CAT 6 cabling at all device locations for the following systems on CAT 6A field mount plugs and connect directly to the device.
 1. CCTV System.
 2. Audio Enhancement System.
 3. Paging System.
 4. Access Control System.
- C. Terminate CAT 6A cabling at all device locations for the following systems on CAT 6A field mount plugs and connect directly to the device.
 1. Wireless Access Points.
- D. Field mount plugs shall be 8-pin Category 6A and will conform to the requirements of ANSI/TIA/EIA-568-B.2-10.

- E. Pin/Pair assignment shall be in accordance with T568B.
- F. Acceptable Products:
 - 1. Belden/CDT RevConnect P/N RVAFPUBK-S1.
 - 2. No Substitutions.

2.4 CATEGORY 6A MODULAR JACKS

- A. CAT 6A modular jacks shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Modular jacks shall be 8-pin Category 6A and will conform to the requirements of ANSI/TIA/EIA–568-B.2-10.
- C. Pin/Pair assignment shall be in accordance with T568B.
- D. Modular jacks shall be manufactured by the same manufacturer as the patch panels in the telecommunication rooms.
- E. Modular data jacks shall be color YELLOW.
- F. Modular jacks shall be compatible with plastic faceplates and stainless steel faceplates.
- G. Modular jacks shall be “Keystone” style.
- H. Transmission characteristics for a mated-connection (jack and cord) shall conform to ANSI/TIA/EIA–568-B.2-10 as shown below.

Frequency (MHz)	NEXT (dB) (min.)	PSANEXT (dB) (min.)	RETURN LOSS (dB) (min.)
0.772	96.2	112.2	70.2
1	94.0	110.0	68.0
4	82.0	98.0	56.0
8	75.9	91.9	49.9
10	74.0	90.0	48.0
16	69.9	85.9	43.9
20	68.0	84.0	42.0
25	66.0	82.0	40.0
31.25	64.1	80.1	38.1
62.5	58.1	74.1	32.1
100	54.0	70.0	28.0
200	48.0	64.0	22.0
250	46.0	62.0	20.0
300	44.5	60.5	18.5
350	43.1	59.1	17.1
400	42.0	58.0	16.0
450	40.9	56.9	14.9

500	40.0	56.0	14.0
550	39.2	55.2	13.2
600	38.4	54.4	12.4
625	38.1	54.1	12.1

- I. Acceptable Products:
 - 1. Belden/CDT 10GX RevConnect Jacks P/N RVAMJKUYL-S1.
 - 2. No Substitutions.

2.5 WORK AREA 4-PORT PLASTIC FACEPLATES

- A. Faceplates shall meet the specific manufacturer system warranty requirements listed in Specification Section 270500 1.10.
- B. Provide UL listed faceplates. Faceplates should be white (verify with Architect), flush mounted and manufactured of high impact thermoplastic.
- C. Faceplates shall have top and bottom label holders with plastic inserts.
- D. Provide faceplates with a minimum of 4 and a maximum of 6 modules. Provide blank inserts in unused openings.
- E. Faceplates shall accept "Keystone" style modular jacks.
- F. Faceplates shall be manufactured by the same manufacturer as the outlet jacks and shall be compatible with the submitted outlet jacks.
- G. Acceptable Products:
 - 1. Belden/CDT 4-Port Faceplate P/N AX102249 (color white) – verify color w/Architect.
 - 2. No Substitutions.

2.6 WORK AREA 4-PORT STAINLESS STEEL FACEPLATES

- A. Provide UL listed stainless steel faceplates at workstation outlets in the gym and where shown on the drawings.
- B. Provide 4-port faceplates. Provide blank inserts in unused openings.
- C. Faceplates shall accept "Keystone" style modular jacks.
- D. Faceplates shall be manufactured by the same manufacturer as the outlet jacks and shall be compatible with the submitted outlet jacks. Provide "keystone" jacks as necessary.
- E. Acceptable Products:
 - 1. Stainless SG Faceplate. Belden/CDT AX102009.
 - 2. No Substitutions.

2.7 VELCRO CABLE STRAPS

- A. Loosely bundle horizontal cabling with Velcro tie wraps.
- B. Velcro tie wraps shall ¾" in width and cut from a continuous roll.
- C. Install Velcro cable ties at 2'-0" intervals outside of the telecom rooms and 1'-0" intervals inside the telecom rooms.
- D. Do not exceed qty (24) cables per bundle.
- E. Acceptable Products
 - 1. Panduit TAK-TY HLSP (plenum).
 - 2. Leviton 43115-075.
 - 3. Or equal.

2.2 HORIZONTAL CATEGORY 6 CABLE - OUTSIDE PLANT

- A. Provide 4-pair CAT 6 OSP rated cabling.
- B. Cables shall be filled and flooded with a water-blocking compound. The cable shall consist of 4-pair 24 AWG insulated conductors. Cable shall be suitable for underground duct installation.
- C. Cable jacket marking: Must be legible and shall contain the following information:
 - 1. Manufacturer's name.
 - 2. Copper conductor gauge.
 - 3. Pair count.
 - 4. Manufacturer's trade mark.
 - 5. Sequential foot markings.
- D. Acceptable Products:
 - 1. Belden P/N OSP6u 01010000.
 - 2. No substitutions.

PART 3 – EXECUTION

3.1 HORIZONTAL CABLE ROUTING AND TERMINATION

- A. Ten feet of cable slack shall be stored at the telecom room and three feet of cable slack shall be provided in the ceiling space above the telecom outlet for every installed horizontal cable.
- B. All horizontal cables shall be installed in cable bundles. Cable bundles shall not exceed qty (24) cables per bundle and will be loosely bound with velcro straps. Cables in a bundle should be uncombed until entry into each rack's vertical cable management, where the cables are to be combed and dressed together until terminated on each patch panel.

- C. Category 6 and Category 6A cables shall be bundled separately.
- D. Cables shall be installed in continuous lengths from origin to destination (no splices) except for transition points or consolidation points specifically shown on the drawings.
- E. The cable's minimum bend radius and maximum pulling tension shall not be exceeded. Refer to manufacturers requirements and reference documents.
- F. All telecom cables shall be supported by approved telecom pathways having dedicated support systems directly attached to structure (i.e. conduit, j-hooks, cable tray, etc.). Cables shall not be attached to or supported by ceiling grid, ceiling grid support wires, lighting fixture support wires or the work of other mechanical, electrical, plumbing or sprinkler trades.
- G. All telecom cables shall be stored in accordance with the manufacturer's requirements.
- H. Any cable damaged or exceeding the manufacturer's recommended installation parameters during installation shall be replaced by the Contractor prior to final acceptance at no cost to the Owner.
- I. All telecom cables shall be labeled with self-adhesive labels. At the work area outlet, the cable label shall be applied to the cable behind the faceplate on a section of cable that can be accessed by removing the cover plate. At the Telecom Room, each cable shall be clearly labeled on the cable jacket behind the patch panel at a location that can be viewed without removing the bundle support ties. Cable labels located within the bundle or where obscured from view shall not be acceptable.
- J. Cables shall be installed in accordance with the recommendations made in the ANSI/TIA/EIA-568-B standard document, manufacturer's recommendations and installation guides, and best industry practices.
- K. Plastic "zip-ties" shall not be permitted within the Structured Cabling System. "Velcro" type (hook and loop) tie wraps shall be used for the purpose of bundling / managing horizontal and backbone cabling (must be plenum rated if installed within a plenum space).
- L. Horizontal UTP pair untwist at the termination shall not exceed 0.5".
- M. Jack pin/pair assignments shall be T568B for all installed horizontal cabling unless otherwise specified within the Project Documents.
 - 1. T568B Jack pin/pair assignments are as follows:

- N. For horizontal cabling, if a J-hook System is used to support cable bundles, all horizontal cables shall be supported at a maximum of 60" intervals. J-hooks must be secured to the permanent building structure. J-Hooks shall not be attached to ceiling tiles, ceiling grid, ceiling support wires or to the work of other mechanical, electrical, plumbing and sprinkler trades.
- O. The horizontal telecom pathway and pathway support system shall not permit significant lateral or vertical motion. Cable quantities shall not exceed J-Hook System manufacturer recommendations or qty (24) cables, whichever is fewer.
- P. Telecom cables may not rest on acoustic ceiling grids or panels, or be attached to any portion of the building except for dedicated telecom pathway including conduit, innerduct, ladder rack, cable tray and/or J-hooks.
- Q. The cable length between the work area outlet and the termination in the telecommunications closet shall not exceed 295 feet. Any horizontal cable runs longer than 295 feet should be brought to the immediate attention of the Owner's Representative prior to installation.
- R. When placing cable, the Contractor shall maintain the following minimum clearance from sources of electro-magnetic interference (EMI).
 - 1. 6" clear from power conductors.
 - 2. 12" clear from fluorescent lighting fixtures and ballasts.
 - 3. 36" clear from transformers and motors.

3.2 WORK AREA OUTLETS

- A. Work Area outlets and connectors shall be installed in accordance with manufacturer's recommendations and installation guides, and best industry practices.

- B. Cables shall be dressed and terminated in accordance with the recommendations made in the ANSI/TIA/EIA-568-B standard document, manufacturer's recommendations and best industry practices.
- C. Pair untwist at the termination shall not exceed 0.5".
- D. Bend radius of the cable in the termination area shall not be less than 4 times the outside diameter of the cable.

END OF SECTION 271500

SECTION 275113 – PAGING SYSTEM

PART 1 – GENERAL

1.1 SUMMARY OF WORK

- A. This section includes a fully operational IP platform for a facility-wide internal communications:
 - 1. The platform shall provide complete internal communications and employ state of the art IP Technology including the minimum functions listed.
 - a. Emergency announcements that will override any pre-programmed audio.
 - b. District-wide, Emergency, Group, All School and Zone live voice paging.
 - c. District-wide, Emergency, Group, All School and Zone paging for pre-recorded audio – tones, music and voice.
 - d. Web-based user interface.
 - 2. The system shall support a minimum of 1000 level priorities which shall be user-definable, allowing each end point to place a minimum of 5 different priority calls at the same time.
 - 3. Any authorized administrator shall be able to call from outside the facility directly via the School District supplied SIP enabled Telephone Network.
 - 4. Automated message strings shall be manually initiated from a single-button access on the console, on a SIP connected telephone, a panic button, from the web-based user interface or via interface with third party systems.
 - 5. Paging and two-way intercom features shall be accessible from any system console or SIP connected telephone for each campus.
 - 6. The platform shall synchronize its system time to the network timeserver or a web-based time server.
 - 7. Each single campus installation shall be locally survivable for intercom, paging, even when the district connection is unavailable.
 - 8. This specification establishes a minimum level of quality, features, and performance for individual components as well as the integrated system.
 - 9. Systems that do not comply with the feature-sets highlighted in this Specification will not be considered.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. 27 05 00: Common Work Results for Communications.

2. 27 05 28: Interior Communications Pathways.
3. 27 08 00: Commissioning of Communications
4. 27 11 00: Communications Equipment Room Fittings
5. 27 15 00: Communications Horizontal Cabling

- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 DEFINITION OF TERMS

- A. Installer(s): Shall refer to the person, persons, or company who or which actually contracts to perform the work specified herein.

1.4 SUBMITTALS

- A. Product data for each component.
- B. Shop Drawings: Prior to proceeding with the work: Provide detailed equipment assemblies and indicate dimensions, weights, required clearances, method of field assembly, components, location of each field connection, and a complete schedule of all equipment and materials with associated manufacturer's product data sheets which are to be used.
1. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Identify terminals to facilitate installation, operation, and maintenance. Include a single-line diagram showing cabling interconnection of components and levels throughout system and impedances.
 2. Drawings and lists indicating proposed nameplate nomenclature and arrangements for control panels and plug panels prior to fabrication reflecting equipment used.
 3. Each drawing shall have a descriptive title and all sub-parts of each drawing shall be labeled. All drawings shall have the name and locations of the project, Systems Contractor's name in the title block.
 4. Details and descriptions of any other aspect of the system, which must differ from the contract documents due to field conditions or equipment, furnished.
- C. FCC Approval: The system shall be approved for direct interconnection to the telephone utility under Part 68 of FCC rules and regulations. Systems, which are not FCC approved or utilize an intermediary device for connection, will not be considered. Provide the FCC registration number of the system being proposed as part of the submittal process.
- D. Product Certificates: Signed by manufacturers certifying that products furnished comply with specified requirements.
- E. Installer Certificates: Signed by manufacturers certifying that Installers comply with specified requirements.

- F. Manufacturer Certificates: Signed by manufacturers certifying that they comply with specified requirements.
- G. Field Test Reports: Indicate and interpret test results for compliance with performance requirements. Include record of final matching transformer-tap settings, and signal ground-resistance measurement certified by Installer.
- H. Maintenance Data: For equipment to be included in maintenance manuals specified in Division 1.
 - 1. Record of Owners equipment-programming option decisions.
 - 2. All instructions necessary for proper operation and manufacturer's instructions.
 - 3. "Proof of Performance" information.
 - 4. Manufacturer's maintenance information.
 - 5. Copies of non-proprietary computer programs and system set up disks documenting all programmable features of the installed system.
- I. Record Drawings: Prior to final acceptance, provide three (3) complete sets of drawings indicating all cable numbers and construction details in accordance with the actual system installation. Revise all shop drawings to represent actual installation conditions. These Record Drawings will be used during "Final Acceptance Testing".
- J. System Training: Submit the following information describing the training programs and system trainers as outlined in paragraph 1.6 of this specification and in accordance with Division 1 specifications.
 - 1. Include with the submittal a preliminary staff development training program in outline form for review and approval by the owner's representative.
 - 2. Include with the submittal a current copy of the trainer's certification from the manufacturer that certifies and identifies the trainer(s) who are eligible to provide training and support for the project.
 - 3. Include with the submittal a current copy of trainer's needs assessment form which will be reviewed with the owner's designated representative for the system's preliminary system programming and configuration.
 - 4. Include with the submittal copies of all documentation used to identify for the owner those participants attending and completing the training programs.
- K. A copy of the manufacturer's standard statement of warranty proving all equipment provided for the school communications network is covered with the required five-year warranty shall be included with the project submittal. This statement of warranty shall be provided on the manufacturer's stationary.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced Installer who is an authorized representative of equipment manufacturer for both installation and maintenance

of equipment required for this Section. Provide the following within thirty (30) days after notification to proceed:

1. Provide a list of installations that the Installer has specifically installed for verification by the Owner. Random installations from other vendors and/or Installers shall not be accepted. The Installer, not its employees, must meet these qualifications.
 2. The Installer shall be bondable.
 3. The Installer shall demonstrate to the satisfaction of the Owner or his representative that he has:
 - a. Adequate plant and equipment to pursue the work properly and expeditiously.
 - b. Adequate staff and technical experience to implement the work.
 - c. Suitable financial status to meet the obligations of the work.
 - d. Technically capable and factory trained service personnel at a local service facility to provide routine and emergency service for all products used in this project.
- B. Any Contractor, who intends to bid on this work and does not meet the requirements of the "Quality Assurance" paragraph(s), shall employ the services of an "Installer" who does meet the requirements and who shall provide the equipment, make all connections and continuously supervise the installation. A subcontractor so employed as the "Installer" must be acceptable to the Architect/Engineer. The "Installer" shall be identified within thirty (30) days of notification to proceed for acceptance by the Architect/Engineer.
- C. Because the life expectancy of this type of communications structure normally exceeds 10 years, the owner expects continuity from the service provider. If the installing/servicing company has not been an authorized provider of the manufacturers product for at least three (3) years, the following is required:
1. A list of (2) systems manufacturers of which they currently are authorized service providers where the relationship exceeds three (3) years.
 2. A letter from the manufacturer outlining the details of changes in service providers over the last three (3) years and what actions they will take to ensure continuity of service to the customer.
- D. Each major component of equipment shall have the manufacturers name, address and model number on a plate securely affixed in a conspicuous place. NEMA code ratings, UL Label, or other data that is die-stamped into the surface of the equipment shall be easily visible.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- F. Comply with NFPA 70

G. Comply with NEMA Standard SB-40 for Emergency Communications in K-12 schools.

H. Comply with UL 60950.

1.6 IN-SERVICE TRAINING

A. The contractor shall provide and implement a complete and comprehensive staff training program for all administrators, facility staff members, and teachers. This mandatory training program will provide school staff a complete understanding of how to utilize and properly operate all functions.

B. The training program shall be implemented by a staff member/trainer employed by the contractor. The trainer must be factory certified to provide training on their product.

C. All staff development training is to be coordinated through the owner's designated representative. As training sessions are completed, the trainer will provide the school's administrative staff and school district's staff a document listing all of the staff and faculty members who attended, received, and completed the training program.

1.7 WARRANTY

A. Provide a manufacturer's five-year warranty of the school communications network equipment against defects in material and workmanship. This warranty will cover all electronic system components. Additional warranties cover clocks, speakers, and call in switches. If any defects are found within the warranty period, the defective equipment shall be replaced at no cost (equipment only); a one year warranty shall be provided for labor.

B. A copy of the manufacturer's standard statement of warranty proving all equipment provided for the school communications network is covered with the required five-year warranty shall be included with the project submittal. This statement of warranty shall be provided on the manufacturer's stationary. The standard five-year warranty is an important element in establishing a standard in quality. Manufacturers who circumvent the five-year warranty by offering special "extended warranties" that are not part of their normal published warranty will not be accepted.

C. Contractor shall respond, excluding weekends and holidays, within 24 hours to any warranty service calls. If equipment cannot be repaired within 24 hours of service visit, the contractor shall provide "loaner" equipment to the facility at no charge.

D. Make available a service contract offering continuing factory authorized service of the system after the initial warranty period.

1.8 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide the following system:
 - 1. Telecenter manufactured by Rauland
 - a. Authorized Rauland Distributor contact:
 - (1) Jeff Bowers
Innovative Communications Systems, Inc.
775-825-2011
jbowers@innovativecomsys.com

PART 2 – PRODUCTS

2.1 SYSTEM REQUIREMENTS

- A. The platform shall utilize state of the art IP Technology for Call-in Notification, School Safety Paging and Evacuation tones, Atomic Time Synchronization, Class Change Tones utilizing multiple, programmable schedules for each zone, Two-way hands-free Internal Communications and Paging, and Program Distribution. The system shall be easy to learn and operate. All standard programming shall be web-based and user friendly to allow the system administrator the ability to easily program system features.
- B. Provide complete and satisfactorily operating district/school communications and district/school safety as described herein, using materials and equipment of types, sizes, ratings, and performances as indicated. Use materials and equipment that comply with referenced standards and manufacturers' standard design and construction, in accordance with published product information. Coordinate the features of all materials and equipment so they form an integrated system, with components and interconnections matched for optimum performance of specified functions.
- C. The platform shall be a single electronic system consisting of a minimum of 10 audio channels for each campus, (classroom) IP Speaker Modules and call switches, IP Zone Modules connecting corridor speakers, inside and outside horns, IP Administrative Consoles, SIP enabled PBX integration and district-wide integration for paging, emergency notifications, calendar scheduling and configuration.
- D. Each Classroom shall be provided with a Speaker Module interface and a minimum of 5 different call switches, each with their own annunciation path and priority.
- E. Call-ins may automatically annunciate (display of priority and location) to administrative consoles, SIP enabled phones, and outside phones.
- F. Call-ins shall be programmed to automatically change priority and annunciation route based on age of call-in and original priority.

- G. Call-ins may have priority (and annunciation route) changed by user action from a console or SIP enabled phone.
- H. Call-in annunciation route shall include playing pre-recorded audio over speakers, sending a pre-configured email, and activating relays.
- I. The platform shall lend itself to expansion by simple addition of hardware modules.
- J. The platform shall connect directly to an existing, standard protocol WAN/LAN network, without the need for a separate server at each school location. Configuration, including bell schedules, calendars, and emergency sequences can be remotely created, changed, stored and downloaded to the system by an authorized user from a web-based user interface.
- K. The platform shall provide the ability to initiate school safety paging announcements, evacuation tones and take cover tones from any telephone or connected web browser within the facility or outside the facility to any other location within the facility or district.
- L. The platform shall provide the ability to selectively communicate or monitor individual classrooms in emergency situations from any telephone within the facility or outside the facility to any other location within the facility; all communication within the classroom shall be hands-free and will not require any interaction by the classroom user.
- M. The platform shall provide classroom users the ability to confirm that they have safely secured their classrooms during an emergency with a single button press. The front office administrator will receive confirmation that the classroom is safely secured via an administrative console and web-based user interface. The front office administrator can view classrooms that are not safely secured via the administrative console. The front office administrator can view classrooms that are not safely secured via the web-based user interface. The front office administrator shall be able to initiate two-way communication, without a pre-announcement tone, to the classroom during an emergency via the administrative console. Web-based user interface will still identify that a school is in an emergency, even if all classrooms are safely secured. Individual classroom check-in and school emergency status shall be viewed from the web-based user interface, both on-site and remotely.
- N. IP Addressable and POE powered Speaker Modules for individual rooms shall be system programmable and may be assigned any two, three, four, five or six digit number as well as name and description. Any extension may be reassigned at any time.
- O. IP-enabled two-way voice communication shall be available from any provided telephone or administrative console through any speaker in a campus. This shall allow hands-free communication to any classroom or any individual loudspeaker unit. A programmable pre-announce tone shall sound immediately before the intercom path is opened and a supervisory tone shall continue to sound at

regular intervals when speaker monitoring is active, complying fully with all privacy legislation. Pre announce tone and supervisory tones shall be disabled during designated emergencies automatically.

- P. The platform shall allow users to configure multiple schedules per school, with a minimum of 500 unique events per schedule, and automatic Daylight Savings time correction. Schedules can be programmed to occur once, daily, weekly, monthly, or in any combination of the preceding recurrences. Each school may have a minimum of 20 unique bell schedules, with a minimum of 5 active schedules on any given day for each campus. User shall be able to select from 25 standard included tones as well additional user created and uploaded audio files for class change signaling and messaging. In addition, scheduled events shall include relay actions, email notifications, and paging exclusions as system configuration changes. The platform shall allow control of the bell schedules via the district WAN/LAN without the need for a separate server at each school location. Bell schedules can be remotely created, changed, stored and assigned to calendar days for the local school by an authorized user from a web-based user interface.
- Q. The platform shall be able to integrate with an existing PA system or operate as a fully independent IP solution. The platform shall be able to function in combination of said configurations, and allow for seamless communication within a school or district-wide, regardless of the type of configuration used. The platform shall be scalable, with the ability to easily add, install, and configure additional equipment to a system.
- R. The platform allows for customization of preprogrammed sequences, used for emergencies, events, and everyday communications. Preprogrammed sequences can be activated from the push of a relay button, soft key of an administrative console, a dial string of a SIP phone, or a web browser configured to the district network. Sequences can be initiated automatically as part of a schedule or on the fly. Preprogrammed sequences can be customized to utilize any combination of audio tones, emails, relays, tone exclusions, swings, delays, duples, SIP phone notifications, and program distribution. Audio tones can include customized audio files and voice messages, recorded in any language. Uploaded audio tones and messages can be preprogrammed to announce repeatedly or individually, as part of a scheduled sequence or on the fly. Each school in a district can have its own customized sequences, and can be activated individually, in groups, or district-wide.

2.2 EQUIPMENT AND MATERIAL

- A. Server Software
 - 1. Provides district-wide paging, bell event scheduling, emergency notification and configuration for entire district.
 - 2. Ability to configure system and initiate system features, per school and district-wide via web-based user interface.
 - 3. The software has the ability to sync system time to the Atomic Clock Signal or to the school's or district's network time server.

4. The software will provide a web browser to deliver district-wide emergency paging, pre-recorded messages and tones from any authorized computer in the facility or the district. The software must be capable of automatically notifying district personnel via the WAN/LAN of an alarm condition.
5. The software can automatically broadcast emergency instructions via associated system hardware throughout an entire district when an alarm (e.g. lockdown, lockout, security, fire) is initiated via the web-based user interface. The emergency instructions are preprogrammed and require no user intervention. Bell tones are able to be halted during an emergency. The system provides redundant alarm annunciation over intercom/paging speakers and is not meant to replace primary fire alarm or security systems.
6. The software allows for user-uploaded pre-recorded messages and tones. Software supports the upload of MP3 and WAV file types. User-uploaded pre-recorded messages and tones can be part of emergencies, sequences, and bell schedules.
7. The software can be installed in cloud, virtual or physical server environments.
8. The web-based user interface supports secure HTTP browsing.
9. The software supports encryption to ensure secure access.
10. The system shall monitor itself if devices go offline and system actions are not received. Specified users shall receive email notifications when devices go offline. The software shall be able to keep a log and report on system activity within a school or all schools district-wide for a minimum of one year. These reports can be exported to excel spreadsheets.
11. The software will support a minimum of 20 bell schedules per school, with 5 schedules assignable to a specific school day. Bell schedules can be programmed to annunciate tones, activate relays, send emails, activate program distribution, and notify SIP phones.
12. The system allows programmable end points to be automatically included or excluded for live paging, bell tones, or prerecorded audio, depending on the time or day or day of the week. These inclusions/exclusions can be applied manually or automatically depending on their schedule.
13. The software can automatically send an email, as part of a programmed sequence of events, to district administrators alerting them of an emergency within the district.
14. The software provides the ability to view schools that are in an emergency status, using any web browser on the district's network. The software shall identify the name of the school in an emergency as well the type of emergency that school is in.
15. The software provides the ability to view individual classrooms that are not checked-in during an emergency, using any web browser on the district's network. The software shall identify the name, extension, and description of the classroom that is not checked-in during the emergency.
16. The system has a minimum of 5 customizable emergencies, one of them being an All-Clear – with the ability to return the system from an emergency to normal status. Each emergency shall have a minimum of 500 unique events.

17. As a district-wide communications solution, the system shall be able to provide simultaneous communications to all schools or groups of schools within a district. The system shall allow a user to initiate district-wide communications to individual schools, all schools or groups of schools, from a web-based user interface. The system shall allow a user to initiate prerecorded audio, live paging, or programmed sequences to individual schools, all schools or groups of schools, from the web-based user interface. Programmed sequences shall be customizable per school, and the system shall be able to activate them simultaneously to individual schools, all schools or groups of schools, from the web-based user interface.
18. The communications software must allow upgrade from an individual school system to multiple schools, or an entire school district, using the same web-based user interface. The communications software from an individual school system must be identical in typical user operation to the multiple schools or entire school district communications system software.

B. Campus Controller

1. Provides call routing for paging and intercom for a single facility.
2. System shall connect to the district provided Telephone Network via a SIP connection.
3. Support a flexible numbering plan allowing two, three, four, five, or six digit extensions.
4. SIP interface to a district provided Telephone Network shall be capable of allowing connected phones to display classroom call-ins, answer internal intercom call-ins, make pages and change priorities of call-ins in progress.
5. Direct dialing, two-way amplified voice intercom between any provided telephone or admin console and speaker without the use of a press-to-talk or talk-listen switch.
6. Ability to upgrade priority level from individual call switch.
7. The ability to answer intercom call-ins registered at administrative consoles and pre-selected telephones.
8. The ability to automatically escalate incoming call-ins to an alternate telephone or group of telephones if they remain unanswered for a predetermined amount of time.
9. The ability to manually upgrade an intercom call-in to an alternate telephone or group of telephones.
10. The ability for classrooms to “check-in” via push button when they have successfully secured their location during emergency.
11. Administrative console shall display locations that have not checked in to confirm their secured location and provide hands-free audio monitoring and communication to unsecured locations.
12. The controller shall not need direct connection to any classroom via home run or distributed wiring. It shall communicate solely through the IP network.
13. Single button access from any console on the system to distribute emergency announcements within the facility to all or select locations equipped with speakers. Emergency announcements originating from any

assigned administrative console shall have priority over all regular system functions.

14. Ability for administrative consoles and connected phones to selectively monitor audio at any two way speaker during an emergency.
15. Stores a minimum of 48 hours' worth of Bell Event Schedules, all emergency notification sequences as well as facility wide configuration.
16. System has the ability to sync system time to the Atomic Clock Signal or to the school's or districts network time server.
17. System's SIP Interface shall provide:
 - a. Audio paging access from any telephone to any single intercom speaker, zone (group) of intercom/paging speakers, or all speakers/paging horns throughout the entire facility.
 - b. Ability to answer a call-in directed to that SIP extension.
 - c. Ability to upgrade a call-in directed to that SIP extension.
 - d. Single button access from any telephone on the system to initiate alarm signals within the facility to all or select locations equipped with speakers. A minimum of 25 separate distinct alarm signals shall be provided. Alarm signals originating from any assigned administrative telephone shall have priority over all regular system functions.
 - e. Ability to initiate a school-wide emergency including lockdown and evacuate sequences.
 - f. SIP device shall display call-in information from call in switch. Information will include a minimum of Classroom Name, Number, and Priority Level.
18. The system will have the ability to utilize a web browser and a USB microphone connected to the PC to deliver district-wide live emergency paging, pre-recorded messages and tones from any authorized computer in the facility or the district. The system must be capable of automatically notifying district personnel via the WAN of an alarm condition.
19. The system can automatically broadcast emergency instructions throughout an entire campus when an alarm (e.g. lockdown, lockout, security, fire) is tripped or manually activated. The emergency instructions are preprogrammed and require no user intervention. Bell tones are able to be halted during an emergency. The system provides redundant alarm annunciation over intercom/paging speakers and is not meant to replace primary fire alarm or security systems.

C. IP Addressable Modules:

1. System shall provide multiple IP Addressable Modules for intercom, paging and relay activation.
 - a. All Modules are POE 802.3af compliant
 - b. All Modules support DHCP.
 - c. All Modules connect to network with a single RJ45 connector
2. IP Addressable Speaker Module

- a. Shall interface to school's data network, a classroom speaker, and multiple call switches.
 - b. A minimum of 5 levels of call-in can be placed from an IP Speaker Module. The call-ins are routed to administrative consoles and select SIP connected telephones and can only be cleared from the system once answered. If a call-in is not answered within a preprogrammed time the call-in may reroute to other telephones, consoles, and speakers.
 - c. An option for Privacy call in switches is supported. When the Privacy switch is activated it prevents administrative or classroom telephones from monitoring the specific classroom/location intercom speaker.
 - d. The ability to belong to one or more of a minimum of 100 independent zones for zone paging, program/music distribution zones and class change tone zones; this assignment is a programmable function, changeable by time of day. Each IP Speaker Module's location shall be programmed in software to belong to any combination of software zones. IP Speaker Modules shall be designed to mount near ceiling and wall speakers and in the plenum space.
 - e. Intercom and paging volume adjustable from Software interface.
- 3. IP Addressable Zone Paging Module
 - a. Zone Paging Module shall connect multiple speakers for district all page, all page, zone paging, bells, audio events and, emergency notification.
 - b. Zone Paging Modules shall be rack and wall mountable.
 - c. Zone Paging Modules shall be able to belong to one or more of 100 independent zones for live paging, bells, pre-recorded audio and emergency notification.
- 4. IP Addressable Aux I/O Module
 - a. Aux I/O Module shall have two input contacts and two output contacts.
 - b. Input and output contacts are individually addressable.
 - c. Aux I/O Module shall be wall and rack mountable.
 - d. User can program relays to be activated manually, through an event/bell schedule, or during emergency notification.
 - e. Aux I/O Module can perform school lockdown from a single press of a panic button.
- 5. IP Addressable Program Line Input Module
 - a. Program Line Input Module shall provide line level audio program distribution into system.
 - b. Program Line Input Module shall have a 3.5mm cable jack.

- c. Program Line Input Module shall be configured via web-based user interface.
- d. User can configure program distribution to be activated manually or automatically through an event/bell schedule.
- e. Program Line Input Module will have a system priority level such that emergency communications override program distribution.

D. IP Addressable Analog Gateway

- 1. IP Addressable Gateway provides integration with existing analog wiring infrastructure – consisting of shielded two-pair classroom field wiring. The Gateway provides the ability to reuse speaker wiring, speakers, and punch blocks to integrate analog infrastructure with IP platform.
- 2. Each Gateway will have 5 watts of power per port and 25 watts total per device.
- 3. Supports 24 classrooms that utilize 25 Volt speakers and all current Telecenter call switches for front office notification.
- 4. Supports minimum of 5 call switch priorities per classroom, capable of lockdown check-in functionality, while reusing existing shielded two-pair classroom field wiring.
- 5. Classroom intercom volume adjustable from Software interface.
- 6. Classroom paging volume adjustable from Software interface.
- 7. Configured to the school network and can be used in conjunction with IP Addressable Modules.

E. IP Addressable Administrative Console

- 1. A full color screen with 64 soft keys, 3 line select, volume control, push to talk, speakerphone mode and left/right and up/down scrolling.
- 2. Audio paging access from any Console to any single intercom speaker, zone (group) of intercom/paging speakers, or all speakers/paging horns throughout the entire school.
- 3. Programmable soft key access from any console on the system to initiate alarm signals within the school to all or select locations equipped with speakers. A minimum of 25 separate distinct alarm signals shall be provided. Alarm signals originating from any assigned administrative console shall have priority over all regular system functions.
- 4. Programmable soft key access from any console to automatically broadcast page emergency instructions throughout an entire school when an alarm (e.g. lockdown, lockout, security, fire) is tripped or manually activated. The emergency instructions are preprogrammed and require no user intervention. The system provides redundant alarm annunciation over intercom/paging speakers and is not meant to replace primary fire alarm or security systems.
- 5. Ability to perform intercom to any single IP Addressable Speaker Module.
- 6. Ability to display 3 call-ins at a time on the screen while other call-ins are annunciating and the ability to scroll to view all call-ins.
- 7. Ability to upgrade a call-in via soft key.
- 8. Programmable soft key access from any console for activating relays, campus wide.

9. Ability to maintain, along with controller and other IP Modules system functions, including intercom, bells and paging for the local campus in the event of district-wide connection loss.
 10. Classrooms that have not 'checked-in' during an emergency are listed on the Administrative Console's screen.
 11. The time duration of an emergency is shown on the screen of the administrative console. The check-in timer is shown on the screen of the administrative console.
- F. Audio Paging/Program Amplifiers
1. Power amplifier(s) shall be provided to provide a minimum of 2 watts of power to all paging speakers, and 15 watts of power to all paging horns.
 2. The maximum load on the paging/program amplifiers shall be 80% of the rated maximum output of the amplifiers.
- G. Visual Status Indicator Lights
1. Visual status indicator lights shall be provided at locations shown on the drawings. Lights shall have multi-color status lights and shall be programmed to display colors associated with an initiated "code" event.
- H. Equipment Racks
1. Where shown on the drawings, equipment shall be rack mounted in 4-post telecom racks (see telecom drawings).
 2. Provide dedicated paging system equipment racks where shown on the drawings.
- I. Wireless Clock System
1. Provide complete and satisfactorily operating NTP Synchronized Wireless Clock System with analog and/or digital secondary clocks as described herein, using materials and equipment of types, sizes, ratings, and performances as indicated.
 2. (NTP) Network Time Protocol is a network standard protocol that assures accurate synchronization to the millisecond of computer clock times in a network of computers. Based on UTC, NTP synchronizes client workstation clocks to the U.S. Naval Observatory Master Clocks in Washington, DC and Colorado Springs, CO. Running as a continuous background client program on a computer, NTP sends periodic time requests to servers, obtaining server time stamps and using them to adjust computer clocks.
 3. The system shall be easy to learn and operate. All standard system programming shall be user friendly to allow the system administrator the ability to easily program system features.
 4. Use materials and equipment that comply with referenced standards and manufacturers' standard design and construction, in accordance with published product information.

5. Coordinate the features of all materials and equipment so they form an integrated system, with components and interconnections matched for optimum performance of specified functions.
6. The NTP Synchronized Wireless System consists of a master transmitter located on the inside of the building, and a NTP receiver connected to a time server. Wireless analog and digital clocks are synchronized to the NTP time. System shall synchronize all clocks to each other. System shall utilize NTP technology to provide atomic time to components.
7. System shall not require hard wiring for its components except for AC Power. Analog Clocks may be battery operated for full portability if required.
8. Analog Clocks shall synchronize to +/- 1 second of the transmitter displayed time.
9. Clocks shall automatically adjust for Daylight Saving per settings on the transmitter
10. The system shall have an internal clock that is continually updated by the NTP receiver. If a NTP failure were to occur, the clocks would continue to be synchronized to the internal clock and would not deviate from each other. Once NTP time is restored, all clocks would once again be synchronized to the NTP time.
11. The system must have a failsafe design so that if a power interruption were to occur, the clocks will continue to operate. If a sync signal is not received by the analog clocks for 48 hours, the second hand will double pulse to indicate this condition. Upon restoration of power, the transmitter will once again communicate with the clocks and normal operation will resume.
12. Battery Powered Analog Clocks shall require 2 "D" cell batteries.
13. System shall be 100% programmable from the front operational panel with lights that indicate power status and NTP reception. Panel programming will also include Time Zone, Frequency, 12 or 24 hour operation and DST on/off.
14. The wireless backbone must support expansion of the system to include wireless alphanumeric displays for emergency crisis communications for district-wide communications.
15. The system may be modified to use GPS instead of NTP as the time source without the need to replace the transmitter. A GPS receiver would need to be added with access to the outside of the building.
16. The system shall lend itself to expansion by simple addition of wireless secondary clocks and their required power source.

J. Interior Ceiling Speakers

1. Provide Ceiling Speaker Assembly consisting of 8 Ohm, 8" speaker mounted in a 2 foot by 2 foot, or 2 foot by 1 foot, lay-in baffle, with an integrated back box that covers the full area of the baffle.
2. The speaker shall be connected by inserting an 8-pin RJ45 terminated CAT 5e or Cat 6 cable.
3. The speaker shall include provisions to allow attachment of a safety cable if required.

K. Wall Mounted Horns

1. Provide double re-entrant type horn loudspeakers with integral driver. The horn loudspeaker shall be impervious to weather and vandalism. Horn shall be constructed of heavy-duty ABS plastic. Horn loudspeaker drivers shall be rated at 15 watts with a frequency response of 480 Hz to 14 KHz. Sensitivity shall be 106 dB 1 watt, 1 meter. Transformer assembly shall be dual voltage multi-tap type suitable for 25 or 70-volt installations. Dispersion pattern shall be 180 degrees conical. The horn loudspeaker shall be constructed of treated heavy gauge aluminum, with all exposed parts potted and a sealed driver. Wiring terminal shall be fully enclosed. The speaker flange and mounting surface shall have a cork-rubber gasket. The horn loudspeakers finish shall be gray baked on enamel.
2. The recessed back box shall be of heavy gauge cold-rolled steel, spot welded for stability with a rust-retardant gray primer finish. Acoustically treat the interior to eliminate mechanical resonance. The back box shall be 10-3/4"x10-3/4"x6" deep.
3. The baffle shall be vandal proof, the faceplate constructed of 14-gauge carbon steel with a minimum tensile strength of 55,000 PSI. A lattice grid sub-plate shall deny access to the horn but be acoustically transparent for sound projection. Provide tamper proof, stainless steel mounting hardware. The baffle shall have a mar/scratch baked epoxy rust inhibitive finish.

L. Uninterruptible Power Supplies (UPS)

1. UPS equipment provided for this system will include Power Conditioning to smooth current and voltage fluctuations.
2. UPS equipment will be sized in accordance with the system manufacturer's recommendations.
3. Provide an individual UPS for EACH SYSTEM CONTROLLER (Gateway) furnished with the system.
4. Provide additional UPS(s) for protection of all other equipment furnished with the system and housed in the equipment racks.
5. All UPS equipment shall be rack mounted.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with the Installer present, for compliance with requirements and other conditions affecting the performance of the School Communications and School Safety Network.
- B. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install system in accordance with NFPA 70 and other applicable codes. Install equipment in accordance with manufacturer's written instructions.
- B. Furnish and install all material, devices, components and equipment for a complete operational system.
- C. Impedance and Level Matching: Carefully match input and output impedance's and signal levels at signal interfaces. Provide matching networks where required.
- D. Control Circuit Wiring: Install control circuits in accordance with NFPA 70 and as indicated. Provide number of conductors as recommended by system manufacturer to provide control functions indicated or specified.
- E. All housings are to be located as indicated.
- F. The contractor shall provide necessary transient protection on the AC power feed, all copper station lines leaving or entering the building, and all central office trunks. All protection shall be as recommended by the equipment supplier and referenced to earth ground.
- G. Wiring within Enclosures: Provide adequate length of conductors. Bundle, lace, and train the conductors to terminal points with no excess. Provide and use lacing bars.
- H. Provide physical isolation from speaker-microphone, telephone, line-level wiring, and power wiring. Run in separate raceways, or where exposed or in same enclosure, provide 12 inch minimum separation between conductors to speaker-microphones, telephone wiring and adjacent parallel power. Provide physical separation as recommended by equipment manufacturer for other system conductors.
- I. Identification of Conductors and Cables: Use color coding of conductors and apply wire and cable marking tape to designate wires and cables so all media are identified in coordination with system wiring diagrams.
- J. Weatherproofing: Provide weatherproof enclosures for items to be mounted outdoors or exposed to weather.

3.3 GROUNDING

- A. Provide equipment grounding connections for Integrated Electronic Communications Network systems as indicated. Tighten connections to comply with tightening torques specified in UL Standard 486A to assure permanent and effective grounds.
- B. Ground equipment, conductor, and cable shields to eliminate shock hazard and to minimize to the greatest extent possible, ground loops, common mode returns, noise pickup, cross talk, and other impairments. Provide 5-ohm ground at main equipment location. Measure, record, and report ground resistance.

- C. Provide all necessary transient protection on the AC power feed and on all copper station lines leaving or entering the building. Note in system drawings, the type and location of these protection devices as well as all wiring information.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Services: Provide services of a duly factory authorized service representative for this project location to supervise the field assembly and connection of components and the pre-testing, testing, and adjustment of the system.
- B. Inspection: Make observations to verify that units and controls are properly labeled and interconnecting wires and terminals are identified. Provide a list of final tap settings of paging speaker line matching transformers.
- C. Testing: Rectify deficiencies indicated by tests and completely re-test work affected by such deficiencies at Contractor's expense. Verify by the system test that the total system meets the Specifications and complies with applicable standards.

3.5 FINAL ACCEPTANCE TESTING

- A. The Final Acceptance Testing shall be provided to the Owner or the Owners designated representative only. Final acceptance testing to any other trade or service provider for the project will not comply with the requirements of this section.
- B. The contractor will provide a Final Acceptance Test record document signed by both the contractor and the Owner or designated Owner's Representative establishing the "In Warranty" date. The warranty period will not commence until the Final Acceptance Test is completed.
- C. Be prepared to verify the performance of any portion of the installation by demonstration, listening and viewing test, and instrumented measurements. Make additional adjustments within the scope of work and which are deemed necessary by the Owner because of the acceptance test.

3.6 COMMISSIONING

- A. The contractor shall train the Owner's maintenance personnel in the procedures and schedules involved in operating, troubleshooting, servicing, and preventative maintenance of the system. This training will be in accordance with the training as outlined in Section 1.6 of these specifications. In addition to the Training Materials provided, the contractor will also furnish Operators Manuals and Users Guides at the time of this training.
- B. Schedule training with Owner through the owners representative, with at least seven days advance notice.

3.7 OCCUPANCY ADJUSTMENTS

- A. The contractor shall provide Occupancy Adjustments in accordance with Section 1.6 of these specifications. A response scenario amenable to both the owner and the contractor will be established and followed for the first year of service.

3.8 CLEANING AND PROTECTION

- A. Prior to final acceptance, the contractor shall vacuum, wipe down and clean all system components and protect them from damage and deterioration. All blank spaces in equipment cabinets will be covered with blank panels. Top and side panels, and all cabinet doors will be installed. All general areas within and around all equipment rack/cabinets in the facility will be swept, vacuumed, and cleaned up. No cabinets will be left unlocked and all cabinet keys will be turned over to the owner or designated owner's representative.

END OF SECTION 275113

SECTION 280000 – COMMON WORK RESULTS FOR ELECTRONIC SAFETY & SECURITY

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Include all labor, materials, tools, transportation, storage costs, excavation, training, equipment, insurance, temporary protection, permits, inspections, taxes and all necessary and related items required to provide complete and operational electronic safety and security systems as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 26: Grounding and Bonding for Electronic Safety & Security.
 - 4. Section 28 05 28: Conduits and Backboxes for Electronic Safety and Security.
 - 5. Section 28 05 53: Identification for Electronic Safety & Security.
 - 6. Section 28 10 00: Access Control.
 - 7. Section 28 20 00: Video Surveillance.
 - 8. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 QUALITY ASSURANCE

- A. The Contractor installing the Electronic Safety and Security systems shall have a minimum of (5) years experience installing commercial security systems of similar size and scope.
- B. See individual Division 28 specifications for additional requirements.

1.4 REGULATIONS AND CODE COMPLIANCE

- A. The Contractor will comply with all applicable governmental regulations including Federal, State, City, and Local applicable codes and ordinances.

- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- C. All work and materials shall conform to and be installed, inspected and tested in accordance with the governing rules and regulations as well as federal, state and local governmental agencies, including, but not limited to the following:
 - 1. NFPA-70, 2011 -- National Electrical Code (NEC).
 - 2. Underwriters Laboratories (UL):
 - a. UL 50 - Enclosures for Electrical Equipment.
 - b. UL 294 – Access Control Systems
 - c. UL 365 – Police Station Connected Burglar Alarm Units and Systems
 - d. UL 609 – Local Burglar Alarm Units and Systems
 - e. UL 611 – Central Station Burglar-Alarm Units
 - f. UL 636 – Hold up alarms
 - g. UL 1076 – Proprietary Burglar Alarm Units and Systems
 - h. UL 1610 – Central Station Burglar-Alarm Units
 - i. UL 60950-1 - Information Technology Equipment - Safety.
 - 3. Federal Communications Commission (FCC):
 - j. Code of Federal Regulations Title 47 - Part 15 – Radio Frequency Devices.
 - k. Code of Federal Regulations Title 47 - Part 68 – Connection of Terminal Equipment to the Telephone Network.
 - 4. Americans with Disabilities Act (ADA).

1.5 DEFINITIONS

- | | | |
|----|--------------------------|--|
| A. | Accessible Ceiling tiles | Space above a ceiling constructed of removable (clipped or unclipped). Acoustical ceiling grid with removal tiles would be considered an accessible ceiling. A gypboard ceiling would not be considered an accessible ceiling. |
| B. | Approved/Approval | Written permission to use a material or system. |
| D. | As Called For | Materials, equipment including the execution specified/shown in the Specifications. |
| D. | Code Requirements | Minimum requirements. |

E.	Concealed	Work installed in pipe and duct shafts, chases or recesses, inside walls, above ceilings, in slabs or below grade.
F.	Exposed	Work not identified as concealed.
G.	Final Acceptance	Owner acceptance of the project from the Contractor upon certification by the Owner's Representative.
H	Furnish	Supply and deliver to installation location.
I.	Furnished by Others	Receive delivery at job site or where called for and install.
J.	Inspection	Visual observations by Owner or Owner's Representative.
K.	Install	Mount and connect equipment and associated materials ready for use.
L.	Listed	Refers to classification by a standards agency.
M.	Or Approved Equal	Approved equal or equivalent as determined by Owner or Owner's Representative.
N.	Owner's Representative	Design professional or Consultant representing the Owner.
O.	Provide	Furnish, install and connect ready for use.
P.	Relocate	Disassemble, disconnect, and transport equipment to new locations: then clean, test, and install ready for use.
Q.	Replace	Remove and provide new item.
R.	Review	A general contractual conformance check of specified products.
S.	Satisfactory	As specified in Specifications.

1.6 INTENT OF DRAWINGS

- A. All drawings are diagrammatic unless otherwise noted as detailed dimensioned drawings. Drawings show approximate locations of equipment and devices. Exact locations are subject to the approval of the Owner or Owner's Representative. The Contractor shall verify dimensions and shall be responsible for their accuracy

- B. Items mentioned in the Specifications and not shown in the Drawings, or shown in the Drawings and not mentioned in the Specifications, shall be of like effect as if shown and mentioned in both. In the case of differences between the Drawings and the Specifications, the stricter provision as determined by the Owner or Owner's Representative shall govern.
- C. Omissions from the Drawings or Specifications, or the incorrect description of details of Work which are necessary to carry out the intent of the Drawings and Specifications, or work which is customarily performed, shall not relieve the Contractor from performing such omitted or incorrectly described work.
- D. No exclusion from, or limitations in, the language used in the Project Documents shall be interpreted as meaning that ancillary or accessory items necessary to complete any required system or item of equipment are to be omitted.

1.7 REVIEW OF SPECIFICATIONS

- A. The Contractor shall carefully study and compare the Drawings and Specifications. Any error, inconsistency or omission discovered shall be immediately reported to the Owner or Owner's Representative. If the Contractor performs any construction activity knowing it involves a recognized error, inconsistency or omission without such notice to the Owner or Owner's Representative, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the cost for any correction.

1.8 EXAMINATION OF THE PREMISES

- A. The Contractor shall visit the Site to become familiar with the local conditions under which the work is to be performed and correlate the observations with the requirements of the Drawings and Specifications. No allowance will be made for claims of concealed conditions which the Contractor learned or should have learned in exercising due diligence in its observations of the site and review of the local conditions.
- B. Before ordering any materials or performing any work, the Contractor shall coordinate the installation with the work of other trades and shall verify all measurements. No extra charge or compensation will be allowed for duplicate work or material required because of an unverified difference between an actual dimension and the measurement indicated in the Drawings. Any discrepancies found shall be submitted in writing to the Owner or Owner's Representative for consideration before proceeding with the work.

1.9 COORDINATION OF CABLING PATHWAYS AND EQUIPMENT ROOMS

- A. Drawings are diagrammatic in depicting the routing of security cabling pathways and the layout of security equipment.
- B. The contractor shall coordinate the installation of all work with other trades including Mechanical, Electrical, Plumbing, Sprinkler, Structural and Architectural.

- C. The contractor shall participate in coordination meetings with other trades prior to the installation of the work. For a specific space/area, the security contractor shall coordinate the routing and installation of all work with all other trades that have work in that specific space/area.
- D. Prior to the installation of security cabling pathway including conduit, sleeves, etc., the contractor shall coordinate the routing of this pathway to avoid conflicts with and provide necessary clearances from the work of other trades. The contractor shall provide all horizontal offsets, vertical offsets and radius bends as necessary to coordinate the routing of the security pathways with the work of other trades and building structure.
- E. Prior to the installation of equipment and/or cabling in the communication rooms, the contractor shall coordinate the layout of all equipment and cable pathways with the Telecom Contractor.

1.10 WARRANTY AND SERVICES

- A. See individual Division 28 Specifications for warranty requirements.

PART 2 – PRODUCTS

2.1 EQUIPMENT AND MATERIALS MINIMUM REQUIREMENTS

- A. Electrical equipment and systems shall meet UL Standards and requirements of the National Electric Code. This listing requirement applies to the entire assembly. Any modifications to equipment to suit the intent of the Specifications shall be performed in accordance with these requirements.
- B. Equipment shall meet all applicable FCC Regulations.
- C. All materials, unless otherwise specified, shall be new and be the standard products of the manufacturer. Used equipment or damaged material will be rejected.
- D. The listing of a manufacturer as “acceptable” does not indicate acceptance of a standard or cataloged item of equipment. All equipment and systems must conform to the Specifications.

2.2 WORKMANSHIP, SUBSTITUTIONS, WARRANTY

- A. Materials and workmanship shall meet or exceed industry standards and be fully guaranteed for a minimum of one (1) year from the date of final acceptance. Cable integrity and associated terminations shall be thoroughly inspected, fully tested and guaranteed free from defects, transpositions, open shorts, tight kinks, damaged jacket insulation, etc.

- B. All labor must be thoroughly competent, skilled and trained, and all work shall be executed in strict accordance with the best practice of the trades.
- C. The Contractor shall be responsible for and make good, without expense to the Owner, any and all defects arising during this warranty period that are due to imperfect materials, improper installation or poor workmanship.
- D. After the Contract is awarded, requests to substitute for specified materials shall be submitted by the Contractor to the Owner or Owner's Representative within thirty (30) days, complete with reasons for the substitution and savings which accrue to the Owner if the substitutions are approved. Substitutions after Contract award will be considered only if the substitutions are equal or superior to the products specified.
- E. No material substitutions will be allowed except by written acceptance from the Consultant. Specified catalog numbers are used for description of equipment and standard of quality only. Equivalent material will be given consideration only if adequate comparison data including samples are provided.
- F. Approval of alternate or substitute equipment or material in no way voids the Specification requirements.
- G. Under no circumstances shall the Owner be required to prove that an item proposed for substitution is not equal to the specified item. It shall be mandatory that the Contractor submit to the Owner or Owner's Representative all evidence to support the contention that the item proposed for substitution is equal to the specified item. The Owner's decision as to the equality of substitution shall be final and without further recourse.

2.3 FACTORY ASSEMBLED PRODUCTS

- A. Manufacturers of equipment assemblies that include components made by others shall assume complete responsibility for the final assembled unit.
 - 1. All components of an assembled unit need not be products of the same manufacturer.
 - 2. Component parts, which are alike, shall be from a single manufacturer.
 - 3. Components shall be compatible with each other and with the total assembly for the intended service.
 - 4. Components of equipment shall bear the manufacturer's name or trademark model number and serial number on a name plate securely affixed in a conspicuous place, or cast integral with, stamped or otherwise permanently marked upon the components of the equipment.
- B. Major items of equipment that serve the same function must be the same make and model.
- C. Equipment and materials installed shall be compatible in all respects with other items being furnished and with existing items so that a complete and fully

operational system will result.

- D. Maximum standardization of components shall be provided to reduce spare part requirements.

PART 3 – EXECUTION

3.1 ROUGH-IN

- A. Before construction work commences, the Contractor shall visit the site and identify the exact routing of horizontal and backbone cable pathways.
- B. All equipment locations and cabling pathway shall be coordinated with other trades and existing conditions to eliminate interference with required clearances for equipment maintenance and inspections.
- C. Coordinate work with other trades and existing conditions to determine exact location of equipment and routing of cable pathways.
 - 1. Where more than one trade is involved in an area, space or chase, all shall cooperate and install their own work to utilize the space equally between them in proportion to their individual requirements. If, after installation of any equipment, piping, ducts, conduit, etc., it is determined that adequate space has not been provided for passage or maintenance, rearrange the work. Any changes in the size or location of the material or equipment supplied or proposed, which may be necessary in order to meet field conditions or in order to avoid conflicts between trades, shall be brought to the immediate attention of the Owner's Representative and approval received before such alterations are made.
- D. Provide easy, safe and code mandated clearances at equipment racks and enclosures.

3.2 CUTTING, CORING AND PATCHING

- A. The Contractor shall be responsible for all cutting, patching, coring and associated work to complete the security cabling pathway system.
- B. Protect existing finishes from water damage during core/cutting work and cleanup all related water and debris. Patch adjacent work disturbed by installation of new work including insulation, walls and wall covering, ceiling and floor covering or other finished surfaces.
- C. Contractor to submit all proposed concrete wall or floor penetrations to the Structural Engineer for approval prior to performing the work. Contractor shall locate and avoid cutting concrete reinforcing steel using current x-ray or pachometer equipment.

3.3 FIRESTOPPING

- A. All penetrations through fire-rated building structures (walls and floors) shall be sealed with an appropriate fire stop system. This requirement applies to through penetrations (complete penetration) and membrane penetrations (through one side of a hollow fire rated structure). Any penetrating item i.e., riser slots and sleeves, cables, conduit, cable tray, and raceways, etc. shall be properly fire stopped.
- B. Firestopping assemblies shall meet or exceed the rating of the wall or floor being penetrated.
- C. Fire stopping References:
 - 1. ASTM E814, Standard Method of Fire Tests of Through-Penetration Fire Stops.
 - 2. ASTM E 119, Fire Tests of Building Construction and Materials (for fire-rated architectural barriers).
 - 3. 2002 NFPA National Electrical Code, Section 800-52, Paragraph 2(b), Spread of Fire and Products of Combustion.

3.4 CONCEALMENT

- A. Security cabling pathways including conduit, sleeves and tray shall be concealed above ceilings, in walls, below slabs, and elsewhere throughout building. If concealment is impossible or impractical, or in areas without ceilings, the Owner's Representative shall be notified of the proposed routing prior to starting that portion of the work.
- B. All CAT 6 security cabling must be routed concealed above accessible ceilings or in conduit. No exposed security cabling is permitted with the exception of CAT 6 security cabling routed within the telecom rooms.
- C. All intrusion detection system cabling must be routed in conduit from the field devices to the controllers located in the telecom rooms.

3.5 CONDUIT SEALING

- A. The Contractor shall seal all building penetrations to prevent the intrusion of moisture.

3.6 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate ordering and installation of all equipment with long lead times or having a major impact on work by other trades so as not to delay the job or impact the schedule.
- B. Where mounting heights are not dimensioned, install systems, materials and equipment to provide the maximum headroom possible.

- C. Set all equipment to accurate line and grade, level all equipment and align all equipment components.
- D. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery of equipment and apparatus furnished into the premises.
- E. No equipment shall be hidden or covered up prior to inspection by the Owner's Representative. All work that is determined to be unsatisfactory shall be corrected immediately.
- F. All work shall be installed level and plumb, parallel and perpendicular to other building systems and components.
- G. The Contractor shall replace all ceiling tiles damaged by work performed as part of the communications contract.
- H. Storage and security of material and equipment shall be the responsibility of the Contractor.

END OF SECTION 280000

SECTION 280500 - CONDUCTORS AND CABLES FOR ELECTRONIC SAFETY AND SECURITY

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs, testing, training and all necessary and related items required to provide a complete and operational Access Control, Video Surveillance and Intrusion Detection System Cabling System as shown on the Drawings and described in the Specifications.
- B. Provide all necessary wiring, cabling and termination equipment required for the entire Access Control, Video Surveillance and Intrusion Detection System.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 28: Conduits and Backboxes for Electronic Safety and Security.
 - 4. Section 28 05 53: Identification for Electronic Safety & Security.
 - 5. Section 28 10 00: Access Control.
 - 6. Section 28 20 00: Video Surveillance.
 - 7. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.
- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
 - 1. NFPA-70, 2011 -- National Electrical Code (NEC).
 - 2. FCC Regulations:

- a. Part 15 – Radio Frequency Devices & Radiation Limits
3. Underwriter's Laboratories (UL): Applicable listing and ratings.
 - a. UL 294: Access Control System Units
 - b. UL 1076: Proprietary Burglar Alarm Units and Systems
4. Electronic Industry Association (EIA) testing standards
5. American Society for Testing and Materials (ATSM)
6. National Electrical Manufacturers' Association (NEMA)

1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's product data sheets for the following items:
 1. Wire and Cable for each system identified in the Division 28 Specifications.

PART 2 - PRODUCTS

2.1 WIRE AND CABLE

- A. Install Category 6 cabling to access control door controllers and video surveillance cameras as shown on the Drawings. Category 6 cabling shall be installed, terminated and tested by the Telecom Contractor in accordance with the Division 27 Specifications.
- B. All other electronic safety and security cabling shall be routed in conduit. No exposed cabling is permitted. Conduit shall be sized so as not to exceed 40% fill rate. Outdoor exposed conduit shall be rigid or IMC. Concealed conduit routed in walls or above ceilings shall be EMT.
- C. Provide cable type, conductor size, conductor quantity and shielding as recommended by the manufacturer of the equipment.
- D. Do not share conduits with fire alarm or electrical systems.
- E. Provide required wire and cable sized to allow for voltage drop on long runs and effectively shielded as required to allow the routing of 12 & 24V power and signal cable in the same conduit without interference or signal noise.
- F. Cable installed outdoors or in underground conduit shall contain a PVC or Polyethylene jacket, flooded to prevent water intrusion.
- G. Acceptable Manufacturers:
 1. Belden.
 2. Commscope.
 3. Honeywell Genesis
 4. Tappan.
 5. Westpenn.
 6. Or approved equal.

PART 3 – EXECUTION

280500 - 2 CONDUCTORS AND CABLES FOR ELECTRONIC SAFETY AND SECURITY

3.1 INSTALLATION

- A. Identify and label all wire and cable clearly with permanent labels. Indicate the number designated on the associated field or shop drawings or run sheet, as applies. Assign wire or cable designations consistently throughout a given system; i.e., each wire or cable shall carry the same labeled designation over its entire run, regardless of intermediate terminations.
- B. Secure all wire and cable run vertically in conduit for continuous distances greater than thirty (30) feet at the vertical run terminations. Non-coaxial cables shall be secured by screw-flange nylon cable ties or similar approved devices, Thomas and Betts or equal. Symmetrical clamping devices with split, circular or other wire conforming, nonmetallic bushings shall be provided for all other cables.
- C. All wire and cable shall be continuous and splice-free for the entire length of run between designated connections or terminations.
- D. Make all connections to screw-type barrier strips on panels and with insulated crimp-type spade lugs when appropriate. Size all lugs properly to assure high electrical integrity, i.e., low resistance connections.
- E. Lace, tie or harness wire or cable as required herein, and in accordance with accepted professional practice. Dress, lace or harness all wire and cable to prevent mechanical stress on electrical connections; no wire or cable shall be supported by a connection point.
- F. Wiring for shielding certain conductors from others or routing in separate raceways, shall be as recommended by the manufacturer's current requirements.
- G. All wiring shall be installed in conduit and shall be of the size recommended by the equipment supplier.
- H. Provide all necessary tie wires.
- I. Follow manufacturers recommended guidelines for installation.

END OF SECTION 280500

SECTION 280526 - GROUNDING AND BONDING FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs, testing, and all necessary and related items required to provide a complete and operational grounding and bonding system for the Electronic Safety and Security System as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 10 00: Access Control.
 - 3. Section 28 20 00: Video Surveillance.
 - 4. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.
- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
 - 1. American Society for Testing and Materials (ASTM):
 - a. B1-07 Standard Specification for Hard-Drawn Copper Wire.
 - b. B3-07 Standard Specification for Soft or Annealed Copper Wire.
 - c. B8-04 Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
 - 2. Institute of Electrical and Electronics Engineers, Inc. (IEEE):

- a. 81-1983 IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Ground System.
 - b. C2-07 National Electrical Safety Code.
- 3. National Fire Protection Association (NFPA):
 - a. NFPA-70, 2011 -- National Electrical Code (NEC).
- 4. Underwriters Laboratories, Inc. (UL):
 - a. 44-05 Thermoset-Insulated Wires and Cables
 - b. 83-08 Thermoplastic-Insulated Wires and Cables
 - c. 467-07 Grounding and Bonding Equipment
 - d. 486A-486B-03 Wire Connectors

1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's product data sheets for the following items:
 - 1. Ground Bars.
 - 2. Ground Lugs.
 - 3. Specialty Equipment Grounding Connectors
 - 4. Grounding and Bonding Conductors.
- B. Shop Drawings: Submit shop drawings indicating the following:
 - 1. Include the location of ground bar. Show the location of equipment to be grounded to the ground bars and the size of the ground conductors. Show the routing and size of ground conductors from the ground bars to electrical panels, building steel, etc.
- C. Test Reports: Provide certified test reports of ground resistance.
- D. Certifications: Submit the following grounding certifications at the completion of the project:
 - 1. Certification that the materials and installation are in accordance with the drawings and specifications.
 - 2. Certification by the Contractor that the complete installation has been properly installed and tested.

PART 2 - PRODUCTS

2.1 GROUNDING AND BONDING CONDUCTORS

- A. Equipment grounding conductors shall be UL 83 insulated stranded copper, except that sizes 10 AWG and smaller shall be solid copper. Insulation color shall be continuous green for all equipment grounding conductors, except that wire sizes 4 AWG and larger shall be permitted to be identified per NEC.

- B. Bonding conductors shall be ASTM B8 bare stranded copper, except that sizes 10 AWG and smaller shall be ASTM B1 solid bare copper wire.

2.2 SPLICES AND TERMINATION COMPONENTS

- A. Components shall meet or exceed UL 467 and be clearly marked with the manufacturer, catalog number, and permitted conductor size(s).

2.3 GROUND CONNECTIONS

- A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.
- B. Below Grade: Exothermic-welded type connectors.
- C. Above Grade:
 1. Bonding Jumpers: Compression-type connectors, using zinc-plated fasteners and external tooth lockwashers.
 2. Connection to Building Steel: Exothermic-welded type connectors.
 3. Ground Busbars: Two-hole compression type lugs, using tin-plated copper or copper alloy bolts and nuts.
 4. Rack and Cabinet Ground Bars: One-hole compression-type lugs, using zinc-plated or copper alloy fasteners.
 5. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, pressure type with at least two bolts.
 6. Pipe Connectors: Clamp type, sized for pipe.
 7. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.4 GROUND TERMINAL BLOCKS

- A. At any equipment mounting location (e.g., backboards and hinged cover enclosures) where rack-type ground bars cannot be mounted, provide screw lug-type terminal blocks.

2.5 SPLICE CASE GROUND ACCESSORIES

- A. Splice case grounding and bonding accessories shall be supplied by the splice case manufacturer when available. Otherwise, use 6 AWG insulated ground wire with shield bonding connectors.

PART 3 – EXECUTION

3.1 GENERAL

- A. Ground in accordance with the NEC, as shown on drawings, and as specified herein.

B. System Grounding:

1. Secondary service neutrals: Ground at the supply side of the secondary disconnecting means and at the related transformers.
2. Separately derived systems (transformers downstream from the service entrance): Ground the secondary neutral.

3.2 INACCESSIBLE GROUNDING CONNECTIONS

- A. Make grounding connections, which are buried or otherwise normally inaccessible (except connections for which periodic testing access is required) by exothermic weld.

3.3 CORROSION INHIBITORS

- A. When making ground and ground bonding connections, apply a corrosion inhibitor to all contact surfaces. Use corrosion inhibitor appropriate for protecting a connection between the metals used.

3.4 CONDUCTIVE PIPING

- A. Bond all conductive piping systems, interior and exterior, to the building to the grounding electrode system. Bonding connections shall be made as close as practical to the equipment ground bus.

3.5 SECURITY EQUIPMENT ROOM GROUNDING

- A. Conduit: Ground and bond metallic conduit systems as follows:
1. Ground metallic service conduit and any pipes entering or being routed within the computer room at each end using 6AWG bonding jumpers.
 2. Bond at all intermediate metallic enclosures and across all joints using 6 AWG bonding jumpers.

3.6 WIREWAY GROUNDING

- A. Ground and Bond Metallic Wireway Systems as follows:
1. Bond the metallic structures of wireway to provide 100 percent electrical continuity throughout the wireway system by connecting a 6 AWG bonding jumper at all intermediate metallic enclosures and across all section junctions.
 2. Install insulated 6 AWG bonding jumpers between the wireway system bonded as required in paragraph 1 above, and the closest building ground at each end and approximately every 50 feet.
 3. Use insulated 6 AWG bonding jumpers to ground or bond metallic wireway at each end at all intermediate metallic enclosures and cross all section junctions.
 4. Use insulated 6 AWG bonding jumpers to ground cable tray to column-mounted building ground plates (pads) at each end and approximately every 50 feet.

3.7 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.

B. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Owner promptly and include recommendations to reduce ground resistance.

END OF SECTION 280526

SECTION 280553 - IDENTIFICATION FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs and all necessary and related items required to provide a complete identification system for the Electronic Safety and Security (ESS) Systems including the Access Control, Intrusion Detection and Video Surveillance systems as shown on the Drawings and described in the Specifications.

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 10 00: Access Control.
 - 4. Section 28 20 00: Video Surveillance.
 - 5. Section 28 30 00: Security Detection, Alarm & Monitoring.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 REGULATIONS AND CODE COMPLIANCE

- A. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Consider such codes or standards a part of this Specification as though fully repeated herein.
- B. Perform all work in accordance with governing codes, rules and regulations including but not limited to the following:
 - 6. National Electric Code (NEC), NFPA 70.

1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's product data sheets for the following items:
 - 1. Equipment cabinet and equipment enclosure labels.
 - 2. Wire and cable labels.

B. Samples: Submit samples of the following items:

1. Include physical samples of each labeling material.

PART 2 - PRODUCTS

2.1 LABELS

A. Phenolic two tone for exterior mounting on equipment enclosures. White lettering on black background.

2.2 WIRE AND CABLE LABELS

A. Provide self-laminating adhesive laser labels.

B. Labels shall be machine printable with a laser printer.

C. Text Attributes:

1. Black
2. 1/8" high, minimum, or #12 font size
3. Font: Verdana preferred, SansSerif, or Arial acceptable
4. Printable area: 1.0" X .375" and 1.0" X 0.50".
5. Cable size: 0.16 – 0.32" OD
6. Color: White

D. Manufacturer:

1. Brady wire marking labels WML-211-295 and WML-311-292.
2. Brother.
3. Thomas and Betts.
4. Or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Physically label all of the ESS Systems components including but not limited to the following:

1. Cables:
 - a. Label at all termination points.
 - b. Label at pullboxes, junction boxes and outlet boxes.
2. Label Access Control and Intrusion Detection System Cabinets.
3. Label Field equipment cabinets.
4. Label equipment within the cabinets and enclosures indicating its function.
5. Label equipment with its IP address (where applicable).
6. Label Terminal blocks.
7. Label Relays.
8. Label Patch panels, and the termination positions within the patch panels.

- B. Identify wire and cable clearly with permanent labels wrapped about the full circumference within one (1) inch of each connection. Indicate the number designated on the associated field or shop drawings or run sheet, as applicable. Assign wire or cable designations consistently throughout a given system; i.e., each wire or cable shall carry the same labeled designation over its entire run, regardless of intermediate terminations. Label cables where cable first enters and exits from conduit, junction or distribution boxes; labels shall be located within six (6) inches of the point of exit.
- C. Label all equipment mounted in the equipment enclosures indicating its function. This includes servers, switches, controllers, power supplies, batteries, etc.
- D. Components, such as racks and patch panels, must be permanently marked with machine-generated labels, according to current practices and as approved by the Owner before installation.
- E. Labels shall coincide with device id's use on the record drawings.
- F. Equipment Enclosures.
 - 1. Label all Enclosures, alarm monitoring, and powers supply enclosures associated with the security system with an adhesive backed phenolic label. Use 12 point text.
 - 2. Labels shall be represented in and match the security system record drawings.
- G. Security Devices.
 - 1. Label all equipment associated with the security system with a permanent machine generated, laminated, label. Use 12 point text with a clear background. Use white or black lettering depending upon the color of the device.
 - 2. Label device in a concealed location with the system point number and address.
 - 3. Label power supply batteries with the month and year they were installed.
- H. Wire and Cable.
 - 1. Label all wire and cable associated with the security system with permanent machine generated, laminated, labels. Use 12 point, black text on a white label.
 - 2. All wire and cable labels shall be clearly visible without the need to remove wire management or any other obstructions.

END OF SECTION 280553

SECTION 282000 – VIDEO SURVEILLANCE SYSTEM

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. Provide all labor, materials, equipment, tools, transportation, storage costs, testing, training and all necessary and related items required to provide a complete and operational video surveillance system as shown on the Drawings and described in the Specifications.
- B. Furnish cameras. Provide MAC address information to WCSD Project Manager. Assign IP addresses to cameras as provided by WCSD Project Manager. Provide temporary camera login credentials to WCSD Project Manager.
- C. Install, mount, secure, aim, focus and adjust all IP video surveillance cameras. Aim cameras as directed by WCSD Project Manager.
- D. Install CAT 6 cabling from each camera to patch panels as shown on the drawings. All CAT 6 cabling to be installed and tested in accordance with the Division 27 Specifications.
- E. Furnish CAT 6 patch cords at the patch panel to connect the camera patch panel ports to owner furnished POE switches. WCSD Project Manager will provide designated pre-configured POE switch port numbers to the contractor. Contractor shall install patch cords and cross connect the cameras to the designated switch ports.
- F. WCSD IT will furnish and install Milestone cameras licenses.
- G. WCSD IT will furnish and configure Milestone software.
- ~~B. Furnish, install, mount, secure, aim, focus, adjust, connect power to, connect to the network, assign IP addresses, configure, test, commission and demonstrate all IP video surveillance cameras.~~
- ~~C. Furnish and install all necessary camera mounts and supports including ceiling mount kits, trim rings, gooseneck supports, corner mounts, pendant mounts, brackets, support arms, pole mounts, back boxes, etc. All screws and fasteners used for camera supports, raceway supports, junction boxes and pull boxes shall be vandal resistant (Torx Pin Head style).~~
- ~~D. Install CAT 6 cabling from each camera to CAT 6A patch panels as shown on the drawings. Furnish CAT 6 patch cords at the patch panel to connect the camera patch panel ports to owner furnished POE switches. NOTE—WCSD will cross connect cameras to the network switches at the Telecom Room. All CAT 6 cabling to be installed and tested in accordance with the Division 27 Specifications.~~
- ~~E. Furnish and install Milestone XProtect Corporate Version 10.x device “channel” software licenses for each new camera at each project location unless otherwise~~

~~noted. See camera schedule on the drawings for licensing requirements. Software licenses shall include a Milestone 1-year "Care Plus" Product Maintenance Agreement. Load license packs on WCSD's existing Milestone Management Server located at the East 9th Street Administration Offices and assign licenses to the camera at each project site.~~

- ~~F. Furnish, install, update and configure Milestone XProtect Corporate Version 10.x video "recording" software on the video recording server (video recording server hardware and server operating system provided and installed by WCSD).~~
- ~~G. Furnish, install, update and configure Milestone XProtect Smart Client video management software on a minimum of (3) client computers at each project location to enable users to view surveillance camera images and control cameras. Configure logical camera viewing groups and for each client computer as directed by WCSD.~~
- ~~H. Test, commission and demonstrate the entire IP video surveillance system in the presence of the Owner's Representative.~~
- ~~I. Provide a minimum of four (4) hours training to the Owner on the usage and operation of the IP video surveillance cameras, video recording server management software and client software. Training shall consist of two (2) 2-hour training sessions as scheduled by the Owner.~~

1.2 RELATED SECTIONS

- A. General: Consult all other Sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete and operable system.
- B. Related Sections:
 - 1. Section 28 00 00: Common Work Results for Electronic Safety & Security.
 - 2. Section 28 05 00: Conductors and Cables for Electronic Safety & Security.
 - 3. Section 28 05 28: Conduits and Backboxes for Electronic Safety and Security.
 - 4. Section 28 05 53: Identification for Electronic Safety & Security.
- C. Division 1 Specifications, General and Supplementary Conditions apply to this Specification Section.

1.3 QUALITY ASSURANCE

- A. The Contractor installing the IP video surveillance cameras and video recording software must have a minimum of (5) years experience installing video surveillance systems of similar size and scope.
- B. The Contractor installing the IP video surveillance system must be a firm normally engaged in the design, installation and maintenance of integrated

security systems including access control, intrusion detection and video surveillance.

~~C. The Contractor installing the IP video surveillance system shall be a "Milestone Certified Partner" and shall have a Milestone Advanced Certification required to purchase and install the Milestone XProtect Corporate software.~~

~~D. The Contractor must be a Sony Security Preferred Reseller (SSPR).~~

~~E.C.~~ The contractor installing the Category 6 cabling to the cameras must comply with the qualification requirements and installation requirements listed in the Division 27 Specifications.

~~F.D.~~ The Contractor must be licensed by the Nevada State Contractors Board.

~~G.E.~~ Formal, written evidence of the following may be requested at any point during the Bid or installation processes:

1. If requested, the Contractor, including any subcontractor, shall show proven expertise in the implementation of video surveillance projects. This expertise can be illustrated through the inclusion of details of at least three (3) projects involving the design and installation of video surveillance systems within the past three year period of similar size and scope. Names, addresses, and telephone numbers of references for the three projects shall be included.
2. In the event subcontractors are used for any portion of the installation or acceptance testing, the Contractor shall be responsible for any subsequent corrective action required on that portion of the work.

1.4 SUBMITTALS

A. Manufacturer Product Data Sheets

1. Submit product data sheets in electronic PDF (portable document format).
2. Provide a table of contents for each submittal indicating the items being submitted. Products listed in the table of contents should be in the same order as they appear in the Specifications.
3. Provide product data sheets for all items listed in each specification section. Partial submittals will not be accepted.
4. Where product data sheets include more than one distinct item, clearly mark data sheet with arrow or other identifying means to clearly indicate the items being submitted for approval. Delete or cross-out non-applicable data.
5. Provide manufacturer data sheets for the following equipment and software:
 - a. Indoor fixed vandal resistant 1080P dome cameras.
 - b. Outdoor fixed 4-sensor vandal resistant dome cameras.

- c. Camera supports including wall mount kits, corner mount kits, pole mount kits, gooseneck support arms, ceiling pendant kits, back boxes, etc.
- ~~d. Video Recording Software and Camera Licenses.~~
- ~~e-d.~~ CAT 6 Cabling – Indoor Plenum Rated.
- ~~f-e.~~ CAT 6A Field Mount Plugs.
- ~~g-f.~~ 48-Port CAT 6A Patch Panels.
- ~~h-g.~~ CAT 6 Patch Cords.
- ~~i-h.~~ Parking Lot Camera Powered POE Extenders.

1.5 REGULATIONS AND CODE COMPLIANCE

- A. The Contractor will comply with all applicable governmental regulations including Federal, State, City, and local applicable codes and ordinances.
- B. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- C. All work and materials shall conform to and be installed, inspected and tested in accordance with federal, state and local governmental agencies, including, but not limited to the following:
 - 1. ANSI/NFPA-70, 2017 -- National Electrical Code (NEC).
 - 2. Underwriter's Laboratories, Inc. (UL).
 - 3. Federal Communications Commission (FCC).
 - 4. Americans with Disabilities Act (ADA).

1.6 INTENT OF DRAWINGS

- A. All drawings are diagrammatic unless otherwise noted as detailed dimensioned drawings. Drawings show approximate locations of equipment and devices. Exact locations are subject to the approval of the Owner or Owner's Representative. The Contractor shall verify dimensions and shall be responsible for their accuracy
- B. Items mentioned in the Specifications and not shown in the Drawings, or shown in the Drawings and not mentioned in the Specifications, shall be of like effect as if shown and mentioned in both. In the case of differences between the Drawings and the Specifications, the stricter provision as determined by the Owner or Owner's Representative shall govern.
- C. Omissions from the Drawings or Specifications, or the incorrect description of details of Work which are necessary to carry out the intent of the Drawings and Specifications, or work which is customarily performed, shall not relieve the Contractor from performing such omitted or incorrectly described work.
- D. No exclusion from, or limitations in, the language used in the Project Documents shall be interpreted as meaning that ancillary or accessory items necessary to complete any required system or item of equipment are to be omitted.

1.7 REVIEW OF SPECIFICATIONS

- A. Prior to submitting a bid for the Project, the Contractor shall carefully study and compare the Drawings and Specifications and shall at once report to the Owner or Owner's Representative any error, inconsistency or omission discovered. During construction, if the Contractor performs any construction activity knowing it involves a recognized error, inconsistency or omission in the Specifications without such notice to the Owner or Owner's Representative, the Contractor shall assume appropriate responsibility for such performance and shall bear an appropriate amount of the cost for any correction.
- B. The Contractor shall not deviate from the specified scope of work as indicated in the Project Documents. Deviations include (but are not limited to):
 - 1. Alteration of video surveillance camera locations from those specified in Plans.
 - 2. Installation of horizontal cables to a different Telecom Room than indicated on the Plans.

1.8 EXAMINATION OF THE PREMISES

- A. The Contractor shall visit the Site(s) to become familiar with the local conditions under which the work is to be performed and correlate his observations with the requirements of the Drawings and Specifications. No allowance will be made for claims of concealed conditions which the Contractor learned or should have learned in exercising due diligence in its observations of the site and review of the local conditions.
- B. Before ordering any materials or performing any work, the Contractor shall verify all measurements and be responsible for correctness of same. No extra charge or compensation will be allowed for duplicate work or material required because of an unverified difference between an actual dimension and the measurement indicated in the Drawings. Any discrepancies found shall be submitted in writing to the Owner or Owner's Representative for consideration before proceeding with the work.

1.9 DELIVERY, STORAGE AND HANDLING

- A. All items to be installed as a component of the IP video surveillance system for the Project shall be stored according to manufacturer's recommendations. In addition, all items must be stored in a location protected from vandalism and weather. Items shall not be stored outside. If air temperature at the storage location shall be below 40 degrees F, the equipment shall be moved to a heated 50 degrees F (minimum) location. If necessary, equipment shall be stored off site at The Contractor's expense.

1.1 WARRANTY

- A. See Division 1 Specifications and General Conditions regarding Guarantee and Warranty requirements which apply to this Specification Section.
- B. The Contractor shall provide the following warranty for the Video Surveillance System described in this specification section:
 - 1. Warranty Start Date: The warranty period will begin after substantial completion of the project.
 - 2. Complete System Warranty: The complete Video Surveillance System including all devices, equipment, cabling, software and programming shall be guaranteed to be free from defects in workmanship and materials for a minimum period of one (1) year from date of substantial completion. Promptly remedy such defects and any subsequent damage caused by the defects or repair thereof at no expense to the Owner.
 - 3. Labor Warranty: Contractor to provide all labor as necessary to complete warranty repairs for a period of one (1) year from the date of substantial completion. During this labor warranty period, all services including equipment, labor, travel, expenses, etc., shall be provided during normal working hours at no cost to the Owner. The Contractor shall provide the Owner with a phone number for service. The Contractor shall respond within one (1) business day of receipt of a service call. The Contractor shall provide an on-site response time of two (2) business day for repair of critical system items during normal business hours.
 - 4. Warranty Exclusions: The guarantee shall exclude acts of God, vandalism, physical abuse or operator misuse.

1.10 FINAL ACCEPTANCE

- A. General
 - 1. All cameras mounted in accordance with the drawings.
 - 2. IP address assigned to cameras and temporary login credentials provided to WCSD IT. Contractor to provide camera hardware MAC addresses to WCSD IT and WCSD IT will provide camera IP addresses to be assigned.
 - 3. _____
 - 4. All CAT 6 cables installed, terminated, labeled and tested. Certified test reports submitted to WCSD.
 - 5. All cameras properly aimed and focused as directed by WCSD IT.
 - 6. All Punchlist items completed.
 - 1. ~~All cameras mounted in accordance with the drawings.~~
 - 2. ~~All CAT 6 cables installed, terminated, labeled and tested. Certified test reports submitted to WCSD.~~
 - 3. ~~All cameras connected to the network and assigned IP addresses (WCSD to provide IP address scheme. WCSD to cross connect cameras to the network at the Telecom Room). Contractor to provide list of camera locations, hardware MAC addresses and IP addresses to WCSD.~~

4. ~~All cameras communicating and recording to the video "Recording" server.~~
5. ~~All cameras properly aimed and focused for both day and night operation.~~
6. ~~All cameras configured for proper aspect ratio, resolution, frame rate and video recording size.~~
7. ~~Video "Recording" software installed, updated and configured on the video recording server at each project location. Coordinate software installation with WCSD.~~
8. ~~The local video "Recording" server communicating with video "Management" server located at the East 9th Street Administration Offices over the wide area network.~~
9. ~~Device "channel" licenses for each camera installed on the video "Management" server.~~
10. ~~Client viewing and configuration software installed, updated and configured on a minimum of (3) client computers at each school location.~~
11. ~~Configure permissions on the recording servers to allow specific users to view live and recorded video.~~
12. ~~Entire video surveillance system tested and commissioned in the presence of the Owner's Representative.~~
13. ~~All Punchlist items identified during the testing and commissioning corrected to the satisfaction of the Owner's Representative.~~
14. ~~Operation and Maintenance manuals turned over to the Owner.~~
15. ~~Owner training completed.~~

B. Inspection Of Work

1. WCSD Project Manager shall perform an inspection of all Contractor work prior to final acceptance. Any items that are found to be in error at this time shall be documented.
2. Documentation shall then be provided to the Contractor, who shall provide a date (within 30 days of WCSD Project Manager inspection) by which all items shall be corrected. The Contractor has the option to coordinate a site visit with the WCSD Project Manager in order to clarify and/or dispute the issues.
3. WCSD Project Manager shall perform a re-inspection of all Contractor work. Any remaining or additional items that are found to be in error shall again be documented. WCSD/IT reserves the right at this point to employ a separate contractor to make corrections at a cost to The Contractor.

PART 2 – PRODUCTS

2.1 FIXED INDOOR VANDAL RESISTANT 1080P DOME CAMERAS

A. Provide cameras meeting the following requirements:

1. The camera shall be of manufacturer's official product line, designed for commercial/industrial 24/7/365 use.
2. The camera shall be based upon standard components and proven technology using open and published protocols.

3. Minimum 3MP, 1920x1080 Resolution.
4. RJ-45 Ethernet Connector. 10/100 Base-T.
5. IEEE 802.3af Compliant.
6. Mini-Dome.
7. Auto Zoom and Focus via Web Browser.
8. Vandal Resistant IK10 Rated.
9. H.264 video compression at 30fps.

B. Acceptable Products

1. Camera:
 - a. Axis P/N P3265-V.
 - b. No substitutions.
2. Recess ceiling mount.
 - a. Provide recess ceiling mount kit where shown on drawings (Axis P/N TP3201).
 - b. No substitutions.
3. Pendant Mount:
 - a. Provide pendant mount kit where shown on drawings including ceiling mount (Axis P/N T91B51), camera shroud (Axis P/N T94K01D) and custom length 1.5 NPT extension column to clear ceiling obstructions (color white).
 - b. No substitutions.

2.2 FIXED 8-20 MEGA PIXEL 4-IMAGE SENSOR 4-CAMERA VANDAL RESISTANT DOME CAMERAS

A. Provide cameras meeting the following requirements:

1. Camera will consist of 4 individual ~~2MP~~ 5MP fixed cameras installed in a single vandal resistant dome.
2. Each of the 4 cameras within the dome shall be capable of being repositioned within the dome by moving it around the perimeter of a circular support track.
3. Each of the 4 cameras within the dome shall be capable of being independently aimed up and down, side to side.
4. Each of the 4 cameras within the dome shall be capable of being remotely focused and zoomed over the IP network via a web browser.
5. Each of the 4 cameras will have a minimum ~~3MP~~ 5MP ~~1080P~~ 2560x1440 Resolution per sensor.
6. Dual encoder (H.264 and MJPEG).
7. The entire camera assembly will one RJ-45 Ethernet Connector, 10/100 Base-T.
8. The entire camera assembly will require 1 software camera license within the VMS software.
9. POE - IEEE 802.3af Compliant.
10. Vandal Resistant and IK10 Rated.
11. IP 66 Ingress and Weather Rated.

12. Indoor/Outdoor rated.
 13. Video frame rate (up to) 30FPS @ full resolution.
 14. Privacy masking.
 15. Operating temperature -30°C (-22 °F) to +50°C (122 °F).
- B. Provide corner mount kit, gooseneck support arm and shroud to mount cameras on exterior corners of buildings as shown on the drawings. Provide additional mounting plates, adapters and accessories as necessary for a vandal resistant and weatherproof installation.
- C. Acceptable Products
1. Camera:
 - a. Axis P/N ~~P3727~~P3737-PLE.
 - b. No known equal.
 2. Pendant Mount:
 - a. Provide pendant mount kit where shown on drawings including ceiling mount (Axis P/N T91B51), camera shroud (Axis P/N T94N01D) and custom length 1.5 NPT extension column to clear ceiling obstructions (color white).
 - b. No substitutions.
 3. Exterior Corner Mount:
 - a. Provide corner mount kit, gooseneck support arm, back box and camera shroud as required for exterior corner mounting (Axis T91A64, T91D61 and T94N01D).
 - b. No substitutions.
 4. Exterior Pole Mount:
 - a. Provide pole mount kit where shown on the drawings including stainless steel bands and mount (Axis P/N T91B57), mounting cabinet (Axis P/N T98A18-VE), wall mount arm (Axis P/N T91D61) and camera pendant kit (Axis P/N T94N01D).
 - b. No substitutions.
- 2.3 HORIZONTAL PLENUM RATED CATEGORY 6 CABLE.
- A. See Section 271500 for requirements.
- 2.4 HORIZONTAL OSP RATED CATEGORY 6 CABLE.
- B. See Section 271500 for requirements.
- 2.5 CATEGORY 6A FIELD MOUNT PLUGS
- A. See Section 271500 for requirements.
- 2.6 CATEGORY 6 COPPER PATCH PANELS

- A. See Section 271100 for requirements.

2.7 CATEGORY 6 COPPER PATCH CORDS

- A. See Section 271100 for requirements.

2.8 ETHERNET / POE EXTENDERS FOR PARKING LOT LIGHT POLE MOUNTED CAMERAS

- A. Provide long range Ethernet Extender for light pole mounted cameras in the parking lot where shown on camera schedule.
- B. Extenders shall be wall mounted in the telecom room adjacent to wall mounted CAT 6 lightning protection entrance terminals. Input to the POE extenders shall be cross-connected to rack mounted 48-port CAT patch panels (see telecom drawings) via CAT 6 cable. Output of POE extenders shall be cross connected to wall mounted lightning protection entrance terminals via CAT 6 cable.
- C. Acceptable Products.
 - 1. Powered Ethernet Extenders:
 - a. Veracity Longspan VLS-1P-B transmitter, VLS-1P-C receiver and VPSU-57V-800 power supply.
 - b. Or Approved Equal.
 - 2. CAT 6 Entrance Protection Panels:
 - a. TII 606 Series Protection Panel with 65V Solid State Protector Modules P/N 606-65.
 - b. Or approved equal.

2.9 VIDEO MANAGEMENT SOFTWARE SYSTEM

- A. WCSD IT will provide and install Milestone camera licenses.
- B. WCSD IT will provide, install and configure Milestone recording server and client viewing software.
- ~~A. Washoe County School District is currently standardized on the Milestone XProtect Corporate VMS software. The contractor shall integrate the cameras at each site with the existing software.~~
- ~~B. The contractor shall provide (1) Milestone XProtect Corporate "Device Channel License" for each camera as shown in the camera schedule. Each Device Channel License shall come with a Milestone 1 year "Care Plus" product maintenance agreement (PMA). During this 1 year period, Milestone will provide technical support and software upgrades at no cost to the School District.~~
- ~~C. See camera schedule for the required type and quantity of licenses.~~

- ~~D. Washoe County School District will provide and install a local "Recording Server" at each school. The contractor is responsible for providing, installing and configuring the Milestone XProtect Corporate "Recording Server" software on this server at each site.~~
- ~~E. Washoe County School District has an existing Milestone XProtect Corporate "Management Server" located at the East 9th Street Admin Office location. The contractor will be responsible for installing the "Device Channel Licenses" on this server and configuring the "Recording Server" at each site to communicate with this "Management Server".~~
- ~~F. At each project site (school) the contractor shall provide, install and configure "Client Viewing" software on (3) existing workstations as identified by WCSD. The contractor shall configure the client software to view cameras at the local school. Logical camera groups and screen layouts shall be configured on each computer.~~
- ~~A. Acceptable Products~~
 - ~~1. Milestone Systems XProtect Corporate Version 10.x Video Management System. Provide the following Software, Licenses and Product Maintenance Agreements (NOTE: Washoe County School Districts owns an XProtect Corporate "Base Server" license. The Contractor does not need to purchase an additional "Base Server" license for this project).~~
 - ~~a. Milestone Systems XProtect Corporate Version 10.x "Device Channel" License. Provide qty (1) license for cameras as shown in the Camera Schedule at each project site (Milestone P/N XPCODL).~~
 - ~~b. Milestone Systems XProtect Corporate Version 10.x "1 Year Care Plus" Produce Maintenance Agreement (PMA). Provide qty (1) 1-year PMA license for each camera shown in the Camera Schedule at each project site (Milestone P/N YXPCODL).~~
 - ~~c. No Substitutions accepted.~~

PART 3 – EXECUTION

3.1 CAMERA SYSTEM INSTALLATION SEQUENCE AND COORDINATION WITH WCSD

- A. The following is the installation sequence for the camera system. The contractor shall coordinate and schedule all work with WCSD's Project Manager.
 - 1. Contractor shall procure cameras and provide a spreadsheet to WCSD Project Manager indicating the camera number, MAC address and camera name. The camera numbers shall match the numbers in the camera schedule. WCSD will provide IP addresses for each camera. Contractor shall configure the cameras with the provided IP addresses and shall update all cameras with current manufacturer firmware.
 - 2. Contractor shall provide camera and temporary login credentials to WCSD Project Manager.

3. Contractor shall install, terminate and test cabling to the cameras. Contractor shall provide certified cable test results to WCSD Project Manager and provide patch cords for the cameras. WCSD IT will inspect the cabling installation and will issue a punchlist identifying any corrective action required.
 4. After the contractor has completed all punchlist items, WCSD IT will install the POE switches and will provide designated pre-configured POE switch port numbers to the contractor. Contractor shall install patch cords and cross connect the cameras to the designated switch ports.
 5. Contractor shall connect, aim, focus and adjust the cameras. Each camera view must be reviewed and signed off by WCSD Project Manager.
 6. WCSD IT will complete all remaining Milestone Software configuration including:
 - a. Installation of Milestone recording server and software at the project site.
 - b. Installation of camera licenses. Camera licenses provided and installed by WCSD IT.
 - c. Configuration of camera settings including frame rate, compression, motion detection, privacy masking, recording, etc.
 - a-d. Installation of Milestone Smart Client software on workstation computers at the project site.
-
- ~~2. Contractor shall procure cameras and provide a spreadsheet to WCSD indicating the camera number, MAC address and camera name. The camera numbers shall match the numbers in the camera schedule. WCSD will provide IP addresses for each camera. Contractor shall configure the cameras with the provided IP addresses and shall update all cameras with current manufacturer firmware.~~
 - ~~3. WCSD will procure the video recording server, install the server at the school and provide the contractor with logon credentials for the server.~~
 - ~~4. Contractor shall install, terminate and test cabling to the cameras. Contractor will provide certified cable test results to WCSD and provide patch cords for the cameras. WCSD will inspect the cabling installation and will issue a punchlist identifying any corrective action required. After the contractor has completed all punchlist items, WCSD IT will install the POE switches and patch cords to cross connect the cameras to the switches.~~
 - ~~5. Contractor shall connect, aim, focus and adjust the cameras. Each camera view must be reviewed and signed off by an Administrator or School Police Officer at the project site. WCSD's Project Manager will provide the contractor with the name of the person at each site responsible for signing off the camera views.~~
 - ~~6. Contractor shall install the Milestone Software on the recording server at the project site and shall configure communication between the recording server and the Milestone Management Server located at WCSD's East 9th Street administrative offices.~~
 - ~~7. Contractor shall assign new camera licenses to the Milestone Management Server as indicated in the camera schedule.~~
 - ~~8. Contractor shall configure all camera settings as required on the local site recording server including IP address, frame rate, compression, bit rate, motion detection, privacy masking, etc.~~
 - ~~9. Contractor shall configure storage locations for "live" recorded video and "archived" video on the server. Locate the recording server database on the local server hard drives (E: drive). Locate "archived" video on the~~

direct attached storage array (F: drive). Confirm storage locations with WCSD IT.

10. ~~Configure the recording server to overwrite "archived" video when the F: drive becomes greater than 80% full. Configure the software to overwrite the oldest video first.~~
11. ~~For each school site, the Contractor shall provide the names of the Principal, Vice Principal and Dean to the WCSD Project Manager. The Contractor shall assign view permissions to the cameras within the Milestone recording server software for the "STAFF" and "SCHOOL POLICE" groups. Only School Police, Principals, Vice Principals and Deans are allowed access via the Smart Client software. All other users must get permission from School Police.~~
12. ~~The Contractor shall configure logical site specific "camera viewing groups" within the Milestone Smart Client Software. The camera viewing groups shall be common to all users.~~
13. ~~WCSD IT will inspect the camera installation, software configuration and will issue a punchlist identifying any corrective action required. After the contractor has completed all punchlist items, the system will be re-inspected by WCSD IT.~~
14. ~~The Contractor shall install and configure the most current Milestone Smart Client software on three (3) computers at the project site as directed by the WCSD Project Manager.~~
15. ~~The Contractor shall provide 4 hours of training to the users at each project site. The training shall consist of (2) 2-hour training sessions as scheduled by WCSD.~~

3.2 ROUGH-IN

- A. Before construction work commences, the Contractor shall visit the site and identify the exact location and mounting of all cameras.
- B. Camera mounting locations shall be coordinated with the work of other trades including ductwork, return and supply grills, lights, switches, exit signs, fire sprinklers, smoke detectors and structure. Cameras, mounts, raceway and cabling shall be installed so as not to interfere with required clearances for maintenance and inspection of equipment.
- C. Notify the Owner's Representative of any obstructions that may block the camera views shown on the Drawings.
- D. The contractor shall minimize the amount of exposed conduit and boxes exposed to view. Paint all interior and exterior conduit exposed to view to match adjacent surfaces. All exterior conduit shall be rigid RMC with water tight boxes and fittings.
- E. All exposed screws and fasteners used for camera mounting hardware, conduit supports, j-boxes and pull boxes shall be vandal resistant (Torx Pin-Head Style).

3.3 CUTTING AND PATCHING

- A. The Contractor shall be responsible for all cutting, patching, coring and associated work to complete the camera installation. Patch adjacent work disturbed or damaged by installation of new work including insulation, walls and wall covering, ceiling and floor covering or other finished surfaces.
- B. The contractor shall be responsible for repairing any ceiling tile, ceiling grid, ceiling supports or adjacent surfaces damaged during the installation of the cameras.
- C. All penetrations through the building envelope shall be sealed and made water tight.
- D. All penetrations through fire rated walls, floors and ceilings shall be fire stopped with a UL listed fire stop system meeting or exceeding the rating of the assembly being penetrated.
- E. No roof penetrations are permitted.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Coordinate ordering and installation of all equipment with long lead times or having a major impact on work by other trades so as not to delay the job or impact the schedule.
- B. Set all cameras and associated supports to accurate line and grade, level all equipment and align all equipment components.
- C. Provide all scaffolding, rigging, hoisting and services necessary for installation of equipment.
- D. Storage and security of material and equipment prior to installation shall be the responsibility of the Contractor.

3.5 CEILING DOME CAMERA MOUNTING AND NETWORK CONNECTION

- A. Install ceiling mounted dome cameras and support brackets in accordance with the Manufacturer's instructions.
- B. Verify ceiling mounted camera locations shown on the drawings. The contractor shall verify that adequate clearances exist above the camera to allow installation at the locations shown. The contractor shall make minor adjustments to the camera locations to avoid clearance conflicts.
- C. Secure cameras to structure with mount kit called out in the camera schedule.
- D. Furnish, install and terminate Category 6 cabling from the IP camera to the telecom room identified on the Drawings.
- E. Terminate CAT 6 cable at the camera on CAT 6A Field Mount Plug and connect directly to the camera.

- F. The contractor shall work with the WCSD IT department to cross connect the cameras to the POE switches in the telecom rooms.
- G. The contractor shall assign static IP addresses to the camera with the IP address scheme specified by WCSD IT.
- H. Verify that the camera has the most current firmware version. If not, download and install the latest firmware version from the manufacturer's website.
- I. ~~Logon to the camera and set the date and time. Set the time to Pacific Standard Time and configure the camera to automatically adjust to daylight savings time. Configure the camera to connect to a Network Time Protocol (NTP) server once every 24 hours and synchronize the time. Use WCSD's NTP server (IP Address 10.0.0.1 — verify with WCSD).~~
- J. ~~Add the camera to the database on the VMS "Recording Server" and load the appropriate drivers for the camera.~~
- K. ~~Configure camera ID, description and date/time stamping. The camera ID should follow the following naming convention: "School Name — Camera # — Area — Location". For example, Camera 3 at McQueen High would be named: "McQueen — 3 — 100 Wing — Main Entrance".~~
- L. ~~Change the default logon password on the IP camera web interface as directed by WCSD.~~

3.6 EXTERIOR GOOSENECK CAMERA MOUNTING AND NETWORK CONNECTION

- A. Notify the Owner's representative where obstructions exist that may block the view from the camera prior to installing the camera.
- B. Install fixed dome cameras, corner mount kits, gooseneck supports and shrouds in accordance with the Manufacturer's instructions.
- C. Core drill exterior building and install rigid conduit to feed the camera via the support bracket.
- D. Route conduit to minimize the amount of conduit exposed to view. Install rigid (RMC) conduit at all exterior locations.
- E. Paint exposed conduit to match existing surfaces.
- F. Securely anchor corner mount kit and/or gooseneck support bracket to structure.
- G. Install camera shroud and connect camera to shroud.
- H. Verify that camera and mounts are level and plumb.

- I. Verify that all components are secure to prevent vibrating or unstable images caused by wind or vibration.
- J. All exposed screws and fasteners shall be vandal resistant (Torx Pin-Head Style).
- K. Furnish, install and terminate Category 6 cabling from the IP camera to the telecom room identified on the Drawings.
- L. Terminate CAT 6 cable at the camera on CAT 6A Field Mount Plug and connect directly to the camera.
- M. The contractor shall coordinate and work with the WCSD IT department to cross connect the cameras to the POE switches in the telecom rooms.
- N. The contractor shall assign static IP addresses to the camera with the IP address scheme specified by WCSD IT.
- O. Verify that the camera has the most current firmware version. If not, download and install the latest firmware version from the manufacturer's website.
- ~~P. Logon to the camera and set the date and time. Set the time to Pacific Standard Time and configure the camera to automatically adjust to daylight savings time. Configure the camera to connect to a Network Time Protocol (NTP) server once every 24 hours and synchronize the time. Use WCSD's NTP server (IP Address 10.0.0.1 – Verify with WCSD).~~
- ~~Q. Add the camera to the database on the VMS "Recording Server" and load the appropriate drivers for the camera.~~
- ~~R. Configure camera ID, description and date/time stamping. The camera ID should follow the following naming convention: "School Name - Camera # - Area - Location". For example, Camera 3 at McQueen High would be named: "McQueen - 3 - 100 Wing - Main Entrance".~~
- ~~S. Change the default logon password on the IP camera web interface as directed by WCSD.~~

3.7 FIXED CAMERA SETUP, FOCUSING AND ADJUSTMENT

- A. Contractor shall connect, aim, focus and adjust the cameras. Each camera view must be reviewed and signed off by WCSD IT.
- ~~A. Configure the resolution on the cameras to the maximum setting 1920x1080 or 2048x1536 as applicable for each camera.~~
- ~~B. Aim the camera with the horizontal field of view shown on the drawings. Cameras set to a wider field of view than shown on the drawings or in a "fish-eye" configuration will be required to be re-adjusted by the contractor.~~

- C. ~~Adjust the vertical field of view so that the ceiling is not visible. For outdoor cameras, adjust the vertical field of view so that the sky is not visible. Secure the camera lens per the manufacturer's instructions.~~
- D. ~~Use the camera's web interface to focus the camera based on the field of view set above. Adjust the focus as necessary to provide a clear field of view.~~
- E. ~~Each school will have a dedicated onsite Representative responsible for reviewing and approving the aiming, field of view and focus of each camera. The contractor will be responsible for working with this dedicated representative and shall obtain the representative's sign-off for each camera. The contractor shall re-aim and/or re-focus the cameras as requested by Representative during testing/commissioning of the surveillance camera system.~~
- F. ~~After the aim and focus of each camera is approved by the onsite Representative, the contractor shall obtain a "screen shot" consisting of a full resolution JPG image of each camera view. The contractor shall submit color print outs on 8 1/2" x 11" of these images at the completion of the project.~~
- G. ~~Adjust the image quality settings on the camera to provide the clearest picture quality for all lighting conditions. The cameras have several settings that affect the image quality. The contractor shall consult with the camera manufacturer and shall adjust these settings to provide optimum image quality depending on the particular "scene" viewed by the camera.~~
- H. ~~Configure the cameras to automatically switch to daytime color and nighttime black & white mode as applicable for the lighting conditions.~~
- I. ~~For indoor cameras, configure the "motion" sensitivity settings within the video management software for each indoor camera so that images are only recorded when people or objects are moving within the field of view. Mask areas of the image that should not trigger motion based recording where applicable (i.e. ceilings, walls above 6' 0", trees, shrubs, etc). NOTE — THE PROPER CONFIGURATION OF THE MOTION SENSITIVITY SETTINGS IS CRITICAL TO THE PERFORMANCE OF THE SYSTEM. If the motion sensitivity is set too low, not all activity will be recorded by the system. If the motion sensitivity is set too high, images will be unnecessarily recorded resulting in server performance degradation and archiving issues.~~
- J. ~~Configure camera frame rate, compression and stream rate as follows:~~
 - 1. ~~Indoor Fixed Dome Cameras:~~
 - a. ~~Frame Rate — 15 fps.~~
 - b. ~~Compression — H.264.~~
 - c. ~~Bit Rate: 3mbps.~~
 - d. ~~Motion Detection: On — Record only when motion detected.~~
 - 2. ~~Outdoor Fixed Dome Cameras:~~

- a. ~~Frame Rate—15 fps.~~
- b. ~~Compression—H.264.~~
- c. ~~Bit Rate: 4mbps.~~
- d. ~~Motion Detection: Off—Record 24x7.~~

3. ~~Outdoor Fixed 4 Camera Sensor Cameras:~~

- a. ~~Frame Rate—10 fps.~~
- b. ~~Compression—H.264.~~
- c. ~~Bit Rate: 3-4mbps for each sensor (depending on size of view area).~~
- d. ~~Motion Detection: Off—Record 24x7.~~

3.8 ~~TESTING AND COMMISSIONING~~

A. ~~After completion of the project, the contractor shall test and commission the IP Video Surveillance System including all cameras and video management software in the presence of the Owner's Representative. The contractor shall notify the Owner's Representative a minimum of (1) week prior to testing.~~

B. ~~At a minimum, the following tests shall be performed.~~

- 1. ~~Verify physical mounting of all cameras.~~
- 2. ~~Verify network connectivity to all cameras.~~
- 3. ~~Verify aim and focus of all cameras.~~
- 4. ~~Verify that cameras have been properly focused for both daytime and nighttime use.~~
- 5. ~~Verify frame rate and image recording settings on all cameras.~~
- 6. ~~Verify privacy masking of camera views where applicable.~~
- 7. ~~Verify proper motion sensitivity adjustment of cameras.~~
- 8. ~~Verify archiving settings.~~
- 9. ~~Verify that device "channel" licenses have been installed on the "Management" server.~~
- 10. ~~Verify proper installation and configuration of the digital video recording software.~~
- 11. ~~Verify proper installation and configuration of the client software including permissions.~~

C. ~~After completion of the commissioning, the Owner's Representative shall prepare a Punchlist of all items to be corrected. After the contractor has completed the Punchlist items to the satisfaction of the Owner's Representative, the Project will be considered "substantially complete" at which time the warranty period will begin.~~

3.9 ~~TRAINING~~

A. ~~After completion of the camera installation, software installation, testing and commissioning, the contractor shall provide a minimum of 4 hours training to the Owner at each project location. Training shall cover usage and operation of the~~

~~cameras, video recording server software and client software. The training shall consist of two (2) 2-hour training sessions as scheduled by the Owner.~~

END OF SECTION

SECTION 328000 - IRRIGATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Plant irrigation system
 - 2. Automatic controller
 - 3. Remote control valves
 - 4. Trenching
 - 5. Sleeves
 - 6. Backfilling

1.3 DEFINITIONS

- A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
- B. Finish Grade: Elevation of finished surface of planting soil.
- C. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Before any irrigation system materials are delivered to the job site, submit to the Owner a complete list of all irrigation system materials proposed to be furnished and installed. Show manufacturer's name and catalog number for each item, furnish complete catalog cuts and technical data, and furnish the manufacturer's recommendations as to method of installation.
- B. Provide at least one person who shall be present at all times during execution of this portion of the work, and who shall be thoroughly familiar with the type of materials being installed, and material manufacturer's recommended methods of installation, and who shall direct all work performed under this section. The Contractor shall have a minimum of 5 years experience in commercial or residential irrigation installation

1.6 CLOSEOUT SUBMITTALS

A. Record Drawings

1. Dimension from two permanent points of reference (buildings, monuments, sidewalks, curbs, pavement, etc.). Locations shown on as-built drawings shall be kept day to day as the project is being installed. All dimensions noted on drawings shall be neat and legible. Show locations and depths of the following items: Point of connection, Routing of sprinkler lines, Ball valves, Sprinkler control valves, Quick coupling valves, Routing of control and power wires, Sprinkler heads, Other related equipment.
2. Record drawings must be delivered to the Owner upon completion.

B. Operations and Maintenance Manual

1. Prepare and deliver to the Owner within ten calendar days prior to completion of construction, all required and necessary descriptive material in complete detail and sufficient quantity, properly prepared in four individually bound copies of the operations and maintenance manual. The manual shall describe the material installed and shall be in sufficient detail to permit operating personnel to understand, operate and maintain all equipment. Spare parts lists and related manufacturer information shall be included for each equipment item installed. Each complete, bound manual shall include the following information:
 - a. Index sheet stating Contractor's address and telephone number, duration of guarantee period, list of equipment with names and addresses of local manufacturer representatives.
 - b. Complete operating and maintenance instructions on all major equipment.
2. In addition to the above maintenance manuals, provide the maintenance personnel with instructions for system operation and show written evidence to the Owner at the conclusion of the project that this service has been rendered.
3. Final payment will not be made until record drawings and operation and maintenance manuals have been submitted and approved.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.
4. Store materials per manufacturer's specifications.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

1.10 WARRANTY

- A. Warranty requirements will be submitted to Owner upon substantial completion of work.
- B. The Contractor shall winterize the system and perform spring start-up of the system during the guarantee period. These functions shall be coordinated in advance with the Owner, and the Owner's personnel shall be encouraged to participate.
 1. Upon re-energizing the system, the Contractor shall repair any leaks or breaks and shall check each head and valve, making any adjustment necessary.
 2. Warranty Period: 12 months from date of irrigation completion.

PART 2 - PRODUCTS

2.1 POLYVINYL CHLORIDE (PVC) PIPE

- A. All mainlines and transmission lines shall be Schedule 40 PVC; laterals shall be schedule 40 PVC. Pipe shall be rigid unplasticized conforming to ASTM D-1784 and D-2241 standard specifications for PVC pipe. The pipe shall be homogeneous throughout and free from visible cracks, holes, foreign materials, blisters, deleterious wrinkles, and dents.
- B. All pipe shall be continuously and permanently marked with the following information: Manufacturer's name or trademark, size, schedule and type of pipe, working pressure at 73F (23C), color pantone #512, and National Sanitation Foundation (N.S.F.) approval.
- C. All above ground piping shall be epoxy painted purple (pantone color #512) and have a purple tag attached with the wording "warning recycled/reclaimed water do not drink" and "aviso agua impura no tomar" (t. christy enterprises, maxi valve identification tag, id-max-p2-rc006 or city of sparks approved equal).

2.2 MANUAL VALVES

- A. All manual ball valves, sizes three-inch (3") (75mm) and smaller, shall be full ported ball valves with maximum working pressure of 175 psi (1200kPa) and 350 psi (2400kPa) hydrostatic test pressure.
- B. All manual gate valves of four-inch (4") (100mm) size or larger shall be iron body, brass trimmed, double disc wedge type with integral taper seats and with non-rising stems, and shall be Mueller A-2360 resilient wedge gate valves with mechanical joints or equal accepted in advance by the owner. All manual gate valves shall be 200 psi (1380kPa) rated.

2.3 VALVE BOXES

- A. All remote control valves, manual control valves, zone shut-off valves, ball valves, or globe valves unless otherwise indicated, shall be installed in valve access box of proper size as required for easy access to the valve.
- B. Valve boxes shall not be located within a planting area. Valve boxes shall be placed with a minimum of five feet (5') (1.5m) separation between each valve box.
- C. All covers for meter boxes, valve boxes, flush valves, pressure reducing vaults, air/vac release assemblies, and all other appurtenances requiring vaults or boxes shall be purple in color (pantone color #512), labeled "reclaimed water" or "effluent", and have secured or locking lids. purple coloration shall be obtained from the manufacturer or be applied by powder coating or epoxy paint. all appurtenances shall have a purple tag attached with the wording "warning recycled/reclaimed water do not drink" and "aviso agua impura no tomar" (t. christy enterprises, maxi valve identification tag, id-max-p2-rc006 or city of sparks approved equal). a debris cap with purple coloration shall be installed inside of all round boxes.

2.4 EMITTERS

- A. All emitters of a particular type and for a particular function in the system shall be of the same manufacture and shall be marked with the manufacturer's name and identification, in such a position that they can be identified without being removed from the system.

2.5 IRRIGATION CONTROLLERS

- A. Field controllers shall be model numbers and manufacturers as shown on the plans or an acceptable equal.
- B. Field controllers shall be installed on approved concrete bases in accordance with the manufacturer's recommendations as shown on the drawings.
- C. Field controllers shall be installed with manufacturer's lightning and surge protection.
- D. Central controller shall be model number and manufacturers as shown on the plans, or acceptable equal. Central controller shall be located as shown on the drawings.

- E. On site lockable disconnects or lockable fuse block and a 110 volt outlet shall be installed at each controller in a separate lockable water-tight enclosure.
- F. All irrigation controller enclosures shall be labeled inside and outside warning that the system uses reclaimed water (t. christy enterprises, controller marking decal, part number #id-4100, or city of sparks approved equal).

2.6 REMOTE CONTROL VALVES

- A. All remote control valves shall be model numbers and manufacturers as shown on the plans or an acceptable equal. All splices shall be installed with 3M DBY and DBR types and all splices shall be made inside the valve box.

2.7 CONTROL WIRE

- A. All electric control and ground wire shall be irrigation control cable or approved equal, 14-gauge unless otherwise indicated on the drawings. All wiring to be used for connecting the automatic remote control valve to the automatic controllers shall be Type "UF", 600 volt, solid copper, single conductor wire with PVC insulation and bear UL approval for direct underground burial feeder cable.
- B. Insulation shall be 4/64-inch (1.6mm) thick minimum covering of ICC-100 compound for positive waterproofing protection. When more than one valve is operated by a single controller station, provide separate control wire from the controller to each valve, and one valve per box. Each valve should have no less than twenty-four inches (24") (600mm) of control cable inside valve box. Each wire shall be labeled at the valve box and at the controller to what zone each wire controls.
- C. Verification of wire types and installation procedures shall be checked to conform to local codes.

2.8 FITTINGS

- A. All plastic pipe fittings shall be permanently marked with the following information: Manufacturer's name or trademark, size, schedule and type of pipe, working pressure at 73F (23C), and National Sanitation Foundation (N.S.F.) approval.
- B. All plastic pipe fittings to be installed shall be molded fittings manufactured of the same material as the pipe and shall be suitable for solvent weld or screwed connections.
- C. Slip fitting socket taper shall be so sized that a dry unsoftened pipe end, conforming to these special provisions, can be inserted no more than halfway into the socket. Plastic saddle and flange fittings will not be permitted. Only schedule 80 fittings may be threaded.

- D. When connection is plastic to metal, plastic male adapters shall be used. The male adapter shall be hand tightened, plus one turn with a strap wrench. Joint compound shall be Teflon Tape and Teflon paste. No oil-based products permitted.
- E. Solvent weld fittings shall be manufactured by Lasco, Spears, or acceptable equal. All lateral line fittings and mainline fittings two inches (2") (50mm) and smaller shall be schedule 40 solvent weld fittings.

2.9 SLEEVES

- A. Pipe sleeves shall be Schedule 40 PVC pipe, or equal.

2.10 CONCRETE

- A. All concrete shall be 3,000 psi (20,700kPa) at 28 days, transit mixed. Provide certifications with each delivery.

2.11 OTHER MATERIALS

- A. All other materials, not specifically described, but required for a complete and proper irrigation system installation, shall be new, first quality of their respective kinds, and included within the submittal to the Owner for approval.

PART 3 - EXECUTION

3.1 PRODUCT HANDLING

- A. Use all means necessary to protect irrigation system materials before, during, and after installation and to protect the installed work and materials of all other trades.
- B. In the event of damage, immediately make all repairs and replacements necessary to the approval of the owner and at no additional cost to the owner.

3.2 SURFACE CONDITIONS

- A. Inspection
 - 1. Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
 - 2. Verify that trenching may be completed in accordance with the original design and the referenced standards.
 - 3. In the event of discrepancy, immediately notify the owner. Do not proceed with installation in areas of discrepancy until all discrepancies have been fully resolved.

3.3 TRENCHING

- A. Perform all trenching required for the installation of items where the trenching is not specifically described in other sections of these Specifications.
- B. Make all trenches in accordance with OSHA Requirements with sufficient width to provide free working space at both sides of the trench and around the installed item as required for gluing, joining, backfilling, and compacting while minimizing width of trenches.
- C. All mainline shall have a minimum cover of thirty six inches (36") and a maximum cover of forty eight (48") above the pipe. All laterals shall be the same depth as the mainline. All lateral and main lines shall be installed in a straight line with no arching or bending of pipe. Change in direction of pipe shall occur only with the use of proper fittings only.
- D. Where trench excavation is inadvertently carried below proper elevations, backfill with material approved by the owner and then compact to provide a firm and unyielding subgrade to the approval of the owner and at no additional cost to the owner.
- E. Trench Bracing
 - 1. Properly support all trenches in strict accordance with all pertinent rules and regulations.
 - 2. Brace, sheet, and support trench walls in such a manner that they will be safe and that the ground alongside the excavation will not slide or settle, and that all existing improvements of every kind will be fully protected from damage.
 - 3. In the event of damage to such improvements, immediately make all repairs and replacements necessary to the approval of the owner and at no additional cost to the owner.
 - 4. Arrange all bracing, sheeting and shoring so as to not place stress on any portion of the completed work until the general construction thereof has proceeded far enough to provide sufficient strength.
 - 5. Exercise care in the drawing and removal of sheeting, shoring, bracing, and timbering to prevent collapse or caving of the excavation faces being supported.
- F. Grading and Stockpiling Trenched Material
 - 1. Control the stockpiling of trenched material in a manner to prevent water running into the excavations.
 - 2. Do not obstruct surface drainage but provide means whereby storm and waste waters are diverted into existing gutters, other surface drains, or temporary drains.
- G. All trench excavation shall be made by open cut. During excavation, material suitable for backfilling shall be piled in an orderly manner a sufficient distance from the banks of the trench to avoid overloading, and to prevent slides or cave-ins. The Contractor shall

remove all material not required for backfill or not suitable for backfill, from the site. Banks of trenches shall be kept as nearly vertical as possible, and shall be properly sheeted and braced as may be necessary to prevent caving.

- H. Trench widths in paved streets or in areas where proximity to other structures require vertical cuts, shall not be wider than is required for proper handling, jointing and bedding of the pipe.
- I. The bottom of the trenches shall be accurately graded to line and grade, and provide uniform bearing and support for each section of the pipe on undisturbed soil, at every point along its entire length. Depressions for joints shall be dug after the trench bottom has been graded, and shall be only of such length, depth and width as required for properly making the particular type joint. Care shall be taken not to excavate below the depths indicated.
- J. Where rock occurs in trench excavation, the rock shall be removed to a depth of six inches (6") (150mm) below the established grade line, and to a width of twelve inches (12") (300mm) greater than the outside diameter of the pipe to be installed in the trench.
- K. Where excavation of trenches requires the removal of asphalt pavement, the pavement shall be cut in a straight line along the edge of the excavation by use of a spade-bitted air hammer, concrete saw, or similar approved equipment to obtain straight, square and clean break; and, after backfilling and subgrade preparations are completed, hot plant mix asphalt concrete shall be replaced and compacted in accordance with the appropriate standard specification. Replaced base course and asphalt shall match removed sections.
- L. Excess material, including rock, broken concrete, bituminous materials, debris, or other materials not suitable for backfill, shall be removed from the site and disposed of by the Contractor.

3.4 SLEEVES

- A. Sleeves shall be installed wherever routing of a pipe, wiring, or both crosses a paved area or passes through a bored hole.
- B. Sleeves laid in open trenches shall be uniformly and evenly supported by undisturbed soil on the trench bottom. Backfill shall conform to standards hereinafter specified.

3.5 BACKFILL

- A. The trenching shall not be backfilled until inspection by the City has been completed and the pipe installation, including the grade, alignment, and jointing has been found to be in compliance with the requirements of the plans and specifications.

- B. Select backfill material consisting of sand, fine gravel or select earth, free of large lumps or rocks larger than one inch (1") (25mm) shall be used in backfilling around and over the installed pipe.
- C. The select material shall be obtained from the excavation material removed from the trench and shall be processed by screening, sifting, or selective sorting, so as to produce the type of backfill herein specified. The Contractor may at his option and own expense provide an acceptable imported material.
- D. This backfill material shall be carefully deposited around and over the pipe in layers not more than six inches (6") (150mm) thick, loose measurement, unless otherwise permitted by the City, wetted to optimum moisture content and uniformly compacted to at least 95 percent of the maximum density obtainable at optimum moisture content as determined by AASHTO T99 Method A or D (latest revision), until the pipe has a cover depth of at least twenty four inches (24").
- E. The remaining depth of the trench shall be backfilled with excavation material removed from the trench, which shall be wetted or dried to near optimum moisture content.

3.6 INSTALLATION OF PIPING

- A. Perform all trenching and backfilling as specified by the specifications in this Section.
- B. Lay out the piping system in strict accordance with the plans. Where piping is shown on the plans to be under paved areas, but running parallel and adjacent to planted areas, the intention is to install the piping in the planted areas.
- C. All mainlines and laterals shall be installed with thirty six inches (36") minimum cover, and a maximum of forty eight inches (48") cover, over the pipe.
- D. All lines shall have a minimum clearance (horizontal and vertical) of four inches (4") (100mm) of adjacent pipe from each other, and six inches (6") (150mm) from lines of other trades, except through pipe sleeves. Parallel lines shall not be installed directly over one another.
- E. Carefully inspect all pipe and fittings before installation, removing all dirt, scale, and burrs and reaming as required; install all pipe with all markings up for visual inspection and verification.
- F. PVC Pipe
 - 1. Plastic pipe shall be installed in a manner so as to provide for expansion and contraction as recommended by the manufacturer.
 - 2. All plastic joints shall be solvent-weld joints. Only the solvent cement recommended by the pipe manufacturer shall be used. All plastic pipe and fittings shall be installed as outlined and instructed by the pipe manufacturer and it shall

be the Contractor's responsibility to make arrangements with the pipe manufacturer for any field assistance that may be necessary. The Contractor shall assume full responsibility for the correct installation.

3. All plastic to metal joints shall be made with plastic adapters.
4. The solvent-weld joints shall be made dry.
5. The solvent-weld joints shall be allowed to set at least 24 hours before pressure is applied to the system on PVC pipe.
6. Swing joints shall be installed on the same side of the pipe as the head. Swing joints may not cross pipe laterally.

3.7 INSTALLATION OF EQUIPMENT

- A. All fittings, valves, etc. shall be carefully placed in the trenches as shown on the plans.
- B. All control wires shall be clearly labeled, by station, using weatherproof material, both at the controller and at the valve. The outside cover of all automatic valve boxes shall also have the station number clearly stamped on the cover.

3.8 TESTING AND INSPECTION

- A. Closing-in Work
 1. Do not allow or cause any of the work in this section to be covered up or enclosed until it has been inspected, tested, and approved by the owner.
 2. Where trenches are not closed at the end of the day Contractor shall accept all liability for any damage or injury that may result from open trenches. Provide barricades and warning tape as necessary around all open trenches.
- B. Before backfilling the mainline, and with all control valves in place, completely flush and test the mainline and repair all leaks; flush out each section of lateral pipe before sprinkler heads are attached.
- C. Testing
 1. Make all necessary provisions for thoroughly bleeding the line of air and debris.
 2. Before testing, fill the line with water for a period of at least 24 hours.
 3. After valves have been installed, test all installed irrigation lines for leaks at a pressure of 150 psi (1035 kPa) for a period of two hours, with all couplings exposed and with all pipe sections center loaded.
 4. Furnish all necessary testing equipment and personnel.
 5. Correct all leaks and retest until acceptance by the Engineer.
- D. Final Inspection
 1. Thoroughly clean, adjust, and balance all systems.

- E. Demonstrate the entire system to the Engineer, proving that all remote control valves are properly balanced, that all heads are properly adjusted for radius and arc of coverage, and that the installed system is workable, clean, and efficient.

END OF SECTION 328000

SECTION 329113 - SOIL PREPARATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes planting soils.

1.3 DEFINITIONS

- A. AAPFCO: Association of American Plant Food Control Officials.
- B. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.
- C. CEC: Cation exchange capacity.
- D. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.
- E. Duff Layer: A surface layer of soil, typical of forested areas, that is composed of mostly decayed leaves, twigs, and detritus.
- F. Imported Soil: Soil that is transported to Project site for use.
- G. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.
- H. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.
- I. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.
- J. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."
- K. Planting Soil: Imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

- L. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.
- M. SSSA: Soil Science Society of America.
- N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.
- O. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.
- P. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.
- Q. USCC: U.S. Composting Council.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Material Certificates: For each type of imported soil and soil amendment and fertilizer before delivery to the site, according to the following:
 - a. Manufacturer's qualified testing agency's certified analysis of standard products.
 - b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.

1.6 PRECONSTRUCTION TESTING

- A. Preconstruction Soil Analyses: For each unamended soil type, perform testing on soil samples and furnish soil analysis and a written report containing soil-amendment and fertilizer recommendations by a qualified testing agency performing the testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.
 - 1. Have testing agency identify and label samples and test reports according to sample collection and labeling requirements.

1.7 TESTING REQUIREMENTS

- A. General: Perform tests on soil samples according to requirements in this article.
- B. Physical Testing:
 - 1. Soil Texture: Soil-particle, size-distribution analysis by one of the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":

- a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.
 - b. Hydrometer Method: Report percentages of sand, silt, and clay.
 2. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
 3. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
 4. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85% compaction according to ASTM D 698 (Standard Proctor).
- C. Chemical Testing:
1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."
 2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1- Physical and Mineralogical Methods."
 3. Metals Hazardous to Human Health: Test for presence and quantities of RCRA metals including aluminum, arsenic, barium, copper, cadmium, chromium, cobalt, lead, lithium, and vanadium. If RCRA metals are present, include recommendations for corrective action.
 4. Phytotoxicity: Test for plant-available concentrations of phytotoxic minerals including aluminum, arsenic, barium, cadmium, chlorides, chromium, cobalt, copper, lead, lithium, mercury, nickel, selenium, silver, sodium, strontium, tin, titanium, vanadium, and zinc.
- D. Fertility Testing: Soil-fertility analysis according to standard laboratory protocol of SSSA NAPT WERA-103, including the following:
1. Percentage of organic matter.
 2. CEC, calcium percent of CEC, and magnesium percent of CEC.
 3. Soil reaction (acidity/alkalinity pH value).
 4. Buffered acidity or alkalinity.
 5. Nitrogen ppm.
 6. Phosphorous ppm.
 7. Potassium ppm.
 8. Manganese ppm.
 9. Manganese-availability ppm.
 10. Zinc ppm.
 11. Zinc availability ppm.
 12. Copper ppm.
 13. Sodium ppm[and sodium absorption ratio].
 14. Soluble-salts ppm.
 15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.
 16. Other deleterious materials, including their characteristics and content of each.

- E. Recommendations: Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory planting soil suitable for healthy, viable plants indicated. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.
 - 1. Fertilizers and Soil Amendment Rates: State recommendations in weight per cu yd of soil.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 - 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 - 2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 - 3. Do not move or handle materials when they are wet or frozen.
 - 4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 PLANTING SOILS

- A. General: Soil amendments, fertilizers, and rates of application specified in this article are guidelines that may need revision based on testing laboratory's recommendations after preconstruction soil analyses are performed.
- B. Planting-Soil: Manufactured soil consisting of manufacturer's basic topsoil, blended in a manufacturing facility with sand, stabilized organic soil amendments, and other materials to produce viable planting soil.
 - 1. Additional Properties of Manufacturer's Basic Soil before Amending: Soil reaction of pH 6 to 7 and minimum of 5 percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration.
 - 2. Unacceptable Properties: Manufactured soil shall not contain the following:
 - a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
 - b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 5 percent by dry weight of the manufactured soil.
 - c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 2 inches (50 mm) in any dimension.

2.2 INORGANIC SOIL AMENDMENTS

- A. Lime: ASTM C 602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:
 - 1. Class: T, with a minimum of 99 percent passing through a No. 8 (2.36-mm) sieve and a minimum of 75 percent passing through a No. 60 (0.25-mm) sieve.
 - 2. Class: O, with a minimum of 95 percent passing through a No. 8 (2.36-mm) sieve and a minimum of 55 percent passing through a No. 60 (0.25-mm) sieve.
- B. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent elemental sulfur, with a minimum of 99 percent passing through a No. 6 (3.35-mm) sieve and a maximum of 10 percent passing through a No. 40 (0.425-mm) sieve.
- C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.
- D. Perlite: Horticultural perlite, soil amendment grade.
- E. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through a No. 50 (0.30-mm) sieve.
- F. Sand: Clean, washed, natural or manufactured, free of toxic materials, and according to ASTM C 33/C 33M.

2.3 ORGANIC SOIL AMENDMENTS

- A. Compost: Well-composted, stable, and weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance".
- B. Wood Derivatives: Shredded and composted, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.
- C. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

2.4 FERTILIZERS

- A. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:
 - 1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

PART 3 - EXECUTION

3.1 GENERAL

- A. Place planting soil and fertilizers according to requirements in other Specification Sections.
- B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.
- C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.2 CLEANING

- A. Protect areas adjacent to planting-soil preparation and placement areas from contamination. Keep adjacent paving and construction clean and work area in an orderly condition.
- B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off Owner's property unless otherwise indicated.
 - 1. Dispose of excess subsoil and unsuitable materials on-site where directed by Owner.

END OF SECTION 329113

SECTION 329300 - PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Plants.
 - 2. Tree stabilization.
 - 3. Landscape edgings.

1.3 DEFINITIONS

- A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
- B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.
- C. Balled and Potted Stock: Plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less diameter and depth recommended by ANSI Z60.1 for type and size of plant required.
- D. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than the minimum root spread according to ANSI Z60.1 for type and size of plant required.
- E. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.
- F. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.
- G. Finish Grade: Elevation of finished surface of planting soil.

- H. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.
- I. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.
- J. Planting Area: Areas to be planted.
- K. Planting Soil: Imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.
- L. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.
- M. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.
- N. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.
- O. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
- B. Samples for Verification: For each of the following:
 - 1. Mineral Mulch: 2 lb (1.0 kg) of each mineral mulch required, in sealed plastic bags labeled with source of mulch. Sample shall be typical of the lot of material to be delivered and installed on-site; provide an accurate indication of color, texture, and makeup of the material.
 - 2. Weed Control Barrier: 12 by 12 inches (300 by 300 mm).
 - 3. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.
- B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:
 - 1. Manufacturer's certified analysis of standard products.
 - 2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.
- C. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of required maintenance periods.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.
 - 1. Experience: Three > years' experience in landscape installation in addition to requirements in Section 014000 "Quality Requirements."
- B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.
 - 1. Selection of plants purchased under allowances is made by Architect, who tags plants at their place of growth before they are prepared for transplanting.
- C. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.
 - 1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches (150 mm) above the root flare for trees up to 4-inch (100-mm) caliper size, and 12 inches (300 mm) above the root flare for larger sizes.
- D. Plant Material Observation: Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Architect of sources of planting materials seven days in advance of delivery to site.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 3. Accompany each delivery of bulk materials with appropriate certificates.
- C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.
- D. Handle planting stock by root ball.
- E. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.
- F. Deliver plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.
 1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
 2. Do not remove container-grown stock from containers before time of planting.
 3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.
- B. Planting Restrictions: Plant during one of the following periods..
 1. Spring Planting: April 1 – June 15.
 2. Fall Planting: September 1 – November 15.

- C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

- A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
 - b. Structural failures including plantings falling or blowing over.
 - 2. Warranty Periods: From date of planting completion.
 - a. Trees, Shrubs, Vines, and Ornamental Grasses: 12 months.
 - b. Ground Covers, Biennials, Perennials, and Other Plants: Three months.
 - 3. Include the following remedial actions as a minimum:
 - a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
 - b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
 - c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
 - d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

- A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.
 - 1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch (19 mm) in diameter; or with stem girdling roots are unacceptable.
 - 2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.
- B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

- C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.
- D. Labeling: Label each plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant.
- E. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.

2.2 FERTILIZERS

- A. Planting Tablets: Tightly compressed chip-type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.
 - 1. Size: 10-gram tablets.
 - 2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.3 MULCHES

- A. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color:
 - 1. Type: [Rounded riverbed gravel or smooth-faced stone] [Crushed stone or gravel] [Marble chips] [Granite chips] <Insert stone type>.
 - 2. Size Range: As indicated on plans.
 - 3. Color: Readily available natural gravel color range acceptable to Architect.

2.4 WEED-CONTROL BARRIERS

- A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. (101g/sq. m) minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.

2.5 PESTICIDES

- A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.
- B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.
- C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.6 TREE-STABILIZATION MATERIALS

A. Trunk-Stabilization Materials:

1. Upright and Guy Stakes: Rough-sawn, sound, new hardwood free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal (38-by-38-mm actual) by length indicated, pointed at one end.
2. Guy Cables: Five-strand, 3/16-inch- (4.8-mm-) diameter, galvanized-steel cable, with zinc-coated turnbuckles a minimum of 3 inches (75 mm) long, with two 3/8-inch (10-mm) galvanized eyebolts.
3. Flags: Standard surveyor's plastic flagging tape, white, 6 inches (150 mm) long.

2.7 LANDSCAPE EDGINGS

a.

B. Aluminum Edging: Standard-profile extruded-aluminum edging, ASTM B 221 (ASTM B 221M), Alloy 6063-T6, fabricated in standard lengths with interlocking sections with loops stamped from face of sections to receive stakes.

1. Edging Size: [3/16 inch (4.8 mm) thick by 5-1/2 inches (140 mm) deep.
2. Stakes: Aluminum, ASTM B 221 (ASTM B 221M), Alloy 6061-T6, approximately 1-1/2 inches (38 mm) wide by 12 inches (300 mm) long.
3. Finish: Manufacturer's standard finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.
 1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
 2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
 3. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
 4. Uniformly moisten excessively dry soil that is not workable or which is dusty.
- B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

- B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
- C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.
- D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.3 PLANTING AREA ESTABLISHMENT

- A. General: Prepare planting area for soil placement and mix planting soil according to Section 329113 "Soil Preparation."
- B. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.4 EXCAVATION FOR TREES AND SHRUBS

- A. Planting Pits and Trenches: Excavate circular planting pits.
 - 1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
 - 2. Excavate approximately three times as wide as ball diameter for balled and burlapped and container-grown stock.
 - 3. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
 - 4. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
 - 5. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
 - 6. Maintain supervision of excavations during working hours.
 - 7. Keep excavations covered or otherwise protected [overnight] [after working hours] [when unattended by Installer's personnel].
- B. Backfill Soil: Subsoil and topsoil removed from excavations may not be used as backfill soil unless otherwise indicated.
- C. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.
- D. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

- A. Inspection: At time of planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.
- B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.
- C. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.
 1. Backfill: Planting soil.
 2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
 - a. Quantity: Two per plant.
 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- D. Container-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.
 1. Backfill: Planting soil.
 2. Carefully remove root ball from container without damaging root ball or plant.
 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch (25 mm) from root tips; do not place tablets in bottom of the hole.
 - a. Quantity: Two per plant.
 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- E. Slopes: When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.6 TREE, SHRUB, AND VINE PRUNING

- A. Remove only dead, dying, or broken branches. Do not prune for shape.
- B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.
- C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.
- D. Do not apply pruning paint to wounds.

3.7 TREE STABILIZATION

- A. Trunk Stabilization by Upright Staking and Tying: Install trunk stabilization as follows unless otherwise indicated:
 - 1. Upright Staking and Tying: Stake trees of 2- through 5-inch (50- through 125-mm) caliper. Stake trees of less than 2-inch (50-mm) caliper only as required to prevent wind tip out. Use a minimum of two stakes of length required to penetrate at least 18 inches (450 mm) below bottom of backfilled excavation and to extend at least 72 inches (1830 mm) above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.
 - 2. Support trees with bands of flexible ties at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
 - 3. Support trees with two strands of tie wire, connected to the brass grommets of tree-tie webbing at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.

3.8 GROUND COVER AND PLANT PLANTING

- A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on Drawings in even rows with triangular spacing.
- B. Use planting soil for backfill.
- C. Dig holes large enough to allow spreading of roots.
- D. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.
- E. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.
- F. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.9 PLANTING AREA MULCHING

- A. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 6 inches (150 mm) and secure seams with galvanized pins.

- B. Mulch backfilled surfaces of planting areas and other areas indicated.
 - 1. Mineral Mulch in Planting Areas: Apply 3-inch (75-mm) average thickness of mineral mulch extending 12 inches (300 mm) beyond edge of individual planting pit or trench and over whole surface of planting area], and finish level with adjacent finish grades. Do not place mulch within 3 inches (75 mm).

3.10 PLANT MAINTENANCE

- A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.
- B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.
- C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.11 REPAIR AND REPLACEMENT

- A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Architect.
 - 1. Submit details of proposed pruning and repairs.
 - 2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
 - 3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.
- B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.
 - 1. Species of Replacement Trees: Species selected by Architect.

3.12 CLEANING AND PROTECTION

- A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.
- B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.
- C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

- D. After installation and before Substantial Completion remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.
- E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

Appendix A – Liquefaction Analysis Results

1.0 INTRODUCTION AND SCOPE

1.1 Project Description

This report presents the results of Reno Tahoe Geo Associates' (RTGA's) geotechnical investigation for design and construction of new facilities at the existing Washoe County School District Transportation Facility located at 1850 Kleppe Lane in Sparks, Nevada (Plate 1). These facilities will include a new building including a bus maintenance garage and offices, a bus wash facility, and modified vehicle circulation and layout of the parking lots. The main building will generally be one-story with portions that have a second story or mezzanine. A site map showing the proposed layout of the new building, wash bay, and parking areas are presented as Plate 2.

Structural loads were not available and were assumed for the purposes of this proposal. Estimated vertical structural loads are not expected to exceed 40 kips at isolated columns and 2 kips to 4 kips per linear foot along continuous wall foundations for long-term loading conditions. Building pad construction is anticipated to consist of cuts and fills of about two feet or less. New pavements will be required for areas that were not previously paved or where buildings will be removed.

1.2 Purpose and Scope of Work

The purpose of this investigation was to explore and evaluate the subsurface conditions at the project site, and to provide our geotechnical engineering recommendations for project design and construction. The scope of our services outlined in our proposal dated March 7, 2022, included the following:

- General geologic setting and seismicity;
- General soil and groundwater conditions at the project site, with emphasis on how the conditions are expected to affect the proposed construction;
- Recommendations for earthwork construction, including site preparation recommendations, a discussion of reuse of existing near surface soils as engineered or non-structural fill, and a discussion of remedial earthwork recommendations, if warranted;
- Recommendations for temporary excavations and trench backfill;
- Recommendations for conventional shallow spread foundation design including soil bearing values, minimum footing depth, resistance to lateral loads and estimated settlements;

- International Building Code Soil Class for use in structural design;
- Lateral earth pressures and drainage recommendations for short retaining structures;
- Subgrade preparation for slab-on-grade concrete and modulus of subgrade reaction based on site soil classifications;
- Site liquefaction potential;
- Pavement structural sections for parking lots; and
- Potential for site soils to corrode steel, or to adversely react with concrete.

This investigation excludes a site-specific evaluation of seismicity, site-specific response spectra, faulting, or other geologic hazards.

2.0 FIELD EXPLORATION AND LABORATORY TESTING

2.1 Field Exploration

Exploration consisted of eight soil borings and one shear wave velocity survey. Our selection of field exploration locations was based on client recommendations, the anticipated project layout, and site access. Exploration locations are shown on Plate 2.

2.2 Borings

Eight soil borings were advanced on April 18 and 22, 2022. Borings were drilled with a track-mounted CME 550 soils sampling drill rig using 4-inch-outside-diameter (O.D.), continuous-flight augers. Boreholes were drilled and sampled to depths of between 6.5 feet to 31.5 feet. Borehole logs are presented on Plates 3 through 10.

The native soils were sampled in-place every 2-1/2 to 5 feet depth by use of a 1.5-inch-inner-diameter (I.D.), 2-inch outer diameter (O.D) Standard split-spoon drive sampler or a 2.6-inch-I.D., 3-inch-O.D. Modified California drive sampler. At appropriate depths, 3-inch diameter Shelby tubes were employed to collect relatively undisturbed samples in cohesive soils.

The drive samplers were driven by a 140-pound automatic drive hammer with a 30-inch stroke. The number of blows to drive the sampler the final 12 inches of an 18-inch penetration (Standard Penetration Test [SPT]- ASTM D 1586) into undisturbed soil is an indication of the density and consistency of the material. Penetration resistance using the Modified California sampler is higher due to the larger diameter and greater ground resistance. Modified California sampler blow counts should be multiplied by 0.65 to obtain an equivalent SPT blow count.

Ground water levels were measured when encountered.

Our engineer or geologist visually classified and logged the soil conditions encountered according to the Unified Soil Classification System and obtained bulk samples of representative soil stratum for further identification and laboratory testing. Soil samples were packaged and sealed in the field to reduce moisture loss and disturbance and returned to our laboratory for testing. The Unified Soil Classification System (USCS) description and a key to log symbols are presented on Plate 11.

Due to the relatively small diameter of the samplers, the maximum particle size that could be obtained was approximately 3 inches. The final logs may not, therefore, adequately represent the actual quantity or presence of cobbles or boulders.

2.3 ReMi Shear Wave Velocity Measurements

One ReMi (Refraction Micrometer) survey was utilized to obtain shear wave velocity measurements near the proposed new building footprint (see Plate 2). ReMi provides a means to obtain basic subsurface profile information on an essentially continuous basis across the explored location. The ReMi survey consists of placing twelve geophones placed in a line at 33 feet spacing, which then record background vibration including natural microtremors, nearby traffic, and other sources. These data are processed to determine the slowest arrival time of seismic waves to interpret a shear-wave-velocity profile with depth. The ReMi shear wave velocity array was utilized to obtain one- and two-dimensional shear wave velocity profiles which are illustrated on Plate 12.

2.4 Laboratory Testing

Laboratory tests were performed on selected samples to aid in soil classification and to evaluate physical properties of the soils, which may affect the geotechnical aspects of project design and construction. We performed laboratory testing on selected soil samples to assess the following:

- Soil Classification (ASTM C136, C117, D422 and D1140)
- Resistance Value (R-Value) for pavement design

In addition, the following analytical tests were performed:

- Soluble Sulfate, Resistivity, and pH

Laboratory test results are summarized on the boring logs (Plates 2 through 9), and detailed testing results are provided on Plates 13 through 17.

3.0 PROJECT CONDITIONS

3.1 Site Conditions

The rectangular site is bounded by Kleppe Lane to the south, the Union Pacific Railroad right-of-way to the north, and adjacent industrial properties to the east and west. The western two-thirds of the site hosts a paved school bus and employee parking lot, an employee administrative building, and bus fueling facility. The eastern one-third of the property hosts four buildings formerly associated with the Nevada Civil Air Patrol which are now part of the bus maintenance facility. The rest of the eastern parcel is largely unpaved gravel parking. The north and west edges of the site were formerly the alignment of a regional drainage channel, the North Truckee Drain, which provide stormwater and irrigation runoff outlet from former ranch areas of Sparks to the Truckee River. The North Truckee Drain was about 20 feet wide at water level and about 12 to 15 feet depressed below adjacent grade. The drain ditch flowed from west to east across the north edge of the site, angled slightly southeast 50 to 200 feet onto the eastern corner of the property, and then flowed south along the east property line. In 2017 and 2018, the drain ditch was backfilled, and the flow was replaced by a large (10-foot deep, 40-foot wide) box culvert in the northern portion of the project parcel. The box culvert traverses from west to east and continues nearly due east to a new outfall into the Truckee River at the end of Larkin Circle. The box culvert underlies the current gravel parking lots. A smaller drainage structure follows the former North Truckee Drain alignment for local stormwater control.

Site elevations range from approximately 4,390 feet at Kleppe Lane to 4,392 feet on most of the property. The site lies on variable thickness of fill placed in the former low channels of the Truckee River and there little or no slope on this or the adjacent parcels. A rectangular portion of the eastern third of the property under the existing building (and where the new major facilities are planned) is filled about 4 to 5 feet higher than the other portions of the site to Elevation 4,395 to 4,396 feet.

3.2 Geologic Conditions

The site is located in the northeastern Truckee Meadows, which is located within the western edge of the Basin and Range Geological province. The Basin and Range geologic province is categorized by generally north-south trending ranges and valleys that are formed by east-west extension of the terrane by normal faulting that has been occurring since Tertiary time. The eastern Sparks area is a tectonic basin developed by downfaulting and concurrent sedimentary infill of the Truckee Meadows (the valley including Sparks and the project site). The Tertiary bedrock surface under the site has

been estimated by Abbott and Louie (2000) to be at roughly 2,000 feet depth at this location by using gravimetric and seismic refraction studies. Both sides of the alluvial valley are flanked by normal (dip-slip) faults which depress the bedrock below the valley surface at the site and raised the bedrock on either side into the Carson and Virginia Ranges. The Truckee Meadows is flanked on the east the Virginia Range which is generally comprised of by Tertiary-age andesite, basalt, and related rock types. On the west the Truckee Meadows is bordered by the Carson Range, which is partially composed of granitic or granodioritic bedrock, which typically erodes to granular alluvial materials.

The geologic map (NBMG, 2011) indicates that the site is located on Holocene floodplain deposits consisting of clay, silt, and minor sand lenses. The site was in the former active floodplain of the Truckee River before it was filled for industrial development. The north side of Kleppe Lane (encompassing the project site) was a wide flood channel with a narrow meandering low-flow channel that was above the main Truckee River and likely was a high-flow channel during strong flooding events on the Truckee River. The floodplain deposit is occurring at the downstream outlet of the Truckee Meadows due to low-gradient, fine-grained overbank flood deposition in the past and historically. This unit typically overlies a coarser unit of sand, gravel, cobbles, and locally boulders which is referred to as the Tahoe Outwash. This deeper deposit was laid down by massive glacial floods emanating from the Sierra Nevada during the Tahoe Glaciation approximately 15,000 to 30,000 years before present.

The USDA National Resource Conservation Survey (NRCS) Web Soil Survey maps the site as two primary map units.

- *Fettic silty clay loam* comprises approximately 95 percent of the site. This unit is described as mixed alluvium on stream terraces containing silt clay loam, clay loam, and stratified loamy sand to silty clay. It is somewhat poorly drained with very high runoff class and very low to moderately low capacity to transmit water (K_{sat} 0.00 to 0.06 in/hr).
- *Xeric Torriothents-Urban land complex* comprises approximately 5 percent as a narrow strip along the northern property boundary. This unit is mixed alluvium formed on fan piedmonts with variable content. It is well drained with very low runoff class and moderately low to very high capacity to transmit water (K_{sat} 0.06 to 19.98 in/hr).

3.3 Results of Site Explorations

Results of our geotechnical exploration are consistent with the geologic map description. Borehole drilling at the site indicated engineered fill in the areas of boreholes B-2, B-3, B-5, and B-6 generally consists of:

- Very stiff silty to clayey sand, some of which is fill, 7 to 8.5 feet thick near Kleppe Lane. Borehole B-2 logged as 7 feet of silty gravel and clayey sand fill.
- With the exception of the B-2 area, native near surface deposits are composed primarily of stiff lean clayey sand (with around 40 to 50 percent fines) with thinly to moderately interbedded medium dense silty sand layers to approximately 21 feet depth.
- At about 21 feet depth in borings B-2, B-3, and B-5, there is an intermittent loose clayey gravelly sand layer that varies between 3 and 7 feet thick that is loose to medium dense. This layer represents a low-energy transition between the underlying high-energy coarse flood deposits and the overlying clays which were deposited in a low-energy alignment.
- Very-dense, highly competent, well graded, sand to gravelly sand was encountered at the bottom of the boreholes starting at 24 to 27 feet below existing grade. This layer represents the Tahoe Outwash soils and typically extends to greater than 100 feet depth in the project vicinity.

Groundwater was encountered beneath the native medium plasticity clay at depths of 21 to 22 feet during drilling.

Results of ReMi analysis indicate generally low-shear-wave velocity material to a depth between 4 to 8 feet along the length of the line which is likely clayey sand fill. Soils are medium dense or stiff between 4 to 8 and 25 to 35 feet depth, which is assumed to represent the stiff clays and medium-dense gravelly sands. This layer increases in depth to the north. Below about 25 to 35 feet depth, soils are very dense which is representative of the Tahoe Outwash sands and gravels of Pleistocene age. The average shear wave velocity measured in the upper 100 feet of the soil/bedrock horizon was 1,203 feet per second. The ReMi survey results are shown on Plate 12.

3.4 Geologic Hazards

3.4.1 Seismicity

The project site lies within an area with a high potential for strong earthquake shaking. Seismicity within the Truckee Meadows area is considered above-average for the western Basin and Range Province. The maximum possible earthquake in this area that could occur would be in the range of magnitude 7.0 to 7.4 along the Mount Rose Fault Zone which trends generally north-south along the western edge of the valley.

3.4.2 Fault Rupture

The east edge of the Truckee Meadows is defined by unnamed fault splays of undifferentiated Quaternary age with no reported recent movement. These have been mapped by NBMG (2011) as no closer than 1,500 feet east of the site. Ramelli et al identifies a potential concealed fault on the east side of Sparks Boulevard about 800 feet west of the site. Splays of the Mount Rose Fault Zone have been mapped to within 3 miles west of the site, trending southwest to northeast. This latest-Quaternary, well-constrained Class A fault displays normal movement of 1 to 5 millimeters per year with an unspecified dip direction.

The Nevada Earthquake Safety Council (NESC, 1998) has developed and adopted the criteria for evaluation of Quaternary age earthquake faults. *Holocene Active Faults* are defined as those with evidence of movement within the past 10,000 years (Holocene time). Those faults with evidence of displacement during the last 130,000 years are termed *Late Quaternary Active Faults*. A *Quaternary Active Fault* is one that has moved within the last 1.6 million years. An *Inactive Fault* is a fault *without recognized activity within Quaternary time* (last 1.6 million years). Holocene Active Faults normally require that occupied structures be set back a minimum of 50 feet (100-foot-wide zone) from the ground surface fault trace. No faulting has been mapped passing through the project site, therefore no building or other structural setbacks are required.

3.4.3 Liquefaction

Liquefaction is a nearly complete loss of soil shear strength that can occur during a seismic event in saturated, loose to medium dense, poorly-graded sands, silty sands, cohesionless silts, and sometimes gravels. Liquefaction results from cyclic shear stresses and strains causing partial collapse of the soil matrix and development of excess pore water pressure between the soil grains. The primary factors affecting liquefaction potential of a soil deposit are: (1) amplitude and duration of seismic ground motions; (2) soil type and density; and (3) depth to groundwater or saturation. The potential consequences of liquefaction to engineered structures include: post-liquefaction settlement, sand boils, increased lateral earth pressures on retaining walls that retain liquefied soil, lateral spread, loss of bearing capacity, and other slope instability.

Liquefaction only occurs in loose to medium dense, generally granular soils, below the groundwater table. Liquefaction will result in settlements shortly after the earthquake due to the reconsolidation of the liquefied soil structure. Water and sand may be expelled to the surface, referred to as sand boils; these may cause minimal damage, except if building footings are located directly over a major sand boil. For sites with gentle slopes or with an adjacent slope, significant damage may potentially result from ground oscillation or lateral spreading. These horizontal deformations occur due to either the earthquake motions imparted to the surface soils, or the driving force of the existing ground surface slope, which causes the surface soils to move with relatively little resistance from the underlying liquefied soils. Lateral spread can occur due to liquefaction under gently sloping ground with slopes shallower than 1 percent. Lateral spread involves permanent ground displacement that accumulates in the down-slope direction due to shearing of the liquefied material during or shortly after earthquake shaking. Lateral spread displacements have historically been a significant proportion of building damage reported after earthquakes.

3.5.1 Liquefaction Potential Triggering Methodology

Liquefaction potential was analyzed and compared using the site SPT data and three methods, Youd et al. (2001) Idriss and Boulanger (2008), and Seed et al (2003). A design peak ground acceleration (PGA) of 0.70g and a design earthquake magnitude of M=7.0 were used.

The three liquefaction evaluation methods analyze the effects of fines and the plasticity of soils differently. All three include an upward correction of blowcount with increasing fines content up to

35 percent fines to obtain an estimate of “equivalent clean sand penetration resistance.” Youd et al. (2001) recommends that soils above 35 percent fines content are either non-liquefiable, or, if they are liquefiable, evaluation from penetration resistance may not be appropriate. Soils above 35 percent fines content may be determined as liquefiable if they meet all the following criteria:

- Liquid limit less than 35 (Youd et al 2001) or 37 (Idriss and Boulanger, 2008, Seed et al, 2003);
- Plasticity Index less than 7 (Youd et al, 2001; Idriss and Boulanger, 2008) or 12 (Seed et al, 2003); and
- Water content/Liquid Limit ratio of greater than 0.85 (Youd et al, 2001) or 0.80 (Idriss and Boulanger, 2008; and Seed et al, 2003).

All three SPT-based methods used in our analysis indicate the presence of limited zones of clayey sands meeting the criteria for liquefiable soils. The upper clayey sand layers were eliminated by using the above criteria. Post-liquefaction consolidation settlements were computed using the method of Tokimatsu and Seed (1987).

3.5.2 Predicted Liquefaction Potential

The liquefaction triggering analyses for each of the deeper borings that encountered the sand layers are provided in Appendix A. A summary of the results is provided in Table 1 stated in terms of liquefied thickness and potential ground deformation effects for the selected design earthquake event. The potential for liquefaction effects is generally proportional to the cumulative thickness of liquefied deposits.

TABLE 1 – SUMMARY OF PREDICTED LIQUEFACTION			
Location	Cumulative Liquefiable Thickness (feet)	Depth Interval (feet)	Estimated Post-Liquefaction Settlement (inches)
B-2	8	21 - 29	1.5 - 2
B-3	0	--	0
B-5	2.5	22 -24.5	0.5

We conclude that minor liquefaction potential is present that could cause on 0 to 2 inches of total settlement during the design earthquake, with an average of 0.8 inches settlement. Assuming columns and major supports located at 40 to 50 feet on center, maximum differential settlement per bay would be on the order of $\frac{3}{4}$ -inch. With the exception of the raised fill under the southeast corner of the site, the region is very flat and is not expected in significant permanent lateral deformation. Transient and or permanent lateral deformation would most likely be less than one foot.

4.0 DISCUSSION AND CONCLUSIONS

From a geotechnical engineering standpoint, the proposed structures may be developed as planned. Based on the results of our field investigation and laboratory testing programs, we have developed the following conclusions. These conclusions may change if additional information becomes available.

- Engineered fill in the areas of boreholes B-2, B-3, B-5, and B-6 generally consists of silty to clayey sand which is 2 to 8.5 feet thick. Natural deposits are stiff clayey sand to lean clay starting below 2 to greater than 6.5 feet which are similar but generally higher moisture content and settlement potential. Both units have plasticity which can result in poor compaction characteristics and low to moderate expansive potential.
- Groundwater was encountered beneath native lean clay at depths of 21 feet to 22 feet. Groundwater is not expected to interfere with the proposed foundation excavation.
- It is anticipated that site grading can be performed with conventional earthmoving equipment. In general, existing fill soils are marginally suitable for re-use as structural fill. Foundations and slabs will require separation from clayey soils by at least 2 feet of compacted structural fill.
- Results of corrosivity testing of site soils indicates a severe degree of corrosivity due to low resistivity and soluble sulfate content. Type V Portland cement should be used where cement will come into contact with native site soils. Special corrosion mitigation measures such as cathodic protection should be implemented for buried steel pipes.

Specific recommendations for project design and construction including mitigation of potential problems described above are presented in Section 5.0.

5.0 RECOMMENDATIONS

5.1 Site Clearing and Preparation

Prior to construction all man-made debris should be removed from the site. RTGA representative should be present during stripping and site preparation operations to observe stripping and grubbing depths. Excavations resulting from removal operations should be cleaned of all loose materials and widened as necessary to permit access by compaction equipment.

Dust control will be the responsibility of the contractor. A dust control plan should be prepared by the owner, civil engineer, or contractor prior to the start of grading.

Following site stripping and any required grubbing, we recommend all areas to receive structural fill or to be used for the future support of pavements be scarified to a depth of at least 8 inches, uniformly moisture-conditioned to near optimum moisture content, and compacted to at least 90 percent relative compaction*.

5.2 Liquefaction Mitigation Alternatives

As outlined in this report, potential liquefaction settlements of 0.5 to 2 inches are predicted during the design earthquake at this site. Potential mitigation methods include: structural mitigation with a mat foundation, driven pile foundations, or ground improvement using compaction grouting. Additional investigation may also be appropriate to assess the hazards or conditions by cone penetration tests or borings between the existing exploration points to further define the extent of each issue.

5.2.1 Structural Mitigation

A tied shallow foundation may be suitable for the building to mitigate liquefaction risk. The 2018 International Building Code provides recommendations for foundations on liquefiable sites in Section 12.13.9. The building is assumed to be Risk Category II, and because lateral spread is predicted to be less than 12 inches, the site will meet the requirements of Table 12.13-2. As total settlement due to liquefaction is expected to not exceed 1 inch and typical column spacing might be 25 to 33 feet, the differential settlement is not expected to exceed 0.010L on Table 12.13-3. For this condition, a

*Wherever referenced in this report, relative compaction should be determined by comparing the in-situ densities of the site soils to the maximum dry density and optimum moisture content as established in accordance with the ASTM D1557 Test Method.

tied shallow foundation would be acceptable. Tie beams between foundations and/or structural integration of the floor slab would be required for this option. Other conditions of IBC Section 12.13.9 may apply to structural design.

5.2.2 Deep Foundations

The structure could potentially be built on deep foundations such as driven pipe piles which would develop capacity starting below 27 feet depth. Foundations supported on pile caps with driven piles would reduce and limit differential settlements to low levels, the foundation would have grade beams between pile caps that would help resist lateral movements.

5.2.3 Compaction Grouting

Most forms of liquefaction mitigation would not be cost effectiveness due to the depth of the liquefiable layer below the ground surface. Some methods such as deep dynamic compaction, transmit vibratory energy down from the surface to densely loose soil, and this energy would be dissipated by the shallow clay layers. Other methods involve driving heavy pile foundations or mandrils to improve the ground from near the surface, so that the method would either degrade or have no effect on the 20 feet of clay soils on the site.

Compaction grouting consists of placement of columns of stiff cement grout through a small diameter driven (e.g., 2 inch-diameter) casing where the grout is then expanded under pressure at the required depths. Pipe casings are driven from the ground surface to the desired bottom depth. Grouting is pumped in the casing until a minimum volume of grout is installed, until the maximum pressure is achieved, or grout returns to the surface. The grout pipe is pulled up to the next stage (typically 2 feet higher) and the process repeated until the entire layer is grouted. This is repeated for multiple grouting boreholes at approximately 6 to 8 feet on center. The grout expansion shears, compacts, and increases lateral pressures on the material between the multiple grouting boreholes so that they are no longer liquefiable. This method is appropriate for this site since it does not require any effort (other than driving the pipe) from the ground surface to 20 feet depth and this method is primarily effective with at least 15 feet of overburden.

5.3 Earthwork

5.3.1 General Site Grading

For the purposes of this report, soils with greater than 30 percent fines are either fine-grained or clay soils, and granular soils are those with less than 30 percent fines. Structural areas are portions of the site that will support the proposed structures, foundations, or pavements. Structural areas should be supported on dense native soils or compacted structural fill.

In general, existing native site soils are silty and/or clayey sands which are marginally suitable for direct support of structures and pavements. Existing native clay site soils are not suitable for re-use as structural fill unless inspection during construction shows materials are cleaner than average for the site. Materials could be reused locally if an inspector is present full time to determine which materials should be exported and which can be retained. Imported structural fill, where required, should be granular and free of organics and should meet the specifications presented in Table 2. All imported fill materials should be approved by the project engineer prior to being transported to the site.

TABLE 2 - GUIDELINE SPECIFICATION FOR IMPORTED STRUCTURAL FILL			
<u>Sieve Size</u>		<u>Percent by Weight Passing</u>	
4 Inch		100	
¾ Inch		70 – 100	
No. 4		35 – 90	
No. 40		10 – 65	
No. 200		5 – 30	
<u>Percent Passing</u>		<u>Maximum Liquid Limit</u>	<u>Maximum Plastic Index</u>
<u>No. 200 Sieve</u>			
5 – 20		40	15
21 – 30		30	10

Soils used for structural fill should be uniformly moisture conditioned to within 2 percent of optimum moisture content and placed in layers of eight inches or less in loose thickness. The lift should then be compacted with appropriate compaction equipment to achieve at least 90 percent relative compaction.

Prior to densification, the moisture content of the soils should be determined to evaluate the need for moisture conditioning. After the densification process, a firm, stable surface should be produced. No material should be placed, spread, or rolled while it is frozen or thawing, or during unfavorable weather conditions.

Oversize material (greater than 4 inches) should not be included in any structural fill that will support future structural loads except stabilizing fill as discussed below.

5.3.2 Remedial Earthwork

Marginal clay and clayey sand soils were found to exist from the ground surface down to at least 5 feet depth. The clay soils were classified as moist, very stiff, and as exhibiting low to medium plasticity. Laboratory testing performed on these materials indicates the some of the clay soils exhibit plasticity indices on the order of 27, indicative of moderate expansion potential (Nelson and Miller, 1992).

All clay soils should be removed from beneath structural areas, unless grading is such that those soils will be covered by at least 1 foot of structural fill beneath footings and 2 feet beneath slabs and pavements. The separation underneath slabs and pavements refer to the depth below the rigid (asphalt concrete/Portland cement concrete) layer and the thickness can include the thickness of the aggregate base layer. It must be emphasized that unless clay soils are completely removed from structural areas some differential movement should be anticipated. All over-excavation should be backfilled with structural fill to footing grade, or subgrade for pavements and slabs. The width of over-excavation in mass grading should extend at least 5 feet from the outline of the structure, or in fine grading should extend laterally from the edge of footings, slabs, or pavements at least one-half the depth of the over-excavation.

Clays to be left in place and covered with fill should be moisture-conditioned to 2 to 4 percent over optimum for a minimum depth of 12 inches. This moisture level will significantly decrease the magnitude of shrink-swell movements in the upper foot of clay. The high moisture content must be maintained by periodic surface wetting, or other methods, until the surface is covered by at least one lift of fill. If allowed to dry out, subsequent expansion of clay soils beneath foundations and floor slabs could significantly exceed the allowable design criteria identified in following sections.

Prior to fill placement, the exposed subgrade surfaces should be scarified to a minimum depth of six inches, moisture conditioned as necessary, and compacted to a minimum of 90 percent relative compaction in accordance with the ASTM D1557 compaction test method. Where less than 70 percent passes the 3/4-inch sieve, soils are too coarse for standard density testing techniques. In this case, as will likely occur here, proof rolling is recommended using a minimum of five single passes with a minimum 10-ton roller in mass grading, or five complete passes with hand compactors in footing trenches. Proof-rolling has proved to provide adequate project performance for coarse-grained soils, as long as all other geotechnical recommendations are closely followed. In all cases, the final surface should be smooth, firm, and exhibit no signs of deflection.

5.3.3 Stabilizing Fill

If construction occurs in wet weather, surface soils can be well above optimum moisture and impossible to compact. In some situations, moisture conditioning of the top 12 inches of subgrade may allow the soil to dry sufficiently to allow compaction. Where construction schedules preclude delays or drying is ineffective, mechanical stabilization will be necessary. Mechanical stabilization may be achieved by over-excavation and/or placement of an initial 12- to 18-inch-thick lift of 12-inch-minus, 3-inch-plus, well graded, angular rock fill. The more angular and well-graded the rock is, the more effective it will be. This fill should be densified with large equipment, such as a self-propelled sheepsfoot or a large loader, until no further deflection is noted. Additional lifts of rock may be necessary to achieve adequate stability. A test section to confirm performance of any planned stabilizing fill is recommended.

The use of a geotextile will prevent mud from pumping up between the rocks, thereby increasing rock-to-rock contact and decreasing the required thickness of stabilizing fill. The geotextile should meet or exceed the following minimum properties as stated in Table 3.

TABLE 3 - MINIMUM AVERAGE ROLL STRENGTH PROPERTIES FOR GEOTEXTILE	
Trapezoid Strength (ASTM D 4533)	80 lbs.
Puncture Strength (ASTM D 4833)	120 lbs.
Grab Tensile/Elongation (ASTM D 4632)	245 @ 50 %

As an alternate to rock fill, a geotextile/gravel system may be used for stabilization. Aggregate base, Class C or D drain rock, or pit run gravels should be placed above the geotextile. Regardless of which alternate is selected, a test section is recommended to determine the required thickness of stabilization.

5.3.4 Temporary Trench Excavation and Backfill

Based on the subsurface conditions encountered within our boreholes, we anticipate that excavations for footings and utility trenches can be made with conventional equipment. Shoring or sloping of trench walls deeper than 4 feet will be necessary to protect personnel and provide temporary stability. All excavations should comply with current OSHA safety requirements for Type C soils (Federal Register 29 CFR, Part 1926).

For the construction of underground utilities, pipe zone backfill (material beneath, and in the immediate vicinity of the pipe) should consist of clean, granular material free of clay and organic matter and be of a size such that 100 percent passes the ¾-inch sieve, not more than 10 percent passes a No. 200 sieve, and the material has a minimum sand equivalency of 30. Trench intermediate backfill (material placed between the pipe zone backfill and finished subgrade) may consist of native soil that is free of debris and organic matter and has a maximum particle size of 4 inches.

Backfill for trenches or other excavations within pavement areas, beneath slabs, and adjacent to foundations should be compacted in 6- to 8-inch layers with mechanical tampers. Jetting and flooding should not be permitted. We recommend all backfill be compacted to at least 90 percent relative compaction. The moisture content of compacted backfill soils should be within 2 percent of the optimum. Poor compaction in utility trench backfill may cause excessive settlements resulting in damage to the pavement structural section or other overlying improvements.

5.4 Seismic Design Parameters

The 2018 International Building Code (IBC), adopted by the City of Sparks, requires a detailed soils evaluation to a depth of 100 feet to develop appropriate seismic design criteria. Geophysical analyses of the upper 100 feet of subsurface soils were performed as described in the Section 2.33 ReMi Shear Wave Velocity Measurements of this report. The results of the analyses indicate average shear wave velocity of 1,203 feet per second in the upper 100 feet of the site soils. As a result, a Site Class C soil

would be applicable for the site. However, liquefiable conditions (Site Class F) are identified, unless the structure has a period of vibration of 0.5 seconds or less, in which case the usual site class method is applicable. Seismic design criteria for structures with a period of vibration of 0.5 second or less are provided on Table 4. If the structure period is greater than 0.5 seconds, then a ground motion hazard analysis would be required due to the liquefiable conditions.

TABLE 4 – SEISMIC DESIGN CRITERIA (2018 IBC/ASCE/SEI 7-16) FOR STRUCTURES WITH PERIOD OF VIBRATION OF 0.5 SECONDS OR LESS	
Approximate Latitude	39.525726
Approximate Longitude	-119.707176
Spectral Response Acceleration at Short Period S_s	1.504
Spectral Response Acceleration at 1-Second Period S_1	0.524
Site Class	C
Site Coefficient F_a , decimal (determined for Site Class C, per ASCE 7-16 section 11.48 Exception 1)	1.2
Site Coefficient F_v , decimal (determined for Site Class C, per ASCE 7-16 section 11.48 Exception 1)	1.476
Site Adjusted Spectral Response Acceleration at Short Periods S_{ms} ,	1.804
Site Adjusted Spectral Response Acceleration at Long Periods S_{m1} ,	0.773
Adjusted Peak Ground Acceleration, PGA_M	0.766

A ground motion hazard analysis would be required if the structural period is 0.5 seconds or longer. RTGA can perform this analysis upon request.

5.5 Shallow Foundations

Near-surface silts and clays are unfavorable foundation soils such that footings should not be founded directly in these materials. The most economical method of foundation support lies in spread footings bearing on a minimum of 2 feet of structural fill. The bottom of footing excavations should be recompacted to at least 90 percent relative compaction and should be firm and unyielding.

Exterior foundations must be embedded a minimum of 24 inches below lowest adjacent exterior finish grade for frost protection and confinement. Interior footings should be bottomed at least 12 inches below lowest adjacent finish grade for confinement. Wall foundation dimensions should satisfy the requirements listed in the latest edition of the International Building Code.

Foundations designed and constructed in accordance with the recommendations of this geotechnical report for the following bearing pressures:

TABLE 5 – ALLOWABLE BEARING PRESSURES	
<u>Foundation Width</u>	<u>Allowable Bearing Pressure</u>
< 3 feet with replacement of the upper 2 feet below the footings	2,000 psf
≥ 3 feet with replacement of the upper 2 feet below footings	2,500 psf

The allowable soil bearing pressures were calculated using a minimum embedment depth of 2 feet and a minimum foundation width of 2 feet or greater. The allowable bearing pressure may be increased by one-third for total loading conditions, including wind and seismic forces. To account for overturning, the design bearing pressure including overturning or load eccentricity should consider the bearing pressure over effective footing width and length, B* and L*:

$$B^* = B - 2 * e_B$$

$$L^* = L - 2 * e_L$$

Where B and L are the actual footing width and length, and e_B and e_L are the eccentricity of the load in length offset from the centerline of the footings. This method generally gives lower maximum applied pressures than computing the maximum edge load under trapezoidal or triangular loading.

Prior to placing steel or concrete, footing excavations should be cleaned of all debris, loose or soft soil, and water. Any loose soil in the bottom of footing excavations should be recompact to at least 90 percent relative compaction or removed to expose firm, unyielding material. All footing

excavations should be observed by the project soils engineer just prior to placing steel or concrete to verify the recommendations contained herein are implemented during construction.

5.6 Settlements

The upper 5 to 20 feet of soil at the site includes soils that have potential for significant settlement. Total settlement of an individual foundation will vary depending on the plan dimensions of the foundation and the actual load supported. Consolidation settlements were calculated based on soil parameters developed on nearby sites to the southeast and soil undrained strengths obtained from pocket penetrometer testing of samples in the boreholes. Elastic settlement, or settlement of unsaturated clay soils, will occur as the building loads are applied. The consolidation settlement will require dissipation of excess pore pressure to occur over time. Soils are expected to remain in the over-consolidated stress range even after building construction. Secondary or creep settlement primarily occurs in normally consolidated soils, so secondary settlement is considered to be negligible.

A summary of anticipated settlements based on footing size for 2,500 psf bearing pressure is provided in Table 6. If 2 feet or more of fill is placed relative to the existing ground surface, the settlement would be additional to the settlement that would occur due to footings at the same location.

TABLE 6 – SETTLEMENT SUMMARY	
<u>Footing Size</u>	<u>Calculated Settlement</u> <u>(inches)</u>
11 ft X 11 ft w/ 2500 psf Bearing Pressure	1.0
8 ft X 8 ft w/ 2500 psf Bearing Pressure	0.9
2 ft strip w/ 2500 psf Bearing Pressure	0.8
Placement of 2 feet of fill	0.3

In our experience, soils in western Nevada do not always settle as slowly as indicated by consolidation theory and testing. This is because many clays are deposited subaerially or are deposited with occasional periods of drying that can result in cracking or other macrostructure. These features greatly increase vertical occurrence of drainage paths, which speeds the rate of drainage compared to

testing of intact small-scale consolidation test samples. Settlement is expected to be relatively rapid as the upper soil layers are unsaturated and over-consolidated. Settlement under columns or footings is expected to be largely complete once loads are fully placed. Settlement under wide-area placement of fills is expected to take one or more months to complete.

5.7 Alternate Foundations – Driven Pipe Piles

Plate 18 shows plots of allowable compressive capacity versus depth for 12-inch-diameter closed-end steel pipe piles. During and following an earthquake with liquefaction, the piles would be subject to down drag due to the liquefied soils settling and reversing the skin friction on the sides of the piles. We recommend a minimum pile length of 38 feet below existing ground surface to allow for lateral fixity below the liquefiable layer. Assuming dead plus normal live loading in the range of 80 kips per pile minimum, a pile length of 10 feet below bottom of liquefiable deposits or 38 feet would be sufficient.

Lateral pile capacity can be provided for these piles if this alternative is selected. Settlement of pile foundations will be less than ½ inch under static and/or liquefiable conditions.

5.8 Short Retaining Walls

Short retaining walls less than 4 feet tall, including loading dock foundations with imbalanced ground levels and utility vaults/sumps, should be designed to resist the lateral earth pressure exerted by the retained, compacted backfill plus any additional lateral force that will be applied to the wall due to surface loads placed at or near the wall. The following table presents a list of recommended soil parameters for the design of these small retaining structures of less than 4 feet in retained height assuming vertical back faces and a level backfill.

TABLE 7 – LATERAL EARTH PRESSURES	
<u>Earth Pressure</u>	<u>Equivalent Fluid Density</u>
Active	30 pcf
At-rest	50 pcf
Seismic Active Pressure	75 pcf
Allowable Passive	450 pcf
Allowable Coefficient of Friction	0.45

The at-rest earth pressure is applicable for braced walls that are restrained at the top, including building walls or vaults. Fifty percent of any uniform area surcharge placed at the top of a restrained wall may be assumed to act as a uniform horizontal pressure over the entire height of the wall. Where rotational movement is possible, the active earth pressure applies. Thirty percent of any uniform surcharge placed at the top of a non-restrained wall may be assumed to act as a uniform horizontal pressure over the entire height of the wall. The seismic active pressure, if larger than the at-rest pressure, applies to both active- and at-rest walls during earthquake conditions.

Resistance to lateral loads may be provided by frictional resistance between the bottom of concrete foundations and the underlying soils and by passive soil pressure against the sides of the foundations. Both allowable passive and frictional resistances may be assumed to act concurrently. The seismic active pressure is used for either active or at-rest walls for earthquake loading.

The above values are for horizontal backfill and do not include hydrostatic pressures that might be caused by groundwater or surface water trapped behind a structure. Therefore, wall backfill should be free draining and provisions should be made to collect and dispose of excess water that may accumulate behind earth retaining structures.

5.9 Concrete Slab-on-Grade Construction

Prior to constructing concrete floors, slabs, walkways, or other flatwork, the upper 8 inches of slab subgrade should be scarified, uniformly moisture conditioned to within 2 percent of optimum moisture content, and uniformly compacted to at least 90 percent relative compaction. At least 4 to 6 inches of Type 2 aggregate base (for interior and exterior slabs, respectively) should be placed beneath concrete slab-on-grade to provide uniform support. The aggregate base should be compacted to a minimum of 95 percent relative compaction. The subgrade should be protected against drying until the concrete slab is placed. Scarification and compaction may not be required if slabs are to be placed directly on previously approved, unfrozen, undisturbed compacted structural fill.

Interior concrete floor slabs should have a minimum thickness of 4 inches, and bus maintenance areas of at least 6 inches. Slab thickness and structural reinforcing requirements within the slab should be determined by the design engineer. In floor slab areas where moisture-sensitive floor coverings are planned, an impermeable membrane (e.g., 15-mil Stego wrap or approved alternate) should be

installed to reduce the migration of moisture vapor through the concrete slabs. Installation should conform to the specifications provided for a Class B vapor restraint (ASTM E 1745 and 1643).

Modulus of subgrade reaction (K) is a measure of the displacement vertical pressure per unit foot. It is used primarily for rigid pavement design and estimates the support of the layers below basecourse and pavement layers. The modulus for this site is estimated to be 100 pounds per square inch per inch of settlement for concrete slabs-on-grade or 170 kips per cubic foot.

5.10 Pavement Sections

Pavement design is mostly a function of heavy bus or truck traffic and dynamic subgrade strength. Dynamic strength was determined from the R-value test (ASTM D2844). The current design methods use Resilient Modulus (M_r) which can be correlated from R-value. Two R-value samples were submitted for analysis. One sample, referred to as Composite sample, was formed from cuttings collected from boreholes B-1, B-4, B-7, and B-8. A second R-value sample was collected from borehole B-3. Results of R-value sample analyses are presented as Plates 15 and 16.

The Composite sample, collected from primarily from native soils, was collected from depth ranging from 1 to 5 feet below surface. Analysis of this sample resulted in an R-value of 22. The R-value sample from borehole B-3 was collected between the surface and 5 feet depth from near-surface granular soils (presumed to be fill) under the existing parking lot area near the center of the site. Analysis of the B-3 sample resulted in an R-value of 37.

We have developed recommendations for pavement section based on the lower R-value using the Asphalt Institute (1991) method. We assumed there will be approximately 260 bus parking spaces for 12-ton school busses, and there will be, on average, four (4) trips per weekday or 5,120 trips per week. For a 20-year design life, there would be 1.4 million equivalent single axle loads on the primary driveways in and out of the facility. For this loading, paved areas subject to concentrated bus traffic should consist of 7 inches of asphalt concrete underlain by 12 inches of Type 2, Class B, aggregate base, or 6 inches of asphalt concrete underlain by 14 inches of aggregate base. Paved areas restricted to bus parking (or less than about 20 percent of the maximum traffic above near the entrances, such as the rear parking lots) can consist of 5 inches of asphalt concrete underlain by 10 inches of aggregate base.

If the traffic ultimately exceeds the anticipated levels, it may be necessary to reevaluate and overlay the pavement at some time in the future.

5.11 Pavement Drainage Design Parameters

Inherent in the selection of design subgrade strength is the assumption that the subgrade will not become saturated. Subgrade strength drops dramatically when moisture increases even slightly more than the selected design value. This is essentially true for any material other than clean sands and gravels and is more critical in fine-grained and clay soils than in granular soils. Soils at this site are considered to be of moderate moisture sensitivity. Where irrigated landscaping is to be placed adjacent to the heavily-driven roadways or driveways, we recommend that edge drains be constructed directly behind the curb, or along the edge of the asphalt where curbs and gutters are not used. If proper drainage is not provided, increased maintenance costs and premature pavement (subgrade) failure will result.

The edge drain should extend at least 12 inches below the pavement subgrade and can consist of either a narrow trench backfilled with Class B or C drain rock, or a synthetic edge drain product such as Mirdrain HC or approved alternate. Drain rock should be separated from native soil backfill by a geotextile such as Mirafi® 140N or equal. The edge drain should be tied into the storm drain or drain rock backfill around the storm drain. In some cases, utility trenches located behind the street could be utilized as edge drains, if designed and constructed with that intent. For extensive center-of-pavement gutters, a subsurface perforated drainpipe should also be considered below the aggregate base section which would tie into the drain rock around the nearest drain inlet, to collect and remove water which may penetrate through cracks around the gutter or water that otherwise infiltrates under the low point of the pavement.

Based on our experience in Northern Nevada, environmental aspects, such as freeze-thaw cycles and thermal cracking will probably govern the life of AC pavements. Thermal cracking of the asphalt pavement allows more water to enter the pavement section, which promotes deterioration and increases maintenance costs. A program of repair including periodic crack and joint sealing should be considered for project maintenance and design starting five to eight years after initial construction.

5.9 Erosion and Sediment Control

Erosion potential is dependent on numerous factors including grain size distribution, cohesion, moisture content, slope angle, and the velocity of the water or wind on the ground surface. Erosion and sediment control should be incorporated in construction and post-construction phase planning. In general, all runoff should be temporarily directed around construction sites. Temporary control measures designed to be effective during construction should be maintained through the course of the work. When necessary, these measures may be left in place along with permanent measures during post construction period until effective landscaping or revegetation has been established. Permanent vegetation consisting of native species should be established where possible and natural vegetation should be protected and retained where possible. Clayey topsoil and natural organic debris should be stockpiled for use in revegetation or removed from site.

There are no major cut or fill slopes planned for this project. Dust potential at this site will be moderate during dry periods. Temporary (during construction) and permanent (after construction) erosion control will be required for all disturbed areas. The contractor shall prevent dust from being generated during construction in compliance with all applicable city, county, state, and federal regulations. The contractor shall submit an acceptable dust control plan to the City of Sparks prior to starting site preparation or earthwork. Project specifications should include an indemnification by the contractor of the owner and engineer for any dust generation during the construction period. The owner will be responsible for mitigation of dust after accepting the project.

To minimize erosion and downstream impacts to sedimentation from this site, best management practices with respect to storm water discharge should be implemented at this site.

5.12 Site Drainage and Moisture Protection

Final elevations at the site should be planned so that drainage is directed away from all foundations. A system of roof gutters and drains is recommended to collect the roof drainage and direct it away from foundations unless pavement extends to the walls. No water ponding should be allowed within five feet of the building perimeter. Any surface water should be re-routed and directed to non-sensitive areas away from the building.

5.13 Corrosion

Analytical testing was conducted on a representative near-surface soil sample obtained from 2.5 to 4 feet in borehole B-3 to assess the potential for adverse reactivity with concrete and corrosivity with steel. The tested soil sample indicated 1,600 mg/kg for sulfate. Chloride content was low at 13 mg/kg. Resistivity was severely corrosive at 650 ohm-cm, and pH was essentially neutral at 7.68 pH units. Type V cement should be used in concrete for this project where concrete is in contact subsurface soils. The resistivity value indicates a severe corrosion potential for ferrous metals in direct contact with on-site soils. Therefore, special corrosion mitigation measures such as cathodic protection should be implemented for buried steel pipes and helical piers. The test results are presented on Plate 17.

6.0 ADDITIONAL SERVICES

6.1 Plan Review, Construction Observation, and Testing

We recommend that RTGA conduct a general review of the project plans, including subsurface drainage systems and specifications to verify our earthwork and foundation recommendations have been properly interpreted and implemented during design. In addition, the recommendations made in this report assume that an adequate program of tests and observations will be made during construction to verify compliance with these recommendations. These tests and observations should include, but not necessarily be limited to, the following:

- Observations and testing during site preparation and earthwork;
- Observations and testing during structural fill compaction;
- Observation during pile driving or ground improvement if utilized;
- Observation and testing of construction materials (concrete, steel and wood); and
- Consultation as may be required during construction.

Additional information concerning the scope and cost of these services can be obtained from our office.

7.0 LIMITATIONS

Recommendations contained in this report are based on our field exploration, and our understanding of the proposed construction. This report has been prepared for design purposes for specific application to the currently proposed subject project in accordance with the generally accepted standards of practice at the time the report was written. No warranty, expressed or implied, is made.

The analyses and recommendations submitted are based on the field exploration performed at the locations shown on Plate 2 of this report. This report may not reflect the soil variations that may be encountered during construction. Therefore, further evaluation of site conditions may be warranted during construction.

If the scope of the proposed construction changes from those described, our recommendations should be reviewed by us and may require modification. All parties to the project including the designer, contractor, subcontractors, etc., should be made aware of this report in its entirety. The use of information contained in this report for bidding purposes should be done at the Contractor's option and risk.

Memorandum

To: Kevin Merkling, WCSD, Rachel Cave, Lonnie Johnson, J-U-B
From: Pablo F. Becerra and Jonathan W. Pease, RTGA *P.B.*
Date: February 24, 2023
Project No.: 22034.002
Subject: Supplemental Pavement Recommendations

This memorandum presents assumptions and recommendations for Asphalt Concrete (AC) and Portland Cement Concrete (PCC) pavement design recommendations for Washoe County School District Bus Yard. This memorandum more closely considers traffic patterns and distributions based on better-developed project maps and plans than we initially had available in our geotechnical report dated May 23, 2022. Pavement sections were developed using the 1993 AASHTO method for the design of flexible and rigid pavements. The method uses, as its basis, the total traffic in Equivalent 18-thousand-pound Single Axle Loads (ESALs) expected for the project over a specific pavement life and the soil subgrade strength using the resilient modulus.

This memorandum provides pavement sections for major differing roadway areas in different phases of the project. The information included to us from J-U-B and the client helped provide calculations needed for the new bus facility. Additional information was provided to RTGA with accurate daily traffic, vehicle type, parking spaces and more to help design the appropriate Phase ESAL for the project. The design was based on full capacity of the facility; therefore, no annual growth or period growth rate was added.

The north and east vehicle parking lot holds roughly 210 vehicles, which we assume will have two (2) trips per day (1-in, 1-out) per vehicle. This is not a major consideration since cars and trucks do not have significant ESALs. The bus parking lot has 220 spaces, some of which may include excessive or inactive vehicles. Each bus will have four (4) trips per day (2-in, 2-out) across the most heavily loaded roadways.

Phase 1B is the parking area along the north and west boundaries of the project, which is eventually assumed to be primarily for employee and driver vehicle parking. During the first year, there may be a wide mix of vehicles due to construction traffic in other areas.

Memo: WCSD Bus Facility Pavement Recs

February 24, 2023

Page 2 of 6

TABLE 1A - PHASE 1B REAR PARKING - YEAR 1 - ESTIMATED TRAFFIC VOLUMES		
Type	Percent of vehicles	Vehicle Trips/day
Cars	50	210
4 tire truck	25	105
Van busses- 2 axle 6 tire	25	105
12-ton School Busses	100	1,024

TABLE 1B – PHASE 1B REAR PARKING - YEAR 2 - 20 ESTIMATED TRAFFIC VOLUMES		
Type	Percent of vehicles	Vehicle Trips/day
Cars	50	210
4 tire truck	25	105
Van busses- 2 axle 6 tire	25	105
12-ton School Busses	0	0
ESAL Loading (20 year)	1.67 x 10 ⁵	

For comparison, we looked at the values provided using the results of the J-U-B Traffic Study, and found them similar and only slightly lower:

TABLE 2A- PHASE 1B REAR PARKING - PART B YEAR 1 - ESTIMATED TRAFFIC VOLUMES (CHECK)		
Type	Percent of vehicles	Vehicle Trips/day
Cars	50	440
4 tire truck	25	220
Van busses- 2 axle 6 tire	25	220
12-ton School Busses	100	880

Memo: WCSD Bus Facility Pavement Recs

February 24, 2023

Page 3 of 6

TABLE 2B - PHASE 1B REAR PARKING - PART B YEAR 2-20 - ESTIMATED TRAFFIC VOLUMES (CHECK)		
Type	Percent of vehicles	Vehicle Trips/day
Cars	50	440
4 tire truck	25	220
Van busses- 2 axle 6 tire	25	220
12-ton School Busses	0	0
ESAL Loading (20 year)	1.50 x 10 ⁵	

The small parking lot by the maintenance facility has no access for bus parking and is limited to about 50 spaces.

TABLE 3 – PHASE 1B SMALL PARKING LOT - ESTIMATED TRAFFIC VOLUMES		
Type	Percent of vehicles	Vehicle Trips/day
Cars	50	40
4 tire truck	40	32
Van busses- 2 axle 6 tire	10	8
12-ton School Busses	0	0
ESAL Loading (20 year)	<10,000	

Memo: WCSD Bus Facility Pavement Recs

February 24, 2023

Page 4 of 6

Washing and fueling areas are assumed to be visited by each bus at most once every four days.

TABLE 4- PHASE 1 D FUELING AND WASHING AREAS - ESTIMATED TRAFFIC VOLUMES		
Type	Percent of vehicles	Vehicle Trips/day
Cars	0	0
4 tire truck	0	0
Van busses- 2 axle 6 tire	0	0
12-ton School Busses	25	55
ESAL Loading (20 year)	1.22 x 10 ⁵	

The main driveway around the north and east side of the facility is assumed to have vehicles from area 1B and a smaller number of school busses and delivery trucks.

TABLE 5- PHASE 1D AND 1E NORTH AND EAST DRIVEWAY - ESTIMATED TRAFFIC VOLUMES		
Type	Percent of vehicles	Vehicle Trips/day
Cars	79	348
4 tire truck	20	88
10-wheeler Truck Deliveries	1	4
12-ton School Busses	10	44
ESAL Loading (20 year)	1.14 x 10 ⁵	

Memo: WCSB Bus Facility Pavement Recs

February 24, 2023

Page 5 of 6

Table 6 Assumes that buses use the bus maintenance facility once every 10 days on average, one way traffic.

TABLE 6- PHASE 2 BUS MAINTENANCE LANES - ESTIMATED TRAFFIC VOLUMES		
Type	Percent of vehicles	Vehicle Trips/day
Cars	0	0
4 tire truck	0	0
Van busses- 2 axle 6 tire	0	0
12-ton School Busses	10	22
ESAL Loading (20 year)	6.1 x 10 ⁴	

TABLE 7- PHASE 3 MAIN BUS PARKING LOT - ESTIMATED TRAFFIC VOLUMES (INCLUDING ENTRANCES FROM STREET)		
Type	Percent of vehicles	Vehicle Trips/day
Cars	10	88
4 tire truck	20	176
Van busses- 2 axle 6 tire	20	176
12-ton School Busses	100	880
ESAL Loading (20 year)	2.48 x 10 ⁶	

Two R-value test results of 37 and 22 were measured for near-surface soils on the site. The R-value of 22 that was measured for the soils near Kleppe Lane Drive was the more conservative value of the two and was used for design. Drainage conditions were assumed to be fair (subgrade saturated 25 percent or more of the time) based on shallow groundwater levels in the area.

If there are clay soils within 2 feet of the bottom of AC or PCC layers, they should be overexcavated 2 feet and replaced with structural fill, as described in the geotechnical report. The thickness of the aggregate base may be included in the necessary separation thickness.

Memo: WCSB Bus Facility Pavement Recs

February 24, 2023

Page 6 of 6

We recommend for the AC pavement design that the pavement course thicknesses correspond to those on the tables below. In our experience, pavement sections are most economical when the AC thickness is about half of the AB thickness (e.g., 5 inches AC on 10 inches AB). PCC pavements were only requested for the maintenance and loading dock areas around the maintenance facility.

TABLE 7 - PAVEMENT COURSE THICKNESS RECOMMENDATIONS			
Asphalt Pavement Design Section	AC (inches)	Pavement (PCC-inches)	AB (or RAB) (inches)
Phase 1B Driver Parking AC	5	--	8
Phase 1B Small Parking Lot	3	--	6
Phase 1D & 1E Fuel Wash, Phase 2 Maintenance AC	5	--	8
Phase 1D & 1E Fuel Wash, Phase 2 Maintenance PCC	--	8	6
Phase 1D and 1E North and East Driveway AC	5		8
Phase 1D and 1E North and East Driveway AC	--	8	6
Phase 3 Bus Yard AC	7	--	12
Phase 3 Bus Yard PCC	--	12	6

Pavement performance can be greatly affected by saturation of unbound layers and subgrade soils. Based on our experience in Northern Nevada, environmental aspects, such as freeze-thaw cycles and thermal cracking will probably govern the life of AC pavements. Thermal cracking of the asphalt pavement allows more water to enter the pavement section, which promotes deterioration and increases maintenance costs.

MAINTENANCE, FUEL, WASH, AND N AND E DRIVEWAY

Pavement Design
(AASHTO 1993 Method)

Design Inputs

Sugrade Support

Asphalt

Concrete

CBR = 7.02

Mr = 8890 psi

k = 168 pci

90 %

%

Reliability

So = 0.45

0.35

Standard Deviation

Po = 4.2

4.5

Initial Serviceability

Pt = 2.0

2.5

Terminal Serviceability

Δ PSI = 2.2

2.0

Design Serviceability Loss,

Layer Coefficients:

AC Surface and Binder $a_1 = 0.35$

Aggregate Base $a_2 = 0.10$

Concrete Compressive Strength = 4000 psi

Modulus of Elasticity of Concrete = 3,600 ksi

Modulus of Rupture of Concrete: = 580

Load Transfer ("J" Factor) = 4.2

Drainage Coefficient = 0.7

Asphalt Section Traffic (18 kip ESAL) =

Minor Arterial

122,000

Asphalt Pavement Section

Drainage, m

AC Surface + Binder

5.0 in.

in.

Aggregate Base

1.0

8.0 in.

in.

Structural Number: 2.55

Structural Number - Required 2.26

Concrete Section Traffic (18 kip ESAL) =

Minor Arterial

122,000

Concrete Pavement Section

7.3 in.

in.

Project: Washoe County Bus Facility

Location: Sparks NV
